

The Real Big Bang Theory: How the Universe Began

Date: Thursday, April 25, 2013

Time: 6:30 p.m. Public Lecture
8:00 p.m. Stargazing in the Football Field

Place: University Commons, Room 168 AB
William Paterson University

Join Professor Jason Kendall as he describes the evidence for the Big Bang and details the recent results from the Planck Mission, which has rediscovered the influence of Dark Energy and the acceleration of the Cosmos.

We'll learn about the Cosmic Microwave Background, the origin of atoms, the size of the universe. Afterwards, if it is clear, we'll go outside with telescopes to look at Jupiter and the Moon. If ever you wanted a Bazinga, this is the night!

For more information, email S.H. Chung at ChungS@wpunj.edu.
