    - a. This is largely intended for use when commodity products are specified, similar to pipe, fittings, valves, sundries, escutcheons, gaskets, flanges, et al.
    - b. This spec allows substitutions, as long as they meet the requirements outlined for the product and comply with the standards.
    - c. There may also be included an actual model number and manufacturer shown to establish comparable quality level for the product.
  - 2. Manufacturers where Basis-of-Design Product is displayed: Subject to compliance with requirements, provide the product indicated on Drawings and specs, or a comparable product by one of the following:
    - a. This restricts products be furnished based on the list of manufacturers stated, a manufacturer's model number and product will be specified to establish a level or product quality and grade desired

### **2.2 PIPE, TUBE, AND FITTINGS**

- A. Refer to individual Division 22 piping Sections for pipe, tube, and fitting materials and joining methods.
- B. Pipe Threads: ASME B1.20.1 for factory-threaded pipe and pipe fittings.

### **2.3 JOINING MATERIALS**

- A. Refer to individual Division 22 piping Sections for special joining materials not listed below.
- B. Pipe-Flange Gasket Materials: Suitable for chemical and thermal conditions of piping system contents.
  - 1. ASME B16.21, nonmetallic, flat, asbestos-free, 1/8-inch maximum thickness unless thickness or specific material is indicated.
  - 2. Full-Face Type: For flat-face, Class 125, cast-iron and cast-bronze flanges.
  - 3. Narrow-Face Type: For raised-face, Class 250, cast-iron and steel flanges.
  - 4. AWWA C110, rubber, flat face, 1/8 inch thick, unless otherwise indicated; and full-face or ring type, unless otherwise indicated.
- C. Flange Bolts and Nuts: ASME B18.2.1, carbon steel, unless otherwise indicated.
- D. Plastic, Pipe-Flange Gasket, Bolts, and Nuts: Type and material recommended by piping system manufacturer, unless otherwise indicated.
- E. Solder Filler Metals: ASTM B 32, lead-free alloys. Include water-flushable flux according to ASTM B 813.

- F. Brazing Filler Metals: AWS A5.8, BCuP Series, copper-phosphorus alloys for general-duty brazing, unless otherwise indicated; and AWS A5.8, BAg1, silver alloy for refrigerant piping, unless otherwise indicated.
  - G. Welding Filler Metals: Comply with AWS D10.12 for welding materials appropriate for wall thickness and chemical analysis of steel pipe being welded.
  - H. Solvent Cements for Joining Plastic Piping:
    - 1. ABS Piping: ASTM D 2235.
    - 2. CPVC Piping: ASTM F 493.
    - 3. PVC Piping: ASTM D 2564. Include primer according to ASTM F 656.
    - 4. PVC to ABS Piping Transition: ASTM D 3138.
  - I. Fiberglass Pipe Adhesive: As furnished or recommended by pipe manufacturer.
- 2.4 TRANSITION FITTINGS
- A. AWWA Transition Couplings: Same size as, and with pressure rating at least equal to and with ends compatible with, piping to be joined.
    - 1. Available Manufacturers: Subject to compliance with requirements, manufacturers offering products that may be incorporated into the Work provide products by one of the following, or approved equal.
      - a. Cascade Waterworks Mfg. Co.
      - b. Dresser Industries, Inc.; DMD Div.
      - c. Ford Meter Box Company, Incorporated (The); Pipe Products Div.
      - d. JCM Industries.
      - e. Smith-Blair, Inc.
      - f. Viking Johnson.
      - g. Underground Piping NPS 1-1/2 and Smaller: Manufactured fitting or coupling.
      - h. Underground Piping NPS 2 and Larger: AWWA C219, metal sleeve-type coupling.
      - i. Aboveground Pressure Piping: Pipe fitting.
      - j. Or Approved Equal.
  - B. Flexible Transition Couplings for Underground Non-pressure Drainage Piping: ASTM C 1173 with elastomeric sleeve, ends same size as piping to be joined, and corrosion-resistant metal band on each end.
    - 1. Available Manufacturers: Subject to compliance with requirements, manufacturers offering products that may be incorporated into the Work provide products by one of the following, or approved equal.
      - a. Cascade Waterworks Mfg. Co.
      - b. Fernco, Inc.
      - c. Mission Rubber Company.
      - d. Plastic Oddities, Inc.

- e. Or Approved Equal.

## 2.5 DIELECTRIC FITTINGS

- A. Description: Combination fitting of copper alloy and ferrous materials with threaded, solder-joint, plain, or weld-neck end connections that match piping system materials.
- B. Insulating Material: Suitable for system fluid, pressure, and temperature.
- C. Dielectric Unions: Factory-fabricated, union assembly, for 250-psig minimum working pressure at 180 deg F.
  - 1. Available Manufacturers: Subject to compliance with requirements, manufacturers offering products that may be incorporated into the Work provide products by one of the following, or approved equal.
    - a. Eclipse, Inc.
    - b. Epco Sales, Inc.
    - c. Hart Industries, International, Inc.
    - d. Watts Industries, Inc.; Water Products Div.
    - e. Zurn Industries, Inc.; Wilkins Div.
    - f. Or Approved Equal.
- D. Dielectric Flanges: Factory-fabricated, companion-flange assembly, for 150- or 300-psig minimum working pressure as required to suit system pressures.
  - 1. Available Manufacturers: Subject to compliance with requirements, manufacturers offering products that may be incorporated into the Work provide products by one of the following, or approved equal.
    - a. Capitol Manufacturing Co.
    - b. Central Plastics Company.
    - c. Epco Sales, Inc.
    - d. Watts Industries, Inc.; Water Products Div.
    - e. Or Approved Equal.
- E. Dielectric-Flange Kits: Companion-flange assembly for field assembly. Include flanges, full-face- or ring-type neoprene or phenolic gasket, phenolic or polyethylene bolt sleeves, phenolic washers, and steel backing washers.
  - 1. Available Manufacturers: Subject to compliance with requirements, manufacturers offering products that may be incorporated into the Work provide products by one of the following, or approved equal.
    - a. Advance Products & Systems, Inc.
    - b. Calpico, Inc.
    - c. Central Plastics Company.
    - d. Pipeline Seal and Insulator, Inc.
    - e. Or Approved Equal.

- f. Separate companion flanges and steel bolts and nuts shall have 150- or 300-psig minimum working pressure where required to suit system pressures.
  - F. Dielectric Couplings: Galvanized-steel coupling with inert and noncorrosive, thermoplastic lining; threaded ends; and 300-psig minimum working pressure at 225 deg F.
    - 1. Available Manufacturers: Subject to compliance with requirements, manufacturers offering products that may be incorporated into the Work provide products by one of the following, or approved equal.
      - a. Calpico, Inc.
      - b. Lochinvar Corp.
  - G. Dielectric Nipples: Electroplated steel nipple with inert and noncorrosive, thermoplastic lining; plain, threaded, or grooved ends; and 300-psig minimum working pressure at 225 deg F.
    - 1. Available Manufacturers: Subject to compliance with requirements, manufacturers offering products that may be incorporated into the Work provide products by one of the following, or approved equal.
      - a. Perfection Corp.
      - b. Precision Plumbing Products, Inc.
      - c. Sioux Chief Manufacturing Co., Inc.
      - d. Victaulic Co. of America.
      - e. Or Approved Equal.
- 2.6 MECHANICAL SLEEVE SEALS
  - A. Refer to Division 22.
- 2.7 SLEEVES
  - A. Refer to Division 22.
- 2.8 ESCUTCHEONS
  - A. Refer to Division 22.
- 2.9 GROUT
  - A. Refer to Division 22.
- 2.10 CONTAINMENT ROOM SEALING REQUIREMENTS
  - A. Description: Field applied joint sealant conforming to ASTM C920 "Specifications for Elastomeric Joint Sealants".
    - 1. Manufacturers:
      - a. Dow Chemical, 732-RTV silicone rubber
      - b. GE
  - B. Sealant shall be mildew resistant and shall be specifically design for exposure to a high degree of moisture. Sealant shall be compatible with and adhere to substrate and materials that are in

direct contact with the sealant. Sealant shall maintain seal under normal expected movements of substrates.

- C. Color shall be clear or white.

### **PART 3 - EXECUTION**

#### **3.1 PLUMBING DEMOLITION**

- A. Refer to Division 01 and Division 02 for general demolition requirements and procedures.
- B. Disconnect, demolish, and remove plumbing systems, equipment, and components indicated to be removed.
  - 1. Piping to Be Removed: Remove portion of piping indicated to be removed and cap or plug remaining piping with same or compatible piping material.
  - 2. Piping to Be Abandoned in Place: Drain piping and cap or plug piping with same or compatible piping material.
  - 3. Equipment to Be Removed: Disconnect and cap services and remove equipment.
  - 4. Equipment to Be Removed and Reinstalled: Disconnect and cap services and remove, clean, and store equipment; when appropriate, reinstall, reconnect, and make equipment operational.
  - 5. Equipment to Be Removed and Salvaged: Disconnect and cap services and remove equipment and deliver to Owner.
- C. If pipe, insulation, or equipment to remain is damaged in appearance or is unserviceable, remove damaged or unserviceable portions and replace with new products of equal capacity and quality.

#### **3.2 PIPING SYSTEMS - COMMON REQUIREMENTS**

- A. Install piping according to the following requirements and Division 22 Sections specifying piping systems.
- B. Drawing plans, schematics, and diagrams indicate general location and arrangement of piping systems. Indicated locations and arrangements were used to size pipe and calculate friction loss, expansion, pump sizing, and other design considerations. Install piping as indicated unless deviations to layout are approved on Coordination Drawings.
- C. Install piping in concealed locations, unless otherwise indicated and except in equipment rooms and service areas.
- D. Install piping indicated to be exposed and piping in equipment rooms and service areas at right angles or parallel to building walls. Diagonal runs are prohibited unless specifically indicated otherwise.
- E. Install piping above accessible ceilings to allow sufficient space for ceiling panel removal.
- F. Install piping to permit valve servicing.
- G. Install piping at indicated slopes.
- H. Install piping free of sags and bends.
- I. Install fittings for changes in direction and branch connections.

- J. Install piping to allow application of insulation.
- K. Select system components with pressure rating equal to or greater than system operating pressure.
- L. Install escutcheons for penetrations of walls, ceilings, and floors.
- M. Install sleeves for pipes passing through penetrations in floors, partitions, roofs, and walls.
- N. Verify final equipment locations for roughing-in.
- O. Refer to equipment specifications in other Sections of these Specifications for roughing-in requirements.

### 3.3 PIPING JOINT CONSTRUCTION

- A. Join pipe and fittings according to the following requirements and Division 22 Sections specifying piping systems.
- B. Ream ends of pipes and tubes and remove burrs. Bevel plain ends of steel pipe.
- C. Remove scale, slag, dirt, and debris from inside and outside of pipe and fittings before assembly.
- D. Soldered Joints: Apply ASTM B 813, water-flushable flux, unless otherwise indicated, to tube end. Construct joints according to ASTM B 828 or CDA's "Copper Tube Handbook," using lead-free solder alloy complying with ASTM B 32.
- E. Brazed Joints: Construct joints according to AWS's "Brazing Handbook," "Pipe and Tube" Chapter, using copper-phosphorus brazing filler metal complying with AWS A5.8.
- F. Threaded Joints: Thread pipe with tapered pipe threads according to ASME B1.20.1. Cut threads full and clean using sharp dies. Ream threaded pipe ends to remove burrs and restore full ID. Join pipe fittings and valves as follows:
  - 1. Apply appropriate tape or thread compound to external pipe threads unless dry seal threading is specified.
  - 2. Damaged Threads: Do not use pipe or pipe fittings with threads that are corroded or damaged. Do not use pipe sections that have cracked or open welds.
- G. Welded Joints: Construct joints according to AWS D10.12, using qualified processes and welding operators according to Part 1 "Quality Assurance" Article.
- H. Flanged Joints: Select appropriate gasket material, size, type, and thickness for service application. Install gasket concentrically positioned. Use suitable lubricants on bolt threads.
- I. Plastic Piping Solvent-Cement Joints: Clean and dry joining surfaces. Join pipe and fittings according to the following:
  - 1. Comply with ASTM F 402 for safe-handling practice of cleaners, primers, and solvent cements.
  - 2. PVC Non-pressure Piping: Join according to ASTM D 2855.
  - 3. PVC to ABS Non-pressure Transition Fittings: Join according to ASTM D 3138 Appendix.
- J. Plastic Non-pressure Piping Gasketed Joints: Join according to ASTM D 3212.
- K. PE Piping Heat-Fusion Joints: Clean and dry joining surfaces by wiping with clean cloth or paper towels. Join according to ASTM D 2657.

1. Plain-End Pipe and Fittings: Use butt fusion.
2. Plain-End Pipe and Socket Fittings: Use socket fusion.
- L. Fiberglass Bonded Joints: Prepare pipe ends and fittings, apply adhesive, and join according to pipe manufacturer's written instructions.

### 3.4 PIPING CONNECTIONS

- A. Make connections according to the following, unless otherwise indicated:
  1. Install unions, in piping NPS 2 and smaller, adjacent to each valve and at final connection to each piece of equipment.
  2. Install flanges, in piping NPS 2-1/2 and larger, adjacent to flanged valves and at final connection to each piece of equipment.
  3. Dry Piping Systems: Install dielectric unions and flanges to connect piping materials of dissimilar metals.
  4. Wet Piping Systems: Install dielectric coupling and nipple fittings to connect piping materials of dissimilar metals.

### 3.5 EQUIPMENT INSTALLATION - COMMON REQUIREMENTS

- A. Install equipment to allow maximum possible headroom unless specific mounting heights are not indicated.
- B. Install equipment level and plumb, parallel and perpendicular to other building systems and components in exposed interior spaces, unless otherwise indicated.
- C. Install plumbing equipment to facilitate service, maintenance, and repair or replacement of components. Connect equipment for ease of disconnecting, with minimum interference to other installations. Extend grease fittings to accessible locations.
- D. Install equipment to allow right of way for piping installed at required slope.

### 3.6 PAINTING

- A. Damage and Touchup: Repair marred and damaged factory-painted finishes with materials and procedures to match original factory finish.

### 3.7 CONCRETE BASES

- A. Concrete Bases: Anchor equipment to concrete base according to equipment manufacturer's written instructions and according to seismic codes at Project.
  1. Construct concrete bases of dimensions indicated, but not less than 4 inches larger in both directions than supported unit.
  2. Install dowel rods to connect concrete base to concrete floor. Unless otherwise indicated, install dowel rods on 18-inch centers around the full perimeter of the base.
  3. Install epoxy-coated anchor bolts for supported equipment that extend through concrete base, and anchor into structural concrete floor.
  4. Place and secure anchorage devices. Use supported equipment manufacturer's setting drawings, templates, diagrams, instructions, and directions furnished with items to be embedded.

5. Install anchor bolts to elevations required for proper attachment to supported equipment.
6. Install anchor bolts according to anchor-bolt manufacturer's written instructions.
7. Use 5000-psi, 28-day compressive-strength concrete and reinforcement as specified in Division 03.

### 3.8 ERECTION OF METAL SUPPORTS AND ANCHORAGES

- A. Refer to Division 05 for structural steel.
- B. Cut, fit, and place miscellaneous metal supports accurately in location, alignment, and elevation to support and anchor plumbing materials and equipment.
- C. Field Welding: Comply with AWS D1.1.

### 3.9 ERECTION OF WOOD SUPPORTS AND ANCHORAGES

- A. Cut, fit, and place wood grounds, nailers, blocking, and anchorages to support, and anchor plumbing materials and equipment.
- B. Select fastener sizes that will not penetrate members if opposite side will be exposed to view or will receive finish materials. Tighten connections between members. Install fasteners without splitting wood members.
- C. Attach to substrates as required to support applied loads.

### 3.10 CONTAINMENT ROOM SEALING REQUIREMENTS INSTALLATION

#### A. General

1. Work that penetrates or is mounted on ceilings, walls, floors or other surfaces throughout containment rooms shall be sealed as outlined below in addition to sealing specified elsewhere in the Specifications. Sealing shall include, but not be limited to, the following:
  - a. All penetrations where faucets, valves and equipment stop valves are mounted on walls.
  - b. Equipment penetrations.
  - c. Emergency eyewash/shower equipment
  - d. All floor penetrations including floor drains and/or cleanouts
  - e. Piping and tubing (including control tubing).
  - f. Access doors.
  - g. Conduits.
2. Completely seal the perimeter joints around insulated and uninsulated penetrations and surface-mounted items.

#### B. Installation

1. Preparation, priming, application, curing and protection of the sealant shall be in conformance with the recommendations of the sealant manufacturer.
2. If necessary, fill voids with backer rods as recommended by the sealant manufacturer.

3. Mask edges of exposed joints if required to make neat joints and prevent excessive misplacement of sealant onto exposed surfaces adjacent to joints.
4. Clean surfaces so that no foreign matter of loose particles or dust detrimental to adhesion are present.
5. Perform sealant work after adjacent painting work is complete and dry.
6. Sealant shall be free of voids, be applied in one continuous bead and be tooled concave and smooth.
7. Strip off protective masking tape after sealant has been applied, strip toward the joints.
8. Protect sealant from damage during and after curing period. If damage occurs, repair.
9. Clean off excess sealant or sealant smears adjacent to joints by methods and with cleaning materials approved by the manufacturers of the sealant.

3.11 GROUTING

- A. Refer to Division 22.

END OF SECTION

H:\Y0586.00\DOC\SPEC\2025\_02-20\_IFB\220500\_COMMON WORK RESULTS.DOC

## SECTION 220513 - COMMON MOTOR REQUIREMENTS FOR PLUMBING EQUIPMENT

### PART 1 - GENERAL

#### 1.1 RELATED DOCUMENTS

- A. Certain requirements common to all the mechanical and electrical trades (Fire Suppression, Plumbing, HVAC, Electrical, and Tele/Data) are specified in Division 20. To avoid repetition, they are not repeated in each relevant Division and Section. However, these requirements are applicable to the work of this Section and are hereby incorporated by reference.
- B. Drawings and general provisions of the Contract, including General and Supplementary Conditions and Division 01 Specification Sections, apply to this Section.

#### 1.2 SUMMARY

- A. Section includes:
  - 1. General motor requirements.
  - 2. Motor characteristics.
  - 3. Polyphase motors.
  - 4. Motors served by variable frequency controllers.
  - 5. Polyphase motors with additional requirements.
  - 6. Single phase motors.
  - 7. Motor starters.

#### 1.3 COORDINATION

- A. Coordinate features of motors, installed units, and accessory devices to be compatible with the following:
  - 1. Motor controllers.
  - 2. Torque, speed, and horsepower requirements of the load.
  - 3. Ratings and characteristics of supply circuit and required control sequence.
  - 4. Ambient and environmental conditions of installation location.

### PART 2 - PRODUCTS

#### 2.1 GENERAL MOTOR REQUIREMENTS

- A. Comply with NEMA MG 1 unless otherwise indicated.
- B. Comply with IEEE 841 for severe-duty motors.

## 2.2 MOTOR CHARACTERISTICS

- A. Duty: Continuous duty at ambient temperature of 40 deg C and at altitude of 3300 feet above sea level.
- B. Capacity and Torque Characteristics: Sufficient to start, accelerate, and operate connected loads at designated speeds, at installed altitude and environment, with indicated operating sequence, and without exceeding nameplate ratings or considering service factor.

## 2.3 POLYPHASE MOTORS

- A. Description: NEMA MG 1, Design B, medium induction motor.
- B. Efficiency: Energy efficient, as defined in NEMA MG 1.
- C. Service Factor: 1.15.
- D. Multispeed Motors: Variable torque.
  - 1. For motors with 2:1 speed ratio, consequent pole, single winding.
  - 2. For motors with other than 2:1 speed ratio, separate winding for each speed.
- E. Multispeed Motors: Separate winding for each speed.
- F. Rotor: Random-wound, squirrel cage.
- G. Bearings: Regreasable, shielded, antifriction ball bearings suitable for radial and thrust loading.
- H. Temperature Rise: Match insulation rating.
- I. Insulation: Class F for motors with variable speed controllers. Class B for ODP motors of nominal efficiency
- J. Code Letter Designation:
  - 1. Motors 15 HP and Larger: NEMA starting Code F or Code G.
  - 2. Motors Smaller than 15 HP: Manufacturer's standard starting characteristic.
- K. Enclosure Material: Cast iron for motor frame sizes 324T and larger; rolled steel for motor frame sizes smaller than 324T.

## 2.4 MOTORS SERVED BY VARIABLE FREQUENCY CONTROLLERS

- A. Motors served by variable frequency controllers (VFC) (also known as variable frequency drives (VFDs)) shall be "inverter-duty" or "drive duty" motors. Motors shall meet or exceed all requirements of NEMA MG-1 Parts 30 and 31 for AC induction motors powered from adjustable speed controls. Use of the motor with a VFD shall not adversely affect the operation, useful life, or warranty of the motor.
- B. Motors shall have Class H insulation.
- C. Windings: Copper magnet wire with moisture-resistant insulation varnish, designed and tested to resist transient spikes, high frequencies, and short time rise pulses produced by pulse-width modulated inverters. Motor windings shall be spike resistant to withstand a minimum of 1,600 peak volts.
- D. Motors shall have shaft grounding system to protect bearings from induced voltage. Shaft grounding system shall have very low drag, less than 1/2 percent of motor HP, and shall operate

for a minimum of three (3) years without periodic adjustments. All consumables of the shaft grounding system shall be replaceable without a shutdown of the motor or VFD. The shaft grounding system shall be as manufactured by AEGIS or equal.

- E. Motors used with VFD shall have a minimum three (3) year warranty

## **2.5 POLYPHASE MOTORS WITH ADDITIONAL REQUIREMENTS**

- A. Motors Used with Reduced-Voltage and Multispeed Controllers: Match wiring connection requirements for controller with required motor leads. Provide terminals in motor terminal box, suited to control method.
  - 1. Thermal Protection: Comply with NEMA MG 1 requirements for thermally protected motors.
- B. Severe-Duty Motors: Comply with IEEE 841, with 1.15 minimum service factor.

## **2.6 SINGLE-PHASE MOTORS**

- A. Motors larger than 1/20 hp shall be one of the following, to suit starting torque and requirements of specific motor application:
  - 1. Permanent-split capacitor.
  - 2. Split phase.
  - 3. Capacitor start, inductor run.
  - 4. Capacitor start, capacitor run.
- B. Multispeed Motors: Variable-torque, permanent-split-capacitor type.
- C. Bearings: Pre-lubricated, anti-friction ball bearings or sleeve bearings suitable for radial and thrust loading.
- D. Motors 1/20 HP and Smaller: Shaded-pole type.
- E. Thermal Protection: Internal protection to automatically open power supply circuit to motor when winding temperature exceeds a safe value calibrated to temperature rating of motor insulation. Thermal-protection device shall automatically reset when motor temperature returns to normal range.

## **2.7 MOTOR STARTERS**

- A. Available Manufacturers: Subject to compliance with requirements, manufacturers offering products that may be incorporated into the work by one of the following, or approved equal.
  - 1. Eaton Electrical (Cutler Hammer).
  - 2. General Electric Company.
  - 3. Siemens Energy and Automation.
  - 4. Or Approved Equal.
- B. Provide starters for motors without variable frequency drives.
- C. Provide magnetic starter with HAND-OFF-AUTO switch (fast-slow-off-auto for two speed motors) in cover for starters that require interlocks or remote control. Provide magnetic starters, with auxiliary contacts, buttons, and switches.

- D. Each three phase, 60 Hz motor shall be provided with magnetic starter with hand -off-automatic switch.
- E. Other motors shall be provided with a manual starter with on-off switch.
- F. Control relay for each starter shall be for operation on 120V, 1 phase. Provide Transformer of sufficient capacity within starter case.
- G. Provide inverse time limit overload and under voltage protection in each leg and with pilot lights. Provide red and green on/off pilot lights
- H. Provide nameplates with engraved white lettering to designate area and equipment served.
- I. Furnish for all single speed motors, 25 hp and above, 95 percent power factor correction capacitors. Capacitors shall be in NEMA enclosure of the same rating as the motor's starter.

**PART 3 - EXECUTION (NOT APPLICABLE)**

**END OF SECTION**

H:\Y0586.00\DOC\SPEC\2025\_02-20\_IFB\220513\_COMMON MOTOR REQUIREMENTS.DOC

## SECTION 220514 - COMMON CONTROL PANEL REQUIREMENTS

### PART 1 - GENERAL

#### 1.1 RELATED DOCUMENTS

- A. Certain requirements common to all the mechanical and electrical trades (Fire Suppression, Plumbing, HVAC, Electrical, and Tele/Data) are specified in Division 20. To avoid repetition, they are not repeated in each relevant Division and Section. However, these requirements are applicable to the work of this Section and are hereby incorporated by reference.
- B. Drawings and general provisions of the Contract, including General and Supplementary Conditions and Division 01 Specification Sections, apply to this Section.

#### 1.2 SUMMARY

- A. Section includes:
  - 1. General control panel requirements.
  - 2. Programmable Logic Controllers
  - 3. General Control Panels (not PLC)

#### 1.3 DEFINITIONS

- A.  $I_n$ : Nominal Discharge Current.
- B. IP Ingress Protection
- C. MCOV: Maximum Continuous Operating Voltage.
- D. Mode(s), also Modes of Protection: The pair of electrical connections where the VPR applies.
- E. MOV: Metal Oxide Varistor; an electronic component with a significant non-ohmic current-voltage characteristic.
- F. NEMA National Electrical Manufacturers Association
- G. OCPD: Overcurrent Protective Device.
- H. SCCR: Short Circuit Current Rating.
- I. SPD: Surge Protective Device.
- J. VPR: Voltage Protection Rating.

#### 1.4 COORDINATION

- A. Short-circuit current rating (SCCR) is the amount of available fault current that an electrical component or equipment can safely withstand, when properly applied.
- B. SCCRs are required to be marked on industrial control panels and other equipment in accordance with the product standards and the NEC.
- C. Comply with UL 508A to ensure the quality and construction of the control panels

- D. For proper protection and compliance with NEC 110.10, the short-circuit current rating for a component or equipment shall be equal to or greater than the available short-circuit current where the equipment is being installed in the system.
- E. Failure to provide equipment with adequate SCCR will not be accepted. Further, panels furnished with inadequate SCCR ratings shall be changed or upgraded by the contractor at no cost to the owner.

#### 1.5 ACTION SUBMITTALS

- A. Product Data: For each type of product indicated. For each control panel on the project, include the withstand rating of said control panel.
- B. Equipment Label Schedule: Include a listing of all equipment to be labeled with the proposed content for each label.
- C. Panel numbering scheme.
- D. Panel Schedules: For each system to include in maintenance manuals.

### PART 2 - PRODUCTS

#### 2.1 GENERAL

- A. Coordinate features of all control panels, installed units, and accessory devices. Assure these to be compatible with the following:
  - 1. Electrical Contractor final short circuit analysis regarding available fault current to each control panel furnished under this section.
  - 2. Furnish control panels with adequate withstand rating based on item 1 above
  - 3. Each control panel shall be labeled to identify the rated SCCR
  - 4. Each control panel shall be labeled to identify the NEMA rating
  - 5. All control panels shall comply with the latest edition of the National Electric Code
  - 6. Ratings and characteristics of supply circuit and required control sequence.
  - 7. Ambient and environmental conditions of installation location.

#### 2.2 NEMA RATINGS FOR ENCLOSURES

- A. Unless specified in other Division 22 sections, NEMA ratings for enclosures shall be as follows:

GENERAL PANEL NEMA RATINGS		
<b>Service:</b>	Division 22 Equipment	<b>Material:</b> Per section
Location	NEMA Rating	Other
Outdoors	4X	Stainless Steel
Indoors	2	Per vendor - notes 1 and 2
Outdoor locations subject to flood	6	Stainless Steel
Mechanical equipment rooms	12	Carbon Steel - note 3
Penthouse mechanical areas	12	Carbon Steel - note 3
Localized areas exposed to washdown	4X	Stainless Steel
Parking garages	4	Stainless Steel or Plastic - notes 1 and 2
Kitchens	4X	Stainless Steel
Vivarium Washrooms	4X	Stainless Steel
General Vivarium	4X	Stainless Steel For rooms subject to washdown
pH system rooms	12	Plastic or Stainless Steel - notes 1 and 2
RODI rooms	4	Splash proof
Hazardous locations	Type 7 or type 9 Explosion Proof	Rating for condition
<b>NOTES:</b> 1. Comply with owner standards 2. Plastic enclosures only allowed with owner approval 3. Factory Powder coated, or primed and painted with epoxy paint		

## 2.3 PANEL SCCR RATING

- A. Short Circuit Current Ratings are listed below. The Division 22 spec sections may otherwise stipulate a SCCR rating in each specific equipment section.
  1. Example: Division 22, water packaged booster pumps specifies specific SCCR rating for water booster pump control panels.
    - a. Consequently, the SCCR rating specified in equipment subsections takes precedence over the rating specified in this spec section
- B. At general bid phase of project, the Short Surge Current Rating shall include:
  1. All single-phase control panels greater than 120 VAC for the project are to be a minimum of 14 kA RMS rating
  2. All single-phase control panels less than or equal to 120 VAC for the project are to be a minimum of 10kA RMS rating
  3. All three-phase system control panels not stipulated in Division 22 equipment sections or identified on the drawings shall carry a minimum default rating of 65,000 amperes RMS.

## 2.4 GENERAL CONTROL PANELS DESIGN

- A. The following systems may use General Circuit Control logic or may use Programmable Logic Control, i.e., PLC's may be used at the contractor's discretion
  1. Hot water circulation pumps for general use
  2. Point of use pump stations

3. Point of use single phase equipment

## 2.5 PROGRAMMABLE LOGIC CONTROLLERS (PLC)

- A. The following systems require associated control panels to be PLC

1. Sewage pump stations
2. Hot water circulation pumps in a medical facility
3. All others identified on the drawings and not listed above
4. All PLC control panels shall have the ability to communicate common field-bus protocols, (BACnet, Modbus, Profibus, and LON), via optional communication expansion card installed inside controller.
5. All PLC's shall communicate with the Building Management System

## PART 3 - EXECUTION (NOT APPLICABLE)

END OF SECTION

## **SECTION 220516 - EXPANSION FITTINGS AND LOOPS FOR PLUMBING PIPING**

### **PART 1 - GENERAL**

#### **1.1 RELATED DOCUMENTS**

- A. Certain requirements common to all the mechanical and electrical trades (Fire Suppression, Plumbing, HVAC, Electrical, and Tele/Data) are specified in Division 20. To avoid repetition, they are not repeated in each relevant Division and Section. However, these requirements are applicable to the work of this Section and are hereby incorporated by reference.
- B. Drawings and general provisions of the Contract, including General and Supplementary Conditions and Division 01 Specification Sections, apply to this Section.

#### **1.2 SUMMARY**

- A. Section Includes:
  - 1. Performance requirements
  - 2. Pack-less expansion joints
  - 3. Grooved-joint expansion joints.
  - 4. Alignment guides and anchors.

#### **1.3 ACTION SUBMITTALS**

- A. Product Data: For each type of product.
  - 1. Design Calculations: Calculate requirements for thermal expansion of piping systems and for selecting and designing expansion joints, loops, and swing connections.
  - 2. Anchor Details: Detail fabrication of each anchor indicated. Show dimensions and methods of assembly and attachment to building structure.
  - 3. Alignment Guide Details: Detail field assembly and attachment to building structure.
  - 4. Schedule: Indicate type, manufacturer's number, size, material, pressure rating, end connections, and location for each expansion joint.

#### **1.4 INFORMATIONAL SUBMITTALS**

- A. Welding certificates.

#### **1.5 CLOSEOUT SUBMITTALS**

- A. Maintenance Data: For expansion joints to include in maintenance manuals.

#### **1.6 QUALITY ASSURANCE**

- A. Welding Qualifications: Qualify procedures and personnel according to AWS D1.1/D1.1M, "Structural Welding Code - Steel."

- B. Pipe and Pressure-Vessel Welding Qualifications: Qualify procedures and operators according to ASME Boiler and Pressure Vessel Code.

## PART 2 - PRODUCTS

### 2.1 PERFORMANCE REQUIREMENTS

- A. Compatibility: Products shall be suitable for piping service fluids, materials, working pressures, and temperatures.
- B. Capability: Products to absorb 200 percent of maximum axial movement between anchors.

### 2.2 PACKLESS EXPANSION JOINTS

#### A. Rubber Union Connector Expansion Joints

1. **Manufacturers:** Subject to compliance with requirements, available manufacturers offering products that may be incorporated into the Work. Provide products by one of the following, or approved equal.
  - a. Flex-Hose Co., Inc. <http://www.specagent.com/Lookup?uid=123456974007>
  - b. Flexicraft Industries <http://www.specagent.com/Lookup?uid=123456974008>
  - c. General Rubber Corporation
  - d. Or Approved Equal. <http://www.specagent.com/Lookup?uid=123456974009>
2. Material: Twin reinforced-rubber spheres with external restraining cables.
3. Minimum Pressure Rating: 150 psig at 170 deg F, unless otherwise indicated.
4. End Connections for NPS 2 and Smaller: Threaded.

#### B. Flexible-Hose Packless Expansion Joints

1. **Manufacturers:** Subject to compliance with requirements, available manufacturers offering products that may be incorporated into the Work. Provide products by one of the following, or approved equal.
  - a. Flex Pression Ltd. <http://www.specagent.com/Lookup?uid=123456973953>
  - b. Flex-Hose Co., Inc. <http://www.specagent.com/Lookup?uid=123456973958>
  - c. Flexicraft Industries
  - d. Or Approved Equal. <http://www.specagent.com/Lookup?uid=123456973954>
2. Description: Manufactured assembly with inlet and outlet elbow fittings and two flexible-metal-hose legs joined by long-radius, 180-degree return bend or center section of flexible hose.
3. Flexible Hose: Corrugated-metal inner hoses and braided outer sheaths.
4. Expansion Joints for Copper Tubing NPS 2 and Smaller: Copper-alloy fittings with solder-joint end connections.
  - a. Bronze hoses and double-braid bronze sheaths with 700 psig at 70 deg F and 500 psig at 450 deg F ratings.

5. Expansion Joints for Copper Tubing NPS 2-1/2 to NPS 4: Copper-alloy fittings with threaded flanged or mechanical end connections.
    - a. Stainless-steel hoses and double-braid, stainless-steel sheaths with 420 psig at 70 deg F and 315 psig at 450 deg F ratings.
  6. Expansion Joints for Steel Piping NPS 2 and Smaller: Carbon-steel fittings with threaded end connections.
    - a. Stainless-steel hoses and double-braid, stainless-steel sheaths with 700 psig at 70 deg F and 515 psig at 600 deg F ratings.
  7. Expansion Joints for Steel Piping NPS 2-1/2 to NPS 6: Carbon-steel fittings with flanged welded end connections.
    - a. Stainless-steel hoses and double-braid, stainless-steel sheaths with 275 psig at 70 deg F and 200 psig at 600 deg F ratings.
  8. Expansion Joints for Steel Piping NPS 8 to NPS 12: Carbon-steel fittings with flanged welded end connections.
    - a. Stainless-steel hoses and double-braid, stainless-steel sheaths with 165 psig at 70 deg F and 120 psig at 600 deg F ratings.
  9. Expansion Joints for Steel Piping NPS 14 and Larger: Carbon-steel fittings with flanged welded end connections.
    - a. Stainless-steel hoses and double-braid, stainless-steel sheaths with 165 psig at 70 deg F and 120 psig at 600 deg F ratings.
- C. Metal-Bellows Packless Expansion Joints
1. Manufacturers: Subject to compliance with requirements, available manufacturers offering products that may be incorporated into the Work include, but are not limited to the following:
    - a. Flex-Hose Co., Inc. <http://www.specagent.com/Lookup?uid=123456973964>
    - b. <http://www.specagent.com/Lookup?uid=123456973965>. Flexicraft Industries
    - c. <http://www.specagent.com/Lookup?uid=123456973966>. Flex-Weld, Inc.
    - d. Or Approved Equal.
  2. Standards: ASTM F 1120 and EJMAs "Standards of the Expansion Joint Manufacturers Association, Inc."
  3. Type: Circular, corrugated bellows with external tie rods.
  4. Minimum Pressure Rating: 150 psig, unless otherwise indicated.
  5. Configuration: Single joint with base and double joint with base class (es), unless otherwise indicated.
  6. Expansion Joints for Copper Tubing: Single- or multi- ply phosphor-bronze bellows, copper pipe ends, and brass shrouds.
    - a. End Connections for Copper Tubing NPS 2 and Smaller: Solder joint or threaded.
    - b. End Connections for Copper Tubing NPS 2-1/2 to NPS 4: Solder joint or threaded.
    - c. End Connections for Copper Tubing NPS 5 and Larger: Flanged.

7. Expansion Joints for Steel Piping: Single- or multi- ply stainless-steel bellows, steel pipe ends, and carbon-steel shroud.
  - a. End Connections for Steel Pipe NPS 2 and Smaller: Threaded.
  - b. End Connections for Steel Pipe NPS 2-1/2 and Larger: Welded.
- D. Externally Pressurized Metal-Bellows Packless Expansion Joints
  1. **Manufacturers:** Subject to compliance with requirements, available manufacturers offering products that may be incorporated into the Work. Provide products by one of the following, or approved equal.
    - a. Flex-Hose Co., Inc.
    - b. Hyspan Precision Products, Inc.  
<http://www.specagent.com/Lookup?uid=123456974015>
    - c. Mason Industries, Inc.
    - d. Or Approved Equal. <http://www.specagent.com/Lookup?uid=123456974016>
  2. Minimum Pressure Rating: 150 psig 200 psig, unless otherwise indicated.
  3. Description
    - a. Totally enclosed, externally pressurized, multi-ply, stainless-steel bellows isolated from fluid flow by an internal pipe sleeve.
    - b. Carbon-steel housing.
    - c. Drain plugs and lifting lug for NPS 3 and larger.
    - d. Bellows shall have operating clearance between the internal pipe sleeves and the external shrouds.
    - e. Joints shall be supplied with a built-in scale to confirm the starting position and operating movement.
    - f. Joint Axial Movement: 6 inches of compression and 1 inch of extension.
  4. Permanent Locking Bolts: Set locking bolts to maintain joint lengths during installation. Temporary welding tabs that are removed after installation in lieu of locking bolts are not acceptable.
  5. End Connection Configuration: Flanged; one raised, fixed and one floating flange.
- E. Rubber Packless Expansion Joints
  1. **Manufacturers:** Subject to compliance with requirements, available manufacturers offering products that may be incorporated into the Work. Provide products by one of the following, or approved equal.
    - a. Flex-Hose Co., Inc. <http://www.specagent.com/Lookup?uid=123456973991>
    - b. Garlock Seating Technologies <http://www.specagent.com/Lookup?uid=123456973994>
    - c. General Rubber Corporation
    - d. Or Approved Equal. <http://www.specagent.com/Lookup?uid=123456973995>
  2. Standards: ASTM F 1123 and FSA's "Technical Handbook: Non-Metallic Expansion Joints and Flexible Pipe Connectors."

3. Material: Fabric-reinforced rubber complying with FSA-PSJ-703.
4. Arch Type: Single or multiple arches with external control rods.
5. Spherical Type: Single or multiple spheres with external control rods.
6. Minimum Pressure Rating for NPS 1-1/2 to NPS 4: 150 psig at 220 deg F.
7. Minimum Pressure Rating for NPS 5 and NPS 6: 140 psig at 200 deg F.
8. Minimum Pressure Rating for NPS 8 to NPS 12: 140 psig at 180 deg F.
9. Material for Fluids Containing Acids, Alkalis, or Chemicals: Butyl rubber Chlorosulfonyl-polyethylene rubber Ethylene-propylene-diene terpolymer rubber.
10. Material for Fluids Containing Gas, Hydrocarbons, or Oil: Buna-N Chlorosulfonated polyethylene synthetic rubber.
11. Material for Water: Butyl rubber Buna-N Chlorosulfonated polyethylene synthetic rubber Chlorosulfonyl-polyethylene rubber Ethylene-propylene-diene terpolymer rubber Natural rubber.
12. End Connections: Full-faced, integral steel flanges with steel retaining rings.

## 2.3 GROOVED-JOINT EXPANSION JOINTS

1. **Manufacturers:** Subject to compliance with requirements, available manufacturers offering products that may be incorporated into the Work. Provide products by one of the following, or approved equal.
  - a. Anvil International <http://www.specagent.com/Lookup?uid=123456974003>
  - b. Shurjoint Piping Products <http://www.specagent.com/Lookup?uid=123456974004>
  - c. Victaulic Company
  - d. Or Approved Equal. <http://www.specagent.com/Lookup?uid=123456974005>
- B. Description: Factory-assembled expansion joint made of several grooved-end pipe nipples, couplings, and grooved joints.
- C. Standard: AWWA C606, for grooved joints.
- D. Nipples: Galvanized, ASTM A 53/A 53M, Schedule 40, Type E or S, steel pipe with grooved ends.
- E. Couplings: Flexible type for steel-pipe dimensions. Include ferrous housing sections, Buna-N gasket suitable for diluted acid, alkaline fluids, and cold and hot water ethylene-propylene-diene terpolymer rubber gasket suitable for cold and hot water, and bolts and nuts.

## 2.4 ALIGNMENT GUIDES AND ANCHORS

- A. Alignment Guides
  1. **Manufacturers:** Subject to compliance with requirements, available manufacturers offering products that may be incorporated into the Work. Provide products by one of the following, or approved equal.
    - a. Flex-Hose Co., Inc. <http://www.specagent.com/Lookup?uid=123456973981>
    - b. Flexicraft Industries <http://www.specagent.com/Lookup?uid=123456973982>

- c. Mason Industries, Inc.
    - d. Or Approved Equal. <http://www.specagent.com/Lookup?uid=123456973989>
  - 2. Description: Steel, factory-fabricated alignment guide, with bolted two-section outer cylinder and base for attaching to structure; with two-section guiding slider for bolting to pipe.
- B. Anchor Materials:
- 1. Steel Shapes and Plates: ASTM A 36/A 36M.
  - 2. Bolts and Nuts: ASME B18.10 or ASTM A 183, steel hex head.
  - 3. Washers: ASTM F 844, steel, plain, flat washers.
  - 4. Mechanical Fasteners: Insert-wedge-type stud with expansion plug anchor for use in hardened Portland cement concrete, with tension and shear capacities appropriate for application.
    - a. Stud: Threaded, zinc-coated carbon steel.
    - b. Expansion Plug: Zinc-coated steel.
    - c. Washer and Nut: Zinc-coated steel.

### **PART 3 - EXECUTION**

#### **3.1 EXPANSION JOINT INSTALLATION**

- A. Install expansion joints of sizes matching sizes of piping in which they are installed.
- B. Install metal-bellows expansion joints according to EJMA's "Standards of the Expansion Joint Manufacturers Association, Inc."
- C. Install rubber packless expansion joints according to FSA-PSJ-703.
- D. Install grooved-joint expansion joints to grooved-end steel piping.

#### **3.2 PIPE LOOP AND SWING CONNECTION INSTALLATION**

- A. Install pipe loops cold-sprung in tension or compression as required to partly absorb tension or compression produced during anticipated change in temperature.
- B. Connect risers and branch connections to mains with at least four pipe fittings, including tee in main.
- C. Connect risers and branch connections to terminal units with at least four pipe fittings, including tee in riser.
- D. Connect mains and branch connections to terminal units with at least four pipe fittings, including tee in main.

#### **3.3 ALIGNMENT-GUIDE AND ANCHOR INSTALLATION**

- A. Install alignment guides to guide expansion and to avoid end-loading and torsional stress.
- B. Install one guide(s) on each side of pipe expansion fittings and loops. Install guides nearest to expansion joint not more than four pipe diameters from expansion joint.

- C. Attach guides to pipe, and secure guides to building structure.
- D. Install anchors at locations to prevent stresses from exceeding those permitted by ASME B31.9 and to prevent transfer of loading and stresses to connected equipment.
- E. Anchor Attachments:
  - 1. Anchor Attachment to Steel Pipe: Attach by welding. Comply with ASME B31.9 and ASME Boiler and Pressure Vessel Code: Section IX, "Welding and Brazing Qualifications."
  - 2. Anchor Attachment to Copper Tubing: Attach with pipe hangers. Use MSS SP-69, Type 24; U bolts bolted to anchor.
- F. Fabricate and install steel anchors by welding steel shapes, plates, and bars. Comply with ASME B31.9 and AWS D1.1/D1.1M.
  - 1. Anchor Attachment to Steel Structural Members: Attach by welding.
  - 2. Anchor Attachment to Concrete Structural Members: Attach by fasteners. Follow fastener manufacturer's written instructions.
- G. Use grout to form flat bearing surfaces for guides and anchors attached to concrete.

END OF SECTION

H:\Y0586.00\DOC\SPEC\2025\_02-20\_IFB\220516\_EXPANSION FITTINGS AND LOOPS.DOC

## **SECTION 220517 - SLEEVES AND SLEEVE SEALS FOR PLUMBING PIPING**

### **PART 1 - GENERAL**

#### **1.1 RELATED DOCUMENTS**

- A. Certain requirements common to all the mechanical and electrical trades (Fire Suppression, Plumbing, HVAC, Electrical, and Tele/Data) are specified in Division 20. To avoid repetition, they are not repeated in each relevant Division and Section. However, these requirements are applicable to the work of this Section and are hereby incorporated by reference.
- B. Drawings and general provisions of the Contract, including General and Supplementary Conditions and Division 01 Specification Sections, apply to this Section.

#### **1.2 SUMMARY**

- A. Section includes:
  - 1. Sleeves.
  - 2. Stack-sleeve fittings.
  - 3. Sleeve-seal systems.
  - 4. Sleeve-seal fittings.
  - 5. Grout.
  - 6. Firestopping.

#### **1.3 PENETRATION FIRE STOPPING ACTION SUBMITTALS**

- A. Product Data: For each type of product indicated.

#### **1.4 DESCRIPTION OF THE FIRE STOPPING WORK OF THIS SECTION**

- A. Only tested fire stop systems shall be used in specific locations as follows:
  - 1. Fire stop or fire seal plumbing penetrations for the passage of piping, and other equipment through fire-rated vertical barriers (walls and partitions), horizontal barriers (floor/ceiling assemblies), and vertical service shaft walls and partitions.
  - 2. Repetitive plumbing penetrations in fire-rated floor assemblies. Penetrations exist for the installation of tubs, showers, aerators and other plumbing fixtures.

#### **1.5 DEFINITIONS**

- A. Firestopping: Material or combination of materials used to retain integrity of fire-rated construction by maintaining an effective barrier against the spread of flame, smoke, and hot gases through penetrations in fire rated wall and floor assemblies.

## 1.6 REFERENCES

- A. Test Requirements: ASTM E 814, "Standard Method of Fire Tests of Through Penetration Fire Stops".
- B. Test Requirements: UL 1479, "Fire Tests of Through-Penetration Fire Stops".
- C. Underwriters Laboratories (UL) of Northbrook, IL publishes tested systems in their "FIRE RESISTANCE DIRECTORY" that is updated annually.
  - 1. UL Fire Resistance Directory
    - a. Fire Stop Devices (XHJI).
    - b. Fire Resistance Ratings (BXRH).
    - c. Through-Penetration Fire Stop Systems (XHEZ).
    - d. Fill, Voids, or Cavity Material (XHHW).
    - e. Forming Materials (XHKU).
- D. International Fire Stop Council Guidelines for Evaluating Fire Stop Systems Engineering Judgments
- E. Inspection Requirements: ASTM E 2174, "Standard Practice for On-site Inspection of Installed Fire Stops".
- F. ASTM E 84, "Standard Test Method for Surface Burning Characteristics of Building Materials".
- G. All major building codes: ICBO, SBCCI, BOCA, and IBC.
- H. NFPA 101 - Life Safety Code.

## 1.7 QUALITY ASSURANCE

- A. A manufacturer's direct representative (not distributor or agent) to be on-site during initial installation of fire stop systems to train appropriate contractor personnel in proper selection and installation procedures. This will be done per manufacturer's written recommendations published in their literature and drawing details.
- B. Fire stop System installation must meet requirements of ASTM E814 or UL1479 tested assemblies that provide a fire rating equal to that of construction being penetrated.
- C. Proposed fire stop materials and methods shall conform to applicable governing codes having local jurisdiction.
- D. Fire stop Systems do not reestablish the structural integrity of load bearing partitions/assemblies or support live loads and traffic. Installer shall consult the structural engineer prior to penetrating any load bearing assembly.
- E. For those fire stop applications that exist for which no UL tested system is available through a manufacturer, a manufacturer's engineering judgment derived from similar UL system designs or other tests will be submitted to local authorities having jurisdiction for their review and approval prior to installation. Engineering judgment drawings must follow requirements set forth by the International Fire Stop Council.

**1.8 SUBMITTALS**

- A. Submit Product Data: Manufacturer's specifications and technical data for each material including the composition and limitations, documentation of UL fire stop systems to be used and manufacturer's installation instructions.
- B. Manufacturer's engineering judgment identification number and drawing details when no UL system is available for an application. Engineering judgment must include both project name and contractor's name who will install fire stop system as described in drawing.
- C. Submit material safety data sheets provided with product delivered to jobsite.

**1.9 INSTALLER QUALIFICATIONS**

- A. Engage an experienced Installer who is certified, licensed, or otherwise qualified by the fire stopping manufacturer as having been provided the necessary training to install manufacturer's products per specified requirements. A manufacturer's willingness to sell its fire stopping products to the Contractor or to an Installer engaged by the Contractor does not in itself confer qualification on the buyer.
- B. Installation Responsibility: Assign installation of through-penetration fire stop systems and fire-resistive joint systems in Project to a single sole source fire stop specialty contractor.
- C. The work is to be installed by a contractor with at least one of the following qualifications:
  - 1. FM 4991 Approved Contractor.
  - 2. UL Approved Contractor.
  - 3. Hilti 3rd, Fire Spec, Accredited Fire Stop Specialty Contractor
- D. Firm with not less than three (3) years' experience with fire stop installation.
- E. Successfully completed not less than three (3) comparable scale projects using similar systems.

**1.10 DELIVERY, STORAGE, AND HANDLING**

- A. Deliver materials undamaged in manufacturer's clearly labeled, unopened containers, identified with brand, type, and UL label where applicable.
- B. Coordinate delivery of materials with scheduled installation date to allow minimum storage time at jobsite.
- C. Store materials under cover and protect from weather and damage in compliance with manufacturer's requirements.
- D. Comply with recommended procedures, precautions or remedies described in material safety data sheets as applicable.
- E. Do not use damaged or expired materials.

**1.11 PROJECT CONDITIONS**

- A. Do not use materials that contain flammable solvents.
- B. Scheduling
  - 1. Schedule installation of CAST IN PLACE firestop devices after completion of floor formwork, metal form deck, or composite deck but before placement of concrete.

2. Schedule installation of other fire stopping materials after completion of penetrating item installation but prior to covering or concealing of openings.
- C. Verify existing conditions and substrates before starting work. Correct unsatisfactory conditions before proceeding.
- D. Weather conditions: Do not proceed with installation of fire stop materials when temperatures exceed the manufacturer's recommended limitations for installation printed on product label and product data sheet.
- E. During installation, provide masking and drop cloths to prevent fire stopping materials from contaminating any adjacent surfaces.

## PART 2 - PRODUCTS

### 2.1 SLEEVES

- A. Cast-Iron Wall Pipes: Cast or fabricated of cast or ductile iron and equivalent to ductile-iron pressure pipe, with plain ends and integral water stop unless otherwise indicated.
- B. Galvanized-Steel Wall Pipes: ASTM A 53/A 53M, Schedule 40, with plain ends and welded steel collar; zinc coated.

- C. Galvanized-Steel-Pipe Sleeves: ASTM A 53/A 53M, Type E, Grade B, Schedule 40, zinc coated, with plain ends.
- D. Galvanized-Steel-Sheet Sleeves: 0.0239 inch minimum thickness; round tube closed with welded longitudinal joint.

## 2.2 STACK-SLEEVE FITTINGS

- A. **Manufacturers:** Subject to compliance with requirements, available manufacturers offering products that may be incorporated into the Work. Provide products by one of the following, or approved equal.
  - 1. Smith, Jay R. Mfg. Co.
  - 2. Zurn Industries, LLC
  - 3. OR Approved Equal.
- B. Description: Manufactured, cast-iron sleeve with integral clamping flange. Include clamping ring, bolts, and nuts for membrane flashing.
  - 1. Under deck Clamp: Clamping ring with setscrews.

## 2.3 SLEEVE-SEAL SYSTEMS

- A. **Manufacturers:** Subject to compliance with requirements, provide products by one of the following or equal:
  - 1. Calpico, Inc.
  - 2. **Link-Seal.**
  - 3. Metraflex Company (The)
  - 4. Or Approved Equal.
- B. Description: Modular sealing-element unit, designed for field assembly, for filling annular space between piping and sleeve.
  - 1. Sealing Elements: EPDM-rubber for non-hydrocarbon situations and NBR where hydrocarbons are used. Use interlocking links shaped to fit surface of pipe. Include type and number required for pipe material and size of pipe.
  - 2. Pressure Plates: Polymer Plastic or Stainless steel.
  - 3. Connecting Bolts and Nuts: Carbon Steel with corrosion resistant coating or Stainless steel of length required to secure pressure plates to sealing elements.

## 2.4 SLEEVE-SEAL FITTINGS

- A. **Manufacturers:** Subject to compliance with requirements, provide products by the following or approved equal:
  - 1. HOLDRITE
- B. Description: Manufactured plastic, sleeve-type, water stop assembly made for imbedding in concrete slab or wall. Unit has plastic or rubber water stop collar with center opening to match piping OD.

**2.5 GROUT**

- A. Standard: ASTM C 1107/C 1107M, Grade B, post-hardening and volume-adjusting, dry, hydraulic-cement grout.
- B. Characteristics: Non-shrink; recommended for interior and exterior applications.
- C. Design Mix: 5000-psi, 28-day compressive strength.
- D. Packaging: Premixed and factory packaged.

**2.6 FIRE STOPPING AND FIRE RATED CONSTRUCTION**

- A. Division 07 of the project specifications shall govern. for materials and architectural drawings for listed penetration details.
- B. Details and further description of fire stopping systems in this section are supplementary to division 7
  - 1. Components: See Division 7 of the general specifications for fire stopping required components. Division 22 supplementary details further clarify requirements.
  - 2. Provide fire stopping composed of components that are compatible with each other, the substrates forming openings, and the items, if any, penetrating the fire stopping under conditions of service and application, as demonstrated by the fire stopping manufacturer based on testing and field experience.
- C. Approved Manufacturers: Subject to compliance with requirements, through-penetration firestop systems that may be incorporated into the work, provide products by one of the following, or approved equal.
  - 1. 3M
  - 2. Hilti
  - 3. Fire-spec.
- D. Basis of Design: Hilti Inc.
  - 1. Approved Products or approved equal:
    - a. Hilti CFS-CID MD Metal Deck Cast-in Device
    - b. Hilti CID-U Cast-in Device
    - c. Hilti CFS-DID Drop-in Device
    - d. Hilti FS ONE Max Firestop Sealant
    - e. Hilti CFP-ES EndoShield Endothermic Mat
- E. Performance Requirements
  - 1. Penetrations in Fire-Resistance-Rated Walls: Provide penetration firestopping with ratings determined per ASTM E 814 or UL 1479, based on testing at a positive pressure differential of 0.01-inch wg (2.49 Pa).
    - a. Fire-resistance-rated walls include fire walls, fire-barrier walls, smoke-barrier walls and fire partitions.
    - b. F-Rating: Not less than the fire-resistance rating of constructions penetrated.

2. Penetrations in Horizontal Assemblies: Provide penetration firestopping with ratings determined per ASTM E 814 or UL 1479, based on testing at a positive pressure differential of 0.01-inch wg (2.49 Pa).
    - a. Horizontal assemblies include floors, floor/ceiling assemblies and ceiling membranes of roof/ceiling assemblies.
    - b. F-Rating: At least 1 hour, but not less than the fire-resistance rating of constructions penetrated.
    - c. T-Rating: At least 1 hour, but not less than the fire-resistance rating of constructions penetrated except for floor penetrations within the cavity of a wall. See IBC Chapter 7 to verify when the T-Rating needs to equal the F-Rating
    - d. T-Ratings shall be achieved by utilizing a Low Bio Persistent Endothermic Mat incorporating foil scrim on both sides
    - e. Basis of Design: Hilti CFP-ES Endo-Shield High Temperature Endothermic Mat. LBC Red List Compliance
  3. Penetrations in Smoke Barriers: Provide penetration firestopping with ratings determined per UL 1479.
    - a. L-Rating: Not exceeding 5.0 cfm/sq. ft. (0.025 cu. m/s per sq. m) of penetration opening at 0.30-inch wg (74.7 Pa) at both ambient and elevated temperatures.
    - b. Utilize Hilti CFS-MSL (Modular Sleeve) or CP 653 Cable Pathway Device with appropriate system to achieve L-Rating.
  4. Containment floors including penthouses:
    - a. Install a firestop system with a W-Rating or a note stating it impedes the passage of water if requested by the designer or owner.
  5. For penetrations involving insulated piping, provide through-penetration firestop systems not requiring removal of insulation.
- F. Provide components for each fire stopping system that are needed to install fill material. Use only components specified by the fire stopping manufacturer and approved by the qualified testing agency for the designated fire-resistance-rated systems.
- G. Sealants, caulking and devices shall be rated the same as the wall rating in which they are used.
- H. Do not install penetrations through head-of-wall firestop joint systems. This results in the loss of the assembly rating, possibly leading to firestop special inspection failures.
- I. Do not install penetrations through head-of-wall firestop joint systems. This results in the loss of the assembly rating, possibly leading to firestop special inspection failures.

### **PART 3 - EXECUTION**

#### **3.1 SLEEVE INSTALLATION**

- A. Install sleeves for piping passing through penetrations in floors, partitions, roofs, and walls.

- B. For sleeves that will have sleeve-seal system installed, select sleeves of size large enough to provide 1 inch annular clear space between piping and concrete slabs and walls.
- C. Sleeves are not required for core-drilled holes.
- D. Sleeves are not required for drywall partitions. the contractor may elect to install sleeves, either removable or permanent at their discretion.
  - 1. All penetrations that require fire stopping sealants or UL rated barriers are to comply with division 7 for all requirements.
- E. Install sleeves in concrete floors, concrete roof slabs, and concrete walls as new slabs and walls are constructed.
  - 1. When sleeves are used, cut sleeves to length for mounting flush with both surfaces.
- F. Containment floor requirements
  - 1. Extend sleeves installed in floors 2 inches above finished floor level in the following areas:
    - a. Mechanical equipment areas
    - b. Mechanical Penthouses
    - c. Vivariums
    - d. Operating rooms
    - e. Biosafety Level 3 or higher laboratories
    - f. Interstitial spaces housing mechanical equipment and piping above any of the above spaces 1-5.
    - g. All laboratory floors
    - h. In the floor slab above all computer rooms
      - 1) In the floor slab above all clean rooms
      - 2) Clean rooms
  - 2. Using grout, seal the space outside of sleeves in slabs and walls without sleeve-seal system.
- G. Install sleeves for pipes passing through interior partitions.
  - 1. Cut sleeves to length for mounting flush with both surfaces.
  - 2. Install sleeves that are large enough to provide 1/4 inch annular clear space between sleeve and pipe or pipe insulation.
  - 3. Seal annular space between sleeve and piping or piping insulation; use joint sealants appropriate for size, depth, and location of joint. Comply with requirements for sealants specified in Division 07.
- H. Fire-Barrier Penetrations: Maintain indicated fire rating of walls, partitions, ceilings, and floors at pipe penetrations. Seal pipe penetrations with fire stop materials. Comply with requirements for fire stopping specified in Division 07.

### 3.2 STACK-SLEEVE-FITTING INSTALLATION

- A. Install stack-sleeve fittings in new slabs as slabs are constructed.

1. Install fittings that are large enough to provide 1/4 inch annular clear space between sleeve and pipe or pipe insulation.
  2. Secure flashing between clamping flanges for pipes penetrating floors with membrane waterproofing. Comply with requirements for flashing specified in Division 07.
  3. Install section of cast-iron soil pipe to extend sleeve to 2 inches above finished floor level.
  4. Extend cast-iron sleeve fittings below floor slab as required to secure clamping ring if ring is specified.
  5. Using grout, seal the space around outside of stack-sleeve fittings.
- B. Fire-Barrier Penetrations: Maintain indicated fire rating of floors at pipe penetrations. Seal pipe penetrations with fire stop materials. Comply with requirements for fire stopping specified in Division 07.

### 3.3 SLEEVE-SEAL-SYSTEM INSTALLATION

- A. Install sleeve-seal systems in sleeves in exterior concrete walls and slabs-on-grade at service piping entries into building.
- B. Select type, size, and number of sealing elements required for piping material and size and for sleeve ID or hole size. Position piping in center of sleeve. Center piping in penetration, assemble sleeve-seal system components, and install in annular space between piping and sleeve. Tighten bolts against pressure plates that cause sealing elements to expand and make a watertight seal.

### 3.4 SLEEVE-SEAL-FITTING INSTALLATION

- A. Install sleeve-seal fittings in new walls and slabs as they are constructed.
- B. Assemble fitting components of length to be flush with both surfaces of concrete slabs and walls. Position water-stop flange to be centered in concrete slab or wall.
- C. Secure nailing flanges to concrete forms.
- D. Using grout, seal the space around outside of sleeve-seal fittings.

### 3.5 SLEEVE AND SLEEVE-SEAL SCHEDULE

- A. Use sleeves and sleeve seals for the following piping-penetration applications:
  1. Exterior Concrete Walls above Grade:
    - a. Piping Smaller Than NPS 6: Galvanized-steel wall sleeves. Sleeve-seal fittings.
    - b. Piping NPS 6 and Larger: Galvanized-steel wall sleeves. Insert material.
  2. Exterior Concrete Walls below Grade:
    - a. Piping Smaller Than NPS 6: Galvanized-steel wall sleeves with sleeve-seal system sleeve-seal fittings
      - 1) Select sleeve size to allow for 1 inch annular clear space between piping and sleeve for installing sleeve-seal system.
    - b. Piping NPS 6: Galvanized-steel wall sleeves with sleeve-seal system

- 1) Select sleeve size to allow for 1 inch annular clear space between piping and sleeve for installing sleeve-seal system.
  3. Concrete Slabs-on-Grade:
    - a. Piping Smaller Than NPS 6: Galvanized-steel wall sleeves with sleeve-seal system Galvanized-steel-pipe sleeves with sleeve-seal system
      - 1) Select sleeve size to allow for 1 inch annular clear space between piping and sleeve for installing sleeve-seal system.
    - b. Piping NPS 6: Galvanized-steel-wall sleeves with sleeve-seal system.
      - 1) Select sleeve size to allow for 1 inch annular clear space between piping and sleeve for installing sleeve-seal system.
  4. Concrete Slabs above Grade:
    - a. Piping Smaller Than NPS 6 Insert pipe size: Galvanized-steel-pipe sleeves
    - b. Piping NPS 6 Insert pipe size and Larger: Galvanized-steel-pipe sleeves Stack-sleeve fittings
  5. Interior Partitions:
    - a. Piping Smaller Than NPS 6: Galvanized-steel-pipe sleeves.
    - b. Piping NPS 6 and Larger: Galvanized-steel-sheet sleeves.

### 3.6 FIRE STOPPING INSTALLATION

- A. Division 7 requirements govern
- B. Manufacturer's Field Services: Contractor to ensure a manufacturer's direct representative is on-site during initial installation of firestop systems to train appropriate contractor personnel in proper selection and installation procedures. Training will be done per manufacturer's written recommendations published in their literature and drawing details.

\*\*CONTACT HILTI FOR CURRENT UL-CLASSIFIED SYSTEM OR ENGINEER JUDGMENT DRAWING: 800-879-6000

**NOTES:**

1. Jobsite conditions of each through-penetration firestop system must meet ALL details of the UL-Classified System selected.
2. If jobsite conditions do not match any UL-classified systems in the schedules above, contact Hilti for alternative systems or Engineer Judgment Drawings - 800-879-8000
3. Where more than one applicable UL-Classified System is listed in the schedules, choose the UL System which is most economical for each through-penetration firestop system.
4. Coordinate work with other trades to assure that penetration opening sizes are appropriate for penetrant locations, and vice versa.
5. For 3-hour rated gypsum walls, contact Hilti for a UL-classified system or engineer judgment drawing - 800-879-8000.

## **SECTION 220518 - ESCUTCHEONS FOR PLUMBING PIPING**

### **PART 1 - GENERAL**

#### **1.1 RELATED DOCUMENTS**

- A. Certain requirements common to all the mechanical and electrical trades (Fire Suppression, Plumbing, HVAC, Electrical, and Tele/Data) are specified in Division 20. To avoid repetition, they are not repeated in each relevant Division and Section. However, these requirements are applicable to the work of this Section and are hereby incorporated by reference.
- B. Drawings and general provisions of the Contract, including General and Supplementary Conditions and Division 01 Specification Sections, apply to this Section.

#### **1.2 SUMMARY**

- A. Section includes:
  - 1. Escutcheons.
  - 2. Floor plates.

#### **1.3 ACTION SUBMITTALS**

- A. Product Data: For each type of product indicated.

### **PART 2 - PRODUCTS**

#### **2.1 ESCUTCHEONS**

- A. One-Piece, Cast-Brass Type: With polished, chrome-plated finish and setscrew fastener.
- B. One-Piece, Deep-Pattern Type: Deep-drawn, box-shaped brass with chrome-plated finish and spring-clip fasteners.
- C. One-Piece, Stamped-Steel Type: With chrome-plated finish and spring-clip fasteners.
- D. Split-Casting Brass Type: With polished, chrome-plated finish and with concealed hinge and setscrew.
- E. Split-Plate, Stamped-Steel Type: With chrome-plated finish, concealed and exposed-rivet hinge, and spring-clip fasteners.

#### **2.2 FLOOR PLATES**

- A. Split Floor Plates: Cast brass with concealed hinge.

## **PART 3 - EXECUTION**

### **3.1 INSTALLATION**

- A. Install escutcheons for piping penetrations of walls, ceilings, and finished floors.
- B. Install escutcheons with ID to closely fit around pipe, tube, and insulation of insulated piping and with OD that completely covers opening.
  - 1. Escutcheons for New Piping:
    - a. Piping with Fitting or Sleeve Protruding from Wall: One-piece, deep-pattern type.
    - b. Chrome-Plated Piping: One-piece, cast-brass or split-casting brass type with polished, chrome-plated finish.
    - c. Insulated Piping: One-piece, stamped-steel type or split-plate, stamped-steel type with concealed hinge or split-plate, stamped-steel type with exposed-rivet hinge.
    - d. Bare Piping at Wall and Floor Penetrations in Finished Spaces: One-piece, cast-brass or split-casting brass type with polished, chrome-plated finish.
    - e. Bare Piping at Ceiling Penetrations in Finished Spaces: One-piece, cast-brass or split-casting brass type with polished, chrome-plated finish.
    - f. Bare Piping in Unfinished Service Spaces: One-piece, cast-brass or split-casting brass type with polished, chrome-plated finish.
    - g. Bare Piping in Equipment Rooms: One-piece, cast-brass or split-casting brass type with polished, chrome-plated finish.
  - 2. Escutcheons for Existing Piping:
    - a. Chrome-Plated Piping: Split-casting brass type with polished, chrome-plated finish.
    - b. Insulated Piping: Split-plate, stamped-steel type with concealed or exposed-rivet hinge.
    - c. Bare Piping at Wall and Floor Penetrations in Finished Spaces: Split-casting brass type with polished, chrome-plated finish.
    - d. Bare Piping at Ceiling Penetrations in Finished Spaces: Split-casting brass type with polished, chrome-plated finish.
    - e. Bare Piping in Unfinished Service Spaces: Split-casting brass type with polished, chrome-plated finish.
    - f. Bare Piping in Equipment Rooms: Split-plate, stamped-steel type with concealed or exposed-rivet hinge.
- C. Install floor plates for piping penetrations of equipment-room floors.
- D. Install floor plates with ID to closely fit around pipe, tube, and insulation of piping and with OD that completely covers opening.
  - 1. New Piping: One-piece, floor-plate type.
  - 2. Existing Piping: Split-casting, floor-plate type.

3.2 FIELD QUALITY CONTROL

- A. Replace broken and damaged escutcheons and floor plates using new materials.

END OF SECTION

H:\Y0586.00\DOC\SPEC\2025\_02-20\_IFB\220518\_ESCUTCHEONS.DOC

## **SECTION 220519 - METERS AND GAUGES FOR PLUMBING PIPING**

### **PART 1 - GENERAL**

#### **1.1 RELATED DOCUMENTS**

- A. Certain requirements common to all the mechanical and electrical trades (Fire Suppression, Plumbing, HVAC, Electrical, and Tele/Data) are specified in Division 20. To avoid repetition, they are not repeated in each relevant Division and Section. However, these requirements are applicable to the work of this Section and are hereby incorporated by reference.
- B. Drawings and general provisions of the Contract, including General and Supplementary Conditions and Division 01 Specification Sections, apply to this Section.

#### **1.2 SUMMARY**

- A. Section includes:
  - 1. Bimetallic-actuated thermometers.
  - 2. Filled-system thermometers.
  - 3. Liquid-in-glass thermometers.
  - 4. Thermowells.
  - 5. Pressure gauges.
  - 6. Gauge attachments.
  - 7. Test plugs.
  - 8. Test-plug kits.
  - 9. Sight flow indicators.
  - 10. Water meters.

#### **1.3 ACTION SUBMITTALS**

- A. Product Data: For each type of product indicated.

#### **1.4 INFORMATIONAL SUBMITTALS**

- A. Product Certificates: For each type of meter and gauge, from manufacturer.

#### **1.5 CLOSEOUT SUBMITTALS**

- A. Operation and Maintenance Data: For meters and gauges to include in operation and maintenance manuals.

## PART 2 - PRODUCTS

### 2.1 BIMETALLIC-ACTUATED THERMOMETERS

- A. **Manufacturers:** Subject to compliance with requirements, available manufacturers offering products that may be incorporated into the Work. Provide products by one of the following or approved equal.
  - 1. Ashcroft Inc.
  - 2. Marsh Bellofram
  - 3. Watts, a Watts Water Technologies company
  - 4. Or Approved Equal.
- B. Standard: ASME B40.3, Grade A.
- C. Case: 304 stainless steel; hermetically sealed per ASME B40.3; ingress protection IP65; external reset slotted hex head on back of case
- D. Dial: White aluminum, dished, with black markings.
- E. Connector Type(s): Plain, NPT, Union
- F. Connector Size: 1/2 inch, with ASME B1.1 screw threads.
- G. Stem: 0.25 or 0.375 inch in diameter; stainless steel.
- H. Window: Flat Instrument Glass.
- I. Ring: Stainless steel.
- J. Element: Bimetal helix.
- K. Pointer: black aluminum.
- L. Accuracy: Plus or minus 1.0 percent full scale value per ASME B40.3, Grade 1A
- M. Basis of Design: WIKA Model 55

### 2.2 FILLED-SYSTEM THERMOMETERS

- A. Direct-Mounted, Stainless steel case, Vapor-Actuated Thermometers:
  - 1. **Manufacturers:** Subject to compliance with requirements, available manufacturers offering products that may be incorporated into the Work. Provide products by one of the following or approved equal.
    - a. Ashcroft.
    - b. Marsh Bellofram.
    - c. Trerice, HO Co.
    - d. Or Approved Equal.
  - 2. Standard: ASME B40.200.
  - 3. Case: Stainless steel, 4.5 inches.
  - 4. Dial: White coated aluminum with black markings.
  - 5. Pointer: Adjustable, balance, aluminum with matte black finish.

6. Window: Glass or Lexan.
7. Ring: Stainless steel.
8. Connector Type(s): Union, Thermowell, or plain bulb. At system plain or union bulb. Copper or 316 stainless steel
9. Thermal System: Liquid-filled bulb in copper-plated steel, aluminum, or brass stem and of length to suit installation.
  - a. Design for Thermowell Installation: Bare stem.
10. Accuracy: Plus or minus 1 percent of scale range.
11. Basis of Design: WIKA Instruments T1.V series

B. Remote-Mounted, Stainless steel, Vapor-Actuated Thermometers:

1. **Manufacturers:** Subject to compliance with requirements, available manufacturers offering products that may be incorporated into the Work. Provide products by one of the following, or approved equal
  - a. Ashcroft.
  - b. Marsh Bellofram.
  - c. Terice, HO Co.
  - d. Or Approved Equal.
2. Standard: ASME B40.200.
3. Case: Stainless steel, 4.5.
4. Dial: White coated aluminum with black markings.
5. Pointer: Adjustable, balance, aluminum with matte black finish
6. Window: Glass or Lexan
7. Ring: Stainless steel.
8. Connector Type(s): Plain, union, or thermowell.
9. Thermal System: Plain or Union. Copper or 316 stainless steel
  - a. Design for Thermowell Installation: Bare stem.
10. Accuracy: Plus or minus 1 percent of scale range.
11. Basis of Design: WIKA Instruments T1. V Series

2.3 LIQUID-IN-GLASS THERMOMETERS

A. Stainless -Case, Compact-Style, Liquid-in-Glass Thermometers:

1. **Manufacturers:** Subject to compliance with requirements, provide products by the following or approved equal:
  - a. Ashcroft.
  - b. Marsh Bellofram.
  - c. Terice, HO Co.

- d. Or Approved Equal.
  2. Standard: ASME B40.200.
  3. Case: Plastic; 6 inch nominal size.
  4. Case Form: Back angle straight unless otherwise indicated.
  5. Tube: Glass with magnifying lens and blue organic liquid.
  6. Tube Background: Non-reflective with permanently etched scale markings graduated in deg F and deg C.
  7. Window: Glass or plastic.
  8. Stem: brass: length to suit installation.
    - a. Design for Thermowell Installation: Bare stem.
  9. Connector: 3/4 inch, with ASME B1.1 screw threads.
  10. Accuracy: Plus or minus 1.0 percent of span.
  11. Basis of Design: WIKA Instruments 213 series
- B. Stainless Case, Industrial-Style, Liquid-in-Glass Thermometers:
1. **Manufacturers:** Subject to compliance with requirements, available manufacturers offering products that may be incorporated into the Work include, products by one of the following, or approved equal
    - a. Marsh Bellofram.
    - b. Watts.
    - c. Weiss.
    - d. Or Approved Equal.
  2. Standard: ASME B40.200.
  3. Case: Plastic: 7 inch or 9 inch nominal size unless otherwise indicated.
  4. Case Form: Adjustable angle unless otherwise indicated.
  5. Tube: Glass with magnifying lens and blue or red organic liquid.
  6. Tube Background: Non-reflective aluminum with permanently etched scale markings graduated in deg F and deg C.
  7. Window: Glass.
  8. Stem: Brass. 3.5 inches, 6.0 inches, 9.0 inches, or 12.0 inches
    - a. Design for Thermowell Installation: Bare stem.
  9. Connector: 1-1/4 inches, with ASME B1.1 screw threads.
  10. Accuracy: Plus or minus 1.0 percent for scale range.

## 2.4 THERMOWELLS

### A. General

1. Standard: ASME B40.200.

2. Description: Pressure-tight, socket-type fitting made for insertion into piping tee fitting.
3. Material for Use with Copper Tubing: CNR or CUNI.
4. Material for Use with Steel Piping: CRES CSA.
5. Type: Stepped shank unless straight or tapered shank is indicated.
6. External Threads: NPS 1/2, NPS 3/4, or NPS 1, ASME B1.20.1 pipe threads.
7. Internal Threads: 1/2 inch, 3/4 inch, and 1 inch, with ASME B1.1 screw threads.
8. Bore: Diameter required to match thermometer bulb or stem.
9. Insertion Length: Length required matching thermometer bulb or stemming.
10. Lagging Extension: Include on thermowells for insulated piping and tubing.
11. Bushings: For converting size of thermowells internal screw thread to size of thermometer connection.

B. Heat-Transfer Medium: Mixture of graphite and glycerin.

## 2.5 PRESSURE GAUGES

A. Direct-Mounted, Stainless-Case, Dial-Type Pressure gauges:

1. **Manufacturers:** Subject to compliance with requirements, available manufacturers offering products that may be incorporated into the Work. Provide products by one of the following, or approved equal.
  - a. AMETEK, Inc.
  - b. Ashcroft Inc.
  - c. Watts, a Watts Water Technologies company
  - d. Or Approved Equal.
2. Standard: ASME B40.100.
3. Case: Stainless steel, 4.5 inches.
4. Pressure-Element Assembly: Bourdon tube unless otherwise indicated.
5. Pressure Connection: Brass, with NPS 1/4, ASME B1.20.1 pipe threads and bottom-outlet type unless back-outlet type is indicated.
6. Movement: Mechanical, with link to pressure element and connection to pointer.
7. Dial: White aluminum with stop pin and black lettering.
8. Pointer: Black aluminum.
9. Window: Snap-in poly carbonate
10. Accuracy: Plus or minus 1.0 percent of span (ASME B40.100, grade 1A)
11. Basis of Design: WIKA Instruments series 111.25 CT

B. Remote-Mounted, Stainless-Case, Dial-Type Pressure gauges:

1. **Manufacturers:** Subject to compliance with requirements, provide products by one of the following available manufacturers offering products that may be incorporated into the Work. Provide products by one of the following, or approved equal.

- a. AMETEK, Inc.
  - b. Ashcroft Inc.
  - c. Watts; a Watts Water Technologies company
  - d. Or Approved Equal.
2. Standard: ASME B40.100.
  3. Case: Stainless steel, 4.5 inches.
  4. Pressure-Element Assembly: Bourdon tube unless otherwise indicated.
  5. Pressure Connection: Brass, with NPS 1/4 NPS 1/4 or NPS 1/2 NPS 1/2, ASME B1.20.1 pipe threads and bottom-outlet type unless back-outlet type is indicated.
  6. Movement: Mechanical, with link to pressure element and connection to pointer.
  7. Dial: White aluminum with stop pin and black lettering.
  8. Pointer: Black aluminum
  9. Window: Snap-in polycarbonate
  10. Accuracy: Grade B, plus or minus 2 percent of middle half of scale range.

## 2.6 GAGE ATTACHMENTS

- A. Snubbers: ASME B40.100, brass; with NPS 1/4 NPS 1/4 or NPS 1/2 NPS 1/2, ASME B1.20.1 pipe threads and piston porous-metal-type surge-dampening device. Include extension for use on insulated piping.
  1. Basis of Design: WIKA Instrument model 910.12.X00
- B. Valves: Brass ball Brass or stainless-steel needle, with NPS 1/4 NPS 1/4 or NPS 1/2 NPS 1/2, ASME B1.20.1 pipe threads.

## 2.7 TEST PLUGS

- A. **Manufacturers:** Subject to compliance with requirements, available manufacturers offering products that may be incorporated into the Work. Provide products by one of the following, or approved equal.
  1. National Meter, Inc.
  2. Watts, a Watts Water Technologies company
  3. Weiss Instruments, Inc.
  4. Or Approved Equal.
- B. Description: Test-station fitting made for insertion into piping tee fitting.
- C. Body: Brass or stainless steel with core inserts and gasketed and threaded cap. Include extended stem on units to be installed in insulated piping.
- D. Thread Size: NPS 1/4 or NPS 1/2, ASME B1.20.1 pipe thread.
- E. Minimum Pressure and Temperature Rating: 500 psig at 200 deg F.
- F. Core Inserts: Chlorosulfonated polyethylene synthetic and EPDM self-sealing rubber.

## 2.8 TEST-PLUG KITS

- A. **Manufacturers:** Subject to compliance with requirements, provide products by one of the following available manufacturers offering products that may be incorporated into the Work. Provide products by one of the following, or approved equal.
  - 1. National Meter, Inc.
  - 2. Terrice, H. O. Co.
  - 3. Weiss Instruments, Inc.
  - 4. **Or Approved Equal.**
- B. Furnish two test-plug kit(s) containing two thermometer(s), one pressure gauge and adapter, and carrying case. Thermometer sensing elements, pressure gauge, and adapter probes shall be of diameter to fit test plugs and of length to project into piping.
- C. Low-Range Thermometer: Small, bimetallic insertion type with 1- to 2-inch- diameter dial and tapered-end sensing element. Dial range shall be at least 25 to 125 deg F.
- D. High-Range Thermometer: Small, bimetallic insertion type with 1- to 2-inch-diameter dial and tapered-end sensing element. Dial range shall be at least 0 to 220 deg F.
- E. Pressure gauge: Small, Bourdon-tube insertion type with 2- to 3-inch-diameter dial and probe. Dial range shall be at least 0 to 200 psig.
- F. Carrying Case: Metal or plastic, with formed instrument padding.

## 2.9 SIGHT FLOW INDICATORS

- A. **Manufacturers:** Subject to compliance with requirements, available manufacturers offering products that may be incorporated into the Work. Provide products by one of the following, or approved equal
  - 1. Dwyer Instruments, Inc.
  - 2. Emerson Process Management Rosemount Division
  - 3. Ernst Flow Industries
  - 4. **Or Approved Equal.**
- B. Description: Piping inline-installation device for visual verification of flow.
- C. Construction: Bronze or stainless-steel body, with sight glass and ball, flapper, or paddle wheel indicator, and threaded or flanged ends.
- D. Minimum Pressure Rating: 125 psig.
- E. Minimum Temperature Rating: 200 deg F.
- F. End Connections for NPS 2 and Smaller: Threaded.
- G. End Connections for NPS 2-1/2 and Larger: Flanged.

## 2.10 WATER METERS

- A. General

1. Contractor to verify the exact model and size with the utility company prior to the purchase of any water meter. Furnish the meter that complies with utility standards for the area.
2. Refer to the Plumbing Drawings, Water Meter Schedule sheet for meter types and locations. Note, schedule sheet takes priority.
3. Coordinate all remote reading devices with the utility company.
4. Verify type of water meter required by the utility company and authorities having jurisdiction. Comply with the utility company priority meter manufacturer.
5. Control Connections: Connect control wiring in accordance with Division 26 for control-voltage electrical power cables.
6. Electrical Connections: Connect wiring in accordance with Division 26 low-voltage electrical power conductors and cables.
7. Ground equipment in accordance with Division 26 for grounding and bonding for electrical systems.
8. Install electrical devices furnished by manufacturer, but not factory mounted, in accordance with NFPA 70 and NECA 1.

**B. Communication Devices**

1. For each municipal water meter provided, or where the municipal water is sub metered for irrigation, coordinate with the service provider: furnish and install the following:
  - a. Remote Registration System Encoder Type: Comply with AWWA C707; modified with signal-transmitting assembly, low-voltage connecting wiring, and remote register assembly. Comply with utility company requirements for municipal installations.
  - b. Data System to be capable of transmitting data using AMR/AMI technology.
2. For each building submeter for "water consumption measurement" requirements, which may require installation of water meters for submetering, with service provider: furnish and install the following:
  - a. Remote Registration System Encoder Type: Comply with AWWA C707; modified with signal-transmitting assembly, low-voltage connecting wiring, and remote register assembly. Comply with utility company requirements for municipal installations.
  - b. Data System to be capable of transmitting data using AMR/AMI technology.
3. For each building submeter for "water consumption measurement" requirements, which may require installation of water meters for submetering for the building owner or for the tenant, furnish and install the following:
  - a. For sub-metering applications, provide pulse, 4-20, or compatible protocol such that remote reading devices report to the BMS (building management system)
  - b. Each submeter shall have a local readout in addition to BMS protocol.

**C. Available Manufacturers: Subject to compliance with water service provider requirements, and specification requirements, manufacturers offering product that may be incorporated into the Work include, products by one of the following, or approved equal**

1. ABB

2. Badger
3. Neptune
4. Or Approved Equal.

A. Displacement-Type Water Meters

Displacement-Type Water Meters				
Service:	Water		Material:	Bronze
Service Limits	Primary ANSI Class:	150		
Description	Type	Positive Displacement.		
	Capacity and Flows	See schedule sheet		
	Pressure Limit	150 psig Maximum Operating Pressure		
	Temperature Limit	Up to 120 °F		
	Standard	AWWA C700. NSF 61 listed		
	Body Design	Nutating disc; totalization meter.		
	Registration	In gallons or cubic feet or as required by utility company.		
	Isolation valves	Gate, Ball or Butterfly per pipe class. Conform to local plumbing code for valve types		
	Connections	Threaded or flanged		
	Mounting	Mount per manufacturer’s standard. Furnish and install on manufacturer’s skid or field floor support brackets		
	Pressure Gauges	Inlet/outlet pressure indicators.		
Electrical	None Provide 110VAC if AMI/AMR system is provided			
Equivalency	Badger Neptune Mueller Co			

B. Turbine-Type Water Meters

Turbine-Type Water Meters				
Service:	Water		Material:	Bronze
Service Limits	Primary ANSI Class:	150		
Description	Type	Turbine.		
	Capacity and Flows	See schedule sheet		
	Pressure Limit	Pressure Rating: 150 psig, for pressure above 150psig furnish class 250 meters.		
	Standard	AWWA C701. NSF 61 listed		
	Body Design	Turbine; totalization meter.		
	Registration	In gallons or cubic feet or as required by utility company.		
	Isolation valves	Gate, Ball or Butterfly per pipe class. Conform to local plumbing code for valve types		
	Connections	Threaded or flanged		
	Mounting	Mount per manufacturer’s standard. Furnish and install on manufacturer’s skid or field floor support brackets		
	Pressure Gauges	Inlet/outlet pressure indicators.		
Electrical	None Provide 110VAC if AMI/AMR system is provided			
Equivalency	Badger Neptune Mueller Co			

C. Compound-Type Water Meters

Compound-Type Water Meters			
Service:	Water	Material:	Bronze
Service Limits	Primary ANSI Class:	150	
Description	Type	Compound.	
	Capacity and Flows	See schedule sheet	

Compound-Type Water Meters			
Service:	Water		Material: Bronze
Service Limits	Primary ANSI Class:	150	
	Pressure Limit	Pressure Rating: 150 psig, for pressure above 150psig furnish class 250 meters.	
	Standard	AWWA C702. NSF 61 listed	
	Body Design	With integral mainline and bypass meters; totalization meter.	
	Registration	In gallons or cubic feet or as required by utility company.	
	Isolation valves	Gate, Ball or Butterfly per pipe class. Conform to local plumbing code for valve types	
	Connections	Flanged	
	Mounting	Mount per manufacturer's standard. Furnish and install on manufacturer's skid or field floor support brackets	
		Pressure Gauges	Inlet/outlet pressure indicators.
Electrical	None Provide 110VAC if AMI/AMR system is provided		
Equivalency	Badger Neptune Mueller Co		

#### D. Ultrasonic-Type Water Meters

Ultra-Sonic-Type Water Meters			
Service: Water		Material:	Bronze, Stainless steel, Engineered polymer. Epoxy-coated ductile iron.
Service Limits	Primary ANSI Class:	150	
Description	Type	Ultrasonic	
	Capacity and Flows	See schedule sheet	
	Pressure Limit	Pressure Rating: 150 psig, for pressure above 150psig furnish class 250 meters.	
	Standard	Ultrasonic open flow tube; totalization meter	
	Body Design	Ultrasonic open flow tube; totalization meter	
	Registration	In gallons or cubic feet or as required by utility company.	
	Isolation valves	Gate, Ball or Butterfly per pipe class. Conform to local plumbing code for valve types	
	Connections	Thread or flanged	
	Mounting	Mount per manufacturer's standard. Furnish and install on manufacturer's skid or field floor support brackets	
	Pressure Gauges	Inlet/outlet pressure indicators.	
Electrical	Provide 110VAC, duplex outlet		
Equivalency	Badger		
	Neptune		
	Mueller Co		

### PART 3 - EXECUTION

#### 3.1 INSTALLATION

- A. Install thermowells with socket extending one-third of pipe diameter and in vertical position in piping tees.
- B. Install thermowells of sizes required to match thermometer connectors. Include bushings if required to match sizes.
- C. Install thermowells with extension on insulated piping.
- D. Fill thermowells with heat-transfer medium.
- E. Install direct-mounted thermometers in thermowells and adjust vertical and tilted positions.
- F. Install remote-mounted thermometer bulbs in thermowells and install cases on panels; connect cases with tubing and support tubing to prevent kinks. Use minimum tubing length.

- G. Install direct-mounted pressure gauges in piping tees with pressure gauge located on pipe at the most readable position.
- H. Install remote-mounted pressure gauges on panel.
- I. Install valve and snubber in piping for each pressure gauge for fluids.
- J. Install test plugs in piping tees.
- K. Install thermometers in the following locations:
  - 1. Inlet and outlet of each water heater.
  - 2. Inlets and outlets of each water heat exchanger.
  - 3. Inlet and outlet of each hot-water storage tank.
  - 4. Inlet and outlet of each remote water chiller.
  - 5. Inlet and outlet of mixing valves.
  - 6. Inlet of hot water recirculation pumps.
  - 7. At each hot water balancing station.
- L. Install pressure gauges in the following locations:
  - 1. Building water service entrance into building.
  - 2. Inlet and outlet of each pressure-reducing valve.
  - 3. Suction and discharge of each water pump.
  - 4. Outlet of each hot water recirculation pump.
  - 5. Top of each water riser.
  - 6. Inlet and outlet of master mixing valves.

### 3.2 WATER METER INSTALLATION

- A. Contact the municipal water department in the jurisdictional area of this project.
- B. Coordinate the type and model water meter accepted by the municipality.
- C. Provide a shop drawing to the Engineer and Architect with approval documentation from the authority of the accepted water meter for the project.
- D. Pay all local fees, procure the water meter from the water department or from an approved vendor, and install the water meter. Carry out commissioning instructions required by the municipal water authority and plumbing inspector.
- E. Follow manufacturer's recommendation for installation and conform to the guidelines provided by the Installation and Operation Manual.
- F. The meter must be installed horizontally with the registration upright.
- G. A strainer should be used if any solids are present in the liquid.
- H. The meter should be installed with the flow arrow marking aligned with the liquid flow.

### 3.3 CONNECTIONS

- A. Install meters and gauges adjacent to machines and equipment to allow service and maintenance of meters, gauges, machines, and equipment.

### 3.4 ADJUSTING

- A. Adjust faces of meters and gauges to proper angle for best visibility.

### 3.5 THERMOMETER SCHEDULE

- A. Thermometers at inlet and outlet of each water heaters and heat exchangers shall be one of the following:
  - 1. Liquid-filled, sealed, bimetallic-actuated type.
  - 2. Direct-mounted, plastic-case, vapor-actuated type.
  - 3. Industrial-style, liquid-in-glass type.
  - 4. Test plug with chlorosulfonated polyethylene synthetic EPDM self-sealing rubber inserts.
- B. Thermometers at inlet and outlet of each hot-water storage tank shall be one of the following:
  - 1. Liquid-filled, sealed, bimetallic-actuated type.
  - 2. Direct-mounted, plastic-case, vapor-actuated type.
  - 3. Compact Industrial-style, liquid-in-glass type.
  - 4. Test plug with chlorosulfonated polyethylene synthetic EPDM self-sealing rubber inserts.
- C. Thermometers at inlet and outlet of each remote water chiller shall be one of the following:
  - 1. Liquid-filled, sealed, bimetallic-actuated type.
  - 2. Direct Remote-mounted, plastic-case, vapor-actuated type.
  - 3. Compact Industrial-style, liquid-in-glass type.
  - 4. Test plug with chlorosulfonated polyethylene synthetic EPDM self-sealing rubber inserts.
- D. Thermometers at inlet and outlet of each hot water recirculation pump shall be one of the following:
  - 1. Liquid-filled, sealed, bimetallic-actuated type.
  - 2. Direct remote-mounted, plastic-case, vapor-actuated type.
  - 3. Compact Industrial-style, liquid-in-glass type.
  - 4. Test plug with chlorosulfonated polyethylene synthetic EPDM self-sealing rubber inserts.
- E. Thermometers at inlet and outlet of each hot water Master Mixing Station shall be one of the following:
  - 1. Compact Industrial-style, liquid-in-glass type.
  - 2. Test plug with chlorosulfonated polyethylene synthetic EPDM self-sealing rubber inserts.
- F. Thermometer stems shall be of length to match thermowell insertion length.

3.6 THERMOMETER SCALE-RANGE SCHEDULE

- A. Scale Range for Cold-Water Piping: 0 to 140 deg F
- B. Scale Range for Hot-Water Piping: 0 to 200 deg F
- C. Scale Range for Cooled-Water Piping: 0 to 100 deg F
- D. Scale Range for Solar-Water Piping: 0 to 250 deg F

3.7 PRESSURE-GAGE SCHEDULE

- A. Pressure gauges at discharge of each water service into building shall be the following:
  - 1. Sealed, direct -mounted, plastic case.
- B. Pressure gauges at inlet and outlet of each water pressure-reducing valve shall be the following:
  - 1. Sealed, direct-mounted, plastic case.
  - 2. Test plug with chlorosulfonated polyethylene synthetic EPDM self-sealing rubber inserts.
- C. Pressure gauges at suction and discharge of each water pump shall be one of the following:
  - 1. Liquid-filled, sealed open-front, pressure-relief solid-front, pressure-relief, direct-mounted, metal case.
  - 2. Sealed, direct-mounted, plastic case.
  - 3. Test plug with chlorosulfonated polyethylene synthetic EPDM self-sealing rubber inserts.

3.8 PRESSURE-GAGE SCALE-RANGE SCHEDULE

- A. Scale Range for Water Service Piping: 0 to 160 psi and 0 to 1100 kPa.
- B. Scale Range for Water Piping: 0 to 100 psi.
- C. Scale Range for Water Piping: 0 to 160 psi.
- D. Scale Range for Water Piping: 0 to 200 psi.

## SECTION 220529 - HANGERS AND SUPPORTS FOR PLUMBING PIPING AND EQUIPMENT

### PART 1 - GENERAL

#### 1.1 RELATED DOCUMENTS

- A. Certain requirements common to all the mechanical and electrical trades (Fire Suppression, Plumbing, HVAC, Electrical, and Tele/Data) are specified in Division 20. To avoid repetition, they are not repeated in each relevant Division and Section. However, these requirements are applicable to the work of this Section and are hereby incorporated by reference.
- B. Drawings and general provisions of the Contract, including General and Supplementary Conditions and Division 01 Specification Sections, apply to this Section.

#### 1.2 SUMMARY

- A. Section includes:
  - 1. Metal pipe hangers and supports.
  - 2. Trapeze pipe hangers.
  - 3. Fiberglass pipe hangers.
  - 4. Metal framing systems.
  - 5. Fiberglass strut systems.
  - 6. Thermal-hanger shield inserts.
  - 7. Fastener systems.
  - 8. Pipe stands.
  - 9. Pipe positioning systems.
  - 10. Equipment supports.
  - 11. Miscellaneous materials.
  - 12. Acoustical isolation hangers and supports.
  - 13. Pipe and supports for buried cast iron or PVC piping.
  - 14. Bracing and support for cast iron drainage piping.
- B. Related Sections
  - 1. Division 05 for structural-steel shapes and plates for trapeze hangers for pipe and equipment supports.

#### 1.3 DEFINITIONS

- A. MSS: Manufacturers Standardization Society of the Valve and Fittings Industry Inc.

#### 1.4 PERFORMANCE REQUIREMENTS

- A. Delegated Design: Design trapeze pipe hangers and equipment supports, including comprehensive engineering analysis by a qualified professional engineer, using performance requirements and design criteria indicated.
- B. Structural Performance: Hangers and supports for plumbing piping and equipment shall withstand the effects of gravity loads and stresses within limits and under conditions indicated according to ASCE/SEI 7.
  - 1. Design supports for multiple pipes, including pipe stands, capable of supporting combined weight of supported systems, system contents, and test water.
  - 2. Design equipment supports capable of supporting combined operating weight of supported equipment and connected systems and components.
  - 3. Design seismic-restraint hangers and supports for piping and equipment and obtain approval from authorities having jurisdiction.

#### 1.5 ACTION SUBMITTALS

- A. Product Data: For each type of product indicated.
- B. Shop Drawings: Signed and sealed by a qualified professional engineer. Include Product Data for components Show fabrication and installation details and include calculations for the following:
  - 1. Trapeze pipe hangers.
  - 2. Metal framing systems.
  - 3. Fiberglass strut systems.
  - 4. Pipe stands.
  - 5. Equipment supports.
- C. Delegated-Design Submittal: For trapeze hangers indicated to comply with performance requirements and design criteria, including analysis data signed and sealed by the qualified professional engineer responsible for their preparation.
  - 1. Detailed fabrication and assembly of trapeze hangers.
  - 2. Design Calculations: Calculate requirements for designing trapeze hangers.

#### 1.6 INFORMATIONAL SUBMITTALS

- A. Welding certificates.

#### 1.7 QUALITY ASSURANCE

- A. Structural Steel Welding Qualifications: Qualify procedures and personnel according to AWS D1.1/D1.1M, "Structural Welding Code - Steel."
- B. Pipe Welding Qualifications: Qualify procedures and operators according to ASME Boiler and Pressure Vessel Code.

## **PART 2 - PRODUCTS**

### **2.1 METAL PIPE HANGERS AND SUPPORTS**

#### **A. Carbon-Steel Pipe Hangers and Supports**

1. Description: MSS SP-58, Types 1 through 58, factory-fabricated components.
2. Galvanized Metallic Coatings: Pre-galvanized or hot dipped.
3. Nonmetallic Coatings: Plastic coating, jacket, or liner.
4. Padded Hangers: Hanger with fiberglass or other pipe insulation pad or cushion to support bearing surface of piping.
5. Hanger Rods: Continuous-thread rod, nuts, and washer made of carbon steel.

#### **B. Stainless-Steel Pipe Hangers and Supports**

1. Description: MSS SP-58, Types 1 through 58, factory-fabricated components.
2. Padded Hangers: Hanger with fiberglass or other pipe insulation pad or cushion to support bearing surface of piping.
3. Hanger Rods: Continuous-thread rod, nuts, and washer made of stainless steel.

#### **C. Copper Pipe Hangers**

1. Description: MSS SP-58, Types 1 through 58, copper-coated-steel, factory-fabricated components.
2. Hanger Rods: Continuous-thread rod, nuts, and washer made of copper-coated steel or stainless steel.

- D. Note: hanger rods shall not be used in shear or compression applications. Threaded rod for tension use only.

### **2.2 TRAPEZE PIPE HANGERS**

- A. Description: MSS SP-69, Type 59, shop- or field-fabricated pipe-support assembly made from structural carbon-steel shapes with MSS SP-58 carbon-steel hanger rods, nuts, saddles, and U-bolts.

### **2.3 FIBERGLASS PIPE HANGERS**

#### **A. Clevis-Type, Fiberglass Pipe Hangers**

1. Description: Similar to MSS SP-58, Type 1, steel pipe hanger except hanger is made of fiberglass or fiberglass-reinforced resin.
2. Hanger Rods: Continuous-thread rod, washer, and nuts made of fiberglass polyurethane or stainless steel.

#### **B. Strap-Type, Fiberglass Pipe Hangers:**

1. Description: Similar to MSS SP-58, Type 9 or Type 10, steel pipe hanger except hanger is made of fiberglass-reinforced resin.
2. Hanger Rod and Fittings: Continuous-thread rod, washer, and nuts made of stainless steel.

## 2.4 METAL FRAMING SYSTEMS

### A. MFMA Manufacturer Metal Framing Systems

1. Description: Shop- or field-fabricated pipe-support assembly for supporting multiple parallel pipes.
2. Standard: MFMA-4.
3. Channels: Continuous slotted steel channel with inturned lips.
4. Channel Nuts: Formed or stamped steel nuts or other devices designed to fit into channel slot and, when tightened, prevent slipping along channel.
5. Hanger Rods: Continuous-thread rod, nuts, and washer made of carbon steel.
6. Metallic Coating: Electroplated zinc hot-dipped galvanized mill galvanized in-line, hot galvanized mechanically deposited zinc.

### B. Non-MFMA Manufacturer Metal Framing Systems

1. Description: Shop- or field-fabricated pipe-support assembly made of steel channels, accessories, fittings, and other components for supporting multiple parallel pipes.
2. Standard: Comply with MFMA-4.
3. Channels: Continuous slotted steel channel with inturned lips.
4. Channel Nuts: Formed or stamped steel nuts or other devices designed to fit into channel slot and, when tightened, prevent slipping along channel.
5. Hanger Rods: Continuous-thread rod, nuts, and washer made of carbon steel.
6. Coating: Zinc.

## 2.5 FIBERGLASS STRUT SYSTEMS

### A. Description: Shop- or field-fabricated pipe-support assembly similar to MFMA-4 for supporting multiple parallel pipes.

1. Channels: Continuous slotted fiberglass or other plastic channel with inturned lips.
2. Channel Nuts: Fiberglass nuts or other devices designed to fit into channel slot and, when tightened, prevent slipping along channel.
3. Hanger Rods: Continuous-thread rod, nuts, and washer made of fiberglass or stainless steel.

## 2.6 THERMAL-HANGER SHIELD INSERTS

- A. Insulation-Insert Material for Cold Piping: ASTM C 552, Type II cellular glass with 100-psig minimum compressive strength and vapor barrier.
- B. Insulation-Insert Material for Hot Piping: ASTM C 552, Type II cellular glass with 100-psig or ASTM C 591, Type VI, Grade 1 polyisocyanurate with 125-psig minimum compressive strength.
- C. For Trapeze or Clamped Systems: Insert and shield shall cover entire circumference of pipe.
- D. For Clevis or Band Hangers: Insert and shield shall cover lower 180 degrees of pipe.

- E. Insert Length: Extend 2 inches beyond sheet metal shield for piping operating below ambient air temperature.

## 2.7 FASTENER SYSTEMS

- A. Mechanical-Expansion Anchors: Insert-wedge-type, zinc-coated or stainless- steel anchors, for use in hardened Portland cement concrete; with pull-out, tension, and shear capacities appropriate for supported loads and building materials where used.
- B. Internally Threaded Anchor for Installation into Metal Deck: Concrete anchor shall be carbon steel, cast-in type with single internal thread and a zinc/yellow chromate plating. The anchor shall have a protective sleeve, steel flange with pre-drilled additional fastening holes and placement spring for attachment to metal deck, anchor is to be secured by clamping the deck between the steel flange and the protective plastic sleeve. The anchor shall bear the diameter and the manufacturer name on the hexagonal head.
- C. Internally Threaded Anchor for Installation into Wood Deck: Concrete anchor shall be carbon steel, cast-in type with single internal thread and a zinc/yellow chromate plating and contained by a plastic flange. The anchor shall have break-off nails for attachment to the surface of wood forms. Anchor will bear the diameter and manufacturer name on hexagonal head.

## 2.8 PIPE STANDS

- A. General Requirements for Pipe Stands: Shop- or field-fabricated assemblies made of manufactured corrosion-resistant components to support roof-mounted piping.
- B. Compact Pipe Stand: One-piece plastic unit with integral-rod roller, pipe clamps, or V-shaped cradle to support pipe, for roof installation without membrane penetration.
- C. Low-Type, Single-Pipe Stand: One-piece plastic or stainless-steel base unit with plastic roller, for roof installation without membrane penetration.
- D. High-Type, Single-Pipe Stand
  - 1. Description: Assembly of base, vertical and horizontal members, and pipe support, for roof installation without membrane penetration.
  - 2. Base: Stainless steel.
  - 3. Vertical Members: Two or more cadmium-plated-steel or stainless-steel, continuous-thread rods.
  - 4. Horizontal Member: Cadmium-plated-steel or stainless-steel rod with plastic or stainless-steel, roller-type pipe support.
- E. High-Type, Multiple-Pipe Stand
  - 1. Description: Assembly of bases, vertical and horizontal members, and pipe supports, for roof installation without membrane penetration.
  - 2. Bases: One or more; plastic.
  - 3. Vertical Members: Two or more protective-coated-steel channels.
  - 4. Horizontal Member: Protective-coated-steel channel.
  - 5. Pipe Supports: Galvanized-steel, clevis-type pipe hangers.

- F. Curb-Mounting-Type Pipe Stands: Shop- or field-fabricated pipe supports made from structural-steel shapes, continuous-thread rods, and rollers, for mounting on permanent stationary roof curb.

## 2.9 PIPE POSITIONING SYSTEMS

- A. Description: IAPMO PS 42, positioning system of metal brackets, clips, and straps for positioning piping in pipe spaces; for plumbing fixtures in commercial applications.

## 2.10 EQUIPMENT SUPPORTS

- A. Description: Welded, shop- or field-fabricated equipment support made from structural carbon-steel shapes.

## 2.11 MISCELLANEOUS MATERIALS

- A. Structural Steel: ASTM A 36/A 36M, carbon-steel plates, shapes, and bars; black and galvanized.
- B. Grout: ASTM C 1107, factory-mixed and -packaged, dry, hydraulic-cement, non-shrink and nonmetallic grout; suitable for interior and exterior applications.
  - 1. Properties: Non-staining, noncorrosive, and nongaseous.
  - 2. Design Mix: 5000-psi, 28-day compressive strength.

## 2.12 ACOUSTICAL ISOLATION HANGERS AND SUPPORTS

- A. All devices, hangers, and supports shall be manufactured components and not field devised methods.
- B. Acceptable Manufacturers:
  - 1. HOLDRITE, Silencer System
  - 2. LSP Products Group, Acousto-Plumb
- C. Closure Clamp: Sound rated variable closure clamp compatible with copper, PEX, and CPVC pipe, for either side or top mounting. Nylon material with TPR pads with UL94V-2 fire rating. Equal to HOLDRITE #250, #255, #280 and #285.
- D. Shower Head/Tub Spout Attachment Clamp: Acoustical clamp for attachment to in-wall framing system that will accept a drop eared 90-degree elbow. Shell shall be polypropylene with UL94V-2 fire rating with santoprene isolator material. Equal to HOLDRITE #265.
- E. Through Stud Isolator/Suspension Clamp: sound rated suspension hanger or through-hole isolator in wood or metal framing for copper, PEX, and CPVC piping. Shell shall be polypropylene with UL94V-2 fire rating with TPE isolator material. Equal to HOLDRITE #261, #262, #263, and #264.
- F. Acoustical Insulation Hanger Liner: TPE sound insulation lining to minimize occurrence of frictional noise caused by thermal expansion. Attaches to in-wall framing systems or around pipes to provide isolation from structure. Equal to HOLDRITE #270 and #271.
- G. Isolation Felt: Felt used for providing sound insulation between piping and hangers, made from polyester felt, with one side being pressure-sensitive adhesive. Equal to HOLDRITE #272-2 and 272-4.

- H. Vibration Isolation Pad: Engineered sound and neoprene vibration riser pad with 10-gauge steel bearing plate for use with riser clamps and equipment isolation, minimum of 3/4 inch thick. Parallel to HOLDRITE #275.

## 2.13 PIPE SUPPORT SYSTEMS FOR PLASTIC PIPING

- A. Hangers and supports shall be designed for PLASTIC PIPING SYSTEM tubing containing no sharp edges or surfaces.
- B. Drop ear bend supports or pre-manufactured wall supports/pipe positioning systems shall be utilized to provide a rigid installation between the vertical piping in the wall to the fixture supply.
- C. Bend supports shall be used at all locations where the tubing is making a 90-degree bend. This includes both within the ceiling and in the wall cavity.
- D. All thermoplastic pressure piping  $\leq 3$  inches and smaller shall be continuously supported by metallic CTS support channels or metallic V channels
  - 1. V Bottom channel comparable to B-line B3106V plastic pipe support channel, galvanized finish
  - 2. V channels support: V Bottom clevis hanger like B-line B3106 hanger, galvanized finish

## 2.14 HANGERS AND SUPPORTS FOR BURIED CAST IRON OR PVC PIPING

- A. General
  - 1. Underground piping where encountered by soil conditions unfit to support the pipe shall be supported from the structural slab.
  - 2. Pipe support materials are described in this section.
  - 3. Soil conditions shall be identified by the Geotechnical Engineer. Soil forces on the pipe shall be determined by the structural engineer.
  - 4. Refer to plumbing detail sheets for specifics regarding support of underslab piping.
  - 5. Underground Piping that requires support systems shall be shown on the drawings and/or described below:
    - a. All of the buried piping in this contract
    - b. The piping indicated on drawings.
    - c. Piping on the lowest level in areas shaded or crosshatched on the underground piping drawings.
- B. Description
  - 1. Piping is installed by trenching into the fill, and then putting hangers with support rods on the pipes as they are installed.
  - 2. Extend hanger rods upward. Anchor the top of the rod in the concrete slab per details indicated on the drawings.
  - 3. The hangers to be used shall be clamp-on type such that the pipe does not move within the hanger and shall be installed as the work progresses.
  - 4. Always keep hangers in a vertical position.

5. Install pipes as close as possible on the underside of the slab. It shall be carried at this elevation out to and through the exterior grade-beam (foundation wall) before dropping to meet the sewer elevation.
6. Hangers and rods shall be placed at two or four-foot centers maximum - based on verification with the Geotechnical Engineer.
7. Install a hanger at each fitting and change of direction.

**C. Backfill and Support**

1. The loading on the buried pipe shall be limited by one of the following two methods.
  - a. In all cases, place Pea Gravel 6 inches below the pipe and lay pipe solid with its hangers in place
  - b. Method 1
    - 1) Place Pea Gravel or Clean Sand Fill around and above the pipeline all the way up to the slab grade. The same fill shall be provided for 12 in. or more on both sides of the pipeline.
  - c. Method 2
    - 1) Foam Insulation Shear Plane—Sheets of 1 in. thick foam insulation shall be placed on both sides of the rods along the entire length of the pipework. Extend the foam down to and over the pipe to the centerline. Fasten the two sheets together at each hanger with wire ties.
    - 2) Backfill shall be placed on both sides of the insulation so that the rods and insulation remain vertical.
  - d. Just before the slab is poured, all the hanger rods must be present at the proper elevation and in alignment.

**D. Materials**

1. All material used to support the underground piping including rods, hangers, fasteners, clips, retainers and sundries shall be made of series 300 stainless steel.
2. Hanger Rods
  - a. Present pipe load data to the manufacturer to determine exact rod sizes.
  - b. Minimum rod sizes for 2- and 3-inch pipe shall be 1/2 inch.
  - c. Minimum rod sizes for 4- to 6-inch pipe shall be 5/8 inch.
  - d. Minimum rod sizes 8 inch and larger pipe shall be 3/4 inch.
  - e. All rods must be at least 304 stainless steel and fit with stainless steel rod to plate or rod to hanger U-bolt attachments.
3. Hangers: 304 stainless steel heavy duty and standard duty double bolt pipe clamps.
4. Rod attachment Concrete Plates: 304 stainless steel placed within rebar assembly for the concrete slab. See drawing details.

## 2.15 AREAS WHERE CORROSION RESISTANT PIPE SUPPORT SYSTEMS ARE REQUIRED

### A. General:

1. Unless required or documented elsewhere in the drawings or specifications, provide corrosion resistant support systems in schedule B chart below.
2. Support Systems: Use 316 stainless-steel and fiberglass pipe hangers and related support systems including rods, braces, shoes, racks, sleeves, anchors or guides, and miscellaneous connection hardware to structures.
3. Racked Piping: Use fiberglass or stainless-steel strut systems and stainless-steel or corrosion-resistant attachments for hostile environment applications.
4. The use of plastic-coated carbon steel or other metallic materials apart from stainless steel is prohibited except as noted.

### B. Schedule

Room Or Area	Limits	Pipe Type	Size	Material
Reclaim Water Equipment Rooms	All Piping Note 3	Thermoplastic Metallic	Greater than 2 inches	316 Stainless Steel
			Equal or less than 2 inches	316 Stainless Steel Fiberglass
Exposed Piping on Roofs	All Piping	Thermoplastic Metallic	Entire piping systems **LINK** note 7	316 Stainless Steel
Exterior Rack Piping	All Piping	Thermoplastic Metallic	Entire piping systems	316 Stainless Steel
Exterior or Open Parking Garages	All Piping	Thermoplastic Metallic	Entire piping systems	Pre galvanized Coated Steel, or Fiberglass supports **LINK** **LINK**
Pool Natatoriums	All Piping	Thermoplastic Metallic	1/2 to 8 inch including all utility services piped through the room	316 Stainless Steel Fiberglass
Pool Equipment Rooms	All Piping	Thermoplastic Metallic	1/2 to 8 inch including all utility services piped through the room	316 Stainless Steel Fiberglass
Clean Rooms	all Piping Note 5	Thermoplastic Metallic	1/2 to 8 inch including all utility services piped through the room	316 Stainless Steel 316 Stainless Steel
Kitchens Prep areas, Dish Washing and Scullery Rooms	All Piping Note 5	Thermoplastic Metallic	Greater than 2 inches	316 Stainless Steel
			Equal or less than 2 inches	316 Stainless Steel Fiberglass
Oceanfront Piers and Wharfs	All Piping exposed to open air Notes 1,2	Thermoplastic Metallic	Entire piping systems	316 Stainless Steel
Oceanfront/ Proximity Buildings Within 1 mile	All Piping Note 1, 2	Thermoplastic Metallic	Greater than 2 inches	316 Stainless Steel
			Equal or less than 2 inches	316 Stainless Steel Fiberglass
<div><div>1.</div><div>All piping exposed to outdoors shall have stainless steel attachments including roof blocks. Roof blocks similar to MAPA **LINK** or MIFAB supports with stainless trim</div></div> <div><div>2.</div><div>All piping in open Penthouses, Open or Louver Ventilated Mechanical Rooms in addition to piping in this chart</div></div> <div><div>3.</div><div>Only where hypochlorite’s are used in the process all exposed Indoor piping to have 316 stainless , thermoplastic, fiberglass **LINK** , Thermoplastic **LINK** , supports</div></div> <div><div>4.</div><div>For all noted above, use Stainless Steel threaded rod links. **LINK**</div></div> <div><div>5.</div><div>Exposed piping in the room. pipework above the room ceiling is exempt.</div></div> <div><div>6.</div><div>Pool Natatoriums and Pool equipment rooms</div></div> <div><div>7.</div><div>For areas designate in this chart, use 316 stainless steel for areas where seismic braces or restraints are installed,</div></div>				

## 2.16 BRACING AND SUPPORT FOR CAST IRON DRAINAGE PIPING

### A. General

1. Cast Iron piping with hub joints or no-hub pipe and fitting coupling joints that are exposed to thrust pressures greater than those recommended by the pipe and fitting manufacturer shall receive auxiliary support by means of appropriate bracing materials, as referred to in CISPI Designation 310-04, CIPSI Designation 301-09 and the CISPI Cast Iron Soil Pipe and Fittings Handbook. Auxiliary restraint products used shall be manufactured assemblies with thrust pressure rating adequate for the specific installation and shall be installed onto horizontal joints NPS 4 diameter and larger in size. Field devised methods and materials shall not be used to accomplish this application solution.

### B. Base Riser Supports, All Pipe Sizes

1. For above floor base of riser stacks supports exiting through wall: Support all base or riser stacks from floor at the lowest point of the sanitary or storm riser. Use an approved floor stanchion or base stand with approved saddle clamp.
2. For underslab base of riser stack supports: Place thrust block at base of long sweep or use pipe restraints to lock underground hubs at inlet and outlet of long sweep.
3. For horizontal to vertical base of riser supports at ceiling – base of riser stack: Support all base or riser stacks using mechanical strap supports across the long sweep or lateral fitting using restraints similar to HOLDRITE #117 series restraints **\*\*LINK\*\***
4. For all change all of direction support
  - a. No-Hub pip and/or Bell and Spigot pipe sizes greater than 4 inch, provide restraints for all drainpipes at all changes in direction and at changes in diameter greater than two pipe sizes per coupling manufacturer reference. HOLDRITE #117 series restraints **\*\*LINK\*\***

### C. All Stormwater piping:

1. Pipe sizes greater than or equal to 3 inch, provide restraints for all drainpipes at all changes in direction and at changes in diameter greater than two pipe sizes per coupling manufacturer reference. HOLDRITE #117 series restraints **\*\*LINK\*\***
2. Base of riser for storm lines > 4 inches in diameter: in addition to item B above, secure the horizontal and vertical portions of the 90 degree log sweep or 90 degree wye and 1/8<sup>th</sup> bend with a joint restraint clamps similar to Anvil figure 595 **\*\*LINK\*\***

## PART 3 - EXECUTION

### 3.1 HANGER AND SUPPORT INSTALLATION

- A. Metal Pipe-Hanger Installation: Comply with MSS SP-69 and MSS SP-89 and local codes. Install hangers, supports, clamps, and attachments as required to properly support piping from the building structure.
- B. Metal Trapeze Pipe-Hanger Installation: Comply with MSS SP-69 and MSS SP-89. Arrange for grouping of parallel runs of horizontal piping, and support together on field-fabricated trapeze pipe hangers.

1. Pipes of Various Sizes: Support together and space trapezes for smallest pipe size or install intermediate supports for smaller diameter pipes as specified for individual pipe hangers.
2. Field-fabricate from ASTM A 36/A 36M, carbon-steel shapes selected for loads being supported. Weld steel according to AWS D1.1/D1.1M.
- C. Fiberglass Pipe-Hanger Installation: Comply with applicable portions of MSS SP-69 and MSS SP-89. Install hangers and attachments as required to properly support piping from building structure.
- D. Metal Framing System Installation: Arrange for grouping of parallel runs of piping, and support together on field-assembled metal framing systems.
- E. Fiberglass Strut System Installation: Arrange for grouping of parallel runs of piping, and support together on field-assembled fiberglass struts.
- F. Thermal-Hanger Shield Installation: Install in pipe hanger or shield for insulated piping.
- G. Fastener System Installation
  1. Install mechanical-expansion anchors in concrete after concrete is placed and completely cured. Install fasteners according to the manufacturer's written instructions.
- H. Pipe Stand Installation
  1. Pipe Stand Types except Curb-Mounted Type: Assemble components and mount them on smooth roof surface. Do not penetrate roof membrane.
  2. Curb-Mounted-Type Pipe Stands: Assemble components or fabricate pipe stand and mount on permanent, stationary roof curb. See Division 07 for curbs.
- I. Pipe Positioning-System Installation: Install support devices to make rigid supply and waste piping connections to each plumbing fixture.
- J. Install hangers and supports complete with necessary attachments, inserts, bolts, rods, nuts, washers, and other accessories.
- K. Equipment Support Installation: Fabricate from welded-structural-steel shapes.
- L. Install hangers and supports to allow controlled thermal and seismic movement of piping systems, to permit freedom of movement between pipe anchors, and to facilitate action of expansion joints, expansion loops, expansion bends, and similar units.
- M. Install lateral bracing with pipe hangers and supports to prevent swaying.
- N. Install building attachments within concrete slabs or attach to structural steel. Install additional attachments at concentrated loads, including valves, flanges, and strainers, NPS 2-1/2 and larger and at changes in direction of piping. Install concrete inserts before concrete is placed; fasten inserts to forms and install reinforcing bars through openings at top of inserts.
- O. Load Distribution: Install hangers and supports so that piping live and dead loads and stresses from movement will not be transmitted to connected equipment.
- P. Pipe Slopes: Install hangers and supports to provide indicated pipe slopes and to not exceed maximum pipe deflections allowed by ASME B31.9 for building services piping.
- Q. Insulated Piping
  1. Attach clamps and spacers to piping.

- a. Piping Operating above Ambient Air Temperature: Clamp may project through insulation.
  - b. Piping Operating below Ambient Air Temperature: Use thermal-hanger shield insert with clamp sized to match OD of insert.
  - c. Do not exceed pipe stress limits allowed by ASME B31.9 for building services piping.
2. Install MSS SP-58, Type 39, protection saddles if insulation without vapor barrier is indicated. Fill interior voids with insulation that matches adjoining insulation.
  - a. Option: Thermal-hanger shield inserts may be used. Include steel weight-distribution plate for pipe NPS 4 and larger if pipe is installed on rollers.
3. Install MSS SP-58, Type 40, protective shields on cold piping with vapor barrier. Shields shall span an arc of 180 degrees.
  - a. Option: Thermal-hanger shield inserts may be used. Include steel weight-distribution plate for pipe NPS 4 and larger if pipe is installed on rollers.
4. Shield Dimensions for Pipe: Not less than the following:
  - a. NPS 1/4 to NPS 3-1/2: 12 inches long and 0.048 inch thick.
  - b. NPS 4: 12 inches long and 0.06 inch thick.
  - c. NPS 5 and NPS 6: 18 inches long and 0.06 inch thick.
  - d. NPS 8 to NPS 14: 24 inches long and 0.075 inch thick.
  - e. NPS 16 to NPS 24: 24 inches long and 0.105 inch thick.
5. Pipes NPS 8 and Larger: Include wood or reinforced calcium-silicate-insulation inserts of length at least as long as protective shield.
6. Thermal-Hanger Shields: Install with insulation same thickness as piping insulation.
7. Support of pipe, tubing and equipment shall be accomplished by means of engineered products, specific to each application. Makeshift, field devised methods are not allowed.
8. Comply with CISPI Designation 310-04, CISPI Designation 301-09 and the CISPI Cast Iron Soil Pipe Handbook, regarding auxiliary support for ho-hub cast iron pipe and fitting joints subjected to excessive thrust forces. Use manufactured assemblies with appropriate thrust pressure ratings, rather than field assembled miscellaneous materials.

### 3.2 PEX PIPING SUPPORTS

- A. Follow all recommendations in the PEX design manual for support of PEX piping systems  
\*\*[LINK](#)\*\*
- B. Hangers and supports shall be designed for PEX tubing containing no sharp edges or surfaces.
- C. Drop ear bend supports or pre-manufactured wall supports/pipe positioning systems shall be utilized to provide a rigid installation between the vertical piping in the wall to the fixture supply.
- D. Bend supports shall be used at all locations where the tubing is making a 90-degree bend. This includes both in the ceiling and in the wall cavity.

- E. Provide steel plate protectors in any location where there is possible damage from drywall, concrete board, or paneling screws or nails.
- F. If PEX tubing passes through hollow masonry walls or metal studs, always protect with suitable sleeves or grommets.
- G. Install hangers for PEX piping with the following maximum horizontal spacing and minimum rod diameters:
  - 1. Method 1: 3 inches and smaller: 32 inches utilizing 3/8 inch rod.
  - 2. Method 2: 3 inches and smaller: Continuously supported by metallic CTS support channels or metallic V channels that:
    - a. Are supported every 6 feet for NPS 1 inch and smaller.
    - b. Are supported every 8 feet for NPS 1-1/4 inches and larger.
    - c. Have a maximum cantilever, measured from the support to the end of the support channel of 1.5 feet.
- H. Vertical Risers
  - 1. Install supports and mid-story guides on vertical PEX risers per the manufacturer's guidelines. At a minimum, install:
    - a. Riser clamp at the base of each floor for both cold and hot water risers.
    - b. Riser clamp at the top of every fourth floor for cold water risers.
    - c. Riser clamp at the top of every other floor for hot water risers.
    - d. Mid-story guide on every floor for both cold and hot water risers to guide expansion. Install iron pipe size (IPS) clamps as mid-story guides so as not to restrain the piping.
- I. Expansion and Contraction
  - 1. As a generally accepted practice, an expansion-controlling device with fixed anchor points or a continuous run of PEX-a Pipe.
  - 2. Support with fixed anchor points is installed every 65 ft. of straight-length piping in a domestic hot-water system.
  - 3. Always install the device at the mid-point of two fixed points.
  - 4. See PEX piping systems manual **\*\*LINK\*\***, expansion compensation section.

### 3.3 ACOUSTICAL HANGERS AND SUPPORT ISOLATION INSTALLATION

- A. Install all items per the manufacturer's recommendations.
- B. Use any and all of the specified components to provide for a complete vibration and acoustical isolated system installation on all water, sanitary and storm, and vent piping systems. Use the appropriate isolator type at each location.
- C. Install acoustical hangers and support isolators to prevent all direct, rigid contact between piping and surrounding structures and hangers. No metal-to-metal contact is permissible.
- D. Provide isolation of all riser clamps. The neoprene pads shall not be more than 25 percent compressed when retaining bolts are tightened. Size supports as required.

- E. Pipes must not directly contact gypsum board, framing, conduit, or other structural elements. Use adequate clearance and approved felt pads to prevent direct contact between pipes and the structure. Holes and cutouts must be adequately oversized to allow clearance all around the piping.

### 3.4 EQUIPMENT SUPPORTS

- A. Fabricate structural-steel stands to suspend equipment from structure overhead or to support equipment above floor.
- B. Grouting: Place grout under supports for equipment and make bearing surface smooth.
- C. Provide lateral bracing for equipment supports to prevent swaying.

### 3.5 BURIED CAST IRON OR PVC PIPING - HANGERS AND SUPPORT INSTALLATION

- A. Piping shall be installed at the prescribed elevation as the fill is being placed within the grade beam area or the piping shall be installed in trenches cut into the fill.
- B. Clamping pipe hangers with rods extending upward shall be installed as the work progresses. The clamping hangers shall be fastened securely to the pipe or fitting and shall hold the rod vertical.
- C. Assure that support plates are structurally tied and supported by the slab rebar as the concrete slab is placed.
- D. Furnish a support hanger at all cleanouts and floor drains. Place concrete at base of cleanouts and floor drains such that the hanger is embedded in the concrete.

### 3.6 METAL FABRICATIONS

- A. Cut, drill, and fit miscellaneous metal fabrications for trapeze pipe hangers and equipment supports.
- B. Fit exposed connections together to form hairline joints. Field-weld connections that cannot be shop welded because of shipping size limitations.
- C. Field Welding: Comply with AWS D1.1/D1.1M procedures for shielded, metal arc welding; appearance and quality of welds; and methods used in correcting welding work; and with the following:
  - 1. Use materials and methods that minimize distortion and develop strength and corrosion resistance of base metals.
  - 2. Obtain fusion without undercut or overlap.
  - 3. Remove welding flux immediately.
  - 4. Finish welds at exposed connections so no roughness shows after finishing and so contours of welded surfaces match adjacent contours.

### 3.7 ADJUSTING

- A. Hanger Adjustments: Adjust hangers to distribute loads equally on attachments and to achieve indicated slope of pipe.
- B. Trim excess length of continuous-thread hanger and support rods to 1-1/2 inches.

### 3.8 PAINTING

- A. Touchup: Clean field welds and abraded areas of shop paint. Paint exposed areas immediately after erecting hangers and supports. Use same materials as used for shop painting. Comply with SSPC-PA 1 requirements for touching up field-painted surfaces.
  - 1. Apply paint by brush or spray to provide a minimum dry film thickness of 2.0 mils.
- B. Touchup: Cleaning and touchup painting of field welds, bolted connections, and abraded areas of shop paint on miscellaneous metal are specified in Division 09 for painting.
- C. Galvanized Surfaces: Clean welds, bolted connections, and abraded areas and apply galvanizing-repair paint to comply with ASTM A 780.

### 3.9 HANGER AND SUPPORT SCHEDULE

- A. Specific hanger and support requirements are in Sections specifying piping systems and equipment.
- B. Comply with MSS SP-69 for pipe-hanger selections and applications that are not specified in piping system Sections.
- C. Use hangers and supports with galvanized metallic coatings for piping and equipment that will not have field-applied finish.
- D. Use nonmetallic coatings on attachments for electrolytic protection where attachments are in direct contact with copper tubing.
- E. Use carbon-steel pipe hangers and supports metal trapeze pipe hangers and metal framing systems and attachments for general service applications.
- F. Use stainless-steel pipe hangers and fiberglass pipe hangers and fiberglass strut systems and stainless-steel or corrosion-resistant attachments for hostile environment applications.
- G. Use copper-plated pipe hangers and copper or stainless-steel attachments for copper piping and tubing.
- H. Use padded hangers for piping that is subject to scratching.
- I. Use thermal-hanger shield inserts for insulated piping and tubing.
- J. Horizontal-Piping Hangers and Supports: Unless otherwise indicated and except as specified in piping system Sections, install the following types:
  - 1. Adjustable, Steel Clevis Hangers (MSS Type 1): For suspension of non-insulated or insulated, stationary pipes NPS 1/2 to NPS 30.
  - 2. Yoke-Type Pipe Clamps (MSS Type 2): For suspension of up to 1050 deg F, pipes NPS 4 to NPS 24, requiring up to 4 inches of insulation.
  - 3. Carbon- or Alloy-Steel, Double-Bolt Pipe Clamps (MSS Type 3): For suspension of pipes NPS 3/4 to NPS 36, requiring clamp flexibility and up to 4 inches of insulation.
  - 4. Steel Pipe Clamps (MSS Type 4): For suspension of cold and hot pipes NPS 1/2 to NPS 24 if little or no insulation is required.
  - 5. Pipe Hangers (MSS Type 5): For suspension of pipes NPS 1/2 to NPS 4, to allow off-center closure for hanger installation before pipe erection.

6. Adjustable, Swivel Split- or Solid-Ring Hangers (MSS Type 6): For suspension of non-insulated, stationary pipes NPS 3/4 to NPS 8.
  7. Adjustable, Steel Band Hangers (MSS Type 7): For suspension of non-insulated, stationary pipes NPS 1/2 to NPS 8.
  8. Adjustable Band Hangers (MSS Type 9): For suspension of non-insulated, stationary pipes NPS 1/2 to NPS 8.
  9. Adjustable, Swivel-Ring Band Hangers (MSS Type 10): For suspension of non-insulated, stationary pipes NPS 1/2 to NPS 8.
  10. Split Pipe Ring with or without Turnbuckle Hangers (MSS Type 11): For suspension of non-insulated, stationary pipes NPS 3/8 to NPS 8.
  11. Extension Hinged or Two-Bolt Split Pipe Clamps (MSS Type 12): For suspension of non-insulated, stationary pipes NPS 3/8 to NPS 3.
  12. U-Bolts (MSS Type 24): For support of heavy pipes NPS 1/2 to NPS 30.
  13. Clips (MSS Type 26): For support of insulated pipes not subject to expansion or contraction.
  14. Pipe Saddle Supports (MSS Type 36): For support of pipes NPS 4 to NPS 36, with steel-pipe base stanchion support and cast-iron floor flange or carbon-steel plate.
  15. Pipe Stanchion Saddles (MSS Type 37): For support of pipes NPS 4 to NPS 36, with steel-pipe base stanchion support and cast-iron floor flange or carbon-steel plate, and with U-bolt to retain pipe.
  16. Adjustable Pipe Saddle Supports (MSS Type 38): For stanchion-type support for pipes NPS 2-1/2 to NPS 36 if vertical adjustment is required, with steel-pipe base stanchion support and cast-iron floor flange.
  17. Single-Pipe Rolls (MSS Type 41): For suspension of pipes NPS 1 to NPS 30, from two rods if longitudinal movement caused by expansion and contraction might occur.
  18. Adjustable Roller Hangers (MSS Type 43): For suspension of pipes NPS 2-1/2 to NPS 24, from single rod if horizontal movement caused by expansion and contraction might occur.
  19. Complete Pipe Rolls (MSS Type 44): For support of pipes NPS 2 to NPS 42 if longitudinal movement caused by expansion and contraction might occur but vertical adjustment is not necessary.
  20. Pipe Roll and Plate Units (MSS Type 45): For support of pipes NPS 2 to NPS 24 if small horizontal movement caused by expansion and contraction might occur and vertical adjustment is not necessary.
  21. Adjustable Pipe Roll and Base Units (MSS Type 46): For support of pipes NPS 2 to NPS 30 if vertical and lateral adjustment during installation might be required in addition to expansion and contraction.
- K. Vertical-Piping Clamps: Unless otherwise indicated and except as specified in piping system Sections, install the following types:
1. Extension Pipe or Riser Clamps (MSS Type 8): For support of pipe risers NPS 3/4 to NPS 24.

2. Carbon- or Alloy-Steel Riser Clamps (MSS Type 42): For support of pipe risers NPS 3/4 to NPS 24 if longer ends are required for riser clamps.
- L. Hanger-Rod Attachments: Unless otherwise indicated and except as specified in piping system Sections, install the following types:
  1. Steel Turnbuckles (MSS Type 13): For adjustment up to 6 inches for heavy loads.
  2. Steel Clevises (MSS Type 14): For 120 to 450 deg F piping installations.
  3. Swivel Turnbuckles (MSS Type 15): For use with MSS Type 11, split pipe rings.
  4. Malleable-Iron Sockets (MSS Type 16): For attaching hanger rods to various types of building attachments.
  5. Steel Weldless Eye Nuts (MSS Type 17): For 120 to 450 deg F piping installations.
- M. Building Attachments: Unless otherwise indicated and except as specified in piping system Sections, install the following types:
  1. Steel or Malleable Concrete Inserts (MSS Type 18): For upper attachment to suspend pipe hangers from concrete ceiling.
  2. Top-Beam C-Clamps (MSS Type 19): For use under roof installations with bar-joist construction, to attach to top flange of structural shape.
  3. Side-Beam or Channel Clamps (MSS Type 20): For attaching to bottom flange of beams, channels, or angles.
  4. Center-Beam Clamps (MSS Type 21): For attaching to center of bottom flange of beams.
  5. Welded Beam Attachments (MSS Type 22): For attaching to bottom of beams if loads are considerable and rod sizes are large.
  6. C-Clamps (MSS Type 23): For structural shapes.
  7. Top-Beam Clamps (MSS Type 25): For top of beams if hanger rod is required tangent to flange edge.
  8. Side-Beam Clamps (MSS Type 27): For bottom of steel I-beams.
  9. Steel-Beam Clamps with Eye Nuts (MSS Type 28): For attaching to bottom of steel I-beams for heavy loads.
  10. Linked-Steel Clamps with Eye Nuts (MSS Type 29): For attaching to bottom of steel I-beams for heavy loads, with link extensions.
  11. Malleable-Beam Clamps with Extension Pieces (MSS Type 30): For attaching to structural steel.
  12. Welded-Steel Brackets: For support of pipes from below or for suspending from above by using clip and rod. Use one of the following for indicated loads:
    - a. Light (MSS Type 31): 750 lb.
    - b. Medium (MSS Type 32): 1500 lb.
    - c. Heavy (MSS Type 33): 3000 lb.
  13. Side-Beam Brackets (MSS Type 34): For sides of steel or wooden beams.
  14. Plate Lugs (MSS Type 57): For attaching to steel beams if flexibility at beam is required.

15. Horizontal Travelers (MSS Type 58): For supporting piping systems subject to linear horizontal movement where headroom is limited.
- N. Saddles and Shields: Unless otherwise indicated and except as specified in piping system Sections, install the following types:
1. Steel-Pipe-Covering Protection Saddles (MSS Type 39): To fill interior voids with insulation that matches adjoining insulation.
  2. Protection Shields (MSS Type 40): Of length recommended in writing by manufacturer to prevent crushing insulation.
  3. Thermal-Hanger Shield Inserts: For supporting insulated pipe.
- O. Spring Hangers and Supports: Unless otherwise indicated and except as specified in piping system Sections, install the following types:
1. Restraint-Control Devices (MSS Type 47): Where indicated to control piping movement.
  2. Spring Cushions (MSS Type 48): For light loads if vertical movement does not exceed 1-1/4 inches.
  3. Spring-Cushion Roll Hangers (MSS Type 49): For equipping Type 41, roll hanger with springs.
  4. Spring Sway Braces (MSS Type 50): To retard sway, shock, vibration, or thermal expansion in piping systems.
  5. Variable-Spring Hangers (MSS Type 51): Preset to indicated load and limit variability factor to 25 percent to allow expansion and contraction of piping system from hanger.
  6. Variable-Spring Base Supports (MSS Type 52): Preset to indicated load and limit variability factor to 25 percent to allow expansion and contraction of piping system from base support.
  7. Variable-Spring Trapeze Hangers (MSS Type 53): Preset to indicated load and limit variability factor to 25 percent to allow expansion and contraction of piping system from trapeze support.
  8. Constant Supports: For critical piping stress and if necessary, to avoid transfer of stress from one support to another support, critical terminal, or connected equipment. Include auxiliary stops for erection, hydrostatic test, and load-adjustment capability. These supports include the following types:
    - a. Horizontal (MSS Type 54): Mounted horizontally.
    - b. Vertical (MSS Type 55): Mounted vertically.
    - c. Trapeze (MSS Type 56): Two vertical type supports and one trapeze member.
- P. Comply with MSS SP-69 for trapeze pipe-hanger selections and applications that are not specified in piping system Sections.
- Q. Comply with MFMA-103 for metal framing system selections and applications that are not specified in piping system Sections.
- R. Use powder-actuated fasteners or mechanical-expansion anchors instead of building attachments where required in concrete construction.
- S. Use pipe positioning systems in pipe spaces behind plumbing fixtures to support supply and waste piping for plumbing fixtures.

3.10 SPACING

- A. Refer to individual piping sections for spacing requirements.
- B. Where no requirement is specified elsewhere, pipe hangers and supports shall be per MSS SP-90.
- C. Space pipe hangers and supports in accordance with following tables, with exceptions as indicated herein.
- D. The vertical spacing shall be at each floor level, with spacing not to exceed that shown in the table below. Provide mid story guides on PEX, PVC, PP, and CPVC piping per local code requirements.

Table 1 – Maximum Horizontal Pipe Hanger and Support Spacing

		1		2		3		4		5	6	7	8	9	10	11	12	13

## **SECTION 220548 - VIBRATION AND SEISMIC CONTROLS FOR PLUMBING**

### **PART 1 - GENERAL**

#### **1.1 RELATED DOCUMENTS**

- A. Certain requirements common to all the mechanical and electrical trades (Fire Suppression, Plumbing, HVAC, Electrical, and Tele/Data) are specified in Division 20. To avoid repetition, they are not repeated in each relevant Division and Section. However, these requirements are applicable to the work of this Section and are hereby incorporated by reference.
- B. Drawings and general provisions of the Contract, including General and Supplementary Conditions and Division 01 Specification Sections, apply to this Section.

#### **1.2 SUMMARY**

##### **A. Section Includes**

1. Elastomeric isolation pads.
2. Elastomeric isolation mounts.
3. Restrained elastomeric isolation mounts.
4. Open-spring isolators.
5. Restrained-spring isolators.
6. Pipe-riser resilient supports.
7. Resilient pipe guides.
8. Elastomeric hangers.
9. Spring hangers.
10. Vibration isolation equipment bases.
11. Thrust restraints.
12. Snubbers.
13. Restraint channel bracings.
14. Restraint cables.
15. Restraint accessories.
16. Mechanical anchor bolts.
17. Adhesive anchor bolts.

##### **B. Related Requirements**

1. Division 21 for vibration isolation and seismic devices for fire-suppression equipment and systems.
2. Division 23 for vibration isolation and seismic devices for HVAC equipment and systems.

### 1.3 ACTION SUBMITTALS

- A. Product Data: For each type of product.
  - 1. Include rated load, rated deflection, and overload capacity for each vibration isolation device.
  - 2. Illustrate and indicate style, material, strength, fastening provision, and finish for each type and size of vibration isolation device type required.
  - 3. Illustrate and indicate style, material, strength, fastening provision, and finish for each type and size of and seismic-restraint component required.
    - a. Tabulate types and sizes of seismic restraints, complete with report numbers and rated strength in tension and shear as evaluated by an agency acceptable to authorities having jurisdiction.
    - b. Annotate to indicate application of each product submitted and compliance with requirements.
  - 4. Interlocking Snubbers: Include ratings for horizontal, vertical, and combined loads.
- B. Shop Drawings:
  - 1. Detail fabrication and assembly of equipment bases. Detail fabrication including anchorages and attachments to structure and to supported equipment. Include adjustable motor bases, rails, and frames for equipment mounting.
  - 2. Vibration Isolation Base Details: Detail fabrication including anchorages and attachments to structure and to supported equipment. Include adjustable motor bases, rails, and frames for equipment mounting.
- C. Delegated-Design Submittal:
  - 1. For each vibration isolation device.
    - a. Include design calculations and details for selecting vibration isolators and vibration isolation bases.
    - b. Design Calculations: Calculate static and dynamic loading due to equipment weight and required to select vibration isolators and for designing vibration isolation bases.
      - 1) Coordinate design calculations with wind load calculations required for equipment mounted outdoors. Comply with requirements in other Sections for equipment mounted outdoors.
    - c. Riser Supports: Include riser diagrams and calculations showing anticipated expansion and contraction at each support point, initial and final loads on building structure and spring deflection changes. Include certification that riser system was examined for excessive stress and that none exists.
  - 2. For each seismic-restraint device.
    - a. Include design calculations and details for selecting seismic restraints complying with performance requirements, design criteria, and analysis data signed and sealed by the qualified professional engineer responsible for their preparation.

- b. Design Calculations: Calculate static and dynamic loading due to equipment weight, operation, and seismic forces required to select vibration isolators and seismic restraints and for designing vibration isolation bases.
    - 1) Coordinate design calculations with wind load calculations required for equipment mounted outdoors. Comply with requirements in other Sections for equipment mounted outdoors.
  - c. Riser Supports: Include riser diagrams and calculations showing anticipated expansion and contraction at each support point, initial and final loads on building structure, spring deflection changes, and seismic loads. Include certification that riser system was examined for excessive stress and that none exists.
3. Wind-Restraint Details:
- a. Design Analysis: To support selection and arrangement of wind restraints. Include calculations of combined tensile and shear loads.
  - b. Details: Indicate fabrication and arrangement. Detail attachments of restraints to the restrained items and to the structure. Show attachment locations, methods, and spacing. Identify components, list their strengths, and indicate directions and values of forces transmitted to the structure during design wind speed. Indicate association with vibration isolation devices.
  - c. Comply with requirements in other Sections for equipment mounted outdoors.
4. Seismic-Restraint Details:
- a. Design Analysis: To support selection and arrangement of seismic and restraints. Include calculations of combined tensile and shear loads.
  - b. Details: Indicate fabrication and arrangement. Detail attachments of restraints to the restrained items and to the structure. Show attachment locations, methods, and spacing. Identify components, list their strengths, and indicate directions and values of forces transmitted to the structure during seismic events. Indicate association with vibration isolation devices.
  - c. Coordinate seismic-restraint and vibration isolation details with wind-restraint details required for equipment mounted outdoors. Comply with requirements in other Sections for equipment mounted outdoors.
  - d. Preapproval and Evaluation Documentation: By an agency acceptable to authorities having jurisdiction, showing maximum ratings of restraint items and the basis for approval (tests or calculations).

#### 1.4 INFORMATIONAL SUBMITTALS

##### A. Coordination Drawings:

- 1. Show coordination of vibration isolation device installation for PLUMBING piping and equipment with other systems and equipment in the vicinity, including other supports and restraints, if any.
- 2. Show coordination of seismic bracing for PLUMBING piping and equipment with vibration isolation, other systems and equipment in the vicinity, including other supports and restraints, if any.

- B. Qualification Data: For professional engineer and testing agency.
- C. Welding certificates.
- D. Field quality-control reports.

## 1.5 QUALITY ASSURANCE

- A. Testing Agency Qualifications: An independent agency, with the experience and capability to conduct the testing indicated, that is an NRTL as defined by OSHA in 29 CFR 1910.7 and that is acceptable to authorities having jurisdiction.
- B. Comply with seismic-restraint requirements in the applicable building code unless requirements in this Section are more stringent.
- C. Welding Qualifications: Qualify procedures and personnel according to AWS D1.1/D1.1M, "Structural Welding Code - Steel."
- D. Seismic-restraint devices shall have horizontal and vertical load testing and analysis and shall bear anchorage preapproval by agency acceptable to authorities having jurisdiction, showing maximum seismic-restraint ratings. Ratings based on independent testing are preferred to ratings based on calculations. If preapproved ratings are unavailable, submittals based on independent testing are required. Calculations (including combining shear and tensile loads) to support seismic-restraint designs must be signed and sealed by a qualified professional engineer.

## PART 2 - PRODUCTS

### 2.1 PERFORMANCE REQUIREMENTS

- A. Wind-Restraint Loading:
  - 1. Basic Wind Speed: Verify with Structural Engineer.
  - 2. Building Classification Category: Verify with Structural Engineer.
  - 3. Minimum 10 lb/sq. ft. multiplied by maximum area of plumbing component projected on vertical plane normal to wind direction, and 45 degrees either side of normal.

### 2.2 ELASTOMERIC ISOLATION PADS

- A. Elastomeric Isolation Pads:
  - 1. Manufacturers: Subject to compliance with requirements, provide products by one of the following or approved equal:
    - a. [Ace Mountings Co., Inc.](#)
    - b. [California Dynamics Corporation.](#)
    - c. [Isolation Technology, Inc.](#)
    - d. Or Approved Equal.
  - 2. Fabrication: Single or multiple layers of sufficient durometer stiffness for uniform loading over pad area.

3. Size: Factory or field cut to match requirements of supported equipment.
4. Pad Material: Oil and water resistant with elastomeric properties.
5. Surface Pattern: Smooth, Ribbed or Waffle pattern.
6. Load-bearing metal plates adhered to pads.
7. Sandwich-Core Material: Resilient and elastomeric.
  - a. Surface Pattern: Smooth, Ribbed or Waffle pattern.

## 2.3 ELASTOMERIC ISOLATION MOUNTS

### A. Double-Deflection, Elastomeric Isolation Mounts:

1. Manufacturers: Subject to compliance with requirements, provide products by one of the following or approved equal:
  - a. [Ace Mountings Co., Inc.](#)
  - b. [California Dynamics Corporation.](#)
  - c. [Isolation Technology, Inc.](#)
  - d. Or Approved Equal.
2. Mounting Plates:
  - a. Top Plate: Encapsulated steel load transfer top plates, factory drilled and threaded with threaded studs or bolts.
  - b. Baseplate: Encapsulated steel bottom plates with holes provided for anchoring to support structure.
3. Elastomeric Material: Molded, oil-resistant rubber, neoprene, or other elastomeric material.

## 2.4 RESTRAINED ELASTOMERIC ISOLATION MOUNTS

### A. Restrained Elastomeric Isolation Mounts:

1. Manufacturers: Subject to compliance with requirements, provide products by one of the following or approved equal:
  - a. [Ace Mountings Co., Inc.](#)
  - b. [California Dynamics Corporation.](#)
  - c. [Isolation Technology, Inc.](#)
  - d. Or Approved Equal.
2. Description: All-directional isolator with seismic restraints containing two separate and opposing elastomeric elements that prevent central threaded element and attachment hardware from contacting the housing during normal operation.
  - a. Housing: Cast-ductile iron or welded steel.

- b. Elastomeric Material: Molded, oil-resistant rubber, neoprene, or other elastomeric material.

## 2.5 OPEN-SPRING ISOLATORS

### A. Freestanding, Laterally Stable, Open-Spring Isolators:

1. Manufacturers: Subject to compliance with requirements, provide products by one of the following or approved equal:
  - a. [Ace Mountings Co., Inc.](#)
  - b. [California Dynamics Corporation.](#)
  - c. [Isolation Technology, Inc.](#)
  - d. Or Approved Equal.
2. Outside Spring Diameter: Not less than 80 percent of the compressed height of the spring at rated load.
3. Minimum Additional Travel: 50 percent of the required deflection at rated load.
4. Lateral Stiffness: More than 80 percent of rated vertical stiffness.
5. Overload Capacity: Support 200 percent of rated load, fully compressed, without deformation or failure.
6. Baseplates: Factory-drilled steel plate for bolting to structure with an elastomeric isolator pad attached to the underside. Baseplates shall limit floor load to 500 psig.
7. Top Plate and Adjustment Bolt: Threaded top plate with adjustment bolt and cap screw to fasten and level equipment.

## 2.6 RESTRAINED-SPRING ISOLATORS

### A. Freestanding, Laterally Stable, Open-Spring Isolators with Vertical-Limit Stop Restraint:

1. Manufacturers: Subject to compliance with requirements, provide products by one of the following or approved equal:
  - a. [Ace Mountings Co., Inc.](#)
  - b. [California Dynamics Corporation.](#)
  - c. [Isolation Technology, Inc.](#)
  - d. Or Approved Equal.
2. Housing: Steel housing with vertical-limit stops to prevent spring extension due to weight being removed.
  - a. Base with holes for bolting to structure with an elastomeric isolator pad attached to the underside. Bases shall limit floor load to 500 psig.
  - b. Top plate with threaded mounting holes and elastomeric pad.
  - c. Internal leveling bolt that acts as blocking during installation.
3. Restraint: Limit stop as required for equipment and authorities having jurisdiction.

4. Outside Spring Diameter: Not less than 80 percent of the compressed height of the spring at rated load.
5. Minimum Additional Travel: 50 percent of the required deflection at rated load.
6. Lateral Stiffness: More than 80 percent of rated vertical stiffness.
7. Overload Capacity: Support 200 percent of rated load, fully compressed, without deformation or failure.

## 2.7 PIPE-RISER RESILIENT SUPPORT

- A. Description: All-directional, acoustical pipe anchor consisting of two steel tubes separated by a minimum 1/2 inch- thick neoprene.
  1. Vertical-Limit Stops: Steel and neoprene vertical-limit stops arranged to prevent vertical travel in both directions.
  2. Maximum Load Per Support: 500 psig on isolation material providing equal isolation in all directions.

## 2.8 RESILIENT PIPE GUIDES

- A. Description: Telescopic arrangement of two steel tubes or post and sleeve arrangement separated by a minimum 1/2 inch- thick neoprene.
  1. Factory-Set Height Guide with Shear Pin: Shear pin shall be removable and reinsertable to allow for selection of pipe movement. Guides shall be capable of motion to meet location requirements.

## 2.9 ELASTOMERIC HANGERS

- A. Elastomeric Mount in a Steel Frame with Upper and Lower Steel Hanger Rods:
  1. Manufacturers: Subject to compliance with requirements, provide products by one of the following or approved equal:
    - a. [Ace Mountings Co., Inc.](#)
    - b. [California Dynamics Corporation.](#)
    - c. [Isolation Technology, Inc.](#)
    - d. Or Approved Equal.
  2. Frame: Steel, fabricated with a connection for an upper threaded hanger rod and an opening on the underside to allow for a maximum of 30 degrees of angular lower hanger-rod misalignment without binding or reducing isolation efficiency.
  3. Dampening Element: Molded, oil-resistant rubber, neoprene, or other elastomeric material with a projecting bushing for the underside opening preventing steel to steel contact.

## 2.10 SPRING HANGERS

- A. Combination Coil-Spring and Elastomeric-Insert Hanger with Spring and Insert in Compression:

1. Manufacturers: Subject to compliance with requirements, provide products by one of the following or approved equal:
  - a. Ace Mountings Co., Inc.
  - b. California Dynamics Corporation.
  - c. Kinetics Noise Control, Inc.
  - d. Or Approved Equal.
2. Frame: Steel, fabricated for connection to threaded hanger rods and to allow for a maximum of 30 degrees of angular hanger-rod misalignment without binding or reducing isolation efficiency.
3. Outside Spring Diameter: Not less than 80 percent of the compressed height of the spring at rated load.
4. Minimum Additional Travel: 50 percent of the required deflection at rated load.
5. Lateral Stiffness: More than 80 percent of rated vertical stiffness.
6. Overload Capacity: Support 200 percent of rated load, fully compressed, without deformation or failure.
7. Elastomeric Element: Molded, oil-resistant rubber or neoprene. Steel-washer-reinforced cup to support spring and bushing projecting through bottom of frame.
8. Adjustable Vertical Stop: Steel washer with neoprene washer "up-stop" on lower threaded rod.
9. Self-centering hanger-rod cap to ensure concentricity between hanger rod and support spring coil.

#### 2.11 VIBRATION ISOLATION EQUIPMENT BASES

- A. Manufacturers: Subject to compliance with requirements, provide products by one of the following or approved equal:
  1. California Dynamics Corporation.
  2. Kinetics Noise Control.
  3. Mason Industries, Inc.
  4. Or Approved Equal.
- B. Steel Rails: Factory-fabricated, welded, structural-steel rails.
  1. Design Requirements: Lowest possible mounting height with not less than 1 inch clearance above the floor. Include equipment anchor bolts and auxiliary motor slide rails.
    - a. Include supports for suction and discharge elbows for pumps.
  2. Structural Steel: Steel shapes, plates, and bars complying with ASTM A 36/A 36M. Rails shall have shape to accommodate supported equipment.
  3. Support Brackets: Factory-welded steel brackets on frame for outrigger isolation mountings and to provide for anchor bolts and equipment support.
- C. Steel Bases: Factory-fabricated, welded, structural-steel bases and rails.

1. Design Requirements: Lowest possible mounting height with not less than 1 inch clearance above the floor. Include equipment anchor bolts and auxiliary motor slide bases or rails.
    - a. Include supports for suction and discharge elbows for pumps.
  2. Structural Steel: Steel shapes, plates, and bars complying with ASTM A 36/A 36M. Bases shall have shape to accommodate supported equipment.
  3. Support Brackets: Factory-welded steel brackets on frame for outrigger isolation mountings and to provide for anchor bolts and equipment support.
- D. Concrete Inertia Base: Factory-fabricated or field-fabricated, welded, structural-steel bases and rails ready for placement of cast-in-place concrete.
1. Design Requirements: Lowest possible mounting height with not less than 1 inch clearance above the floor. Include equipment anchor bolts and auxiliary motor slide bases or rails.
    - a. Include supports for suction and discharge elbows for pumps.
  2. Structural Steel: Steel shapes, plates, and bars complying with ASTM A 36/A 36M. Bases shall have shape to accommodate supported equipment.
  3. Support Brackets: Factory-welded steel brackets on frame for outrigger isolation mountings and to provide for anchor bolts and equipment support.
  4. Fabrication: Fabricate steel templates to hold equipment anchor-bolt sleeves and anchors in place during placement of concrete. Obtain anchor-bolt templates from supported equipment manufacturer.

## 2.12 THRUST RESTRAINTS

- A. Manufacturers: Subject to compliance with requirements, provide products by one of the following or approved equal:
1. [Ace Mountings Co., Inc.](#)
  2. [California Dynamics Corporation.](#)
  3. [Kinetics Noise Control.](#)
  4. Or Approved Equal
- B. Description: Spring element combined with steel angles, backup plates, threaded rod, washers and nuts to produce a pair of devices capable of limiting movement of air handling equipment to 0.25 inch.
- C. Restraint shall be convertible in the field from compression type to tension type.
- D. Unit shall be pre-compressed.

## 2.13 SNUBBERS

- A. Manufacturers: Subject to compliance with requirements, provide products by one of the following or approved equal:
1. [Kinetics Noise Control, Inc.](#)

2. Mason Industries, Inc.
  3. Vibration Mountings & Controls, Inc.
  4. Or Approved Equal.
- B. Description: Factory fabricated using welded structural-steel shapes and plates, anchor bolts, and replaceable resilient isolation washers and bushings.
1. Anchor bolts for attaching to concrete shall be seismic-rated, drill-in, and stud-wedge or female-wedge type.
  2. Resilient Isolation Washers and Bushings: Oil- and water-resistant neoprene.
  3. Maximum 1/4 inch air gap, and minimum 1/4 inch- thick resilient cushion.

#### 2.14 RESTRAINT CHANNEL BRACINGS

- A. Manufacturers: Subject to compliance with requirements, provide products by one of the following or approved equal:
1. Cooper B-Line, Inc.
  2. Hilti, Inc.
  3. Unistrut.
  4. Or Approved Equal.
- B. Description: MFMA-4, shop- or field-fabricated bracing assembly made of slotted steel channels with accessories for attachment to braced component at one end and to building structure at the other end and other matching components and with corrosion-resistant coating; rated in tension, compression, and torsion forces.

#### 2.15 RESTRAINT CABLES

- A. Manufacturers: Subject to compliance with requirements, provide products by one of the following or approved equal:
1. Kinetics Noise Control, Inc.
  2. Loos & Co., Inc.
  3. Vibration Mountings & Controls, Inc.
  4. Or Approved Equal.
- B. Restraint Cables: ASTM A 492 stainless-steel cables. End connections made of steel assemblies with thimbles, brackets, swivel, and bolts designed for restraining cable service; with a minimum of two clamping bolts for cable engagement.

#### 2.16 SEISMIC-RESTRAINT ACCESSORIES

- A. Manufacturers: Subject to compliance with requirements, provide products by one of the following or approved equal:
1. Cooper B-Line, Inc.
  2. Kinetics Noise Control, Inc.
  3. Mason Industries, Inc.

4. Or Approved Equal.
- B. Hanger-Rod Stiffener: Steel tube or steel slotted-support-system sleeve with internally bolted connections or reinforcing steel angle clamped to hanger rod.
- C. Hinged and Swivel Brace Attachments: Multifunctional steel connectors for attaching hangers to rigid channel bracings and restraint cables.
- D. Bushings for Floor-Mounted Equipment Anchor Bolts: Neoprene bushings designed for rigid equipment mountings, and matched to type and size of anchor bolts and studs.
- E. Bushing Assemblies for Wall-Mounted Equipment Anchorage: Assemblies of neoprene elements and steel sleeves designed for rigid equipment mountings, and matched to type and size of attachment devices used.
- F. Resilient Isolation Washers and Bushings: One-piece, molded, oil- and water-resistant neoprene, with a flat washer face.

## 2.17 MECHANICAL ANCHOR BOLTS

- A. Manufacturers: Subject to compliance with requirements, provide products by one of the following or approved equal:
  1. Cooper B-Line, Inc.
  2. Hilti, Inc.
  3. Kinetics Noise Control, Inc.
  4. Or Approved Equal.
- B. Mechanical Anchor Bolts: Drilled-in and stud-wedge or female-wedge type in zinc-coated steel for interior applications and stainless steel for exterior applications. Select anchor bolts with strength required for anchor and as tested according to ASTM E 488.

## 2.18 ADHESIVE ANCHOR BOLTS

- A. Manufacturers: Subject to compliance with requirements, provide products by one of the following or approved equal:
  1. Hilti, Inc.
  2. Kinetics Noise Control, Inc.
  3. Mason Industries, Inc.
  4. Or Approved Equal.
- B. Adhesive Anchor Bolts: Drilled-in and capsule anchor system containing PVC or urethane methacrylate-based resin and accelerator, or injected polymer or hybrid mortar adhesive. Provide anchor bolts and hardware with zinc-coated steel for interior applications and stainless steel for exterior applications. Select anchor bolts with strength required for anchor and as tested according to ASTM E 488.

## **PART 3 - EXECUTION**

### **3.1 EXAMINATION**

- A. Examine areas and equipment to receive vibration isolation- and wind-control devices for compliance with requirements for installation tolerances and other conditions affecting performance of the Work.
- B. Examine roughing-in of reinforcement and cast-in-place anchors to verify actual locations before installation.
- C. Proceed with installation only after unsatisfactory conditions have been corrected.
- D. Examine areas and equipment to receive seismic restraint devices for compliance with requirements for installation tolerances and other conditions affecting performance of the Work.

### **3.2 APPLICATIONS**

- A. Multiple Pipe Supports: Secure pipes to trapeze member with clamps approved for application by an agency acceptable to authorities having jurisdiction.
- B. Hanger-Rod Stiffeners: Install hanger-rod stiffeners to receive them and where required to prevent buckling of hanger rods due to seismic forces.
- C. Strength of Support and Seismic-Restraint Assemblies: Select sizes of components so strength is adequate to carry present and future static and seismic loads within loading limits.

### **3.3 VIBRATION CONTROL AND SEISMIC-RESTRAINT DEVICE INSTALLATION**

- A. Coordinate the location of embedded connection hardware with supported equipment attachment and mounting points and with requirements for concrete reinforcement and formwork specified in Division 03.
- B. Installation of vibration isolators must not cause any change of position of equipment, piping, or ductwork resulting in stresses or misalignment.
- C. Comply with requirements in Division 07 for installation of roof curbs, equipment supports, and roof penetrations.
- D. Equipment Restraints:
  - 1. Install seismic snubbers on Plumbing equipment mounted on vibration isolators. Locate snubbers as close as possible to vibration isolators and bolt to equipment base and supporting structure.
  - 2. Install resilient bolt isolation washers on equipment anchor bolts where clearance between anchor and adjacent surface exceeds 0.125 inch.
  - 3. Install seismic-restraint devices using methods approved by an agency acceptable to authorities having jurisdiction that provides required submittals for component.
- E. Piping Restraints:
  - 1. Comply with requirements in MSS SP-127.
  - 2. Space lateral supports a maximum of 40 feet OC, and longitudinal supports a maximum of 80 feet OC.

3. Brace a change of direction longer than 12 feet.
- F. Install cables so they do not bend across edges of adjacent equipment or building structure.
- G. Install seismic-restraint devices using methods approved by an agency acceptable to authorities having jurisdiction that provides required submittals for component.
- H. Install bushing assemblies for anchor bolts for floor-mounted equipment, arranged to provide resilient media between anchor bolt and mounting hole in concrete base.
- I. Install bushing assemblies for mounting bolts for wall-mounted equipment, arranged to provide resilient media where equipment or equipment-mounting channels are attached to wall.
- J. Attachment to Structure: If specific attachment is not indicated, anchor bracing to structure at flanges of beams, at upper truss chords of bar joists, or at concrete members.
- K. Drilled-in Anchors:
  1. Identify position of reinforcing steel and other embedded items prior to drilling holes for anchors. Do not damage existing reinforcing or embedded items during coring or drilling. Notify the structural engineer if reinforcing steel or other embedded items are encountered during drilling. Locate and avoid pre-stressed tendons, electrical and telecommunications conduit, and gas lines.
  2. Do not drill holes in concrete or masonry until concrete, mortar, or grout has achieved full design strength.
  3. Wedge Anchors: Protect threads from damage during anchor installation. Heavy-duty sleeve anchors shall be installed with sleeve fully engaged in the structural element to which anchor is to be fastened.
  4. Adhesive Anchors: Clean holes to remove loose material and drilling dust prior to installation of adhesive. Place adhesive in holes proceeding from the bottom of the hole and progressing toward the surface in such a manner as to avoid introduction of air pockets in the adhesive.
  5. Set anchors to manufacturer's recommended torque, using a torque wrench.
  6. Install zinc-coated steel anchors for interior and stainless-steel anchors for exterior applications.

### 3.4 ACCOMMODATION OF DIFFERENTIAL SEISMIC MOTION

- A. Install flexible connections in piping where they cross seismic joints, where adjacent sections or branches are supported by different structural elements, and where the connections terminate with connection to equipment that is anchored to a different structural element from the one supporting the connections as they approach equipment. Comply with requirements in Division 23 for piping flexible connections.

### 3.5 FIELD QUALITY CONTROL

- A. Testing Agency: Engage a qualified testing agency to perform tests and inspections.
- B. Tests and Inspections:
  1. Provide evidence of recent calibration of test equipment by a testing agency acceptable to authorities having jurisdiction.

2. Schedule test with Owner, through Architect, before connecting anchorage device to restrained component (unless post connection testing has been approved), and with at least seven days' advance notice.
  3. Obtain Architect's approval before transmitting test loads to structure. Provide temporary load-spreading members.
  4. Test at least four of each type and size of installed anchors and fasteners selected by Architect.
  5. Test to 90 percent of rated proof load of device.
  6. Measure isolator restraint clearance.
  7. Measure isolator deflection.
  8. Verify snubber minimum clearances.
- C. Remove and replace malfunctioning units and retest as specified above.
- D. Prepare test and inspection reports.

### 3.6 ADJUSTING

- A. Adjust isolators after piping system is at operating weight.
- B. Adjust limit stops on restrained-spring isolators to mount equipment at normal operating height. After equipment installation is complete, adjust limit stops so they are out of contact during normal operation.

### 3.7 VIBRATION ISOLATION EQUIPMENT BASES INSTALLATION

- A. Coordinate the location of embedded connection hardware with supported equipment attachment and mounting points and with requirements for concrete reinforcement and formwork specified in Division 03.

### 3.8 VIBRATION ISOLATION SCHEDULES

- A. Provide vibration isolators and equipment bases for all rotating, piston driven or vibrating equipment in accordance with the following schedules. Selection of equipment isolators shall be based on approved equipment shop drawings.

Base & Isolator Types			
Base Types		Isolator Types	
A	No base, isolators attached directly to equipment.	1	Elastomeric pad.
B	Structural steel rails or base.	2	Elastomeric floor mount or hanger. Use restrained elastomeric mount where seismic restraint is required.
C	Concrete inertia base.	3	Spring floor isolator or hanger.
D	Curb-mounted base.	4	Restrained spring isolator.
		5	Thrust restraint.

Vibration Isolation -RODI Skids and Vacuum Pumps															
r Type	Horsepower and Other	RPM	Slab on Grade			Up to 20 ft			20 to 30 ft			30 to 40 ft			Table Notes
			Base Type	Isolator Type	Min Defl., (in.)	Base Type	Isolator Type	Min Defl., (in.)	Base Type	Isolator Type	Min Defl., (in.)	Base Type	Isolator Type	Min Defl., (in.)	
RODI Filter Skids	All	All	A	2	0.25	A	4	0.75	A	4	1.5	A	4	2.5	1
RODI RO Skids	All	All	A	1	0.25	A	4	0.75	A	4	1.5	A	4	1.5	1,2
RODI Storage Tanks	All	All	A	1	0.25	A	4	0.75	A	4	1.5	A	4	1.5	1,2
Vacuum Pumps	All	All	A	1	0.25	A	4	0.75	A	4	1.5	A	4	1.5	
Notes:															
1. Increase isolator deflection so isolator stiffness is less than one-tenth the stiffness of the supporting structure, as defined by the deflection due to load at the equipment support. 2. Where equipment manufacturer indicates component cannot be installed directly on individual isolators (type A), provide equipment manufacturer recommended supplemental support (base type).															

Vibration Isolation - Air Compressors															
Compressor Type	Horsepower and Other	RPM	Slab on Grade			Up to 20 ft			20 to 30 ft			30 to 40 ft			Table Notes
			Base Type	Isolator Type	Min Defl., (in.)	Base Type	Isolator Type	Min Defl., (in.)	Base Type	Isolator Type	Min Defl., (in.)	Base Type	Isolator Type	Min Defl., (in.)	
Tank-mounted horizontal	≤10	All	A	3	0.75	A	3	0.75	A	3	1.5	A	3	1.5	1
	≥15	All	C	3	0.75	C	3	0.75	C	3	1.5	C	3	1.5	1
Tank-mounted vertical	All	All	C	3	0.75	C	3	0.75	C	3	1.5	C	3	1.5	1
Base-Mounted	All	All	C	3	0.75	C	3	0.75	C	3	1.5	C	3	1.5	1
Large Reciprocating	All	All	C	3	0.75	C	3	0.75	C	3	1.5	C	3	1.5	1
Notes:															
1. Compressors: Install base-mounted compressors through 5 hp and horizontal tank-type air compressors through 10 hp directly on spring isolators (type 3) with structural bases (type B), and compressors 15 to 100 hp on spring isolators (type 3) with inertia bases (type C) weighing 1 to 2 times the compressor weight.															

Vibration Isolation - Pumps															
Pump Type	Horsepower and Other	RPM	Slab on Grade			Up to 20 ft			20 to 30 ft			30 to 40 ft			Table Notes
			Base Type	Isolator Type	Min Defl., (in.)	Base Type	Isolator Type	Min Defl., (in.)	Base Type	Isolator Type	Min Defl., (in.)	Base Type	Isolator Type	Min Defl., (in.)	
Close Coupled	≤7.5	All	B	2	0.25	C	3	0.75	C	3	0.75	C	3	0.75	1
	≥10	All	C	3	0.75	C	3	0.75	C	3	1.5	C	3	1.5	1

	≥30	All	A	3	1.5	A	3	1.5	A	3	1.5	A	3	2.5	
End suction and split case	≤40	All	C	3	0.75	C	3	0.75	C	3	1.5	C	3	1.5	1
	50 to 125	All	C	3	0.75	C	3	0.75	C	3	1.5	C	3	2.5	1
	≥150	All	C	3	0.75	C	3	0.75	C	3	2.5	C	3	3.5	1
Notes: 1. Pumps: Type C bases strength and shape shall accommodate base elbow supports. Concrete bases (type C) shall be designed for a thickness of one-tenth the longest dimension with minimum thickness as follows: (1) for up to 30 hp, 6 in.; (2) for 40 to 75 hp, 8 in.; and (3) for 100 hp and up, 12 in. Pumps over 75 hp and multistage pumps shall be provided with supplemental restraining devices.															

Vibration Isolation - Water Heaters Generators															
Type	Horsepower and Other	RPM	Slab on Grade			Up to 20 ft			20 to 30 ft			30 to 40 ft			Table Notes
			Base Type	Isolator Type	Min Defl., (in.)	Base Type	Isolator Type	Min Defl., (in.)	Base Type	Isolator Type	Min Defl., (in.)	Base Type	Isolator Type	Min Defl., (in.)

Steam Fired	All	All	A	1	0.25	B	4	0.75	B	4	1.5	B	4	2.5	1
Notes: 1. Where equipment manufacturer indicates component cannot be installed directly on individual isolators (type A) provide equipment manufacturer recommended supplemental support (base type).															

### 3.9 SCHEDULE FOR VIBRATION ISOLATION WATER STORAGE TANKS UP TO 2000 GALLON

A. Furnish and install vibration isolation and seismic restraint for all water storage tanks. Submit to the engineer a delegated design submission compliant with tank structure for seismic restraint. At a minimum submit the following:

1. Furnish and Install at minimum one piece molded bridge bearing neoprene washer/bushing. The bushing shall surround the anchor bolt and have a flat washer face to avoid metal to metal contact
2. Furnish female wedge anchors are preferred in floor locations so isolators or equipment can be slid into place after the anchors are installed. Anchors shall be manufactured from full diameter wire, and shall have a safety shoulder to fully support the wedge ring under load. Female wedge anchors shall have an evaluation report number from the ICBO Evaluation Service, Inc. verifying to its allowable loads.
3. Furnish and install housekeeping pad anchors consisting of a ductile iron casting that is tapered and hexagonal, smaller at its base than at its top. The upper portion shall have holes for rebar to pass through. The anchor shall be continuously threaded from top to bottom for the attachment of soleplates. Housekeeping pad anchors shall be attached to the structural slab using a stud wedge anchor.

**3.10 VIBRATION ISOLATION SOLAR PANELS**

- A. Provide with each solar panel, manufacturers vibration isolation and seismic control system. Design Calculations: Calculate static and dynamic loading due to equipment weight and required to select vibration isolators and for designing vibration isolation bases.
  - 1. Coordinate design calculations with wind load calculations required for equipment mounted outdoors. Comply with requirements in other Sections for equipment mounted outdoors.

**3.11 PIPING SYSTEM VIBRATION ISOLATION**

- A. Vibration isolators for suspended piping:
  - 1. Provide spring hangers for all piping in equipment rooms and up to 50 ft from vibration-isolated equipment and PRV stations. The first three hangers from the equipment shall be provided with the same deflection as the equipment isolators, with a maximum limitation of 2 in. deflection. Remaining hangers shall be spring or combination spring and elastomeric with 0.75 in. deflection. The first two hangers adjacent to the equipment shall be the positioning or pre-compressed type. Provide positioning hangers for all isolated piping 8 in. and larger. Piping over 2 inches in diameter suspended below or within 50 ft of conference rooms, classrooms and auditorium areas shall be hung with isolation hangers.
- B. Vibration isolators for floor-supported piping:
  - 1. Provide vibration isolators for floor supports for piping in equipment rooms to isolate equipment. Isolators shall be selected according to the guidelines for hangers. The first two adjacent floor supports shall be the restrained spring type, with a restraint/blocking feature to prevent load transfer to equipment flanges as the piping is filled or drained. Provide a slide plate where pipe is subjected to large thermal movement (PTFE, graphite, or steel) and shall be installed on top of the isolator. Provide a thermal barrier when rubber products are installed directly beneath steam or hot-water lines.
- C. Vibration isolation for piping riser supports:
  - 1. Provide resilient pipe riser support near to midpoint of riser and provide spring hangers at each floor or structural level to support riser and allow thermal expansion risers.
  - 2. Provide spring hangers for first three hangers connected to branch piping at each level.

**3.12 SCHEDULE FOR GAS PIPING AND MEDICAL GAS PIPING**

- A. Furnish and install complete seismic restraining system for all natural gas piping and medical gas piping system installed in this contract.
  - 1. Use seismic cable restraints (paragraph 2.3.L) if isolated. Seismic cable restraints or seismic solid braces restraints may be used on un-isolated piping.
  - 2. Seismically restrain all piping as follows:
    - a. Gas piping, medical gas piping, and medical compressed air and medical vacuum piping that is 1 inch ID or larger.
  - 3. Transverse piping restraints shall be at 40 feet maximum spacing for all pipe sizes, except where lesser spacing is required to limit anchorage loads.

4. Longitudinal restraints shall be at 80 feet maximum spacing for all pipe sizes, except where lesser spacing is required to limit anchorage loads.
5. Where thermal expansion is a consideration, guides and anchors may be used as transverse and longitudinal restraints provided they have a capacity equal to or greater than the restraint loads in addition to the loads induced by expansion or contraction.
6. Transverse restraint for one pipe section may also act as a longitudinal restraint for a pipe section of the same size connected perpendicular to it if the restraint is installed within 24 inches of the elbow or tee or combined stresses are within allowable limits at longer distances.
7. Hold down clamps must be used to attach pipe to all trapeze members before applying restraints in a manner similar to clevis supports.
8. Branch lines may not be used to restrain main lines.

END OF SECTION

## SECTION 220553 - IDENTIFICATION FOR PLUMBING PIPING AND EQUIPMENT

### PART 1 - GENERAL

#### 1.1 RELATED DOCUMENTS

- A. Certain requirements common to all the mechanical and electrical trades (Fire Suppression, Plumbing, HVAC, Electrical, and Tele/Data) are specified in Division 20. To avoid repetition, they are not repeated in each relevant Division and Section. However, these requirements are applicable to the work of this Section and are hereby incorporated by reference.
- B. Drawings and general provisions of the Contract, including General and Supplementary Conditions and Division 01 Specification Sections, apply to this Section.

#### 1.2 SUMMARY

- A. Section Includes:
  - 1. Equipment labels.
  - 2. Warning signs and labels.
  - 3. Pipe labels.
  - 4. Valve tags.
  - 5. Warning tags.

#### 1.3 ACTION SUBMITTALS

- A. Product Data: For each type of product indicated.
- B. Samples: For color, letter style, and graphic representation required for each identification material and device.
- C. Equipment Label Schedule: Include a listing of all equipment to be labeled with the proposed content for each label.
- D. Valve numbering scheme.
- E. Valve Schedules: For each piping system to be included in maintenance manuals.

### PART 2 - PRODUCTS

#### 2.1 EQUIPMENT LABELS

- A. Metal Labels for Equipment:
  - 1. **Manufacturers:** Subject to compliance with requirements, available manufacturers offering products that may be incorporated into the Work, provide products by one of the following or approved equal:
    - a. Brady Corporation
    - b. Marketing Services, Inc.

- c. Seton Identification Products
    - d. Or Approved Equal.
  - 2. Material and Thickness:
    - a. Brass, 0.032-inch
    - b. Stainless steel, 0.025-inch
    - c. Aluminum, 0.032-inch or anodized aluminum, 0.032-inch
    - d. Above are minimum thickness, and all having predrilled or stamped holes for attachment hardware.
  - 3. Letter Color: Black.
  - 4. Background Color: White.
  - 5. Minimum Label Size: Length and width vary for required label content, but not less than 2-1/2 by 3/4 inch.
  - 6. Minimum Letter Size: 1/2 inch for viewing distances up to 72 inches, and proportionately larger lettering for greater viewing distances. Include secondary lettering two-thirds to three-quarters the size of principal lettering.
  - 7. Fasteners: Stainless-steel rivets or self-tapping screws.
  - 8. Adhesive: Contact-type permanent adhesive, compatible with label and with substrate.
- B. Plastic Labels for Equipment:
- 1. **Manufacturers:** Subject to compliance with requirements, available manufacturers offering products that may be incorporated into the Work, provide products by one of the following or approved equal:
    - a. Brady Corporation
    - b. Marking Services, Inc.
    - c. Seton Identification Products
    - d. Or Approved Equal.
  - 2. Material and Thickness: Multilayer, multicolor, plastic labels for mechanical engraving, 1/8 inch thick, and having predrilled holes for attachment hardware.
  - 3. Letter Color: Black.
  - 4. Background Color: White.
  - 5. Maximum Temperature: Able to withstand temperatures up to 160 deg F.
  - 6. Minimum Label Size: Length and width vary for required label content, but not less than 2-1/2 by 3/4 inch.
  - 7. Minimum Letter Size: 1/4 inch for name of units if viewing distance is less than 24 inches, 1/2 inch for viewing distances up to 72 inches, and proportionately larger lettering for greater viewing distances. Include secondary lettering two-thirds to three-quarters the size of principal lettering.
  - 8. Fasteners: Stainless-steel rivets or self-tapping screws.
  - 9. Adhesive: Contact-type permanent adhesive, compatible with label and with substrate.

- C. Label Content: Include equipment's Drawing designation or unique equipment number, Drawing numbers where equipment is indicated (plans, details, and schedules), and the Specification Section number and title where equipment is specified.
- D. Equipment Label Schedule: For each item of equipment to be labeled, on 8-1/2-by-11-inch bond paper. Tabulate equipment identification number and identify Drawing numbers where equipment is indicated (plans, details, and schedules) and the Specification Section number and title where equipment is specified. Equipment schedule shall be included in operation and maintenance data.

## 2.2 WARNING SIGNS AND LABELS

- A. **Manufacturers:** Subject to compliance with requirements, available manufacturers offering products that may be incorporated into the Work, provide products by one of the following or approved equal:
  - 1. Brady Corporation
  - 2. Marking Services Inc.
  - 3. Seton Identification Products
  - 4. Or Approved Equal.
- B. Material and Thickness: Multilayer, multicolor, plastic labels for mechanical engraving, 1/8 inch thick, and having predrilled holes for attachment hardware.
- C. Letter Color: White.
- D. Background Color: Red.
- E. Maximum Temperature: Able to withstand temperatures up to 160 deg F.
- F. Minimum Label Size: Length and width vary for required label content, but not less than 2-1/2 by 3/4 inch.
- G. Minimum Letter Size: 1/4 inch for name of units if viewing distance is less than 24 inches, 1/2 inch for viewing distances up to 72 inches, and proportionately larger lettering for greater viewing distances. Include secondary lettering two-thirds to three-quarters the size of principal lettering.
- H. Fasteners: Stainless-steel rivets or self-tapping screws.
- I. Adhesive: Contact-type permanent adhesive, compatible with label and with substrate.
- J. Label Content: Include caution and warning information plus emergency notification instructions.

## 2.3 PIPE LABELS

- A. **Manufacturers:** Subject to compliance with requirements, available manufacturers offering products that may be incorporated into the Work, provide products by one of the following or approved equal:
  - 1. Brady Corporation
  - 2. Marking Services Inc.
  - 3. Seton Identification Products

4. Or Approved Equal.
- B. General Requirements for Manufactured Pipe Labels: Preprinted, color-coded, with lettering indicating service, and showing flow direction.
- C. Pretensioned Pipe Labels: Pre-coiled, semi-rigid plastic formed to partially cover circumference of pipe and to attach to pipe without fasteners or adhesive.
- D. Pipe Label Contents: Include identification of piping service using designations listed in part 3.1 ; also include an arrow indicating flow direction.
  1. Flow-Direction Arrows: Integral with piping-system service lettering to accommodate both directions or as separate unit on each pipe label to indicate flow direction.
  2. Lettering Size: Size letters according to ASME A13.1 for piping At least 1/2 inch for viewing distances up to 72 inches and proportionately larger lettering for greater viewing distances.

## 2.4 VALVE TAGS

- A. **Manufacturers:** Subject to compliance with requirements, available manufacturers offering products that may be incorporated into the Work, provide products by one of the following or approved equal:
  1. Brady Corporation
  2. Marking Services, Inc.
  3. Seton Identification Products
  4. Or Approved Equal.
- B. Valve Tags: Stamped or engraved with 1/4-inch letters for piping system abbreviation and 1/2-inch numbers.
  1. Tag Material: Brass, 0.032-inch or stainless steel, 0.025-inch minimum thickness and having predrilled or stamped holes for attachment hardware.
  2. Fasteners: Brass wire-link chain or beaded chain or S-hook.
- C. Valve Schedules: For each piping system, on 8-1/2-by-11-inch bond paper. Tabulate valve number, piping system, system abbreviation (as shown on valve tag), location of valve (room or space), normal-operating position (open, closed, or modulating), and variations for identification. Mark valves for emergency shutoff and similar special uses.
  1. Valve-tag schedule shall be included in operation and maintenance data.
- D. When an isolation or other functioning valve controls a specific remote operation that is separated by a partition or wall, include in the valve tag the valve's function. At the remote connection point, place signage stipulating where the control valve is located.

## 2.5 WARNING TAGS

- A. **Manufacturers:** Subject to compliance with requirements, available manufacturers offering products that may be incorporated into the Work, provide products by one of the following or approved equal:
  1. Brady Corporation
  2. Marking Services Inc.

3. Seton Identification Products
  4. Or Approved Equal.
- B. Description: Preprinted or partially preprinted accident-prevention tags of plasticized card stock with matte finish suitable for writing.
1. Size: Approximately 4 by 7 inches.
  2. Fasteners: Reinforced grommet and wire or string.
  3. Nomenclature: Large-size primary caption such as "DANGER," "CAUTION," or "DO NOT OPERATE."
  4. Color: Safety yellow background with black lettering.

### PART 3 - EXECUTION

#### 3.1 PIPE IDENTIFICATION SCHEDULE

##### A. General

1. Provide color-coded pipe identification markers on piping installed under this Section. Pipe markers shall be Snap-On laminated plastic protected by clear acrylic coating. Pipe markers shall be applied after Architectural painting where such is required.
2. Provide an arrow marker with each pipe content marker to indicate direction of flow. If flow can be in either direction, use double-headed arrow marker.
3. Color banding shall meet ASME, ANSI latest and OSHA requirements.
4. Markers are to be applied to all piping, regardless of under jacket colors per the tables that follow:
5. Apply labels to all piping routed throughout any areas including those above drop ceilings, under floor, and those exposed to view when access doors or access panels are opened.
6. Apply labels to piping in concealed areas. Concealed areas, for purposes of this identification section, are those areas that cannot be seen except by demolition of the building elements.
7. In addition to pipe markers, arrow markers shall be used to indicate the direction of flow.
8. Where the same service is distributed at different pressures, include in the marker the pressure of the service.
  - a. Example: Natural gas - Gas 2 psig, or Gas 10 inches WC
  - b. Example: Compressed air - Lab Compressed Air 25 psig or Lab compressed air 110 psig
9. As a minimum, locate pipe markers as follows:
  - a. Provide a pipe marker at each valve to indicate proper identification of pipe contents. Where several valves exist on one (1) header, it is necessary to mark only the header.
  - b. At each branch or riser take off on piping systems, excluding short takeoffs for fixtures and terminal units.

- c. Provide a pipe marker and an arrow marker at every point of pipe entry or exit where the pipe penetrates a wall, floor, service column or enclosure.
- d. At access doors, manholes and similar access points that permit view of concealed piping.
- e. Near major equipment items and other points of origination and termination

B. The charts below indicate the following:

- a. Marker/Legend: label text printed on the pipe label
- b. Label Color: back round base color
- c. Text Color: self-explanatory

<b>CHART 1</b> <b>Basic Plumbing Services</b>

### 3.2 CONTINUOUS PROTECTIVE PLASTIC JACKETS AND COLORS

- A. The following areas shall require all insulated piping to be protected along the entire pipe length with White PVC jacket covers (Ceel-Co or Zeston plastic jacket). See Division 22 for plumbing pipe insulation for jacket specifics:
- a. Penthouse Mechanical Rooms - Piping 10 feet and lower
  - b. Plumbing Equipment Rooms - Piping 10 feet and lower
  - c. Mechanical Rooms - Piping 10 feet and lower
  - d. All Rainwater Leaders (horizontal) in areas without ceilings
  - e. Shipping Docks where piping is exposed or below ceilings - Piping 10 feet and lower
  - f. Vivarium MEP Walkways or Accessible Interstitial Spaces - All Piping
  - g. Vivarium (general) - Exposed Piping
  - h. Vivarium Washrooms (both clean and dirty side) - All Piping
  - i. Kitchens - Exposed Piping Below Ceiling
  - j. Pilot Plants - All Piping
  - k. Food Plants - All Piping
2. This plastic jacket shall include fitting covers and piping covers.
  3. Piping to be covered with this plastic jacket shall be insulated and finished as herein specified and then the plastic jacket shall be applied.

### 3.3 LABELING OF GAS PIPING

- A. Furnish and install one coat of primer and two coats of finish paint to all interior gas piping installed as part of this contract.
1. See Division 09 for paint types for interior piping.
  2. Painting shall begin at plumbing side of contract downstream of the utility company gas meter - see exterior painting below for piping exposed to weather.
  3. All gas piping shall be painted "Safety Yellow" per ANSI/ASME identification code 13.1.
  4. Painting shall include all gas vents from vent origin to termination.
  5. Include necessary paint finish touch-up where welding or jointing process has interfered with paint finish
  6. Install labels after paint has cured for a minimum of 5 days.
- B. Gas Piping Exposed to Weather or on Roof
1. Furnish and install OSHA Safety Yellow to exterior and roof mounted gas piping commencing at a starting point one (1) foot below roof to gas pipe termination point on roof in the following manner:
    - a. Primer: Epoxy primer/sealer applied at a spreading rate recommended by the manufacturer (2 coats)

- 1) Moore M36-00/M37 Polyamide Epoxy Clear Sealer Finish
    - 2) PPG 97-14XX Series Pitt Guard DTR Polyamide Epoxy Clear Sealer Finish
    - 3) S-W Heavy Duty Epoxy B67W300 Series
  - b. Intermediate Coat: Epoxy applied at a spreading rate recommended by the manufacturer of 3.0 to 8.0 mils
    - 1) DuPont 25P High Solids Epoxy Mastic
    - 2) S-W Heavy Duty Epoxy B67W300 Series
    - 3) Tnemec Series 66 Hi-Build Epoxoline Polyamidoamine Epoxy
  - c. Topcoat: Semi-gloss aliphatic polyurethane enamel applied at a spreading rate recommended by the manufacturer to achieve a dry film thickness of 2.0 - 4.0 mils.
    - 1) Moore M73/M75 Aliphatic Acrylic Urethane Semi-Gloss
    - 2) PPG 97-8XXX Series Pitthane High Build Acrylic Aliphatic Urethane
    - 3) S-W Corothane II Low VOC Satin Finish B65W200 Series
2. All finish gas piping shall be painted "Safety Yellow" per ANSI/ASME identification code 13.1.
3. Include necessary paint finish touch-up where welding or jointing process has interfered with paint finish
4. Install labels after paint has cured for a minimum of five (5) days.
5. Do not paint over dirt, rust, scale, grease, moisture, scuffed surfaces or conditions detrimental to formation of a durable paint film. Provide finish coats that are compatible with primers used.

### 3.4 PREPARATION

- A. Clean piping and equipment surface of substances that could impair bond of identification devices, including dirt, oil, grease, release agents, and incompatible primers, paints, and encapsulants.

### 3.5 GENERAL INSTALLATION REQUIREMENTS

- A. Coordinate installation of identifying devices with completion of covering and painting of surfaces where devices are to be applied.
- B. Coordinate installation of identifying devices with locations of access panels and doors.
- C. Install identifying devices before installing acoustical ceilings and similar concealment.

### 3.6 EQUIPMENT LABEL INSTALLATION

- A. Install or permanently fasten labels on each major item of mechanical equipment.
- B. Locate equipment labels where accessible and visible.

### 3.7 PIPE LABEL INSTALLATION

- A. Piping Color Coding: Painting of piping is specified in Division 09.
- B. Pipe Label Locations: Locate pipe labels where piping is exposed or above accessible ceilings in finished spaces; machine rooms; accessible maintenance spaces such as shafts, tunnels, and plenums; and exterior exposed locations as follows:
  - 1. Near each valve and control device.
  - 2. Near each branch connection, excluding short takeoffs for fixtures and terminal units. Where flow pattern is not obvious, mark each pipe at branch.
  - 3. Near penetrations through walls, floors, ceilings, and inaccessible enclosures.
  - 4. At access doors, manholes, and similar access points that permit view of concealed piping.
  - 5. Near major equipment items and other points of origination and termination.
  - 6. Spaced at maximum intervals of 50 feet along each run. Reduce intervals to 25 feet in areas of congested piping and equipment.
  - 7. On piping above removable acoustical ceilings. Omit intermediately spaced labels.
  - 8. Mains shall be labeled at points of entrance and exit from mechanical room, adjacent to each valve, on each riser, at each tee fitting, at points of entrance and exit from building, at least once in each room, and at intervals no longer than 20 feet.
- C. Directional Flow Arrows: Arrows shall be used to indicate direction of flow in pipes, including pipes where flow is allowed in both directions.

### 3.8 VALVE-TAG INSTALLATION

- A. Install tags on valves and control devices in piping systems, except check valves, valves within factory-fabricated equipment units, shutoff valves, faucets, convenience and lawn-watering hose connections, and similar roughing-in connections of end-use fixtures and units. List tagged valves in a valve schedule.
- B. Valve-Tag Application Schedule: Tag valves according to size, shape, and color scheme and with captions similar to those indicated in the following subparagraphs:
  - 1. Tags, Valves, Equipment, and Instruments
    - a. Upon completion of work, attach engraved laminated plastic tags to all valves, and instrumentation. Equipment shall bear a stamped stainless tag. Tags shall have black characters on white face, consecutively numbered and prefixed with letter P for general valves. Tags shall bear the number used in the P&IDs for those items so marked.
    - b. Embossed or engraved aluminum or brass tags may be substituted if desired.
    - c. Tags shall be at least 1 inch diameter with numerals at least 3/8 inch high and attached by S hooks and chains.
    - d. Nameplates, catalog numbers and rating identifications shall be securely attached to electrical and mechanical equipment with screws or rivets. Adhesives or cements will not be permitted.

- e. Non-potable water outlets shall be identified with permanently attached yellow color code or 4 inches high triangle tag reading, "water unsafe."
  - f. Coordinate numbering system with existing piping tags as not to duplicate numbers.
- 2. Valve-Tag Size and Shape: All Plumbing and Piping Services that are part of this contract 1-1/2 inches round.
  - 3. Valve-Tag Colors: Comply with the same colors as indicated for Pipe Labels
  - 4. Letter Colors: manufacturers standard.

### 3.9 WARNING-TAG INSTALLATION

- A. Write the required message on, and attach warning tags to, equipment and other items where required.

END OF SECTION

H:\Y0586.00\DOC\SPEC\2025\_02-20\_IFB\220553\_IDENTIFICATION FOR PLUMBING PIPING  
AND EQUIPMENT.DOC

## SECTION 220716 - PLUMBING EQUIPMENT INSULATION

### PART 1 - GENERAL

#### 1.1 RELATED DOCUMENTS

- A. Certain requirements common to all the mechanical and electrical trades (Fire Suppression, Plumbing, HVAC, Electrical, and Tele/Data) are specified in Division 20. To avoid repetition, they are not repeated in each relevant Division and Section. However, these requirements are applicable to the work of this Section and are hereby incorporated by reference.
- B. Drawings and general provisions of the Contract, including General and Supplementary Conditions and Division 01 Specification Sections, apply to this Section.

#### 1.2 SUMMARY

- A. Section includes insulating the following plumbing equipment:

- 1. Insulation materials
- 2. Insulating cements
- 3. Adhesives
- 4. Mastics
- 5. Sealants
- 6. Factory-applied jackets
- 7. Field-applied cloths
- 8. Field-applied jackets
- 9. Tapes
- 10. Securements
- 11. Corner angles

#### 1.3 ACTION SUBMITTALS

- A. Product Data: For each type of product indicated. Include thermal conductivity, water-vapor permeance thickness, and jackets (both factory and field applied, if any).
- B. LEED Submittals:
  - 1. Product Data for Credit IEQ 4.1: For adhesives and sealants, documentation including printed statement of VOC content and chemical components.
  - 2. Laboratory Test Reports for Credit IEQ 4: For adhesives and sealants, documentation indicating that product complies with the testing and product requirements of the California Department of Health Services' "Standard Practice for the Testing of Volatile Organic Emissions from Various Sources Using Small-Scale Environmental Chambers."
- C. Shop Drawings: Include plans, elevations, sections, details, and attachments to other work.

1. Detail application of protective shields, saddles, and inserts at hangers for each type of insulation and hanger.
  2. Detail attachment and covering of heat tracing inside insulation.
  3. Detail removable insulation at equipment connections and access panels.
  4. Detail application of field-applied jackets.
  5. Detail application at linkages of control devices.
  6. Detail field application for each equipment type.
- D. Samples: For each type of insulation and jacket indicated. Identify each Sample, describing product and intended use. Sample sizes are as follows:
1. Sheet Form Insulation Materials: 12 inches square.
  2. Sheet Jacket Materials: 12 inches square.
  3. Manufacturer's Color Charts: For products where color is specified, show the full range of colors available for each type of finish material.

#### 1.4 INFORMATIONAL SUBMITTALS

- A. Qualification Data: For qualified Installer.
- B. Material Test Reports: From a qualified testing agency acceptable to authorities having jurisdiction indicating, interpreting, and certifying test results for compliance of insulation materials, sealers, attachments, cements, and jackets, with requirements indicated. Include dates of tests and test methods employed.
- C. Field quality-control reports.

#### 1.5 QUALITY ASSURANCE

- A. Installer Qualifications: Skilled mechanics who have successfully completed an apprenticeship program or another craft training program certified by the Department of Labor, Bureau of Apprenticeship and Training.
- B. Surface-Burning Characteristics: For insulation and related materials, as determined by testing identical products according to ASTM E 84 by a testing agency acceptable to authorities having jurisdiction. Factory label insulation and jacket materials and adhesive, mastic, tapes, and cement material containers, with appropriate markings of applicable testing agency.
  1. Insulation Installed Indoors: Flame-spread index of 25 or less, and smoke-developed index of 50 or less.
  2. Insulation Installed Outdoors: Flame-spread index of 75 or less, and smoke-developed index of 150 or less.
- C. Mockups: Before installing insulation, build mockups for each type of insulation and finish listed below to demonstrate quality of insulation application and finishes. Build mockups in the location indicated or, if not indicated, as directed by Architect. Use materials indicated for the completed Work.
  1. Equipment Mockups: One tank or vessel, pump.

2. For each mockup, fabricate cutaway sections to allow observation of application details for insulation materials, adhesives, mastics, attachments, and jackets.
3. Notify Architect seven days in advance of dates and times when mockups will be constructed.
4. Obtain Architect's approval of mockups before starting insulation application.
5. Approval of mockups does not constitute approval of deviations from the Contract Documents contained in mockups unless Architect specifically approves such deviations in writing.
6. Maintain mockups during construction in an undisturbed condition as a standard for judging the completed Work.
7. Demolish and remove mockups when directed.

#### 1.6 DELIVERY, STORAGE, AND HANDLING

- A. Packaging: Insulation material containers shall be marked by manufacturer with appropriate ASTM standard designation, type and grade, and maximum use temperature.

#### 1.7 COORDINATION

- A. Coordinate sizes and locations of supports, hangers, and insulation shields specified in Division 22.
- B. Coordinate clearance requirements with equipment Installer for equipment insulation application.
- C. Coordinate installation and testing of heat tracing.

#### 1.8 SCHEDULING

- A. Schedule insulation application after pressure testing systems and, where required, after installing and testing heat tracing. Insulation application may begin on segments that have satisfactory test results.
- B. Complete installation and concealment of plastic materials as rapidly as possible in each area of construction.

### PART 2 - PRODUCTS

#### 2.1 INSULATION MATERIALS

- A. Comply with requirements in "Water Boiler Breeching Insulation Schedule" and "Equipment Insulation Schedule" articles for where insulating materials shall be applied.
- B. Products shall not contain asbestos, lead, mercury, or mercury compounds.
- C. Products that come in contact with stainless steel shall have a leachable chloride content of less than 50 ppm when tested according to ASTM C 871.
- D. Insulation materials for use on austenitic stainless steel shall be qualified as acceptable according to ASTM C 795.

- E. Foam insulation materials shall not use CFC or HCFC blowing agents in the manufacturing process.
- F. Calcium Silicate:
  - 1. **Manufacturers: Subject to compliance with requirements, provide products by the following or approved equal:**
    - a. **Industrial Insulation Group, LLC (IIG-LLC)**
    - b. **Or Approved Equal.**
  - 2. Flat-, curved-, and grooved-block sections of noncombustible, inorganic, hydrous calcium silicate with a non-asbestos fibrous reinforcement. Comply with ASTM C 533, Type I.
- G. Cellular Glass: Inorganic, incombustible, foamed or cellulated glass with annealed, rigid, hermetically sealed cells. Factory-applied jacket requirements are specified in "Factory-Applied Jackets" Article.
  - 1. **Manufacturers: Subject to compliance with requirements, available manufacturers offering products that may be incorporated into the Work, provide products by the following or approved equal:**
    - a. **Johns Mansville.**
    - b. **Owens Corning.**
    - c. **Pittsburgh Corning Corporation**
    - d. **Or Approved Equal.**
  - 2. Block Insulation: ASTM C 552, Type I.
  - 3. Special-Shaped Insulation: ASTM C 552, Type III.
  - 4. Board Insulation: ASTM C 552, Type IV.
  - 5. Preformed Pipe Insulation without Jacket: Comply with ASTM C 552, Type II, Class 1.
  - 6. Preformed Pipe Insulation with Factory-Applied ASJ-SSL: Comply with ASTM C 552, Type II, Class 2.
  - 7. Factory fabricate shapes according to ASTM C 450 and ASTM C 585.
- H. Flexible Elastomeric Insulation: Closed-cell, sponge- or expanded-rubber materials. Comply with ASTM C 534, Type I for tubular materials and Type II for sheet materials.
  - 1. **Manufacturers: Subject to compliance with requirements, available manufacturers offering products that may be incorporated into the Work, provide products by the following or approved equal:**
    - a. **Aeroflex USA, Inc.**
    - b. **Armacell LLC**
    - c. **K-Flex USA**
    - d. **Or Approved Equal.**

- I. Mineral-Fiber Blanket Insulation: Mineral or glass fibers bonded with a thermosetting resin. Comply with ASTM C 553, Type II and ASTM C 1290, Type I. Factory-applied jacket requirements are specified in "Factory-Applied Jackets" Article.
  - 1. **Manufacturers: Subject to compliance with requirements, available manufacturers offering products that may be incorporated into the Work, provide products by the following or approved equal:**
    - a. **Certain Teed Corporation**
    - b. **Johns Manville; a Berkshire Hathaway company**
    - c. **Knauf Insulation**
    - d. **Or Approved Equal.**
- J. High-Temperature, Mineral-Fiber Blanket Insulation: Mineral or glass fibers bonded with a thermosetting resin. Comply with ASTM C 553, Type V, without factory-applied jacket.
  - 1. **Manufacturers: Subject to compliance with requirements, available manufacturers offering products that may be incorporated into the Work, provide products by the following or approved equal:**
    - a. **Industrial Insulation Group, LLC (IIG-LLC)**
    - b. **Johns Manville; a Berkshire Hathaway company**
    - c. **Knauf Insulation**
    - d. **Or Approved Equal.**
- K. Mineral-Fiber Board Insulation: Mineral or glass fibers bonded with a thermosetting resin. Comply with ASTM C 612, Type IA or Type IB. For equipment applications, provide insulation with factory applied ASJ. Factory-applied jacket requirements are specified in "Factory-Applied Jackets" Article.
  - 1. **Manufacturers: Subject to compliance with requirements, available manufacturers offering products that may be incorporated into the Work, provide products by the following or approved equal:**
    - a. **CertainTeed Corporation**
    - b. **Johns Manville, a Berkshire Hathaway company**
    - c. **Knauf Insulation**
    - d. **Or Approved Equal.**
- L. High-Temperature, Mineral-Fiber Board Insulation: Mineral or glass fibers bonded with a thermosetting resin. Comply with ASTM C 612, Type III, without factory-applied jacket.
  - 1. **Manufacturers: Subject to compliance with requirements, available manufacturers offering products that may be incorporated into the Work, provide products by the following or approved equal:**
    - a. **Industrial Insulation Group, LLC (IIG-LLC)**
    - b. **Knauf Insulation**
    - c. **Rock Wool**

d. **Or Approved Equal.**

M. Mineral-Fiber, Preformed Pipe Insulation:

1. **Manufacturers:** Subject to compliance with requirements, available manufacturers offering products that may be incorporated into the Work, provide products by the following or approved equal:
  - a. **Johns Manville; a Berkshire Hathaway company.**
  - b. **Knauf Insulation.**
  - c. **Manson Insulation Inc.**
  - d. **Or Approved Equal.**
2. Type I, 850 Deg F Materials: Mineral or glass fibers bonded with a thermosetting resin. Comply with ASTM C 547, Type I, Grade A, with factory-applied ASJ-SSL. Factory-applied jacket requirements are specified in "Factory-Applied Jackets" Article.

N. Mineral-Fiber, Pipe and Tank Insulation: Mineral or glass fibers bonded with a thermosetting resin. Semi rigid board material with factory applied FSK jacket complying with ASTM C 1393, Type II or Type IIIA Category 2, or with properties similar to ASTM C 612, Type IB. Nominal density is 2.5 lb/cu. ft. or more. Thermal conductivity (k-value) at 100 deg F is 0.29 Btu x in./h x sq. ft. x deg F or less. Factory-applied jacket requirements are specified in "Factory-Applied Jackets" Article.

1. **Manufacturers:** Subject to compliance with requirements, available manufacturers offering products that may be incorporated into the Work, provide products by the following or approved equal:
  - a. **CertainTeed Corporation.**
  - b. **Johns Manville; a Berkshire Hathaway company.**
  - c. **Knauf Insulation.**
  - d. **Or Approved Equal.**

O. Polyolefin: Unicellular, polyethylene thermal plastic insulation. Comply with ASTM C 534 or ASTM C 1427, Type I, Grade 1 for tubular materials and Type II, Grade 1 for sheet materials.

1. **Manufacturers:** Subject to compliance with requirements, available manufacturers offering products that may be incorporated into the Work, provide products by the following or approved equal:
  - a. **Armacell LLC.**
  - b. **Nomaco Insulation.**
  - c. **Or Approved Equal.**

2.2 INSULATING CEMENTS

A. Mineral-Fiber Insulating Cement: Comply with ASTM C 195.

1. **Manufacturers:** Subject to compliance with requirements, provide products by the following or approved equal:

- a. Ramco Insulation, Inc.
  - b. Or Approved Equal.
- B. Expanded or Exfoliated Vermiculite Insulating Cement: Comply with ASTM C 196.
  - 1. **Manufacturers: Subject to compliance with requirements, provide products by the following or approved equal:**
    - a. Ramco Insulation, Inc.
    - b. Or Approved Equal.
- C. Mineral-Fiber, Hydraulic-Setting Insulating and Finishing Cement: Comply with ASTM C 449.
  - 1. **Manufacturers: Subject to compliance with requirements, provide products by the following or approved equal:**
    - a. Ramco Insulation, Inc.
    - b. Or Approved Equal.

## 2.3 ADHESIVES

- A. Materials shall be compatible with insulation materials, jackets, and substrates and for bonding insulation to it and to surfaces to be insulated unless otherwise indicated.
- B. Calcium Silicate Adhesive: Fibrous, sodium-silicate-based adhesive with a service temperature range of 50 to 800 deg F.
  - 1. **Manufacturers: Subject to compliance with requirements, available manufacturers offering products that may be incorporated into the Work, provide products by the following or approved equal:**
    - a. Childers Brand; H. B. Fuller Construction Products.
    - b. Eagle Bridges - Marathon Industries.
    - c. Foster Brand; H. B. Fuller Construction Products.
    - d. Or Approved Equal.
  - 2. For indoor applications, adhesive shall have a VOC content of 80 g/L or less when calculated according to 40 CFR 59, Subpart D (EPA Method 24).
  - 3. Adhesive shall comply with the testing and product requirements of the California Department of Health Services' "Standard Practice for the Testing of Volatile Organic Emissions from Various Sources Using Small-Scale Environmental Chambers."
- C. Cellular-Glass Adhesive: Two-component, thermosetting urethane adhesive containing no flammable solvents, with a service temperature range of minus 100 to plus 200 deg F.
  - 1. **Manufacturers: Subject to compliance with requirements, provide products by the following or approved equal:**
    - a. Foster Brand; H. B. Fuller Construction Products.
    - b. Or Approved Equal.

2. For indoor applications, adhesive shall have a VOC content of 50 g/L or less when calculated according to 40 CFR 59, Subpart D (EPA Method 24).
  3. Adhesive shall comply with the testing and product requirements of the California Department of Health Services' "Standard Practice for the Testing of Volatile Organic Emissions from Various Sources Using Small-Scale Environmental Chambers."
- D. Flexible Elastomeric and Polyolefin Adhesive: Comply with MIL-A-24179A, Type II, Class I.
1. **Manufacturers: Subject to compliance with requirements, available manufacturers offering products that may be incorporated into the Work, provide products by the following or approved equal:**
    - a. Aeroflex USA, Inc.
    - b. Armacell LLC.
    - c. Foster Brand; H. B. Fuller Construction Products.
    - d. Or Approved Equal.
  2. For indoor applications, adhesive shall have a VOC content of 50 g/L or less when calculated according to 40 CFR 59, Subpart D (EPA Method 24).
  3. Adhesive shall comply with the testing and product requirements of the California Department of Health Services' "Standard Practice for the Testing of Volatile Organic Emissions from Various Sources Using Small-Scale Environmental Chambers."
- E. Mineral-Fiber Adhesive: Comply with MIL-A-3316C, Class 2, Grade A.
1. **Manufacturers: Subject to compliance with requirements, available manufacturers offering products that may be incorporated into the Work, provide products by the following or approved equal:**
    - a. Childers Brand; H. B. Fuller Construction Products.
    - b. Eagle Bridges - Marathon Industries.
    - c. Foster Brand; H. B. Fuller Construction Products.
    - d. Or Approved Equal.
  2. For indoor applications, adhesive shall have a VOC content of 80 g/L or less when calculated according to 40 CFR 59, Subpart D (EPA Method 24).
  3. Adhesive shall comply with the testing and product requirements of the California Department of Health Services' "Standard Practice for the Testing of Volatile Organic Emissions from Various Sources Using Small-Scale Environmental Chambers."
- F. ASJ Adhesive, and FSK and PVDC Jacket Adhesive: Comply with MIL-A-3316C, Class 2, Grade A for bonding insulation jacket lap seams and joints.
1. **Manufacturers: Subject to compliance with requirements, available manufacturers offering products that may be incorporated into the Work, provide products by the following or approved equal:**
    - a. Childers Brand; H. B. Fuller Construction Products.
    - b. Eagle Bridges - Marathon Industries.

- c. Foster Brand; H. B. Fuller Construction Products.
    - d. Or Approved Equal.
  - 2. For indoor applications, adhesive shall have a VOC content of 50 g/L or less when calculated according to 40 CFR 59, Subpart D (EPA Method 24).
  - 3. Adhesive shall comply with the testing and product requirements of the California Department of Health Services' "Standard Practice for the Testing of Volatile Organic Emissions from Various Sources Using Small-Scale Environmental Chambers."
- G. PVC Jacket Adhesive: Compatible with PVC jacket.
- 1. **Manufacturers: Subject to compliance with requirements, available manufacturers offering products that may be incorporated into the Work, provide products by the following or approved equal:**
    - a. Dow Corning Corporation.
    - b. Johns Manville; a Berkshire Hathaway company.
    - c. PIC Plastics, Inc.
    - d. Or Approved Equal.
  - 2. For indoor applications, adhesive shall have a VOC content of 50 g/L or less when calculated according to 40 CFR 59, Subpart D (EPA Method 24).
  - 3. Adhesive shall comply with the testing and product requirements of the California Department of Health Services' "Standard Practice for the Testing of Volatile Organic Emissions from Various Sources Using Small-Scale Environmental Chambers."

## 2.4 MASTICS

- A. Materials shall be compatible with insulation materials, jackets, and substrates; comply with MIL-PRF-19565C, Type II.
- 1. For indoor applications, use mastics that have a VOC content of 50 g/L or less when calculated according to 40 CFR 59, Subpart D (EPA Method 24).
- B. Vapor-Barrier Mastic: Water based; suitable for indoor use on below ambient services.
- 1. **Manufacturers: Subject to compliance with requirements, available manufacturers offering products that may be incorporated into the Work, provide products by the following or approved equal:**
    - a. Foster Brand; H. B. Fuller Construction Products.
    - b. Knauf Insulation.
    - c. Vimasco Corporation.
    - d. Or Approved Equal.
  - 2. Water-Vapor Permeance: ASTM E 96/E 96M, Procedure B, 0.013 perm at 43-mil dry film thickness.
  - 3. Service Temperature Range: Minus 20 to plus 180 deg F.

4. Solids Content: ASTM D 1644, 58 percent by volume and 70 percent by weight.
  5. Color: White.
- C. Breather Mastic: Water based; suitable for indoor and outdoor use on above ambient services.
1. **Manufacturers: Subject to compliance with requirements, available manufacturers offering products that may be incorporated into the Work, provide products by the following or approved equal:**
    - a. Childers Brand; H. B. Fuller Construction Products.
    - b. Eagle Bridges - Marathon Industries.
    - c. Foster Brand; H. B. Fuller Construction Products.
    - d. Knauf Insulation.
    - e. Or Approved Equal.
  2. Water-Vapor Permeance: ASTM F 1249, 1.8 perms at 0.0625-inch dry film thickness.
  3. Service Temperature Range: Minus 20 to plus 180 deg F.
  4. Solids Content: 60 percent by volume and 66 percent by weight.
  5. Color: White.

## 2.5 SEALANTS

- A. Joint Sealants:
1. **Manufacturers: Subject to compliance with requirements, available manufacturers offering products that may be incorporated into the Work, provide products by the following or approved equal:**
    - a. Childers Brand; H. B. Fuller Construction Products.
    - b. Eagle Bridges - Marathon Industries.
    - c. Foster Brand; H. B. Fuller Construction Products.
    - d. Or Approved Equal.
  2. Materials shall be compatible with insulation materials, jackets, and substrates.
  3. Permanently flexible, elastomeric sealant.
  4. Service Temperature Range: Minus 100 to plus 300 deg F.
  5. Color: White or gray.
  6. For indoor applications, sealants shall have a VOC content of 420 g/L or less when calculated according to 40 CFR 59, Subpart D (EPA Method 24).
  7. Sealants shall comply with the testing and product requirements of the California Department of Health Services' "Standard Practice for the Testing of Volatile Organic Emissions from Various Sources Using Small-Scale Environmental Chambers."
- B. FSK and Metal Jacket Flashing Sealants:

1. **Manufacturers: Subject to compliance with requirements, available manufacturers offering products that may be incorporated into the Work, provide products by the following or approved equal:**
    - a. Childers Brand; H. B. Fuller Construction Products.
    - b. Eagle Bridges - Marathon Industries.
    - c. Foster Brand; H. B. Fuller Construction Products.
    - d. Or Approved Equal.
  2. Materials shall be compatible with insulation materials, jackets, and substrates.
  3. Fire- and water-resistant, flexible, elastomeric sealant.
  4. Service Temperature Range: Minus 40 to plus 250 deg F.
  5. Color: Aluminum.
  6. For indoor applications, sealants shall have a VOC content of 420 g/L or less when calculated according to 40 CFR 59, Subpart D (EPA Method 24).
  7. Sealants shall comply with the testing and product requirements of the California Department of Health Services' "Standard Practice for the Testing of Volatile Organic Emissions from Various Sources Using Small-Scale Environmental Chambers."
- C. ASJ Flashing Sealants, and Vinyl, PVDC, and PVC Jacket Flashing Sealants:
1. **Manufacturers: Subject to compliance with requirements, provide products by the following or approved equal:**
    - a. Childers Brand; H. B. Fuller Construction Products.
    - b. Or Approved Equal.
  2. Materials shall be compatible with insulation materials, jackets, and substrates.
  3. Fire- and water-resistant, flexible, elastomeric sealant.
  4. Service Temperature Range: Minus 40 to plus 250 deg F.
  5. Color: White.
  6. For indoor applications, sealants shall have a VOC content of 420 g/L or less when calculated according to 40 CFR 59, Subpart D (EPA Method 24).
  7. Sealants shall comply with the testing and product requirements of the California Department of Health Services' "Standard Practice for the Testing of Volatile Organic Emissions from Various Sources Using Small-Scale Environmental Chambers."

## 2.6 FACTORY-APPLIED JACKETS

- A. Insulation system schedules indicate factory-applied jackets on various applications. When factory-applied jackets are indicated, comply with the following:
1. ASJ: White, Kraft-paper, fiberglass-reinforced scrim with aluminum-foil backing; complying with ASTM C 1136, Type I.

2. ASJ-SSL: ASJ with self-sealing, pressure-sensitive, acrylic-based adhesive covered by a removable protective strip; complying with ASTM C 1136, Type I.
3. FSK Jacket: Aluminum-foil, fiberglass-reinforced scrim with Kraft-paper backing; complying with ASTM C 1136, Type II.
4. PVDC Jacket for Indoor Applications: 4-mil- thick, white PVDC bi-axially oriented barrier film with a permeance at 0.02 perm when tested according to ASTM E 96/E 96M and with a flame-spread index of 5 and a smoke-developed index of 20 when tested according to ASTM E 84.
  - a. **Manufacturers: Subject to compliance with requirements, provide products by the following or approved equal:**
    - 1) Dow Chemical Company (The).
    - 2) Or Approved Equal.
5. PVDC Jacket for Outdoor Applications: 6-mil- thick, white PVDC bi-axially oriented barrier film with a permeance at 0.01 perm when tested according to ASTM E 96/E 96M and with a flame-spread index of 5 and a smoke-developed index of 25 when tested according to ASTM E 84.
  - a. **Manufacturers: Subject to compliance with requirements, provide products by the following or approved equal:**
    - 1) Dow Chemical Company (The).
    - 2) Or Approved Equal.
6. PVDC-SSL Jacket: PVDC jacket with a self-sealing, pressure-sensitive, acrylic-based adhesive covered by a removable protective strip.
  - a. **Manufacturers: Subject to compliance with requirements, provide products by the following or approved equal:**
    - 1) Dow Chemical Company (The).
    - 2) Or Approved Equal.

## 2.7 FIELD-APPLIED CLOTHS

- A. Woven Glass-Fiber Fabric: Comply with MIL-C-20079H, Type I, plain weave, and pre-sized a minimum of 8 oz./sq. yd..
  1. **Manufacturers: Subject to compliance with requirements, provide products by the following or approved equal:**
    - a. Alpha Associates, Inc.
    - b. Or Approved Equal.

## 2.8 FIELD-APPLIED JACKETS

- A. Field-applied jackets shall comply with ASTM C 921, Type I, unless otherwise indicated.

- B. PVC Jacket: High-impact-resistant, UV-resistant PVC complying with ASTM D 1784, Class 16354-C; thickness as scheduled; roll stock ready for shop or field cutting and forming. Thickness is indicated in field-applied jacket schedules.
1. **Manufacturers: Subject to compliance with requirements, available manufacturers offering products that may be incorporated into the Work, provide products by the following or approved equal:**
    - a. Johns Manville; a Berkshire Hathaway company.
    - b. PIC Plastics, Inc.
    - c. Proto Corporation.
    - d. Or Approved Equal.
  2. Adhesive: As recommended by jacket material manufacturer.
  3. Color: White or color-code jackets based on system. Color as selected by Architect.
  4. Factory-fabricated tank heads and tank side panels.
- C. Metal Jacket:
1. **Manufacturers: Subject to compliance with requirements, available manufacturers offering products that may be incorporated into the Work, provide products by the following or approved equal:**
    - a. Childers Brand; H. B. Fuller Construction Products.
    - b. ITW Insulation Systems; Illinois Tool Works, Inc.
    - c. RPR Products, Inc.
    - d. Or Approved Equal.
  2. Aluminum Jacket: Comply with ASTM B 209, Alloy 3003, 3005, 3105, or 5005, Temper H-14.
    - a. Finish and thickness are indicated in field-applied jacket schedules.
    - b. Moisture Barrier for Indoor Applications: 3-mil- thick, heat-bonded polyethylene and Kraft paper.
    - c. Moisture Barrier for Outdoor Applications: 3-mil- thick, heat-bonded polyethylene and Kraft paper.
  3. Stainless-Steel Jacket: ASTM A 167 or ASTM A 240/A 240M.
    - a. Sheet and roll stock ready for shop or field sizing or factory cut and rolled to size.
    - b. Material, finish, and thickness are indicated in field-applied jacket schedules.
    - c. Moisture Barrier for Indoor Applications: 3-mil- thick, heat-bonded polyethylene and Kraft paper.
    - d. Moisture Barrier for Outdoor Applications: 3-mil- thick, heat-bonded polyethylene and Kraft paper or 2.5-mil- thick polysurlyn.

2.9 TAPES

- A. ASJ Tape: White vapor-retarder tape matching factory-applied jacket with acrylic adhesive, complying with ASTM C 1136.
1. **Manufacturers: Subject to compliance with requirements, available manufacturers offering products that may be incorporated into the Work, provide products by the following or approved equal:**
    - a. Avery Dennison Corporation, Specialty Tapes Division.
    - b. Compac Corporation.
    - c. Ideal Tape Co., Inc., an American Biltrite Company.
    - d. Or Approved Equal.
  2. Width: 3 inches.
  3. Thickness: 11.5 mils.
  4. Adhesion: 90 ounces force/inch in width.
  5. Elongation: 2 percent.
  6. Tensile Strength: 40 lbf/inch in width.
  7. ASJ Tape Disks and Squares: Precut disks or squares of ASJ tape.
- B. FSK Tape: Foil-face, vapor-retarder tape matching factory-applied jacket with acrylic adhesive; complying with ASTM C 1136.
1. **Manufacturers: Subject to compliance with requirements, available manufacturers offering products that may be incorporated into the Work, provide products by the following or approved equal:**
    - a. Avery Dennison Corporation, Specialty Tapes Division.
    - b. Compac Corporation.
    - c. Ideal Tape Co., Inc., an American Biltrite Company.
    - d. Or Approved Equal.
  2. Width: 3 inches.
  3. Thickness: 6.5 mils.
  4. Adhesion: 90 ounces force/inch in width.
  5. Elongation: 2 percent.
  6. Tensile Strength: 40 lbf/inch in width.
  7. FSK Tape Disks and Squares: Precut disks or squares of FSK tape.
- C. PVC Tape: White vapor-retarder tape matching field-applied PVC jacket with acrylic adhesive; suitable for indoor and outdoor applications.

1. **Manufacturers: Subject to compliance with requirements, available manufacturers offering products that may be incorporated into the Work, provide products by the following or approved equal:**
    - a. Compac Corporation.
    - b. Ideal Tape Co., Inc., an American Biltrite Company.
    - c. Venture Tape.
    - d. Or Approved Equal.
  2. Width: 2 inches.
  3. Thickness: 6 mils.
  4. Adhesion: 64 ounces force/inch in width.
  5. Elongation: 500 percent.
  6. Tensile Strength: 18 lbf/inch in width.
- D. Aluminum-Foil Tape: Vapor-retarder tape with acrylic adhesive.
1. **Manufacturers: Subject to compliance with requirements, available manufacturers offering products that may be incorporated into the Work, provide products by the following or approved equal:**
    - a. Avery Dennison Corporation, Specialty Tapes Division.
    - b. Compac Corporation.
    - c. Ideal Tape Co., Inc., an American Biltrite Company.
    - d. Or Approved Equal.
  2. Width: 2 inches.
  3. Thickness: 3.7 mils.
  4. Adhesion: 100 ounces force/inch in width.
  5. Elongation: 5 percent.
  6. Tensile Strength: 34 lbf/inch in width.
- E. PVDC Tape: White vapor-retarder PVDC tape with acrylic adhesive.
1. **Manufacturers: Subject to compliance with requirements, provide products by the following or approved equal:**
    - a. Dow Chemical Company (The).
    - b. Or Approved Equal.
  2. Width: 3 inches.
  3. Film Thickness: 4 mils.
  4. Adhesive Thickness: 1.5 mils.
  5. Elongation at Break: 145 percent.
  6. Tensile Strength: 55 lbf/inch in width.

## 2.10 SECUREMENTS

### A. Bands:

1. **Manufacturers: Subject to compliance with requirements, available manufacturers offering products that may be incorporated into the Work, provide products by the following or approved equal:**
  - a. ITW Insulation Systems; Illinois Tool Works, Inc.
  - b. RPR Products, Inc.
  - c. Or Approved Equal.
2. Stainless Steel: ASTM A 167 or ASTM A 240/A 240M, Type 304 or Type 316; 0.015 inch thick, 3/4 inch wide with wing seal or closed seal.
3. Aluminum: ASTM B 209, Alloy 3003, 3005, 3105, or 5005; Temper H-14, 0.020 inch thick, 3/4 inch wide with wing seal or closed seal.
4. Springs: Twin spring set constructed of stainless steel with ends flat and slotted to accept metal bands. Spring size determined by manufacturer for application.

### B. Insulation Pins and Hangers:

1. Capacitor-Discharge-Weld Pins: Copper- or zinc-coated steel pin, fully annealed for capacitor-discharge welding, 0.135-inch- diameter shank, length to suit depth of insulation indicated.
  - a. **Manufacturers: Subject to compliance with requirements, available manufacturers offering products that may be incorporated into the Work, provide products by the following or approved equal:**
    - 1) AGM Industries, Inc.
    - 2) Gemco.
    - 3) Midwest Fasteners, Inc.
    - 4) Or Approved Equal.
2. Cupped-Head, Capacitor-Discharge-Weld Pins: Copper- or zinc-coated steel pin, fully annealed for capacitor-discharge welding, 0.135-inch- diameter shank, length to suit depth of insulation indicated with integral 1-1/2-inch galvanized carbon-steel washer.
  - a. **Manufacturers: Subject to compliance with requirements, available manufacturers offering products that may be incorporated into the Work, provide products by the following or approved equal:**
    - 1) AGM Industries, Inc.
    - 2) CL WARD & Family Inc.
    - 3) Gemco.
    - 4) Or Approved Equal.

3. Metal, Adhesively Attached, Perforated-Base Insulation Hangers: Baseplate welded to projecting spindle that is capable of holding insulation, of thickness indicated, securely in position indicated when self-locking washer is in place.
  - a. **Manufacturers: Subject to compliance with requirements, available manufacturers offering products that may be incorporated into the Work, provide products by the following or approved equal:**
    - 1) AGM Industries, Inc.
    - 2) Gemco.
    - 3) Midwest Fasteners, Inc.
    - 4) Or Approved Equal.
  - b. Baseplate: Perforated, galvanized carbon-steel sheet, 0.030 inch thick by 2 inches square.
  - c. Spindle: Stainless steel, fully annealed, 0.106-inch- diameter shank, length to suit depth of insulation indicated.
  - d. Adhesive: Recommended by hanger manufacturer. Product with demonstrated capability to bond insulation hanger securely to substrates indicated without damaging insulation, hangers, and substrates.
4. Nonmetal, Adhesively Attached, Perforated-Base Insulation Hangers: Baseplate fastened to projecting spindle that is capable of holding insulation, of thickness indicated, securely in position indicated when self-locking washer is in place.
  - a. **Manufacturers: Subject to compliance with requirements, available manufacturers offering products that may be incorporated into the Work, provide products by the following or approved equal:**
    - 1) Gemco.
    - 2) Midwest Fasteners, Inc.
    - 3) Or Approved Equal.
  - b. Baseplate: Perforated, nylon sheet, 0.030 inch thick by 1-1/2 inches in diameter.
  - c. Spindle: Nylon, 0.106-inch- diameter shank, length to suit depth of insulation indicated, up to 2-1/2 inches.
  - d. Adhesive: Recommended by hanger manufacturer. Product with demonstrated capability to bond insulation hanger securely to substrates indicated without damaging insulation, hangers, and substrates.
5. Self-Sticking-Base Insulation Hangers: Baseplate welded to projecting spindle that is capable of holding insulation, of thickness indicated, securely in position indicated when self-locking washer is in place.
  - a. **Manufacturers: Subject to compliance with requirements, available manufacturers offering products that may be incorporated into the Work, provide products by the following or approved equal:**
    - 1) AGM Industries, Inc.

- 2) Gemco.
    - 3) Midwest Fasteners, Inc.
    - 4) Or Approved Equal.
  - b. Baseplate: Galvanized carbon-steel sheet, 0.030 inch thick by 2 inches square.
  - c. Spindle: Stainless steel, fully annealed, 0.106-inch- diameter shank, length to suit depth of insulation indicated.
  - d. Adhesive-backed base with a peel-off protective cover.
6. Insulation-Retaining Washers: Self-locking washers formed from 0.016-inch- thick, stainless-steel sheet, with beveled edge sized as required to hold insulation securely in place but not less than 1-1/2 inches in diameter.
  - a. **Manufacturers: Subject to compliance with requirements, available manufacturers offering products that may be incorporated into the Work, provide products by the following or approved equal:**
    - 1) AGM Industries, Inc.
    - 2) Gemco.
    - 3) Midwest Fasteners, Inc.
    - 4) Or Approved Equal.
  - b. Protect ends with capped self-locking washers incorporating a spring steel insert to ensure permanent retention of cap in exposed locations.
7. Nonmetal Insulation-Retaining Washers: Self-locking washers formed from 0.016-inch-thick nylon sheet, with beveled edge sized as required to hold insulation securely in place but not less than 1-1/2 inches in diameter.
  - a. **Manufacturers: Subject to compliance with requirements, available manufacturers offering products that may be incorporated into the Work, provide products by the following or approved equal:**
    - 1) Gemco.
    - 2) Midwest Fasteners, Inc.
    - 3) Or Approved Equal.
- C. Staples: Outward-clinching insulation staples, nominal 3/4-inch- wide, stainless steel or Monel.
- D. Wire: 0.062-inch soft-annealed, stainless steel.
  1. **Manufacturers: Subject to compliance with requirements, provide products by the following or approved equal:**
    - a. C & F Wire.
    - b. Or Approved Equal.

## 2.11 CORNER ANGLES

- A. PVC Corner Angles: 30 mils thick, minimum 1 by 1 inch, PVC according to ASTM D 1784, Class 16354-C. White or color-coded to match adjacent surface.
- B. Aluminum Corner Angles: 0.040 inch thick, minimum 1 by 1 inch, aluminum according to ASTM B 209, Alloy 3003, 3005, 3105, or 5005; Temper H-14.
- C. Stainless-Steel Corner Angles: 0.024 inch thick, minimum 1 by 1 inch, stainless steel according to ASTM A 167 or ASTM A 240/A 240M, Type 304 or Type 316.

## PART 3 - EXECUTION

### 3.1 EXAMINATION

- A. Examine substrates and conditions for compliance with requirements for installation tolerances and other conditions affecting performance of insulation application.
  - 1. Verify that systems and equipment to be insulated have been tested and are free of defects.
  - 2. Verify that surfaces to be insulated are clean and dry.
- B. Proceed with installation only after unsatisfactory conditions have been corrected.

### 3.2 PREPARATION

- A. Surface Preparation: Clean and dry surfaces to receive insulation. Remove materials that will adversely affect insulation application.
- B. Surface Preparation: Clean and prepare surfaces to be insulated. Before insulating, apply a corrosion coating to insulated surfaces as follows:
  - 1. Stainless Steel: Coat 300 series stainless steel with an epoxy primer 5 mils thick and an epoxy finish 5 mils thick if operating in a temperature range between 140 and 300 deg F. Consult coating manufacturer for appropriate coating materials and application methods for operating temperature range.
  - 2. Carbon Steel: Coat carbon steel operating at a service temperature between 32 and 300 deg F with an epoxy coating. Consult coating manufacturer for appropriate coating materials and application methods for operating temperature range.
- C. Coordinate insulation installation with the trade installing heat tracing. Comply with requirements for heat tracing that applies to insulation.
- D. Mix insulating cements with clean potable water; if insulating cements are to be in contact with stainless-steel surfaces, use demineralized water.

### 3.3 GENERAL INSTALLATION REQUIREMENTS

- A. Install insulation materials, accessories, and finishes with smooth, straight, and even surfaces; free of voids throughout the length of equipment.
- B. Install insulation materials, forms, vapor barriers or retarders, jackets, and thicknesses required for each item as specified in insulation system schedules.

- C. Install accessories compatible with insulation materials and suitable for the service. Install accessories that do not corrode, soften, or otherwise attack insulation or jacket in either wet or dry state.
- D. Install insulation with longitudinal seams at top and bottom of horizontal runs.
- E. Install multiple layers of insulation with longitudinal and end seams staggered.
- F. Keep insulation materials dry during application and finishing.
- G. Install insulation with tight longitudinal seams and end joints. Bond seams and joints with adhesive recommended by insulation material manufacturer.
- H. Install insulation with least number of joints practical.
- I. Where vapor barrier is indicated, seal joints, seams, and penetrations in insulation at hangers, supports, anchors, and other projections with vapor-barrier mastic.
  - 1. Install insulation continuously through hangers and around anchor attachments.
  - 2. For insulation application where vapor barriers are indicated, extend insulation on anchor legs from point of attachment to supported item to point of attachment to structure. Taper and seal ends at attachment to structure with vapor-barrier mastic.
  - 3. Install insert materials and install insulation to tightly join the insert. Seal insulation to insulation inserts with adhesive or sealing compound recommended by insulation material manufacturer.
  - 4. Cover inserts with jacket material matching adjacent pipe insulation. Install shields over jacket, arranged to protect jacket from tear or puncture by hanger, support, and shield.
- J. Apply adhesives, mastics, and sealants at manufacturer's recommended coverage rate and wet and dry film thicknesses.
- K. Install insulation with factory-applied jackets as follows:
  - 1. Draw jacket tight and smooth.
  - 2. Cover circumferential joints with 3-inch- wide strips, of same material as insulation jacket. Secure strips with adhesive and outward clinching staples along both edges of strip, spaced 4 inches OC.
  - 3. Overlap jacket longitudinal seams at least 1-1/2 inches. Install insulation with longitudinal seams at bottom of pipe. Clean and dry surface to receive self-sealing lap. Staple laps with outward clinching staples along edge at 2 inches OC.
    - a. For below ambient services, apply vapor-barrier mastic over staples.
  - 4. Cover joints and seams with tape, according to insulation material manufacturer's written instructions, to maintain vapor seal.
  - 5. Where vapor barriers are indicated, apply vapor-barrier mastic on seams and joints.
- L. Cut insulation in a manner to avoid compressing insulation more than 75 percent of its nominal thickness.
- M. Finish installation with systems at operating conditions. Repair joint separations and cracking due to thermal movement.

- N. Repair damaged insulation facings by applying same facing material over damaged areas. Extend patches at least 4 inches beyond damaged areas. Adhere, staple, and seal patches similar to butt joints.
- O. For above ambient services, do not install insulation to the following:
  - 1. Vibration-control devices.
  - 2. Testing agency labels and stamps.
  - 3. Nameplates and data plates.
  - 4. Manholes.
  - 5. Handholes.
  - 6. Cleanouts.

### 3.4 INSTALLATION OF EQUIPMENT, TANK, AND VESSEL INSULATION

- A. Mineral-Fiber, Pipe, and Tank Insulation Installation for Tanks and Vessels: Secure insulation with adhesive and anchor pins and speed washers.
  - 1. Apply adhesives according to manufacturer's recommended coverage rates per unit area, for 100 percent coverage of tank and vessel surfaces.
  - 2. Groove and score insulation materials to fit as closely as possible to equipment, including contours. Bevel insulation edges for cylindrical surfaces for tight joints. Stagger end joints.
  - 3. Protect exposed corners with secured corner angles.
  - 4. Install adhesively attached or self-sticking insulation hangers and speed washers on sides of tanks and vessels as follows:
    - a. Do not weld anchor pins to ASME-labeled pressure vessels.
    - b. Select insulation hangers and adhesive that are compatible with service temperature and with substrate.
    - c. On tanks and vessels, maximum anchor-pin spacing is 3 inches from insulation end joints, and 16 inches OC. in both directions.
    - d. Do not over compress insulation during installation.
    - e. Cut and miter insulation segments to fit curved sides and domed heads of tanks and vessels.
    - f. Impale insulation over anchor pins and attach speed washers.
    - g. Cut excess portion of pins extending beyond speed washers or bend parallel with insulation surface. Cover exposed pins and washers with tape matching insulation facing.
  - 5. Secure each layer of insulation with stainless-steel or aluminum bands. Select band material compatible with insulation materials.
  - 6. Where insulation hangers on equipment and vessels are not permitted or practical and where insulation support rings are not provided, install a girdle network for securing insulation. Stretch pre-stressed aircraft cable around the diameter of vessel and make taut

with clamps, turnbuckles, or breather springs. Place one circumferential girdle around equipment approximately 6 inches from each end. Install wire or cable between two circumferential girdles 12 inches OC. Install a wire ring around each end and around outer periphery of center openings and stretch pre-stressed aircraft cable radially from the wire ring to nearest circumferential girdle. Install additional circumferential girdles along the body of equipment or tank at a minimum spacing of 48 inches OC. Use this network for securing insulation with tie wire or bands.

7. Stagger joints between insulation layers at least 3 inches.
  8. Install insulation in removable segments on equipment access doors, manholes, handholes, and other elements that require frequent removal for service and inspection.
  9. Bevel and seal insulation ends around manholes, handholes, ASME stamps, and nameplates.
  10. For equipment with surface temperatures below ambient, apply mastic to open ends, joints, seams, breaks, and punctures in insulation.
- B. Flexible Elastomeric Thermal Insulation Installation for Tanks and Vessels: Install insulation over entire surface of tanks and vessels.
1. Apply 100 percent coverage of adhesive to surface with manufacturer's recommended adhesive.
  2. Seal longitudinal seams and end joints.
- C. Insulation Installation on Pumps:
1. Fabricate metal boxes lined with insulation. Fit boxes around pumps and coincide box joints with splits in pump casings. Fabricate joints with outward bolted flanges. Bolt flanges on 6-inch centers, starting at corners. Install 3/8-inch- diameter fasteners with wing nuts. Alternatively, secure the box sections together using a latching mechanism.
  2. Fabricate boxes from stainless steel, at least 0.040 inch thick.
  3. For below ambient services, install a vapor barrier at seams, joints, and penetrations. Seal between flanges with replaceable gasket material to form a vapor barrier.

### 3.5 INSTALLATION OF CALCIUM SILICATE INSULATION

- A. Insulation Installation on Water Boiler Breechings:
1. Secure single-layer insulation with stainless-steel bands at 12-inch intervals and tighten bands without deforming insulation material.
  2. Install two-layer insulation with joints tightly butted and staggered at least 3 inches. Secure inner layer with wire spaced at 12-inch intervals. Secure outer layer with stainless-steel bands at 12-inch intervals.
  3. On exposed applications without metal jacket, finish insulation surface with a skim coat of mineral-fiber, hydraulic-setting cement. When cement is dry, apply flood coat of lagging adhesive and press on one layer of glass cloth. Overlap edges at least 1 inch. Apply finish coat of lagging adhesive over glass cloth. Thin finish coat to achieve smooth, uniform finish.

### 3.6 INSTALLATION OF FLEXIBLE ELASTOMERIC INSULATION

- A. Seal longitudinal seams and end joints with manufacturers recommended adhesive to eliminate openings in insulation that allow passage of air to surface being insulated.

### 3.7 FIELD-APPLIED JACKET INSTALLATION

- A. Where glass-cloth jackets are indicated, install directly over bare insulation or insulation with factory-applied jackets.
  - 1. Draw jacket smooth and tight to surface with 2-inch overlap at seams and joints.
  - 2. Embed glass cloth between two 0.062-inch- thick coats of lagging adhesive.
  - 3. Completely encapsulate insulation with coating, leaving no exposed insulation.
- B. Where FSK jackets are indicated, install as follows:
  - 1. Draw jacket material smooth and tight.
  - 2. Install lap or joint strips with same material as jacket.
  - 3. Secure jacket to insulation with manufacturer's recommended adhesive.
  - 4. Install jacket with 1-1/2-inch laps at longitudinal seams and 3-inch- wide joint strips at end joints.
  - 5. Seal openings, punctures, and breaks in vapor-retarder jackets and exposed insulation with vapor-barrier mastic.
- C. Where PVC jackets are indicated, install with 1-inch overlap at longitudinal seams and end joints; for horizontal applications, install with longitudinal seams along top and bottom of tanks and vessels. Seal with manufacturers recommended adhesive.
  - 1. Apply two continuous beads of adhesive to seams and joints, one bead under lap and the finish bead along seam and joint edge.
- D. Where metal jackets are indicated, install with 2-inch overlap at longitudinal seams and end joints. Overlap longitudinal seams arranged to shed water. Seal end joints with weatherproof sealant recommended by insulation manufacturer. Secure jacket with stainless-steel bands 12 inches OC. and at end joints.
- E. Where PVDC jackets are indicated, install as follows:
  - 1. Jacket can be wrapped in cigarette fashion along length of roll for insulation systems with an outer circumference of 33-1/2 inches or less. 33-1/2-inch- circumference limit allows for 2-inch- overlap seal. Using the length of roll allows for longer sections of jacket to be installed at one time. Use adhesive on the lap seal. Visually inspect lap seal for "fish mouthing," and use PVDC tape along lap seal to secure joint.
  - 2. Repair holes or tears in PVDC jacket by placing PVDC tape over the hole or tear and wrapping a minimum of 1-1/4 circumferences to avoid damage to tape edges.

### 3.8 FINISHES

- A. Insulation with ASJ, Glass-Cloth, or Other Paintable Jacket Material: Paint jacket with paint system identified below and as specified in Division 09.

1. Flat Acrylic Finish: Two finish coats over a primer that is compatible with jacket material and finish coat paint. Add fungicidal agent to render fabric mildew proof.
  - a. Finish Coat Material: Interior, flat, latex-emulsion size.
- B. Flexible Elastomeric Thermal Insulation: After adhesive has fully cured, apply two coats of insulation manufacturer's recommended protective coating.
- C. Color: Final color as selected by Architect. Vary first and second coats to allow visual inspection of the completed Work.
- D. Do not field paint aluminum or stainless-steel jackets.

### 3.9 FIELD QUALITY CONTROL

- A. Testing Agency: Engage a qualified testing agency to perform tests and inspections.
- B. Perform tests and inspections.
- C. Tests and Inspections:
  1. Inspect field-insulated equipment, randomly selected by Architect, by removing field-applied jacket and insulation in layers in reverse order of their installation. Extent of inspection shall be limited to one location(s) for each type of equipment defined in the "Equipment Insulation Schedule" Article. For large equipment, remove only a portion adequate to determine compliance.
- D. All insulation applications will be considered defective Work if sample inspection reveals noncompliance with requirements.

### 3.10 EQUIPMENT INSULATION SCHEDULE

- A. Insulation materials and thicknesses are identified below. If more than one material is listed for a type of equipment, selection from materials listed is Contractor's option.
- B. Insulate indoor and outdoor equipment that is not factory insulated.
- C. Heat-exchanger (water-to-water for water heating service) insulation shall be one of the following:
  1. Calcium Silicate: 3 inches thick.
  2. Cellular Glass: 3 inches thick.
  3. Mineral-Fiber Blanket: 2 inches thick and 3-lb/cu. ft. nominal density.
  4. Mineral-Fiber Board: 2 inches thick and 3-lb/cu. ft. nominal density.
  5. Mineral-Fiber Pipe and Tank: 2 inches thick.
  6. Mineral-Fiber Preformed Pipe Insulation, Type I: 2 inches thick.
- D. Steam-to-hot-water converter insulation shall be one of the following:
  1. Calcium Silicate: 3 inches thick.
  2. Cellular Glass: 3 inches thick.
  3. Mineral-Fiber Blanket: 2 inches thick and 3-lb/cu. ft. nominal density.

4. Mineral-Fiber Board: 2 inches thick and 3-lb/cu. ft. nominal density.
  5. Mineral-Fiber Pipe and Tank: 2 inches thick.
  6. Mineral-Fiber Preformed Pipe Insulation, Type I: 2 inches thick.
- E. Hot-water pump insulation shall be one of the following:
1. Cellular Glass: 2 inches thick.
  2. Mineral-Fiber Blanket: 1 inch thick and 3-lb/cu. ft. nominal density.
  3. Mineral-Fiber Board: 1 inch thick and 3-lb/cu. ft. nominal density.
- F. Hot-water storage tank insulation shall be one of the following, of thickness to provide an R-value of 12.5:
1. Cellular glass.
  2. Mineral-Fiber Blanket: 3-lb/cu. ft. nominal density.
  3. Mineral-Fiber Board: 3-lb/cu. ft. nominal density.
  4. Mineral-fiber pipe and tank.
- G. Water storage tank insulation shall be one of the following:
1. Cellular Glass: thick.
  2. Flexible Elastomeric: 1 inch thick.
  3. Mineral-Fiber Blanket: 1 inch thick and 3-lb/cu. ft. nominal density.
  4. Mineral-Fiber Board: 1 inch thick and 3-lb/cu. ft. nominal density.
  5. Mineral-Fiber Pipe and Tank: 1 inch thick.
  6. Polyolefin: 1 inch thick.

### 3.11 INDOOR, FIELD-APPLIED JACKET SCHEDULE

- A. Install jacket over insulation material. For insulation with factory-applied jacket, install the field-applied jacket over the factory-applied jacket.
- B. If more than one material is listed, selection from materials listed is Contractor's option.
- C. Equipment, Concealed:
1. None.
  2. PVC: 30 mils thick.
  3. Stainless Steel, Type 304 or Type 316, Smooth 2B Finish Corrugated Stucco Embossed: 0.016 inch 0.024 inch thick.
- D. Equipment, Exposed, up to 48 Inches in Diameter or with Flat Surfaces up to 72 Inches:
1. None.
  2. PVC: 30 mils thick.
  3. Stainless Steel, Type 304 or Type 316, Smooth 2B Finish Corrugated Stucco Embossed: 0.024 inch thick.

- E. Equipment, Exposed, Larger Than 48 Inches in Diameter or with Flat Surfaces Larger Than 72 Inches:
  - 1. Stainless Steel, Type 304 or Type 316, Smooth Stucco Embossed, with 1-1/4-Inch- Deep Corrugations 2-1/2-Inch- Deep Corrugations 4-by-1-Inch Box Ribs: thick.

**3.12 OUTDOOR, FIELD-APPLIED JACKET SCHEDULE**

- A. Install jacket over insulation material. For insulation with factory-applied jacket, install the field-applied jacket over the factory-applied jacket.
- B. If more than one material is listed, selection from materials listed is Contractor's option.
- C. Equipment, Concealed:
  - 1. None.
  - 2. PVC: 30 mils thick.
  - 3. Stainless Steel, Type 304 or Type 316, Smooth 2B Finish Corrugated Stucco Embossed: 0.024 inch thick.
- D. Equipment, Exposed, up to 48 Inches in Diameter or with Flat Surfaces up to 72 Inches:
  - 1. Stainless Steel, Type 316, Smooth 2B Finish Corrugated Stucco Embossed with Z-Shaped Locking Seam: 0.024 inch thick.
- E. Equipment, Exposed, Larger Than 48 Inches in Diameter or with Flat Surfaces Larger Than 72 Inches:
  - 1. Stainless Steel, Type 316, Smooth Stucco Embossed, with 1-1/4-Inch- Deep Corrugations 2-1/2-Inch- Deep Corrugations 4-by-1-Inch Box Ribs: 0.024 inch thick.

**END OF SECTION**

H:\Y0586.00\DOC\SPEC\2025\_02-20\_IFB\220716\_PLUMBING EQUIPMENT INSULATION.DOC

## SECTION 220719 - PLUMBING PIPING INSULATION

### PART 1 - GENERAL

#### 1.1 RELATED DOCUMENTS

- A. Certain requirements common to all the mechanical and electrical trades (Fire Suppression, Plumbing, HVAC, Electrical, and Tele/Data) are specified in Division 20. To avoid repetition, they are not repeated in each relevant Division and Section. However, these requirements are applicable to the work of this Section and are hereby incorporated by reference.
- B. Drawings and general provisions of the Contract, including General and Supplementary Conditions and Division 01 Specification Sections, apply to this Section.

#### 1.2 SUMMARY

- A. Section includes insulating the following plumbing piping services:
  - 1. Insulation materials
  - 2. Accessory materials
  - 3. Insulated couplings for rack piping systems
  - 4. Insulated cast iron or steel piping systems supported on clevis or band hangers
  - 5. Factory applied jackets
  - 6. Tapes
  - 7. Securements

#### 1.3 ACTION SUBMITTALS

- A. Product Data: For each type of product indicated. Include thermal conductivity, water-vapor permeance thickness, and jackets (both factory- and field-applied, if any).
- B. LEED Submittals:
  - 1. Product Data for Credit IEQ 4.1: For adhesives and sealants, documentation including printed statement of VOC content and chemical components.
  - 2. Laboratory Test Reports for Credit IEQ 4: For adhesives and sealants, documentation indicating that product complies with the testing and product requirements of the California Department of Health Services' "Standard Practice for the Testing of Volatile organic Emissions from Various Sources Using Small-Scale Environmental Chambers."
- C. Shop Drawings: Include plans, elevations, sections, details, and attachments to other work.
  - 1. Detail application of protective shields, saddles, and inserts at hangers for each type of insulation and hanger.
  - 2. Detail attachment and covering of heat tracing inside insulation.
  - 3. Detail insulation application at pipe expansion joints for each type of insulation.
  - 4. Detail insulation application at elbows, fittings, flanges, valves, and specialties for each type of insulation.

5. Detail removable insulation at piping specialties, equipment connections, and access panels.
6. Detail application of field-applied jackets.
7. Detail application at linkages of control devices.
- D. Samples: For each type of insulation and jacket indicated. Identify each Sample, describing product and intended use. Sample sizes are as follows:
  1. Preformed Pipe Insulation Materials: 12 inches long by NPS 2.
  2. Jacket Materials for Pipe: 12 inches long by NPS 2.
  3. Sheet Jacket Materials: 12 inches square.
  4. Manufacturer's Color Charts: For products where color is specified, show the full range of colors available for each type of finish material.

#### 1.4 INFORMATIONAL SUBMITTALS

- A. Qualification Data: For qualified Installer.
- B. Material Test Reports: From a qualified testing agency acceptable to authorities having jurisdiction indicating, interpreting, and certifying test results for compliance of insulation materials, sealers, attachments, cements, and jackets, with requirements indicated. Include dates of tests and test methods employed.
- C. Field quality-control reports.

#### 1.5 QUALITY ASSURANCE

- A. Installer Qualifications: Skilled mechanics who have successfully completed an apprenticeship program or another craft training program certified by the Department of Labor, Bureau of Apprenticeship and Training.
- B. Surface-Burning Characteristics: For insulation and related materials, as determined by testing identical products according to ASTM E 84 by a testing agency acceptable to authorities having jurisdiction. Factory label insulation and jacket materials and adhesive, mastic, tapes, and cement material containers, with appropriate markings of applicable testing agency.
  1. Insulation Installed Indoors: Flame-spread index of 25 or less, and smoke-developed index of 50 or less.
  2. Insulation Installed Outdoors: Flame-spread index of 75 or less, and smoke-developed index of 150 or less.
- C. Comply with the following applicable standards and other requirements specified for miscellaneous components:
  1. Supply and Drain Protective Shielding Guards: ICC A117.1.

#### 1.6 DELIVERY, STORAGE, AND HANDLING

- A. Packaging: Insulation material containers shall be marked by manufacturer with appropriate ASTM standard designation, type and grade, and maximum use temperature.

1.7 COORDINATION

- A. Coordinate sizes and locations of supports, hangers, and insulation shields specified in Division 22.
- B. Coordinate clearance requirements with piping Installer for piping insulation application. Before preparing piping Shop Drawings, establish and maintain clearance requirements for installation of insulation and field-applied jackets and finishes and for space required for maintenance.
- C. Coordinate installation and testing of heat tracing.

1.8 SCHEDULING

- A. Schedule insulation application after pressure testing systems and, where required, after installing and testing heat tracing. Insulation application may begin on segments that have satisfactory test results.
- B. Complete installation and concealment of plastic materials as rapidly as possible in each area of construction.

PART 2 - PRODUCTS

2.1 INSULATION MATERIALS

- A. Comply with requirements in "Piping Insulation Schedule, General," "Indoor Piping Insulation Schedule," "Outdoor, Aboveground Piping Insulation Schedule," and "Outdoor, Underground Piping Insulation Schedule" articles for where insulating materials shall be applied.
- B. Products shall not contain asbestos, lead, mercury, or mercury compounds.
- C. Products that come in contact with stainless steel shall have a leachable chloride content of less than 50 ppm when tested according to ASTM C 871.
- D. Insulation materials for use on austenitic stainless steel shall be qualified as acceptable according to ASTM C 795.
- E. Foam insulation materials shall not use CFC or HCFC blowing agents in the manufacturing process.
- F. Type A: Cellular Glass: Inorganic, incombustible, foamed or cellulated glass with annealed, rigid, hermetically sealed cells. Factory-applied jacket requirements are specified in "Factory-Applied Jackets" Article.
  - 1. Manufacturers: Subject to compliance with requirements, available manufacturers offering products that may be incorporated into the Work, provide products by one of the following, or approved equal.
    - a. Certain-Teed.
    - b. Johns Manville.
    - c. Owens Corning.
    - d. Or Approved Equal.

2. Molded Fibrous Glass Pipe Insulation: Comply with ASTM C 547, Type 1, Grade A, and ASTM C 585, for sizes required and of a type suitable for installation on piping systems as required. One (1) of the following types shall be used:
  3. For indoor systems operating at temperatures from 0 deg F (-18 deg C) to +850 deg F (454 deg C):
    - a. Owens Corning™ Fiberglas™ Insulation with SSL II® Positive Closure System.
  4. For pipe fittings where pressed jointing systems are used
    - a. Option 1 - field fit pre-molded fitting cover above
    - b. Option 2 - use PVC fitting cover field fit with included applied insulation.
  5. For systems operating below ambient (32 deg F (0 deg C) to +65 deg F (18 deg C)) temperature:
    - a. Owens Corning™ VaporWick® Pipe Insulation. (see Plumbing Pipe Insulation – VaporWick® Pipe Insulation)
  6. Block Insulation: ASTM C 552, Type I.
  7. Special-Shaped Insulation: ASTM C 552, Type III.
  8. Preformed Pipe Insulation with Factory-Applied ASJ-SSL: Comply with ASTM C 552, Type II, Class 2.
  9. Factory fabricate shapes according to ASTM C 450 and ASTM C 585.
- G. Type B: Flexible Elastomeric Insulation: Closed-cell, sponge- or expanded-rubber materials. Comply with ASTM C 534, Type I for tubular materials.
1. Manufacturers: Subject to compliance with requirements, available manufacturers offering products that may be incorporated into the Work, provide products by one of the following, or approved equal.
    - a. Aeroflex USA, Inc.
    - b. Armacell LLC.
    - c. K-Flex USA.
    - d. Or Approved Equal.
  2. Flexible elastomeric in tubular foam. AC/Accoflex, AP/Armaflex, AP/Armaflex SS. This product meets the requirements as defined in ASTM C 534, Grade 1, Type I, "Specification for Preformed Flexible Elastomeric Cellular Thermal Insulation in Sheet and Tubular Form
  3. Materials shall have a flame spread index of less than 25 and a smoke developed index of less than 50 when tested in accordance with ASTM E 84, latest revision.
  4. Materials shall have a maximum thermal conductivity of 0.27 Btu-in./h-ft<sup>2</sup>- deg F at a 75 deg F mean temperature when tested in accordance with ASTM C 177 or ASTM C 518, latest revisions.
  5. Materials shall have a maximum water vapor transmission of 0.08 perm inches when tested in accordance with ASTM E 96, Procedure A, latest revision.
  6. Adhesive shall be the insulation manufacturer's recommended contact adhesive: Armaflex 520, Armaflex 520 BLV. B.

7. Insulation finish shall be the insulation manufacturer's recommended finish: WB Armaflex Finish. C.
  8. Accessories such as adhesives, mastics and cements shall have the same properties as listed above and shall not detract from any of the system ratings as specified above.
- H. Type C: Mineral-Fiber, Preformed Pipe Insulation:
1. Manufacturers: Subject to compliance with requirements, available manufacturers offering products that may be incorporated into the Work, provide products by one of the following, or approved equal.
    - a. Johns Manville; a Berkshire Hathaway company.
    - b. Knauf Insulation.
    - c. Manson Insulation Inc.
    - d. Or Approved Equal.
  2. Perpendicular oriented Mineral Fiber Insulation: ASTM C1393, Type IIIB, Category 2:
    - a. For piping equal to or larger than 10 in (250 mm) diameter operating at temperatures up to +850 deg F (454 deg C):
    - b. Owens Corning™ Fiberglas™ FLEXWRAP® Insulation.
  3. Perpendicular oriented Mineral Fiber Insulation: ASTM C1393, Type II, Category 1:
    - a. For piping equal to or larger than 10 in (250 mm) diameter operating at temperatures up to +650 deg F (343 deg C):
    - b. Owens Corning™ Fiberglas™ Pipe and Tank Insulation.
  4. Type I, 850 Deg F Materials: Mineral or glass fibers bonded with a thermosetting resin. Comply with ASTM C 547, Type I, Grade A, with factory-applied ASJ-SSL. Factory-applied jacket requirements are specified in "Factory-Applied Jackets" Article.
- I. Type D: Hydrous Calcium Silicate
1. Manufacturers: Subject to compliance with requirements, available manufacturers offering products that may be incorporated into the Work, provide products by one of the following, or approved equal.
    - a. Johns Manville.
    - b. Industrial Insulation Group (IIG); Thermo-12 Gold.
    - c. Or Approved Equal.
  2. Preformed Pipe Sections: Flat-, curved-, and grooved-block sections of noncombustible, inorganic, hydrous calcium silicate with a non-asbestos fibrous reinforcement. Comply with ASTM C 533, Type I.
  3. Flat-, curved-, and grooved-block sections of noncombustible, inorganic, hydrous calcium silicate with a non-asbestos fibrous reinforcement. Comply with ASTM C 533, Type I.
  4. Prefabricated Fitting Covers: Comply with ASTM C 450 and ASTM C 585 for dimensions used in pre-forming insulation to cover valves, elbows, tees, and flanges.

5. Preformed pipe insulation of rigid, ANSI/ASTM C533; rigid white; asbestos free; "k" value of 0.44 at 300 deg F. Trade name "Cal-Sil" for piping up to 1200 deg F. Johns Manville or equal.
  6. Factory fabricate shapes according to ASTM C 450 and ASTM C 585.
- J. Type E: Phenolic
1. Manufacturers: Subject to compliance with requirements, available manufacturers offering products that may be incorporated into the Work, provide products by one of the following, or approved equal.
    - a. Kingspan Solar
    - b. Resolco International
    - c. Or Approved Equal.
  2. Preformed pipe insulation of rigid, expanded, closed-cell structure. Comply with ASTM C 1126, Type III, Grade 1.
  3. Block insulation of rigid, expanded, closed-cell structure. Comply with ASTM C 1126, Type II, Grade 1.
  4. Factory fabricate shapes according to ASTM C 450 and ASTM C 585.
  5. Factory-Applied Jacket: ASJ. Requirements are specified in "Factory-Applied Jackets" Article.
- K. Type F: Underground Elastomeric
1. For Underground Installation basis of design is Armaflex Tuffcoat **\*\*LINK\*\***
  2. Used only for underslab trap primer piping where copper tube is used as pipe material.
- L. Type G: Protective Shielding Pipe Covers
1. Manufacturers: Subject to compliance with requirements, available manufacturers offering products that may be incorporated into the Work, provide products by one of the following, or approved equal.
    - a. Engineered Brass Company.
    - b. Truebro.
    - c. Zurn Industries, LLC.
    - d. Or Approved Equal.
  2. Description: Manufactured plastic wraps for covering plumbing fixture hot-water supply hot- and cold-water supplies and trap and drain piping. Comply with Americans with Disabilities Act (ADA) requirements.
- M. Type H: Exterior Underground Pre-Engineered Insulated
1. Application: Hot or cold water from building-to-building buried underground
  2. Service limits: 40 deg F (5 deg C) to 250 deg F (120 deg C) at 150 psig (1000 KPa)
  3. Completely factory-fabricated, insulated, and jacketed copper piping system for the underground distribution. Pipe to be Type "K" copper tube insulated with rigid, foamed-in-place, polyurethane foam that is encased and sealed in a rugged PVC jacket.

4. Insulation: Foamed-in-place closed-cell polyurethane foam that fills the annular space between the pipe and outer jacket
    - a. Thermal conductivity. 90 percent closed cell structure provides high resistance to water absorption. Nominal density is 2 LB/FT<sup>3</sup>, thermal conductivity ("K" factor) is 0.14 BTU in./ (HR) (sf) (deg F) at 73 deg F.
  5. PVC Outer Jacket: Type 1, Grade 1 Polyvinyl Chloride flexible vapor barrier to protect both the insulation and pipe. C-resistant and strong enough so the system can withstand H-20 loading with 2 feet of cover with 90 percent backfill compaction.
  6. Coupling: Machined coupling containing two O-ring seals. When two lengths are joined in the coupling the O-rings are compressed to form a watertight connection and also provide separation of pipe ends for expansion and contraction. Expansion loops or expansion joints are not required whereas each coupling acts as an expansion joint, evenly distributing free expansion and contraction along the entire line.
  7. End Seal: A latex coating is factory applied to both ends of the pipe insulation to ensure moisture protection at all couplings.
  8. Basis of Design: Perma-Pipe/Ricwil Copper-Gard
- N. Type J: Protection of non-rated plenum piping
1. Flexible, non-combustible enclosure for cables and pipes in return air plenums
  2. Manufacturers: Subject to compliance with requirements, available manufacturers offering products that may be incorporated into the Work, provide products by one of the following, or approved equal.
    - a. Basis of Design: 3M Fire Wrap.
    - b. Morgan Plenum Wrap
    - c. Unifraxs FyreWrap® 0.5 Plenum Insulation
    - d. **Or Approved Equal.**
  3. Flexible fire-resistant wrap consisting of an inorganic fiber blanket encapsulated with a scrim-reinforced foil.
  4. Installation shall be in strict accordance with manufacturer's written instructions C).
  5. Flame Spread Index and Smoke Developed Index of the foil encapsulated blanket shall be less than 25 / less than 50.
- O. Type K: Underground Insulation and Jackets for Grease Waste Piping
1. Manufacturers:
    - a. Basis-of-Design Product: Subject to compliance with requirements, provide underground pipe insulation for the exterior kitchen heat traced wastewater indicated as BOD below or provide products by one of the following, or approved equal.
      - 1) Basis of Design: PITTPWRAP FOAMGLAS ® Insulation on Underground Direct-Buried Piping System by Pittsburg Corning
      - 2) Knauf Industries
      - 3) Owens Corning Corporation

- 4) Or Approved Equal.
2. General Applications
  - a. All insulation materials shall be stored in an area protected from the weather and kept dry before and during applications.
  - b. All piping shall be cleaned of foreign substances and free of surface moisture prior to and during the application of insulation.
  - c. Make certain that all weld beads are ground smooth with the surface of the pipe prior to application of the insulation.
3. Products
  - a. FOAMGLAS® insulation, ASTM C 552, "Spec. for Cellular Glass Thermal Insulation 2 inches thick, by Pittsburgh Corning Corporation.
  - b. Jacketing
    - 1) PITTWRAP® jacketing (FI-209), supplied by Pittsburgh Corning Corporation.
    - 2) Reinforcing Fabric PC® Fabric 79, Pittsburgh Corning Corporation (product data sheet FI-159).
    - 3) Strapping Tape Glass fiber-reinforced, 1 inch (25 mm) wide, Scotch brand #880 by 3M, or equal.
    - 4) Bore Coating Hydrocal® B-11, by U.S. Gypsum, or equal.
    - 5) High-Temperature Sealant PC® RTV 450 Silicone Adhesive—FI-244 (maximum temperature limit 400 deg F
4. Factory-Jacketed
  - a. FOAMGLAS® insulation which has been pre-jacketed with PITTWRAP® jacketing shall be applied joint-to-joint with all joints tightly butted. Strapping tape may be used over the jacketing to temporarily secure the insulation until longitudinal laps are sealed and butt strips applied.
    - 1) See PITTWRAP appropriate data sheet for details for sealing PITTWRAP® jacketing laps and butt strip application.
5. Pre-Insulation of Pipe Where conditions permit, FOAMGLAS® insulation and jacketing may be applied outside of the trench to sections of piping.
  - a. Pipe lengths should be insulated in segments. Length of insulation segment should not exceed 10 ft (3 m).
  - b. Leave uninsulated spaces between segments to allow for placement of slings by which the pipe can be lowered into the trench.
  - c. The use of a spreader bar with two (2) slings or more is recommended. The quantity and location of sling placement shall be determined by the design professional to avoid excessive deflection and facilitate proper control of the pipe length during transfer.
  - d. After the sections of pipe are in place in the trench, and ends of the sections secured, insulation and jacketing shall be applied to the joint areas and uninsulated spaces that were not completed above ground.

- e. Adequate working space should be maintained for installation personnel.

## 2.2 ACCESSORY MATERIALS

- A. Accessories: Provide accessories per insulating system manufacturer's recommendations, including the following:
  - 1. Closure Materials: Butt strips, bands, wires, staples, mastics, adhesives, and pressure-sensitive tapes.
    - a. Mold resistant mastics are recommended for cold ( $\leq 60$  deg F) water applications.
  - 2. Field-Applied Jacketing Materials: Sheet metal, plastic, canvas, fiberglass cloth, insulating cement, PVC fitting covers.
  - 3. Support Materials: Hanger straps, hanger rods, saddles, support rings, and high-density inserts.
- B. Adhesives for Indoor Applications: VOC content of 50 g/L or less when calculated according to 40 CFR 59, Subpart D (EPA Method 24).

## 2.3 INSULATED COUPLINGS FOR RACK PIPING SYSTEMS

- A. The insulation and vapor barrier must be contiguous through the rack support clips with the support materials: cited above in A.3
- B. Alternatively, products designed to replace insulation shields for racked utility piping located on strut bars and routed throughout buildings may be used. The replacement must substitute a thermo-plastic Olefin (TPO) or manufacturers standard insulating coupling and support, with insulation placed on each side of the strut clip and butted against the clip.
- C. Design Basis: Hydra-Zorb products Klo-shure 9 series for insulated pipe and tube fastened on strut bars.
  - 1. The insulation must be adhered and taped to the TPO couplers.
  - 2. Use only for services less than 180 deg F.
  - 3. Do not use for steam.
  - 4. Do not use for piping systems that are subject to steam or hot water sanitation.

## 2.4 INSULATED CAST IRON OR STEEL PIPING SYSTEMS SUPPORTED ON CLEVIS OR BAND HANGERS

- A. Section: Hangers and Supports
  - 1. Thermal hanger shields shall be used on cast iron horizontal insulated pipe systems at each point of support. Manufactured units shall comply with MSS SP-58 standards and be tested per MSS guidelines. Each assembly shall fit the various pipe diameters and match the outside diameter of the adjoining pipe insulation.
  - 2. Thermal hanger inserts shall be calcium silicate with a minimum compressive strength of 100 PSI. The insert shall be jacketed with industry standard, non-reactive, all service meeting ASTM E 96A (maximum 0.02 perm). 'Water-resistant coatings', which do not provide a sealable vapor barrier, shall not be allowed. A mastic of a contrasting color may be used (i.e. Childers CP-30 or MEI 5510 or equal), providing the longitudinal seam is field-sealed during installation.

3. A rolled shield of G-90 galvanized steel shall be an integral part of the unit and shall be of a gauge and length appropriate for the compressive strength of the insert material and type of hanger.
4. Insulation and jacket shall extend a minimum of 1 inch beyond each end of the galvanized steel shield to provide a complete, neat and vapor-tight seal with the adjoining insulation.

**B. Basis of Design: VEP Insulated Pipe Supports**

1. Hanger type and span between hangers shall govern the type of thermal hanger shield used and shall be as follows:
  - a. Band-type hangers to 10-foot maximums (clevis, teardrop) — Value Engineered Products' (VEP) Pro-shield, Quik-Shield or equal.
  - b. Roller-type hangers, regardless of hanger spans - VEP's MaxSpan R.H. or equal.
  - c. Band-type hangers with spans greater than 10 feet - VEP's MaxSpan units or equal.
  - d. Trapeze style and other clamping-type supports to 10 foot maximums - VEP's Pro-Shield or
  - e. Trapeze style and other clamping-type supports exceeding 10 feet\* - VEP's MaxSpan units
2. Product must be tested to ASTM E84
3. Safety Ratio shall be a minimum of 3.5:1 - (support capabilities to anticipated pipe load).
4. Independent test results documenting the compliance of 'or equal' products shall be available upon request of the Architect, Engineer, or Owner.

**2.5 FACTORY-APPLIED JACKETS**

- A. Coordinate types of factory-applied jacket insulation materials selected, and types of factory-applied jackets indicated in insulation system schedules.
- B. Insulation system schedules indicate factory-applied jackets on various applications. When factory-applied jackets are indicated, comply with the following:
  1. ASJ: White, Kraft-paper, fiberglass-reinforced scrim with aluminum-foil backing; complying with ASTM C 1136, Type I.
  2. ASJ-SSL: ASJ with self-sealing, pressure-sensitive, acrylic-based adhesive covered by a removable protective strip; complying with ASTM C 1136, Type I.
  3. FSK Jacket: Aluminum-foil, fiberglass-reinforced scrim with Kraft-paper backing; complying with ASTM C 1136, Type II.
- C. Jacket Types

TYPE	STYLE	MATERIALS
Type 1	All Service Jacket	Vapor Barrier Jackets: Kraft reinforced foil vapor barrier with self-sealing adhesive joints. Jacket shall be heavy-duty fire-retardant material with glass fiber reinforcing and self-sealing lap. Jacket will be factory applied to the insulation. Jacket shall have neat, white Kraft finish or white vinyl suitable for painting, with bead puncture resistance of 50 units minimum. Vapor barrier shall be .001 inch aluminum foil adhered to the inner surface of the jacket. Permeance shall not exceed 0.02 perms. Jacket shall be Owens-Corning Fiberglass "ASJ-SSL" or Manville flamesafe "AP-T".
Type 2	PVC Jackets:	Install jacket over insulation material. For insulation with factory-applied jacket, install the field-applied jacket over the factory-applied jacket.  One piece, pre-molded type equal to Johns Manville Zeston 2000/300 Series PVC 20 or 30 mil jacketing and PVC fitting covers. All jackets shall follow manufacturers to comply with temperature of service piping.  Jackets shall meet USDA compliance standard for all food handling
Type 4	Aluminum Jacket:	Aluminum roll stock ready for shop or field cutting. Comply with ASTM B 209/M 3003 alloy, H-14 temper.  0.016 inch thick smooth aluminum jacket with longitudinal ZEE style closures. Jacket shall be secured at both joints with 2 inch wide aluminum straps centered over butt joint of jacket. Provide 1/2 inch wide aluminum bands on 12 inch centers. Fitting covers shall be manufactured for purpose intended and shall be of same material. Acceptable for outdoor installation.
Type 5	Stainless Steel Jackets:	Weatherproof stainless steel jacketing, manufactured from T-304 smooth in .010 thickness. All jacketing shall have an internally bonded moisture retarder over the surface in contact with the insulation.
Type 6	Stainless Steel Jackets:	Weatherproof stainless steel jacketing, manufactured from T-316 smooth in .016 thickness. All jacketing shall have an internally bonded moisture retarder over the surface in contact with the insulation.
Type 7	Protective Shielding Piping Enclosures for barrier free trap and water piping under fixture	Manufacturers: Subject to compliance with requirements, available manufacturers offering products that may be incorporated into the Work, provide products by one of the following, or approved equal. <ul style="list-style-type: none"> <li>▪ Truebro.</li> <li>▪ Zurn Industries, LLC.</li> </ul> Description: Manufactured plastic enclosure for covering plumbing fixture hot- and cold-water supplies and trap and drain piping. Comply with ADA requirements.  Furnish protective shielding to all Emergency Eyewash units where water waste and trap are exposed and are exclusively selected for Barrier Free Use.
Type 8	For underground grease waste pipes	PITTWRAF® jacketing (FI-209), supplied by Pittsburgh Corning Corporation. Comparable manufacturers products specific to the manufactured insulating materials is acceptable

## 2.6 TAPES

- A. ASJ Tape: White vapor-retarder tape matching factory-applied jacket with acrylic adhesive, complying with ASTM C 1136.
  1. Manufacturers: Subject to compliance with requirements, available manufacturers offering products that may be incorporated into the Work, provide products by one of the following, or approved equal.
    - a. Avery Dennison Corporation, Specialty Tapes Division.
    - b. Compac Corporation.
    - c. Ideal Tape Co., Inc., an American Biltrite Company.
  2. Width: 3 inches.
  3. Thickness: 11.5 mils.

4. Adhesion: 90 ounces force/inch in width.
  5. Elongation: 2 percent.
  6. Tensile Strength: 40 lbf/inch in width.
  7. ASJ Tape Disks and Squares: Precut disks or squares of ASJ tape.
- B. FSK Tape: Foil-face, vapor-retarder tape matching factory-applied jacket with acrylic adhesive; complying with ASTM C 1136.
1. Manufacturers: Subject to compliance with requirements, available manufacturers offering products that may be incorporated into the Work, provide products by one of the following, or approved equal.
    - a. Avery Dennison Corporation, Specialty Tapes Division.
    - b. Compac Corporation.
    - c. Ideal Tape Co., Inc., an American Biltrite Company.
  2. Width: 3 inches.
  3. Thickness: 6.5 mils.
  4. Adhesion: 90 ounces force/inch in width.
  5. Elongation: 2 percent.
  6. Tensile Strength: 40 lbf/inch in width.
  7. FSK Tape Disks and Squares: Precut disks or squares of FSK tape.
- C. PVC Tape: White vapor-retarder tape matching field-applied PVC jacket with acrylic adhesive; suitable for indoor and outdoor applications.
1. Manufacturers: Subject to compliance with requirements, available manufacturers offering products that may be incorporated into the Work, provide products by one of the following, or approved equal.
    - a. Compac Corporation.
    - b. Ideal Tape Co., Inc., an American Biltrite Company.
    - c. Venture Tape.
  2. Width: 2 inches.
  3. Thickness: 6 mils.
  4. Adhesion: 64 ounces force/inch in width.
  5. Elongation: 500 percent.
  6. Tensile Strength: 18 lbf/inch in width.
- D. Aluminum-Foil Tape: Vapor-retarder tape with acrylic adhesive.
1. Manufacturers: Subject to compliance with requirements, available manufacturers offering products that may be incorporated into the Work, provide products by one of the following, or approved equal.
    - a. Avery Dennison Corporation, Specialty Tapes Division.
    - b. Compac Corporation.

- c. Ideal Tape Co., Inc., an American Biltrite Company.
- 2. Width: 2 inches.
- 3. Thickness: 3.7 mils.
- 4. Adhesion: 100 ounces force/inch in width.
- 5. Elongation: 5 percent.
- 6. Tensile Strength: 34 lbf/inch in width.

## 2.7 SECUREMENTS

### A. Bands

- 1. Manufacturers: Subject to compliance with requirements, available manufacturers offering products that may be incorporated into the Work, provide products by one of the following, or approved equal.
  - a. ITW Insulation Systems; Illinois Tool Works, Inc.
  - b. RPR Products, Inc.
- 2. Stainless Steel: ASTM A 167 or ASTM A 240/A 240M, Type 304 or Type 316; 0.015 inch thick, 3/4 inch wide with wing seal or closed seal.
- 3. Aluminum: ASTM B 209, Alloy 3003, 3005, 3105, or 5005; Temper H-14, 0.020 inch thick, 3/4 inch wide with wing seal or closed seal.

### B. Staples: Outward-clinching insulation staples, nominal 3/4-inch- wide, stainless steel or Monel.

### C. Wire: 0.062-inch soft-annealed, stainless steel.

- 1. Manufacturers: Subject to compliance with requirements, available manufacturers offering products that may be incorporated into the Work, provide products by one of the following, or approved equal.
  - a. C & F Wire.

## PART 3 - EXECUTION

### 3.1 PIPING INSULATION SCHEDULE

#### A. General Summary Table - Referred Products

- 1. Insulating Material

Type	Product	Common Reference Additional
A	Glass Fiber	Fiberglas
B	Flexible Elastomeric Insulation	Armaflex black or white closed cell
C	Mineral Fiber Pre-Formed	Preformed Minwool
D	Hydrous Calcium Silicate	Cal-Sil
E	Phenolic Foam	Solar
F	Buried copper trap primer piping	Armaflex Tuffcoat
G	Package	for Handicap Fixtures waste and water
H	Closed-Cell Polyurethane Foam	Package pre-insulated pipe and insulation - Ricwil
J	Plenum wrap for piping	Fire Wrapping for non-rated piping in return air plenums
K	Cellular Glass	FoamGlas

## 2. Jacket Material

Type	Product	Common Reference Additional
1	All Service Jacket	General White ASJ
2	Protective PVC Jacket	General White PVC
4	Aluminum Jacket	General outdoor
5	Stainless Steel Jacket	Clean rooms
6	Stainless Steel Jacket	Pharma
7	Plastic Preformed Barrier Free	For Handicap Fixtures
8	Manufacturers Wrapping	Pittwrap or comparable

PIPING SYSTEM	TYPE	THICKNESS INCHES	JACKET	NOTES
Water Service Cold, Up To Meter - Water Supply	A C	1 1	Type 2	
All Cold-Water Supply, potable and non-potable	A C	1/2	Type 1	Note 4 Note 5
All Hot Water Supply and Return less than 1-1/2 inches, potable and non-potable	A C	1 1	Type 1	Note 4 Note 5
All Hot Water Supply and Return greater than 1-1/2 inches, potable and non-potable	A C	1-1/2 1-1/2	Type 1	Note 4 Note 5
Cold Water Supply in Kitchens	B	1/2	Type 2	Below Ceilings
Cold Water Supply in Kitchens	B	1/2	Type 1	Above Ceilings
Hot Water Supply and Return in Kitchens less than 1-1/2 inches	B	1	Type 2	Below Ceilings
Hot Water Supply and Return in Kitchens less than 1-1/2 inches	B	1	Type 1	Above Ceilings
Hot Water Supply and Return in Kitchens greater than 1-1/2 inches	B	1-1/2	Type 2	Below Ceilings
Hot Water Supply and Return in Kitchens greater than 1-1/2 inches	B	1-1/2	Type	Above Ceilings
Emergency or Tempered Water System less than 1-1/2 inches	A C	1	Type 1	Type 2 When Routed Through Food Service Area Note 5
Emergency or Tempered Water System greater than 1-1/4 inches	A C	1	Type 1	Type 2 When Routed Through Food Service Area Note 5
All Cold-Water Piping Passing Through and in Clean Rooms	B	1	Type 2	Above Ceilings Note 4
All Cold-Water Piping Passing Through and in Clean Rooms	B	1	Type 3	Below Ceilings Note 4
All Hot Water Piping Passing Through and in Clean Rooms	B	1-1/2	Type 2	Above Ceilings Note 4

PIPING SYSTEM	TYPE	THICKNESS INCHES	JACKET	NOTES
All Hot Water Piping Passing Through and in Clean Rooms	B	1-1/2	Type 3	Below Ceilings Note 4
All Insulated Piping in Mechanical Rooms, and in Corridors Without Ceilings,	Per This Table	Per This Table	Type 2	Note 5
Roof Drains and Horizontal Rainwater	A C	1/2	Type 1	Note 3 Include Drain Bodies Note 5 if exposed to view
Horizontal Overflow Roof Drainage System	A, B or C	1/2	Type 1	Note 3
Storm water Force Main Piping	A, B or C	1/2	Type 1	From pump station to gravity trunk line connection
Plumbing piping receiving condensate from HVAC or general equipment	A or C	3/4	Type 1 and 2	Clearly labeled Includes horizontal and vertical piping See note 4
Hot Service Drains and Vents	A C	1-1/2 1	Type 1	Note 3 Note 5
Piping Exposed to Freezing (Water) less than 2 inch	A C	2	Type 5	
Piping Exposed to Freezing (Water) greater than 2 inch	A C	3	Type 5	See note 2
Piping Exposed to Freezing (Sanitary)	A C	2	Type 5	See note 2
Piping Exposed in enclosed Parking Garages	A C	2	Type 2 Type 4	See note 2
Piping Exposed in open Parking Garages	A C	2	Type 2 Type 5	See note 2
Solar Supply and Return. Interior	B	2	Type 3	
Solar Supply and Return. Exterior	E	2	Type 5	
Reclaim Water Systems metallic piping	A, B or C	1/2	Type 1	Note 4 Note 5 For metallic pipe insulated either purple paint ASJ along its entire length or cover with PVC purple covering
Reclaim Water Systems thermoplastic piping	none			
Buried Hot or Cold Water Piping Building to Building	H	Factory	Factory	Pre-Insulated Sizes 1/2 to 4 inch
Trap Primer Piping Buried Underslab	F	1/2	none	Armocell Tuffcoat Spec for Interior only
Exposed Sanitary Drains, Domestic Water, Domestic Hot Water, and Stops for Plumbing Fixtures for People with Disabilities	G	1/2	Type 7	Package System Only  Includes EW&S Where Designated for Barrier Free Use.
All Kitchen Heat Traced Grease Waste. All Heat Traced Sanitary	A	2	Type 2	Note 5
Underground Kitchen Heat Traced Grease Waste. Underground Heat Traced Sanitary	K	2	Type 8	Note 5
Stainless Piping: Hot Stainless Steel Piping Systems, 140 deg F to 200 deg F less than 3 inch	D	2½	Type 6	Up To 185 deg F Note 5
Plastic piping systems in return air plenums that do not meet ASTM E-84 standard	J	0.5	Foil	Pipe label tags attached around foil to identify piping use full bands and lagging
Supplemental Notes Note 1: Install insulation over fittings, valves, strainers, flanges, mechanical couplings, unions, and other specialties with continuous thermal and vapor-retarder integrity unless otherwise indicated Note 2: This contractor will furnish and install heat trace tape, prior to insulation installation. Raychem self-regulating Winter Guard Plus 8 watts per foot with failure alarm. In instances where temperature may drop below 10 deg F, use 12 watts				

PIPING SYSTEM	TYPE	THICKNESS INCHES	JACKET	NOTES
<p>per foot.</p> <p>Note 3: Insulation shall include drain sump body and all horizontal piping to and including the elbow down to vertical.</p> <p>Note 4: Unless noted otherwise this section pertains to ALL piping in a specified system, including in-chase or in-shaft piping.</p> <p>Note 5: see spec section 220553 subsection 3.5 H for requirements of plastic jacketing.</p> <p>a. all insulated piping to be protected along the entire pipe length where indicated in 220553, 3.5H with white PVC jacketed covers similar to (<b>Knauf</b>, Ceel-Co o<b>Zeston plastic jacket</b>),</p> <p>b. this applies to exposed piping.</p>				

### 3.2 EXAMINATION

- A. Examine substrates and conditions for compliance with requirements for installation tolerances and other conditions affecting performance of insulation application.
  - 1. Verify that systems to be insulated have been tested and are free of defects.
  - 2. Verify that surfaces to be insulated are clean and dry.
- B. Proceed with installation only after unsatisfactory conditions have been corrected.

### 3.3 PREPARATION

- A. Surface Preparation: Clean and dry surfaces to receive insulation. Remove materials that will adversely affect insulation application.
- B. Surface Preparation: Clean and prepare surfaces to be insulated. Before insulating, apply a corrosion coating to insulated surfaces as follows:
  - 1. Stainless Steel: Coat 300 series stainless steel with an epoxy primer 5 mils thick and an epoxy finish 5 mils thick if operating in a temperature range between 140 and 300 deg F. Consult coating manufacturer for appropriate coating materials and application methods for operating temperature range.
  - 2. Carbon Steel: Coat carbon steel operating at a service temperature between 32 and 300 deg F with an epoxy coating. Consult coating manufacturer for appropriate coating materials and application methods for operating temperature range.
- C. Coordinate insulation installation with the trade installing heat tracing. Comply with requirements for heat tracing that applies to insulation.
- D. Mix insulating cement with clean potable water; if insulating cements are to be in contact with stainless-steel surfaces, use de-mineralized water.

### 3.4 GENERAL INSTALLATION REQUIREMENTS

- A. Install insulation materials, accessories, and finishes with smooth, straight, and even surfaces; free of voids throughout the length of piping including fittings, valves, and specialties.
- B. Install insulation materials, forms, vapor barriers or retarders, jackets, and thicknesses required for each item of pipe system as specified in insulation system schedules.
- C. Install accessories compatible with insulation materials and suitable for the service. Install accessories that do not corrode, soften, or otherwise attack insulation or jacket in either wet or dry state.
- D. Install insulation with longitudinal seams at top and bottom of horizontal runs.
- E. Install multiple layers of insulation with longitudinal and end seams staggered.

- F. Do not weld brackets, clips, or other attachment devices to piping, fittings, and specialties.
- G. Keep insulation materials dry during application and finishing.
- H. Install insulation with tight longitudinal seams and end joints. Bond seams and joints with adhesive recommended by insulation material manufacturer.
- I. Install insulation with the least number of joints practical.
- J. Where vapor barrier is indicated, seal joints, seams, and penetrations in insulation at hangers, supports, anchors, and other projections with vapor-barrier mastic.
  - 1. Install insulation continuously through hangers and around anchor attachments.
  - 2. For insulation application where vapor barriers are indicated, extend insulation on anchor legs from point of attachment to supported item to point of attachment to structure. Taper and seal ends at attachment to structure with vapor-barrier mastic.
  - 3. Install insert materials and install insulation to tightly join the insert. Seal insulation to insulation inserts with adhesive or sealing compound recommended by insulation material manufacturer.
  - 4. Cover inserts with jacket material matching adjacent pipe insulation. Install shields over jacket, arranged to protect jacket from tear or puncture by hanger, support, and shield.
- K. Apply adhesives, mastics, and sealants at manufacturer's recommended coverage rate and wet and dry film thicknesses.
- L. Install insulation with factory-applied jackets as follows:
  - 1. Draw jacket tight and smooth.
  - 2. Cover circumferential joints with 3-inch- wide strips, of same material as insulation jacket. Secure strips with adhesive and outward clinching staples along both edges of strip, spaced 4 inches OC.
  - 3. Overlap jacket longitudinal seams at least 1-1/2 inches. Install insulation with longitudinal seams at bottom of pipe. Clean and dry surface to receive self-sealing lap. Staple laps with outward clinching staples along edge at 2 inches OC.
    - a. For below-ambient services, apply vapor-barrier mastic over staples.
  - 4. Cover joints and seams with tape, according to insulation material manufacturer's written instructions, to maintain vapor seal.
  - 5. Where vapor barriers are indicated, apply vapor-barrier mastic on seams and joints and at ends adjacent to pipe flanges and fittings.
- M. Cut insulation in a manner to avoid compressing insulation more than 75 percent of its nominal thickness.
- N. Finish installation with systems at operating conditions. Repair joint separations and cracking due to thermal movement.
- O. Repair damaged insulation facings by applying same facing material over damaged areas. Extend patches at least 4 inches beyond damaged areas. Adhere, staple, and seal patches similar to butt joints.
- P. For above-ambient services, do not install insulation to the following:
  - 1. Vibration-control devices.

2. Testing agency labels and stamps.
3. Nameplates and data plates.
4. Cleanouts.

### 3.5 PENETRATIONS

- A. Insulation Installation at Roof Penetrations: Install insulation continuously through roof penetrations.
  1. Seal penetrations with flashing sealant.
  2. For applications requiring only indoor insulation, terminate insulation above roof surface and seal with joint sealant. For applications requiring indoor and outdoor insulation, install insulation for outdoor applications tightly joined to indoor insulation ends. Seal joint with joint sealant.
  3. Extend jacket of outdoor insulation outside roof flashing at least 2 inches below top of roof flashing.
  4. Seal jacket to roof flashing with flashing sealant.
- B. Insulation Installation at Underground Exterior Wall Penetrations: Terminate insulation flush with sleeve seal. Seal terminations with flashing sealant.
- C. Insulation Installation at Aboveground Exterior Wall Penetrations: Install insulation continuously through wall penetrations.
  1. Seal penetrations with flashing sealant.
  2. For applications requiring only indoor insulation, terminate insulation inside wall surface and seal with joint sealant. For applications requiring indoor and outdoor insulation, install insulation for outdoor applications tightly joined to indoor insulation ends. Seal joint with joint sealant.
  3. Extend jacket of outdoor insulation outside wall flashing and overlap wall flashing at least 2 inches.
  4. Seal jacket to wall flashing with flashing sealant.
- D. Insulation Installation at Interior Wall and Partition Penetrations (That Are Not Fire Rated): Install insulation continuously through walls and partitions.
- E. Insulation Installation at Fire-Rated Wall and Partition Penetrations: Install insulation continuously through penetrations of fire-rated walls and partitions.
  1. Comply with requirements in Division 07 for firestopping and fire-resistive joint sealers.
- F. Insulation Installation at Floor Penetrations:
  1. Pipe: Install insulation continuously through floor penetrations.
  2. Seal penetrations through fire-rated assemblies. Comply with requirements in Division 07.

### 3.6 GENERAL PIPE INSULATION INSTALLATION

- A. Requirements in this article generally apply to all insulation materials except where more specific requirements are specified in various pipe insulation material installation articles.

**B. Insulation Installation on Fittings, Valves, Strainers, Flanges, and Unions:**

1. Install insulation over fittings, valves, strainers, flanges, unions, and other specialties with continuous thermal and vapor-retarder integrity unless otherwise indicated.
2. Insulate pipe elbows using preformed fitting insulation or mitered fittings made from same material and density as adjacent pipe insulation. Each piece shall be butted tightly against adjoining piece and bonded with adhesive. Fill joints, seams, voids, and irregular surfaces with insulating cement finished to a smooth, hard, and uniform contour that is uniform with adjoining pipe insulation.
3. Insulate tee fittings with preformed fitting insulation or sectional pipe insulation of same material and thickness as used for adjacent pipe. Cut sectional pipe insulation to fit. Butt each section closely to the next and hold in place with tie wire. Bond pieces with adhesive.
4. Insulate valves using preformed fitting insulation or sectional pipe insulation of same material, density, and thickness as used for adjacent pipe. Overlap adjoining pipe insulation by not less than two times the thickness of pipe insulation, or one pipe diameter, whichever is thicker. For valves, insulate up to and including the bonnets, valve stuffing-box studs, bolts, and nuts. Fill joints, seams, and irregular surfaces with insulating cement.
5. Insulate strainers using preformed fitting insulation or sectional pipe insulation of same material, density, and thickness as used for adjacent pipe. Overlap adjoining pipe insulation by not less than two times the thickness of pipe insulation, or one pipe diameter, whichever is thicker. Fill joints, seams, and irregular surfaces with insulating cement. Insulate strainers so strainer basket flange or plug can be easily removed and replaced without damaging the insulation and jacket. Provide a removable reusable insulation cover. For below-ambient services, provide a design that maintains vapor barrier.
6. Insulate flanges and unions using a section of oversized preformed pipe insulation. Overlap adjoining pipe insulation by not less than two times the thickness of pipe insulation, or one pipe diameter, whichever is thicker.
7. Cover segmented insulated surfaces with a layer of finishing cement and coat with a mastic. Install vapor-barrier mastic for below-ambient services and a breather mastic for above-ambient services. Reinforce the mastic with fabric-reinforcing mesh. Trowel the mastic to a smooth and well-shaped contour.
8. For services not specified to receive a field-applied jacket except for flexible elastomeric and polyolefin, install fitted PVC cover over elbows, tees, strainers, valves, flanges, and unions. Terminate ends with PVC end caps. Tape PVC covers to adjoining insulation facing using PVC tape.
9. Stencil or label the outside insulation jacket of each union with the word "union." Match size and color of pipe labels.

**C. Insulate instrument connections for thermometers, pressure gauges, pressure temperature taps, test connections, flow meters, sensors, switches, and transmitters on insulated pipes. Shape insulation at these connections by tapering it to and around the connection with insulating cement and finish with finishing cement, mastic, and flashing sealant.**

**D. Install removable insulation covers at locations indicated. Installation shall conform to the following:**

1. Make removable flange and union insulation from sectional pipe insulation of same thickness as that on adjoining pipe. Install same insulation jacket as adjoining pipe insulation.
2. When flange and union covers are made from sectional pipe insulation, extend insulation from flanges or union long at least two times the insulation thickness over adjacent pipe insulation on each side of flange or union. Secure flange cover in place with stainless-steel or aluminum bands. Select band material compatible with insulation and jacket.
3. Construct removable valve insulation covers in same manner as for flanges, except divide the two-part section on the vertical center line of valve body.
4. When covers are made from block insulation, make two halves, each consisting of mitered blocks wired to stainless-steel fabric. Secure this wire frame, with its attached insulation, to flanges with tie wire. Extend insulation at least 2 inches over adjacent pipe insulation on each side of valve. Fill space between flange or union cover and pipe insulation with insulating cement. Finish cover assembly with insulating cement applied in two coats. After first coat is dry, apply and trowel second coat to a smooth finish.
5. Unless a PVC jacket is indicated in field-applied jacket schedules, finish exposed surfaces with a metal jacket.

### 3.7 INSTALLATION OF CELLULAR-GLASS INSULATION

#### A. Insulation Installation on Straight Pipes and Tubes:

1. Secure each layer of insulation to pipe with wire or bands and tighten bands without deforming insulation materials.
2. Where vapor barriers are indicated, seal longitudinal seams, end joints, and protrusions with vapor-barrier mastic and joint sealant.
3. For insulation with factory-applied jackets on above-ambient services, secure laps with outward clinched staples at 6 inches OC.
4. For insulation with factory-applied jackets on below-ambient services, do not staple longitudinal tabs. Instead, secure tabs with additional adhesive as recommended by insulation material manufacturer and seal with vapor-barrier mastic and flashing sealant.

#### B. Insulation Installation on Pipe Flanges:

1. Install preformed pipe insulation to outer diameter of pipe flange.
2. Make width of insulation section same as overall width of flange and bolts, plus twice the thickness of pipe insulation.
3. Fill voids between inner circumference of flange insulation and outer circumference of adjacent straight pipe segments with cut sections of cellular-glass block insulation of same thickness as pipe insulation.
4. Install jacket material with manufacturer's recommended adhesive, overlap seams at least 1 inch, and seal joints with flashing sealant.

#### C. Insulation Installation on Pipe Fittings and Elbows:

1. Install preformed sections of same material as straight segments of pipe insulation when available. Secure according to manufacturer's written instructions.

2. When preformed sections of insulation are not available, install mitered sections of cellular-glass insulation. Secure insulation materials with wire or bands.

**D. Insulation Installation on Valves and Pipe Specialties:**

1. Install preformed sections of cellular-glass insulation to valve body.
2. Arrange insulation to permit access to packing and to allow valve operation without disturbing insulation.
3. Install insulation to flanges as specified for flange insulation application.

**3.8 INSTALLATION OF FLEXIBLE ELASTOMERIC INSULATION**

**A. Seal longitudinal seams and end joints with manufacturers recommended adhesive to eliminate openings in insulation that allow passage of air to surface being insulated.**

**B. Insulation Installation on Pipe Flanges:**

1. Install pipe insulation to outer diameter of pipe flange.
2. Make width of insulation section same as overall width of flange and bolts, plus twice the thickness of pipe insulation.
3. Fill voids between inner circumference of flange insulation and outer circumference of adjacent straight pipe segments with cut sections of sheet insulation of same thickness as pipe insulation.
4. Secure insulation to flanges and seal seams with manufacturers recommended adhesive to eliminate openings in insulation that allow passage of air to surface being insulated.

**C. Insulation Installation on Pipe Fittings and Elbows:**

1. Install mitered sections of pipe insulation.
2. Secure insulation materials and seal seams with manufacturer's recommended adhesive to eliminate openings in insulation that allow passage of air to surface being insulated.

**D. Insulation Installation on Valves and Pipe Specialties:**

1. Install preformed valve covers manufactured of same material as pipe insulation when available.
2. When preformed valve covers are not available, install cut sections of pipe and sheet insulation to valve body. Arrange insulation to permit access to packing and to allow valve operation without disturbing insulation.
3. Install insulation to flanges as specified for flange insulation application.
4. Secure insulation to valves and specialties and seal seams with manufacturer's recommended adhesive to eliminate openings in insulation that allow passage of air to surface being insulated.

**3.9 INSTALLATION OF MINERAL-FIBER INSULATION**

**A. Insulation Installation on Straight Pipes and Tubes:**

1. Secure each layer of preformed pipe insulation to pipe with wire or bands and tighten bands without deforming insulation materials.

2. Where vapor barriers are indicated, seal longitudinal seams, end joints, and protrusions with vapor-barrier mastic and joint sealant.
3. For insulation with factory-applied jackets on above-ambient surfaces, secure laps with outward clinched staples at 6 inches OC.
4. For insulation with factory-applied jackets on below-ambient surfaces, do not staple longitudinal tabs. Instead, secure tabs with additional adhesive as recommended by insulation material manufacturer and seal with vapor-barrier mastic and flashing sealant.

**B. Insulation Installation on Pipe Flanges:**

1. Install preformed pipe insulation to outer diameter of pipe flange.
2. Make width of insulation section same as overall width of flange and bolts, plus twice the thickness of pipe insulation.
3. Fill voids between inner circumference of flange insulation and outer circumference of adjacent straight pipe segments with mineral-fiber blanket insulation.
4. Install jacket material with manufacturer's recommended adhesive, overlap seams at least 1 inch, and seal joints with flashing sealant.

**C. Insulation Installation on Pipe Fittings and Elbows:**

1. Install preformed sections of same material as straight segments of pipe insulation when available.
2. When preformed insulation elbows and fittings are not available, install mitered sections of pipe insulation, to a thickness equal to adjoining pipe insulation. Secure insulation materials with wire or bands.

**D. Insulation Installation on Valves and Pipe Specialties:**

1. Install preformed sections of same material as straight segments of pipe insulation when available.
2. When preformed sections are not available, install mitered sections of pipe insulation to valve body.
3. Arrange insulation to permit access to packing and to allow valve operation without disturbing insulation.
4. Install insulation to flanges as specified for flange insulation application.

**3.10 INSTALLATION OF POLYOLEFIN INSULATION**

**A. Insulation Installation on Straight Pipes and Tubes:**

1. Seal split-tube longitudinal seams and end joints with manufacturers recommended adhesive to eliminate openings in insulation that allow passage of air to surface being insulated.

**B. Insulation Installation on Pipe Flanges:**

1. Install pipe insulation to outer diameter of pipe flange.
2. Make width of insulation section same as overall width of flange and bolts, plus twice the thickness of pipe insulation.

3. Fill voids between inner circumference of flange insulation and outer circumference of adjacent straight pipe segments with cut sections of polyolefin sheet insulation of same thickness as pipe insulation.
  4. Secure insulation to flanges and seal seams with manufacturers recommended adhesive to eliminate openings in insulation that allow passage of air to surface being insulated.
- C. Insulation Installation on Pipe Fittings and Elbows:
1. Install mitered sections of polyolefin pipe insulation.
  2. Secure insulation materials and seal seams with manufacturer's recommended adhesive to eliminate openings in insulation that allow passage of air to surface being insulated.
- D. Insulation Installation on Valves and Pipe Specialties:
1. Install cut sections of polyolefin pipe and sheet insulation to valve body.
  2. Arrange insulation to permit access to packing and to allow valve operation without disturbing insulation.
  3. Install insulation to flanges as specified for flange insulation application.
  4. Secure insulation to valves and specialties, and seal seams with manufacturer's recommended adhesive to eliminate openings in insulation that allow passage of air to surface being insulated.
- 3.11 FIELD-APPLIED JACKET INSTALLATION
- A. Where glass-cloth jackets are indicated, install directly over bare insulation or insulation with factory-applied jackets.
1. Draw jacket smooth and tight to surface with 2-inch overlap at seams and joints.
  2. Embed glass cloth between two 0.062-inch- thick coats of lagging adhesive.
  3. Completely encapsulate insulation with coating, leaving no exposed insulation.
- B. Where FSK jackets are indicated, install as follows:
1. Draw jacket material smooth and tight.
  2. Install lap or joint strips with same material as jacket.
  3. Secure jacket to insulation with manufacturer's recommended adhesive.
  4. Install jacket with 1-1/2-inch laps at longitudinal seams and 3-inch- wide joint strips at end joints.
  5. Seal openings, punctures, and breaks in vapor-retarder jackets and exposed insulation with vapor-barrier mastic.
- C. Where PVC jackets are indicated, install with 1-inch overlap at longitudinal seams and end joints. Seal with manufacturers recommended adhesive.
1. Apply two continuous beads of adhesive to seams and joints, one bead under lap and the finish bead along seam and joint edge.
- D. Where metal jackets are indicated, install with 2-inch overlap at longitudinal seams and end joints. Overlap longitudinal seams arranged to shed water. Seal end joints with weatherproof sealant recommended by insulation manufacturer. Secure jacket with stainless-steel bands 12 inches OC. and at end joints.

### 3.12 INSTALLATION OF FOAMGLAS INSULATION ON UNDERGROUND PIPING

#### A. Preparation

1. After the nominal system diameter is determined (pipe diameter plus insulation thickness), the trench shall be excavated to allow 6 inches (15 cm) minimum clearance in all directions around the final O.D. of the system.
2. The bottom of the trench shall be graded to the design slope of the piping and to provide uniform bearing along its entire length.
3. Where wet or unstable soils are encountered, such soil shall be removed to a sufficient depth and the trench backfilled with coarse sand or loose granular earth. This backfill shall be compacted to a density equal to that of the acceptable portions of the trench.
4. Where excavation of rock is required, the rock shall be excavated to an over depth of 6 inches (15 cm) minimum below the specified trench depth. Over depths in rock shall be backfilled with loose granular earth or coarse sand and thoroughly tamped.
5. In areas of high-water table, adequate drainage shall be provided by a gravel bed and a perforated drainpipe covered with synthetic drainage fabric to prevent clogging.
  - a. The pipe shall lead to a sump provided with means to remove water from the trench area. Such conditions shall be determined and provided for by the engineer or design professional.
6. All insulated piping shall rest in a 6 inches (15 cm) layer of compacted sand. Excavation shall be kept free of standing water during insulation and jacketing application.
7. Note: Where excessive or cyclical movement is anticipated, the bore of FOAMGLAS® insulation shall be coated with a thin application of bore coating and allowed to dry before insulation is applied to the pipe.

#### B. Insulation Application FOAMGLAS® insulation and PITWRAP® jacketing shall be applied to piping in 10' segments (maximum length). After completion, the segments are rotated 180 degrees and the bottom of the jacketing and butt strips are inspected for proper application and sealing. If any defects are visible, they must be corrected. Major defects may require removal of jacketing. Assuming proper jacketing and sealing, the segments are rotated back into position and the connecting butt strips are applied.

1. Field jacketed insulation-staggered joints: the last section of FOAMGLAS® pipe covering the 10 ft segment is cut even to form a through joint between completed segments.
2. Large diameter piping: shorter segments can be insulated and jacketed if more practical.
3. Abrasion: insulation sections for large diameter piping will have to be bore coated.
4. Special considerations-anchors, guides, expansion loops, elbows, etc.: the completed insulated segment is rotated and inspected before installing the connecting section of insulation at the anchors, guides, expansion loops, elbows, etc.
5. These procedures are not to be used on oversized insulation.

#### C. Field-Jacketed

1. Field-jacketed FOAMGLAS® insulation shall be applied to the piping with butt joints staggered and tightly butted. Longitudinal and butt joints shall be left dry. All joints shall be tightly fitted to eliminate voids by refitting or replacing sections of insulation.

2. Each section of insulation shall be held in place by two wraps of strapping tape with a 50 percent overlap per wrap.
3. For double-layer applications, the second layer of FOAMGLAS® insulation shall be applied in a manner similar to the first, with all joints staggered between layers.

**D. Jacketing**

1. Application Apply the specified jacketing in strict accordance with the appropriate product data sheet. Request Technical Data Letter #244 from Pittsburg Corning for quality control installation methods.
2. Seal all overlaps and butt strips as noted in the product data sheet to ensure that ground water cannot penetrate the jacket system.
3. Note: In tunnels, manholes and pre-cast trenches where high ambient temperatures may exist, metal bands should be installed 12 inches on center of the jacketing exterior to control slippage of the overlap seal.

**E. Irregular Surfaces**

1. At all irregular surfaces such as elbows, tees, fitting covers, etc., the PITTWRAF® jacketing shall be precut to fit the contour of the surface to which it is to be applied. Precut sections shall allow for 2 inch (5 cm) overlap. All laps shall be sealed. In addition to sealing the PITTWRAF® jacketing on these irregular surfaces, a glove coat of the PITTCOTE® 300 coating shall be applied over the jacketing. First, carefully burn away the exterior plastic film on the PITTWRAF® jacketing. Then apply a glove coat of PITTCOTE® 300 coating. While still tacky, embed a layer of reinforcing fabric in the coating. After one hour, apply a second coat of PITTCOTE® 300 coating over the first coat. Total wet film thickness of the two coats should be 1/8 inch (3 mm) minimum. As an alternative to the cutting and fitting of PITTWRAF® jacketing on fittings, a five-layer application of PITTCOTE® 300 coating may be used.
2. The coating shall be applied in accordance with the procedures found in product Pittsburg Corning data sheet FI-120, in alternating layers of mastic, reinforcing fabric, mastic, mastic fabric and mastic, totaling five layers. Total wet film thickness shall be 1/4 inch (6 mm) minimum. If backfilling takes place less than 24 hours after PITTCOTE® 300 coating is applied, roofing felt shall be placed over the coating before backfilling.
3. Ends and bore of insulation left exposed at day's end shall be sealed between the insulation and the pipe with PITTCOTE® 300 coating to prevent bulk water entry. All completed work shall be backfilled as soon as possible to prevent damage to the insulation system.

**F. Anchors/Guides**

1. Size of concrete anchors and guide blocks and locations of each shall be determined by the engineer or design professional. Anchors shall be continuously welded to the carrier pipe.
2. When sizing anchors, coefficient of friction for FOAMGLAS® insulation is an average of 0.6. It is common engineering practice to locate line guides on both sides of an expansion loop, zee, or expansion joint. The line guide ensures that the thermal expansion is properly directed into the expansion mechanism. Butt ends of insulation in contact with anchor and/or guide plates shall be sealed continuously to plates with high-temperature sealant. Diameter of pipe sleeve guides shall be a maximum of 1/4 inch (6 mm) greater in diameter than the diameter of the pipe.

**G. Wall Penetrations**

1. The piping system should be designed so that no movement occurs at the penetrations except for manholes containing expansion couplings. All other movement should be accommodated by expansion loops or at changes of direction. Prime all concrete surfaces at penetrations before applying asphalt coating.

**H. Expansion Provisions**

1. Expansion loops, ells, tees and lead-off lines shall be insulated with oversize insulation. Inside diameter of the oversize insulation shall be the same as the exterior diameter of the straight run piping insulation. If the calculated pipe movement is greater than this allowance, contact Pittsburgh Corning Corporation.
2. Oversize insulation shall be the same thickness as the straight run piping insulation, but not less than 2 inches (5 cm) thick.
  - a. Oversize insulation shall overlap straight run insulation at least 9 inches (23 cm). All oversize insulation which provides for expansion shall be encased in concrete, a minimum of 3 inches (8 cm) thick around the insulation.
  - b. Concrete pad supports molded to fit inside the oversize insulation to center the pipe and to allow free movement shall be provided. Concrete support pads may be fabricated in the field or prefabricated.
  - c. These supports should be cured a minimum of seven days prior to use in steam piping applications. Alternatively, expansion joints may be used to accommodate expansion and are to be insulated. Expansion joints are common on pipes larger than 12 inches (30 cm) NPS.
  - d. A sheet metal insulation support shall be provided to support the oversize insulation. If pipe insulation is not of sufficient thickness to allow sheet metal support to clear expansion joints, provide insulation collars of sufficient thickness and minimum 9 inches (23 cm) width to provide clearance.

**I. Field Quality Control**

1. After application of the jacketing system to all straight and irregular sections of insulation, visually inspect all laps, seams, butt strips and glove-coated areas to ensure that these areas are sealed from water entry in accordance with the specifications and appropriate product data sheet.

**J. Backfilling**

1. The trench shall be carefully backfilled using the excavated earth approved for backfilling, consisting of sand, clay, earth, loam, or other approved materials. Sand backfill shall be placed within 6 inches (15 cm) of the insulated pipe and shall be free of rocks, debris, or stones greater than 1/4 inch (6 mm) diameter. Care shall be taken not to damage the PITTWRAP® jacketing during backfilling. Backfill shall be applied in 6 inches (15 cm) lifts, tamping each lift until a depth of 12 inches (30 cm) over the insulated pipe is reached. The remainder of the trench shall be backfilled in 12 inches (30 cm) lifts, with each lift tamped to the desired compaction.

**3.13 FINISHES**

- A. Insulation with ASJ, Glass-Cloth, or Other Paintable Jacket Material: Paint jacket with paint system identified below and as specified in Division 09.

1. Flat Acrylic Finish: Two (2) finish coats over a primer that is compatible with jacket material and finish coat paint. Add fungicidal agent to render fabric mildew proof.
  - a. Finish Coat Material: Interior, flat, latex-emulsion size.
- B. Flexible Elastomeric Thermal Insulation: After adhesive has fully cured, apply two coats of insulation manufacturer's recommended protective coating.
- C. Color: Final color as selected by Architect. Vary first and second coats to allow visual inspection of the completed Work.
- D. Do not field paint aluminum or stainless-steel jackets.

### 3.14 FIELD QUALITY CONTROL

- A. Perform tests and inspections.
  1. Submit test report to Engineer as part of the closeout documents.
- B. All insulation applications will be considered defective Work if sample inspection reveals noncompliance with requirements.

### 3.15 PIPING INSULATION SCHEDULE, GENERAL

- A. Acceptable preformed pipe and tubular insulation materials and thicknesses are identified for each piping system and pipe size range. If more than one material is listed for a piping system, selection from materials listed is Contractor's option.
- B. Items Not Insulated: Unless otherwise indicated, do not install insulation on the following:
  1. Drainage piping located in crawl spaces.
  2. Underground piping.
  3. Chrome-plated pipes and fittings unless there is a potential for personnel injury.

### 3.16 OUTDOOR, FIELD-APPLIED JACKET SCHEDULE

- A. Install jacket over insulation material. For insulation with factory-applied jacket, install the field-applied jacket over the factory-applied jacket.
- B. If more than one material is listed, selection from materials listed is Contractor's option.
- C. Piping, Concealed:
  1. None.
  2. PVC, Color-Coded by System: 30 mils thick.
  3. Stainless Steel, Type 304 Smooth 2B Finish: 0.016 inch thick.
- D. Piping, Exposed:
  1. PVC: 30 mils thick.
  2. Stainless Steel, Type 304, Smooth 2B Finish with Z-Shaped Locking Seam: 0.020 inch thick.

3.17 UNDERGROUND, FIELD-INSTALLED INSULATION JACKET

- A. For underground direct-buried piping applications, install underground direct-buried jacket over insulation material.

END OF SECTION

H:\Y0586.00\DOC\SPEC\2025\_02-20\_IFB\220719\_PLUMBING PIPING INSULATION.DOC

## SECTION 220800 - COMMISSIONING OF PLUMBING

### PART 1 - GENERAL

#### 1.1 RELATED DOCUMENTS

- A. Certain requirements common to all the mechanical and electrical trades (Fire Suppression, Plumbing, HVAC, Electrical, and Tele/Data) are specified in Division 20. To avoid repetition, they are not repeated in each relevant Division and Section. However, these requirements are applicable to the work of this Section and are hereby incorporated by reference.
- B. Drawings and general provisions of the Contract, including General and Supplementary Conditions and Division 01 Specification Sections, apply to this Section.

#### 1.2 SUMMARY

- A. This section includes
  - 1. Test equipment.
- B. Related Sections:
  - 1. Division 01 for general commissioning process requirements.

#### 1.3 DESCRIPTION

- A. Refer to Division 01 for the description of commissioning.

#### 1.4 DEFINITIONS

- A. Refer to Division 01 Section "General Commissioning Requirements" for definitions.

#### 1.5 SUBMITTALS

- A. Refer to Division 01 for CxA's role.
- B. Refer to Division 01 for specific requirements. In addition, provide the following:
  - 1. Certificates of readiness
  - 2. Certificates of completion of installation, prestart, and startup activities.
  - 3. O&M manuals
  - 4. Test reports

#### 1.6 QUALITY ASSURANCE

- A. Test Equipment Calibration Requirements: Contractors will comply with test manufacturer's calibration procedures and intervals. Recalibrate test instruments immediately after instruments have been repaired resulting from being dropped or damaged. Affix calibration tags to test instruments. Furnish calibration records to CxA upon request.

## 1.7 COORDINATION

- A. Refer to Division 01 for requirements pertaining to coordination during the commissioning process.

## PART 2 - PRODUCTS

### 2.1 TEST EQUIPMENT

- A. All standard testing equipment required to perform startup, initial checkout and functional performance testing shall be provided by the contractor for the equipment being tested. For example, the plumbing contractor of Division 22 shall ultimately be responsible for all standard testing equipment for the plumbing system in Division 22, except for equipment specific to and used by TAB in their commissioning responsibilities. A sufficient quantity of two-way radios shall be provided by each subcontractor.
- B. Special equipment, tools and instruments (specific to a piece of equipment and only available from vendor) required for testing shall be included in the base bid price to the Owner and left on site, except for stand-alone data logging equipment that may be used by the CxA.
- C. Proprietary test equipment and software required by any equipment manufacturer for programming and/or start-up, whether specified or not, shall be provided by the manufacturer of the equipment. Manufacturer shall provide the test equipment, demonstrate its use, and assist in the commissioning process as needed. Proprietary test equipment (and software) shall become the property of the Owner upon completion of the commissioning process.
- D. Data logging equipment and software required to test equipment will be provided by the CxA, but shall not become the property of the Owner.
- E. All testing equipment shall be of sufficient quality and accuracy to test and/or measure system performance with the tolerances specified in the Specifications. If not otherwise noted, the following minimum requirements apply: Temperature sensors and digital thermometers shall have a certified calibration within the past year to an accuracy of 0.5 deg F and a resolution of + or - 0.1 deg F. Pressure sensors shall have an accuracy of + or - 2.0 percent of the value range being measured (not full range of meter) and have been calibrated within the last year.

## PART 3 - EXECUTION

### 3.1 GENERAL DOCUMENTATION REQUIREMENTS

- A. With assistance from the installing contractors, the CxA will prepare Pre-Functional Checklists for all commissioned components, equipment, and systems
- B. Red-lined Drawings:
  - 1. The contractor will verify all equipment, systems, instrumentation, wiring and components are shown correctly on red-lined drawings.
  - 2. Preliminary red-lined drawings must be made available to the Commissioning Team for use prior to the start of Functional Performance Testing.
  - 3. Changes, as a result of Functional Testing, must be incorporated into the final as-built drawings, which will be created from the red-lined drawings.
  - 4. The contracted party, as defined in the Contract Documents will create the as-built drawings.

**C. Operation and Maintenance Data:**

1. Contractor will provide a copy of O&M literature within 45 days of each submittal acceptance for use during the commissioning process for all commissioned equipment and systems.
2. The CxA will review the O&M literature once for conformance to project requirements.
3. The CxA will receive a copy of the final approved O&M literature once corrections have been made by the contractor.

**D. Demonstration and Training:**

1. Contractor will provide demonstration and training as required by the specifications.
2. A complete training plan and schedule must be submitted by the contractor to the CxA four weeks (4) prior to any training.
3. A training agenda for each training session must be submitted to the CxA one (1) week prior the training session.
4. The CxA shall be notified at least 72 hours in advance of scheduled tests so that testing may be observed by the CxA and Owner's representative. A copy of the test record shall be provided to the CxA, Owner, and Architect.
5. Engage a Factory-authorized service representative to train Owner's maintenance personnel to adjust, operate, and maintain specific equipment.
6. Train Owner's maintenance personnel on procedures and schedules for starting and stopping, trouble shooting, servicing, and maintaining equipment.
7. Review data in O&M Manuals.

**E. Systems manual requirements**

1. The Systems Manual is intended to be a usable information resource containing all of the information related to the systems, assemblies, and Commissioning Process in one place with indexes and cross references.
2. The GC shall include final approved versions of the following information for the Systems Manual:
  - a. As-Built System Schematics
  - b. Verified Record Drawings
  - c. Test Results (not otherwise included in Cx Record)
  - d. Periodic Maintenance Information for computer maintenance management system
  - e. Recommendations for recalibration frequency of sensors and actuators
  - f. A list of contractors, subcontractors, suppliers, architects, and engineers involved in the project along with their contact information.
  - g. Training Records, Information on training provided, attendees list, and any on-going training.
3. This information shall be organized and arranged by building system, such as fire alarm, chilled water, heating hot water, etc.

4. Information should be provided in an electronic version to the extent possible. Legible, scanned images are acceptable for non-electronic documentation to facilitate this deliverable.

## 1.8 CONTRACTOR'S RESPONSIBILITIES

- A. Perform commissioning tests at the direction of the CxA.
- B. Attend construction phase controls coordination meetings.
- C. Attend domestic water balancing review and coordination meetings.
- D. Participate in Plumbing systems, assemblies, equipment, and component maintenance orientation and inspection as directed by the CxA.
- E. Provide information requested by the CxA for final commissioning documentation.
- F. Include requirements for submittal data, operation and maintenance data, and training in each purchase order or sub-contract written.
- G. Prepare preliminary schedule for Plumbing system orientations and inspections, operation and maintenance manual submissions, training sessions, pipe and duct system testing, flushing and cleaning, equipment start-up, testing and balancing and task completion for owner. Distribute preliminary schedule to commissioning team members.
- H. Update schedule as required throughout the construction period.
- I. During the startup and initial checkout process, execute the related portions of the prefunctional checklists for all commissioned equipment.
- J. Assist the CxA in all verification and functional performance tests.
- K. Provide measuring instruments and logging devices to record test data, and provide data acquisition equipment to record data for the complete range of testing for the required test period.
- L. Gather operation and maintenance literature on all equipment, and assemble in binders as required by the specifications. Submit to CxA (45) days after submittal acceptance.
- M. Coordinate with the CxA to provide (48) hour advance notice so that the witnessing of equipment and system start-up and testing can begin.
- N. Notify the CxA a minimum of two (2) weeks in advance of the time for start of the balancing work. Attend the initial balancing meeting for review of the balancing procedures.
- O. Participate in, and schedule vendors and contractors to participate in the training sessions.
- P. Provide written notification to the CM/GC and CxA that the following work has been completed in accordance with the contract documents, and that the equipment, systems, and sub-system are operating as required.
  1. Plumbing equipment including domestic water heaters, pumps, plumbing fixtures, and all other equipment furnished under this Division.
  2. Gas piping, sanitary waste and vent piping, storm drainage piping, sump pumps and automatic sprinkler system.
  3. Fire stopping in fire rated construction, including caulking, gasketing and sealing of smoke barriers.
  4. Air compressors

5. Fuel delivery systems
- Q. The equipment supplier shall document the performance of his equipment.
- R. Provide a complete set of red-lined drawings to the CxA prior to the start of Functional Performance Testing.
- S. Balance Contractor
  1. Attend initial commissioning coordination meeting scheduled by the CxA.
  2. Submit the site specific balancing plan to the CxA and Design Professional for review and acceptance.
  3. Attend the balancing review meeting scheduled by the CxA. Be prepared to discuss the procedures that shall be followed in balancing the Plumbing system.
  4. At the completion of the balancing work, and the submittal of the final balancing report, notify the Plumbing contractor and the CM/GC.
  5. At the completion of balancing work, and the submittal of the final balancing report, notify the Plumbing Contractor and the CM/GC.
  6. Participate in verification of the balancing report, which will consist of repeating measurements contained in the balancing reports. Assist in diagnostic purposes when directed.
- T. Provide training of the Owner's operating staff using expert qualified personnel, as specified.
- U. Equipment Suppliers
  1. Provide all requested submittal data, including detailed start-up procedures and specific responsibilities of the Owner, to keep warranties in force.
  2. Assist in equipment testing per agreements with contractors.
  3. Provide information requested by CxA regarding equipment sequence of operation and testing procedures.
- V. Refer to Division 01 for additional contractor responsibilities.
- 1.9 OWNER'S RESPONSIBILITIES
  - A. Refer to Division 01 for Owner's Responsibilities.
- 1.10 DESIGN PROFESSIONAL'S RESPONSIBILITIES
  - A. Refer to Division 01 for Design Professional's Responsibilities.
- 1.11 CXA'S RESPONSIBILITIES
  - A. Refer to Division 01 for CxA's Responsibilities.
- 1.12 TESTING PREPARATION
  - A. Certify in writing to the CxA that Plumbing systems, subsystems, and equipment have been installed, calibrated, and started and are operating according to the Contract Documents.

- B. Certify in writing to the CxA that Plumbing instrumentation and control systems have been completed and calibrated, that they are operating according to the Contract Documents, and that pretest set points have been recorded.
- C. Certify in writing that balancing procedures have been completed and that testing, adjusting, and balancing reports have been submitted, discrepancies corrected, and corrective work approved.
- D. Set systems, subsystems, and equipment into operating mode to be tested (e.g., normal shutdown, normal auto position, normal manual position, unoccupied cycle, emergency power, and alarm conditions).
- E. Inspect and verify the position of each device and interlock identified on checklists.
- F. Check safety cutouts, alarms, and interlocks with smoke control and life-safety systems during each mode of operation.
- G. Testing Instrumentation: Install measuring instruments and logging devices to record test data as directed by the CxA.

#### 1.13 DOMESTIC WATER BALANCING VERIFICATION

- A. Prior to performance of Domestic Water Balancing work, provide copies of reports, sample forms, checklists, and certificates to the CxA.
- B. Notify the CxA at least ten (10) days in advance of testing and balancing Work, and provide access for the CxA to witness balancing Work.
- C. Provide technicians, instrumentation, and tools to verify testing and balancing of Plumbing systems at the direction of the CxA.
  - 1. The CxA will notify testing and balancing subcontractor ten (10) days in advance of the date of field verification. Notice will not include data points to be verified.
  - 2. The balancing subcontractor shall use the same instruments (by model and serial number) that were used when original data were collected.
  - 3. Failure of an item includes a deviation of more than 10 percent. Failure of more than 10 percent of selected items shall result in rejection of final balancing report.
  - 4. Remedy the deficiency and notify the CxA so verification of failed portions can be performed.

#### 1.14 GENERAL TESTING REQUIREMENTS

- A. Provide technicians, instrumentation, and tools to perform commissioning test at the direction of the CxA.
- B. Scope of Plumbing testing shall include entire Plumbing installation. Testing shall include measuring capacities and effectiveness of operational and control functions.
- C. Test all operating modes, interlocks, control responses, and responses to abnormal or emergency conditions, and verify proper response of building automation system controllers and sensors.
- D. The CxA along with the Plumbing contractor, balancing subcontractor shall prepare detailed testing plans, procedures, and checklists for Plumbing systems, subsystems, and equipment.
- E. Tests will be performed using design conditions whenever possible.

- F. Simulated conditions may need to be imposed using an artificial load when it is not practical to test under design conditions. Before simulating conditions, calibrate testing instruments. Provide equipment to simulate loads. Set simulated conditions as directed by the CxA and document simulated conditions and methods of simulation. After tests, return settings to normal operating conditions.
- G. The CxA may direct that set points be altered when simulating conditions is not practical.
- H. The CxA may direct that sensor values be altered with a signal generator when design or simulating conditions and altering set points are not practical.
- I. If tests cannot be completed because of a deficiency outside the scope of the Plumbing system, document the deficiency and report it to the Owner. After deficiencies are resolved, reschedule tests.
- J. If the testing plan indicates specific seasonal testing, complete appropriate initial performance tests and documentation and schedule seasonal tests.

#### **1.15 PLUMBING SYSTEMS, SUBSYSTEMS, AND EQUIPMENT TESTING PROCEDURES**

- A. Equipment Testing and Acceptance Procedures: Testing requirements are specified in individual Division 22 sections. Provide submittals, test data, inspector record, and certifications to the CxA.
- B. Plumbing Instrumentation and Control System Testing: Field testing plans and testing requirements are specified in Division 23 for HVAC Controls." Assist the CxA with preparation of testing plans.
- C. Pipe system cleaning, flushing, hydrostatic tests and chemical treatment: Test requirements are specified in Division 22 piping sections. Plumbing Contractor shall prepare a pipe system cleaning, flushing, and hydrostatic testing plan. Provide cleaning, flushing, testing, and treating plan and final reports to the CxA. Plan shall include the following:
  - 1. Sequence of testing and testing procedures for each section of pipe to be tested, identified by pipe zone or sector identification marker. Markers shall be keyed to Drawings for each pipe sector, showing the physical location of each designated pipe test section. Drawings keyed to pipe zones or sectors shall be formatted to allow each section of piping to be physically located and identified when referred to in pipe system cleaning, flushing, hydrostatic testing, and chemical treatment plan.
  - 2. Description of equipment for flushing operations.
  - 3. Minimum flushing water velocity.
  - 4. Tracking checklist for managing and ensuring that all pipe sections have been cleaned, flushed, hydrostatically tested, and chemically treated.
- D. Plumbing Distribution System Testing: Provide technicians, instrumentation, tools, and equipment to test performance of air, fuel gas, sanitary waste and vent piping, storm drainage piping, sprinkler and domestic water distribution systems.
- E. Vibration and Sound Tests: Provide technicians, instrumentation, tools, and equipment to test performance of vibration isolation and seismic controls.
- F. The work included in the commissioning process involves a complete and thorough evaluation of the operation and performance of all components, systems and sub-systems. The following equipment and systems shall be evaluated:

1. All Water Systems including hot and cold water systems and their related components and heaters.
  2. All Compressed Air Systems
  3. All Water Heaters and Heat Exchangers
  4. All Condensing Equipment
  5. All Vacuum Systems
  6. Emergency Eyewash and Shower Equipment
  7. All Backflow Devices
  8. Fuel Gas System
  9. Gas System – Carbon Dioxide
  10. Gas System – Central Cylinder
  11. Gas System – Hydrogen
  12. Gas System – Natural Gas
  13. Gas System – Nitrogen
  14. Hot Water Circulating Pumps
  15. Hot Water Tempering Stations
  16. Plumbing Fixtures
  17. Rainwater Collection System
  18. RODI Purified Water Systems
  19. Sanitary Waste and Venting System
  20. pH Neutralization Systems
  21. Chemical Waste Handling, Storage and Process Systems
  22. Special Waste Systems
  23. Wastewater Pumping Systems
  24. Lab Waste Pumping Systems
  25. Storm Drainage System
  26. Trap Primer
  27. Water Booster Systems
  28. Water Storage Systems
- 1.16 DEFICIENCIES/NON-CONFORMANCE, COST OF RETESTING, FAILURE DUE TO MANUFACTURER DEFECT
- A. Refer to Division 01 for requirements pertaining to deficiencies/non-conformance, cost of retesting, or failure due to manufacturer defect.

1.17 APPROVAL

- A. Refer to Division 01 for approval procedures.

1.18 DEFERRED TESTING

- A. Refer to Division 01 for requirements pertaining to deferred testing.

1.19 OPERATION AND MAINTENANCE MANUALS

- A. The Operation and Maintenance Manuals shall conform to Contract Documents requirements as stated in Division 01.
- B. Refer to Division 01 for the AE and CxA roles in the Operation and Maintenance Manual contribution, review and approval process.

1.20 TRAINING OF OWNER PERSONNEL

- A. Refer to Division 01 for requirements pertaining to training.
- B. Plumbing Contractor. The mechanical contractor shall have the following training responsibilities:
  - 1. Provide the CxA with a training plan two weeks before the planned training.
  - 2. Provide designated Owner personnel with comprehensive orientation and training in the understanding of the systems and the operation and maintenance of each piece of Plumbing equipment.
  - 3. During any demonstration, should the system fail to perform in accordance with the requirements of the O&M manual or sequence of operations, the system will be repaired or adjusted as necessary and the demonstration repeated.
  - 4. The appropriate trade or manufacturer's representative shall provide the instructions on each major piece of equipment. This person may be the start-up technician for the piece of equipment, the installing contractor or manufacturer's representative. Practical building operating expertise as well as in-depth knowledge of all modes of operation of the specific piece of equipment is required. More than one party may be required to execute the training.
  - 5. The training sessions shall follow the outline in the Table of Contents of the operation and maintenance manual and illustrate whenever possible the use of the O&M manuals for reference.
  - 6. Hands-on training shall include start-up, operation in all modes possible, including manual, shut-down and any emergency procedures and preventative maintenance for all pieces of equipment.
  - 7. The plumbing contractor shall fully explain and demonstrate the operation, function and overrides of any local packaged controls.
  - 8. Training shall occur after functional testing is complete, unless approved otherwise by the Owner.

END OF SECTION

H:\Y0586.00\DOC\SPEC\2025\_02-20\_IFB\220800\_COMMISSIONING.DOC

## **SECTION 221110 - COMMON PLUMBING PIPING**

### **PART 1 - GENERAL**

#### **1.1 RELATED DOCUMENTS**

- A. Certain requirements common to all the mechanical and electrical trades (Fire Suppression, Plumbing, HVAC, Electrical, and Tele/Data) are specified in Division 20. To avoid repetition, they are not repeated in each relevant Division and Section. However, these requirements are applicable to the work of this Section and are hereby incorporated by reference.
- B. Drawings and general provisions of the Contract, including General and Supplementary Conditions and Division 01 Specification Sections, apply to this Section.

#### **1.2 SUMMARY**

- A. Section Includes:
  - 1. Piping materials
  - 2. Under-building-slab and aboveground pipes, tubes, and fittings inside buildings.
  - 3. Stainless steel water piping
  - 4. Encasement for piping.
  - 5. Dielectric fittings

#### **1.3 ACTION SUBMITTALS**

- A. Product Data: For transition fittings and dielectric fittings.
- B. All Pipe, Fittings, Valves and Sundries contained in this specification section. All piping systems shall be submitted as a single piping submittal package with labels tagged consistent with the pipe index found in Part 2 of this spec.
- C. LEED Submittals:
  - 1. Product Data for Credit IEQ 4.1: For solvent cements and adhesive primers, documentation including printed statement of VOC content.
  - 2. Laboratory Test Reports for Credit IEQ 4: For solvent cements and adhesive primers, documentation indicating that products comply with the testing and product requirements of the California Department of Health Services' "Standard Practice for the Testing of Volatile Organic Emissions from Various Sources Using Small-Scale Environmental Chambers."

#### **1.4 INFORMATIONAL SUBMITTALS**

- A. All Product shop drawings and submittal sheets for all pipe, fittings, valves, equipment, appurtenances, and systems included in this section.
- B. System purging and disinfecting activities report and hot water balancing reports.
  - 1. Completion Documentation. Submit HW balancing report to Engineer. Submit testing report(s) including system tested, date, test method, witnesses and participants, and

statement that any deficiencies discovered during testing have been satisfactorily corrected.

2. Provide documentation and certifications as required by authorities for building occupancy. Prior to occupancy, submit to Engineer and AHJ
  - a. Certification that the potable water systems have been balanced and sterilized,
  - b. Laboratory certifications on test samples of the water.
- C. Field quality-control reports.
- D. Potable/non-potable cross connection test report and survey sheets

#### 1.5 FIELD CONDITIONS

- A. Interruption of Existing Water Service: Do not interrupt water service to facilities occupied by Owner or others unless permitted under the following conditions and then only after arranging to provide temporary water service according to requirements indicated:
  1. Number of days in advance of proposed interruption of water service.
  2. Do not interrupt the water service without Architect's, Construction Manager's, and Owner's written permission.

### PART 2 - PRODUCTS

#### 2.1 PIPING MATERIALS

- A. Comply with requirements in "Piping Schedule Index and Pipe Tables." Article for applications of pipe, tube, fitting materials, and joining methods for specific services, service locations, and pipe sizes.
- B. Potable-water piping and components shall comply with NSF 14 and NSF 61 Annex G. Plastic piping components shall be marked with "NSF-pw."

#### 2.2 BUILDING PLUMBING SYSTEM PIPING

- A. Building-underground and aboveground pipes, tubes, and fittings inside buildings
- B. Where building and plumbing codes allow, the contractor, at their option may substitute stainless steel piping for potable and non-potable water services.
- C. Water piping and components shall comply with NSF 61 Annex G.

#### 2.3 STAINLESS-STEEL WATER PIPING

- A. Appurtenances for Grooved-End, Stainless-Steel Pipe:
  1. **Manufacturers:** Subject to compliance with requirements, available manufacturers offering products that may be incorporated into the Work, provide products by one of the following, or approved equal.
    - a. **Grinnell Mechanical Products.**
    - b. **Shurjoint Piping Products.**

- c. Victaulic Company.
  - d. Or Approved Equal.
- 2. Fittings for Grooved-End, Stainless-Steel Pipe: Stainless-steel casting with dimensions matching stainless-steel pipe.
- 3. Mechanical Couplings for Grooved-End, Stainless-Steel Pipe:
- 4. AWWA C606 for stainless-steel-pipe dimensions.
- 5. Stainless-steel housing sections.
- 6. Stainless-steel bolts and nuts.
- 7. EPDM-rubber gaskets suitable for hot and cold water.
- 8. Minimum Pressure Rating:
  - a. NPS 8 and Smaller: 600 psig.
  - b. NPS 10 and NPS 12: 400 psig.
  - c. NPS 14 to NPS 24: 250 psig.

#### 2.4 ENCASEMENT FOR PIPING

- A. Standard: ASTM A 674 or AWWA C105/A21.5.
- B. Form: Sheet or tube.
- C. Color: Black or natural.

#### 2.5 DIELECTRIC FITTINGS

- A. General Requirements: Assembly of copper alloy and ferrous materials with separating nonconductive insulating material. Include end connections compatible with pipes to be joined.
- B. Dielectric Unions:
  - 1. Manufacturers: Subject to compliance with requirements, available manufacturers offering products that may be incorporated into the Work, provide products by one of the following, or approved equal.
    - a. A. Y. McDonald Mfg. Co.
    - b. Watts; a Watts Water Technologies company.
    - c. Zurn Industries, LLC.
    - d. Or Approved Equal.
  - 2. Standard: ASSE 1079.
  - 3. Pressure Rating: 125 psig minimum at 180 deg F for low pressure piping and 150 psig 250 psig for high systems where the operating pressure exceeds 150 psig.
  - 4. End Connections: Solder-joint copper alloy and threaded ferrous.
- C. Dielectric Flanges:

1. **Manufacturers:** Subject to compliance with requirements, available manufacturers offering products that may be incorporated into the Work, provide products by one of the following, or approved equal.
    - a. Watts; a Watts Water Technologies company.
    - b. Wilkins.
    - c. Zurn Industries, LLC.
    - d. Or Approved Equal.
  2. Standard: ASSE 1079.
  3. Factory-fabricated, bolted, companion-flange assembly.
  4. Pressure Rating: 125 psig minimum at 180 deg F 150 psig 175 psig 300 psig match system working pressure.
  5. End Connections: Solder-joint copper alloy and threaded ferrous; threaded solder-joint copper alloy and threaded ferrous.
- D. Dielectric-Flange Insulating Kits:
1. **Manufacturers:** Subject to compliance with requirements, available manufacturers offering products that may be incorporated into the Work, provide products by one of the following, or approved equal.
    - a. Advance Products & Systems, Inc.
    - b. Calpico, Inc.
    - c. Central Plastics Company.
    - d. Or Approved Equal.
  2. Non-conducting materials for field assembly of companion flanges.
  3. Pressure Rating: 150 psig.
  4. Gasket: Neoprene or phenolic.
  5. Bolt Sleeves: Phenolic or polyethylene.
  6. Washers: Phenolic with steel backing washers.
- E. Dielectric Nipples:
1. **Manufacturers:** Subject to compliance with requirements, available manufacturers offering products that may be incorporated into the Work, provide products by one of the following, or approved equal.
    - a. Elster Perfection Corporation.
    - b. Precision Plumbing Products.
    - c. Victaulic Company.
    - d. Or Approved Equal.
  2. Standard: IAPMO PS 66.
  3. Electroplated steel nipple complying with ASTM F 1545.
  4. Pressure Rating and Temperature: 300 psig at 225 deg F.

5. End Connections: Male threaded or grooved.
6. Lining: Inert and noncorrosive, propylene.

### PART 3 - EXECUTION

#### 3.1 PIPE SCHEDULE INDEX

SERVICE	CODE	MAXIMUM SERVICE OPERATING LIMITS		PIPE CLASS	PIPE MATERIAL
		(psig)	Temp (°F)		
City or Service Water Entrance Piping	CW	100	250	A05	Type K Copper or D1CL
Domestic Cold Water	CW	100	250	A10 A20	Type L Copper
Domestic Hot Water	HW	100	250	A10 A20	Type L Copper
Domestic Hot Water Return	HWR	100	250	A10 A20	Type L Copper

Indirect Waste (above ground)	IW	Gravity	80	A17 A10	G. Steel Copper
Hot or Cold Potable or non -Potable Water piping for high rise mains	Service labeled	250	180	A21	Stainless Steel with mechanical or weld joints
	FL	100	250	A25	Copper Purple Labeled Pipe
	QW	100	250	A25	Copper Purple Labeled Pipe
Rain Leader	RW	Gravity	80	D10	Cast Iron
Sanitary Waste & Vent	S, W or V	Gravity	120	D10	Cast Iron
Indirect Waste (below ground)	IW	Gravity	80	D10	Cast Iron
Force Main (Sanitary or Storm)	FM	50	120	D11 A10	G. Steel Copper
Groundwater Collection Piping	GC	0	80	D18	Sch 40 PVC Perforated
Sanitary Waste and Vent	S, W or V	0	120	D20	Schedule 40 PVC
Kitchen Grease Waste Piping	KW	Gravity	120	D13	Epoxy Coated Cast Iron
	KW	Gravity	120	D-25	Blucher Stainless Steel
Wastewater from soda fountains See note 9	KW	Gravity	40 - 100	D13 D25	Epoxy Cast Iron or Stainless Steel
Alternative Pipe Material - Water	Wres	150	120	P30	CPVC
Alternative Pipe Material - Water	WRes	80	200	P35	PEX
Reclaim Water	REC	100	73	P45	Charlotte Purple

SERVICE	CODE	MAXIMUM SERVICE OPERATING LIMITS		PIPE CLASS	PIPE MATERIAL
		(psig)	Temp (°F)		
					Pipe
				P47	Niron Purple Pipe
	FL	100	250	P45	Charlotte Purple Pipe
				P47	Niron Purple Pipe
	QW	100	250	P45	Charlotte Purple Pipe
				P47	Niron Purple Pipe

GENERAL PIPE SPEC NOTES:

- Each valve type shall be the product of a single manufacturer. Each system shall be provided with valves as required by code and shown on the drawings and shall be installed to facilitate operation, replacement and repair
- Provide access panels for concealed valves behind non-removable ceilings or walls.
- Provide shut-off valves on supply piping to individual pieces of equipment.
- Provide pipe dope, Teflon tape, wax rings, neoprene gaskets and other jointing compounds as required by best standard practice and only on service as recommended by manufacturer.
- Apply putties and jointing compounds for plumbing fixtures and trim as recommended by manufacturers.
- Valves on insulated piping systems shall be equipped with extended handles to accommodate insulation thickness.
- All piping insulation and materials installed in return air plenums shall be plenum rated. Thermoplastic piping systems are hereby prohibited in return air plenums.
- Piping routed through metal stud or wood stud partitions: provide centering such that piping does not contact metal studs and also protection of piping systems routed horizontally through metal stud or wood stud partitions where the piping crosses a stud. Sleeve type protection shall be used to prevent damage to the lateral piping using screws/nails/fasteners. Provide pre-manufactured products equal to puncture solution, or on-site sleeves.
- In all areas where waste from Soda dispensing equipment enters the waste drainage system, the waste piping that serves the area shall be corrosion resistant from the soda machines to a man sanitary trunk header. The corrosion resistant header may also pick up other users from the commissary area

### 3.2 EARTHWORK

- Comply with requirements in Division 31 for excavating, trenching, and backfilling.

### 3.3 GENERAL INSTALLATION REQUIREMENTS

- Piping Installation
  - Install piping approximately as shown on the drawings and as directed during installation by the General Contractor or the Architect.
  - Piping shall be installed as straight and direct as possible forming right angles or parallel lines with building walls, other piping and neatly spaced.
  - The horizontal runs of piping, except when concealed in partitions, shall be installed as high as possible.
- Piping or other apparatus shall not be installed in such a manner that interferes with the full swing of the doors and access to other equipment.
- The arrangement, positions and connections of pipes, fixtures, drains, valves, and the like, indicated on the drawings shall be followed as closely as possible, but the right is reserved by the General Contractor or the Architect to change locations and elevations to accommodate the work, without additional compensation for such change.

- D. It shall be possible to drain the water from all sections of each cold and hot water piping system. Pitch piping back to drain valves.
- E. Screwed piping of brass or chrome plated brass shall be made with special care to avoid marring or damaging pipe and fitting exterior and interior surfaces.
- F. Screwed pipe and copper tubing shall be reamed smooth before installation.
- G. All exposed piping in connection with fixtures and where exposed on finished walls or to view, shall be chrome plated. Where chrome plated piping is installed, cut and thread pipe so that no unplated pipe threads are visible when the work is completed.
- H. Remove and replace with new materials, any copper or brass piping (chrome plated or unplated) and valves showing visible tool marks.
- I. Vertical risers shall be firmly supported by riser clamps, properly installed to relieve all weight from the fittings.
- J. The pipe and fittings shall be manufactured in the United States of America and in accordance with the Commercial Standards, American National Standards Institute and American Society of Testing Materials.

### 3.4 GRAVITY PIPING INSTALLATION

- A. Drawing plans, schematics, and diagrams indicate general location and arrangement of piping systems. Indicated locations and arrangements were used to size pipe and calculate friction loss, expansion, pump sizing, and other design considerations. Install piping as indicated unless deviations to layout are approved on coordination drawings.
- B. Supplementary Bracing: See Division 22 for hangers and supports, Sub-Section 2.5 for specific restraint conditions for cast iron soil pipe.
- C. Install piping in concealed locations unless otherwise indicated and except in equipment rooms and service areas.
- D. Install piping indicated to be exposed and piping in equipment rooms and service areas at right angles or parallel to building walls. Diagonal runs are prohibited unless specifically indicated otherwise.
- E. Install piping above accessible ceilings to allow sufficient space for ceiling panel removal.
- F. Install piping free of sags and bends.
- G. Install piping to allow application of insulation.
- H. Lay buried building drainage piping beginning at low point of each system. Install true to grades and alignment indicated, with unbroken continuity of invert. Place hub ends of piping upstream. Install required gaskets according to manufacturer's written instructions for use of lubricants, cements, and other installation requirements. Maintain swab in piping and pull past each joint as completed.
- I. Install cast-iron soil piping according to CISPI's "Cast Iron Soil Pipe and Fittings Handbook," Chapter IV, "Installation of Cast Iron Soil Pipe and Fittings."
- J. Install steel piping according to applicable plumbing code.
- K. Install stainless-steel piping according to ASME A112.3.1 and applicable plumbing code.
- L. Install aboveground copper tubing according to CDA's "Copper Tube Handbook."

- M. Install aboveground PVC piping according to ASTM D 2665.
- N. Install Underground PVC piping according to ASTM D 2321.
- O. Be responsible for checking each pipe for alignment, centerline elevation and invert grade for underground installations.
- P. At times when work is not in progress, open ends of pipe and fittings shall be securely closed so that no trench water, earth or other substance will enter the pipe or fittings. Pipe laid through rock excavation shall rest on a six-inch layer of well-compacted sand.
- Q. The Sanitary (waste and vent), and storm drainage piping three inches and smaller in diameter shall pitch a minimum of 1/4 inch per foot and piping four inches and larger in diameter shall pitch a minimum of 1/8 inch per foot.
- R. The vent stacks shall be connected as shown and extended through the roof a minimum of 18 inches. Waste and vent pipes shall be concealed unless otherwise noted.
- S. Every fixture shall be separately trapped, and the traps must be vented unless an approved battery or wet vented system is installed. Floor drains shall be considered as a fixture.
- T. Vents shall be connected to the discharge of each trap in the sanitary system, and then carried individually to a point above the flood level of the fixture before connecting with any other vent pipes. Pitch the branch vents back to the fixtures.
- U. The vents passing through the roof shall be a minimum size of four inches in diameter.
- V. Cleanouts shall be provided in drainage piping at changes in directions, at foot of stacks or other required points so that all portions of the lines will be readily accessible for cleaning or rodding out.
- W. The maximum horizontal distance between cleanouts; in piping four inches in diameter and smaller shall not be more than 50 feet apart; in piping five inches in diameter and larger shall not be more than 100 feet apart.
- X. Traps on sanitary piping not integral with fixtures and in accessible locations shall be provided with a brass trap screw protected by the water seal and will be regarded as a cleanout.
- Y. Test tees with brass cleanout plugs shall be provided at the foot of all vertical waste and storm drainage stacks and at each floor. Wherever cleanouts on vertical lines occur concealed behind finished walls, they shall be extended to back of finished wall and a wall plate shall be provided.

### **3.5 SPECIALTY PIPING INSTALLATION**

- A. Install engineered soil and waste drainage and vent piping systems as follows:
  - 1. Combination Waste and Vent: Comply with standards of authorities having jurisdiction.
  - 2. Solvent Drainage System: Comply with ASSE 1043 and solvent fitting manufacturer's written installation instructions.
  - 3. Reduced-Size Venting: Comply with standards of authorities having jurisdiction.
- B. Anchorage shall be provided to restrain drainage piping from axial movement.
  - 1. For plastic pipe sizes greater than 6 inches, and other pipes sizes greater than 4 inches (102 mm), restraints shall be provided for drainpipes at all changes in direction and at all changes in diameter greater than two pipe sizes. Braces, blocks, rodding, backfill and other methods specified as suitable by the coupling manufacturer shall be utilized.

2. Bases of stacks shall be supported by the building structure, virgin or compacted earth or other material suitable to support the weight of the piping.
  - C. Expansion joint fittings in drainage pipe.
    1. Expansion joint fittings shall be used only where necessary to provide for expansion and contraction of the pipes. The expansion joint fittings shall be of the typical material suitable for use with the type of piping with which such fittings are installed.
  - D. Install underground, ductile-iron, force-main piping according to AWWA C600. Install buried piping inside building between wall and floor penetrations and connection to sanitary sewer piping outside building with restrained joints. Anchor pipe to wall or floor. Install thrust-block supports at vertical and horizontal offsets.
    1. In all areas with corrosive soil environments, install encasement on piping according to ASTM A 674 or AWWA C105/A 21.5.
  - E. Install underground, copper, force-main tubing according to CDA's "Copper Tube Handbook."
  - F. Plumbing Specialties:
    1. Install backwater valves in sanitary waster gravity-flow piping. Comply with requirements for backwater valves specified in Division 22.
    2. Install cleanouts at grade and extend to where building sanitary drains connect to building sanitary sewers in sanitary drainage gravity-flow piping. Install cleanout fitting with closure plug inside the building in sanitary drainage force-main piping. Comply with requirements for cleanouts specified in Division 22.
    3. Install drains in sanitary drainage gravity-flow piping. Comply with requirements for drains specified in Division 22.
  - G. Do not enclose, cover, or put piping into operation until it is inspected and approved by authorities having jurisdiction.
  - H. Install sleeves for piping penetrations of walls, ceilings, and floors. Comply with requirements for sleeves specified in Division 22.
  - I. Install sleeve seals for piping penetrations of concrete walls and slabs. Comply with requirements for sleeve seals specified in Division 22.
  - J. Install escutcheons for piping penetrations of walls, ceilings, and floors. Comply with requirements for escutcheons specified in Division 22.
- 3.6 JOINT CONSTRUCTION (GRAVITY DRAIN STORM AND VENT SYSTEMS)
- A. Join hub-and-spigot, cast-iron soil piping with gasket joints according to CISPI's "Cast Iron Soil Pipe and Fittings Handbook" for compression joints.
  - B. Join hub-and-spigot, cast-iron soil piping with calked joints according to CISPI's "Cast Iron Soil Pipe and Fittings Handbook" for lead-and-oakum calked joints.
  - C. Join hubless, cast-iron soil piping according to CISPI 310 and CISPI's "Cast Iron Soil Pipe and Fittings Handbook" for hubless-piping coupling joints.
  - D. Threaded Joints: Thread pipe with tapered pipe threads according to ASME B1.20.1. Cut threads full and clean using sharp dies. Ream threaded pipe ends to remove burrs and restore full ID. Join pipe fittings and valves as follows:

1. Apply appropriate tape or thread compound to external pipe threads unless dry seal threading is specified.
  2. Damaged Threads: Do not use pipe or pipe fittings with threads that are corroded or damaged. Do not use pipe sections that have cracked or open welds.
- E. Join stainless-steel pipe and fittings with gaskets according to ASME A112.3.1.
- F. Join copper tube and fittings with soldered joints according to ASTM B 828. Use ASTM B 813, water-flushable, lead-free flux and ASTM B 32, lead-free-alloy solder.
- G. Grooved Joints: Cut groove ends of pipe according to AWWA C606. Lubricate and install gasket over ends of pipes or the pipe and fitting. Install coupling housing sections, over gasket, with keys seated in piping grooves. Install and tighten housing bolts.
- H. Flanged Joints: Align bolt holes. Select appropriate gasket material, size, type, and thickness. Install gasket concentrically positioned. Use suitable lubricants on bolt threads. Torque bolts in a cross pattern.
- I. Plastic, Non-Pressure-Piping, Solvent-Cement Joints: Clean and dry joining surfaces. Join pipe and fittings according to the following:
1. Comply with ASTM F 402 for safe-handling practice of cleaners, primers, and solvent cements.
  2. ABS Piping: Join according to ASTM D 2235 and ASTM D 2661 Appendixes.
  3. PVC Piping: Join according to ASTM D 2855 and ASTM D 2665 Appendixes.

### 3.7 PRESSURE PIPING INSTALLATION

- A. Drawing plans, schematics, and diagrams indicate general location and arrangement of domestic water piping. Indicated locations and arrangements are used to size pipes and calculate friction loss, expansion, and other design considerations. Install piping as indicated unless deviations to layout are approved on coordination drawings.
- B. Install copper tubing under building slab according to CDA's "Copper Tube Handbook."
- C. Install ductile-iron piping under building slab with restrained joints according to AWWA C600 and AWWA M41.
- D. Install underground copper tube and ductile iron pipe in PE encasement according to ASTM A 674 or AWWA C105/A21.5 when soil is of corrosive nature.
- E. Install shutoff valve, hose-end drain valve, strainer, pressure gauge, and test tee with valve inside the building at each domestic water-service entrance. Comply with requirements for pressure gauges in Division 22 and with requirements for drain valves and strainers in this section for water piping specialties.
- F. Install shutoff valve immediately upstream of each dielectric fitting.
- G. When water pressure exceeds 80 psig, install water-pressure-reducing valves downstream from shutoff valves.
- H. Rough-in domestic water piping for water-meter installation according to utility company's requirements.
- I. Install seismic restraints on piping. Comply with requirements for seismic-restraint devices in Division 22.

- J. Install piping concealed from view and protected from physical contact by building occupants unless otherwise indicated and except in equipment rooms and service areas.
- K. Install piping indicated to be exposed and piping in equipment rooms and service areas at right angles or parallel to building walls. Diagonal runs are prohibited unless specifically indicated otherwise.
- L. Install piping above accessible ceilings to allow sufficient space for ceiling panel removal, and coordinate with other services occupying that space.
- M. Install piping to permit valve servicing.
- N. Install nipples, unions, special fittings, and valves with pressure ratings the same as or higher than the system pressure rating used in applications below unless otherwise indicated.
- O. Install piping free of sags and bends.
- P. Install fittings for changes in direction and branch connections.
- Q. Install PEX piping with loop at each change of direction of more than 90 degrees.
- R. Install unions in copper tubing at final connection to each piece of equipment, machine, and specialty.
- S. Install pressure gauges on suction and discharge piping for each plumbing pump and packaged booster pump. Comply with requirements for pressure gauges in Division 22.
- T. Install thermostats in hot-water circulation piping. Comply with requirements for thermostats in Division 22.
- U. Install thermometers on inlet and outlet piping from each water heater. Comply with requirements for thermometers in Division 22.
- V. Install sleeves for piping penetrations of walls, ceilings, and floors. Comply with requirements for sleeves specified in Division 22.
- W. Install sleeve seals for piping penetrations of concrete walls and slabs. Comply with requirements for sleeve seals specified in Division 22.
- X. Install escutcheons for piping penetrations of walls, ceilings, and floors. Comply with requirements for escutcheons specified in Division 22.

### 3.8 JOINT CONSTRUCTION (PRESSURE PIPING SYSTEMS)

- A. Ream ends of pipes and tubes and remove burrs. Bevel plain ends of steel pipe.
- B. Remove scale, slag, dirt, and debris from inside and outside of pipes, tubes, and fittings before assembly.
- C. Threaded Joints: Thread pipe with tapered pipe threads according to ASME B1.20.1. Cut threads full and clean using sharp dies. Ream threaded pipe ends to remove burrs and restore full ID. Join pipe fittings and valves as follows:
  - 1. Apply appropriate tape or thread compound to external pipe threads.
  - 2. Damaged Threads: Do not use pipe or pipe fittings with threads that are corroded or damaged.
- D. Brazed Joints for Copper Tubing: Comply with CDA's "Copper Tube Handbook," "Braze Joints" chapter.

- E. Soldered Joints for Copper Tubing: Apply ASTM B 813, water-flushable flux to end of tube. Join copper tube and fittings according to ASTM B 828 or CDA's "Copper Tube Handbook."
  - F. Pressure-Sealed Joints for Copper Tubing: Join copper tube and pressure-seal fittings with tools recommended by fitting manufacturer.
  - G. Push-on Joints for Copper Tubing: Clean end of tube. Measure insertion depth with manufacturer's depth gauge. Join copper tube and push-on-joint fittings by inserting tube to measured depth.
  - H. Joint Construction for Grooved-End Copper Tubing: Make joints according to AWWA C606. Roll groove ends of tubes. Lubricate and install gasket over ends of tubes or tubes and fitting. Install coupling housing sections over gasket with keys seated in tubing grooves. Install and tighten housing bolts.
  - I. Joint Construction for Grooved-End, Ductile-Iron Piping: Make joints according to AWWA C606. Cut round-bottom grooves in ends of pipe at gasket-seat dimension required for specified (flexible or rigid) joint. Lubricate and install gasket over ends of pipes or pipe and fitting. Install coupling housing sections over gasket with keys seated in piping grooves. Install and tighten housing bolts.
  - J. Joint Construction for Grooved-End Steel Piping: Make joints according to AWWA C606. Roll groove ends of pipe as specified. Lubricate and install gasket over ends of pipes or pipe and fitting. Install coupling housing sections over gasket with keys seated in piping grooves. Install and tighten housing bolts.
  - K. Flanged Joints: Select appropriate asbestos-free, nonmetallic gasket material in size, type, and thickness suitable for domestic water service. Join flanges with gasket and bolts according to ASME B31.9.
  - L. Joint Construction for Solvent-Cemented Plastic Piping: Clean and dry joining surfaces. Join pipe and fittings according to the following:
    - 1. Comply with ASTM F 402 for safe-handling practice of cleaners, primers, and solvent cements. Apply primer.
    - 2. CPVC Piping: Join according to ASTM D 2846/D 2846M Appendix.
    - 3. PVC Piping: Join according to ASTM D 2855.
  - M. Joints for PEX Piping: Join according to ASTM F 1807.
  - N. Joints for Dissimilar-Material Piping: Make joints using adapters compatible with materials of both piping systems.
- 3.9 TRANSITION FITTING INSTALLATION
- A. Install transition couplings at joints of dissimilar piping.
  - B. Transition Fittings in Underground Domestic Water Piping:
    - 1. Fittings for NPS 1-1/2 and Smaller: Fitting-type coupling.
    - 2. Fittings for NPS 2 and Larger: Sleeve-type coupling.
  - C. Transition Fittings in Aboveground Domestic Water Piping NPS 2 and Smaller: per manufacturers recommendations

**3.10 DIELECTRIC FITTING INSTALLATION**

- A. Install dielectric fittings in piping at connections of dissimilar metal piping and tubing.
- B. Dielectric Fittings for NPS 2 and Smaller: Use dielectric couplings couplings or nipples nipples unions.
- C. Dielectric Fittings for NPS 2-1/2 to NPS 4: Use dielectric flanges flange kits nipples.
- D. Dielectric Fittings for NPS 5 and Larger: Use dielectric flange kits.

**3.11 EXAMINATION OF VALVES**

- A. Examine valve interior for cleanliness, freedom from foreign matter, and corrosion. Remove special packing materials, such as blocks, used to prevent disc movement during shipping and handling.
- B. Operate valves in positions from fully open to fully closed. Examine guides and seats made accessible by such operations.
- C. Examine threads on valve and mating pipe for form and cleanliness.
- D. Examine mating flange faces for conditions that might cause leakage. Check bolting for proper size, length, and material. Verify that gasket is of proper size, that its material composition is suitable for service, and that it is free from defects and damage.
- E. Do not attempt to repair defective valves; replace them with new valves.

**3.12 VALVE INSTALLATION**

- A. Install valves with unions or flanges at each piece of equipment arranged to allow service, maintenance, and equipment removal without system shutdown.
- B. Locate valves for easy access and provide separate support where necessary.
- C. Install valves in horizontal piping with stem at or above center of pipe.
- D. Install valves in position to allow full stem movement.
- E. Install chainwheels on operators for butterfly and gate valves NPS 4 and larger and more than 96 inches above floor. Extend chains to 60 inches above finished floor.
- F. Install check valves for proper direction of flow and as follows:
  - 1. Swing Check Valves: In horizontal position with hinge pin level.
  - 2. Center-Guided and Plate-Type Check Valves: In horizontal or vertical position, between flanges.
  - 3. Lift Check Valves: With stem upright and plumb.
- G. Install valve tags. Comply with requirements in Division 22 for valve tags and schedules.

**3.13 FOOD SERVICE EQUIPMENT**

- A. Provide roughing and final connections for water, waste, kitchen waste, vent and gas systems.
- B. Include all necessary appurtenances such as traps, tailpieces, strainers, wheel handle stops, valves, drain cocks, etc. to fixtures and equipment so required.

- C. Each fixture, appliance, or piece of equipment, including work in, under or through tables, cabinets and equipment chases shall be fit with valves and traps.
- D. Provide miscellaneous equipment connections and indirect drains from service units and similar equipment. Unions or flanged means of disconnect shall be installed at kitchen equipment and at all places where disconnect of piping allows for repair or removal of the equipment.
- E. Roughing shall not begin until the Architect has approved equipment and fixture shop drawings and a kitchen template is furnished by the pertinent manufacturer.
- F. Verify all connection requirements with the architect and kitchen consultant. Each location of service connection shall be obtained prior to roughing such that all work may be installed in a neat and professional manner.
- G. Garbage Disposer: Include ball valves, solenoid valve and vacuum breaker on the cold-water service to this equipment
- H. Water Hammer Arrestors: an isolation valve shall be installed beneath each absorber. Absorbers shall be sized in accordance with the Plumbing and Drainage Institute Standard PDI-WH-201. Furnish and install shock absorbers at each piece of equipment with quick closing valves including but not limited to:
  - 1. Dishwashers
  - 2. Booster heaters
  - 3. Cold or hot water fill stations with spring loaded manual valves.
  - 4. At all equipment with solenoid shutoff valves
- I. Provide isolation or stop valves at all fixture and equipment connections. Valves shall be provided at the equipment. Valves shall be 1/4 turn isolation type stop valves.
- J. Provide vacuum breakers on water service lines to booster heaters, garbage disposer, dishwashers, pot washers, as well as all equipment that has means for a hose connection at the outlet faucet.
- K. Provide a backflow device comparable to a Watts SD-3 conforming to ASSE-1022 on the cold-water connection to carbonators, beverage dispensers and coffee machines.
- L. Provide adjustable pressure reducing valves (PRV's) at all hot water connections to glassware washers, dishwashers, pot washers and other automatic kitchenware wash equipment.
- M. Furnish and install approved backflow preventers for all food service equipment including dishwashers, combi-ovens, pot washers, garbage disposers that are not equipped with approved integral backflow devices.

### 3.14 HANGER AND SUPPORT INSTALLATION

- A. Comply with requirements for seismic-restraint devices in Division 22.
- B. Comply with requirements for pipe hanger, support products, and installation in Division 22.
  - 1. Vertical Piping: MSS Type 8 or 42, clamps.
  - 2. Individual, Straight, Horizontal Piping Runs:
  - 3. 100 Feet and Less: MSS Type 1, adjustable, steel clevis hangers.
  - 4. Longer than 100 Feet: MSS Type 43, adjustable roller hangers.

5. Longer than 100 Feet if Indicated: MSS Type 49, spring cushion rolls.
  6. Multiple, Straight, Horizontal Piping Runs 100 Feet or Longer: MSS Type 44, pipe rolls. Support pipe rolls on trapeze.
  7. Base of Vertical Piping: MSS Type 52, spring hangers.
- C. Support vertical piping and tubing at base and at each floor.
- D. Rod diameter may be reduced one size for double-rod hangers, to a minimum of 3/8 inch.
- E. Install hangers for cast-iron soil piping with the following maximum horizontal spacing and minimum rod diameters:
1. NPS 1-1/2 and NPS 2: 60 inches with 3/8-inch rod.
  2. NPS 3: 60 inches with 1/2-inch rod.
  3. NPS 4 and NPS 5: 60 inches with 5/8-inch rod.
  4. NPS 6 and NPS 8: 60 inches with 3/4-inch rod.
  5. NPS 10 and NPS 12: 60 inches with 7/8-inch rod.
  6. Spacing for 10-foot lengths may be increased to 10 feet. Spacing for fittings is limited to 60 inches.
- F. Install supports for vertical cast-iron soil piping every 15 feet.
- G. Install hangers for copper tubing with the following maximum horizontal spacing and minimum rod diameters:
1. NPS 3/4 and Smaller: 60 inches with 3/8-inch rod.
  2. NPS 1 and NPS 1-1/4: 72 inches with 3/8-inch rod.
  3. NPS 1-1/2 and NPS 2: 96 inches with 3/8-inch rod.
  4. NPS 2-1/2: 108 inches with 1/2-inch rod.
  5. NPS 3 to NPS 5: 10 feet with 1/2-inch rod.
  6. NPS 6: 10 feet with 5/8-inch rod.
  7. NPS 8: 10 feet with 3/4-inch rod.
- H. Install supports for vertical copper tubing every 10 feet.
- I. Install hangers for steel piping with the following maximum horizontal spacing and minimum rod diameters:
1. NPS 1-1/4 and Smaller: 84 inches with 3/8-inch rod.
  2. NPS 1-1/2: 108 inches with 3/8-inch rod.
  3. NPS 2: 10 feet with 3/8-inch rod.
  4. NPS 2-1/2: 11 feet with 1/2-inch rod.
  5. NPS 3 and NPS 3-1/2: 12 feet with 1/2-inch rod.
  6. NPS 4 and NPS 5: 12 feet with 5/8-inch rod.
  7. NPS 6: 12 feet with 3/4-inch rod.
  8. NPS 8 to NPS 12: 12 feet with 7/8-inch rod.

- J. Install supports for vertical steel piping every 15 feet.
- K. Install hangers for stainless-steel piping with the following maximum horizontal spacing and minimum rod diameters:
  - 1. NPS 1-1/4 and Smaller: 84 inches with 3/8-inch rod.
  - 2. NPS 1-1/2: 108 inches with 3/8-inch rod.
  - 3. NPS 2: 10 feet with 3/8-inch rod.
  - 4. NPS 2-1/2: 11 feet with 1/2-inch rod.
  - 5. NPS 3 and NPS 3-1/2: 12 feet with 1/2-inch rod.
  - 6. NPS 4 and NPS 5: 12 feet with 5/8-inch rod.
  - 7. NPS 6: 12 feet with 3/4-inch rod.
  - 8. NPS 8 to NPS 12: 12 feet with 7/8-inch rod.
- L. Install supports for vertical stainless-steel piping every 15 feet.
- M. Install vinyl-coated hangers for CPVC piping with the following maximum horizontal spacing and minimum rod diameters:
  - 1. NPS 1 and Smaller: 36 inches with 3/8-inch rod.
  - 2. NPS 1-1/4 to NPS 2: 48 inches with 3/8-inch rod.
  - 3. NPS 2-1/2 to NPS 3-1/2: 48 inches with 1/2-inch rod.
  - 4. NPS 4 and NPS 5: 48 inches with 5/8-inch rod.
  - 5. NPS 6: 48 inches with 3/4-inch rod.
  - 6. NPS 8: 48 inches with 7/8-inch rod.
- N. Install supports for vertical CPVC piping every 60 inches for NPS 1 and smaller, and every 72 inches for NPS 1-1/4 and larger.
- O. Install vinyl-coated hangers for PEX piping with the following maximum horizontal spacing and minimum rod diameters:
  - 1. NPS 1 and Smaller: 32 inches with 3/8-inch rod.
- P. Install hangers for vertical PEX piping every 48 inches.
- Q. Install vinyl-coated hangers for PVC piping with the following maximum horizontal spacing and minimum rod diameters:
  - 1. NPS 2 and Smaller: 48 inches with 3/8-inch rod.
  - 2. NPS 2-1/2 to NPS 3-1/2: 48 inches with 1/2-inch rod.
  - 3. NPS 4 and NPS 5: 48 inches with 5/8-inch rod.
  - 4. NPS 6: 48 inches with 3/4-inch rod.
  - 5. NPS 8: 48 inches with 7/8-inch rod.
- R. Install supports for vertical PVC piping every 48 inches.
- S. Support piping and tubing not listed in this article according to MSS SP-69 and manufacturer's written instructions.

### 3.15 CONNECTIONS

- A. Drawings indicate general arrangement of piping, fittings, and specialties.
- B. When installing piping adjacent to equipment and machines, allow space for service and maintenance.
- C. Connect domestic water piping to exterior water-service piping. Use transition fitting to join dissimilar piping materials.
- D. Connect water piping to water-service piping with shutoff valve; extend and connect to the following:
  - 1. Domestic Water Booster Pumps: Cold-water suction and discharge piping.
  - 2. Water Heaters: Cold-water inlet and hot-water outlet piping in sizes indicated, but not smaller than sizes of water heater connections.
  - 3. Plumbing Fixtures: Cold- and hot-water-supply piping in sizes indicated, but not smaller than that required by plumbing code.
  - 4. Equipment: Cold- and hot-water-supply piping as indicated, but not smaller than equipment connections. Provide shutoff valve and union for each connection. Use flanges instead of unions for NPS 2-1/2 and larger.

### 3.16 IDENTIFICATION

- A. Identify system components. Comply with requirements for identification materials and installation in Division 22.
- B. Label pressure piping with system operating pressure.

### 3.17 FIELD QUALITY CONTROL

- A. Perform the following tests and inspections:
  - 1. Piping Inspections:
    - a. Do not enclose, cover, or put piping into operation until it has been inspected and approved by authorities having jurisdiction.
    - b. During installation, notify authorities having jurisdiction at least one day before inspection must be made. Perform tests specified below in presence of authorities having jurisdiction:
      - 1) Roughing-in Inspection: Arrange for inspection of piping before concealing or closing in after roughing in and before setting fixtures.
      - 2) Final Inspection: Arrange for authorities having jurisdiction to observe tests specified in "Piping Tests" Subparagraph below and to ensure compliance with requirements.
  - 2. Reinspection: If authorities having jurisdiction find that piping will not pass tests or inspections, make required corrections and arrange for reinspection.
  - 3. Reports: Prepare inspection reports and have them signed by authorities having jurisdiction.
  - 4. Piping Tests:

- a. Fill water piping. Check components to determine that they are not air bound and that piping is full of water.
  - b. Test for leaks and defects in new piping and parts of existing piping that have been altered, extended, or repaired. If testing is performed in segments, submit a separate report for each test, complete with diagram of portion of piping tested.
  - c. Leave new, altered, extended, or replaced domestic water piping uncovered and unconcealed until it has been tested and approved. Expose work that was covered or concealed before it was tested.
  - d. Cap and subject piping to static water pressure of 50 psig above operating pressure, without exceeding pressure rating of piping system materials. Isolate test source and allow it to stand for four hours. Leaks and loss in test pressure constitute defects that must be repaired.
  - e. Repair leaks and defects with new materials, and retest piping or portion thereof until satisfactory results are obtained.
  - f. Prepare reports for tests and for corrective action required.
- B. Domestic water piping will be considered defective if it does not pass tests and inspections.
- C. Prepare test and inspection reports.

### 3.18 TESTING AND ADJUSTING - GENERAL

- A. Scope
1. Test and adjust plumbing systems as specified and as required by authorities that have jurisdiction. Perform tests recommended by manufacturers of materials and equipment. This requirement may be waived by Architect.
  2. Testing, balancing, and adjusting shall in no way relieve guarantee requirements.
  3. Furnish instruments, equipment, material, and labor necessary to conduct tests.
  4. All systems shall be thoroughly adjusted for perfect intended operation. All mechanical equipment shall be adjusted for flow, temperature, etc. of fluid.
  5. Pumps, relief valves and pressure reducing valves shall be adjusted as specified and as required by the Engineer. Submit in writing to the Engineer upon completion of this work that it is completed and ready for use.
- B. Before date of acceptance, furnish Architect with certificates of testing and inspection indicating approval of authorities having jurisdiction and conformance with requirements of Contract Documents.
- C. General
1. Submit proposed test procedures, recording forms, and test equipment for review before testing.
  2. Notify Architect and authorities involved at least 48 hours before testing and inspection.
  3. Do not paint, cover or conceal work before testing, inspecting and obtaining approval; this includes backfilling and application of insulation.

4. Costs of repairs and restoration of work of other trades and of existing building surfaces or material damaged during cleaning or testing shall be borne by trade performing cleaning or testing.
- D. No tests shall be started until systems have been cleaned as described under "Cleaning." Provide temporary piping and connections for testing, flushing, or draining systems to be tested.
  1. Repair or replace leaks, damage and defects that result from tests to like-new condition. Remove and replace defective materials with acceptable materials.
  2. Piping and joints shall be made tight without caulking. Continue tests until systems operate without adjustments and repair to equipment or piping.
  3. Provide testing instruments, force pumps, gauges, equipment, and labor necessary to conduct tests. Instruments used for testing and balancing shall have been calibrated within six months before balancing. Instrument calibration shall be certified.
  4. Submit six copies of the complete testing and balancing report to Architect for review.
- E. The final test shall be made after vertical and horizontal pipes and roughing-in have been run and before sewer or fixture connection is made.
  1. After soil, waste, and storm lines, etc. have been installed, outlets shall be temporarily plugged up.
  2. Test piping and check for leakage.
  3. Retesting after leaks are repaired shall be at no additional cost.
- F. Pressurized Piping Systems
  1. Leak tests shall be conducted in accordance with ANSI applicable codes and as specified herein.
  2. Test piping of various systems before covered or furred in.
  3. Tests shall be witnessed by the Architect and pronounced satisfactory before pressure is removed or any water drained off.
  4. Equipment shall be valved off or removed during the test if equipment pressure rating is less than test pressure.
  5. Retest systems after leaks are repaired within Contract Price.
- G. Potable Water System Test
  1. Certification of the potable water system integrity shall be required where separate systems of potable and non-potable water are provided to supply plumbing fixtures.
  2. Fill potable water system to capacity with clean clear water. Introduce water at top of piping system (hot and cold). During filling, introduce green food coloring dye into piping system. A floor-by-floor survey shall be conducted. Operate each outlet (hot and cold) connected to potable water system until coloring has been observed. A method of maintaining the level of water and coloring shall be employed in order to make-up the drawn off amounts. A survey sheet shall indicate each floor and the room number sequentially.
  3. This survey is required to be performed after all pressure testing and flushing of the piping system but before sterilization, further it is required that all fixtures connected to the potable water system be installed prior to the test.

- H. Examine Part 2 for supplemental testing requirements.

3.19 TESTING: PIPING SYSTEMS

A. General

1. Piping systems shall be subjected to testing water or air as noted and shall hold tight at the pressure head stated for the time interval required without adding air or water. While any system is being tested, required head or pressure shall be maintained until joints are inspected.
2. Equipment, material, power, and labor necessary for the inspection and test of piping systems shall be furnished. The system shall be complete and able to withstand the test procedures prescribed.
3. Tests shall be witnessed by the Inspector having jurisdiction and the Architect with 48-hour notice given these authorities.
4. Equipment, material, and labor required for testing of various systems or part thereof shall be provided by Plumbing Contractor.

B. Sanitary, Other Waste, Vent and Roof Water Conductor Systems

1. Water test shall be applied to drainage systems either in their entirety or in sections as required, after rough piping has been installed.
2. If applied to the entire system, openings in piping system shall be tightly closed, except the highest opening, and system filled with water to point of overflow.
3. If the system is tested in sections, each opening shall be tightly closed except the highest opening in the section under test, and each section shall be filled with water, but no section shall be tested with less than a 10-foot head of water.
4. In testing successive sections, at least upper 10 feet of next preceding section shall be tested so that no joint of piping in building, except the uppermost 10 feet of the system shall be submitted to a test of less than a 10-foot head of water.
5. Water shall be kept in the system for at least 30 minutes before inspection starts; the system shall then be made tight at all points.
6. Points of drainage systems tested with air instead of water shall be tested by attaching an air compressor testing apparatus to suitable opening and, after closing all other inlets or outlets, forcing air into systems until a uniform gauge pressure of 5 psi or sufficient pressure to balance a column of mercury 10 inches high. Pressure shall be held without introduction of additional air for a period of at least 15 minutes.

C. Water Piping Systems

1. Upon completion of water supply systems or section thereof, as required, the system shall be tested and proved tight under 1.5 times the operating system pressure and a minimum of 150 psi. The gauge shall be located on lowest new floor and pressure shall hold for a period of one hour without introducing additional water. Water used for testing shall be from a potable source of supply.
2. Filtered water piping system shall be tested with filtered or distilled water to a pressure of 100 psi for one hour.

D. Testing Summary

System	Test Medium	Test Pressure	Test Duration
Drainage and Vent (All Systems)	Water	10 feet	30 minutes
Water (All Systems)	Water	1.5 operating pressure and 150 psig minimum	1 hour
Thermoplastic Piping	Water No air	1.5 operating pressure and manufacturers recommendation	1 hour
Ejector Discharge/Pumped Piping System	Water	1.5 times system pressure and 50 psig min	1 hour

- E. Defective Work: If inspection or tests show defects, such defective work or material shall be replaced, and inspection and tests shall be repeated. Repairs to the piping shall be made with new material. No caulking of screwed joints or holes shall be acceptable.
- F. Additional Tests
1. Provide additional tests such as smoke pressure tests as required by regulations or as directed by authorities making the inspection.
  2. Provide for any repeated test as directed by the Architect, to make all systems tight as required.
  3. Visual inspections of joints and valves shall be made as directed by the Architect.

### 3.20 ADJUSTING

- A. Perform the following adjustments before operation:
1. Close drain valves, hydrants, and hose bibbs.
  2. Open shutoff valves to fully open position.
  3. Open throttling valves to proper setting.
  4. Adjust balancing valves in hot-water-circulation return piping to provide adequate flow.
  5. Manually adjust ball-type balancing valves in hot-water-circulation return piping to provide hot-water flow in each branch.
  6. Adjust calibrated balancing valves to flows indicated.
  7. Remove plugs used during testing of piping and for temporary sealing of piping during installation.
  8. Remove and clean strainer screens. Close drain valves and replace drain plugs.
  9. Remove filter cartridges from housings and verify that cartridges are as specified for application where they are used and are clean and ready for use.
  10. Check plumbing specialties and verify proper settings, adjustments, and operation.

### 3.21 BALANCING OF HOT WATER SYSTEMS

- A. Hot Water Systems shall include all water piping that is heated through equipment arranged for that purpose.

1. Balance all hot or heated water systems.
2. These shall include building potable and non-potable hot water, hot distributed laboratory water, building tempered water systems, building process or industrial hot systems, and building pure water systems.

**B. Building Distribution Systems**

1. The entire hot water circulation systems shall be thoroughly balanced so hot water drawn from fixtures shall be as quickly available as possible.
  - a. Hot water delivery times shall be based on American Society of Plumbing Engineers (ASPE) water heating design manual standards.
  - b. Hot water from all fixtures shall be based on comparable temperatures as stipulated in presiding building codes.
  - c. Tempered water to emergency fixtures shall be available per the latest energy code to all fixtures and shall meet ANSI requirements for temperature and volume.
2. All circuits and sub circuits shall be flow and temperature balanced such that hot water positive flow is achieved in each branch circuit of the building hot water systems.
3. See drawing detail sheets and specification section pipe table A10 for flow and balancing valve spec options. The specified products indicate either integral flow or flow/temperature balancing devices, assure the installed devices meet these specifications.
4. Indicate on a riser diagram the type of balancing device use, method of calibration and proposed flow in each branch circuit of the hot water piping network for each hot water system.

**C. All Building Hot Water Distribution Pumps**

1. Balance flows to the main Thermostatic Hot Water Mixing Valves according to manufacturer's instructions.
2. Provide plastic tags on each circuit indicating the flow and balancing valve position to the Mixing valves and then to the water heaters.

**D. Submissions. For each system noted:**

1. Submit a report indicating the actual flow and temperature in each circuit described in Item C above. The report shall designate the following:
  - a. Time to achieve hot water at the remote hot water faucet in the circuit.
  - b. Hot water temperature achieved.
  - c. Setting on circuit setter.
2. For the circuits at the outlets of hot water circulation pumps, indicate the following:
  - a. The actual flow and temperature into Temperature Mixing Valve
  - b. The actual flow and temperature back to the heaters and/or storage tanks

**3.22 CLEANING**

- A. Purging and disinfection operations shall be based on samples obtained prior to and post disinfection from the site of the potable and non potable water systems.

Cleaning Group #1	All Potable and Non-Potable Water Piping, Including Flushing Water, Reclaim Water Systems and Quench Water Piping Systems.	
Work in Progress	As work progresses throughout construction, remove dirt and debris, and keep clean the interior of all water piping systems	
Purging and disinfection operations	All Division 22, sections of the specifications are subject to procedures outlined in this table for cleaning and disinfection procedures of potable and non-potable water piping system	
Fluid Used	Clean potable water shall be the media for flushing the piping system	
Cleaning	Cleaning accomplished by a flushing process. The flushing rate shall be equal to the design flow rate for lines in the system. If a process pump is in the system, the flushing rate shall be the pumping rate of the pump. If more than one pump is in the system, the highest pumping rate shall be the flushing rate.	
Disinfection	Test Parameters	Purging and disinfection operations, shall be based on samples obtained prior to and post disinfection from the site of the potable and non-potable water systems.
	Samples	Samples shall be gathered by a qualified testing agency.
		Draw a minimum of two samples for each testing procedure.
		Location in the piping system where sample is drawn
		Date samples drawn
		Name of person responsible for taking the samples
	New Piping and/or Parts of Existing Piping That Have Been Altered, Extended, or Repaired	Purge before using
		New or repaired water systems shall be purged of deleterious matter and disinfect prior to utilization
		Use purging and disinfecting procedures prescribed by the health authority or the water purveyor as well as inspectional authorities having jurisdiction
		If methods are not prescribed, use procedures described in either AWWA C651 or AWWA C652 or follow procedures described below
		Flush piping system with clean, potable water until dirty water does not appear at outlets.
	Minimum Concentration	Fill system or part thereof with water/chlorine solution with at least 50 ppm of chlorine. Isolate with valves and allow to stand for 24 hours
	Requirement	Water piping systems shall be thoroughly disinfected with the solution containing specified concentration
	Filters	Bypass all building filters
	Chlorinating materials	Shall be either liquid chlorine or sodium hypochlorite solution, shall be introduced into the system and drawn to all points in the system.
	Duration	Disinfection solution shall be allowed to remain in system for 24 hours, during this time, valves and faucets shall be opened and closed several times.
	Post Disinfection	After disinfection, solution shall be flushed from the system with clear water until residual chlorine content is no greater than 0.2 parts per million.
	Hot Water System	Perform chlorination prior to heating the domestic hot water system. Run circulation pumps on the domestic HW system shall be supervised by Owner and performed by approved chemical testing laboratory and results sent to the Architect or Architect's representative for verification.
	Repeat procedures if biological examination shows contamination	
Flushing	Flush the system with clean, potable water until chlorine matches the chlorine content of the incoming potable supply. This, such that water coming from system after the standing time.	
	Repeat procedures if lab testing of samples indicates that required purity is not obtained.	

Cleaning Group #1	All Potable and Non-Potable Water Piping, Including Flushing Water, Reclaim Water Systems and Quench Water Piping Systems.
Flushing Duration	Strainers and/or baskets shall be inspected frequently during the flushing operation and cleaned. Flushing operation shall continue until extraneous material is no longer accumulating in the strainer or basket at the discharge point. After the completion of flushing, the system shall be drained completely and returned to the pre-cleaning condition.
Test Reports and Certification	Identification of system tested
	Testing laboratory shall submit a summary of test procedure for approval prior to any work performed. Work shall be in accordance with Owner's requirements. Subcontractor shall provide valves required to disinfect water supply system in part as required by phasing of construction and to provide isolating valves and draw-off valves for proper containment, phasing and flushing.
	Prepare and submit reports of purging and disinfecting activities. Include copies of water-sample approvals from authorities having jurisdiction.

END OF SECTION

H:\Y0586.00\DOC\SPEC\2025\_02-20\_IFB\221110\_COMMON PLUMBING PIPING.DOC

## SECTION 221115 - PLUMBING NATURAL GAS PIPING

### PART 1 - GENERAL

#### 1.1 RELATED DOCUMENTS

- A. Certain requirements common to all the mechanical and electrical trades (Fire Suppression, Plumbing, HVAC, Electrical, and Tele/Data) are specified in Division 20. To avoid repetition, they are not repeated in each relevant Division and Section. However, these requirements are applicable to the work of this Section and are hereby incorporated by reference.
- B. Drawings and general provisions of the Contract, including General and Supplementary Conditions and Division 01 Specification Sections, apply to this Section.

#### 1.2 SUMMARY

- A. Section Includes:
  - 1. Performance requirements
  - 2. Pipe Tables: Gas pipes, tubes, and fittings.
  - 3. Motorized gas valves
  - 4. Piping connector specialties.
  - 5. Dielectric unions.
  - 6. Buried pipe labeling and identification.
  - 7. Earthquake valves
  - 8. Fire safety valves
  - 9. Boiler and water heater gas detection systems

#### 1.3 CODES AND REGULATIONS:

- A. State Plumbing and Gas codes
- B. NFPA 54 gas code
- C. NFPA 70, National Electrical Code.
- D. NFPA 72, National Fire Alarm Code.
- E. Americans with Disabilities Act.
- F. Uniform Building Codes (UBC).
- G. Local and State Building Codes.
- H. All requirements of the local Authority Having Jurisdiction.

#### 1.4 DEFINITIONS

- A. CWP: Cold working pressure.

- B. Division 22 - Plumbing Work. All parts and pieces hereby referred.
- C. Exposed, Exterior Installations: Exposed to view outdoors or subject to outdoor ambient temperatures and weather conditions. An example includes rooftop locations.
- D. Exposed, Interior Installations: Exposed to view indoors. Examples include finished occupied spaces and mechanical equipment rooms.
- E. Finished Spaces: Spaces other than mechanical and electrical equipment rooms, furred spaces, pipe and duct shafts, unheated spaces immediately below roof, spaces above ceilings, unexcavated spaces, crawlspace, and tunnels.
- F. ASME American Society of Mechanical Engineers
- G. ASCE: American Society of Civil Engineers
- H. CO: Carbon Monoxide
- I. CS Carbon Steel
- J. DN: Diameter Nominal
- K. NBR: Nitrile Butadiene Rubber.
- L. NPS Nominal Pipe Size
- M. NRTL: Nationally Recognized Testing Laboratory
- N. PE: Polyethylene Pipe

#### 1.5 ACTION SUBMITTALS

- A. Product Data: For each type of product indicated.
  - 1. Manufacturer
  - 2. Model Number
  - 3. Catalogue Data sheet with Photographs
  - 4. Wiring and equipment connection diagrams clearly showing factory equipment and field installed equipment.
- B. Detail fabrication and assembly of seismic restraints.
- C. Shop Drawings
  - 1. Shop Drawings: For facility natural-gas piping layout. Include plans, piping layout and elevations, sections, and details for fabrication of pipe anchors, hangers, supports for multiple pipes, alignment guides, expansion joints and loops, and attachments of the same to building structure.
  - 2. Detail the location of anchors, alignment guides, and expansion joints and loops.
  - 3. Include plans, elevations, sections and mounting and attachments details.
  - 4. Indicate dimensions, weights, loads, and required clearances, method of field assembly, components, and location and size of each field connection.
  - 5. Wiring Diagrams
    - a. Detail wiring for signal, power, and control wiring
- D. Operation and Maintenance Data

1. Include Emergency, Operation and Maintenance manuals.
  2. Refer to Division 01 Section "Operation and Maintenance Data"
  3. Manufacturer's recommended detailed installation instructions
- E. Delegated-Design Submittal: For natural-gas piping seismic restraint supports, for both pipe and equipment to comply with performance requirements and design criteria, including analysis data signed and sealed by the qualified professional engineer responsible for their preparation.

#### 1.6 INFORMATIONAL SUBMITTALS

- A. Welding certificates.
- B. Field quality-control reports.

#### 1.7 CLOSEOUT SUBMITTALS

- A. Operation and maintenance data.
- B. Operation and Maintenance Data: For motorized gas valves pressure regulators and service meters to include in emergency, operation, and maintenance manuals.

#### 1.8 DELIVERY, STORAGE, AND HANDLING

- A. Handling Flammable Liquids: Remove and dispose of liquids from existing natural-gas piping according to requirements of authorities having jurisdiction.
- B. Deliver pipes and tubes with factory-applied end caps. Maintain end caps through shipping, storage, and handling to prevent pipe end damage and to prevent entrance of dirt, debris, and moisture.
- C. Store and handle pipes and tubes having factory-applied protective coatings to avoid damaging coating and protect from direct sunlight.
- D. Protect stored PE pipes and valves from direct sunlight.

#### 1.9 PROJECT CONDITIONS

- A. Perform site survey, research public utility records, and verify existing utility locations. Contact utility-locating service for area where Project is located.
- B. Interruption of Existing Natural-Gas Service: Do not interrupt natural-gas service to facilities occupied by Owner or others unless permitted under the following conditions and then only after arranging to provide purging and startup of natural-gas supply according to requirements indicated:
  1. Notify Architect and Owner no fewer than five **days** in advance of proposed interruption of natural-gas service.
  2. Do not proceed with interruption of natural-gas service without Owner's written permission.

#### 1.10 QUALITY ASSURANCE

- A. Steel Support Welding Qualifications: Qualify procedures and personnel according to AWS D1.1/D1.1M, "Structural Welding Code - Steel."
- B. Pipe Welding Qualifications: Qualify procedures and operators according to ASME Boiler and Pressure Vessel Code.

- C. Electrical Components, Devices, and Accessories: Listed and labeled as defined in NFPA 70, by a qualified testing agency, and marked for intended location and application.

## PART 2 - PRODUCTS

### 2.1 PERFORMANCE REQUIREMENTS

- A. Minimum Operating-Pressure Ratings:
- Piping and Valves: 100 psig minimum unless otherwise indicated.
  - Service Regulators: 100 psig minimum unless otherwise indicated.
- B. Natural-Gas System Pressure within buildings
- Allowed: 0.5 psig
  - Allowed: More than 0.5 psig, but not more than 2 psig,
  - Allowed: Natural-Gas System Pressures within Buildings: Two pressure ranges. Primary pressure is more than 0.5 psig but not more than 2 psig,, and is reduced to secondary pressure of 0.5 psig or less.
- C. Delegated Design: Design restraints and anchors for natural-gas piping and equipment, including comprehensive engineering analysis by a qualified professional engineer, using performance requirements and design criteria indicated.

### 2.2 PIPE TABLES: GAS PIPE AND FITTINGS

- A. Piping Systems
- B. Joint Compound and Tape: Suitable for natural gas.
- C. Welding Filler Metals: Comply with AWS D10.12/D10.12M for welding materials appropriate for wall thickness and chemical analysis of steel pipe being welded.

#### A11 - NATURAL GAS

Pipe Class: A11			
Service: Natural Gas		Material: Steel	
Service Limits	Primary ANSI Class:	150	
	Coefficient of linear expansion	6.5 x 10 <sup>-6</sup> inches per inch	Corrosion Allowance 0.05 inch

GENERAL		
Approvals for Use	All sizes	Secure approval from the owner and from the Authority Having Jurisdiction for the use of MegaPress or Mueller Streamline® STL-G Carbon Steel fittings and valves for this project. Submit approval to the engineer with the shop drawing submittals.

PIPE AND FITTINGS		
Piping	All sizes	Schedule 40 Carbon Steel ASTM A53-EGrade B, ASTM A106 Grade A, or ASTM A120.
Fittings	1/2 to 2 inches	Malleable-Iron Threaded Fittings: ASME B16.3, Class 150, standard pattern Note, when pressures exceed 5 psig, then all piping must be welded
	2-1/2 inches and up	Wrought-Steel Welding Fittings: ASTM A 234/A 234M for butt welding and socket welding

	1/2 to 4 inches	Viega MegaPress G or Mueller Streamline® STL-G Carbon Steel Press fittings 1/2 inch to 4 inch shall conform to ANSI LC4-2012/CSA 6.32-2102 standard. Fittings for use on IPS Schedule 40 pipe shall have a nickel / zinc coating to reduce corrosion. Fittings shall have an HNBR sealing element, 420 stainless steel grip ring and Smart Connect (SC) feature that guarantees detection of an un-pressed fitting during testing. Installation must be in accordance to manufacturer's instruction and all installers shall be trained by manufacturer on proper installation.
	Pressure greater than 5 psig	Note, when pressures exceed 5 psig, all piping, all sizes, must be welded
Unions	1/2 to 2 inch	Unions: ASME B16.39, Class 150, malleable iron with brass-to-iron seat, ground joint, and threaded ends or Viega MegaPress G or Mueller Streamline® STL-G Carbon Steel Unions 1/2 inch-2 inch meeting requirements above.
Flanges	Type	Forged-Steel Flanges and Flanged Fittings: ASME B16.5, minimum Class 150, including bolts, nuts, and regulator gaskets of the following material group, end connections, and facings: Viega MegaPress G or Mueller Streamline® STL-G Carbon Steel Flanges meeting ASME B16.5 and ANSI LC4 / CSA 6.32.
	Material Group	1.1
	Connections	Threaded or butt welding to match pipe
	Lapped Face:	Not permitted underground
Gaskets	Gasket Materials	ASME B16.20, metallic, flat, asbestos free, aluminum O-rings, and spiral- wound metal gaskets.
	Bolts and Nuts	ASME B18.2.1, carbon steel aboveground and stainless steel underground
	Viega MegaPress	G Flanges meeting ASME B16.5 and ANSI LC4 / CSA 6.32
<b>VALVES</b>		

<b>Pipe Class:</b> A11			
<b>Service:</b> Natural Gas		<b>Material:</b> Steel	
<b>Service Limits</b>	Primary ANSI Class:	150	
	Coefficient of linear expansion	6.5 x 10 <sup>-6</sup> inches per inch	Corrosion Allowance 0.05 inch

Available Manufacturers	Subject to compliance with requirements, manufacturers offering products that may be incorporated into the Work include, but are not limited to, the following: Watts Regulator, Apollo, Serd Audco, Resun, Nordstrom, AY McDonald Note: All valves used for gas shall be approved for use by the State Fuel Gas Code and/or the State Plumbing Board		
Plug/Gas Cock Valves	1/2 to 2 inch	Bronze body and plug manually operated low pressure (2 psig or less) natural or propane gas valve for use indoors at ambient temperatures of 32 to 125 degrees Fahrenheit Basis: A.Y.McDonald 10554 to 10558	
	2½ inch and up	Iron Body, Greasable and Lubricated Tapered Plug, rectangular port, regular opening, Flanged End, WOG, 125 psi SWP Valve shall be equal to R&M Energy Systems Inc. Resun 1431-200.	
Ball Valve	1/2 to 2 inch THD or Weld	Bottom loaded pressure stem valve rated at 600 psi WOG. Basis of Design: Watts B-6000-UL-MassApollo 70-100-07 series, Watts FBV-3C	
	1/2 to 2 inch Press Connect Valves	Viega LLC; MegaPress G Ball Valve with Smart Connect Technology to detect unpressed fittings during the testing process. Installers shall be credentialed by the manufacturer within the last two years.	
		Carbon Steel Press-Connect Valves shall conform to CSA 6.32 / ANSI LC-4 or CSA 6.32a / ANSI LC-4a. Carbon Steel Press-Connect Valves ½-inch thru 2-inch for use with schedule 40 ASTM A53 carbon steel pipe.	
		1/2 inch thru 2 inch fittings shall have stainless-steel grip ring with bidirectional teeth, 304 stainless separator ring, and HNBR sealing element at each press connection. Special attention shall be given to the required two step pressure test. Initial test for unpressed fitting detection per manufacturer's installation manual Full pressure test in accordance with code requirements	
	2-1/2 inches and up	Ball valves shall be of the floating-ball design providing bi-directional, tight shutoff in accordance with MSS SP-72. The valves shall be rated at 150# WSP/300# WOG. Bodies shall be ductile iron per ASTM A536, With ANSI Class 150 raised-face flanges. The interior and exterior of the body shall be UL certified polyester powder coated to meet NSF/ANSI 61 and NSF/ANSI 372. The ball shall be PFA infused stainless steel, with a stainless-steel blowout-proof stem. The seats and body seals shall be PTFE. The stem seal shall be PTFE, externally adjustable chevron type. Valves shall be equipped with locking handles as standard. Valves shall be equipped with 2" manual gear operators. Basis of Design American Valve 4000D series : <LINK>	
Check Valve	All available sizes	150# Class, bronze swing check valve	
	Configuration	Aluminum disc, screwed cap, threaded or flanged ends, lifting lug for 3 – 8 inch valves.	
	Design Basis:	1/2 to 1½ inch Eclipse 1000 series <LINK>. 2 to 8 inch - McMaster-Carr 316SS Check <LINK> for pressures 2 psi and above US Valve 1½ to 8 inch gas line low pressure check valve <LINK> Contractor to Consult manufacturers for proper valve configurations per application	
Non-Return Valves	Description	Spring loaded non-return valve to prevent back feeding of gases which could lead to unwanted gas mixtures	
	Material	Brass	
	Sizes	½ to 1 inch	
	O-ring	NPR	
Design Basis		Witt non return valve <LINK>	

**PRESSURE REGULATING DEVICES**

<b>Pipe Class:</b>	<b>A11</b>		
<b>Service:</b>	Natural Gas		<b>Material:</b> Steel
<b>Service Limits</b>	Primary ANSI Class:	150	
	Coefficient of linear expansion	6.5 x 10 <sup>-6</sup> inches per inch	Corrosion Allowance 0.05 inch

Available Manufacturers	<p>Subject to compliance with requirements, manufacturers offering products that may be incorporated into the work include, the following:</p> <ul style="list-style-type: none"> <li>• American Meter Company</li> <li>• Belgas</li> <li>• Eclipse Combustion, Inc.</li> <li>• Fisher Control Valves and Regulators</li> <li>• Itron Valve</li> <li>• Sensus</li> <li>• Maxitrol Company</li> <li>• Pietro Fiorentini Company</li> </ul> <p>Note: All valves used for gas shall be approved for use by the State Fuel Gas Code and/or the State Plumbing Board.</p> <p>Note: A tee fitting with one capped opening shall be installed on the upstream side between regulator and its shutoff valve and on the downstream side not less than 10 pipe diameters from regulator outlet. Fittings shall accommodate field pressure measuring instruments. Provide 1/4 turn isolation valves on each tee fitting plus cap. When installing regulators for condensing gas boilers or water heaters, strictly observe manufacturer's installation guidelines. Assure the regulator manufacturer sizes the device such that lockup or droop does not occur when condensing units start and/or quickly stop. Assure the regulator position is per the equipment (boilers, water heaters, AHU) manufacturers and the regulator manufacturer standards for all circumstances. Install all pilot lines in strict conformance with manufacturer requirements.</p>		
Main Gas Service Regulator	<p>Coordinate with the Utility for gas service regulators. The service regulator is to be furnished and installed by <b>the gas utility</b>.</p> <p>Basis of Design: Piero Fiorentini <a href="#">Norval</a> Dival series regulator selection program link</p>		
<p>Line Pressure Regulator – (5 psig to low pressure)</p> 	Type	Single-port, self-contained regulator with orifice no larger than required at maximum pressure inlet, and no pressure sensing piping external to the regulator. Pressure regulator shall maintain discharge pressure setting downstream, and not exceed 150 percent of design discharge pressure at shutoff	
	Body	Body and Diaphragm Case: Ductile iron or die-cast aluminum.	
	Standard	Comply with ANSI Z21.80.	
	Springs	Manufacturer standard	
	Plate	Manufacturer standard	
	Seat Disc	Manufacturer standard	
	Orifice	Aluminum; interchangeable	
	Seal Plug	Manufacturer standard	
	Overpressure:	Protection Device Factory mounted on pressure regulator.	
	Inlet Filter	Yes	
	Vent	Atmospheric: Factory- or field-installed, stainless-steel screen in opening if not connected to vent piping	
	Pressure	Maximum Inlet Pressure: 5 psig (13.8 kPa)	
	Rooftop Installations	Install a vent from the regulator to above the snow line – see venting below.	
	Design Basis	Maximum Inlet Pressure: 5 psig, (34.5kPa) Over Pressure Device: 4 port dual model device Pietro Fiorentini Governor Overprotection Device (ODP) Operator/Monitor model	

<b>Pipe Class:</b> A11			
<b>Service:</b> Natural Gas		<b>Material:</b> Steel	
<b>Service Limits</b>	Primary ANSI Class:	150	
	Coefficient of linear expansion	6.5 x 10 <sup>-6</sup> inches per inch	Corrosion Allowance 0.05 inch

 <p>Line Pressure Regulator – (2 psig to low pressure)</p>	Design Basis	Maximum inlet pressure 5 psig (35 kPa) Pietro Fiorentini <b>Governor Overprotection Device (ODP) model</b> two stage pressure cut model
	Type	Single-port, self-contained regulator with orifice no larger than required at maximum pressure inlet, and no pressure sensing piping external to the regulator. Pressure regulator shall maintain discharge pressure setting downstream, and not exceed 150 percent of design discharge pressure at shutoff
	Body	Body and Diaphragm Case: Ductile iron or die-cast aluminum.
	Standard	Comply with ANSI Z21.80.
	Springs	Manufacturer standard
	Plate	Manufacturer standard
	Seat Disc	Manufacturer standard
	Orifice	Aluminum; interchangeable
	Seal Plug	Manufacturer standard
	Overpressure:	Protection Device Factory mounted on pressure regulator.
	Inlet Filter	Yes
	Vent	Atmospheric: Factory- or field-installed, stainless-steel screen in opening if not connected to vent piping
	Pressure	Maximum Inlet Pressure: 2 psig (13.8 kPa)
	Rooftop Installations	Install a vent from the regulator to above the snow line – see venting below.
	Design Basis	Pietro Fiorentini <b>Governor model</b>
 <p>Appliance Pressure Regulators</p>	Type	Single-port, self-contained regulator with orifice no larger than required at maximum pressure inlet, and no pressure sensing piping external to the regulator. Pressure regulator shall maintain discharge pressure setting downstream, and not exceed 150 percent of design discharge pressure at shutoff
	Body	Body and Diaphragm Case: die-cast aluminum.
	Standard	Comply with ANSI Z21.80.
	Springs	Manufacturer standard
	Plate	Manufacturer standard
	Seat Disc	Manufacturer standard
	Orifice	Aluminum; interchangeable
	Seal Plug	Manufacturer standard
	Inlet Filter	Yes
	Finish	Factory-Applied Finish: Minimum three-layer polyester and polyurethane, if approved by authorities having jurisdiction.
	Design Basis	
Regulator Vents	General	This applies to all regulators that require a vent line:
	Atmospheric	Install a vent from the regulator to above the snow line and terminate with a 180 degree turn down
	Screens	Field-install, a 16 mesh stainless-steel screen in opening at the end of the vent line if the service regulator has a stainless screen in the vent already and when the installer has to extend the vent above the snow line, remove and relocate the factory screen to the end of the vent extension
Generator Piping	Configuration	When regulators are provided at generators, increase pipe size immediately after the regulator and extend piping at increased pipe size to generator connection point
	Regulators	Use regulators with pilot lines. Pipe pilot line strictly by manufacturer's recommendations
	Sizes	[See Drawings] [minimum size 3 time larger than regulator size] [Insert Option Here]
Test Ports	Configuration	Provide instrument connection upstream and downstream of all pressure regulating devices
	Size	1/4 inch FPT or weld-o-let with 1/4 inch approved tee handle ball or needle valve - quarter turn

<b>Pipe Class:</b> A11			
<b>Service:</b> Natural Gas		<b>Material:</b> Steel	
<b>Service Limits</b>	Primary ANSI Class:	150	
	Coefficient of linear expansion	6.5 x 10 <sup>-6</sup> inches per inch	Corrosion Allowance 0.05 inch
	Gauge	Provide glycerine filled 304 stainless case gauge at the outlet of the ball valve with the proper pressure denominations 2-1/2 inch dial dual scale gauge brass internals, 0 - 15 psig/kpa with 1.5 percent accuracy, 1/4 inch bottom mount	
NOTES:			
1. Provide two wrenches for each gas cock size.			
2. The Contractor, at his option, may weld piping down to 1-1/4 if permitted by local codes.			
3. All welders for gas piping must be certified per the requirements of Division 22.			
4. Where multiple gas regulators are installed, regulators shall be marked with a metal tag designating the building or areas being supplied.			
5. For all underground installation, Detectable Warning Tape: Acid- and alkali-resistant, PE film warning tape manufactured for marking and identifying underground utilities, a minimum of 6 inches (150 mm) wide and 4 mils (0.1 mm) thick, continuously inscribed with a description of utility, with metallic core encased in a protective jacket for corrosion protection, detectable by metal detector when tape is buried up to 30 inches (750 mm) deep; colored yellow.			

## 2.3 MOTORIZED GAS VALVES

### A. Automatic Gas Valves: Comply with ANSI Z21.21.

1. Body: Brass or aluminum.
2. Seats and Disc: NBR.
3. Springs and Valve Trim: Stainless steel.
4. Normally closed.
5. Visual position indicator.
6. Electrical actuator operated by appliance automatic shutoff device.

### B. Electrically Operated Valves: Comply with UL 429.

1. Manufacturers: Subject to compliance with requirements, provide products by one of the following:
  - a. Eclipse Innovative Thermal Technologies.
  - b. Honeywell Building Solutions; Honeywell International, Inc.
  - c. Johnson Controls.
2. General
  - a. Pilot operated.
  - b. Body: Brass or aluminum.
  - c. Seats and Disc: Nitrile rubber.
  - d. Springs and Valve Trim: Stainless steel.
  - e. 120-V ac, 60 Hz, Class B, continuous-duty molded coil, and replaceable.
  - f. NEMA ICS 6, Type 4, coil enclosure.
  - g. Normally closed.
  - h. Visual position indicator.
3. Specific

- a. Solenoid Valve Type Intrinsicly safe specifications completely encapsulated within the enclosure using epoxy material.
- b. Configuration Valve shall be furnished with NEMA 4x conduit hub and shall be explosion proof design. Operate at 120 VAC with an intrinsic safety barrier.
- c. Design Basis
  - 1) ASCO gas shutoff valve series EF-8210 brass body valve.
  - 2) AGS Merlin.
4. Note: for substituted valves that require pneumatics, furnish 40 micron filtered 1/2-inch compressed air for valve operation

## 2.4 PIPING CONNECTOR SPECIALTIES

### A. Appliance Flexible Connectors:

1. Indoor, Fixed-Appliance Flexible Connectors: Comply with ANSI Z21.24.
2. Indoor, Movable-Appliance Flexible Connectors: Comply with ANSI Z21.69.
3. Outdoor, Appliance Flexible Connectors: Comply with ANSI Z21.75.
4. Corrugated stainless-steel tubing with polymer coating.
5. Operating-Pressure Rating: 0.5 psig.
6. End Fittings: Zinc-coated steel.
7. Threaded Ends: Comply with ASME B1.20.1.
8. Maximum Length: 72 inches

### B. Quick-Disconnect Devices: Comply with ANSI Z21.41.

1. Copper-alloy convenience outlet and matching plug connector.
2. Nitrile seals.
3. Hand operated with automatic shutoff when disconnected.
4. For indoor or outdoor applications.
5. Adjustable, retractable restraining cable.

### C. Y-Pattern Strainers:

1. Body: ASTM A126, Class B, cast iron with bolted cover and bottom drain connection.
2. End Connections: Threaded ends for NPS 2 and smaller.
3. Strainer Screen: 40-mesh startup strainer and perforated stainless-steel basket with 50 percent free area.
4. CWP Rating: 125 psig.

### D. Weatherproof Vent Cap:

1. Cast- or malleable-iron increaser fitting with corrosion-resistant wire screen, with free area at least equal to cross-sectional area of connecting pipe and threaded-end connection.

## 2.5 DIELECTRIC UNIONS

### A. Dielectric Unions:

1. Manufacturers: Subject to compliance with requirements, available manufacturers offering products that may be incorporated into the Work, provide products by one of the following, or approved equal.
  - a. Watts Regulator.
  - b. Wilkins.
  - c. Zurn Industries, LLC.
  - d. Or Approved Equal.
2. Description:
  - a. Standard: ASSE 1079.
  - b. Pressure Rating: 125 psig minimum at 180 deg F.
  - c. End Connections: Solder-joint copper alloy and threaded ferrous.

## 2.6 BURIED PIPE LABELING AND IDENTIFYING

- A. Detectable Warning Tape: Acid- and alkali-resistant, PE film warning tape manufactured for marking and identifying underground utilities, a minimum of 6 inches wide and 4 mils thick, continuously inscribed with a description of utility, with metallic core encased in a protective jacket for corrosion protection, detectable by metal detector when tape is buried up to 30 inches deep; colored yellow.

## 2.7 EARTHQUAKE VALVES

- A. General All valves used for gas shall be approved for use by the State Fuel Gas Code, shall be NFPA complaint and shall be accepted for use by the (AHJ) Authority Having Jurisdiction
- B. Earthquake Sensitive Gas Shut Off Valve Body Manufacturers standard.
- C. Type Swing style check valve arrangement with an acceleration-sensitive triggering mechanism whereby the horizontal motion of an earthquake activates the valve and initiates closure.
- D. Control The valve shall not require internal or external electrical power.
- E. Mechanism Springs assist the valve- flapper to close and gas pressure assists in holding the valve disc in the closed position.
  1. Actuation Trip mechanism is factory set and sealed.
  2. indicator Positive indication via a sight glass or similar mechanism such that the Open or Closed indicator can be seen, and the trip mechanism status of the valve can be easily determined.
  3. End Connections Flange
- F. Basis of Design Pacific Seismic Products series 300 series horizontal valve. **\*\*LINK\*\***
- G. Earthquake Valves, Maximum Operating Pressure of 5 psig: Comply with ASCE/SEI 25.
  1. Listed and labeled by an NRTL acceptable to authorities having jurisdiction.

2. Maximum Operating Pressure: 5 psig.
  3. Cast-aluminum body with nickel-plated chrome steel internal parts.
  4. NBR valve washer.
  5. Sight windows for visual indication of valve position.
  6. Threaded end connections complying with ASME B1.20.1.
  7. Wall-mounting bracket with bubble level indicator.
- H. Earthquake Valves, Maximum Operating Pressure of 60 psig: Comply with ASCE/SEI 25.
1. Listed and labeled by an NRTL acceptable to authorities having jurisdiction.
  2. Maximum Operating Pressure: Per 0.5 psig 7 psig 60 psig.
  3. Cast-aluminum body with stainless steel internal parts.
  4. NBR, reset-stem O-ring seal.
  5. Valve position, open or closed, indicator.
  6. Composition valve seat with clapper held by spring or magnet locking mechanism.
  7. Level indicator.
  8. End Connections: Threaded for valves NPS 2 and smaller; flanged for valves NPS 2-1/2 and larger.

## 2.8 FIRE SAFETY VALVES

- A. General All valves used for gas shall be approved for use by the State Fuel Gas Code, shall be NFPA compliant and shall be accepted for use by the (AHJ) Authority Having Jurisdiction
- B. Fire Valve
1. Body Materials
    - a. 4 inches and larger - Iron
    - b. 3 inches and smaller -Carbon Steel w 316 SS ball
  2. Type: Quick-closing, fire safety gas shut-off valve
  3. Location: Where shown in the gas supply line on the drawings
  4. Mechanism: held open by a wire with a 165 deg F fusible link arranged so that the valve will automatically close if the link melts.
  5. Actuation: Spring-loaded
  6. End Connections: Flange or NPT per size
  7. Basis of Design
    - a. BI-Torq BT series fusible link fire safe valve
    - b. Preferred Utilities Mfg. Model 110-G

## 2.9 GAS SOLENOID SHUTDOWN FOR APPLIANCES

- A. At point of use appliances, such as kitchen ranges where solenoids are required, furnish and pipe in a gas solenoid valve for actuation by the hood ANSUL system.

- B. See Motorized Gas Valves section of this specification for details.

**2.10 BOILER AND WATER HEATER DETECTION SYSTEM**

**A. General**

1. Provide a complete installation of a combustible gas detection system to protect the designated area from harmful gas build up.
2. The system shall include, but not be limited to, the following:
  - a. Future expandability
  - b. Gas Valve and Electrical Power Control Circuits
  - c. Display of Alarm Status
  - d. Display of Toxic / Hazardous Gas Levels
  - e. Remote Panic Buttons
  - f. Relay Outputs to BMS / F.A.C.P.
  - g. Re-Set and Test Functions
3. All Products and Devices for a complete Commercial Gas Solenoid Safety Device System with all components designed to operate together as a system. The system shall and be UL listed and labelled and be as listed in the Equipment Schedule of the Section
4. Install hazardous/toxic gas monitoring equipment including sensors as shown on Contract Drawings, and as recommended by manufacturer of equipment, and as required by authorities having jurisdiction.
5. The unit shall be furnished and installed as a packaged system with single point connections for power and piping.
  - a. All control wiring shall be completed as part of the package. Any field control wiring shall be the responsibility of this contractor (div 22)

**B. Manufacturers**

1. Basis-of-Design Product: Subject to compliance with requirements, provide kitchen detection package and controls indicated as Basis-of-Design (BOD) below or a comparable product by one of the following:
  - a. BOD: American Gas Safety Systems
  - b. Drager Gas Detection
  - c. Marcurco Gas Detection

**C. Boiler or Water Heater Detection and Monitoring System Installation:**

1. Install in accordance with manufacturer's recommendations and instructions. Verify manufacturer's mounting heights to comply with ADA or other standards.
2. Finish and install all devices as shown in Drawings and as specified herein. Where device is to be installed by other trades, furnish, and then turn over to appropriate trade for installation.
3. Furnish, install, and make final connections to monitoring and Panic Buttons as indicated on Drawings and specified herein. Furnish and install low voltage and volt free control wiring from Utility Controller to connection point on BMS. Final connection by others.

4. Plumbing: Make final connections to all piping systems were indicated by Drawings and specifications. Install in accordance with this specification.
5. Electrical: Electrical Contractor shall furnish all conduit and wiring, making final wiring connections to all equipment as indicated by Drawings and specifications. Contractor shall be responsible for all system configurations, integration, test, and start-up.

D. Mechanical Room Gas Detection Systems

<b>BOILER OR WATER HEATER DETECTION SYSTEM</b>			
<b>Service:</b> Gas Detection and Control		<b>Material:</b> vendor package	
Service Limits	Primary ANSI Class:	150	
	Coefficient of linear expansion	NA	
<b>PACKAGE</b>			
Controls and Instrumentation	Panel	Gas Detection Device type AGS Mini Merlin CH4CO as the Basis Of Design The device panel will be capable of operating within relative humidity ranges of 5-95% non- condensing and temperature ranges of -4° F to 140° F (-20° C to 60° C).	
	Compliance	The unit shall be UL certified and listed Specifically, the device will be certified and listed to ANSI/UL 61010-1 3 <sup>rd</sup> edition and CAN/CSA-C22.2 No. 61010-1.	
	I/O	The device will be 120 Vac powered, individually powered and capable of accepting the inputs of multiple devices. The unit will clearly display the condition of an alarm and provide hazardous or toxic gas levels via ppm or % of VOL. The device shall provide a re-set and test function. The device shall incorporate dual sensor technology to detect Methane and CO (Carbon Monoxide) without the requirement for additional components.	
	Mounting	Mount the panel per manufacturer's instructions and recommendations.	
	Panel Architecture	The device will energize a 120v output to control gas solenoid valves and electrical contractors In alarm the device shall de-energize this control output. For local activation of audible alarms, the transmitter shall have an on-board device able to generate an audible output of 85 dBA @ 10 ft. The unit shall provide a traffic signal type colored TFT display, Green – all clear, Yellow – warning (low alarm) Red – Alarm.	
	Building Management Systems (BMS):	The device panel will be capable of transmitting alarm conditions to a BMS system through its dry contact relay output. For local activation of fans or louvers (or other equipment), the relay will change state in alarm and revert back once the alarm has been removed.	
	Fire Alarm Re-set:	The device shall provide a Re-Set function that will re-energize the gas valve and electrical power outputs allowing the gas supply and the appliances to resume. The Re-Set function shall only be permitted by the device if all detectors are reporting a clean and safe condition.	
	Natural Gas Sensor:	The unit shall integrate with the Controller and shut down all designated outputs upon detection of Natural Gas. Each Controller can utilize up to three fuel gas sensors.	
	Carbon Monoxide Sensors	The unit shall integrate with the Controller and shut down all designated outputs upon detection of unsafe levels of CO gas. Each Controller can utilize up to six CO Detectors.	
Panic Buttons, EPO	Panic Buttons	Each Controller shall be configured so that pressing Panic Buttons will disable all utilities. Each Controller shall be configured so that Gas services will automatically shut down in all alarm modes.	
	Inside Room	Type <b>AGO-EGOTW</b> <b>**LINK**</b> Panic Button will be constructed of tough polycarbonate with a stainless steel back plate capable of operating within relative humidity ranges of 0-100% and temperature ranges of -40° F to 250° F (-40° C to 121° C). Unit will be clearly labeled "EMERGENCY BOILER SHUT-OFF" with 5/8" black text on yellow background with red mushroom type button. Unit will be certified and listed to UL safety standards and be ADA compliant.	
	Outside Room	Type <b>AGS-EGOTWWM</b> <b>**LINK**</b> Panic Button in order to insure system shutdown remotely in case of an Emergency. Integrate Remote Emergency Stop Button(s) with the Controller. Locate button(s) as shown in Drawings and per manufacturer's recommendations	
	Panic Alarm/Fire Alarm	Remote Panic Button and input from fire alarm system shall activate high alarm protocol.	

BOILER OR WATER HEATER DETECTION SYSTEM			
<b>Service:</b> Gas Detection and Control		<b>Material:</b> vendor package	
Service Limits	Primary ANSI Class:	150	
	Coefficient of linear expansion	NA	
Solenoid Valves:	Gas Valve type AGSMERLINxxxx shall be 120v actuated flanged gas solenoid with an operating pressure Of 0-5PSI. Constructed of die-cast aluminum with a fluid powered actuator. The valves should be UL listed as a safety shut-off valve with a closing time of <1second.		
Fuel Gas Sensor	The sensors shall be UL listed to comply with UL2075 and incorporate filters to only look for the desired hazardous or toxic gases selected. If Methane Sensor detects 8% of LEL, the detector shall indicate Low Alarm level via TFT screen. If the hazardous gas level reaches 10% of LEL the detector shall indicate High Alarm level via TFT screen and audible alarm. The high alarm shall de-energize the power output to the gas valve and electrical contractor isolating the gas supply to the boiler room and the electrical power to the appliances. The internal relay outputs shall change state communicating the alarm condition to the BMS and F.A.C.P.		
Carbon Monoxide Sensor	If CO sensor detects Carbon Monoxide the detector shall indicate Low Alarm level via TFT screen. If CO levels continue to rise or trigger alarm thresholds as per the OSHA Dept of Labor TWA alarm thresholds the detector shall indicate High Alarm via TFT screen and audible alarm. The high alarm shall de-energize the power output to the gas valve and electrical contractor isolating the gas supply to the boiler room and the electrical power to the appliances. The internal relay outputs shall change state communicating the alarm condition to the BMS and F.A.C.P.		
Alarm	Audible/Visual alarm beacon type AGSAAB in order to provide a remote visual and audible alarm upon system activation. Integrate Alarm Beacon with the Mini Merlin Controller. Locate as shown in Drawings and per manufacturer's recommendations.		
Testing	After installation, test equipment to demonstrate operation of functions described above under sequence of operation by manufactures certified service technician. Provide testing kits (including gas bottles) for testing and calibration by Commission technician.		
Connections	Piping End Connections: Weld or Threaded spool pieces or ANSI Flange		
Signage	At each Control Panel location provide model # AGSLABELKS. Caution sign will be posted above the Control Panel to indicate the proper procedure for resetting the system in case of system activation including but not limited to systems with standing pilots to avoid gas exposure or possible explosion.		
Electrical	See schedule sheet. Field coordinate power requirement. Components, Devices, and Accessories: Listed and labeled as defined in NFPA 70, by a qualified testing agency, and marked for intended location and application		
Wiring	Install conduit and wiring from device, gas valve, contactor and remote panic buttons as recommended by manufacturer of equipment.		
Warranty	See Part 1.		
Equivalency	See Manufacturers above.		

- E. Detector alarm levels are to be activated and the unit is to be installed in accordance with the following parameters:

Gases	TDLR Code Required Limits			Mounting Height
	1 <sup>st</sup> Alarm Set Point	2 <sup>nd</sup> Alarm Set Point	3 <sup>rd</sup> Alarm Set Point	
Carbon Monoxide	35 ppm	50 ppm	-	Per manufacturer
Methane	8% of LEL 4% of VOL	10% of LEL 5% of VOL		Per manufacturer

## PART 3 - EXECUTION

### 3.1 PIPE SCHEDULE INDEX

SERVICE	CODE	MAXIMUM SERVICE OPERATING LIMITS		PIPE CLASS	PIPE MATERIAL
		(psig)	Temp (°F)		
Gas (Natural)	G	50	70	A11	C. Steel
Gas Vent	GV	50	70	A11	C. Steel
Sleeve for Interior Under-Ground Natural Gas Piping	G-S	50	120	A17	G. Steel
Natural Gas Exterior Underground	G	30	73.4	A19	Polyethylene
Natural Gas Interior or Exterior Underground	G	30	73.4	A19a	Corrugated SS PE sleeve
Gas Condensing Flue Piping	FLUE-1-	14 inch WC	550	FLUE-1	Single Wall Stainless Steel
Gas Condensing Flue Piping	FLUE-2-	14 inch WC	550	FLUE-2	Double Wall Stainless Steel
Gas Condensing Flue Piping	FLUE-3-	14 inch WC	194	FLUE-3	CPVC Flue Gas System
Gas Condensing Flue Piping	FLUE-4	14 inch WC	149	FLUE-4	PVC Flue Gas System
<p>General Pipe Spec Notes:</p> <ol style="list-style-type: none"> <li>Each valve type shall be the product of a single manufacturer. Each system shall be provided with valves as required by code and shown on the drawings and shall be installed to facilitate operation, replacement, and repair.</li> <li>Provide access panels for concealed valves behind non-removable ceilings or walls.</li> <li>Provide shut-off valves on supply piping to individual pieces of equipment.</li> <li>Provide pipe dope and other jointing compounds as required by best standard practice and only on service as recommended by manufacturer.</li> <li>Piping routed through metal stud or wood stud partitions: provide centering such that piping does not contact metal studs and protection of piping systems routed horizontally through metal stud or wood stud partitions where the piping crosses a stud. Sleeve type protection shall be used to prevent damage to the lateral piping using screws/nails/fasteners. Provide pre-manufactured products equal to puncture solution, or on-site sleeves.</li> </ol>					

### 3.2 GENERAL NATURAL GAS SYSTEMS INSTALLATION

- A. All piping shall be cut accurately to measurements obtained at the site and shall be installed without springing or forcing due to inaccurate measurements or improper hanger installation.
- B. Piping shall be done by a licensed gas fitter (as required by Code).
- C. Gas piping shall pitch to drain and shall have drip pockets at least 6 inches long with removable caps at low points.
- D. Gas Isolation Valves
  - Provide a gas cock valve at each branch run out from main or riser serving gas outlets. This shall include all branches from the gas main and further branches from gas sub-mains. These requirements will be strictly enforced by the local plumbing inspector. This requirement shall take precedent over general arrangement drawings. Therefore, the following is called for:
  - Provide a gas shutoff valve at each Tee on both outlets of the Tee in a run of piping.

3. Provide a gas shutoff valve at each piece of equipment.
  4. Gas valves or cocks shall not be concealed and shall be readily accessible for inspection and repair.
  5. Every branch line from a main shall be furnished with a branch valve (no exceptions) and shall be taken off the top of main using such fittings as may be required by structural obstructions or other installation conditions. All service pipes, fittings, and valves shall be kept at sufficient distance from other work to permit not less than 1 inch between finished coverings on other service piping.
- E. Provide union connection between shut-off cock and equipment to permit disconnection of equipment.
- F. Piping shall be securely fastened, separately hung, and shall not support any other weight or piping. Piping dropping in concrete block walls shall be factory wrapped for corrosion protection.
- G. Welded piping shall conform to the latest requirements of the STATE Fuel Gas Code.
- H. All piping shall be supported independently and securely fastened to the building structure with appropriate anchors and pipe hangers. In general, all lines shall be installed above ceilings in finished spaces.
- I. All piping shall be cut true and threaded or welded. Cap all open ends of piping to prevent the entrance of debris when work on this system is complete or the workday has ended.
- J. Provide individual vents from regulators, pressure switches and reliefs on factory packaged equipment gas trains at all equipment located on this system. It is this contractor's responsibility to extend all vents to the atmosphere terminal at a safe location in conjunction with the fuel gas code.
- K. Gas piping and safety devices shall meet the requirements of NFPA No. 54 and shall be subject to inspection and approval of the State Gas Regulatory Board.
- L. Special Note: Provide aluminum check valves on all gas pipes that enter rooms where compressed air is installed or when both compressed air and gas piping connect to the same piece of equipment. This is required in all areas where gas and air are present.
- M. All pipes shall be run parallel and graded evenly to low points. A serviceable drip leg of at least six inches in length shall be provided at each low point, at every connection to a piece of equipment, and at the base of each riser.
- N. For gas installations of over 5,000,000 (five million) BTU/HR, submit a plan of the proposed piping system and equipment for approval to the local Gas Inspector. A letter from the servicing gas supplier indicating that the fuel supply is available shall accompany the submission. Gas utilization equipment over 12,500,000 BTU/HR, water tube boilers having outputs of 10,000 pounds of steam per hour or more, gas booster installations, cogeneration systems, and kilns, shall be submitted to and approved by the Board of State Examiners of Plumbers and Gas Fitters.
- O. Provide valved pressure gauge assemblies at each main gas service entrance, at each water heater, boiler, emergency or standby generator, incinerators, HVAC rooftop units and all other major pieces of equipment utilizing gas. Each pressure gauge assembly shall be individually valved, include a snubber, and shall have a dial range that would locate the system pressure as close to the approximate mid-point on the dial range as possible. Assembly shall be similar to TRERICE Model 760B, 2-1/2-inch diameter gauge, 735-2 valve and 872-1 snubber.

- P. The piping system shall be purged with 100 psi compressed air to remove dirt and debris.
- Q. Gas piping connections to all equipment shall include a gas shutoff valve, drip leg, union fitting and pressure gauge as well as a swing joint consisting of at least two 90-degree elbows at all HVAC equipment.

### 3.3 INDOOR PIPING INSTALLATION

- A. Comply with NFPA 54 and the State Fuel Gas Code for installation and purging of natural-gas piping.
- B. Drawing plans, schematics, and diagrams indicate general location and arrangement of piping systems. Indicated locations and arrangements are used to size pipes and calculate friction loss, expansion, and other design considerations. Install piping as indicated unless deviations to layout are approved on Coordination Drawings.
- C. Arrange pipe spaces, chases, slots, sleeves, and openings in building structure during progress of construction, to allow for mechanical installations.
- D. Install piping in concealed locations unless otherwise indicated and except in equipment rooms and service areas.
- E. Install piping indicated to be exposed and piping in equipment rooms and service areas at right angles or parallel to building walls. Diagonal runs are prohibited unless specifically indicated otherwise.
- F. Install piping above accessible ceilings to allow sufficient space for ceiling panel removal.
- G. Locate valves for easy access.
- H. Install natural-gas piping at uniform grade of 2 percent down toward drip and sediment traps.
- I. Install piping free of sags and bends.
- J. Install fittings for changes in direction and branch connections.
- K. Verify final equipment locations for roughing-in.
- L. Comply with requirements in Sections specifying gas-fired appliances and equipment for roughing-in requirements.
- M. Drips and Sediment Traps: Install drips at points where condensate may collect, including service-meter outlets. Locate where accessible to permit cleaning and emptying. Do not install where condensate is subject to freezing.
  - 1. Construct drips and sediment traps using tee fitting with bottom outlet plugged or capped. Use nipple a minimum length of 3 pipe diameters, but not less than 3 inches long and same size as connected pipe. Install with space below bottom of drip to remove plug or cap.
- N. Extend relief vent connections for service regulators, line regulators, and overpressure protection devices to outdoors and terminate with weatherproof vent cap.
- O. Conceal pipe installations in walls, pipe spaces, utility spaces, above ceilings, below grade or floors, and in floor channels unless indicated to be exposed to view.
- P. Use eccentric reducer fittings to make reductions in pipe sizes. Install fittings with level side down.
- Q. Connect branch piping from top or side of horizontal piping.

- R. Install unions in pipes NPS 2 and smaller, adjacent to each valve, at final connection to each piece of equipment.
- S. Do not use natural-gas piping as grounding electrode.
- T. Install strainer on inlet of each line-pressure regulator and automatic or electrically operated valve.
- U. Install pressure gauge upstream and downstream from each line regulator.
- V. Install sleeves for piping penetrations of walls, ceilings, and floors. Comply with requirements for sleeves specified in Division 23 for sleeves and sleeve seals for HVAC piping.
- W. Install sleeve seals for piping penetrations of concrete walls and slabs. Comply with requirements for sleeve seals specified in Division 23 for sleeves and sleeve seals for HVAC piping.
- X. Install escutcheons for piping penetrations of walls, ceilings, and floors. Comply with requirements for escutcheons specified in Division 22 specifications."

### 3.4 GAS SERVICE, METER, VENTS AND PIPING

- A. Gas meter and piping to meter from gas main will be provided by Gas Utility Company. Pay charges associated with Gas Company installation. Gas piping provided under this Section; shall begin at building side of gas meter.
- B. Provide pressure reducing valve between meter and building piping, as required by Gas Company, piped and vented to outside of building.
- C. Provide full size isolation valve at the gas meter outlet.
- D. Provide an aluminum or plastic valve tag stating the gas pressure downstream of the gas meter.

### 3.5 OUTDOOR PIPING INSTALLATION

- A. Comply with NFPA 54 the State Fuel Gas Code and local project codes for installation and purging of natural-gas piping.
- A. All exterior gas piping, valves and fittings shall be protected and covered with Tapecoat H35 Gray corrosion protection tape with integral primer and adhesive. All fittings and joints shall be wrapped with similar protective tape.
- B. Install underground, natural-gas piping buried at least 36 inches below finished grade. Comply with requirements in Division 31 for earth moving for excavating, trenching, and backfilling.
  - 1. If natural-gas piping is installed less than 36 inches below finished grade, install it in containment conduit.
- C. Install underground natural gas piping according to ASTM D2774.
- D. Steel Piping with Protective Coating:
  - 1. Apply joint cover kits to pipe after joining to cover, seal, and protect joints.
  - 2. Repair damage to PE coating on pipe as recommended in writing by protective coating manufacturer.
  - 3. Replace pipe having damaged Polyethylene coating with new pipe.

### 3.6 VALVE INSTALLATION

- A. Install manual gas shutoff valve for each gas appliance ahead of corrugated stainless-steel tubing or copper connector.
- B. Install underground valves with valve boxes.
- C. Install regulators and overpressure protection devices with maintenance access space adequate for servicing and testing.
- D. Install earthquake valves aboveground outside buildings according to listing.
- E. Install anode for metallic valves in underground PE piping.

### 3.7 PIPING JOINT CONSTRUCTION

- A. Ream ends of pipes and tubes and remove burrs.
- B. Remove scale, slag, dirt, and debris from inside and outside of pipe and fittings before assembly.
- C. Threaded Joints:
  - 1. Thread pipe with tapered pipe threads complying with ASME B1.20.1.
  - 2. Cut threads full and clean using sharp dies.
  - 3. Ream threaded pipe ends to remove burrs and restore full inside diameter of pipe.
  - 4. Apply appropriate tape or thread compound to external pipe threads unless dry seal threading is specified.
  - 5. Damaged Threads: Do not use pipe or pipe fittings with threads that are corroded or damaged. Do not use pipe sections that have cracked or open welds.
- D. Welded Joints:
  - 1. Construct joints according to AWS D10.12/D10.12M, using qualified processes and welding operators.
  - 2. Bevel plain ends of steel pipe.
  - 3. Patch factory-applied protective coating as recommended by manufacturer at field welds and where damage to coating occurs during construction.
- E. thermoplastic approved Natural Gas Piping Heat-Fusion Joints: Clean and dry joining surfaces by wiping with clean cloth or paper towels. Join according to ASTM D2657.
  - 1. Plain-End Pipe and Fittings: Use butt fusion.
  - 2. Plain-End Pipe and Socket Fittings: Use socket fusion.

### 3.8 HANGER AND SUPPORT INSTALLATION

- A. Comply with requirements for seismic-restraint devices specified in Division 22 Specifications for "Vibration and Seismic Controls"
- B. Comply with requirements for pipe hangers and supports specified in Division 22 "Hangers and Supports for Piping and Equipment."

- C. Install hangers for steel piping, with maximum horizontal spacing and minimum rod diameter, to comply with MSS-58, locally enforced codes, and authorities having jurisdiction requirements, whichever are most stringent.
- D. Install hangers for corrugated stainless-steel tubing, with maximum horizontal spacing and minimum rod diameter, to comply with manufacturer's written instructions, locally enforced codes, and authorities having jurisdiction requirements, whichever are most stringent.
- E. Support horizontal piping within 12 inches of each fitting.
- F. Support vertical runs of steel piping to comply with MSS-58, locally enforced codes, and authorities having jurisdiction requirements, whichever are most stringent.
- G. Support vertical runs of corrugated stainless-steel tubing to comply with manufacturer's written instructions, locally enforced codes, and authorities having jurisdiction requirements, whichever are most stringent.

### 3.9 CONNECTIONS

- A. Connect to utility's gas main according to utility's procedures and requirements.
- B. Install natural-gas piping electrically continuous and bonded to gas appliance equipment grounding conductor of the circuit powering the appliance according to NFPA 70.
- C. Install piping adjacent to appliances to allow service and maintenance of appliances.
- D. Connect piping to appliances using manual gas shutoff valves and unions. Install valve within 72 inches of each gas-fired appliance and equipment. Install union between valve and appliances or equipment.
- E. Sediment Traps: Install tee fitting with capped nipple in bottom to form drip, as close as practical to inlet of each appliance.

### 3.10 BOILER ROOM GAS DETECTION INSTALLATION:

- A. Install in accordance with manufacturer's recommendations and instructions. Verify manufacturer's mounting heights to comply with ADA or other standards.
- B. Plumbing Contractor to furnish all devices as shown on Drawings and as specified herein. Where device(s) is to be installed by other trades, plumbing contractor is to furnish and then turn over to appropriate trade for installation.
- C. Electrical
  - 1. Plumbing Contract shall be responsible for all costs associated with the Electrical Contractor to furnish all conduit and wiring and install the system furnished by the Plumbing Contractor, making final wiring connections to all equipment as indicated by Drawings and specifications. The contractor shall be responsible for all system configurations, integration, test, and start-up.
- D. Boiler Room Gas Detection Start Up and Test:
  - 1. Prior to placing the Gas Detection System into service, perform ALL Start-up procedures and Checklists as stated in Manufacturer's Operations and Maintenance Procedure literature.

- E. Verify that all components and control devices comply with manufacturer's requirements and recommendations and that all devices and installations conform to Drawings and Specification requirements.

### 3.11 IDENTIFICATION

- A. Identify system components. Comply with requirements for identification materials and installation in Division 22.
- B. Label and Painting requirements for Natural Gas Piping
  - 1. See division 22 identification and labeling requirements.
- C. Label pressure piping with system operating pressure.

### 3.12 TESTING OF GAS PIPING SYSTEM

- A. General
  - 1. Test, inspect, and purge natural gas according to NFPA 54, or the International Fuel Gas Code (as adopted and amended by State or Local codes) and local inspectional requirements.
  - 2. Test Fluid: Pressure test gas piping system with air, carbon dioxide or nitrogen pressure.
  - 3. Test Pressure: Not less than 3 psi gauge.
  - 4. Test Duration: 24 hours with no decrease in pressure, after corrected by changes in ambient temperature.
  - 5. Local Jurisdictional Requirements: Should regional Inspectors or authorities have requirements specific to the local jurisdiction, they shall be supplementary to these requirements and shall be completed in addition to the chart below.
  - 6. Disconnect all users during the test procedure by means of pipe blanks or lock out tag out valves.
  - 7. For welded piping and for piping carrying gas at pressures exceeding 14-inches of water column pressure, the test pressure shall commonly be at least 1-1/2 times the working pressure and not less than 3 psig for a period of 24 hours with no decrease in pressure. If a decrease in pressure is detected, soap or bubble test joints for leaks, repair or replace as required, and retest.
- B. Testing of large segments of pipe installation over 500 cubic feet
  - 1. Upon completion of gas piping system or section thereof, as required, test by attaching an air compressor testing apparatus to any suitable opening and, after closing all other inlets or outlets, force air into the system until a uniform pressure per the chart below for each 500 cubic feet of pipe volume without showing any drop in pressure. Pressure shall be measured with a mercury manometer, slope gauge, or an equivalent device calibrated to read in increments of no greater than 1/10 lbs.
- C. Renovation Work: Test added, altered, and repaired piping per the chart below. Test the hot connection to the existing gas piping system per the requirements of the local plumbing inspector.
  - 1. For Renovation work, submit method and means test summary to the engineer, the plumbing inspector, and the owner prior to test procedure for project record.

2. Where testing work interrupts gas service to existing building services, submit methods and means for test procedure and seek owner approval prior to any test that interrupts service to the building users.
3. Install an isolation valve between the new and renovated piping system within approximately 3 ft of connection.
4. Test all new piping separately. Then make connection and soap connection joint multiple times, monitor over an 8-hour period to verify connection is leak free.
  - a. In addition, test the stub connection and valve per the requirements of the local Plumbing Inspector.
5. Label the newly installed valve as “Renovated Service Addition, added month/day/year.”

D. The testing summary outlined below is considered minimum requirements for this project.

Application	Natural Gas System	Pipeline Pressure	Pipe Fabrication	Test Pressure	Test Duration	Additional
Commercial or Residential	Low Pressure	< 1/2 psig	Thread Weld or	3 psig	2 hours	
Commercial	High Pressure	> 1/2 psi up to 2 psig	Weld	1.5 x WP Not < 3 psig	24 hours	Note 4
Commercial or Industrial	Natural Gas (High Pressure)	> 2 psi and < 5 psig	Weld	1.5 x WP	24 hours	Note 4
Single Family Residential	Natural Gas (Low Pressure)	< 1/2 psig	Thread Weld or	10-inch mercury minimum	1 hour	Note 6
Mixed Use or Commercial/Industrial	In all cases where Natural Gas input equals or exceeds 10 <sup>6</sup> BTUH	All	Weld	10 x WP	24 hours	Note 7
Process	Natural Gas (High Pressure)	> 5.0 psi	Weld	100 psig min	24 hours	Note 5
1. Submit test protocols for all gas pipe testing to engineer prior to testing of piping systems. 2. Definition: W.C. is defined as water column 3. Definition: WP is defined as working pressure 4. § NFPA 54 8.1.4.2: Where test pressure exceeds 125 psig, the test pressure shall not exceed a value that produces a hoop stress in the piping greater than 50% of the specified min. yield strength of the pipe. 5. Consult engineer for working pressures greater than 5 psig in all cases. 6. All tests and testing outputs including gauge pressure, duration and acceptance shall be accepted to the local authority having jurisdiction (Plumbing Inspector) 7. Adhere to this requirement for all test procedures for this project. It is noted as a minimum stipulation for Massachusetts.						

E. Deficiency

1. Natural-gas piping will be considered defective if it does not pass tests and inspections.
2. At completion of the test, the system shall meet the requirements of the local Plumbing or Gas Inspector prior to engineer acceptance.
3. Identify all areas where leakage occurs via non-corrosive and nonflammable methods and means accepted by the local authority.
4. If a decrease in pressure is detected, soap or bubble test joints for leaks, repair or replace as required, and retest.
5. Document all repaired sections in the test report. All replaced or repaired deficiencies shall be re-tested and accepted by the local plumbing inspector.

F. Piping back in service

1. After acceptance of the tested system by the regional Plumbing Inspector and gas company, purge all test gas from the piping system and refill the system with product gas.
  2. Test all appliance and user connections per code before system start up
- G. Testing Report
1. Prepare test and inspection reports.
  2. Submit a testing report to the Architect and Engineer to certify gas inspector acceptance of all test results.

END OF SECTION

H:\Y0586.00\DOC\SPEC\2025\_02-20\_IFB\221115\_PLUMBING NATURAL GAS PIPING.DOC

## **SECTION 221119 - WATER PIPING SPECIALTIES**

### **PART 1 - GENERAL**

#### **1.1 RELATED DOCUMENTS**

- A. Certain requirements common to all the mechanical and electrical trades (Fire Suppression, Plumbing, HVAC, Electrical, and Tele/Data) are specified in Division 20. To avoid repetition, they are not repeated in each relevant Division and Section. However, these requirements are applicable to the work of this Section and are hereby incorporated by reference.
- B. Drawings and general provisions of the Contract, including General and Supplementary Conditions and Division 01 Specification Sections, apply to this Section.

#### **1.2 SUMMARY**

- A. Section Includes:
  - 1. General requirements for piping
  - 2. Performance requirements
  - 3. Vacuum breakers.
  - 4. Backflow preventers.
  - 5. Water pressure-reducing valves.
  - 6. Individual fixture water tempering valves
  - 7. Single Unit Temperature-actuated, water mixing valves.
  - 8. High Low Temperature actuated mixing valves
  - 9. Central digital thermostatic water mixing valves, small to moderate flow
  - 10. Central digital thermostatic water mixing valves, moderate to large flow
  - 11. Strainers for Water piping.
  - 12. Outlet boxes.
  - 13. Hose stations.
  - 14. Hose bibbs.
  - 15. Wall hydrants.
  - 16. Post Hydrants
  - 17. Drain valves.
  - 18. Water-hammer arresters.
  - 19. Air vents.
  - 20. Trap-seal primer valves.
  - 21. Trap-seal primer systems.
  - 22. Flexible connectors.

- 23. Large capacity water hammer arrestors
- 24. Large capacity surge chambers

- B. All pipe, fittings, and valves used in this distribution system and installed after January 4, 2014 must comply with the new Federal Mandate known as the “Reduction of Lead in Drinking Water Act-2014”. Any product pipe, fittings or valve installed after the enactment date that does not comply, shall be removed and changed by this contractor at Contractor expense to comply with the Federal Law

### 1.3 ACTION SUBMITTALS

- A. Product Data: For each type of product.
- B. Shop Drawings: For domestic water piping specialties.
  - 1. Include diagrams for power, signal, and control wiring.

### 1.4 INFORMATIONAL SUBMITTALS

- A. Field quality-control reports.
  - 1. Submit operational test report for thermostatic mixing valves
  - 2. Submit operational test reports for digital mixing valves
  - 3. Submit operational test reports for all Backflow Preventers
  - 4. Submit operational test reports for Large capacity Water Hammer Arrestors
  - 5. Submit operational test reports for large capacity surge chambers

### 1.5 CLOSEOUT SUBMITTALS

- A. Operation and Maintenance Data: For domestic water piping specialties to include in emergency, operation, and maintenance manuals.

## PART 2 - PRODUCTS

### 2.1 GENERAL REQUIREMENTS FOR PIPING SPECIALTIES

- A. All pipe, fittings, and valves used in this distribution system and installed after January 4, 2014 must comply with the new Federal Mandate known as the “Reduction of Lead in Drinking Water Act-2014”. Therefore, after the enactment date of 1/4/14, all products installed must comply. Any product pipe, fittings, valve, or specialty item installed after the enactment date that does not comply, shall be removed and changed by this contractor at his/her own expense to comply with the Federal Law
- B. Potable-water piping and components shall comply with NSF 61 Annex G and NSF 14.

### 2.2 PERFORMANCE REQUIREMENTS

- A. Minimum Working Pressure for Water Piping Specialties: 150 psig unless otherwise indicated.
  - 1. Note, where pressures exceed 150 psig, submit and use class 250 apparatuses.

## 2.3 VACUUM BREAKERS

- A. Pipe-Applied, Atmospheric-Type Vacuum Breakers:
- B. Manufacturers: Subject to compliance with requirements, available manufacturers offering products that may be incorporated into the Work, provide products by one of the following, or approved equal.
  - 1. Ames Co.
  - 2. Watts; a Watts Water Technologies company.
  - 3. Zurn Industries, LLC.
  - 4. Or Approved Equal.
- C. Data
  - 1. Standard: ASSE 1001.
  - 2. Size: NPS 1/4 to NPS 3, as required to match connected piping.
  - 3. Body: Bronze.
  - 4. Inlet and Outlet Connections: Threaded.
  - 5. Finish: Rough bronze.
  - 6. Basis of Design for Cold Water: Watts LF288A, [\\*\\*LINK\\*\\*](#) Cash Acme V101.
  - 7. Basis of Design for Hot Water: Cash Acme V101. [\\*\\*LINK\\*\\*](#).
- D. Hose-Connection Vacuum Breakers :
  - 1. Manufacturers: Subject to compliance with requirements, available manufacturers offering products that may be incorporated into the Work, provide products by one of the following, or approved equal.
    - a. Watts; a Watts Water Technologies company.
    - b. Woodford Manufacturing Company.
    - c. Zurn Industries, LLC.
    - d. Or Approved Equal.
  - 2. Standard: ASSE 1011.
  - 3. Body: Bronze, non-removable, with manual drain.
  - 4. Outlet Connection: Garden-hose threaded complying with ASME B1.20.7.
  - 5. Finish: Match finish of HB Chrome, stainless steel or nickel-plated bronze.
  - 6. Basis of Design: Cash Acme VB-222. [\\*\\*LINK\\*\\*](#)
- E. Pressure Vacuum Breakers:
  - 1. Manufacturers: Subject to compliance with requirements, available manufacturers offering products that may be incorporated into the Work, provide products by one of the following, or approved equal.
    - a. FEBCO.
    - b. Watts; a Watts Water Technologies company.

- c. Zurn Industries, LLC.
    - d. Or Approved Equal.
  - 2. Standard: ASSE 1020.
  - 3. Operation: Continuous-pressure applications.
  - 4. Pressure Loss: 5 psig maximum, through middle third of flow range.
  - 5. Accessories:
    - a. Valves: Ball type, on inlet
  - 6. Basis of Design Cold Water: Watts series LF800M4QT
  - 7. Basis of Design Hot Water: Cash Acme PVB
  - 8. Basis of Design Freeze Proof Cold Water: Watts series 800M4FR
- F. Spill-Resistant Vacuum Breakers :
  - 1. Manufacturers: Subject to compliance with requirements, available manufacturers offering products that may be incorporated into the Work, provide products by one of the following, or approved equal.
    - a. Watts; a Watts Water Technologies company.
    - b. Woodford Manufacturing Company.
    - c. Zurn Industries, LLC.
    - d. Or Approved Equal.
  - 2. Standard: ASSE 1056.
  - 3. Operation: Continuous-pressure applications.
  - 4. Accessories:
    - a. Valves: Ball type, on inlet and outlet.
  - 5. Basis of Design: Zurn Model 460, Watts LF008PCQT

## 2.4 BACKFLOW PREVENTERS

- A. Reduced-Pressure-Principle Backflow Preventers:
  - 1. Manufacturers: Subject to compliance with requirements, , provide products by one of the following, or approved equal.
    - a. FEBCO.
    - b. Watts; a Watts Water Technologies company.
    - c. Zurn Industries, LLC.
    - d. Or Approved Equal.
  - 2. Standard: ASSE 1013.
  - 3. Operation: Continuous-pressure applications.
  - 4. Pressure Loss: 8 PSIG maximum, through middle third of flow range.

5. Body: Bronze for NPS 2 and smaller; steel with interior lining that complies with AWWA C550 or that is FDA approved or stainless steel for NPS 2-1/2 and larger.
  6. End Connections: Threaded for NPS 2 and smaller; flanged or mechanical for NPS 2-1/2 and larger.
  7. Configuration: Designed for horizontal, straight-through flow.
  8. Accessories:
    - a. Valves NPS 2 and Smaller: Ball type with threaded ends on inlet and outlet.
    - b. Valves NPS 2-1/2 and Larger: Outside-screw and yoke-gate type with flanged ends on inlet and outlet.
    - c. Air-Gap Fitting: ASME A112.1.2, matching backflow-preventer connection.
  9. Basis of Design: Watts 957
  10. Basis of Design: Watts 009-QT-S
  11. Basis of Design: Special Flow Patterns: Febco 825YA, Febco 880V
- B. Backflow Preventer Anti-Flood Device**
1. Manufacturers: Subject to compliance with requirements, provide products by one of the following or approved equal:
    - a. Cla-Val
    - b. FEBCO.
    - c. Watts; a Watts Water Technologies company.
    - d. Or Approved Equal.
  2. The Flood Protection Shutdown Valve shall be a normally open Diaphragm Valve installed upstream of the Reduced Pressure Zone Backflow Assembly, and automatically close if the RPZ relief valve begins to discharge. A Time Delay supplied in the JB113 Junction Box shall prevent the valve from closing on intermittent discharges from the RPZ relief valve. If continuous Relief Valve discharge occurs, the FS99 Flow Sensor installed horizontally in the RPZ Relief Valve discharge piping shall send a signal to the JB113 Junction Box energizing Solenoid to close the main valve. Once closed the Flood Protection Shutdown Valve must be manually reset.
  3. The JB113 Junction Box shall be valve mounted with the Solenoid pre-wired. The FS99 Flow Sensor shall be provided with the valve package and shall be field installed in a horizontal position in the RPZ Relief Valve discharge piping. Vertical installation of the Flow Sensor shall not be acceptable. The valve shall be equipped with a Limit Switch to provide local visual and remote electrical indication of valve closure.
  4. The Reduced Pressure Zone Backflow Assembly, Flood Protection Shutdown Valve, JB113 Junction Box and FS99 Flow Sensor shall be provided by the same manufacturer and be covered by a single warranty policy.
  5. The main valve shall be a hydraulically operated, single diaphragm actuated, globe or angle pattern valve. Y-pattern valves shall not be permitted. The valve shall contain a disc and diaphragm assembly that forms a sealed chamber below the valve cover, separating operating pressure from line pressure. The diaphragm shall be constructed of nylon reinforced Buna-N and shall not seal directly against the valve seat and shall be

fully supported by the valve body and cover. Rolling diaphragm construction will not be allowed and there shall be no pistons operating the main valve or any pilot controls.

6. The main valve body and cover shall be Ductile Iron ASTM A536, and all internal cast components shall be Ductile Iron or CF8M (316) Stainless Steel. All Ductile Iron components, including the body and cover, shall be lined and coated with an NSF 61 Certified Epoxy Coating applied by the electrostatic heat fusion process. All main valve throttling components (valve seat and disc guide) shall be Stainless Steel. The valve body and cover must be machined with a 360-degree locating lip to assure proper alignment.
  7. The disc and diaphragm assembly shall contain a Buna-N synthetic rubber “Quad Seal” that is securely retained on 3-1/2 sides by a disc retainer and disc guide. Diaphragm assemblies utilizing bolts or cap screws for component retention will not be permitted. Direction of flow through the valve shall be the over-the-disc design, causing the valve to close upon diaphragm failure.
  8. The exposed portion of the Quad Seal shall contact the valve seat and seal drip-tight. The disc and diaphragm assembly must be guided by two separate bearings, one installed in the valve cover and one concentrically located within the valve seat, to avoid deflection and assure positive disc-to-seat contact. Center guided valves will not be permitted. The main valve stem shall be Xylan coated to avoid the effects of mineral or hard water build-up. The main valve spring shall be the manufacturer’s heavy or extra heavy spring design. All necessary repairs shall be made from the top of the valve while the body remains in line.
  9. The Pilot Control System shall contain a Flo-Clean Strainer, 3-Way Accelerator, NEMA 4, 120 VAC 60HZ 3-Way Solenoid with Manual Operator, Manual Reset Ball Valve, Pressure Gauge, separate Adjustable Opening and Closing Speed Controls, Single Limit Switch, JB113 Junction Box and Isolation Ball Valves on all body connections. The JB113 Junction Box shall be valve mounted and the FS99 Flow Sensor shall be field installed.
  10. Accessories:
    - a. Valves NPS 2 and Smaller: Ball type with threaded ends on inlet and outlet.
    - b. Valves NPS 2-1/2 and Larger: Flanged ends on inlet and outlet.
  11. Basis of design: Watts Model 113-6RFP (globe) or 1113-6RFP (angle) Flood
- C. Double-Check, Backflow-Prevention Assemblies:
1. Manufacturers: Subject to compliance with requirements, , provide products by one of the following, or approved equal.
    - a. FEBCO.
    - b. Watts; a Watts Water Technologies company.
    - c. Zurn Industries, LLC.
    - d. Or Approved Equal.
  2. Standard: ASSE 1015.
  3. Operation: Continuous-pressure applications unless otherwise indicated.
  4. Pressure Loss: 5 psig maximum, through middle third of flow range.

5. Body: Bronze for NPS 2 and smaller; steel with interior lining that complies with AWWA C550 or that is FDA approved or stainless steel for NPS 2-1/2 and larger.
  6. End Connections: Threaded for NPS 2 and smaller; flanged or mechanical for NPS 2-1/2 and larger.
  7. Configuration: Designed for horizontal, straight-through flow.
  8. Accessories:
    - a. Valves NPS 2 and Smaller: Ball type with threaded ends on inlet and outlet.
    - b. Valves NPS 2-1/2 and Larger: Outside-screw and yoke-gate type with flanged ends on inlet and outlet.
  9. Basis of Design: Watts LF007.
- D. Beverage-Dispensing-Equipment Backflow Preventers:
1. Manufacturers: Subject to compliance with requirements, , provide products by one of the following, or approved equal.
    - a. FEBCO.
    - b. Watts; a Watts Water Technologies company.
    - c. Zurn Industries, LLC.
    - d. Or Approved Equal.
  2. Standard: ASSE 1022.
  3. Operation: Continuous-pressure applications.
  4. Size: NPS 1/4 or NPS 3/8.
  5. Body: Stainless steel.
  6. End Connections: Threaded.
- E. Hose-Connection Backflow Preventers:
1. Manufacturers: Subject to compliance with requirements, , provide products by one of the following, or approved equal.
    - a. Watts; a Watts Water Technologies company.
    - b. Woodford Manufacturing
    - c. Zurn Industries, LLC.
    - d. Or Approved Equal.
  2. Standard: ASSE 1052.
  3. Operation: Up to 10-foot head of water back pressure.
  4. Inlet Size: NPS 1/2 or NPS 3/4.
  5. Outlet Size: Garden-hose thread complying with ASME B1.20.7.
  6. Capacity: At least 3-gpm flow.
- F. Backflow-Preventer Test Kits :

1. Manufacturers: Subject to compliance with requirements, , provide products by one of the following, or approved equal.
  - a. FEBCO.
  - b. Watts; a Watts Water Technologies company.
  - c. Zurn Industries, LLC.
  - d. Or Approved Equal.
2. Description: Factory calibrated, with gauges, fittings, hoses, and carrying case with test-procedure instructions.

## 2.5 WATER PRESSURE-REDUCING VALVES

### A. Water Regulators: See drawings for sizes, pressures and flow rates

1. Manufacturers: Subject to compliance with requirements, available manufacturers offering products that may be incorporated into the Work, provide products by one of the following, or approved equal.
  - a. Conbraco Industries, Inc.
  - b. Watts; a Watts Water Technologies company.
  - c. Zurn Industries, LLC.
  - d. Or Approved Equal.
2. Standard: ASSE 1003.
3. Pressure Rating: Initial working pressure of 150 psig.
4. Size: See drawings.
5. Body: Bronze for NPS 2 and smaller; cast iron with interior lining that complies with AWWA C550 or that is FDA approved for NPS 2-1/2 and NPS 3.
6. Valves for Booster Heater Water Supply: Include integral bypass.
7. End Connections: Threaded for NPS 2 and smaller; flanged for NPS 2-1/2 and NPS 3.

### B. Water-Control Valves: See drawings for sizes, pressures and flow rates

1. Manufacturers: Subject to compliance with requirements, available manufacturers offering products that may be incorporated into the Work, provide products by one of the following, or approved equal.
  - a. OCV Control Valves.
  - b. Watts; a Watts Water Technologies company.
  - c. Zurn Industries, LLC.
  - d. Or Approved Equal.
2. Description: Pilot-operated, diaphragm-type, single-seated, main water-control valve.
3. Pressure Rating: Initial working pressure of 150 psig 1035 kPa minimum with AWWA C550 or FDA-approved, interior epoxy coating. Include small pilot-control valve, restrictor device, specialty fittings, and sensor piping.

4. Main Valve Body: Cast- or ductile-iron body with AWWA C550 or FDA-approved, interior epoxy coating; or stainless-steel body.
5. End Connections: Threaded for NPS 2 DN 50 and smaller; flanged for NPS 2-1/2 DN 65 and larger.

2.6 INDIVIDUAL-FIXTURE, WATER TEMPERING VALVES:

A. **Manufacturers: Subject to compliance with requirements, available manufacturers offering products that may be incorporated into the Work, provide products by one of the following, or approved equal.**

1. Leonard Valve Company.
2. Watts; a Watts Water Technologies company.
3. Zurn Industries, LLC.
4. Or Approved Equal.

B. Description

1. Standard: ASSE 1070, thermostatically controlled, water tempering valve.
2. Pressure Rating: 125 psig minimum unless otherwise indicated.
3. Body: Bronze body with corrosion-resistant interior components.
4. Temperature Control: Adjustable.
5. Inlets and Outlet: Threaded.
6. Finish: Rough -plated bronze if concealed. or chrome plated if exposed
7. Tempered-Water Setting: 110 deg F.

C. Basis of Design:

1. **Zurn ZW3870XLT**
2. **Watts LFMMV**
3. Powers LFE480

2.7 SINGLE UNIT TEMPERATURE-ACTUATED, WATER MIXING VALVES

A. Primary, Thermostatic, Water Mixing Valves:

1. Manufacturers: Subject to compliance with requirements, available manufacturers offering products that may be incorporated into the Work, provide products by one of the following, or approved equal.
  - a. Leonard Valve Company.
  - b. Powers.
  - c. Zurn Industries, LLC.
  - d. Or Approved Equal.
2. Standard: ASSE 1017.
3. Pressure Rating: 125 psig minimum unless otherwise indicated.

4. Type: Exposed-mounted, thermostatically controlled, water mixing valve.
5. Material: Bronze body with corrosion-resistant interior components.
6. Connections: Threaded inlets and outlet.
7. Accessories: Manual temperature control, check stops on hot- and cold-water supplies, and adjustable, temperature-control handle.
8. Tempered-Water Setting: See drawings.
9. Valve Finish: Rough bronze.
10. Piping Finish: Copper.
11. Basis of Design:
  - a. Zurn Model ZW1017XL
  - b. Lawler 803 series
  - c. Powers LFSH 1430 series

## 2.8 HIGH-LOW TEMPERATURE-ACTUATED, WATER MIXING VALVES

- A. Manifold, Thermostatic, Water Mixing-Valve Assemblies: See drawing schedule sheet for valve duty.
  1. Manufacturers: Subject to compliance with requirements, available manufacturers offering products that may be incorporated into the Work, provide products by one of the following, or approved equal.
    - a. **Leonard Valve Company.**
    - b. **Powers.**
    - c. **Symmons Industries, Inc.**
    - d. **Or Approved Equal.**
  2. Description: Factory-fabricated, exposed-mounted, thermostatically controlled, water mixing-valve assembly in two-valve parallel arrangement.
  3. Large-Flow Parallel: Thermostatic, water mixing valve and downstream-pressure regulator with pressure gauges on inlet and outlet.
  4. Intermediate-Flow Parallel: Thermostatic, water mixing valve and downstream-pressure regulator with pressure gauges on inlet and outlet.
  5. Small-Flow Parallel: Thermostatic, water mixing valve.
  6. Thermostatic Mixing Valves: Comply with ASSE 1017. Include check stops on hot- and cold-water inlets and shutoff valve on outlet.
  7. Water Regulator(s): Comply with ASSE 1003. Include pressure gauge on inlet and outlet.
  8. Pressure Rating: 125 psig minimum unless otherwise indicated.
  9. Thermostatic Mixing Valve and Water Regulator Finish: Rough bronze.
  10. Piping Finish: Copper.
  11. Basis of Design:

- a. Powers 1430 series
- b. Lawler 803 series

## 2.9 CENTRAL DIGITAL THERMOSTATIC VALVES, SMALL TO MODERATE FLOW:

- A. Manufacturers: Subject to compliance with requirements, , provide products by one of the following, or approved equal.
  - 1. Leonard Valve
  - 2. Powers/Watts Intellistation Jr.
  - 3. PVI Heaters
- B. General Requirements
  - 1. Standard: ASSE 1017.
  - 2. Pressure Rating:
    - a. Where circuit line pressure is 125 psi or less, 125 psig minimum unless otherwise indicated.
    - b. Where circuit line pressure is greater than 150 psi but less than 250 psig use class 250 valves minimum unless otherwise indicated.
  - 3. Material: manufacturer standard corrosion-resistant interior components.
  - 4. Accessories: Digital temperature control, package factory piped and factory wired for single point connections.
  - 5. The system is ready for connection to the Building Automation System
  - 6. Tempered-Water Setting: See Drawings

CENTRAL DIGITAL WATER MIXING SMALL TO MODERATE FLOW		
<b>Service:</b>	Building Hot Water	<b>Material:</b> Coper, Brass or Stainless
Service Limits	Primary ANSI Class:	150
GENERAL		
Description	Type	Electronic water mixing valves providing user-directed control and monitoring water distribution, with an electronic Control Module, an electronically actuated valve that mixes hot and cold water.
	Listing /Compliance	ASSE 1017, cUPC, NSF, CSA 24/UL873,
	Number Valves per Mixing Valve Station	See Schedule Sheet
	Fabrication	System shall be a pre-piped and mounted
MIXING VALVE/S		
Digital Mixing Station	Material	Lead free construction, with manufacturers standard finish
	Capacity and Flows	See Schedule Sheet
	Maximum Operating Pressure	200psi
	Maximum Hot Water Temperature	200 deg F
	Minimum Hot Water Supply Temperature	2 deg F above set point Hot Water Inlet Temperature Range 120-180 deg F in accordance with ASSE 1017 and resist "temperature creep" during periods of low/zero demand.
	Ambient Temperature	32 deg F to 122 deg F (50 deg C) Ambient Humidity ... 0 - 90 RH non-condensing
	Fail safe Design	In the event of a power failure, system will open full cold supply. In case of a loss of cold water, the system will close hot water supply
	Minimum Flow	0.5gpm
	Sundries	Furnish and install check valves, strainers, thermometers, pressure gauges, ball valves, inlet

CENTRAL DIGITAL WATER MIXING SMALL TO MODERATE FLOW		
<b>Service:</b>	Building Hot Water	
<b>Material:</b>	Coper, Brass or Stainless	
<b>Service Limits</b>	Primary ANSI Class:	150
Connections		hot water to outlet mixed water by-pass and shall be mounted onto an enameled steel frame.
	Recirculation	The unit shall be furnished with a Digital Re-Circulating Valves (DRV) Each recirculating valve shall be digital of lead-free stainless steel/polymer construction.
	End Connections	Furnish and install all isolation valves on all service connections Furnish balancing valves and flow meters per drawing details
	Outlet valves	Furnish check valves and shut-off Ball/Butterfly valves on pump outlet piping for each pump. Manifold piping at outlet.
	Connections	Threaded spool pieces or ANSI Flange
	Mounting	Mount per manufacturer's standard. Pre piped ready for single point connections
<b>CONTROL</b>		
Controller	Panel	Touch screen digital display to select desired outlet water temperature
	Sensor	A quick response temperature sensor and check valves.
	Tout	Electronic mixing valves monitor mixed outlet temperature.
	Sanitize	System will feature a user-set, high-temperature sanitization mode for thermal disinfection of bacteria and a programmable temperature set back feature to improve energy efficiency User programmable high temperature Sanitization mode to help limit water borne bacteria as part of a user-directed and controlled thermal eradication protocol.
	Controller Access	Controller shall be password protected and feature a user-adjustable outlet temperature Mixed outlet temperature can be adjusted/monitored at the valve or remotely by BAS (Building Automation System) or Mobile and Web Apps
	BMS	Controller shall integrate with building automation systems (separate module not required) through BACnet and Modbus protocols and feature local and remote temperature alarms. Systems via either ModBus, Bacnet™ and LonWorks™ protocols* with an Ethernet port for access via a web browser.
	Remote Monitoring	System shall provide monitoring and visibility of mixing valve assets across multiple locations/sublocations. System shall offer the ability to remote temperature control for owner and admin levels
	App	App shall be capable of sending system alerts via text and/or email and prioritizes alerts based on levels of safety and potential liability. System offers three user levels for security.
	Other	Programmable hi/lo temperature alert • Programmable schedule for setback of temperature • On board clock for time stamping of error messages • Wi-Fi enable for software upgrades, temperature monitoring, control and alerts • Pre-piped system
Electrical	Power	115-230 V (ac) ± 10%, 50/60 Hz, 20 VA
	Actuator Load	24 V (dc), 0.55 A, 13 W
Warranty	See part 1	
Equivalency	Powers/Watts Intellistation Jr Armstrong Brain 40	

2.10 CENTRAL DIGITAL THERMOSTATIC VALVES, MODERATE TO LARGE FLOW:

- A. Manufacturers: Subject to compliance with requirements, , provide products by one of the following, or approved equal.
1. Leonard Valve
  2. Powers/Watts Intellistation Senior.
  3. PVI Heaters DigiTemp
  4. Or Approved Equal.
- B. General Requirements
1. Standard: ASSE 1017.
  2. Pressure Rating:
    - a. Where circuit line pressure is 125 psi or less, 125 psig minimum unless otherwise indicated.
    - b. Where circuit line pressure is greater than 150 psi but less than 250 psig use class 250 valves minimum unless otherwise indicated.
  3. Material: manufacturer standard corrosion-resistant interior components.
  4. Accessories: Digital temperature control, package factory piped and factory wired for single point connections.
  5. The system is ready for connection to the Building Automation System
  6. Tempered-Water Setting: See Drawings

## 2.11 STRAINERS FOR WATER PIPING

### A. Y-Pattern Strainers:

1. Pressure Rating: 125 psig minimum unless otherwise indicated.
2. Body: Bronze for NPS 2 and smaller; cast iron with interior lining that complies with AWWA C550 or that is FDA approved, epoxy coated and for NPS 2-1/2 and larger.
3. End Connections: Threaded for NPS 2 and smaller; flanged for NPS 2-1/2 and larger.
4. Screen: Stainless steel with round perforations unless otherwise indicated.
5. Perforation Size:
  - a. Strainers NPS 2 and Smaller: 0.020 inch.
  - b. Strainers NPS 2-1/2 to NPS 4: 0.045 inch.
  - c. Strainers NPS 5 and Larger: 0.25 inch.
6. Drain: 1/2 to 2 inch pipe plug 2-1/2 inches and larger - Factory-installed, hose-end drain valve.

## 2.12 OUTLET BOXES

### A. Clothes Washer Outlet Boxes:

### B. Manufacturers: Subject to compliance with requirements, available manufacturers offering products that may be incorporated into the Work, provide products by one of the following, or approved equal.

1. Acorn Engineering Company.
2. Watts; a Watts Water Technologies company.
3. Zurn Industries, LLC.
4. Or Approved Equal.

### C. Data

1. Mounting: Recessed.
2. Material and Finish: Plastic or Stainless-steel box and faceplate.
3. Faucet: Combination valved fitting or separate hot- and cold-water valved fittings complying with ASME A112.18.1. Include garden-hose thread complying with ASME B1.20.7 on outlets.
4. Supply Shutoff Fittings: NPS 1/2 gate, globe, or ball valves and NPS 1/2 copper, water tubing.
5. Drain: NPS 2 standpipe and P-trap for direct waste connection to drainage piping.
6. Inlet Hoses: Two 60-inch- long, braided stainless steel household clothes washer inlet hoses with female, garden-hose-thread couplings. Include rubber washers.
7. Drain Hose: One 48-inch- long, rubber household clothes washer drain hose with hooked end.
8. Basis of Design: Watts DWB

- D. Icemaker Outlet Boxes:
- E. **Manufacturers: Subject to compliance with requirements, available manufacturers offering products that may be incorporated into the Work, provide products by one of the following, or approved equal.**
  - 1. Acorn Engineering Company.
  - 2. IPS Corporation.
  - 3. Oatey.
  - 4. Or Approved Equal.
- F. Data
  - 1. Mounting: Recessed.
  - 2. Material and Finish: Plastic or Stainless-steel box and faceplate.
  - 3. Faucet: Valved fitting complying with ASME A112.18.1. Include NPS 1/2 or smaller copper tube outlet.
  - 4. Supply Shutoff Fitting: NPS 1/2 gate, globe, or ball valve and NPS 1/2 copper, water tubing.
  - 5. Integral Water Hammer Arrestor
  - 6. Basis of Design: Sioux Chief Ox Box with water hammer arrestor

#### 2.13 HOSE STATIONS

- A. **Manufacturers: Subject to compliance with requirements, available manufacturers offering products that may be incorporated into the Work, provide products by one of the following, or approved equal.**
  - 1. Leonard Valve Company.
  - 2. Strahman Valves, Inc.
  - 3. T & S Brass and Bronze Works, Inc.
- B. Single-Temperature-Water Hose Stations HS-1:
  - 1. Standard: ASME A112.18.1.
  - 2. Cabinet: Stainless-steel enclosure with exposed valve handle, hose connection, and hose rack. Include thermometer in front.
  - 3. Hose-Rack Material: Stainless steel.
  - 4. Body Material: Bronze with stainless-steel wetted parts.
  - 5. Body Finish: Chrome plated.
  - 6. Mounting: Wall, with reinforcement.
  - 7. Supply Fittings: NPS 3/4 gate, globe, or ball valve and check valve and NPS 3/4 copper, water tubing. Omit check valve if check stop is included with fitting.
  - 8. Hose: Manufacturer's standard, for service fluid, temperature, and pressure; 50 feet long.
  - 9. Nozzle: With hand-squeeze, on-off control.

10. Vacuum Breaker:
    - a. Integral or factory-installed, non-removable, manual-drain-type, hose-connection vacuum breaker complying with ASSE 1011 or backflow preventer complying with ASSE 1052.
    - b. Garden-hose thread complying with ASME B1.20.7 on outlet.
  11. Basis of Design: Strahman
- C. Hot- and Cold-Water Hose Stations: HS-2
1. Standard: ASME A112.18.1.
  2. Faucet Type: Thermostatic mixing valve.
  3. Cabinet: Stainless-steel enclosure with exposed valve handles, hose connection, and hose rack. Include thermometer in front.
  4. Hose-Rack Material: Stainless steel.
  5. Body Material: Bronze with stainless-steel wetted parts.
  6. Body Finish: Chrome plated.
  7. Mounting: Wall, with reinforcement.
  8. Supply Fittings: Two NPS 3/4 gate, globe, or ball valves and check valves and NPS 3/4 copper, water tubing. Omit check valves if check stops are included with fitting.
  9. Hose: Manufacturer's standard, for service fluid, temperature, and pressure; 50 feet long.
  10. Nozzle: With hand-squeeze, on-off control.
  11. Vacuum Breaker: Integral or factory-installed, non-removable, manual-drain-type, hose-connection vacuum breaker complying with ASSE 1011 or backflow preventer complying with ASSE 1052; and garden-hose thread complying with ASME B1.20.7 on outlet.
  12. Basis of Design: Strahman
- 2.14 HOSE BIBBS
- A. Hose Bibbs :
1. Standard: ASME A112.18.1 for sediment faucets.
  2. Body Material: Bronze.
  3. Seat: Bronze, replaceable.
  4. Supply Connections: NPS 1/2 or NPS 3/4 threaded or solder-joint inlet.
  5. Outlet Connection: Garden-hose thread complying with ASME B1.20.7.
  6. Pressure Rating: 125 psig.
  7. Vacuum Breaker: Integral non-removable, drainable, hose-connection vacuum breaker complying with ASSE 1011.
  8. Finish for Mechanical Rooms: Bronze.
  9. Basis of Design: **Watts HB-1** 3/4 inch

10. Finish for Equipment Rooms: Chrome or nickel plated.
  - a. Basis of Design: Chicago 952-CP
11. Finish for Service Areas: Chrome or nickel plated.
  - a. Basis of Design: Chicago 998-633RCF
12. Finish for Finished Rooms, including toilet rooms: Chrome or nickel plated. verify finish with architect
  - a. Basis of Design: Chicago 952-CP, handle to be turned over to owner
13. Operation for Finished Rooms: key handle, furnish a key for each device installed
14. Include operating key with each operating-key hose bibb.
15. Include integral wall flange with each chrome- or nickel-plated hose bibb.

## 2.15 WALL HYDRANTS

### A. Non-freeze, Cold-Water Wall Hydrants

1. Manufacturers: Subject to compliance with requirements, available manufacturers offering products that may be incorporated into the Work, provide products by one of the following, or approved equal.
  - a. Smith, Jay R. Mfg. Co.
  - b. Watts; a Watts Water Technologies company.
  - c. Zurn Industries, LLC.
  - d. Or Approved Equal.
2. Standard: ASME A112.21.3M for concealed or exposed-outlet, self-draining wall hydrants.
3. Pressure Rating: 125 psig.
4. Operation: Loose key.
5. Casing and Operating Rod: Of length required to match wall thickness. Include wall clamp.
6. Inlet: NPS 3/4 or NPS 1.
7. Outlet: Concealed, with integral vacuum breaker and garden-hose thread complying with ASME B1.20.7.
8. Box: Deep, flush mounted with cover.
9. Box and Cover Finish: Match architect's selection for finish. .
10. Outlet: Exposed, with integral vacuum breaker and garden-hose thread complying with ASME B1.20.7.
11. Nozzle and Wall-Plate Finish: Match architects' selection for finish.
12. Operating Keys(s): Two with each wall hydrant.

### A. Non-freeze, Hot- and Cold-Water Wall Hydrants: Tag # WH-2

1. Manufacturers: Subject to compliance with requirements, available manufacturers offering products that may be incorporated into the Work, provide products by one of the following, or approved equal.
    - a. Smith, Jay R. Mfg. Co.
    - b. Watts; a Watts Water Technologies company.
    - c. Zurn Industries, LLC.
    - d. Or Approved Equal.
  2. Standard: ASME A112.21.3M for concealed or exposed-outlet, self-draining wall hydrants.
  3. Pressure Rating: 125 psig.
  4. Operation: Loose key.
  5. Casing and Operating Rods: Of length required to match wall thickness. Include wall clamps.
  6. Inlet: NPS 3/4 or NPS 1.
  7. Outlet: Concealed.
  8. Box: Deep, flush mounted with cover.
  9. Box and Cover Finish: Chrome plated.
  10. Vacuum Breaker:
    - a. Non-removable, manual-drain-type, hose-connection vacuum breaker complying with ASSE 1011 or backflow preventer complying with ASSE 1052.
    - b. Garden-hose thread complying with ASME B1.20.7 on outlet.
  11. Operating Keys(s): Two with each wall hydrant.
- A. Vacuum Breaker Wall Hydrants
1. Manufacturers: Subject to compliance with requirements, available manufacturers offering products that may be incorporated into the Work, provide products by one of the following, or approved equal.
    - a. Smith, Jay R. Mfg. Co.
    - b. Watts; a Watts Water Technologies company.
    - c. Zurn Industries, LLC.
    - d. Or Approved Equal.
  2. Standard: ASSE 1019, Type A or Type B.
  3. Type: Freeze-resistant, automatic draining with integral air-inlet valve.
  4. Classification: Type B, for automatic draining with hose removed or with hose attached and nozzle closed.
  5. Pressure Rating: 125 psig.
  6. Operation: Loose key or wheel handle.

7. Casing and Operating Rod: Of length required to match wall thickness. Include wall clamp.
8. Inlet: NPS 1/2 or NPS 3/4.
9. Outlet: Exposed with garden-hose thread complying with ASME B1.20.7.
- 10. Basis of design:     Woodford Y95**

B. Non-freeze, Automatic Draining Roof Hydrants with Roof Mounting System

1. Standard: ASSE 1052
2. Operation: Lever piston operating mechanism with drain port designed to discharge into the drainage system automatically via 1/8 inch NPT thus not requiring a flushing maintenance procedure.
3. Roof attachment: Separate mounting system consisting of cast iron basin to be installed by the roofing contractor.
4. Length: Valve body inlet to be in heated area.
5. Inlet: 1" NPT
6. Outlet: Woodford Model 50HF dual check vacuum breaker compliant with ASSE 1052
  - a. Garden-hose thread complying with ASME B1.20.7 on outlet.
7. Venturi style drain free roof hydrants not recommended.
8. Basis of Design: Woodford Model RHY2-MS

2.16 DRAIN VALVES

A. Ball-Valve-Type, Hose-End Drain Valves:

1. Standard: MSS SP-110 for standard-port, two-piece ball valves.
2. Pressure Rating: 400-psig minimum CWP.
3. Size: NPS 3/4.
4. Body: Copper alloy.
5. Ball: Chrome-plated brass.
6. Seats and Seals: Replaceable.
7. Handle: Vinyl-covered steel.
8. Inlet: Threaded or solder joint.
9. Outlet: Threaded, short nipple with garden-hose thread complying with ASME B1.20.7 and cap with brass chain.

B. Stop-and-Waste Drain Valves:

1. Standard: MSS SP-110 for ball valves or MSS SP-80 for gate valves.
2. Pressure Rating: 200-psig minimum CWP or Class 125.
3. Size: NPS 3/4.
4. Body: Copper alloy or ASTM B 62 bronze.

5. Drain: NPS 1/8 side outlet with cap.

## 2.17 WATER-HAMMER ARRESTERS

### A. Water-Hammer Arresters:

1. Manufacturers: Subject to compliance with requirements, available manufacturers offering products that may be incorporated into the Work, provide products by one of the following, or approved equal.
  - a. Smith, Jay R. Mfg. Co.
  - b. Watts; a Watts Water Technologies company.
  - c. Zurn Industries, LLC.
  - d. Or Approved Equal.
2. Standard: ASSE 1010 or PDI-WH 201.
3. Type: Metal bellows or Copper tube with piston.
4. Size: ASSE 1010, Sizes AA and A through F, or PDI-WH 201, Sizes A through F.

## 2.18 AIR VENTS

### A. Bolted-Construction Automatic Air Vents:

1. Body: Bronze.
2. Pressure Rating and Temperature: 125-psig minimum pressure rating at 140 deg F.
3. Float: Replaceable, corrosion-resistant metal.
4. Mechanism and Seat: Stainless steel.
5. Size: NPS 1/2 minimum inlet.
6. Inlet and Vent Outlet End Connections: Threaded.

### B. Welded-Construction Automatic Air Vents :

1. Body: Stainless steel.
2. Pressure Rating: 150-psig minimum pressure rating.
3. Float: Replaceable, corrosion-resistant metal.
4. Mechanism and Seat: Stainless steel.
5. Size: NPS 3/8 minimum inlet.
6. Inlet and Vent Outlet End Connections: Threaded.

## 2.19 TRAP-SEAL PRIMER DEVICE

### A. Supply-Type, Trap-Seal Primer Device

1. Manufacturers: Subject to compliance with requirements, available manufacturers offering products that may be incorporated into the Work, provide products by one of the following, or approved equal.
  - a. Smith, Jay R. Mfg. Co.

- b. Watts; a Watts Water Technologies company.
  - c. Zurn Industries, LLC.
  - d. Or Approved Equal.
- 2. Standard: ASSE 1018.
- 3. Pressure Rating: 125 psig minimum.
- 4. Body: Bronze.
- 5. Inlet and Outlet Connections: NPS 1/2 threaded, union, or solder joint.
- 6. Gravity Drain Outlet Connection: NPS 1/2 threaded or solder joint.
- 7. Finish: Chrome plated, or rough bronze for units used with pipe or tube that is not chrome finished.
- 8. Basis of Design: Precision Plumbing model PRO1-500 Brass
- 9. Precision Plumbing model PRO1-ULP500 chrome

## 2.20 TRAP-SEAL PRIMER SYSTEMS

### A. Trap-Seal Primer Systems

- 1. Manufacturers: Subject to compliance with requirements, available manufacturers offering products that may be incorporated into the Work, provide products by one of the following, or approved equal.
  - a. Precision Plumbing Products.
  - b. Zurn Industries, LLC.
  - c. Or Approved Equal.
- 2. Standard: ASSE 1044.
- 3. Piping: NPS 3/4, ASTM B 88, Type L; copper, water tubing.
- 4. Cabinet: Recessed or Surface per the architect, -mounted steel box with stainless-steel cover.
- 5. Electric Controls: 24-hour timer, solenoid valve, and manual switch for 120-V ac power.
  - a. Electrical Components, Devices, and Accessories: Listed and labeled as defined in NFPA 70, by a qualified testing agency, and marked for intended location and application.
- 6. Vacuum Breaker: ASSE 1001.
- 7. Number Outlets: field verify.per number of traps
- 8. Size Outlets: NPS 1/2.
- 9. Basis of Design: Zurn Z-1020

## 2.21 FLEXIBLE CONNECTORS

- A. Manufacturers: Subject to compliance with requirements, available manufacturers offering products that may be incorporated into the Work, provide products by one of the following, or approved equal.

1. Flexicraft Industries.
  2. Metraflex Company (The).
  3. Universal Metal Hose.
  4. Or Approved Equal.
- B. Bronze-Hose Flexible Connectors: Corrugated-bronze tubing with bronze wire-braid covering and ends brazed to inner tubing.
1. Working-Pressure Rating: Minimum 250 psig.
  2. End Connections NPS 2 and Smaller: Threaded copper pipe or plain-end copper tube.
  3. End Connections NPS 2-1/2 and Larger: Flanged copper alloy.
- C. Stainless-Steel-Hose Flexible Connectors: Corrugated-stainless-steel tubing with stainless-steel wire-braid covering and ends welded to inner tubing.
1. Working-Pressure Rating: Minimum 250 psig.
  2. End Connections NPS 2 and Smaller: Threaded steel-pipe nipple.
  3. End Connections NPS 2-1/2 and Larger: Flanged steel nipple.

## 2.22 LARGE CAPACITY WATER HAMMER ARRESTORS

- A. Equipment
1. Tee to main line
  2. Isolation valve
  3. P-Style fitting below absorber
  4. Shock absorber
  5. Pressure gauge
- B. Manufacturers:
1. Basis-of-Design Product: Subject to compliance with requirements, provide packaged hytol indicated as BOD below or a comparable product by one of the following:
    - a. BOD: Zurn 1712 Series Accumutrol Water Hammer Arrestor **\*\*LINK\*\***
    - b. JR Smith
    - c. Watts Regulator
    - d. Or Approved Equal.
- C. Shock Absorbing Equipment
1. Location: See Drawings.
  2. ZURN Z1712 Shock associated with solenoid or other quick-closing valves serving heavy equipment shall be controlled by installation of ZURN Z1712 ACCUMUTROL, complete with floating stainless steel spherical piston, surge chamber, valve and gauge assembly
  3. Maximum Temperature: 500 deg F .
  4. Maximum Pressure: 200 PSI Residual

5. Orientation: Vertical
6. Size: See Schedule Sheet
7. Support: Anchor supply pipe to building structure

## 2.23 LARGE CAPACITY SURGE CHAMBER

### A. General

1. Description
  - a. This specification describes the requirements for a Bladder Surge Control System. The purpose of the system is to minimize transient pressures from shock waves due to pump start- up, shutdown or valve shut-off.
  - b. The work included in this section consists of the furnishing of all labor, materials, equipment and appurtenances for surge protection at the discharge side of each well pump to prevent column separation and/or to limit surge upon pump shutdown including a power failure situation.
  - c. The bladder type surge arrestor shall consist of a cylindrical pressure tank for surge control, including: bladder, shell assembly, gas plate assembly, rupture disc, pressure gauges, other miscellaneous appurtenances and constructed in accordance with ASME Section VIII Pressure Vessel Code Division I. Design pressure shall be 114 psig and verified by the surge suppressor manufacturer.
  - d. The surge arrestor shall be constructed on a reinforced concrete foundation with steel supports as detailed on the Drawings.
2. General Requirements
  - a. Available Manufacturers: Subject to compliance with requirements, manufacturers offering products that may be incorporated into the Work include, but are not limited to, the following:
    - 1) Young Engineering and Manufacturing Inc.
    - 2) Blacoh Fluid Control
    - 3) ARI Optimal Flow Solutions
    - 4) Wessels Co Inc.
    - 5) Or Approved Equal.
  - b. The supplier must have a minimum of five years' experience and must submit a surge analysis for the engineer's approval (or verify analysis performed by others) showing: input data for the piping system, initial flow rate, initial and maximum expanded air volume and envelope of maximum and minimum line pressure throughout the pipe system. In addition, a predicted pressure-time history at the pump station and at other critical points in the pipe system will also be required.
  - c. The bladder surge control system shall include a surge tank, bladder, gas valve and other miscellaneous appurtenances.
  - d. The surge tank must be designed to match the dynamics of the pumping system.
  - e. The surge tank supplier shall indicate the percent of fluid in the tank, with a nominal value of 60% fluid to 40% nitrogen gas.

- f. An operation and maintenance manual must be provided and personnel representing the bladder type surge arrestor manufacturer are required to check the installation and instruct the owner's personnel in the operating of the surge control system. A field test of the equipment will be performed in conjunction with this site visit.
  - 3. Reference Specifications, Codes and Standards
    - a. Pressure vessels shall be in accordance with the latest revision of the American Society of Mechanical Engineers (ASME) Code for Unfired Pressure Vessels, Section VIII, Division 1.
    - b. All local Plumbing Codes shall be met.
    - c. The system and anchorage of the tank shall conform to the Uniform Building Code (UBC).
  - 4. Surge Analysis
    - a. The manufacturer shall review the plans and specifications and the surge analysis as performed by others in regard to the system hydraulics and the surge vessels.
    - b. Results of the analysis shall indicate that the design and size of the surge arrestor provided will adequately protect the system from excessive pressure surges and shall show the hydro pneumatic bladder type surge control system will meet the Performance Guarantees.
- B. Materials
  - 1. The surge vessel shall be rated for use with Potable Water Systems
  - 2. Bladder Surge Tank
    - a. The surge tank shall be constructed of carbon steel for the maximum allowable working pressure in accordance with the ASME Pressure Vessel Code, Section VIII. The surge arrestor shall be provided with a flanged line connection, adequate supports, lifting lugs and couplings for a drain, pressure gauge, bladder, gas inlet nozzle, energy dissipater plate and manway.
    - b. The surge tank Volume: see schedule sheet
    - c. The shell shall be constructed of carbon steel and have a manufacturer's standard manway for internal inspection and access to rubber bladder. The tank shall be internally sand blasted and coated with epoxy to meet potable water standards (10-12 MDFT).
    - d. The bladder shall have a gas valve to add or release gas to a given pre-charge with nitrogen gas. The unit shall also have a 4" diameter pressure gauge.
    - e. Breaker. The nozzle loss factor shall be an outflow  $k=2.0$  and an inflow  $k=3.2$  to the full equivalent flow area of the inlet diameter nozzle. The tank shall be fitted with a 304-stainless steel perforated plate to prevent the bladder from escaping through the fluid port.
    - f. The unit shall have support legs or saddles designed by manufacturer verified per UBC Seismic Zone requirements to withstand earthquake loading.
    - g. The bladder surge tank shall be equipped with a non-intrusive volume indicator device to monitor gas pre-charge levels without disrupting tank operations.

- h. This device shall be portable and be able to be used on bladder surge tank to determine the condition of the bladder gas pre-charge.
  - 3. Miscellaneous Components
    - a. Pressure Gauge
    - b. Gas Charging Nozzle
    - c. Rupture Disc
    - d. Electronic Volume Indicator (Portable)
- C. System Data
- 1. For surge protection purposes, the following criteria and data shall be used for designing and sizing the surge arrestor.
    - a. Pump Size and Pumping Conditions
    - b. Approximate System-Head Curve Data for Design Flow Rates (Interim and Ultimate) the individual well information regarding the pump column length, diameter, bowl setting, pump (dynamic) well water level and other critical hydraulic parameters can be obtained in the plans, specifications and engineering documentation.
    - c. Pipeline and Elevation Data
  - 2. Detailed distribution system information can be obtained from the owner or owner's engineer.
    - a. Hydraulic Design Criteria
    - b. Friction Factor: Hazen-Williams
    - c. The surge vessel is to be connected to the discharge pipeline as shown on the Plans. Non- slam check valves are utilized on the discharge of each pumping unit.
    - d. The manufacturer shall include surge/flow conditions in the design of the surge vessel.
  - 3. The minimum net tank volume shall be calculated in gallons.
  - 4. The surge tank shall contain approximately 60-percent fluid under steady state flow conditions and be connected to the discharge pipeline with a minimum-size same as drain pipe.
  - 5. Physical Sizing
    - a. The surge arrestor shall be sized to fit the pump station site area limitations as shown on the Drawings. Any variation of the size indicated on the Drawings shall be subject to approval by the Engineer and Owner.

## **PART 3 - EXECUTION**

### **3.1 INSTALLATION**

- A. Install backflow preventers in each water supply to mechanical equipment and systems and to other equipment and water systems that may be sources of contamination. Comply with authorities having jurisdiction.

1. Locate backflow preventers in same room as connected equipment or system.
  2. Install drain for backflow preventers with atmospheric-vent drain connection with air-gap fitting, fixed air-gap fitting, or equivalent positive pipe separation of at least two pipe diameters in drain piping and pipe-to-floor drain. Locate air-gap device attached to or under backflow preventer. Simple air breaks are unacceptable for this application.
  3. Do not install bypass piping around backflow preventers.
- B. Install water regulators with inlet and outlet shutoff valves and bypass with memory-stop balancing valve. Install pressure gauges on inlet and outlet.
- C. Install water-control valves with inlet and outlet shutoff valves and bypass with globe valve. Install pressure gauges on inlet and outlet.
- D. Install balancing valves in locations where they can easily be adjusted.
- E. Install temperature-actuated, water mixing valves with check stops or shutoff valves on inlets and with shutoff valve on outlet.
1. Install cabinet-type units recessed in or surface mounted on wall as specified.
- F. Install Y-pattern strainers for water on supply side of each control valve water pressure-reducing valve solenoid valve and pump.
- G. Install outlet boxes recessed in wall or surface mounted on wall. Install 2-by-4-inch fire-retardant-treated-wood blocking, wall reinforcement between studs. Comply with requirements for fire-retardant-treated-wood blocking in Division 06.
- H. Install hose stations with check stops or shutoff valves on inlets and with thermometer on outlet.
1. Install cabinet-type units recessed in or surface mounted on wall as specified. Install 2-by-4-inch fire-retardant-treated-wood blocking, wall reinforcement between studs. Comply with requirements for fire-retardant-treated-wood blocking in Division 06.
- I. Install ground hydrants with 1 cubic yard of crushed gravel around drain hole. Set ground hydrants with box flush with grade.
- J. Install draining-type post hydrants with 1 cubic yard of crushed gravel around drain hole. Set post hydrants in concrete paving or in 1 cubic foot of concrete block at grade.
- K. Set non-freeze, non-draining-type post hydrants in concrete or pavement.
- L. Set freeze-resistant yard hydrants with riser pipe in concrete or pavement. Do not encase canister in concrete.
- M. Install water-hammer arresters in water piping according to PDI-WH 201.
- N. Install air vents at high points of water piping. Install drain piping and discharge onto floor drain.
- O. Install supply-type, trap-seal primer valves with outlet piping pitched down toward drain trap a minimum of 1 percent, and connect to floor-drain body, trap, or inlet fitting. Adjust valve for proper flow.
- P. Install drainage-type, trap-seal primer valves as lavatory trap with outlet piping pitched down toward drain trap a minimum of 1 percent, and connect to floor-drain body, trap, or inlet fitting.
- Q. Install trap-seal primer systems with outlet piping pitched down toward drain trap a minimum of 1 percent, and connect to floor-drain body, trap, or inlet fitting. Adjust system for proper flow.

### 3.2 CONNECTIONS

- A. Comply with requirements for ground equipment in Division 26.
- B. Fire-retardant-treated-wood blocking is specified in Division 26 for electrical connections.

### 3.3 LABELING AND IDENTIFYING

- A. Equipment Nameplates and Signs: Install engraved plastic-laminate equipment nameplate or sign on or near each of the following:
  - 1. Pressure vacuum breakers.
  - 2. Intermediate atmospheric-vent backflow preventers.
  - 3. Reduced-pressure-principle backflow preventers.
  - 4. Double-check, backflow-prevention assemblies.
  - 5. Carbonated-beverage-machine backflow preventers.
  - 6. Dual-check-valve backflow preventers.
  - 7. Reduced-pressure-detector, fire-protection, backflow-preventer assemblies.
  - 8. Double-check, detector-assembly backflow preventers.
  - 9. Water pressure-reducing valves.
  - 10. Calibrated balancing valves.
  - 11. Primary, thermostatic, water mixing valves.
  - 12. Manifold, thermostatic, water mixing-valve assemblies.
  - 13. Photographic-process, thermostatic, water mixing-valve assemblies.
  - 14. Primary water tempering valves.
  - 15. Outlet boxes.
  - 16. Hose stations.
  - 17. Supply-type, trap-seal primer valves.
  - 18. Trap-seal primer systems.
- B. Distinguish among multiple units, inform operator of operational requirements, indicate safety and emergency precautions, and warn of hazards and improper operations, in addition to identifying unit. Nameplates and signs are specified in Division 22.

### 3.4 FIELD QUALITY CONTROL

- A. Perform the following tests and inspections:
  - 1. Test each pressure vacuum breaker reduced-pressure-principle backflow preventer double-check, backflow-prevention assembly and double-check, detector-assembly backflow preventer Insert type according to authorities having jurisdiction and the device's reference standard.
- B. Water piping specialties will be considered defective if they do not pass tests and inspections.
- C. Prepare test and inspection reports.

3.5 ADJUSTING

- A. Set field-adjustable pressure set points of water pressure-reducing valves.
- B. Set field-adjustable flow set points of balancing valves.
- C. Set field-adjustable temperature set points of temperature-actuated or Digital type water mixing valves.

END OF SECTION

H:\Y0586.00\DOC\SPEC\2025\_02-20\_IFB\221119\_WATER PIPING SPECIALTIES.DOC

## SECTION 221319 - SANITARY WASTE PIPING SPECIALTIES

### PART 1 - GENERAL

#### 1.1 RELATED DOCUMENTS

- A. Certain requirements common to all the mechanical and electrical trades (Fire Suppression, Plumbing, HVAC, Electrical, and Tele/Data) are specified in Division 20. To avoid repetition, they are not repeated in each relevant Division and Section. However, these requirements are applicable to the work of this Section and are hereby incorporated by reference.
- B. Drawings and general provisions of the Contract, including General and Supplementary Conditions and Division 01 Specification Sections, apply to this Section.

#### 1.2 SUMMARY

- A. Section Includes:
  - 1. Backwater valves.
  - 2. Cleanouts.
  - 3. Floor drains.
  - 4. Trench drains.
  - 5. Channel drainage systems.
  - 6. Roof flashing assemblies.
  - 7. Through-penetration firestop assemblies.
  - 8. Miscellaneous sanitary drainage piping specialties.
  - 9. Drain heat recovery devices
  - 10. Flashing materials.
  - 11. FOG disposal systems.
- B. Related Requirements:
  - 1. Division 33 for storm draining piping and piping specialties outside the building.

#### 1.3 DEFINITIONS

- A. ABS: Acrylonitrile-butadiene-styrene plastic.
- B. FOG: Fats, oils, and greases.
- C. FRP: Fiberglass-reinforced plastic.
- D. HDPE: High-density polyethylene plastic.
- E. PE: Polyethylene plastic.
- F. PP: Polypropylene plastic.
- G. PVC: Polyvinyl chloride plastic.

#### 1.4 ACTION SUBMITTALS

- A. Product Data: For each type of product indicated. Include rated capacities, operating characteristics, and accessories for the following:
  - 1. FOG disposal systems.
  - 2. Grease interceptors.
  - 3. Grease removal devices.
  - 4. Oil interceptors.
- B. Shop Drawings: Show fabrication and installation details for frost-resistant vent terminals.
  - 1. Wiring Diagrams: Power, signal, and control wiring.

#### 1.5 INFORMATIONAL SUBMITTALS

- A. Manufacturer Seismic Qualification Certification: Submit certification that FOG disposal systems, grease interceptors, grease removal devices, oil interceptors, accessories, and components will withstand seismic forces defined in Division 22. Include the following:
  - 1. Basis for Certification: Indicate whether withstand certification is based on actual test of assembled components or on calculation.
    - a. The term "withstand" means "the unit will remain in place without separation of any parts from the device when subjected to the seismic forces specified."
    - b. The term "withstand" means "the unit will remain in place without separation of any parts from the device when subjected to the seismic forces specified and the unit will be fully operational after the seismic event."
  - 2. Dimensioned Outline Drawings of Equipment Unit: Identify center of gravity and locate and describe mounting and anchorage provisions.
  - 3. Detailed description of equipment anchorage devices on which the certification is based and their installation requirements.
- B. Field quality-control reports.

#### 1.6 CLOSEOUT SUBMITTALS

- A. Operation and Maintenance Data: For drainage piping specialties to include in emergency, operation, and maintenance manuals.

#### 1.7 QUALITY ASSURANCE

- A. Drainage piping specialties shall bear label, stamp, or other markings of specified testing agency.
- B. Electrical Components, Devices, and Accessories: Listed and labeled as defined in NFPA 70, Article 100, by a testing agency acceptable to authorities having jurisdiction, and marked for intended use.
- C. Comply with NSF 14, "Plastics Piping Components and Related Materials," for plastic sanitary piping specialty components.

1.8 COORDINATION

- A. Coordinate size and location of concrete bases. Cast anchor-bolt inserts into bases. Concrete, reinforcement, and formwork requirements are specified in Division 03.
- B. Coordinate size and location of roof penetrations.

1.9 MAINTENANCE MATERIAL SUBMITTALS

- A. Furnish extra materials described below that match products installed and that are packaged with protective covering for storage and identified with labels describing contents.
  - 1. Cultures: Provide 1-gal. bottles of bacteria culture recommended by manufacturer of FOG disposal systems equal to 200 percent of amount installed, but no fewer than two 1-gal. bottles.

PART 2 - PRODUCTS

2.1 BACKWATER VALVES

- A. Horizontal, Cast-Iron Backwater Valves:
  - 1. **Manufacturers:** Subject to compliance with requirements, available manufacturers offering products that may be incorporated into the Work, provide products by one of the following, or approved equal.
    - a. Smith, Jay R. Mfg. Co.
    - b. Watts; a Watts Water Technologies company.
    - c. Zurn Industries, LLC.
    - d. Or Approved Equal.
  - 2. Standard: ASME A112.14.1.
  - 3. Size: Same as connected piping.
  - 4. Body: Cast iron.
  - 5. Cover: Cast iron with bolted or threaded access check valve.
  - 6. End Connections: Hub and spigot or hubless.
  - 7. Type Check Valve: Removable, bronze, swing check, factory assembled, or field modified to hang open for airflow unless subject to backflow condition.
  - 8. Extension: ASTM A 74, Service class; full-size, cast-iron, soil-pipe extension to field-installed cleanout at floor; replaces backwater valve cover.
- B. Drain-Outlet Backwater Valves:
  - 1. **Manufacturers:** Subject to compliance with requirements, available manufacturers offering products that may be incorporated into the Work, provide products by one of the following, or approved equal.
    - a. Smith, Jay R. Mfg. Co.
    - b. Watts; a Watts Water Technologies company.

- c. Zurn Industries, LLC.
  - d. Or Approved Equal.
- 2. Size: Same as floor drain outlet.
- 3. Body: Cast iron or bronze made for vertical installation in bottom outlet of floor drain.
- 4. Check Valve: Removable ball float.
- 5. Inlet: Threaded.
- 6. Outlet: Threaded or spigot.
- C. Horizontal, Plastic Backwater Valves
  - 1. **Manufacturers:** Subject to compliance with requirements, available manufacturers offering products that may be incorporated into the Work, provide products by one of the following, or approved equal.
    - a. Oatey.
    - b. Sioux Chief Manufacturing Company, Inc.
    - c. Zurn Industries, LLC.
    - d. Or Approved Equal.
  - 2. Size: Same as connected piping.
  - 3. Body: PVC.
  - 4. Cover: Same material as body with threaded access to check valve.
  - 5. Check Valve: Removable swing check.
  - 6. End Connections: Socket type.

## 2.2 CLEANOUTS

- A. See Part 3 of this specification for cleanout schedule
- B. Horizontal Cast-Iron Exposed Cleanouts: Type A
  - 1. Application: exposed horizontal pipe runs above slab in line or end cleanout
  - 2. **Manufacturers:** Subject to compliance with requirements, provide products by one of the following, or approved equal.
    - a. Jay R. Smith Mfg Co; a division of Morris Group International.
    - b. WATTS.
    - c. Zurn Industries, LLC.
    - d. Or Approved Equal.
  - 3. Standard: ASME A112.36.2M.
  - 4. Size: Same as connected drainage piping
  - 5. Body Material: cast-iron soil pipe in line or end placed into fitting approved tee as required to match connected piping.
  - 6. Closure: Countersunk or raised-head, brass plug.

7. Closure Plug Size: Same as cleanout size.
  8. Basis of Design: **Watts 460** or TY with **Generic**
- C. Finish Area Floor Cleanouts for Cast Iron Systems: Type B
- Application: Cast iron pipe horizontal runs, finish areas. i.e. tile or terrazzo or epoxy finish.
1. **Manufacturers:** Subject to compliance with requirements, available manufacturers offering products that may be incorporated into the Work, provide products by one of the following, or approved equal.
    - a. **Smith, Jay R. Mfg. Co.**
    - b. **Watts; a Watts Water Technologies company.**
    - c. **Zurn Industries, LLC.**
    - d. Or Approved Equal.
  2. Standard: ASME A112.36.2M, for adjustable housing cleanouts.
  3. Size: Same as connected branch.
  4. Body or Ferrule Material: Match Piping.
  5. Clamping Device: match pipe material
  6. Closure: Brass plug with tapered threads.
  7. Adjustable Housing Material: Cast iron with threads set-screws or other device.
  8. Frame and Cover Material and Finish: Nickel-bronze
  9. Frame and Cover Shape: Round.
  10. Top-Loading Classification: Heavy Duty.
  11. For Carpeted areas use carpet marker
  12. Basis of Design: **Watts Model CO-200R**
- D. Industrial Area Floor Cleanouts for Cast Iron Systems: Type B XH
1. Application: Cast iron pipe horizontal or vertical runs, non-finish industrial areas mechanical rooms, penthouses or areas where forklifts or pallet jacks are used
  2. **Manufacturers:** Subject to compliance with requirements, available manufacturers offering products that may be incorporated into the Work, provide products by one of the following, or approved equal.
    - a. **Smith, Jay R. Mfg. Co.**
    - b. **Watts.**
    - c. **Zurn Industries, LLC.**
    - d. Or Approved Equal.
  3. Standard: ASME A112.36.2M, for adjustable housing cleanouts.
  4. Size: Same as connected branch.
  5. Body or Ferrule Material: Match Piping.
  6. Clamping Device: match pipe material

7. Closure: Brass plug with tapered threads.
8. Adjustable Housing Material: Cast iron with threads set-screws or other device.
9. Frame and Cover Material and Finish: Nickel-bronze, copper alloy or Stainless steel.
10. Frame and Cover Shape: Round.
11. Top-Loading Classification: Extra Heavy Duty.
12. For Carpeted areas use carpet marker
13. Basis of Design: Watts CO-200-RX, for large sizes Watts Model CO-300 MF with inside cleanout added

E. Exposed Floor Cleanouts for Stainless Steel Systems Type C

1. Application: For stainless steel piping systems where specified for kitchens and other uses
2. Manufacturers: Subject to compliance with requirements, provide products by one of the following, or approved equal.
  - a. BLÜCHER; A Watts brand.
  - b. Watts
  - c. Zurn Industries, LLC.
  - d. Or Approved Equal.
3. Standards: ASME A112.3.1; NSF listed.
4. Size: Same as connected branch.
5. Housing: Type 316 stainless steel.
6. Closure: Stainless steel with seal Plastic plug.
7. Riser: ASTM A74, Service Class, stainless steel drainage pipe fitting and riser to cleanout.
8. Body or Ferrule: Stainless steel.
9. Clamping Device: Required.
10. Outlet Connection: Inside caulk Spigot Threaded Butt-weld field selected
11. Adjustable Housing Material: Stainless steel with threads setscrews or other device.
12. Frame and Cover Material and Finish: Stainless steel.
13. Frame and Cover Shape: Square.
14. Top-Loading Classification: Heavy Duty.
15. Basis of Design:
  - a. Type C1: Kitchens and finish floor areas. Blucher BCO 140 heavy duty
  - b. Type C2: For industrial areas. Watts 1200-RX-28. Stainless steel extra heavy duty

F. Test Tees for Cast Iron Systems: Type D

Application: Exposed horizontal or vertical in line or “Dandy” cleanout

1. **Manufacturers:** Subject to compliance with requirements, available manufacturers offering products that may be incorporated into the Work, provide products by one of the following, or approved equal.
    - a. **Smith, Jay R. Mfg. Co.**
    - b. **Watts; a Watts Water Technologies company.**
    - c. **Zurn Industries, LLC.**
    - d. Or Approved Equal.
  2. Standard: ASME A112.36.2M and ASTM A 74, ASTM A 888, or CISPI 301, for cleanout test tees.
  3. Size: Same as connected drainage piping.
  4. Body Material: Hub-and-spigot, cast-iron soil-pipe T-branch or hubless, cast-iron soil-pipe test tee as required to match connected piping.
  5. Closure Plug: Countersunk.
  6. Closure Plug Size: Same as or not more than one size smaller than cleanout size.
  7. Basis of Design: **Watts Model CO-460**
- G. Wall Cleanouts for Cast Iron Systems: Type E
- Application: Finish area vertical in line or “Dandy” cleanout
1. **Manufacturers:** Subject to compliance with requirements, available manufacturers offering products that may be incorporated into the Work, provide products by one of the following, or approved equal.
    - a. **Smith, Jay R. Mfg. Co.**
    - b. **Watts; a Watts Water Technologies company.**
    - c. **Zurn Industries, LLC.**
    - d. Or Approved Equal.
  2. Standard: ASME A112.36.2M, for cleanouts. Include wall access.
  3. Size: Same as connected drainage piping.
  4. Body Material: T-branch as required to match connected piping.
  5. Closure: Drilled and threaded brass plug.
  6. Closure Plug Size: Same as or not more than one size smaller than cleanout size.
  7. Wall Access: Square, nickel-bronze, copper-alloy, or stainless-steel wall-installation frame and cover.
  8. Basis of Design: **Watts Model CO-460-RD**
- H. Floor Cleanouts for PVC systems: Type F
- Application: Floor Cleanout plastic piping Systems
1. **Manufacturers:** Subject to compliance with requirements, available manufacturers offering products that may be incorporated into the Work, provide products by one of the following, or approved equal.

- a. Sioux Chief Manufacturing Company, Inc.
    - b. Watts; a Watts Water Technologies company.
    - c. Zurn Industries, LLC.
    - d. Or Approved Equal.
  2. Size: Same as connected branch.
  3. Body Material: PVC.
  4. Closure Plug: PVC or PP.
  5. Cover: Round
  6. Riser: Drainage pipe fitting and riser to clean out of same material as drainage piping.
  7. Basis of Design: Watts 200 R -60 for PVC
- I. Penthouse Industrial Floor Cleanouts for Cast Iron Systems: Type G
1. Application: cast iron pipe horizontal for concrete penthouse floor
  2. Manufacturers: Subject to compliance with requirements, available manufacturers offering products that may be incorporated into the Work, provide products by one of the following, or approved equal.
    - a. Smith, Jay R. Mfg. Co.
    - b. Watts.
    - c. Zurn Industries, LLC.
    - d. Or Approved Equal.
  3. Standard: ASME A112.36.2M, for adjustable housing cleanouts.
  4. Size: Same as connected branch.
  5. Body or Ferrule Material: Match Piping.
  6. Clamping Device: match pipe material
  7. Closure: Brass plug with tapered threads
  8. Adjustable Housing Material: Cast iron with threads set screws or another device.
  9. Frame and Cover Material and Finish: Stainless steel.
  10. Frame and Cover Shape: Round.
  11. Top-Loading Classification: Heavy Duty.
  12. For Carpeted areas use carpet marker
  13. Basis of Design:
    - a. For a membrane floor with surface membrane clamp: Watts CO-200-R with C option
    - b. For a poured waterproof floor: Watts CO-200-H with an elastomeric flange
- J. Penthouse Industrial Floor Cleanouts for Cast Iron Systems: Type H
1. Application: cast iron pipe horizontal for concrete floor with membrane

2. **Manufacturers:** Subject to compliance with requirements, available manufacturers offering products that may be incorporated into the Work, provide products by one of the following, or approved equal.
  - a. **Smith, Jay R. Mfg. Co.**
  - b. **Watts.**
  - c. **Zurn Industries, LLC.**
  - d. Or Approved Equal.
3. Standard: ASME A112.36.2M, for adjustable housing cleanouts.
4. Size: Same as connected branch.
5. Body or Ferrule Material: Match Piping.
6. Clamping Device: match pipe material
7. Closure: Brass plug with tapered threads
8. Adjustable Housing Material: Cast iron with threads set-screws or another device.
9. Frame and Cover Material and Finish: Nickle Bronze or Stainless steel.
10. Frame and Cover Shape: Round.
11. Top-Loading Classification: Heavy Duty.
12. For Carpeted areas use carpet marker
  - a. Basis of Design: for a membrane floor with surface membrane clamp: **Watts CO-200-Rwith C option**

## 2.3 FLOOR DRAINS

### A. Cast-Iron Floor Drains : SEE DRAWING SCHEDULE SHEET

1. **Manufacturers:** Subject to compliance with requirements, available manufacturers offering products that may be incorporated into the Work, provide products by one of the following, or approved equal.
  - a. **Smith, Jay R. Mfg. Co.**
  - b. **Watts; a Watts Water Technologies company.**
  - c. **Zurn Industries, LLC.**
  - d. Or Approved Equal.

### B. Stainless-Steel Floor Drains SEE DRAWING SCHEDULE SHEET

1. ASME A112.6.3, Stainless-Steel Floor Drains:
  - a. **Manufacturers:** Subject to compliance with requirements, available manufacturers offering products that may be incorporated into the Work, provide products by one of the following, or approved equal.
    - 1) **Smith, Jay R. Mfg. Co.**
    - 2) **Watts; a Watts Water Technologies company.**
    - 3) **Zurn Industries, LLC.**

4) Or Approved Equal.

C. Plastic Floor Drains SEE DRAWING SCHEDULE SHEET

1. **Manufacturers:** Subject to compliance with requirements, available manufacturers offering products that may be incorporated into the Work, provide products by one of the following, or approved equal.
  - a. Oatey.
  - b. Sioux Chief Manufacturing Company, Inc.
  - c. Zurn Industries, LLC.
  - d. Or Approved Equal.

2.4 TRENCH DRAINS SEE DRAWING SCHEDULE SHEET

A. Trench Drains

1. **Manufacturers:** Subject to compliance with requirements, available manufacturers offering products that may be incorporated into the Work, provide products by one of the following, or approved equal.
  - a. Smith, Jay R. Mfg. Co.
  - b. Watts; a Watts Water Technologies company.
  - c. Zurn Industries, LLC.
  - d. Or Approved Equal.
2. Standard: ASME A112.6.3 for trench drains.
3. Top Loading Classification: Extra Heavy-Duty.
4. Trap Material: Cast iron or Stainless steel. See schedule sheet
5. Trap Pattern: Standard P-trap.

2.5 CHANNEL DRAINAGE SYSTEMS

A. Stainless-Steel Channel Drainage Systems:

1. Non-ASME A112.3.1, Stainless-Steel Channel Drainage Systems:
  - a. **Manufacturers:** Subject to compliance with requirements, available manufacturers offering products that may be incorporated into the Work, provide products by one of the following, or approved equal.
    - 1) Multi Drain Systems, Inc.
    - 2) Zurn Industries, LLC.
    - 3) Or Approved Equal.
2. Type: Modular system of stainless-steel channel sections, grates, and appurtenances; designed so grates fit into channel recesses without rocking or rattling.
  - a. Channel Sections: Interlocking-joint, stainless steel with level invert.

- 1) Dimensions: wide. Include number of units required to form total lengths indicated. On schedule
  - b. Grates: Manufacturer's designation "heavy duty," with slots or perforations and of width and thickness that fit recesses in channels.
    - 1) Material: Stainless steel.
    - 2) Locking Mechanism: Manufacturer's standard device for securing grates to channel sections.
  - c. Covers: Solid stainless steel, of width and thickness that fit recesses in channels, and of lengths indicated.
  - d. Supports, Anchors, and Setting Devices: Manufacturer's standard, unless otherwise indicated.
  - e. Channel-Section Joining and Fastening Materials: As recommended by system manufacturer.
- B. Polymer-Concrete Channel Drainage Systems
  1. Narrow, Sloped-Invert, Polymer-Concrete Channel Drainage Systems:
    - a. **Manufacturers:** Subject to compliance with requirements, available manufacturers offering products that may be incorporated into the Work, provide products by one of the following, or approved equal.
      - 1) ACO USA.
      - 2) Polycast: Hubbell Power Systems, Inc.
      - 3) Smith, Jay R. Mfg. Co.
      - 4) Or Approved Equal.
  2. Narrow, Level-Invert, Polymer-Concrete Channel Drainage Systems:
    - a. **Manufacturers:** Subject to compliance with requirements, available manufacturers offering products that may be incorporated into the Work, provide products by one of the following, or approved equal.
      - 1) ACO USA.
      - 2) Forté Composites, Inc.
      - 3) Josam Company.
      - 4) Or Approved Equal.
  3. Wide, Level-Invert, Polymer-Concrete Channel Drainage Systems:
    - a. **Manufacturers:** Subject to compliance with requirements, available manufacturers offering products that may be incorporated into the Work, provide products by one of the following, or approved equal.
      - 1) ACO USA.
      - 2) Josam Company.
      - 3) Polycast: Hubbell Power Systems, Inc.

- 4) Or Approved Equal.
4. Type: Modular system of channel sections, grates, and appurtenances; designed so grates fit into channel recesses without rocking or rattling.
  - a. Channel Sections: Narrow, interlocking-joint, sloped-invert, polymer-concrete modular units with end caps. Include rounded bottom, with built-in invert slope of 0.6 percent and with outlets in number, sizes, and locations indicated. Include extension sections necessary for required depth.
    - 1) Dimensions: 4-inch inside width. Include number of units required to form total lengths indicated.
    - 2) Frame: Gray-iron or galvanized steel for grates.
  - b. Grates: Manufacturer's designation "heavy duty," with slots or perforations and of width and thickness that fit recesses in channel sections.
    - 1) Material: Ductile iron OR Stainless steel.
    - 2) Locking Mechanism: Manufacturer's standard device for securing grates to channel sections.
  - c. Supports, Anchors, and Setting Devices: Manufacturer's standard, unless otherwise indicated.
  - d. Channel-Section Joining and Fastening Materials: As recommended by system manufacturer.
  - e. Channel Sections: Wide, interlocking-joint, precast, polymer-concrete modular units with end caps. Include flat or rounded bottom, with level invert and with outlets in number, sizes, and locations indicated.
    - 1) Dimensions: see schedule sheet Include number of units required to form total lengths indicated.
    - 2) Frame: Gray-iron or galvanized steel for grates.
  - f. Grates: Manufacturer's designation "heavy duty," with slots or perforations and of width and thickness that fit recesses in channel sections.
    - 1) Material: Stainless steel.
    - 2) Locking Mechanism: Manufacturer's standard device for securing grates to channel sections.
  - g. Covers: Solid see schedule of width and thickness that fit recesses in channel sections, and of lengths indicated.
  - h. Supports, Anchors, and Setting Devices: Manufacturer's standard, unless otherwise indicated.
  - i. Channel-Section Joining and Fastening Materials: As recommended by system manufacturer.
- C. Polymer-Concrete Sediment Interceptor
  1. Description: 27-inch- square, precast, polymer-concrete body, with outlets in number and sizes indicated. Include 24-inch- square, gray-iron slotted grate.

2. Frame: Gray-iron or galvanized steel for grate.
- D. Plastic Channel Drainage Systems
  1. HDPE, PE, PP, or PVC Channel Drainage Systems:
    - a. **Manufacturers:** Subject to compliance with requirements, available manufacturers offering products that may be incorporated into the Work, provide products by one of the following, or approved equal.
      - 1) NDS Inc.
      - 2) Smith, Jay R. Mfg. Co.
      - 3) Zurn Industries, LLC.
      - 4) Or Approved Equal.
  2. Type: Modular system of channel sections, grates, and appurtenances; designed so grates fit into channel recesses without rocking or rattling.
    - a. Channel Sections: Interlocking-joint, HDPE or PE PP or PVC modular units, with end caps. Include flat, rounded, or inclined bottom, with level invert and with outlets in number, sizes, and locations indicated.
      - 1) Dimensions: 4 inches wide. Include number of units required to form total lengths indicated.
    - b. Grates: With slots or perforations and widths and thickness that fit recesses in channel sections.
      - 1) Material: Stainless steel.
    - c. Supports, Anchors, and Setting Devices: Manufacturer's standard, unless otherwise indicated.
    - d. Channel-Section Joining and Fastening Materials: As recommended by system manufacturer.

## 2.6 ROOF FLASHING ASSEMBLIES

- A. Roof Flashing Assemblies
  1. **Manufacturers:** Subject to compliance with requirements, available manufacturers offering products that may be incorporated into the Work, provide products by one of the following, or approved equal.
    - a. Acorn Engineering Company.
    - b. Thaler Metal Industries Ltd.
    - c. Zurn Industries, LLC.
    - d. Or Approved Equal.
  2. Description: Manufactured assembly made of 4.0-lb/sq. ft., 0.0625-inch- OR 6.0-lb/sq. ft., 0.0938-inch- thick, lead flashing collar and skirt extending at least 10 inches from pipe, with galvanized-steel boot reinforcement and counter flashing fitting.
    - a. Extended Vent Cap: With field-installed, vandal-proof vent cap.

## 2.7 THROUGH-PENETRATION FIRESTOP ASSEMBLIES

### A. Through-Penetration Firestop Assemblies

1. **Manufacturers:** Subject to compliance with requirements, available manufacturers offering products that may be incorporated into the Work, provide products by one of the following, or approved equal.
  - a. ProSet Systems Inc.
  - b. Hilti
  - c. 3M
  - d. Or Approved Equal.
2. Standard: UL 1479 assembly of sleeve and stack fitting with firestopping plug.
3. Size: Same as connected soil, waste, or vent stack.
4. Sleeve: Molded PVC plastic, of length to match slab thickness and with integral nailing flange on one end for installation in cast-in-place concrete slabs.
5. Stack Fitting: ASTM A 48/A 48M, gray-iron, hubless-pattern, wye branch with neoprene O-ring at base and gray-iron plug in thermal-release harness. Include PVC protective cap for plug.
6. Special Coating: Corrosion resistant on interior of fittings.

## 2.8 MISCELLANEOUS SANITARY DRAINAGE PIPING SPECIALTIES

### A. Open Drains

1. Description: Shop or field fabricate from ASTM A 74, Service class, hub-and-spigot, cast-iron, soil-pipe fittings. Include P-trap, hub-and-spigot riser section; and where required, increaser fitting joined with ASTM C 564, rubber gaskets.
2. Size: Same as connected waste piping with increaser fitting two sizes larger than connected pipe.

### B. Deep-Seal Traps

1. Description: Cast-iron or bronze casting, with inlet and outlet matching connected piping and cleanout trap-seal primer valve connection.
2. Size: Same as connected waste piping.
  - a. NPS 2: 4-inch- minimum water seal.
  - b. NPS 2-1/2 and Larger: 5-inch- minimum water seal.
  - c. Trap Primer System – see drawings for type and schedule

### C. Floor-Drain, Trap-Seal Primer Fittings

1. Description: Cast iron, with threaded inlet and threaded or spigot outlet, and trap-seal primer valve connection.
2. Size: Same as floor drain outlet with NPS 1/2 side inlet.

### D. Trap Guard Devices

1. General:

- a. Rubber trap guard devices may be used only where approved by the Plumbing Inspector
  - b. Compliance: ASSE, ICC, IAPMO listed
  - c. Seek approval for use of these alternative materials, methods and equipment. The provisions of this code are not intended to prevent the installation of any material or to prohibit any method of construction not specifically prescribed by the prevailing plumbing code, provided that any such alternative has been approved.
  - d. An alternative material or method of construction shall be approved where the code official finds that the proposed design is satisfactory and complies with the intent of the provisions of this code, and that the material, method or work offered is, for the purpose intended, at least the equivalent of that described.
    - 1) 2006 International Plumbing Code Sec. 105.2 Sec. 1002.4 Trap Seals
    - 2) 2006 International Residential Code Sec. R104.1.1 Sec. P3201 Trap Seals
    - 3) 2006 Uniform Plumbing Code Sec. 301.2 Sec. Sanitary Drainage
    - 4) NSF 14 Plastic Piping System Components & Related Materials
    - 5) CAN/CSA B602-06 Elastomeric Mechanical Couplings for DWV Pipe
2. Product Description:
- a. An Elastomeric, Normally Closed Trap Guard Device utilizes a normally closed seal to prevent evaporation of the trap seal and also protect against sewer gases from backing up into habitable areas. It opens with fluid and allows liquid drainage to flow through into the building drain.
  - b. Product Identification: The Trap Guard device package shall be legibly marked or labeled with the Trap Guard name, trademark and model number.
3. Manufacturers: Subject to compliance with requirements, available manufacturers offering products that may be incorporated into the Work, provide products by one of the following, or approved equal.
- a. Zurn ZShield
  - b. Rectorseal series Sure Seal
  - c. JR Smith Quad Close
  - d. Or Approved Equal.
- E. Air-Gap Fittings
1. Standard: ASME A112.1.2, for fitting designed to ensure fixed, positive air gap between installed inlet and outlet piping.
  2. Body: Bronze or cast iron.
  3. Inlet: Opening in top of body.
  4. Outlet: Larger than inlet.
  5. Size: Same as connected waste piping and with inlet large enough for associated indirect waste piping.
- F. Sleeve Flashing Device

1. Description: Manufactured, cast-iron fitting, with clamping device that forms sleeve for pipe floor penetrations of floor membrane. Include galvanized-steel pipe extension in top of fitting that will extend 2 inches above finished floor and galvanized-steel pipe extension in bottom of fitting that will extend through floor slab.

2. Size: As required for close fit to riser or stack piping.

**G. Stack Flashing Fittings**

1. Description: Counter flashing-type, cast-iron fitting, with bottom recess for terminating roof membrane, and with threaded or hub top for extending vent pipe.

2. Size: Same as connected stack vent or vent stack.

**H. Vent Caps**

1. Description: Cast-iron body with threaded or hub inlet and vandal-proof design. Include vented hood and setscrews to secure to vent pipe.

2. Size: Same as connected stack vent or vent stack.

**I. Frost-Resistant Vent Terminals**

1. Description: Manufactured or shop-fabricated assembly constructed of copper, or galvanized steel.

2. Design: To provide 1-inch enclosed air space between outside of pipe and inside of flashing collar extension, with counter flashing.

**J. Expansion Joints**

1. Standard: ASME A112.21.2M.

2. Body: Cast iron with bronze sleeve, packing, and gland.

3. End Connections: Matching connected piping.

4. Size: Same as connected soil, waste, or vent piping.

**2.9 DRAIN HEAT RECOVERY DEVICES**

**A. Description**

1. Drain water heat recovery device consisting of one or more copper tubes helically wound around copper drain water pipe.

2. The package equipment is designed to recover heat from hot drain lines and transfer said recovery to the water piping at an end user

**B. Design and Performance Criteria**

1. Design drain water heat recovery device in accordance with manufacturer's written recommendations and to UL MJAT, Specialty Heating and Heating-Cooling Appliance Accessories.

2. Drain water Size: see schedule

3. Available Active Drain Water Pipe Length: see schedule .

4. Efficiency: 56 percent minimum at an equal flow rate of 4.5 gpm.

5. Pressure Loss: 6 psi maximum at flow rate of 6.7 gpm on potable water side of drain water heat recovery device.

C. Materials

1. Heat Exchanger: To CSA B55.1.
2. Water Piping: To ASTM B88M, copper tube, hard drawn, Type L minimum.
3. Drain water Piping: To ASTM B306, copper tube, Type DWV

D. Accessories

1. Bottom Pipe Coupling: Top Pipe Coupling
  - a. Acceptable Material: use no hub connector specified in sanitary pipe specification section for see schedule 2] NPS Hubless Connector.
2. Pipe Insulation: In accordance piping Division 22 for Plumbing Piping Insulation.

E. Basis of design: [Power pipe drain/water heat recovery R series or C series](#)

2.10 FLASHING MATERIALS

- A. Copper Sheet: ASTM B 152/B 152M, of the following minimum weights and thicknesses, unless otherwise indicated:
  1. General Applications: 12 oz. /sf..
  2. Vent Pipe Flashing: 8 oz. /sf.
- B. Zinc-Coated Steel Sheet: ASTM A 653/A 653M, with 0.20 percent copper content and 0.04-inch minimum thickness, unless otherwise indicated. Include G90 hot-dip galvanized, mill-phosphatized finish for painting if indicated.
- C. Elastic Membrane Sheet: ASTM D 4068, flexible, chlorinated polyethylene, 40-mil minimum thickness.
- D. Fasteners: Metal compatible with material and substrate being fastened.
- E. Metal Accessories: Sheet metal strips, clamps, anchoring devices, and similar accessory units required for installation; matching or compatible with material being installed.
- F. Solder: ASTM B 32, lead-free alloy.
- G. Bituminous Coating: SSPC-Paint 12, solvent-type, bituminous mastic.

2.11 FOG DISPOSAL SYSTEMS

A. FOG Disposal Systems:

1. [Manufacturers](#): Subject to compliance with requirements, available manufacturers offering products that may be incorporated into the Work, provide products by one of the following, or approved equal.
  - a. Highland Tank Inc.
  - b. [Smith, Jay R. Mfg. Co.](#)
  - c. Or Approved Equal.
2. Standard: IAPMO PS 118, for removing solids from and breaking down and digesting suspended fats, oils, and greases from food-preparation or -processing wastewater.
3. Flow-Control Fitting: Matching unit size.

4. Strainer Unit: Stainless-steel housing with aluminum cover and removable-basket-type, stainless-steel, wire-mesh strainer. Include pressure plug instead of cover. Include extra basket. Include stainless-steel extension.
5. Media Chamber: Stainless-steel housing and aluminum cover, with internal baffles, piping, plastic coalescing surfaces, and clarifier section with test ports. Include stainless-steel extension.
6. Shelf: Stainless steel, 19.5 inches wide by 13 inches high by 8.75 inches deep, for metering pump, control devices, and culture bottle.
7. Culture Metering Pump, Timer, Control, and Tubing: Proprietary.
8. Culture: Include 1-gal. bottle, as recommended by unit manufacturer.
9. Strainer and Media-Chamber, Unit Size: see schedule
10. Inlet and Outlet: NPS 2.
11. Strainer and Media-Chamber, Unit Size: see schedule **5**
12. Inlet and Outlet: NPS 3.
13. Piping: Waste and vent piping is specified in Division 22.
14. Power Requirement: see schedule.
15. Full-Load Amperes: see schedule .
16. Minimum Circuit Ampacity: < see schedule
17. Maximum Over current Protection: see schedule .

### **PART 3 - EXECUTION**

#### **3.1 SCHEDULE FOR FLOOR CLEANOUT INSTALLATION**

- A. All drainage cleanouts to be Buy American Compliant
  1. Schedule all drainage equipment on the drawings

Service	Piping	Duty	Type	Cleanout Top
Floor cleanouts in finished areas	Cast Iron	Medium	B	See part 2
Floor cleanouts in carpeted finished areas	Cast Iron	Medium	B add carpet marker	See -part 2
Floor cleanouts in unfinished areas	Cast Iron	Heavy	B-XH	Round Stainless Steel or Ductile Iron
Floor cleanouts in warehouses and loading docks	Cast Iron	Extra Heavy	B-HX	Round Stainless, Ductile or Durisist
Floor cleanouts in Industrial anywhere forklifts or pallet-jack equipment is used	Cast Iron	Extra Heavy	B-HX	Round Stainless, Ductile or Durisist
Floor cleanouts in kitchen finished areas	Stainless Steel	Medium	C1	For kitchen and finish floor areas
Floor cleanouts in kitchen outside kitchen for mechanical areas or industrial areas	Stainless Steel	Extra Heavy	C2	Non finished areas
Floor cleanouts in unfinished areas	Stainless Steel	Heavy	C	Round Stainless Steel
Floor cleanouts in warehouses and loading docks	Stainless Steel	Extra Heavy	C	Round Stainless Steel Extra Heavy Duty model
Floor cleanouts in Industrial anywhere forklifts or pallet-jack equipment is used	Stainless Steel	Extra Heavy	C	Round Stainless Steel Extra Heavy Duty model
Floor cleanouts in finished areas	PVC	Medium	F	Round
Floor cleanouts in carpeted finished areas	PVC	Medium	F	Round add carpet marker
Floor cleanouts for penthouses	Cast Iron	Heavy	G	Round Stainless Steel
Floors with waterproof membrane	Per Pipe	Heavy	H	Round Stainless Steel or Nickle Chrome

### 3.2 INSTALLATION

#### A. Equipment Mounting:

1. Install FOG disposal systems grease interceptors grease removal devices and solids interceptors on cast-in-place concrete equipment bases. Comply with requirements for equipment bases and foundations specified in Division 03.
2. Comply with requirements for vibration isolation and seismic control devices specified in Division 22.

- B. Install backwater valves in building drain piping. For interior installation, provide cleanout deck plate flush with floor and centered over backwater valve cover, and of adequate size to remove valve cover for servicing.
- C. Install cleanouts in aboveground piping and building drain piping according to the following, unless otherwise indicated:
  - 1. Size same as drainage piping up to NPS 4. Use NPS 4 for larger drainage piping unless larger cleanout is indicated.
  - 2. Locate at each change in direction of piping greater than 45 degrees.
  - 3. Locate at minimum intervals of 50 feet for piping NPS 4 and smaller and 100 feet for larger piping.
  - 4. Locate at base of each vertical soil and waste stack.
- D. For floor cleanouts for piping below floors, install cleanout deck plates with top flush with finished floor.
- E. For cleanouts located in concealed piping, install cleanout wall access covers, of types indicated, with frame and cover flush with finished wall.
- F. Install floor drains at low points of surface areas to be drained. Set grates of drains flush with finished floor, unless otherwise indicated.
  - 1. Position floor drains for easy access and maintenance.
  - 2. Set floor drains below elevation of surrounding finished floor to allow floor drainage. Set with grates depressed according to the following drainage area radii:
    - a. Radius, 30 Inches or Less: Equivalent to 1 percent slope, but not less than 1/4-inch total depression.
    - b. Radius, 30 to 60 Inches: Equivalent to 1 percent slope.
    - c. Radius, 60 Inches or Larger: Equivalent to 1 percent slope, but not greater than 1-inch total depression.
  - 3. Install floor-drain flashing collar or flange so no leakage occurs between drain and adjoining flooring. Maintain integrity of waterproof membranes where penetrated.
  - 4. Install individual traps for floor drains connected to sanitary building drain, unless otherwise indicated.
- G. Install trench drains at low points of surface areas to be drained. Set grates of drains flush with finished surface, unless otherwise indicated.
- H. Assemble non-ASME A112.3.1, stainless-steel channel drainage system components according to manufacturer's written instructions. Install on support devices so that top will be flush with adjacent surface.
- I. Assemble plastic channel drainage system components according to manufacturer's written instructions. Install on support devices so that top will be flush with adjacent surface.
- J. Install roof flashing assemblies on sanitary stack vents and vent stacks that extend through roof.
- K. Install through-penetration firestop assemblies in plastic conductors and stacks at floor penetrations.
- L. Assemble open drain fittings and install with top of hub 2 inches above floor.

- M. Install deep-seal traps on floor drains and other waste outlets, if indicated.
- N. Install floor-drain, trap-seal primer fittings on inlet to floor drains that require trap-seal primer connection.
  - 1. Exception: Fitting may be omitted if trap has trap-seal primer connection.
  - 2. Size: Same as floor drain inlet.
- O. Install air-gap fittings on draining-type backflow preventers and on indirect-waste piping discharge into sanitary drainage system.
- P. Install sleeve flashing device with each riser and stack passing through floors with waterproof membrane.
- Q. Install vent caps on each vent pipe passing through roof.
- R. Install frost-resistant vent terminals on each vent pipe passing through roof. Maintain 1-inch clearance between vent pipe and roof substrate.
- S. Install expansion joints on vertical stacks and conductors. Position expansion joints for easy access and maintenance.
- T. Install frost-proof vent caps on each vent pipe passing through roof. Maintain 1-inch clearance between vent pipe and roof substrate.
- U. Assemble components of FOG disposal systems and install on floor. Install trap, vent, fresh-air inlet, and flow-control fitting according to authorities having jurisdiction. Install shelf fastened to reinforcement in wall construction and adjacent to unit, unless otherwise indicated. Install culture bottle, culture metering pump, timer, and control on shelf. Install tubing between culture bottle, metering pump, and chamber.
- V. Install grease interceptors, including trapping, venting, and flow-control fitting, according to authorities having jurisdiction and with clear space for servicing.
  - 1. Above-Floor Installation: Set unit with bottom resting on floor, unless otherwise indicated.
  - 2. Flush with Floor Installation: Set unit and extension, if required, with cover flush with finished floor.
  - 3. Recessed Floor Installation: Set unit in receiver housing having bottom or cradle supports, with receiver housing cover flush with finished floor.
  - 4. Install cleanout immediately downstream from interceptors not having integral cleanout on outlet.
- W. Install grease removal devices on floor. Install trap, vent, and flow-control fitting according to authorities having jurisdiction. Install control panel adjacent to unit, unless otherwise indicated.
- X. Install oil interceptors, including trapping, venting, and flow-control fitting, according to authorities having jurisdiction and with clear space for servicing. Coordinate oil-interceptor storage tank and gravity drain with Division 23.
- Y. Install solids interceptors with cleanout immediately downstream from interceptors that do not have integral cleanout on outlet. Install trap on interceptors that do not have integral trap and are connected to sanitary drainage and vent systems.
- Z. Install wood-blocking reinforcement for wall-mounting-type specialties.

- AA. Install traps on plumbing specialty drain outlets. Omit traps on indirect wastes unless trap is indicated.

### 3.3 CONNECTIONS

- A. Install piping adjacent to equipment to allow service and maintenance.
- B. FOG Disposal Systems: Connect inlet and outlet to unit, connect flow-control fitting and fresh-air inlet piping to unit inlet piping, and connect vent piping between trap and media chamber. Connect electrical power.
- C. Ground equipment according to Division 26.
- D. Connect wiring according to Division 26.

### 3.4 DRAIN HEAT RECOVERY INSTALLATION

- A. Install drain water heat recovery device in accordance with manufacturer's written recommendations.
- B. De-burr drainpipe top cut.
- C. Use hubless connector with full steel band for bottom connection of drain water heat recovery device.
- D. Use hubless connector with full steel band for top of drain water heat recovery device.
- E. Tighten connectors on both top and bottom hubless connectors to secure drain water heat recovery device in correct position.
- F. Connect incoming cold water to bottom of drain water heat recovery device coil manifold.

### 3.5 FLASHING INSTALLATION

- A. Flash floor membranes provided under divisions 7 in floors into penetration flashing collars
- B. As listed below, where floor membranes are not provided under division 7, furnish and install flashing material
- C. Fabricate flashing from single piece unless large pans, sumps, or other drainage shapes are required. Join flashing according to the following if required:
  - 1. Copper Sheets: Solder joints of copper sheets.
  - 2. Approved Membrane Materials
    - a. Submit flashing material prior to use and in timely manner to suit construction progress to architect/engineer approval.
- D. Install sheet flashing on pipes, sleeves, and specialties passing through or embedded in floors and roofs with waterproof membrane.
  - 1. Pipe Flashing: Sleeve type, matching pipe size, with minimum length of 10 inches, and skirt or flange extending at least 8 inches around pipe.
  - 2. Sleeve Flashing: Flat sheet, with skirt or flange extending at least 8 inches around sleeve.
  - 3. Embedded Specialty Flashing: Flat sheet, with skirt or flange extending at least 8 inches around specialty.

- E. Install floor drain flashing collar or flange so no leakage occurs between drain and adjoining flooring. Maintain integrity of waterproof membranes where penetrated.
- F. Penthouse and containment cleanouts and floor drains
  - 1. Provide waterproofing membrane extending a minimum of 12 inches from drain in all directions
  - 2. Extend waterproofing membrane into seepage pan and secure with clamping collar
  - 3. Provide underdeck clamp on thin slab installations of 5 inches or less, above grade installations only. Secure clamp to drain.
- G. Drains or cleanouts cored into existing floors:
  - 1. For drains in existing floors, where a core hole is used, replace and patch floor construction with 5000 psi non-shrink concrete
  - 2. Use dowels with the approval of the structural engineer to maintain the new to existing patch
  - 3. Apply with brush a continuous coat of epoxy bonding agent, (EPO bond) all around perimeter of core and body of drain assembly
  - 4. Provide underdeck clamp
- H. Set flashing on floors and roofs in solid coating of bituminous cement.
- I. Secure flashing into sleeve and specialty clamping ring or device.
- J. Install flashing for piping passing through roofs with counter flashing or commercially made flashing fittings, according to Division 07.
- K. Fabricate and install flashing and pans, sumps, and other drainage shapes.

### 3.6 LABELING AND IDENTIFYING

- A. Equipment Nameplates and Signs: Install engraved plastic-laminate equipment nameplate or sign on or near each of the following:
  - 1. FOG disposal systems.
- B. Distinguish among multiple units, inform operator of operational requirements, indicate safety and emergency precautions, and warn of hazards and improper operations, in addition to identifying unit. Nameplates and signs are specified in Division 22.

### 3.7 RUBBER TRAP SLEEVE INSTALLATION:

- A. Product shall be installed in accordance with the Manufacturer's instructions and the requirements of the applicable codes. Device can be installed inside other manufacturer's drain tail pieces or optionally inside 2 inches, 3 inches or 4 inches pipe that connects the various types of floor or hub drains. If a T&P relief valve is discharged into the Trap Guard device, it must be discharged into the center opening of the device. A strainer with a center hole is available for that purpose.
- B. Protect the elastomeric device materials from being touched with solvent cement or primers during installation. Protect material from being distorted or damaged during storage, handling and installation.
- C. Test Methods and Performance Requirements:

1. The Elastomeric membrane material shall be field pressure tested to determine the back pressure of the device to hold back compressed air from 1 inch WC and then increased to 2 inch WC with no leakage.
  2. Testing shall be performed to verify that a plumbing snake can be effectively used with the Trap Guard device installed. For a typical 4 inch diameter floor drain, a 1-1/2 inch PVC pipe shall be inserted the entire length of the device with lubrication to provide an adequate pathway for a plumbing snake.
  3. Testing shall be performed to determine the maximum water flow the device could accommodate using an electric sump pump and a portable water reservoir. The pump discharge shall be into the Trap Guard device installed into a simulated drain assembly. Test acceptance is 30 GPM.
- D. Commission the device by flushing out thoroughly with clear warm water.

### 3.8 FIELD QUALITY CONTROL

- A. Perform tests and inspections and prepare test reports.
1. Manufacturer's Field Service: Engage a factory-authorized service representative to inspect field-assembled FOG disposal systems and their installation, including piping and electrical connections, and to assist in testing.
- B. Tests and Inspections:
1. Leak Test: After installation, charge system and test for leaks. Repair leaks and retest until no leaks exist.
  2. Test and adjust controls and safeties. Replace damaged and malfunctioning controls and equipment.

### 3.9 PROTECTION

- A. Protect drains during remainder of construction period to avoid clogging with dirt or debris and to prevent damage from traffic or construction work.
- B. Place plugs in ends of uncompleted piping at end of each day or when work stops.

### 3.10 DEMONSTRATION

- A. Engage a factory-authorized service representative to train Owner's maintenance personnel to adjust, operate, and maintain FOG disposal systems. Refer to Division 01.

END OF SECTION

H:\Y0586.00\DOC\SPEC\2025\_02-20\_IFB\221319\_SANITARY WASTE PIPING SPECIALTIES.DOC

## SECTION 221423 - STORM DRAINAGE PIPING SPECIALTIES

### PART 1 - GENERAL

#### 1.1 RELATED DOCUMENTS

- A. Certain requirements common to all the mechanical and electrical trades (Fire Suppression, Plumbing, HVAC, Electrical, and Tele/Data) are specified in Division 20. To avoid repetition, they are not repeated in each relevant Division and Section. However, these requirements are applicable to the work of this Section and are hereby incorporated by reference.
- B. Drawings and general provisions of the Contract, including General and Supplementary Conditions and Division 01 Specification Sections, apply to this Section.

#### 1.2 SUMMARY

- A. Section Includes:
  - 1. Metal roof drains.
  - 2. Miscellaneous storm drainage piping specialties.
  - 3. Roof Drain Markers
  - 4. Cleanouts.
  - 5. Backwater valves.
  - 6. Trench drains.
  - 7. Channel drainage systems.
  - 8. Through-penetration firestop assemblies.
  - 9. Flashing materials.

#### 1.3 ACTION SUBMITTALS

- A. Product Data: For each type of product indicated.

#### 1.4 QUALITY ASSURANCE

- A. Drainage piping specialties shall bear label, stamp, or other markings of specified testing agency.

### PART 2 - PRODUCTS

#### 2.1 METAL ROOF DRAINS

- A. Cast-Iron, Large-Sump, General-Purpose Roof Drains **see drawings for schedule information.**
  - 1. **Manufacturers:** Subject to compliance with requirements, available manufacturers offering products that may be incorporated into the Work, provide products by one of the following, or approved equal.

- a. Smith, Jay R. Mfg. Co.
    - b. Watts; a Watts Water Technologies company.
    - c. Zurn Industries, LLC.
    - d. Or Approved Equal.
  2. Standard: ASME A112.6.4, for general-purpose roof drains.
  3. Body Material: Cast iron.
  4. Combination Flashing Ring and Gravel Stop
  5. Under deck Clamp
  6. Expansion Joint:
  7. Basis of Design: Watts Model RD-300
- B. Cast-Iron, Large-Sump, Dual Outlet Roof Drain/Overflow; **see drawings for schedule information.**
1. **Manufacturers:** Subject to compliance with requirements, available manufacturers offering products that may be incorporated into the Work, provide products by one of the following, or approved equal.
    - a. Smith, Jay R. Mfg. Co.
    - b. Watts; a Watts Water Technologies company.
    - c. Zurn Industries, LLC.
    - d. Or Approved Equal.
  2. Standard: ASME A112.6.4, for general-purpose roof drains.
  3. Body Material: Cast iron.
  4. Combination Flashing Ring and Gravel Stop
  5. Under deck Clamp
  6. Expansion Joint:
  7. 4 inch High Overflow
  8. Basis of Design: Watts Model RD-700
- C. Cast-Iron, Medium-Sump, Small Area Roof Drains see drawings for schedule information.
1. **Manufacturers:** Subject to compliance with requirements, available manufacturers offering products that may be incorporated into the Work, provide products by one of the following, or approved equal.
    - a. Smith, Jay R. Mfg. Co.
    - b. Watts; a Watts Water Technologies company.
    - c. Zurn Industries, LLC.
    - d. Or Approved Equal.
  2. Standard: ASME A112.6.4, for general-purpose roof drains.
  3. Body Material: Cast iron.

4. Dimension of Body: 8- to 12-inch diameter.
  5. Combination Flashing Ring and Gravel Stop: Required.
  6. Under deck Clamp
  7. Basis of Design: Watts Model RD-100
  8. REMOVED COPPER DRAINS FROM THE SPEC. NO ONE USES, IF SPECIFIC NEED GO BACK TO MASTER FOR INFORMATION.
- D. Cast-Iron, Small-Sump, General-Purpose Roof Drains, see drawings for schedule information.
1. **Manufacturers:** Subject to compliance with requirements, available manufacturers offering products that may be incorporated into the Work, provide products by one of the following, or approved equal.
    - a. Smith, Jay R. Mfg. Co.
    - b. Watts; a Watts Water Technologies company.
    - c. Zurn Industries, LLC.
    - d. Or Approved Equal.
  2. Standard: ASME A112.6.4, for general-purpose roof drains.
  3. Body Material: Cast iron.
  4. Dimension of Body: Nominal 8-inch diameter.
  5. Combination Flashing Ring and Gravel Stop.
  6. Under deck Clamp:
  7. Expansion Joint:
  8. Basis of Design: Watts Model 200

## 2.2 MISCELLANEOUS STORM DRAINAGE PIPING SPECIALTIES

- A. Downspout Adaptors :
1. Description: Manufactured, gray-iron casting, for attaching to horizontal-outlet, parapet roof drain and to exterior, sheet metal downspout.
  2. Size: Inlet size to match parapet drain outlet.
- B. Downspout Boots :
1. Description: Manufactured, ASTM A 48/A 48M, gray-iron casting, with strap or ears for attaching to building; NPS 4 outlet; and shop-applied bituminous coating.
  2. Size: Inlet size to match downspout and NPS 4 outlet.
- C. Conductor Nozzles :
1. Description: Bronze body with threaded inlet and bronze wall flange with mounting holes.
  2. Size: Same as connected conductor.

## 2.3 ROOF DRAIN MARKERS

- A. Roof Drain Marker: Drain dome-mounted vertical fiberglass flag marker secured in aluminum socket by set-screw in turn secured with pre-punched aluminum bracket configured for secure through-bolting centered over roof drain dome.
  - 1. Flag Marker: Pultruded fiber-reinforced polymer rod, 1/2 inch (12 mm) diameter by 48 inch (1219 mm) long, with reflective dual-colored reversible ends enabling marking of selected drains.
    - a. Flexural Strength, minimum, ASTM D 790, 700,000 psi (689 MPa).
    - b. Impact Strength, minimum, ASTM D 256: 40 ft-lb/in.
  - 2. Marker Base: 1 by 1 by 4 inch (25 by 25 by 102 mm) extruded aluminum bar, ASTM B 209 (ASTM B 209M), with milled flag receiver, threaded flag set screw retainer, and threaded base.
  - 3. Flag Bracket: 1 by 11 by 0.063 inch (25 by 25 by 1.60 mm) aluminum plate bracket, ASTM B 221 (ASTM B 221M).
  - 4. Fasteners: Alloy Group 2 (A4) stainless-steel bolts, ASTM F 593 (ASTM F 738M), and nuts, ASTM F 594 (ASTM F 836M).
- B. Basis-of-Design Product: [Roof Drain Marker Co., LLC.](#), West Bridgewater, MA;

## 2.4 CLEANOUTS

- A. See part 3 of this specification for cleanout schedule
- B. Horizontal Cast-Iron Exposed Cleanouts: **Type A**
  - 1. Application: exposed horizontal pipe runs above slab in line or end cleanout
  - 2. Manufacturers: Subject to compliance with requirements, provide products by one of the following, or approved equal.
    - a. [Jay R. Smith Mfg Co; a division of Morris Group International.](#)
    - b. [WATTS.](#)
    - c. [Zurn Industries, LLC.](#)
    - d. Or Approved Equal.
  - 3. Standard: ASME A112.36.2M.
  - 4. Size: Same as connected drainage piping
  - 5. Body Material: cast-iron soil pipe in line or end placed into fitting approved tee as required to match connected piping.
  - 6. Closure: Countersunk or raised-head, brass plug.
  - 7. Closure Plug Size: Same as cleanout size.
  - 8. Basis of Design: [Watts 460](#) or TY with [Generic](#)
- C. Finish Area Floor Cleanouts for Cast Iron Systems: **Type B**
  - Application: cast iron pipe horizontal runs, finish areas. i.e. tile or terrazzo or epoxy finish.

1. **Manufacturers:** Subject to compliance with requirements, available manufacturers offering products that may be incorporated into the Work, provide products by one of the following, or approved equal.
    - a. **Smith, Jay R. Mfg. Co.**
    - b. **Watts; a Watts Water Technologies company.**
    - c. **Zurn Industries, LLC.**
    - d. Or Approved Equal.
  2. Standard: ASME A112.36.2M, for adjustable housing cleanouts.
  3. Size: Same as connected branch.
  4. Body or Ferrule Material: Match Piping .
  5. Clamping Device: match pipe material
  6. Closure: Brass plug with tapered threads.
  7. Adjustable Housing Material: Cast iron with threads set-screws or other device.
  8. Frame and Cover Material and Finish: Nickel-bronze
  9. Frame and Cover Shape: Round.
  10. Top-Loading Classification: Heavy Duty.
  11. For Carpeted areas use carpet marker
  12. Basis of Design: **Watts Model CO-200R**
- D. Industrial Area Floor Cleanouts for Cast Iron Systems: **Type B XH**
- Application: cast iron pipe horizontal or vertical runs, non-finish industrial areas mechanical rooms, penthouses or areas where forklifts or pallet jacks are used
1. **Manufacturers:** Subject to compliance with requirements, available manufacturers offering products that may be incorporated into the Work, provide products by one of the following, or approved equal.
    - a. **Smith, Jay R. Mfg. Co.**
    - b. **Watts.**
    - c. **Zurn Industries, LLC.**
    - d. Or Approved Equal.
  2. Standard: ASME A112.36.2M, for adjustable housing cleanouts.
  3. Size: Same as connected branch.
  4. Body or Ferrule Material: Match Piping .
  5. Clamping Device: match pipe material
  6. Closure: Brass plug with tapered threads.
  7. Adjustable Housing Material: Cast iron with threads set-screws or other device.
  8. Frame and Cover Material and Finish: Nickel-bronze, copper alloy or Stainless steel.
  9. Frame and Cover Shape: Round.

10. Top-Loading Classification: Extra Heavy Duty.
  11. For Carpeted areas use carpet marker
  12. Basis of Design: Watts CO-200-RX, for large sizes Watts Model CO-300 MF with inside cleanout added
- E. Exposed Floor Cleanouts for Stainless Steel Systems **Type C**
1. Application: for stainless steel piping systems where specified for kitchens and other uses
  2. **Manufacturers:** Subject to compliance with requirements, provide products by one of the following, or approved equal.
    - a. BLÜCHER; A Watts brand.
    - b. Watts
    - c. Zurn Industries, LLC.
    - d. Or Approved Equal.
  3. Standards: ASME A112.3.1; NSF listed.
  4. Size: Same as connected branch.
  5. Housing: Type 316 stainless steel.
  6. Closure: Stainless steel with seal Plastic plug.
  7. Riser: ASTM A74, Service Class, stainless steel drainage pipe fitting and riser to cleanout.
  8. Body or Ferrule: Stainless steel.
  9. Clamping Device: Required.
  10. Outlet Connection: Inside caulk Spigot Threaded Butt-weld field selected
  11. Adjustable Housing Material: Stainless Steel with threads setscrews or other device.
  12. Frame and Cover Material and Finish: Stainless steel.
  13. Frame and Cover Shape: Square.
  14. Top-Loading Classification: Heavy Duty.
  15. Basis of Design:
    - a. Type C1: Kitchens and finish floor areas Blucher BCO 140 heavy duty
    - b. Type C2: For industrial areas Watts 1200-RX-28 stainless steel Extra Heavy Duty
- F. Test Tees for Cast Iron Systems: **Type D**
- Application: Exposed horizontal or vertical in line or “Dandy” cleanout
1. **Manufacturers:** Subject to compliance with requirements, available manufacturers offering products that may be incorporated into the Work, provide products by one of the following, or approved equal.
    - a. Smith, Jay R. Mfg. Co.
    - b. Watts; a Watts Water Technologies company.

- c. Zurn Industries, LLC.
    - d. Or Approved Equal.
  2. Standard: ASME A112.36.2M and ASTM A 74, ASTM A 888, or CISPI 301, for cleanout test tees.
  3. Size: Same as connected drainage piping.
  4. Body Material: Hub-and-spigot, cast-iron soil-pipe T-branch or hubless, cast-iron soil-pipe test tee as required to match connected piping.
  5. Closure Plug: Countersunk.
  6. Closure Plug Size: Same as or not more than one size smaller than cleanout size.
  7. Basis of Design: Watts Model CO-460
- G. Wall Cleanouts for Cast Iron Systems: **Type E**
- Application: finish area vertical in line or “Dandy” cleanout
1. **Manufacturers:** Subject to compliance with requirements, available manufacturers offering products that may be incorporated into the Work, provide products by one of the following, or approved equal.
    - a. Smith, Jay R. Mfg. Co.
    - b. Watts; a Watts Water Technologies company.
    - c. Zurn Industries, LLC.
    - d. Or Approved Equal.
  2. Standard: ASME A112.36.2M, for cleanouts. Include wall access.
  3. Size: Same as connected drainage piping.
  4. Body Material: T-branch as required to match connected piping.
  5. Closure: Drilled and threaded brass plug.
  6. Closure Plug Size: Same as or not more than one size smaller than cleanout size.
  7. Wall Access: Square, nickel-bronze, copper-alloy, or stainless-steel wall-installation frame and cover.
  8. Basis of Design: Watts Model CO-460-RD
- H. Floor Cleanouts for PVC systems: **Type F**
- Application: Floor Cleanout plastic piping Systems
1. **Manufacturers:** Subject to compliance with requirements, available manufacturers offering products that may be incorporated into the Work, provide products by one of the following, or approved equal.
    - a. Sioux Chief Manufacturing Company, Inc.
    - b. Watts; a Watts Water Technologies company.
    - c. Zurn Industries, LLC.
    - d. Or Approved Equal.
  2. Size: Same as connected branch.

3. Body Material: PVC.
4. Closure Plug: PVC or PP.
5. Cover: Round
6. Riser: Drainage pipe fitting and riser to clean out of same material as drainage piping.
7. Basis of Design: **Watts 200 R -60 for PVC**

I. Penthouse Industrial Floor Cleanouts for Cast Iron Systems: Type G

1. Application: cast iron pipe horizontal for concrete penthouse floor
2. **Manufacturers:** Subject to compliance with requirements, available manufacturers offering products that may be incorporated into the Work, provide products by one of the following, or approved equal.
  - a. **Smith, Jay R. Mfg. Co.**
  - b. **Watts.**
  - c. **Zurn Industries, LLC.**
  - d. Or Approved Equal.
3. Standard: ASME A112.36.2M, for adjustable housing cleanouts.
4. Size: Same as connected branch.
5. Body or Ferrule Material: Match Piping.
6. Clamping Device: match pipe material
7. Closure: Brass plug with tapered threads
8. Adjustable Housing Material: Cast iron with threads set-screws or another device.
9. Frame and Cover Material and Finish: Stainless steel.
10. Frame and Cover Shape: Round.
11. Top-Loading Classification: Heavy Duty.
12. For Carpeted areas use carpet marker

Basis of Design:

- a. For a membrane floor with surface membrane clamp: **Watts CO-200-R with C option**
- b. For a poured water proof floor: **Watts CO-200-H** with an elastomeric flange

J. Penthouse Industrial Floor Cleanouts for Cast Iron Systems: Type H

1. Application: cast iron pipe horizontal for concrete floor with membrane
2. **Manufacturers:** Subject to compliance with requirements, available manufacturers offering products that may be incorporated into the Work, provide products by one of the following, or approved equal.
  - a. **Smith, Jay R. Mfg. Co.**
  - b. **Watts.**
  - c. **Zurn Industries, LLC.**

- d. Or Approved Equal.
3. Standard: ASME A112.36.2M, for adjustable housing cleanouts.
4. Size: Same as connected branch.
5. Body or Ferrule Material: Match Piping .
6. Clamping Device: match pipe material
7. Closure: Brass plug with tapered threads
8. Adjustable Housing Material: Cast iron with threads set-screws or another device.
9. Frame and Cover Material and Finish: Nickle Bronze or Stainless steel.
10. Frame and Cover Shape: Round.
11. Top-Loading Classification: Heavy Duty.
12. For Carpeted areas use carpet marker
  - a. Basis of Design: for a membrane floor with surface membrane clamp: . Watts CO-200-Rwith C option

## 2.5 BACKWATER VALVES

### A. Cast-Iron, Horizontal Backwater Valves, see drawings for schedule information.

1. **Manufacturers:** Subject to compliance with requirements, available manufacturers offering products that may be incorporated into the Work, provide products by one of the following, or approved equal.
  - a. Smith, Jay R. Mfg. Co.
  - b. Watts; a Watts Water Technologies company.
  - c. Zurn Industries, LLC.
  - d. Or Approved Equal.
2. Standard: ASME A112.14.1, for backwater valves.
3. Size: Same as connected piping.
4. Body Material: Cast iron.
5. Cover: Cast iron with bolted or threaded access check valve.
6. End Connections: hub and spigot or hubless.
7. Check Valve: Removable, bronze, swing check, factory assembled or field modified to hang open for airflow unless subject to backflow condition.
8. Extension: ASTM A 74, Service class; full-size, cast-iron soil-pipe extension to field-installed cleanout at floor; replaces backwater valve cover.
9. Basis of Design: Watts Model BV-200

### B. Cast-Iron, Drain-Outlet Backwater Valves, see drawings for schedule information.

1. **Manufacturers:** Subject to compliance with requirements, available manufacturers offering products that may be incorporated into the Work, provide products by one of the following, or approved equal.

- a. Smith, Jay R. Mfg. Co.
    - b. Watts; a Watts Water Technologies company.
    - c. Zurn Industries, LLC.
    - d. Or Approved Equal.
  2. Size: Same as floor drain outlet.
  3. Body Material: Cast iron or bronze made for vertical installation in bottom outlet of floor drain.
  4. Check Valve: Removable ball float.
  5. Inlet: Threaded.
  6. Outlet: Threaded or spigot.
  7. Basis of Design: Watts Model BV-300
- C. Plastic, Horizontal Backwater Valves
1. **Manufacturers:** Subject to compliance with requirements, available manufacturers offering products that may be incorporated into the Work, provide products by one of the following, or approved equal.
    - a. IPS Corporation.
    - b. Sioux Chief Manufacturing Company, Inc.
    - c. Zurn Industries, LLC.
    - d. Or Approved Equal.
  2. Standard: ASME A112.14.1, for backwater valves.
  3. Size: Same as connected piping.
  4. Body Material: PVC.
  5. Cover: Same material as body with threaded access to check valve.
  6. Check Valve: Removable swing check.
  7. End Connections: Socket type.
  8. Basis of Design: Sioux Chief Model 869-6P 6" backwater valve

## 2.6 TRENCH DRAINS

- A. Trench Drains: see drawings for schedule information.
1. **Manufacturers:** Subject to compliance with requirements, available manufacturers offering products that may be incorporated into the Work, provide products by one of the following, or approved equal.
    - a. Smith, Jay R. Mfg. Co.
    - b. Watts; a Watts Water Technologies company.
    - c. Zurn Industries, LLC.
    - d. Or Approved Equal.

2. Standard: ASME A112.6.3, for trench drains.
3. Body Material: Cast iron.
4. Flange: Anchor with weep holes.
5. Clamping Device
6. Grate Material: Stainless steel.
7. Dimensions of Frame and Grate: 8 inches
8. Top-Loading Classification: Heavy Duty.
9. Basis of Design: Watts Model DEAD LEVEL DX SERIES

## 2.7 THROUGH-PENETRATION FIRESTOP ASSEMBLIES

- A. Through-Penetration Firestop Assemblies for PVC or other thermoplastic piped system conductors:
  1. Manufacturers: Subject to compliance with requirements, available manufacturers offering products that may be incorporated into the Work, provide products by one of the following, or approved equal.
    - a. 3M Corporation.
    - b. Hilti, Inc.
    - c. ProSet Systems Inc.
    - d. Or Approved Equal.
  2. Standard: ASTM E 814, for through-penetration firestop assemblies.
  3. Certification and Listing: Insert testing agency acceptable to authorities having jurisdiction for through-penetration firestop assemblies.
  4. Size: Same as connected pipe.
  5. Sleeve: Molded PVC plastic, of length to match slab thickness and with integral nailing flange on one end for installation in cast-in-place concrete slabs.
  6. Stack Fitting: ASTM A 48/A 48M, gray-iron, hubless-pattern, wye branch with neoprene O-ring at base and gray-iron plug in thermal-release harness. Include PVC protective cap for plug.
  7. Special Coating: Corrosion resistant on interior of fittings.

## 2.8 FLASHING MATERIALS

- A. Copper Sheet: ASTM B 152/B 152M, 12 oz. /sf.
- B. Zinc-Coated Steel Sheet: ASTM A 653/A 653M, with 0.20 percent copper content and 0.04-inch minimum thickness unless otherwise indicated. Include G90 hot-dip galvanized, mill-phosphatized finish for painting if indicated.
- C. Elastic Membrane Sheet: ASTM D 4068, flexible, chlorinated polyethylene, 40-mil minimum thickness.
- D. Fasteners: Metal compatible with material and substrate being fastened.

- E. Metal Accessories: Sheet metal strips, clamps, anchoring devices, and similar accessory units required for installation; matching or compatible with material being installed.
- F. Solder: ASTM B 32, lead-free alloy.

### PART 3 - EXECUTION

#### 3.1 SCHEDULE FOR FLOOR CLEANOUTS

- A. All drainage cleanouts to be Buy American Compliant

Service	Piping	Duty	Type	Cleanout Top
Floor cleanouts in finished areas	Cast Iron	Medium	B	See part 2
Floor cleanouts in carpeted finished areas	Cast Iron	Medium	B. Add carpet marker	See -part 2
Floor cleanouts in unfinished areas	Cast Iron	Heavy	B-XH	Round Stainless Steel or Ductile Iron
Floor cleanouts in warehouses and loading docks	Cast Iron	Extra Heavy	B-HX	Round Stainless, Ductile or Durisist
Floor cleanouts in Industrial anywhere forklifts or pallet-jack equipment is used	Cast Iron	Extra Heavy	B-HX	Round Stainless, Ductile or Durisist
Floor cleanouts in kitchen finished areas	Stainless Steel	Medium	C1	For kitchen and finish floor areas
Floor cleanouts in kitchen outside kitchen for mechanical areas or industrial areas	Stainless Steel	Extra Heavy	C2	Non finished areas
Floor cleanouts in unfinished areas	Stainless Steel	Heavy	C	Round Stainless Steel
Floor cleanouts in warehouses and loading docks	Stainless Steel	Extra Heavy	C	Round Stainless Steel Extra Heavy Duty model
Floor cleanouts in Industrial anywhere forklifts or pallet-jack equipment is used	Stainless Steel	Extra Heavy	C	Round Stainless Steel Extra Heavy Duty model
Floor cleanouts in finished areas	PVC	Medium	F	Round
Floor cleanouts in carpeted finished areas	PVC	Medium	F	Round add carpet marker
Floor cleanouts for penthouses	Cast Iron	Heavy	G	Round Stainless Steel
Floors with waterproof membrane	Per Pipe	Heavy	H	Round Stainless Steel or Nickle Chrome

#### 3.2 INSTALLATION

- A. Install roof drains at low points of roof areas according to roof membrane manufacturer's written installation instructions.

1. Install flashing collar or flange of roof drain to prevent leakage between drain and adjoining roofing. Maintain integrity of waterproof membranes where penetrated.
2. Install expansion joints, if indicated, in roof drain outlets.
3. Position roof drains for easy access and maintenance.
- B. Install downspout adapters on outlet of back-outlet parapet roof drains and connect to sheet metal downspouts.
- C. Install downspout boots at grade with top 12 inches above grade. Secure to building wall.
- D. Install conductor nozzles at exposed bottom of conductors where they spill onto grade.
- E. Install cleanouts in aboveground piping and building drain piping according to the following instructions unless otherwise indicated:
  1. Use cleanouts the same size as drainage piping up to NPS 4. Use NPS 4 for larger drainage piping unless larger cleanout is indicated.
  2. Locate cleanouts at each change in direction of piping greater than 45 degrees.
  3. Locate cleanouts at minimum intervals of 50 feet for piping NPS 4 and smaller and 100 feet for larger piping.
  4. Locate cleanouts at base of each vertical soil and waste stack.
- F. For floor cleanouts for piping below floors, install cleanout deck plates with top flush with finished floor.
- G. For cleanouts located in concealed piping, install cleanout wall access covers, of types indicated, with frame and cover flush with finished wall.
- H. Install horizontal backwater valves in floor with cover flush with floor.
- I. Install drain-outlet backwater valves in outlet of drains.
- J. Install test tees in vertical conductors and near floor.
- K. Install wall cleanouts in vertical conductors. Install access door in wall if indicated.
- L. Install trench drains at low points of surface areas to be drained. Set grates of drains flush with finished surface unless otherwise indicated.
- M. Assemble channel drainage system components according to manufacturer's written instructions. Install on support devices so that top will be flush with adjacent surface.
- N. Install through-penetration firestop assemblies in plastic conductors at concrete floor penetrations.
- O. Install sleeve flashing device with each conductor passing through floors with waterproof membrane.

### 3.3 CONNECTIONS

- A. Comply with requirements for piping specified in Division 22. Drawings indicate general arrangement of piping, fittings, and specialties.

### 3.4 ROOF DRAIN MARKER INSTALLATION

- A. Install roof drain markers on each roof drain dome in roof area. Install in accordance with manufacturer's instructions.
  - 1. Attach bracket to drain dome using manufacturer-furnished corrosion-resistant fasteners, securely tighten.
  - 2. Thread marker base to threaded stud on marker bracket and tighten securely.
  - 3. Insert flag marker into marker base and secure using set-screw. Coordinate selection of colored flag marker end based upon drain condition.

### 3.5 FLASHING INSTALLATION

- A. Fabricate flashing from single piece of metal unless large pans, sumps, or other drainage shapes are required. Join flashing according to the following if required:
  - 1. Copper Sheets: Solder joints of copper sheets.
- B. Install sheet flashing on pipes, sleeves, and specialties passing through or embedded in floors and roofs with waterproof membrane.
  - 1. Pipe Flashing: Sleeve type, matching the pipe size, with a minimum length of 10 inches and with skirt or flange extending at least 8 inches around pipe.
  - 2. Sleeve Flashing: Flat sheet, with skirt or flange extending at least 8 inches around sleeve.
  - 3. Embedded Specialty Flashing: Flat sheet, with skirt or flange extending at least 8 inches around specialty.
- C. Set flashing on floors and roofs in solid coating of bituminous cement.
- D. Secure flashing into sleeve and specialty clamping ring or device.
- E. Fabricate and install flashing and pans, sumps, and other drainage shapes.

### 3.6 PROTECTION

- A. Protect drains during remainder of construction period to avoid clogging with dirt or debris and to prevent damage from traffic or construction work.
- B. Place plugs in ends of uncompleted piping at end of each day or when work stops.

END OF SECTION

H:\Y0586.00\DOC\SPEC\2025\_02-20\_IFB\221423\_STORM DRAINAGE PIPING SPECIALTIES.DOC

## SECTION 223400 - FUEL-FIRED, WATER HEATERS

### PART 1 - GENERAL

#### 1.1 RELATED DOCUMENTS

- A. Certain requirements common to all the mechanical and electrical trades (Fire Suppression, Plumbing, HVAC, Electrical, and Tele/Data) are specified in Division 20. To avoid repetition, they are not repeated in each relevant Division and Section. However, these requirements are applicable to the work of this Section and are hereby incorporated by reference.
- B. Drawings and general provisions of the Contract, including General and Supplementary Conditions and Division 01 Specification Sections, apply to this Section.

#### 1.2 SUMMARY

- A. Section Includes:
  - 1. Commercial, gas-fired, condensing water heaters – General
  - 2. Multi Duty Commercial Condensing Water Heater
  - 3. Extensive Capacity Commercial Condensing Water Heater.
  - 4. Gas-fired, tankless, condensing water heaters.
  - 5. Residential, gas-fired storage, water heaters
  - 6. Water heater accessories.
  - 7. Floor leak detection system
  - 8. Source Quality Control

#### 1.3 PERFORMANCE REQUIREMENTS

- A. For seismic projects and related performance, commercial water heaters shall withstand the effects of earthquake motions determined according to Division 22 for vibration and seismic isolation.
  - 1. For seismic projects, the term "withstand" means "the unit will remain in place without separation of any parts from the device when subjected to the seismic forces specified and the unit will be fully operational after the seismic event."

#### 1.4 ACTION SUBMITTALS

- A. Product Data: For each type and size of water heater indicated. Include rated capacities, operating characteristics, electrical characteristics, and furnished specialties and accessories.
- B. LEED Submittals:
  - 1. Product Data for Prerequisite EA 2: Documentation indicating that units comply with applicable requirements in ASHRAE/IESNA 90.1, Section 7, "Service Water Heating."
- C. Shop Drawings:

1. Wiring Diagrams: For power, signal, and control wiring.

#### 1.5 INFORMATIONAL SUBMITTALS

- A. Seismic Qualification Certificates: For fuel-fired, water heaters, accessories, and components, from manufacturer.
  1. Basis for Certification: Indicate whether withstand certification is based on actual test of assembled components or on calculation.
  2. Dimensioned Outline Drawings of Equipment Unit: Identify center of gravity and locate and describe mounting and anchorage provisions.
  3. Detailed description of equipment anchorage devices on which the certification is based and their installation requirements.
- B. Product Certificates: For each type of commercial, gas-fired, gas-fired, tankless, residential, gas-fired, water heater, from manufacturer.
- C. Water Heater Labeling: Certified and labeled by testing agency acceptable to authorities having jurisdiction.
- D. Source quality-control reports.
- E. Field quality-control reports.
- F. Warranty: Sample of special warranty.

#### 1.6 CLOSEOUT SUBMITTALS

- A. Operation and Maintenance Data: For fuel-fired, water heaters to include in emergency, operation, and maintenance manuals.

#### 1.7 QUALITY ASSURANCE

- A. Electrical Components, Devices, and Accessories: Listed and labeled as defined in NFPA 70, by a qualified testing agency, and marked for intended location and application.
- B. ASHRAE/IESNA Compliance: Fabricate and label fuel-fired, water heaters to comply with ASHRAE/IESNA 90.1.
- C. ASME Compliance:
  1. Where ASME-code construction is indicated, fabricate and label commercial, water heater storage tanks to comply with ASME Boiler and Pressure Vessel Code: Section VIII, Division 1.
  2. Where ASME-code construction is indicated, fabricate and label commercial, finned-tube, water heaters to comply with ASME Boiler and Pressure Vessel Code: Section IV.
- D. NSF Compliance: Fabricate and label equipment components that will be in contact with potable water to comply with NSF 61 Annex G, "Drinking Water System Components - Health Effects."

#### 1.8 COORDINATION

- A. Coordinate sizes and locations of concrete bases with actual equipment provided.

## 1.9 WARRANTY

- A. General: periods are stipulated here for this specification section. Generally manufacturers standard warranty applies, however, longer warranty periods, if required, are stipulated in part 2 where each product is specified. The warranty periods stipulated in part 2 take priority over standard manufacturer's warranty periods specified in part 1.
- B. Warranty: Manufacturer's standard warranty – submit a form in which manufacturer agrees to repair or replace components that fail in materials or workmanship within manufacturers standard specified warranty period. Manufacturers standard warranty must include minimum durations below
- C. Minimum Durations and Special Warrantees: Manufacturer's standard form in which manufacturer agrees to repair or replace components that fail in materials or workmanship within specified warranty period.
  - 1. Structural failures including shell.
  - 2. Warranty period shall begin on the date of project substantial completion stipulated by the Architect and/or the Construction Manager
  - 3. Commercial, Storage, Water Heaters:
    - a. Storage Tank: Five years.
    - b. Controls and Other Components: Three years.
  - 4. Residential, , Storage, Domestic-Water Heaters:
    - a. Storage Tank: 5 years.
    - b. Controls and Other Components: Three years.
  - 5. Compression Tanks: Five years.

## PART 2 - PRODUCTS

### 2.1 COMMERCIAL, GAS-FIRED WATER HEATERS GENERAL

- A. Commercial, Gas-Fired, High-Efficiency, Water Heaters:
  - 1. Manufacturers: Subject to compliance with requirements, available manufacturers offering products that may be incorporated into the Work, provide products by one of the following, or approved equal.
    - a. A. O. Smith
    - b. Lochinvar, LLC.
    - c. PVI Industries, LLC.
    - d. Or Approved Equal.
  - 2. Standard: ANSI Z21.10.3/CSA 4.3.
  - 3. Description: Manufacturer's proprietary design to provide at least 94% percent thermal efficiency.
  - 4. Storage-Tank Construction: ASME-code steel with 150-psig except for high-rise application minimum working-pressure rating.

## 2.2 MULTI DUTY COMMERCIAL CONDENSING WATER HEATER AND TANK

<b>GAS FIRED CONDENSING WATER HEATER -</b>	
Fuel	Natural or Propane Gas, verify on Schedule Sheet.
Number of Units	See Schedule Sheet
Performance	<p>The water heaters shall be CSA listed as a complete unit. The heater shall satisfy current Federal Energy Policy Act standards for both thermal efficiency and stand-by heat losses as established for gas fired water heaters.</p> <p>Water heaters will operate at a minimum 94 percent thermal efficiency at full firing rate when tested to the ANSI Z21.10.3 thermal efficiency test protocol (DOE 10 CFR 431).</p> <p>Water heater will meet the thermal efficiency and standby heat loss requirements of ASHRAE 90.1 – 2010.</p>
Construction	<p>Water heaters will be of the BTU input(s) and storage capacity indicated on the equipment schedule.</p> <p>The water heater will be a vertical fire or horizontal water tube design that is constructed and stamped in accordance with Section IV of the ASME code. Water heater will be National Board Registered for a working pressure of 150 psi and will be pressure tested at 1-1/2 times working pressure. Water heater will be coupled with an external storage tank or an internal storage tank. The tank is to be lined with manufacturers lining comparable to seamless cement. Aa Cement lined Storage Vessel shall not require any type of anodic protection.</p> <p>Water Heater heat exchanger shall be constructed of 316L stainless steel, and mounted in a sealed stainless steel combustion chamber. The heat exchanger and combustion chamber assembly shall be of all-welded construction. The heat exchanger shall be rated for 160psi maximum operating pressure. Materials shall meet ASME Section II material requirements and be accepted by NSF 61 for municipal potable water systems. All tank connections/fittings will be non-ferrous or stainless steel.</p> <p>Combustion will be provided by a premix, fan-assisted surface burner with a gas train meeting CSA standards for the input specified.</p> <p>Combustion will be provided by a fan-assisted burner with a gas train meeting Massachusetts code requirements for the input specified.</p> <ul style="list-style-type: none"> <li>• Burner will be stainless steel.</li> <li>• Gas train components will capable of self-pro-portionating gas and air to maintain optimum combustion in response to varying vent pressures.</li> <li>• The burner will employ a Variable speed blower utilizing pulse width modulation to vary gas and air.</li> <li>• Burner NOx emissions will be less than 20 ppm when corrected to 3 percent oxygen.</li> </ul> <p>Water heater will be a category IV, condensing appliance and vent through PVC or Polypropylene. Water heater will satisfy requirements for sealed combustion. Vents for inlet air and exhaust can terminate in different pressure zones.</p>
Quality Assurance	<p>Listing: The water heater will be The water heater shall be certified to the ANSI Z21.10.3 / CSA 4.3 Gas Water Heater Standard. ASME Compliance: Water heater shall bear the ASME stamp and be National Board listed. Water heaters will operate at a minimum 94 percent thermal efficiency at full firing rate when tested to the ANSI Z21.10.3 thermal efficiency test protocol (DOE 10 CFR 431).</p> <p>The water heater will comply with current ASHRAE 90.1 requirements. Water heater manufacturer certified to the ISO 9001 International Quality System.</p>
Water Heater Trim	<p>As a minimum, the heater will be equipped with the following:</p> <ul style="list-style-type: none"> <li>• electronic flame monitoring</li> <li>• electronic low water cutoff</li> <li>• an <i>immersion</i> operating control</li> <li>• an <i>immersion</i> UL listed temperature limiting device</li> <li>• an ASME- rated temperature and pressure relief valve</li> </ul> <p>Operating and safety controls shall meet the requirements of CSD-1/GEGAP and Massachusetts code</p> <p>The water heater shall employ an electronic operating control with digital temperature readout. Operator shall be capable of connecting to a building automation system through serial connection using Modbus RTU protocol.</p>

<b>GAS FIRED CONDENSING WATER HEATER -</b>	
Installation and Communication	<p>Install water heaters level and plumb in accordance with manufacturers written instructions and referenced standards</p> <p>The controller shall have the ability to communicate common field-bus protocols, (BACnet, Modbus, Profibus, and LON or N2), via optional gateway communication expansion card installed inside controller.</p>
Finishing	<p>Base option - The storage and heating sections shall be completely factory packaged on a single skid, requiring only job site hookup to utilities, venting, and plumbing. The system may be shipped in component parts should jobsite access be restricted. The heater shall be insulated to meet current ASHRAE 90.1 standby loss requirements. Pressure vessel shall include a ball-type drain valve. The heater shall fit properly in the space provided and installation shall conform to all local, state, and national codes</p>
Start-Up	<p>Start up on the unit will be performed by factory trained and authorized personnel. A copy of the startup report will be provided to the owner.</p>
Warranty	See part 1
Rated Duty/Capacity	See Drawing Schedule Sheet
Basis of Design	<p>Model NX Hubbell Water Heaters</p> <p>PVI Conquest™ Plus packaged water heater</p>

## 2.3 WATER HEATER ACCESSORIES

### A. Condensate Neutralization for Condensing Heaters

1. Provide a package neutralization pod capable of pH correction of the condensate discharge for each condensing water heater
2. Provide appropriate thermoplastic piping to and from pod to a safe drain location

### B. Water Compression Tanks:

1. Manufacturers: Subject to compliance with requirements, available manufacturers offering products that may be incorporated into the Work, provide products by one of the following, or approved equal.
  - a. AMTROL, Inc.
  - b. Smith, A. O. Corporation.
  - c. Taco, Inc.
  - d. Or Approved Equal.
2. Description: Steel, pressure-rated tank constructed with welded joints and factory-installed butyl-rubber diaphragm. Include air pre-charge to minimum system-operating pressure at tank.
3. Construction:
  - a. Tappings: Factory-fabricated steel, welded to tank before testing and labeling. Include ASME B1.20.1 pipe thread.
  - b. Interior Finish: Comply with NSF 61 Annex G barrier materials for potable-water tank linings, including extending finish into and through tank fittings and outlets.
  - c. Air-Charging Valve: Factory installed.
4. Warranty: see part 1

### C. Drain Pans: Corrosion-resistant metal with raised edge. Comply with ANSI/CSA LC 3. Include dimensions not less than base of water heater, and include drain outlet not less than NPS 3/4 with ASME B1.20.1 pipe threads or with ASME B1.20.7 garden-hose threads.

### D. Piping-Type Heat Traps: Field-fabricated piping arrangement according to ASHRAE/IESNA 90.1 or ASHRAE 90.2.

### E. Heat-Trap Fittings: ASHRAE 90.2.

### F. Manifold Kits: -water heater manufacturer's factory-fabricated inlet and outlet piping for field installation, for multiple water heater installation. Include ball-, butterfly-, or gate-type shutoff valves to isolate each water heater and calibrated memory-stop balancing valves to provide balanced flow through each water heater.

- G. Comply with requirements for ball-, butterfly-, or gate-type shutoff valves specified in Division 22.
  - 1. Comply with requirements for balancing valves specified in Division 22.
- H. Gas Shutoff Valves: ANSI Z21.15/CSA 9.1-M manually operated. Furnish for installation in piping.
- I. Gas Pressure Regulators: ANSI Z21.18/CSA 6.3, appliance type. Include 1/2-psig, 2-psig or 5-psig pressure rating as required to match gas supply.
- J. Automatic Gas Valves: ANSI Z21.21/CSA 6.5, appliance, electrically operated, on-off automatic valve.
- K. Combination Temperature-and-Pressure Relief Valves: Include relieving capacity at least as great as heat input, and include pressure setting less than water heater working-pressure rating. Select relief valves with sensing element that extends into storage tank.
  - 1. Gas-Fired, Water Heaters: ANSI Z21.22/CSA 4.4-M.
- L. Pressure Relief Valves: Include pressure setting less than water heater working-pressure rating.
  - 1. Gas-Fired, Water Heaters: ANSI Z21.22/CSA 4.4-M.
- M. Vacuum Relief Valves: ANSI Z21.22/CSA 4.4-M.
- N. Water Heater Stands: Manufacturer's factory-fabricated steel stand for floor mounting, capable of supporting water heater and water. Provide dimension that will support bottom of water heater a minimum of 18 inches above the floor.
- O. Water Heater Mounting Brackets: Manufacturer's factory-fabricated steel bracket for wall mounting, capable of supporting water heater and water.

#### 2.4 FLOOR LEAK DETECTION

- A. Leak Detection: Provide leak detection for each installation of general water heating equipment including storage tanks per the following:
  - 1. Provide a concrete curb containment that fully encompasses the water heater installation area. If storage tanks are separate provide curb around each unit or package.
  - 2. Provide a full size floor drain or floor sink inside the concrete curbed area
- B. General
  - 1. Furnish and install a complete floor leak detection system around the perimeter of the steam water heater installation.
  - 2. Wireless or hard wired floor sensors are acceptable
  - 3. Position leak detection pucks approximately 10 feet on center around the perimeter of the heater installation
  - 4. Perform all necessary placement of sensors, controllers and valves. Route detector wires, control wire signals to valves and charger wires to result in a full turnkey operation
  - 5. Mount the fixed controller on a wall or column in the immediate area of the water heater
  - 6. Coordinate power with Division 26 Electrical Contractor exact location of power source wire. 120VAC will be provided to a two duplex outlets at the controller location

- C. Manufacturers: Subject to compliance with requirements, available manufacturers offering products that may be incorporated into the Work, provide products by one of the following, or approved equal.
1. Pipe Burst Pro.
  2. Floodmaster, Inc.
  3. Pentair
  4. Or Approved Equal.

LEAK DETECTION - FLOOR MONITOR SYSTEM FOR STEAM WATER HEATER AREA		
DESCRIPTION	Water detection alarm system designed to monitor water leak location, and near water systems such as water heating equipment and recirculating pumps. The system shall sequence an alarm when: <ul style="list-style-type: none"><li>- A wireless sensor and/or wired sensor is in contact with any non-flammable conductive liquid (such as water)</li><li>- A water meter, integrated with the system, exceeds a user set quantity within a user defined timer limit</li></ul> The system shall operate as a package and initiate the following: <ul style="list-style-type: none"><li>- Automatically close the electrically actuated water valve on the designated water shut off location via wireless relay switch</li><li>- Sound local audible alarms, send alerts and notifications via text, email and/or phone call</li><li>- Report via dry contacts to a Building Management System (BMS)</li><li>- Report directly to Building Personnel and allow full system monitoring and control via app.ionleaks.com</li></ul>	
PERFORMANCE CONDITIONS	Floor stationed wireless and wired sensors are activated by conductive fluid. Flow detection is activated when a user set quantity is exceeded in a user defined timer limit. <ul style="list-style-type: none"><li>- All communications, audible alarms, alerts, phone calls, communication with BMS and automatic valve closures, are automatically set in motion.</li><li>- Opening of the valve happens slowly in incremental “ticking” stages.</li><li>- Up to one-hundred (100) wireless devices can be added to a single system.</li><li>- Up to twenty-six (26) autonomous zones are available within a single system.</li><li>- Single systems communicate with each other for scalability within a property.</li></ul>	
COMPONENT HARDWARE		
Communication Hub	Description	The primary function of the device is to coordinate incoming signals from system devices and facilitate actions accordingly. Each Communication HUB accommodates up to 100 Wireless Devices distributed, as applicable, across a maximum of 26 autonomous Zones.
	Wireless Range	Up to 900 feet in nominal conditions.
	Internet Connectivity	Connectivity to internet router via RJ45 connection located inside the Valve Interface Panel (VIP).
	Power Requirements	Component Power Adapter Input: 100V – 240V 50/60Hz Component Power Adapter Output: DC 5V @ 1A max
Wireless Relay And Switch	Description	The primary function of the device is enabling wireless operation of equipment wired to it. This device operates as a control module for standard equipment, but is capable of managing any third party device that meets the input/output criteria.
	Wireless Range	Up to 900 feet in nominal conditions.
	Power Requirements	Component Power Adapter Input: 100V – 240V 50/60Hz Component Power Adapter Output: DC 5V @ 1A max
Wireless Water And Temperature Sensor	Description	The primary function of the device is to detect the physical presence of water or when the ambient temperature drops below the standard threshold. When water is detected or the standard temperature threshold is reached, the regular operation of this device is to sound an audible alarm in the device itself, and alarm the System Zone it is assigned to.
	Wireless Range	Up to 900 feet in nominal conditions.
	Power Requirements	Component Power Adapter Input: 100V – 240V 50/60Hz Component Power Adapter Output: DC 5V @ 1A max Battery Power: Two (2) standard Double A (AA) batteries
Wireless Signal Repeater	Description	The primary function of the device is to extend the coverage area between the Communication HUB and end devices. The secondary function of the device is to detect the physical presence of water or when the ambient temperature drops below the standard threshold. When water is detected or the standard temperature threshold is reached, the regular operation of the RP Device is to sound an audible alarm in the device itself, and alarm the System Zone it is assigned to.
	Wireless Range	Up to 900 feet in nominal conditions.
	Power Requirements	Component Power Adapter Input: 100V – 240V 50/60Hz Component Power Adapter Output: DC 5V @ 1A max Battery Backup: Two (2) standard Double A (AA) batteries
Wireless Remote	Description	The primary function of the device is to change the state of, or mute an alarm

LEAK DETECTION - FLOOR MONITOR SYSTEM FOR STEAM WATER HEATER AREA		
Control		for, the Zone it is assigned to. The secondary function of this device is to detect the physical presence of water or when the ambient temperature drops below the standard threshold. When water is detected or the standard temperature threshold is reached, the regular operation of this device is to sound an audible alarm in the device itself, and alarm the Zone it is assigned to.
	Wireless Range	Up to 900 feet in nominal conditions.
	Power Requirements	Component Power Adapter Input: 100V – 240V -50/60Hz Component Power Adapter Output: DC 5V @ 1A max Battery Backup: Two (2) standard Double A (AA) batteries
WIRELESS FREQUENCY	915MHz	
WIRED SENSORS	Stainless Steel and ABS Wired sensors placed at a ratio of one sensor per 100sqft with wires extended and connected to a wireless sensor. Test all sensor locations, wired and/or wireless.	
ACCESSORIES	Provide all manufacturers approved and recommended connectors, extension cables, junction boxes and tags to provide a complete, functional system	
WATER INLET AND OUTLET CONTROL SHUTOFF VALVES FLDV-101	<p>All Actuators are rated:</p> <ul style="list-style-type: none"> <li>• NEMA 6P</li> <li>• NEMA 7D</li> </ul> <p>All Valves are rated:</p> <ul style="list-style-type: none"> <li>• UPC</li> <li>• NSF/ANSI 61 – Annex G</li> <li>• No Lead</li> </ul> <p>Available valve sizes (<i>model numbers listed</i>) are:</p> <ul style="list-style-type: none"> <li>• ¾" – WVEZ3-T</li> <li>• 1" – WVFS3-T</li> <li>• 1½" – WVHS2-T</li> <li>• 2" – WVIS2-T</li> <li>• 3" – WVK5-T (WVKS(five)-T)</li> </ul> <p>316 Stainless Steel Full Port Ball Valve Lead Free Brass Standard Port Ball Valve Manual Handle for Emergency Override WV Series, Electrically Actuated Valves Run control wiring from wireless relay to each Water Valve location, maximum distance between Water Valve and wireless relay is 100'.</p>	
REMOTE ALARM	BMS or Security systems interface via dry contacts	
ELECTRICAL	<p>Wireless Component with Battery: Two (2) standard Double A (AA) batteries Wireless Component Power Adapter Input: 100V – 240V -50/60Hz Wireless Component Power Adapter Output: DC 5V @ 1A max Water Valve Power Adapter Input: 100V – 240V @ 1.5A Water Valve Power Adapter Output: 15V @ 3A max</p>	
BASIS OF DESIGN	PipeBurst Pro 4 series VP415-CP), app.ionleaks.com, SK220B wired sensors, WT400 wireless sensors, Series WV Electrically Actuated Valves, ( <i>see above for WV model numbers.</i> )	

## 2.5 SOURCE QUALITY CONTROL

- A. Factory Tests: Test and inspect assembled water heaters and storage tanks specified to be ASME-code construction, according to ASME Boiler and Pressure Vessel Code.
- B. Hydrostatically test commercial water heaters and storage tanks to minimum of one and one-half times pressure rating before shipment.
- C. Water heaters will be considered defective if they do not pass tests and inspections. Comply with requirements in Division 01 for retesting and re-inspecting requirements and Division 01 for requirements for correcting the Work.

- D. Prepare test and inspection reports.

### PART 3 - EXECUTION

#### 3.1 INDEX OF FUEL FIRED WATER HEATERS-

Equipment Tag	Type	Application	Tank size range
Refer to Schedule Sheet	Gas Fired Condensing with Tank	Multi-Residential or Commercial mid-range to large load profile	100 to 300 gallons Multipurpose
Refer to Schedule Sheet	Gas Fired Condensing Very Large Application	Extensive Load, Small Storage, Large Recovery	100 to 300 gallons
Refer to Schedule Sheet	Gas Fired Condensing Tankless	Instantaneous Residential Style	none
Refer to Schedule Sheet	Residential Gas Fired Storage Water Heater	Standard Atmospheric Gas fired Residential Style Water Heater	10 - 66 gallons

#### 3.2 WATER HEATER INSTALLATION

- A. Commercial, Water Heater Mounting: Install commercial water heaters on concrete base. Comply with requirements for concrete base specified in Division 03.
- Exception: Omit concrete bases for commercial water heaters if installation on stand, bracket, suspended platform, or directly on floor is indicated.
  - Maintain manufacturer's recommended clearances.
  - Arrange units so controls and devices that require servicing are accessible.
  - Install dowel rods to connect concrete base to concrete floor. Unless otherwise indicated, install dowel rods on 18-inch centers around the full perimeter of concrete base.
  - For supported equipment, install epoxy-coated anchor bolts that extend through concrete base and anchor into structural concrete floor.
  - Place and secure anchorage devices. Use setting drawings, templates, diagrams, instructions, and directions furnished with items to be embedded.
  - Install anchor bolts to elevations required for proper attachment to supported equipment.
  - Anchor water heaters to substrate.
- B. Residential, Water Heater Mounting: Install residential water heaters on floor.
- Maintain manufacturer's recommended clearances.
  - Arrange units so controls and devices that require servicing are accessible.
  - Place and secure anchorage devices. Use setting drawings, templates, diagrams, instructions, and directions furnished with items to be embedded.
  - Install anchor bolts to elevations required for proper attachment to supported equipment.
  - Anchor water heaters to substrate.
- C. Tankless, Water Heater Mounting: Install tankless, water heaters at least 18 inches above floor on wall bracket.

1. Maintain manufacturer's recommended clearances.
  2. Arrange units so controls and devices that require servicing are accessible.
  3. Place and secure anchorage devices. Use setting drawings, templates, diagrams, instructions, and directions furnished with items to be embedded.
  4. Install anchor bolts to elevations required for proper attachment to supported equipment.
  5. Anchor water heaters to substrate.
- D. Install water heaters level and plumb, according to layout drawings, original design, and referenced standards. Maintain manufacturer's recommended clearances. Arrange units so controls and devices needing service are accessible.
1. Install shutoff valves on water-supply piping to water heaters and on hot-water outlet piping. Comply with requirements for shutoff valves specified in Division 22. Install gas-fired, water heaters according to NFPA 54.
  2. Install gas shutoff valves on gas supply piping to gas-fired, water heaters without shutoff valves.
  3. Install gas pressure regulators on gas supplies to gas-fired, water heaters without gas pressure regulators if gas pressure regulators are required to reduce gas pressure at burner.
  4. Install automatic gas valves on gas supplies to gas-fired, water heaters if required for operation of safety control.
  5. Comply with requirements for gas shutoff valves, gas pressure regulators, and automatic gas valves specified in Divisions 22 and 23.
- E. Install commercial water heaters with seismic-restraint devices. Comply with requirements for seismic-restraint devices specified in Division 22.
- F. Install combination temperature-and-pressure relief valves in top portion of storage tanks. Use relief valves with sensing elements that extend into tanks. Extend commercial-water-heater relief-valve outlet, with drain piping same as water piping in continuous downward pitch, and discharge by positive air gap onto closest floor drain.
- G. Install combination temperature-and-pressure relief valves in water piping for water heaters without storage. Extend commercial-water-heater relief-valve outlet, with drain piping same as water piping in continuous downward pitch, and discharge by positive air gap onto closest floor drain.
- H. Install water-heater drain piping as indirect waste to spill by positive air gap into open drains or over floor drains. Install hose-end drain valves at low points in water piping for water heaters that do not have tank drains. Comply with requirements for hose-end drain valves specified in Division 22.
- I. Install thermometer on outlet piping of water heaters. Comply with requirements for thermometers specified in Division 22.
- J. Assemble and install inlet and outlet piping manifold kits for multiple water heaters. Fabricate, modify, or arrange manifolds for balanced water flow through each water heater. Include shutoff valve and thermometer in each water heater inlet and outlet, and throttling valve in each water heater outlet. Comply with requirements for valves specified in Division 22 and comply with requirements for thermometers specified in Division 22.

- K. Install piping-type heat traps on inlet and outlet piping of water heater storage tanks without integral or fitting-type heat traps.
- L. Fill water heaters with water.
- M. Charge water compression tanks with air.

### 3.3 CONNECTIONS

- A. Comply with requirements for water piping specified in Division 22.
- B. Comply with requirements for fuel-oil piping specified in Division 23.
- C. Comply with requirements for gas piping specified in Divisions 22 and 23.
- D. Drawings indicate general arrangement of piping, fittings, and specialties.
- E. Where installing piping adjacent to fuel-fired, water heaters, allow space for service and maintenance of water heaters. Arrange piping for easy removal of water heaters.

### 3.4 IDENTIFICATION

- A. Identify system components. Comply with requirements for identification specified in Division 22.

### 3.5 FIELD QUALITY CONTROL

- A. Perform tests and inspections.
  - 1. Manufacturer's Field Service: Engage a factory-authorized service representative to inspect components, assemblies, and equipment installations, including connections, and to assist in testing.
  - 2. Leak Test: After installation, charge system and test for leaks. Repair leaks and retest until no leaks exist.
  - 3. Operational Test: After electrical circuitry has been energized, start units to confirm proper operation.
  - 4. Test and adjust controls and safeties. Replace damaged and malfunctioning controls and equipment.
- B. Water heaters will be considered defective if they do not pass tests and inspections. Comply with requirements in Division 01 for retesting and re-inspecting requirements and Division 01 for requirements for correcting the Work.
- C. Prepare test and inspection reports.

### 3.6 DEMONSTRATION

- A. Engage a factory-authorized service representative to train Owner's maintenance personnel to adjust, operate, and maintain commercial, gas-fired, storage, gas-fired, tankless commercial, gas- and oil-fired, water heaters.

END OF SECTION

## **SECTION 224200 - COMMERCIAL PLUMBING FIXTURES**

### **PART 1 - GENERAL**

#### **1.1 RELATED DOCUMENTS**

- A. Certain requirements common to all the mechanical and electrical trades (Fire Suppression, Plumbing, HVAC, Electrical, and Tele/Data) are specified in Division 20. To avoid repetition, they are not repeated in each relevant Division and Section. However, these requirements are applicable to the work of this Section and are hereby incorporated by reference.
- B. Drawings and general provisions of the Contract, including General and Supplementary Conditions and Division 01 Specification Sections, apply to this Section.

#### **1.2 SUMMARY**

- A. Section Includes:
  - 1. Plumbing Fixtures General
  - 2. Water Closets
  - 3. Water Closet Flushometer Valves
  - 4. Closet Toilet Seat
  - 5. Water Closet Supports
  - 6. Urinals
  - 7. Urinal Flushometer Valves
  - 8. Urinal Supports
  - 9. Lavatories
  - 10. Lavatory Support
  - 11. Lavatory Faucets
  - 12. Commercial Janitor Sinks
  - 13. Service Sink Faucets
  - 14. Utility Sinks
  - 15. Utility Sink Faucets
  - 16. Handwash Sinks
  - 17. Handwash Sink Supports
  - 18. Handwash Sink Faucets
  - 19. Showers
  - 20. Individual Shower Faucets for Single Shower
  - 21. Group Wall Mounted Showers
  - 22. Drinking Fountains stainless steel or vitreous china wall mount semi recessed

- 23. Supply Fittings
- 24. Risers
- 25. Source quality control
- 26. Grout

### 1.3 ACTION SUBMITTALS

- A. Product Data: For each type of product.
  - 1. Include construction details, material descriptions, dimensions of individual components.
  - 2. Include rated capacities, operating characteristics, electrical characteristics, and furnished specialties and accessories.
- B. LEED Submittals:
  - 1. Product Data for Prerequisites WE 1, Credit WE 2, and/or Credit WE 3: Documentation indicating flow and water consumption requirements.
  - 2. Product Data for Prerequisite WE 1: Documentation indicating flow and water consumption requirements.
  - 3. Product Data for Prerequisite WE 1 and/or Credit WE 2: Documentation indicating flow and water consumption requirements.
- C. Shop Drawings: Include diagrams for power, signal, and control wiring.

### 1.4 CLOSEOUT SUBMITTALS

- A. Operation and Maintenance Data: For all plumbing fixtures including faucets, fittings, valves, flushometer valves and electronic sensors to be included in operation and maintenance manuals.

### 1.5 MAINTENANCE MATERIAL SUBMITTALS

- A. Furnish extra materials that are packaged with protective covering for storage and identified with labels describing contents.
  - 1. Flushometer-Valve Repair Kits: Equal to 10 percent of amount of each type installed, but no less than one of each type.

## PART 2 - PRODUCTS

### 2.1 PLUMBING FIXTURES - GENERAL

- A. Plumbing Fixtures Models are scheduled on the drawings, specifically on the plumbing drawing schedule sheet. Below are requirements that establish the level of quality.
- B. Quality
  - 1. Grade 1, type 1 plumbing fixtures only are acceptable.
- C. See Drawings for exact models and types.
- D. General

1. All plumbing fixtures shall be furnished from the same manufacturer for all commodity and china product castings. Specialties only may be furnished from exclusive manufacturers.
2. All fixtures shall comply with the latest water conservation standards.
3. Refer to Architectural and Plumbing Drawings for quantities, locations and mounting heights of fixtures provided under this Section.
4. Fixture trim, traps, faucets, escutcheons, and waste pipes exposed to view in finished spaces shall be IPS brass with chrome plating over nickel finish. Refer to schedules for specific applications, such as commercial kitchens, or institutional facilities, etc.
5. Vitreous china fixtures shall be regular selection fused and vitrified to produce homogeneous material with close grain without pores. Surfaces that contact walls, floors and other fixtures shall be set true.
6. Enameled surfaces on cast iron fixtures shall be of suitable thickness to provide the highest commercial grade. Exterior exposed surfaces not enameled shall be treated at factory with one coat of filler.
7. Affix manufacturer's guarantee label or trademark to fixture to indicate first quality. Acid-resisting enameled fixture shall bear manufacturer's symbol signifying resistance to acid.
8. Set fixtures with wall outlet flanges at proper distance from floors and walls with closet setting compound or gasket.
9. Vitreous china and enameled cast-iron fixtures shall be scheduled on the drawings unless specified otherwise.
  - a. Fixture colors: White, unless scheduled otherwise.

## 2.2 WATER CLOSETS

### A. Water Closets: Wall mounted, top spud.

1. **Manufacturers:** Subject to compliance with requirements, provide products by one of the following or approved equal:
  - a. American Standard.
  - b. Eljer Company.
  - c. Kohler Co.
  - d. Sloan Valve Company.
  - e. TOTO USA, INC.
  - f. Zurn Industries LLC.
  - g. Or Approved Equal.
2. **Bowl:**
  - a. Standards: ASME A112.19.2/CSA B45.1 and ASME A112.19.5.
  - b. Material: Vitreous china.
  - c. Type: Siphon jet.

- d. Style: Flushometer valve.
- e. Height: Standard.
- f. Rim Contour: Elongated.
- g. Water Consumption: 1.28 gal. per flush.
- h. Water Consumption: 1.6 gal. for all private use water closets greater than 50 feet from a vertical stack
- i. Spud Size and Location: NPS 1-1/2; top.

## 2.3 WATER CLOSET FLUSHOMETER VALVES

### A. Lever-Handle, Flushometer Valves:

- 1. **Manufacturers:** Subject to compliance with requirements, provide products by one of the following or approved equal:
  - a. **Advanced Modern Technologies Corporation - AMTC.**
  - b. **Delany Products.**
  - c. **Sloan Valve Company.**
  - d. **Zurn Industries, LLC.**
  - e. Or Approved Equal.
- 2. Standard: ASSE 1037.
- 3. Minimum Pressure Rating: 125 psig.
- 4. Features: Include integral check stop and backflow-prevention device.
- 5. Material: Brass body with corrosion-resistant components.
  - a. Style: Exposed or concealed, as indicated on drawing schedules.
    - 1) Exposed Flushometer-Valve Finish: Chrome plated.
    - 2) For concealed valves - Panel Finish: Chrome plated or stainless steel.
  - b. Consumption: 1.28 gal. 1.6 gal. per flush for remote.
  - c. Minimum Inlet: NPS 1.
  - d. Minimum Outlet: NPS 1-1/4.

### B. Solenoid-Actuator, Flushometer Valves

- 1. **Manufacturers:** Subject to compliance with requirements, provide products by one of the following or approved equal:
  - a. **Delany Products.**
  - b. **Sloan Valve Company.**
  - c. **Zurn Industries, LLC.**
  - d. Or Approved Equal.
- 2. Standard: ASSE 1037.
- 3. Minimum Pressure Rating: 125 psig.

4. Features: Include integral check stop and backflow-prevention device.
5. Material: Brass body with corrosion-resistant components.
6. Exposed Flushometer-Valve Finish: Chrome plated.
7. Panel Finish: Chrome plated or stainless steel.
8. Style: Exposed or concealed as indicated on drawing schedules.
9. Actuator: Solenoid complying with UL 1951, and listed and labeled as defined in NFPA 70, by a qualified testing agency, and marked for intended location and application.
10. Trip Mechanism: see schedule: Battery-powered or Hard-wired electronic sensor complying with UL 1951, and listed and labeled as defined in NFPA 70, by a qualified testing agency, and marked for intended location and application.
11. Consumption: Refer to drawing schedules.
12. Minimum Inlet: NPS 1.
13. Minimum Outlet: NPS 1-1/4.

#### 2.4 CLOSET TOILET SEAT:

- A. **Manufacturers:** Subject to compliance with requirements, provide products by one of the following or approved equal:
1. **American Standard.**
    - a. Bemis Manufacturing Company.
    - b. Church Seats; Bemis Manufacturing Company.
    - c. Kohler Co.
    - d. Olsonite Seat Co.
    - e. TOTO USA, INC.
    - f. Zurn Industries, LLC.
    - g. Or Approved Equal.
  2. Standard: IAPMO/ANSI Z124.5.
  3. Material: Plastic.
  4. Type: Commercial (Heavy duty).
  5. Shape: Elongated rim, open front.
  6. Hinge: Self-sustaining, check.
  7. Hinge Material: Noncorroding metal.
  8. Seat Cover: Refer to drawing schedules.
  9. Color: Match fixture color, unless otherwise indicated on drawings.

#### 2.5 WATER CLOSET SUPPORTS

- A. Water Closet Carrier:

1. **Manufacturers:** Subject to compliance with requirements, provide products by one of the following or approved equal:
  - a. Josam Company.
  - b. Smith Industries.
  - c. Wade Company.
  - d. Watts.
  - e. Zurn Industries, LLC.
  - f. Or Approved Equal.
2. Standard: ASME A112.6.1M.
3. Description: Waste-fitting assembly, as required to match drainage piping material and arrangement with faceplates, couplings gaskets, and feet; bolts and hardware matching fixture. Include additional extension coupling, faceplate, and feet for installation in wide pipe space.
4. Water-Closet Mounting Height: Standard, Child, or Handicapped/elderly according to ICC/ANSI A117.1. See drawing schedules.

## 2.6 URINALS

### A. Urinals: Wall hung, back outlet, blowout.

1. **Manufacturers:** Subject to compliance with requirements, provide products by one of the following or approved equal:
  - a. American Standard.
  - b. Eljer Inc.
  - c. Kohler Co.
  - d. Sloan Company.
  - e. TOTO of America.
  - f. Zurn Industries LLC
  - g. Or Approved Equal.
2. Fixture:
  - a. Standards: ASME A112.19.2/CSA B45.1 and ASME A112.19.5.
  - b. Material: Vitreous china.
  - c. Strainer or Trapway: Manufacturer's standard strainer with integral trap.
  - d. Water Consumption: Water saving.
  - e. Spud Size and Location: NPS 1-1/4.
  - f. Outlet Size and Location: NPS 2; back.
  - g. Color: White.
3. Waste Fitting:
  - a. Standard: ASME A112.18.2/CSA B125.2 for coupling.

- b. Size: NPS 2.
- 4. Support: Type I Urinal Carrier with fixture support plates and coupling with seal and fixture bolts and hardware matching fixture. Include rectangular, steel uprights.
- 5. Urinal Mounting Height: Standard Child Handicapped/elderly according to ICC A117.1.
- B. Urinals: Wall hung, back outlet, siphon jet, standard or accessible.
  - 1. **Manufacturers:** Subject to compliance with requirements, provide products by one of the following or approved equal:
    - a. American Standard.
    - b. Kohler Co.
    - c. Sloan Company.
    - d. Zurn Industries, LLC.
    - e. Or Approved Equal.
  - 2. Fixture:
    - a. Standards: ASME A112.19.2/CSA B45.1 and ASME A112.19.5.
    - b. Material: Vitreous china.
    - c. Type: Siphon jet with extended shields.
    - d. Strainer or Trapway: Manufacturer's standard strainer with integral trap.
    - e. Water Consumption: Water saving Low.
    - f. Spud Size and Location: NPS 3/4.
    - g. Outlet Size and Location: NPS 2; back.
    - h. Color: White.
  - 3. Waste Fitting:
    - a. Standard: ASME A112.18.2/CSA B125.2 for coupling.
    - b. Size: NPS 2.
  - 4. Support: Type I Urinal Carrier with fixture support plates and coupling with seal and fixture bolts and hardware matching fixture. Include rectangular, steel uprights.
  - 5. Urinal Mounting Height: Refer to drawing schedules.
- C. Urinals: Wall-hung, back outlet, washout, standard or accessible.
  - 1. **Manufacturers:** Subject to compliance with requirements, provide products by one of the following or approved equal:
    - a. American Standard.
    - b. Kohler Co.
    - c. Sloan Company.
    - d. TOTO USA, INC.
    - e. Zurn Industries, LLC.
    - f. Or Approved Equal.

2. Fixture:
  - a. Standards: ASME A112.19.2/CSA B45.1 and ASME A112.19.5.
  - b. Material: Vitreous china.
  - c. Type: Washout with extended shields.
  - d. Strainer or Trap-way: Manufacturer's standard strainer with integral trap.
  - e. Water Consumption: Water saving Low.
  - f. Spud Size and Location: NPS 3/4.
  - g. Outlet Size and Location: NPS 2, back.
  - h. Color: White.
3. Waste Fitting:
  - a. Standard: ASME A112.18.2/CSA B125.2 for coupling.
  - b. Size: NPS 2.
4. Support: Type I Urinal Carrier with fixture support plates and coupling with seal and fixture bolts and hardware matching fixture. Include rectangular, steel uprights.
5. Urinal Mounting Height: Refer to drawing schedules.

## 2.7 URINAL FLUSHOMETER VALVES

- A. Styles: Refer to drawing schedules for model types.
- B. Lever-Handle, Flushometer Valves:
  1. **Manufacturers:** Subject to compliance with requirements, provide products by one of the following or approved equal:
    - a. Delany Products.
    - b. Sloan Valve Company.
    - c. Zurn Industries, LLC.
    - d. Or Approved Equal.
  2. Standard: ASSE 1037.
  3. Minimum Pressure Rating: 125 psig.
  4. Features: Include integral check stop and backflow-prevention device.
  5. Material: Brass body with corrosion-resistant components.
  6. Exposed Flushometer-Valve Finish: Chrome plated.
  7. Panel Finish: Chrome plated or stainless steel.
  8. Style: Refer to drawing schedules.
  9. Consumption: Refer to drawing schedules.
  10. Minimum Inlet: Refer to drawing schedules.
  11. Minimum Outlet: Refer to drawing schedules.
- C. Hard-Wired, Solenoid-Actuator, Flushometer Valves:

1. **Manufacturers:** Subject to compliance with requirements, provide products by one of the following or approved equal:
    - a. Sloan Valve Company.
    - b. TOTO USA, INC.
    - c. Zurn Industries, LLC.
    - d. Or Approved Equal.
  2. Standard: ASSE 1037.
  3. Minimum Pressure Rating: 125 psig.
  4. Features: Include integral check stop and backflow-prevention device.
  5. Material: Brass body with corrosion-resistant components.
  6. Exposed Flushometer-Valve Finish: Chrome plated.
  7. Panel Finish: Chrome plated or stainless steel.
  8. Style: Refer to drawing schedules.
  9. Actuator: Solenoid complying with UL 1951; listed and labeled as defined in NFPA 70, by a qualified testing agency; and marked for intended location and application.
  10. Trip Mechanism: Hard-wired electronic sensor complying with UL 1951; listed and labeled as defined in NFPA 70, by a qualified testing agency; and marked for intended location and application.
  11. Consumption: Refer to drawing schedules.
  12. Minimum Inlet: Refer to drawing schedules.
  13. Minimum Outlet: Refer to drawing schedules.
- D. Battery-Powered, Solenoid-Actuator, Flushometer Valves:
1. **Manufacturers:** Subject to compliance with requirements, provide products by one of the following or approved equal:
    - a. American Standard.
    - b. Delany Products.
    - c. Kohler Co.
    - d. Sloan Valve Company.
    - e. TOTO USA, INC.
    - f. Zurn Industries, LLC.
    - g. Or Approved Equal.
  2. Standard: ASSE 1037.
  3. Minimum Pressure Rating: 125 psig.
  4. Features: Include integral check stop and backflow-prevention device.
  5. Material: Brass body with corrosion-resistant components.
  6. Exposed Flushometer-Valve Finish: Chrome plated.

7. Panel Finish: Chrome plated or stainless steel.
8. Style: Refer to drawing schedules.
9. Actuator: Solenoid complying with UL 1951; listed and labeled as defined in NFPA 70, by a qualified testing agency; and marked for intended location and application.
10. Trip Mechanism: Battery-powered electronic sensor complying with UL 1951; listed and labeled as defined in NFPA 70, by a qualified testing agency; and marked for intended location and application.
11. Consumption: Refer to drawing schedules.
12. Minimum Inlet: Refer to drawing schedules.
13. Minimum Outlet: Refer to drawing schedules.

## 2.8 URINAL SUPPORTS

### A. Urinal Carriers:

1. **Manufacturers:** Subject to compliance with requirements, provide products by one of the following or approved equal:
  - a. Jay R. Smith Mfg. Co; a division of Morris Group International.
  - b. Josam Company.
  - c. MIFAB, Inc.
  - d. Wade Drains.
  - e. WATTS.
  - f. Zurn Industries, LLC.
  - g. Or Approved Equal.
2. Standard: ASME A112.6.1M.

## 2.9 LAVATORIES

### A. Lavatory: Oval, Vitreous China, Undercounter Mounted.

1. **Manufacturers:** Subject to compliance with requirements, provide products by one of the following or approved equal:
  - a. American Standard.
  - b. Kohler Co.
  - c. Sloan Valve Company.
  - d. TOTO USA, INC.
  - e. Zurn Industries, LLC.
  - f. Or Approved Equal.
2. Fixture:
  - a. Standard: ASME A112.19.2/CSA B45.1.
  - b. Type: For undercounter mounting.

- c. Nominal Size: Refer to drawing plans and schedules.
    - d. Faucet-Hole Punching: No holes.
    - e. Faucet-Hole Location: On countertop.
    - f. Mounting Material: Sealant and undercounter mounting kit.
  - 3. Faucet: scheduled.
- B. Lavatory: Rectangular, Vitreous China, Wall Mounted.
- 1. **Manufacturers:** Subject to compliance with requirements, provide products by one of the following or approved equal:
    - a. American Standard.
    - b. Kohler Co.
    - c. Sloan Valve Company.
    - d. TOTO.
    - e. Zurn Industries, LLC.
    - f. Or Approved Equal.
  - 2. Fixture:
    - a. Standard: ASME A112.19.1/CSA B45.2.
    - b. Type: Straight-front apron with straight back.
    - c. Nominal Size: Rectangular, Scheduled
    - d. Faucet-Hole Punching: scheduled.
    - e. Faucet-Hole Location: Top.
    - f. Mounting Material: Wall bracket.
  - 3. Faucet: Refer to drawing schedules.
- C. Lavatory: Wheelchair, Vitreous China, Wall Mounted.
- 1. **Manufacturers:** Subject to compliance with requirements, provide products by one of the following or approved equal:
    - a. American Standard.
    - b. Kohler Co.
    - c. Sloan Valve Company.
    - d. TOTO of America.
    - e. Zurn Industries, LLC.
    - f. Or Approved Equal.
  - 2. Fixture:
    - a. Standard: ASME A112.19.2/CSA B45.1.
    - b. Type: Slab or wheelchair.
    - c. Nominal Size: Rectangular, 27 by 20 inches.

- d. Faucet-Hole Punching: Three holes, centers. Coordinate with scheduled faucet
  - e. Faucet-Hole Location: Top.
  - f. Mounting: For concealed-arm carrier.
3. Faucet: Refer to drawing schedules.

2.10 LAVATORY SUPPORT:

- A. **Manufacturers:** Subject to compliance with requirements, provide products by one of the following or approved equal:
- 1. Jay R. Smith Mfg. Co; a division of Morris Group International.
  - 2. Josam Company.
  - 3. MIFAB, Inc.
  - 4. Wade Drains.
  - 5. WATTS.
  - 6. Zurn Industries, LLC.
  - 7. Or Approved Equal.
- B. Standard: ASME A112.6.1M.
- C. Lavatory Mounting Height: Refer to schedules.
- 1. Standard Child or Handicapped/elderly according to ICC A117.1.

2.11 LAVATORY FAUCETS:

- A. Manual-type, Mixing, commercial, solid-brass valve.
- 1. NSF Standard: Comply with NSF 372 for faucet materials that will be in contact with potable water.
    - a. **Manufacturers:** Subject to compliance with requirements, provide products by one of the following or approved equal:
    - b. American Standard.
    - c. Chicago Faucets; Geberit Company.
    - d. GROHE America, Inc.
    - e. Kohler Co.
    - f. Speakman Company.
    - g. T&S Brass and Bronze Works, Inc.
    - h. Zurn Industries, LLC.
    - i. Or Approved Equal.
  - 2. Standard: ASME A112.18.1/CSA B125.1.
  - 3. General: Include hot- and cold-water indicators; coordinate faucet inlets with supplies and fixture hole penetrations; coordinate outlet with spout and fixture receptor.
  - 4. Body Type: Refer to schedules for centerset, widespread or single hole.

5. Body Material: Commercial, solid brass.
  6. Finish: Polished chrome plate.
  7. Maximum Flow Rate: Refer to drawing schedules.
  8. Maximum Flow: Refer to drawing schedules for metering cycle.
  9. Mounting Type, Valve Handle(s), Spout, Spout Outlet, Operation - scheduled.
  10. Drain: Grid.
- B. Lavatory Faucets: Automatic-type, electronic-sensor-operated, solid-brass valve. Refer to drawing schedules for hard-wired, battery, or solar power option.
1. NSF Standard: Comply with NSF 372 for faucet materials that will be in contact with potable water.
  2. **Manufacturers:** Subject to compliance with requirements, provide products by one of the following or approved equal:
    - a. American Standard.
    - b. Bradley Corporation.
    - c. Chicago Faucets; Geberit Company.
    - d. GROHE America, Inc.
    - e. Kohler Co.
    - f. Sloan Valve Company.
    - g. Speakman Company.
    - h. T&S Brass and Bronze Works, Inc.
    - i. TOTO USA, INC.
    - j. Zurn Industries, LLC.
    - k. Or Approved Equal.
  3. Standards: ASME A112.18.1/CSA B125.1 and UL 1951.
  4. Electrical Components, Devices, and Accessories: Listed and labeled as defined in NFPA 70, by a qualified testing agency, and marked for intended location and application.
  5. General: Include hot- and cold-water indicators; coordinate faucet inlets with supplies and fixture hole punchings; coordinate outlet with spout and fixture receptor.
  6. Body Type: Refer to drawing schedules.
  7. Body Material: Commercial, solid brass.
  8. Finish: Polished chrome plate.
  9. Maximum Flow Rate: 0.5 gpm.
  10. Mounting Type, Valve Handle(s), Spout, Spout Outlet, Operation: As scheduled.
  11. Drain: Grid. Finish same as faucet.
- C. Laminar-Flow, Faucet-Spout Outlets

1. NSF Standard: Comply with NSF 372 for faucet-spout-outlet materials that will be in contact with potable water.
2. **Manufacturers:** Subject to compliance with requirements, provide products by one of the following or approved equal:
  - a. AM Conservation Group, Inc.
  - b. Chronomite Laboratories, Inc; a division of Morris Group International.
  - c. NEOPERL, Inc.
  - d. T&S Brass and Bronze Works, Inc.
  - e. Or Approved Equal.
3. **Description:** Chrome-plated-brass, faucet-spout outlet that produces non-aerating, laminar stream. Include external or internal thread that mates with faucet outlet for attachment to faucets where indicated and flow-rate range that includes flow of faucet.

## 2.12 COMMERCIAL JANITOR SINKS

### A. Service Basins: Terrazzo, floor mounted.

1. **Manufacturers:** Subject to compliance with requirements, provide products by one of the following or approved equal:
  - a. Acorn Engineering Company; a Division of Morris Group International.
  - b. Florestone Products Co., Inc.
  - c. Stern-Williams Co., Inc.
  - d. Or Approved Equal.
2. **Fixture:**
  - a. Standard: IAPMO PS 99.
  - b. Tiling Flange: On three sides.
  - c. Rim Guard: On all top surfaces.
  - d. Color: Not applicable.
  - e. Drain: Grid with NPS 3 outlet.
3. **Mounting:** On floor and flush to wall.

### B. Service Sinks: Enameled, cast iron, trap standard mounted.

1. **Manufacturers:** Subject to compliance with requirements, provide products by one of the following or approved equal:
  - a. American Standard.
  - b. Commercial Enameling Company.
  - c. Kohler Co.
  - d. Zurn Industries, LLC.
  - e. Or Approved Equal.
2. **Fixture:**

- a. Standard: ASME A112.19.1/CSA B45.2.
    - b. Type: Service sink with back.
    - c. Nominal Size: Refer to drawing schedules.
    - d. Color: White.
    - e. Mounting: NPS 3 P-trap standard with grid strainer inlet, cleanout, and floor flange.
    - f. Rim Guard: On front and sides.
  3. Support: sink carrier.
- C. Service Sinks: Enameled, cast iron, floor mounted.
1. **Manufacturers:** Subject to compliance with requirements, provide products by one of the following or approved equal:
    - a. American Standard.
    - b. Kohler.
    - c. Zurn Industries, LLC.
    - d. Or Approved Equal.
  2. Fixture:
    - a. Standard: ASME A112.19.1/CSA B45.2.
    - b. Style: With front apron and raised back.
    - c. Nominal Size: 28 by 28 inches.
    - d. Color: White.
    - e. Drain: Grid with NPS 3 outlet.
    - f. Rim Guard: Coated wire.

2.13 SERVICE SINK FAUCETS:

- A. Manual type, two lever handle mixing valve.
1. **Manufacturers:** Subject to compliance with requirements, provide products by one of the following or approved equal:
    - a. American Standard.
    - b. Bradley Corporation.
    - c. Chicago Faucets; Geberit Company.
    - d. Kohler Co.
    - e. Sloan Valve Company.
    - f. Speakman Company.
    - g. T&S Brass and Bronze Works, Inc.
    - h. Zurn Industries, LLC.
    - i. Or Approved Equal.

2. Standard: ASME A112.18.1/CSA B125.1.
3. General: Include hot- and cold-water indicators; coordinate faucet inlets
  - a. Coordinate with supplies and fixture hole penetrations
  - b. coordinate outlet with spout and sink receptor.
4. Body Type: Widespread.
5. Body Material: Commercial, solid brass.
6. Finish: Chrome plated.
7. Maximum Flow Rate: 4.0 gpm.
8. Handle(s): Refer to drawing schedules.
9. Mounting Type: Refer to drawing schedules.
10. Spout Type: Rigid, solid brass with wall brace and pail hook.
11. Vacuum Breaker: Required for hose outlet.
12. Spout Outlet: Hose thread according to ASME B1.20.7. furnish and install hose.
13. Mop service hanger furnish and install.

## 2.14 UTILITY SINKS

### A. Utility Sinks: Stainless steel, counter mounted.

1. **Manufacturers:** Subject to compliance with requirements, provide products by one of the following or approved equal:
  - a. Advance Tabco.
  - b. Eagle Group.
  - c. Elkay Manufacturing Co.
  - d. Griffin Products, Inc.
  - e. Just Manufacturing.
  - f. Or Approved Equal.
2. Fixture:
  - a. Standard: ASME A112.19.3/CSA B45.4.
  - b. Type: Ledge back.
  - c. Number of Compartments: Refer to drawing schedules.
  - d. Metal Thickness: 0.050 inch.
  - e. Drains: Grid with NPS 1-1/2 tailpiece and twist drain.
3. Faucet(s): Refer to drawing schedules.
4. Supply Fittings:
  - a. Standard: ASME A112.18.1/CSA B125.1.
  - b. Supplies: Chrome-plated brass compression stop with inlet connection matching water-supply piping type and size.

- 1) Operation: Wheel handle.
    - 2) Risers: NPS 1/2, ASME A112.18.6, braided or corrugated stainless-steel flexible hose.
  5. Waste Fittings:
    - a. Standard: ASME A112.18.2/CSA B125.2.
      - 1) Material: Stainless-steel, two-piece trap and swivel elbow with 0.012-inch-thick stainless-steel tube to wall; and stainless-steel wall flange.
    - b. Continuous Waste:
      - 1) Material: Chrome-plated, 0.032-inch-thick brass tube.
  6. Mounting: On counter kit with sealant.
- B. Utility Sinks: Stainless steel, freestanding.
  1. Manufacturers: Subject to compliance with requirements, provide products by one of the following or approved equal:
    - a. Advance Tabco.
    - b. AERO Manufacturing Company.
    - c. Amtekco Industries, Inc; a Wasserstrom Company.
    - d. Eagle Group.
    - e. Elkay Manufacturing Co.
    - f. Griffin Products, Inc.
    - g. Just Manufacturing.
    - h. Or Approved Equal.
  2. Fixture:
    - a. Standard: ASME A112.19.3/CSA B45.4.
    - b. Type: With backsplash.
    - c. Number of Compartments: scheduled.
    - d. Overall Dimensions: . scheduled.
    - e. Metal Thickness: 0.063 inch.
    - f. Compartments:
      - 1) Drain: Grid with NPS 2 tailpiece and twist drain.
      - 2) Drain Location: Near back of compartment.
    - g. Number of Compartments: scheduled:
    - h. Drainboard(s): Refer to drawing plans and schedules.
      - 1) Dimensions Each: Refer to drawing schedules.
  3. Supports: Adjustable-length steel legs.
  4. Faucet(s): Refer to drawing schedules.

- a. Number Required: One for single compartment. Two for multiple compartment.
- b. Mounting: On backsplash.
- 5. Supply Fittings:
  - a. Standard: ASME A112.18.1/CSA B125.1.
  - b. Supplies: Chrome-plated brass compression stop with inlet connection matching water-supply piping type and size.
    - 1) Operation: Wheel handle.
    - 2) Risers: NPS 1/2, ASME A112.18.6, braided or corrugated stainless-steel flexible hose.
- 6. Waste Fittings:
  - a. Standard: ASME A112.18.2/CSA B125.2.
  - b. Trap(s):
    - 1) Size: NPS 2.
    - 2) Material: Chrome-plated, two-piece, cast-brass trap and swivel elbow with 0.032-inch- thick brass tube to wall; and chrome-plated brass or steel wall flange.
    - 3) Material: Stainless-steel, two-piece trap and swivel elbow with 0.012-inch-thick stainless-steel tube to wall; and stainless-steel wall flange.
  - c. Continuous Waste:
    - 1) Size: NPS 2.
    - 2) Material: Chrome-plated, 0.032-inch- thick brass tube.

## 2.15 UTILITY SINK FAUCETS

- A. NSF Standard: Comply with NSF 372 for faucet-spout materials that will be in contact with potable water.
- B. Sink Faucets: Manual type, mixing valve. Refer to drawing schedules.
- C. Commercial, Solid-Brass Faucets:
  - 1. Manufacturers: Subject to compliance with requirements, provide products by one of the following or approved equal:
    - a. American Standard.
    - b. Bradley Corporation.
    - c. Chicago Faucets; Geberit Company.
    - d. Just Manufacturing.
    - e. Kohler Co.
    - f. Sloan Valve Company.
    - g. Speakman Company.
    - h. T&S Brass and Bronze Works, Inc.

- i. Zurn Industries, LLC.
  - j. Or Approved Equal.
2. Standard: ASME A112.18.1/CSA B125.1.
3. General: Include hot- and cold-water indicators; coordinate faucet inlets with supplies and fixture hole punchings; coordinate outlet with spout and sink receptor.
4. Body Material: Commercial, solid brass.
5. Finish: Polished chrome plate.
6. Maximum Flow Rate: 2.2 gpm.
7. Handle(s): Wrist blade, 4 inches Elbow, or 6 inches. (see schedule)
8. Mounting Type: per sink opening
9. Spout Type: Swing, solid brass or Swivel gooseneck. (see schedule)
10. Vacuum Breaker: Refer to drawing schedules. Required for threaded outlet.
11. Spout Outlet: Aerator Laminar flow, Hose thread according to ASME B1.20.7, Plain end Spray (see schedule)

## 2.16 HANDWASH SINKS

### A. Handwash Sinks: Stainless steel, wall mounted.

1. **Manufacturers:** Subject to compliance with requirements, provide products by one of the following or approved equal:
  - a. Advance Tabco.
  - b. AERO Manufacturing Company.
  - c. Amtekco Industries, Inc; a Wasserstrom Company.
  - d. Eagle Group.
  - e. Elkay Manufacturing Co.
  - f. Griffin Products, Inc.
  - g. Just Manufacturing.
  - h. Sloan Valve Company.
  - i. Or Approved Equal.
2. Fixture:
  - a. Standards: ASME A112.19.3/CSA B45.4 and NSF/ANSI 2.
  - b. Type: Basin with radius corners, back for faucet, and support brackets.
  - c. Nominal Size: 17 by 16 by 5 inches.
3. Supply Fittings: Comply with requirements in "Supply Fittings" Article.
4. Waste Fittings: Comply with requirements in "Waste Fittings" Article.
5. Support: Type II sink carrier.

6. Lavatory Mounting Height: Standard Child Handicapped/elderly according to ICC A117.1.

## 2.17 HANDWASH SINK SUPPORTS

- A. Type II Sink Carrier:
- B. Manufacturers: Subject to compliance with requirements, provide products by one of the following or approved equal:
  1. Jay R. Smith Mfg. Co.
  2. Josam Company.
  3. MIFAB, Inc.
  4. Wade Drains.
  5. WATTS
  6. Or Approved Equal.
- C. Standard: ASME A112.6.1M.

## 2.18 HANDWASH SINK FAUCETS

- A. Automatic, sensor-operated type, 120 V ac hard-wired or battery-powered. Refer to drawing schedules.
  1. Commercial, Solid-Brass Faucets:
    - a. **Manufacturers:** Subject to compliance with requirements, provide products by one of the following or approved equal:
      - 1) American Standard.
      - 2) Bradley Corporation.
      - 3) Chicago Faucets; Geberit Company.
      - 4) Elkay Manufacturing Co.
      - 5) GROHE America, Inc.
      - 6) Just Manufacturing.
      - 7) Kohler Co.
      - 8) Sloan Valve Company.
      - 9) Speakman Company.
      - 10) T&S Brass and Bronze Works, Inc.
      - 11) Zurn Industries, LLC.
      - 12) Or Approved Equal.
  2. Standard: ASME A112.18.1/CSA B125.1.
  3. General: Coordinate faucet inlets with supplies and fixture hole punchings; coordinate outlet with spout and sink receptor.

4. Body Type: Refer to drawing schedules.
5. Body Material: Commercial, solid brass.
6. Finish: Polished chrome plate.
7. Maximum Flow Rate: 0.5 gpm.
8. Mounting Type: per sink opening
9. Spout Type: Rigid gooseneck or as scheduled on drawings.
10. Spout Outlet: Aerator.
11. Thermostatic Mixing Valve: Use ASSE 1070 point-of-use thermostatic mixing valve. Refer to drawing schedules.
12. Control module: Water-resistant module with internal flow setting switches.

## 2.19 SHOWERS

### A. Shower Basins

1. Cast-Polymer Shower Basins:
  - a. **Manufacturers:** Subject to compliance with requirements, provide products by one of the following or approved equal:
    - 1) Crane Plumbing, L.L.C.
    - 2) Florestone Products Co., Inc.
    - 3) Inpro Corporation.
    - 4) Or Approved Equal.
2. FRP Shower Basins:
  - a. **Manufacturers:** Subject to compliance with requirements, provide products by one of the following or approved equal:
    - 1) Crane Plumbing, L.L.C.
    - 2) Florestone Products Co., Inc.
    - 3) LASCO Bathware.
    - 4) MAAX.
    - 5) Sterling.
    - 6) Swan Corporation (The).
    - 7) Or Approved Equal.
3. PMMA (Acrylic) Shower Basins:
  - a. **Manufacturers:** Subject to compliance with requirements, provide products by one of the following or approved equal:
    - 1) American Standard.
    - 2) Crane Plumbing, L.L.C.
    - 3) Florestone Products Co., Inc.

- 4) Jason International, Inc.
  - 5) Kohler Co.
  - 6) LASCO Bathware.
  - 7) MAAX.
  - 8) Royal Baths Manufacturing Co.
  - 9) Or Approved Equal.
4. Precast-Terrazzo Shower Basins:
- a. **Manufacturers:** Subject to compliance with requirements, provide products by one of the following or approved equal:
    - 1) Acorn Engineering Company; a Division of Morris Group International.
    - 2) Crane Plumbing, L.L.C.
    - 3) Florestone Products Co., Inc.
    - 4) Stern-Williams Co., Inc.
    - 5) Or Approved Equal.
5. Solid-Surface Shower Basins:
- a. **Manufacturers:** Subject to compliance with requirements, provide products by one of the following or approved equal:
    - 1) American Standard.
    - 2) Swan Corporation (The).
    - 3) Tower Industries.
    - 4) Or Approved Equal.
6. General:
- a. Cast-polymer FRP PMMA Precast-terrazzo or Solid-surface base for built-up-type shower fixture. See schedule sheet for designation and type for each shower area.
  - b. Control: Thermostatic valve with individual hot- and cold-water mixing-valve operation.
  - c. Flow-Control Fitting: 2.0 gpm shower head maximum.
  - d. EPA WaterSense: Required.
  - e. Liquid Soap Dispenser: Required for each shower head.
  - f. Soap Dish: Required for each shower head.
  - g. Standard: ANSI Z124.1.3 for cast-polymer FRPPMMA bases.
  - h. Standard: IAPMO PS 99 for precast-terrazzo material.
  - i. Standard: ANSI/ICPA SS-1 for solid-surface material.
  - j. Type: Handicapped/wheelchair.
  - k. Nominal Size and Shape: Refer to drawing schedules.
  - l. Color: White, unless schedules otherwise.

- m. Outlet: Drain with NPS 2 outlet.
- n. Bathing Surface: Slip resistant according to ASTM F462.

2.20 INDIVIDUAL SHOWER FAUCETS FOR SINGLE SHOWER:

- A. **Manufacturers:** Subject to compliance with requirements, provide products by one of the following or approved equal:
  - 1. Acorn Engineering Company; a Division of Morris Group International.
  - 2. Chicago Faucets; Geberit Company.
  - 3. Lawler Manufacturing Company, Inc.
  - 4. Leonard Valve Company.
  - 5. POWERS; A WATTS Brand.
  - 6. Or Approved Equal.
- B. **Description:** Single-handle, thermostatic mixing valve with hot- and cold-water indicators; check stops; and shower head.
- C. **Faucet:**
  - 1. Standards: ASME A112.18.1/CSA B125.1 and ASSE 1016.
  - 2. Body Material: Solid brass.
  - 3. Finish: Polished chrome plate.
    - a. Shower-Arm, Flow-Control Fitting: 2.0 gpm.
  - 4. EPA WaterSense: Required.
  - 5. Mounting: Concealed.
  - 6. Operation: Single-handle control. Refer to drawing schedules.
  - 7. Antiscald Device: Integral with mixing valve.
  - 8. Check Stops: Check-valve type, integral with or attached to body; on hot- and cold-water supply connections.
  - 9. Supply Connections: NPS 1/2.
- D. **Shower Head:**
  - 1. Standard: ASME A112.18.1/CSA B125.1.
  - 2. Type: scheduled.
  - 3. Shower Head Material: Metallic with chrome-plated finish.
  - 4. Spray Pattern: Adjustable.
  - 5. Integral Volume Control: Required.
  - 6. Shower-Arm, Flow-Control Fitting: 2.0 gpm maximum.
- E. **Temperature Indicator:** Integral with faucet.

2.21 GROUP WALL-MOUNTED SHOWERS:

- A. **Manufacturers:** Subject to compliance with requirements, provide products by one of the following or approved equal:
  - 1. Acorn Engineering Company; a Division of Morris Group International.
  - 2. Bradley Corporation.
  - 3. Willoughby Industries.
  - 4. Zurn Industries, LLC.
  - 5. Or Approved Equal.
- B. **Description:** Stainless-steel, wall-mounted, surface-enclosure shower fixture with individual nozzles.
- C. **Standards:** ASME A112.18.1/CSA B125.1 and ASSE 1016.
- D. **Metal Nominal Thickness:** 0.063 inch.
- E. **Number of Shower Nozzles:** Refer to plans and drawing schedules.
- F. **Height to Nozzles:** Refer to drawing plans, elevations, and schedules.
- G. **Control:** Thermostatic valve with individual hot- and cold-water mixing-valve operation.
- H. **Flow-Control Fitting:** 2.0 gpm maximum for each shower head.
- I. **EPA WaterSense:** Required.
- J. **Liquid Soap Dispenser:** Required for each shower head.
- K. **Soap Dish:** Required for each shower head.
- L. **Mounting:** Wall bracket.
- M. **Supplies:** NPS 3/4 copper tubing with valves.

2.22 DRINKING FOUNTAINS: STAINLESS STEEL AND VITREOUS CHINA, WALL MOUNTED, SEMIRECESSED.

- A. **Stainless-Steel Drinking Fountains:**
  - 1. **Manufacturers:** Subject to compliance with requirements, provide products by one of the following or approved equal:
    - a. Elkay
    - b. Filtrine
    - c. Halsey Taylor
    - d. Haws
    - e. Oasis
    - f. Or Approved Equal.
- B. **Vitreous-China Drinking Fountains:**
  - 1. **Manufacturers:** Subject to compliance with requirements, provide products by one of the following or approved equal:

- a. Kohler
  - b. American Standard
  - c. Eljer
  - d. Crane
  - e. Or Approved Equal.
- C. Standards:
- 1. ASME A112.19.3/CSA B45.4.
  - 2. ASME A112.19.2/CSA B45.1.
  - 3. NSF 61 and NSF 372.
  - 4. ICC A117.1.
- D. Receptor Shape: Concave with projecting bowl.
- E. Bubbler: One, with adjustable stream regulator, located on deck.
- F. Maximum Water Flow: 0.15 gpm.
- G. Control: Refer to drawing schedules.
- H. Drain: Grid type with NPS 1-1/4 tailpiece.
- I. Supply: NPS 3/8 with shutoff valve.
- J. Waste Fitting: ASME A112.18.2/CSA B125.2, NPS 1-1/4 brass P-trap.
- K. Support: Mounting frame or brackets for attaching to wood blocking or substrate.

## 2.23 SUPPLY FITTINGS

- A. NSF Standard: Comply with NSF 61 Annex G or NSF 372 or NSF 372 (NSF 372), "Drinking Water System Components - Health Effects," for supply-fitting materials that will be in contact with potable water.
- B. Standard: ASME A112.18.1/CSA B125.1.
- C. Supply Piping: Chrome-plated brass pipe or chrome-plated copper tube matching water-supply piping size. Include chrome-plated brass or stainless-steel wall flange.
- D. Supply Stops: Chrome-plated brass, one-quarter-turn, ball-type, or compression valve with inlet connection matching supply piping.
- E. Operation: Loose key.

## 2.24 RISERS

- A. NPS 1/2 chrome-plated, soft-copper flexible tube or ASME A112.18.6, braided or corrugated stainless-steel, flexible hose waste fittings.
- B. Standard: ASME A112.18.2/CSA B125.2.
- C. Drain: Grid with NPS 1-1/2 DN 40 tailpiece.
- D. Trap:
  - 1. Size: NPS 1-1/2.

2. Note: All trap trim shall match the finish selected by the Architect. See architectural requirements for finished material.
3. Material: two-piece, cast-brass trap, and swivel elbow with 0.032-inch- thick brass tube to wall; and finish -plated brass or steel wall flange.
4. Material: Stainless-steel, two-piece trap and swivel elbow with 0.012-inch- thick stainless-steel tube to wall; and stainless-steel wall flange.
  - a. Supply Connections: For hot and cold water.

#### 2.25 SOURCE QUALITY CONTROL

- A. Certify performance of emergency plumbing fixtures by independent testing organization acceptable to authorities having jurisdiction.

#### 2.26 GROUT

- A. Standard: ASTM C 1107/C 1107M, Grade B, post-hardening and volume-adjusting, dry, hydraulic-cement grout.
- B. Characteristics: Non-shrink; recommended for interior and exterior applications.
- C. Design Mix: 5000-psi, 28-day compressive strength.
- D. Packaging: Premixed and factory packaged.

### PART 3 - EXECUTION

#### 3.1 EXAMINATION

- A. Examine roughing-in of water supply and sanitary drainage and vent piping systems to verify actual locations of piping connections before plumbing fixture installation.
- B. Examine walls and floors for suitable conditions where closet plumbing fixtures will be installed.
- C. Proceed with installation only after unsatisfactory conditions have been corrected.

#### 3.2 INSTALLATION

#### 3.3 WATER-CLOSET INSTALLATION:

- A. Install level and plumb according to roughing-in drawings.
- B. Install floor-mounted water closets on bowl-to-drain connecting fitting attachments to piping or building substrate. Install accessible, wall-mounted water closets at mounting height for handicapped/elderly, according to ICC/ANSI A117.1.
- C. Install toilet seats on water closets.

#### 3.4 URINAL INSTALLATION:

- A. Install urinals level and plumb according to roughing-in drawings.
- B. Install wall-hung, back-outlet urinals onto waste fitting seals and attached to supports.

- C. Install Wall-hung, bottom-outlet urinals with tubular waste piping attached to supports.
- D. Install accessible, wall-mounted urinals at mounting height for the handicapped/elderly, according to ICC/ANSI A117.1.
- E. Install trap-seal liquid in waterless urinals.

### 3.5 LAVATORY INSTALLATION

- A. Install lavatories level and plumb according to roughing-in drawings.
- B. Install supports, affixed to building substrate, for wall-mounted lavatories.
- C. Install accessible wall-mounted lavatories at handicapped/elderly mounting height for people with disabilities or the elderly, according to ICC/ANSI A117.1.
- D. Install wall flanges or escutcheons at piping wall penetrations in exposed, finished locations. Use deep-pattern escutcheons if required to conceal protruding fittings. Comply with escutcheon requirements specified in Division 22.
- E. Seal joints between lavatories, counters, and walls using sanitary-type, one-part, mildew-resistant silicone sealant. Match sealant color to fixture color. Comply with sealant requirements specified in Division 07.
- F. Install protective shielding pipe covers and enclosures on exposed supplies and waste piping of accessible lavatories. Comply with requirements in Division 22 for plumbing piping insulation.

### 3.6 SINK INSTALLATION

- A. Install sinks level and plumb according to roughing-in drawings.
- B. Install supports, affixed to building substrate, for wall-hung sinks.
- C. Install accessible wall-mounted sinks at handicapped/elderly mounting height according to ICC/ANSI A117.1.
- D. Set floor-mounted sinks in leveling bed of cement grout.
- E. Install water-supply piping with stop on each supply to each sink faucet.
  - 1. Install stops in locations where they can be easily reached for operation.
- F. Install wall flanges or escutcheons at piping wall penetrations in exposed, finished locations. Use deep-pattern escutcheons if required to conceal protruding fittings. Comply with escutcheon requirements specified in Division 22.
- G. Seal joints between sinks and counters, floors, and walls using sanitary-type, one-part, mildew-resistant silicone sealant. Match sealant color to fixture color. Comply with sealant requirements specified in Division 07.
- H. Install protective shielding pipe covers and enclosures on exposed supplies and waste piping of accessible sinks. Comply with requirements in Division 22 for plumbing piping insulation.

### 3.7 SHOWER INSTALLATION

- A. Assemble shower components according to manufacturers' written instructions.
- B. Install showers level and plumb according to roughing-in drawings.
- C. Install water-supply piping with stop on each supply to each shower faucet.

1. Exception: Use ball or gate valves if supply stops are not specified with shower.
  2. Install stops in locations where they can be easily reached for operation.
- D. Install shower flow-control fittings with specified maximum flow rates in shower arms.
- E. Set shower receptors and shower basins in leveling bed of cement grout.

### 3.8 WASH-FOUNTAIN INSTALLATION

- A. Install wash fountains level and plumb according to roughing-in drawings.
- B. Set freestanding wash fountains on floor.
- C. Install off-floor carrier supports, affixed to building substrate, for wall-mounted wash fountains.
- D. Install accessible, wall-mounted wash fountains at mounting height for handicapped/elderly according to ICC A117.1.
- E. Install water-supply piping with shutoff valve on each supply to each wash fountain to be connected to domestic-water distribution piping.
- F. Use ball or gate valve. Install valves in locations where they can be easily reached for operation.
- G. Install trap and waste piping on each drain outlet of each wash fountain to be connected to sanitary drainage system.
- H. Seal joints between fixtures and walls using sanitary-type, one-part, mildew-resistant, silicone sealant. Match sealant color to fixture color. Comply with sealant requirements specified in Division 07.

### 3.9 SUPPORT INSTALLATION:

- A. Install supports, affixed to building substrate, for wall-hung urinals.
- B. Use off-floor carriers with waste fitting and seal for back-outlet urinals.
- C. Use carriers without waste fitting for urinals with tubular waste piping.
- D. Use chair-type carrier supports with rectangular steel uprights for accessible urinals.
- E. Install supports, affixed to building substrate, for floor-mounted, back-outlet water closets.
- F. Use carrier supports with waste-fitting assembly and seal.
- G. Install floor-mounted, back-outlet water closets attached to building floor substrate, onto waste-fitting seals; and attach to support.
- H. Install wall-mounted, back-outlet water-closet supports with waste-fitting assembly and waste-fitting seals; and affix to building substrate.

### 3.10 DRINKING FOUNTAIN INSTALLATION

- A. Install fixtures level and plumb according to roughing-in drawings. For fixtures indicated for children, install at height required by authorities having jurisdiction.
- B. Set pedestal drinking fountains on the floor.
- C. Install recessed drinking fountains secured to wood blocking in wall construction.
- D. Install off-the-floor carrier supports, affixed to building substrate, for wall-mounted fixtures.

- E. Install water-supply piping with shutoff valve on supply to each fixture to be connected to domestic-water distribution piping. Use ball or gate valve. Install valves in locations where they can be easily reached for operation.

### 3.11 SHOWER INSTALLATION

- A. Assemble shower components according to manufacturers' written instructions.
- B. Install showers level and plumb according to roughing-in drawings.
- C. Install water-supply piping with stop on each supply to each shower faucet.
  - 1. Install stops in locations where they can be easily reached for operation.
- D. Install shower flow-control fittings with specified maximum flow rates in shower arms.
- E. Set shower receptors and shower basins in leveling bed of cement grout.
- F. Install wall flanges or escutcheons at piping wall penetrations in exposed, finished locations. Use deep-pattern escutcheons if required to conceal protruding fittings. Comply with escutcheons requirements specified in Division 22.
- G. Seal joints between showers and floors and walls using sanitary-type, one-part, mildew-resistant silicone sealant. Match sealant color to fixture color. Comply with sealant requirements specified in Division 07.

### 3.12 FLUSHOMETER-VALVE INSTALLATION:

- A. Install flushometer-valve, water-supply fitting on each supply to each water closet.
- B. Attach supply piping to supports or substrate within pipe spaces behind fixtures.
- C. Install lever-handle flushometer valves for accessible water closets with handle mounted on open side of water closet.
- D. Install actuators in locations that are easy for people with disabilities to reach.
- E. Install fresh batteries in battery-powered, electronic-sensor mechanisms.

### 3.13 WALL FLANGE AND ESCUTCHEON INSTALLATION:

- A. Install wall flanges or escutcheons at piping wall penetrations in exposed, finished locations and within cabinets and millwork.
- B. Install deep-pattern escutcheons if required to conceal protruding fittings.
- C. Comply with escutcheon requirements specified in Division 22.

### 3.14 JOINT SEALING:

- A. Seal joints between water closets and walls and floors using sanitary-type, one-part, mildew-resistant silicone sealant.
- B. Match sealant color to water-closet color.
- C. Comply with sealant requirements specified in Division 07.
- D. Install escutcheons on piping wall and ceiling penetrations in exposed, finished locations. Comply with requirements for escutcheons specified in Division 22.

- E. Fill self-contained fixtures with flushing fluid.

### 3.15 CONNECTIONS

- A. Connect water closets with water supplies and soil, waste, and vent piping. Use size fittings required to match water closets.
- B. Where installing piping adjacent to water closets allow space for service and maintenance.

### 3.16 ADJUSTING

- A. Operate and adjust water closets and controls. Replace damaged and malfunctioning water closets, fittings, and controls.
- B. Operate and adjust urinals and controls. Replace damaged and malfunctioning urinals, fittings, and controls.
- C. Adjust water pressure at flushometer valves to produce proper flow.
- D. Install fresh batteries in battery-powered, electronic-sensor mechanisms.

### 3.17 CLEANING AND PROTECTION

- A. Clean all plumbing fixtures and fittings with manufacturers' recommended cleaning methods and materials.
- B. Install protective covering for fixtures and fittings.
- C. Do not allow use of plumbing fixtures for temporary facilities unless approved in writing by the Owner.
- D. Verify all fixtures are clear of debris and clogs and all aerators are clean after cleaning.

END OF SECTION

H:\Y0586.00\DOC\SPEC\2025\_02-20\_IFB\224200\_COMMERCIAL PLUMBING FIXTURES.DOC

## SECTION 224500 - EMERGENCY PLUMBING FIXTURES

### PART 1 - GENERAL

#### 1.1 RELATED DOCUMENTS

- A. Certain requirements common to all the mechanical and electrical trades (Fire Suppression, Plumbing, HVAC, Electrical, and Tele/Data) are specified in Division 20. To avoid repetition, they are not repeated in each relevant Division and Section. However, these requirements are applicable to the work of this Section and are hereby incorporated by reference.
- B. Drawings and general provisions of the Contract, including General and Supplementary Conditions and Division 01 Specification Sections, apply to this Section.

#### 1.2 SUMMARY

- A. Section Includes:
  - 1. Standard Wall Mount Eye/face Wash Unit.
  - 2. Accessible Wall Mount Eye/face Wash Unit.
  - 3. Barrier Free Recessed Wall Mount Combination Unit
  - 4. Water Tempering Equipment
  - 5. High Temperature Reject Valves
  - 6. Source Quality Control.

#### 1.3 DEFINITIONS

- A. Accessible Fixture: Emergency plumbing fixture that can be approached, entered, and used by people with disabilities.
- B. Plumbed Emergency Plumbing Fixture: Fixture with fixed, potable-water supply.
- C. Self-Contained Emergency Plumbing Fixture: Fixture with flushing-fluid-solution supply.
- D. Tepid: Moderately warm.

#### 1.4 ACTION SUBMITTALS

- A. Product Data: For each type of product indicated. Include flow rates and capacities, furnished specialties, and accessories.
- B. Shop Drawings: Diagram power, signal, and control wiring.

#### 1.5 INFORMATIONAL SUBMITTALS

- A. Product Certificates: Submit certificates of performance testing specified in "Source Quality Control" Article.

- B. Field quality-control test reports.

#### 1.6 CLOSEOUT SUBMITTALS

- A. Operation and Maintenance Data: For emergency plumbing fixtures to include in operation and maintenance manuals.

#### 1.7 MAINTENANCE MATERIAL SUBMITTALS

- A. Furnish extra materials that match products installed and that are packaged with protective covering for storage and identified with labels describing contents.

- 1. Flushing-Fluid Solution: Separate lot and equal to at least 200 percent of amount of solution installed for each self-contained unit.

#### 1.8 QUALITY ASSURANCE

- A. Electrical Components, Devices, and Accessories: Listed and labeled as defined in NFPA 70, by a qualified testing agency, and marked for intended location and application.
- B. ANSI Standard: Comply with ANSI Z358.1, "Emergency Eyewash and Shower Equipment."
- C. NSF Standard: Comply with NSF 61 Annex G, "Drinking Water System Components - Health Effects," for fixture materials that will be in contact with potable water.
- D. Regulatory Requirements: Comply with requirements in ICC/ANSI A117.1, "Accessible and Usable Buildings and Facilities"; Public Law 90-480, "Architectural Barriers Act"; and Public Law 101-336, "Americans with Disabilities Act"; for plumbing fixtures for people with disabilities.

### PART 2 - PRODUCTS

#### 2.1 GENERAL

- A. For all identification, part, or tag numbers see the schedule sheet for Division 22.
- B. For all electrical requirements see schedule.
- C. State Plumbing code requirements for flow, pressure and temperature shall be followed for all installations.
- D. Finishes: Match finishes defined by Architect for each location unless otherwise stipulated in this section.

#### 2.2 STANDARD, WALL-MOUNTED, EYE/FACE WASH UNITS

- A. Plumbed Eyewash Only
  - 1. Manufacturers: Subject to compliance with requirements, available manufacturers offering products that may be incorporated into the Work, provide products by one of the following, or approved equal.
    - a. Acorn Safety.
    - b. Guardian Equipment Co.

- c. Haws Corporation.
  - d. Speakman Company.
  - e. Water Saver Faucet Co.
  - f. Or Approved Equal.
- 2. Capacity: Not less than 3.0 gpm for at least 15 minutes.
- 3. Supply Piping: NPS 1/2 chrome-plated brass or stainless steel with flow regulator and stay-open control valve.
- 4. Furnish flip top dust cover, internal flow controls and filter.
- 5. Control-Valve Actuator: Paddle.
- 6. Spray-Head Assembly: Two or four receptor-mounted spray heads.
- 7. Receptor: stainless-steel bowl.
- 8. Drain Piping: NPS 1-1/4 minimum, chrome-plated brass, receptor drain, P-trap, waste to wall, and wall flange complying with ASME A112.18.2/CSA B125.2.
- 9. Mounting: Wall bracket.
- 10. Basis of Design
  - a. Stainless Steel: Guardian G-1724

## **2.3 ACCESSIBLE, WALL-MOUNTED, PLUMBED, EYE/FACE WASH UNITS**

### **A. Plumbed Eyewash Only**

- 1. Manufacturers: Subject to compliance with requirements, available manufacturers offering products that may be incorporated into the Work, provide products by one of the following, or approved equal.
  - a. Acorn Safety.
  - b. Guardian Equipment Co.
  - c. Haws Corporation.
  - d. Speakman Company.
  - e. Water Saver Faucet Co.
  - f. Or Approved Equal.
- 2. Capacity: Not less than 3.0 gpm for at least 15 minutes.
- 3. Supply Piping: NPS 1/2 chrome-plated brass or stainless steel with flow regulator and stay-open control valve.
- 4. Control-Valve Actuator: Paddle.

5. Spray-Head Assembly: Four receptor-mounted spray heads.
6. Furnish flip top dust cover, internal flow controls and filter.
7. Receptor: stainless-steel bowl.
8. Mounting: Wall bracket.
9. Special Construction: Comply with ICC/ANSI A117.1.
10. Basis of Design
  - a. Stainless Steel: Guardian

**2.4 BARRIER FREE, RECESSED, WALL MOUNTED COMBINATION**

**A. Eye/face wash and shower safety station with ceiling mounted exposed shower head,**

1. Manufacturers: Subject to compliance with requirements, available manufacturers offering products that may be incorporated into the Work, provide products by one of the following, or approved equal.
  - a. Acorn Safety.
  - b. Guardian Equipment Co.
  - c. Haws Corporation.
  - d. Speakman Company.
  - e. Water Saver Faucet Co.
  - f. Or Approved Equal.
2. ADA Compliance:
  - a. When installed at recommended mounting heights, unit complies with ADA requirements for accessibility by handicapped persons.
3. Piping:
  - a. Material: Exposed pipe and escutcheon are brushed stainless steel.
  - b. Unit Supply: NPS 1-1/4
  - c. Unit Drain: Outlet at bottom.
4. Shower:
  - a. Capacity: Not less than 20 gpm
  - b. Supply Piping: NPS with flow regulator and stay-open control valve.
  - c. Provide flow restrictor on each shower head, Guardian FC-20
  - d. Control-Valve Actuator: Panic bar actuator
  - e. Shower Head: 10-inch stainless steel.
5. Eye/Face Wash Unit:

- a. Capacity: Not less than 3 gpm for at least 15 minutes.
- b. Supply Piping: NPS 1/2 with flow regulator and stay-open control valve.
- c. Control-Valve Actuator: 1/2-inch IPS brass plug-type valve with O-ring seals. Furnished with in-line strainer to protect valve from debris and foreign matter.
- d. Spray-Head Assembly: Two receptor-mounted spray heads.
- e. Receptor: 16-gauge stainless steel combination cover and drain pan. Grasping "panic bar" handle and opening cover pulls spray head assembly down from vertical to horizontal position, activating water flow.
- f. Waste: 2-inch NPT female outlet
- g. Mounting: Recessed mounting in wall. Unit fits in standard 3-5/8 inch deep wall.
- h. Basis of Design
  - 1) Galvanized Steel Pipe with Plastic Head: Guardian GBF2150

## 2.5 WATER-TEMPERING EQUIPMENT

### A. Hot- and Cold-Water, Water-Tempering Equipment,:

- 1. Manufacturers: Subject to compliance with requirements, provide products by one of the following, or approved equal.
  - a. Guardian Equipment Co.
  - b. Haws Corporation.
  - c. Lawler Manufacturing Company, Inc.
  - d. Leonard Valve Company.
  - e. Powers.
  - f. Or Approved Equal.
- 2. Description: Factory-fabricated equipment with thermostatic mixing valve.
  - a. Thermostatic Mixing Valve: Designed to provide 85 deg F tepid, potable water at emergency plumbing fixtures, to maintain temperature at plus or minus 5 deg F throughout required 15-minute test period, and in case of unit failure to continue cold-water flow, with union connections, controls, metal piping, and corrosion-resistant enclosure.
  - b. Supply Connections: For hot and cold water.

### B. Electric Water-Tempering Equipment

- 1. Manufacturers: Subject to compliance with requirements, available manufacturers offering products that may be incorporated into the Work, provide products by one of the following, or approved equal.
  - a. Guardian
  - b. A.O. Smith
  - c. Lochinvar

- d. Chromolox.
  - e. Or Approved Equal.
2. Description: Factory-fabricated equipment with electric heating.
- a. Heating System: Electric, designed to provide 85 deg F tepid, potable water at emergency plumbing fixtures, to maintain temperature at plus or minus 5 deg F throughout required 15-minute test period, and in case of unit failure to continue cold-water flow, with union connections, controls, heating coils, high-temperature-limit device, metal piping, and corrosion-resistant enclosure.
    - 1) Electrical Characteristics: see schedule sheet for voltage at single phase, 60 Hz.
  - b. Basis of Design: Guardian skid mounted system with tanks, heaters, recirculation pump, UV sterilizer, and Tempering Valve model number G-4110.

## 2.6 TEMPERATURE REJECT VALVE

- A. Install temperature safety dump valve where indicated. Allow rejected water to be discharged to safe location
- B. When installing the valve on the loop, use a tee and close coupler to the valve. Allow no more than 6D from main circulation line. The 6D is measured on the outlet tee diameter of the pipe (normally 3/4 inch, therefore about 4-1/2 inches.
- C. Manufacturers
  - 1. Basis-of-Design Product: Subject to compliance with requirements, provide temperature dump valve indicated as BOD below or a comparable product by one of the following or approved equal:
    - a. Basis of Design: ThermOmega HAT/SP
    - b. Kobold Instrument Co
    - c. Dwyer Instrument Co
- D. Valve:
  - 1. Therm-Omega HAT/SPanti scald device.
  - 2. Set point = 95 deg F.
  - 3. Comply with ANSI Z358.1 standards.
  - 4. Self-operating, no power or signal required.
  - 5. Provide temperature gauges on both the supply and return of the loop system.

## 2.7 •SOURCE QUALITY CONTROL

- A. Certify performance of emergency plumbing fixtures by independent testing organization acceptable to authorities having jurisdiction.
  - 1. Exception: .

## **PART 3 - EXECUTION**

### **3.1 EXAMINATION**

- A. Examine roughing-in for water and waste piping systems to verify actual locations of piping connections before plumbed emergency plumbing fixture installation.
- B. Proceed with installation only after unsatisfactory conditions have been corrected.

### **3.2 EMERGENCY PLUMBING FIXTURE INSTALLATION**

- A. Assemble emergency plumbing fixture piping, fittings, control valves, and other components.
- B. Install fixtures level and plumb.
- C. Fasten fixtures to substrate.
- D. Install shutoff valves in water-supply piping to fixtures. Use ball or gate valve if specific type valve is not indicated. Install valves chained or locked in open position if permitted. Install valves in locations where they can easily be reached for operation. Comply with requirements for valves specified in Division 22.
  - 1. Exception: Omit shutoff valve on supply to group of plumbing fixtures that includes emergency equipment.
  - 2. Exception: Omit shutoff valve on supply to emergency equipment if prohibited by authorities having jurisdiction.
- E. Install dielectric fitting in supply piping to emergency equipment if piping and equipment connections are made of different metals. Comply with requirements for dielectric fittings specified in Division 22.
- F. Install thermometers in supply and outlet piping connections to water-tempering equipment. Comply with requirements for thermometers specified in Division 22.
- G. Install trap and waste piping on drain outlet of emergency equipment receptors that are indicated to be directly connected to drainage system. Comply with requirements for waste piping specified in Division 22.
- H. Install indirect waste piping on drain outlet of emergency equipment receptors that are indicated to be indirectly connected to drainage system. Comply with requirements for waste piping specified in Division 22.
- I. Install escutcheons on piping wall and ceiling penetrations in exposed, finished locations. Comply with requirements for escutcheons specified in Division 22.
- J. Fill self-contained fixtures with flushing fluid.

### **3.3 CONNECTIONS**

- A. Connect cold-water-supply piping to plumbed emergency plumbing fixtures not having water-tempering equipment. Comply with requirements for cold-water piping specified in Division 22 for domestic water piping."

- B. Connect hot- and cold-water-supply piping to hot- and cold-water, water-tempering equipment. Connect output from water-tempering equipment to emergency plumbing fixtures. Comply with requirements for hot- and cold-water piping specified in Division 22 for domestic water piping.
- C. Connect steam and cold-water-supply and condensate return piping to steam and cold water-tempering equipment. Connect output from water-tempering equipment to emergency plumbing fixtures. Comply with requirements for cold-water piping specified in Division 22 for domestic water piping and comply with requirements for steam and condensate piping specified in Division 23.
- D. Connect cold water and electrical power to electric heating water-tempering equipment. Comply with requirements for cold-water piping specified in Division 22 for domestic water piping."
- E. Directly connect emergency plumbing fixture receptors with trapped drain outlet to sanitary waste and vent piping. Comply with requirements for waste piping specified in Division 22.
- F. Indirectly connect emergency plumbing fixture receptors without trapped drain outlet to sanitary waste or storm drainage piping.
- G. Where installing piping adjacent to emergency plumbing fixtures, allow space for service and maintenance of fixtures.

### 3.4 IDENTIFICATION

- A. Install equipment nameplates or equipment markers on emergency plumbing fixtures and equipment and equipment signs on water-tempering equipment. Comply with requirements for identification materials specified in Division 22.

### 3.5 FIELD QUALITY CONTROL

- A. Mechanical-Component Testing: After plumbing connections have been made, test for compliance with requirements. Verify ability to achieve indicated capacities.
- B. Tests and Inspections:
  - 1. Perform each visual and mechanical inspection.
  - 2. Leak Test: After installation, charge system and test for leaks. Repair leaks and retest until no leaks exist.
  - 3. Operational Test: After electrical circuitry has been energized, start units to confirm proper unit operation.
  - 4. Test and adjust controls and safeties. Replace damaged and malfunctioning controls and equipment.
- C. Emergency plumbing fixtures and water-tempering equipment will be considered defective if they do not pass tests and inspections.
- D. Prepare test and inspection reports.

### 3.6 ADJUSTING

- A. Adjust or replace fixture flow regulators for proper flow.
- B. Adjust equipment temperature settings.

END OF SECTION

H:\Y0586.00\DOC\SPEC\2025\_02-20\_IFB\224500\_EMERGENCY PLUMBING FIXTURES.DOC

## SECTION 224700 - WATER COOLERS

### PART 1 - GENERAL

#### 1.1 RELATED DOCUMENTS

- A. Certain requirements common to all the mechanical and electrical trades (Fire Suppression, Plumbing, HVAC, Electrical, and Tele/Data) are specified in Division 20. To avoid repetition, they are not repeated in each relevant Division of the Specifications. However, these requirements are applicable to the work of this Division, and are hereby incorporated by reference.
- B. Drawings and general provisions of the Contract, including General and Supplementary Conditions and Division 01 Specification Sections, apply to this Section.
- C. This project is required to achieve minimum LEED v4 NC BD+C Silver Certification. Refer to Sustainable Design Specification Section 018111, as well as Specification Section 017410 Construction Indoor Air Quality and Specification Section 017419 Construction Nonhazardous Waste Management Plan for requirements to achieve this certification.

#### 1.2 SUMMARY

- A. Section includes
  - 1. Pressure water coolers

#### 1.3 ACTION SUBMITTALS

- A. Product Data: For each type of remote water coolers.
  - 1. Include construction details, material descriptions, dimensions of individual components and profiles, and finishes.
  - 2. Include rated capacities, operating characteristics, electrical characteristics, and furnished specialties and accessories.
- B. LEED Submittals:
  - 1. Product Data for Credit IEQ 4.1: For adhesives and sealants, documentation including printed statement of VOC content and chemical components.
  - 2. Laboratory Test Reports for Credit IEQ 4: For adhesives and sealants, documentation indicating that product complies with the testing and product requirements of the California Department of Health Services' "Standard Practice for the Testing of Volatile Organic Emissions from Various Sources Using Small-Scale Environmental Chambers."
- C. Shop Drawings: Include diagrams for power, signal, and control wiring.

#### 1.4 CLOSEOUT SUBMITTALS

- A. Maintenance Data: For remote water coolers to include in maintenance manuals.

## 1.5 MAINTENANCE MATERIAL SUBMITTALS

- A. Furnish extra materials that match products installed and that are packaged with protective covering for storage and identified with labels describing contents.
  - 1. Filter Cartridges: No fewer than two (2) of each.

## PART 2 - PRODUCTS

### 2.1 PRESSURE WATER COOLERS

- A. Pressure Water Coolers: EWC-1
  - 1. Manufacturers: Subject to compliance with requirements, available manufacturers offering products that may be incorporated into the Work, provide products by one of the following, or approved equal.
    - a. Oasis Coolers
    - b. Elkay Manufacturing Co.
    - c. Halsey Taylor.
    - d. Haws Corporation.
    - e. Or Approved Equal.
  - 2. Standards:
    - a. Comply with NSF 61 Annex G.
    - b. Comply with ASHRAE 34, "Designation and Safety Classification of Refrigerants," for water coolers. Provide HFC 134a (tetrafluoroethane) refrigerant unless otherwise indicated.
  - 3. Cabinet: All stainless steel.
  - 4. Bubbler: One, with adjustable stream regulator, located on deck.
  - 5. Control: Push bar.
  - 6. Drain: Grid with NPS 1-1/4 tailpiece.
  - 7. Supply: NPS 3/8 with shutoff valve.
  - 8. Waste Fitting: ASME A112.18.2/CSA B125.2, NPS 1-1/4 brass P-trap.
  - 9. Limited 5-year warranty
  - 10. Filter: One or more water filters complying with NSF 42 and NSF 53 for cyst and lead reduction to below EPA standards; with capacity sized for unit peak flow rate.
  - 11. Cooling System: Electric, with **precooler**, hermetically sealed compressor, cooling coil, air-cooled condensing unit, corrosion-resistant tubing, refrigerant, corrosion-resistant-metal storage tank, and adjustable thermostat.
    - a. Electrical Components, Devices, and Accessories: Listed and labeled as defined in NFPA 70, by a qualified testing agency, and marked for intended location and application.
  - 12. Capacities and Characteristics:

- a. Cooled Water: 8 gph.
- b. Ambient-Air Temperature: 90 deg F.
- c. Inlet-Water Temperature: 80 deg F
- d. Cooled-Water Temperature: 50 deg F.
- e. Electrical Characteristics:
  - 1) Motor Horsepower: 390 watts.
  - 2) Volts: 120-V ac.
  - 3) Phase: Single.
  - 4) Hertz: 60.
  - 5) Full-Load Amperes:
  - 6) Minimum Circuit Ampacity: One (1)
- 13. Ventilation Grille: Stainless steel, located below water cooler.
- 14. Support: Mounting frame for attaching to substrate.
- 15. Basis of Design
  - a. Halsey Taylor Model: HTHBWF-OVLSER-1

### **PART 3 - EXECUTION**

#### **3.1 EXAMINATION**

- A. Examine roughing-in for water-supply and sanitary drainage piping systems to verify actual locations of piping connections before fixture installation.
- B. Examine walls and floors for suitable conditions where remote water coolers will be installed.
- C. Proceed with installation only after unsatisfactory conditions have been corrected.

#### **3.2 INSTALLATION**

- A. Install fixtures level and plumb according to roughing-in drawings. For fixtures indicated for children, install at height required by authorities having jurisdiction.
- B. Set freestanding pressure water coolers on floor.
- C. Install off-the-floor carrier supports, affixed to building substrate, for wall-mounted fixtures.
- D. Install mounting frames, affixed to building construction, and attach recessed, pressure water coolers to mounting frames.
- E. Install water-supply piping with shutoff valve on supply to each fixture to be connected to domestic-water distribution piping. Use ball or gate valve. Install valves in locations where they can be easily reached for operation.
- F. Install trap and waste piping on drain outlet of each fixture to be connected to sanitary drainage system.

- G. Install wall flanges or escutcheons at piping wall penetrations in exposed, finished locations. Use deep-pattern escutcheons where required to conceal protruding fittings. Comply with escutcheon requirements specified in Division 22.
- H. Seal joints between fixtures and walls using sanitary-type, one-part, mildew-resistant, silicone sealant. Match sealant color to fixture color.
- I. Install remote water coolers level and plumb according to roughing-in drawings.
- J. Install water-supply piping with shutoff valve on supply to each remote water cooler to be connected to domestic-water distribution piping. Use ball or gate valve. Install valves in locations where they can be easily reached for operation. Set remote water coolers on floor unless otherwise indicated.
- K. Install wall flanges or escutcheons at piping wall penetrations in exposed, finished locations. Use deep-pattern escutcheons where required to conceal protruding fittings. Comply with escutcheon requirements specified in Division 22.

### 3.3 CONNECTIONS

- A. Connect fixtures with water supplies, stops, and risers, and with traps, soil, waste, and vent piping. Use size fittings required to match fixtures.
- B. Comply with water piping requirements specified in Division 22.
- C. Install ball or gate shutoff valve on water supply to each fixture. **Install valve upstream from filter for water cooler.**
- D. Comply with soil and waste piping requirements specified in Division 22.

### 3.4 ADJUSTING

- A. Adjust water-cooler temperature settings.
- B. Adjust fixture flow regulators for proper flow and stream height.
- C. Adjust pressure water-cooler temperature settings.

### 3.5 CLEANING

- A. After installing fixture, inspect unit. Remove paint splatters and other spots, dirt, and debris. Repair damaged finish to match original finish.
- B. Clean fixtures, on completion of installation, according to manufacturer's written instructions.
- C. Provide protective covering for installed fixtures.
- D. Do not allow use of fixtures for temporary facilities unless approved in writing by Owner.
- E. After installing remote water cooler, inspect unit. Remove paint splatters and other spots, dirt, and debris. Repair damaged finish to match original finish.

END OF SECTION

**SECTION 230130.51 - HVAC AIR-DISTRIBUTION SYSTEM CLEANING-EXISTING  
SYSTEMS**

**PART 1 - GENERAL**

**1.1 RELATED DOCUMENTS**

- A. Certain requirements common to all the mechanical and electrical trades (Fire Suppression, Plumbing, HVAC, Electrical, and Tele/Data) are specified in Division 20. To avoid repetition, they are not repeated in each relevant Division and Section. However, these requirements are applicable to the work of this Section and are hereby incorporated by reference.
- B. Drawings and general provisions of the Contract, including General and Supplementary Conditions and Division 01 Specification Sections, apply to this Section.

**1.2 SUMMARY**

- A. Section includes cleaning HVAC air-distribution equipment, ducts, plenums, and system components.

**1.3 DEFINITIONS**

- A. ASCS: Air systems cleaning specialist.
- B. NADCA: National Air Duct Cleaners Association.

**1.4 INFORMATIONAL SUBMITTALS**

- A. Qualification Data: For an ASCS.
- B. Strategies and procedures plan.
- C. Cleanliness verification report.

**1.5 QUALITY ASSURANCE**

- A. ASCS Qualifications: A certified member of NADCA.
  - 1. Certification: Employ an ASCS certified by NADCA on a full-time basis.
  - 2. Supervisor Qualifications: Certified as an ASCS by NADCA.
- B. UL Compliance: Comply with UL 181 and UL 181A for fibrous-glass ducts.

PART 2 - PRODUCTS (NOT USED)

PART 3 - EXECUTION

3.1 EXAMINATION

- A. Examine HVAC air-distribution equipment, ducts, plenums, and system components to determine appropriate methods, tools, and equipment required for performance of the Work.
- B. Perform "Project Evaluation and Recommendation" according to NADCA ACR 2006.
- C. Prepare written report listing conditions detrimental to performance of the Work.
- D. Proceed with work only after unsatisfactory conditions have been corrected.

3.2 PREPARATION

- A. Prepare a written plan that includes strategies and step-by-step procedures. At a minimum, include the following:
  - 1. Supervisor contact information.
  - 2. Work schedule including location, times, and impact on occupied areas.
  - 3. Methods and materials planned for each HVAC component type.
  - 4. Required support from other trades.
  - 5. Equipment and material storage requirements.
  - 6. Exhaust equipment setup locations.
- B. Use the existing service openings, as required for proper cleaning, at various points of the HVAC system for physical and mechanical entry and for inspection.
- C. Comply with NADCA ACR 2006, "Guidelines for Constructing Service Openings in HVAC Systems" Section.

3.3 CLEANING

- A. Comply with NADCA ACR 2006.
- B. Remove visible surface contaminants and deposits from within the HVAC system.
- C. Systems and Components to Be Cleaned:
  - 1. Air devices for supply and return air.
  - 2. Air-terminal units.
  - 3. Ductwork:
    - a. Supply-air ducts, including turning vanes, to the air-handling unit.
    - b. Return-air ducts to the air-handling unit.
    - c. Exhaust-air ducts.
  - 4. Air-Handling Units:

- a. Interior surfaces of the unit casing.
  - b. Coil surfaces compartment.
  - c. Condensate drain pans.
  - d. Fans, fan blades, and fan housings.
5. Filters and filter housings.
- D. Collect debris removed during cleaning. Ensure that debris is not dispersed outside the HVAC system during the cleaning process.
- E. Particulate Collection:
  1. For particulate collection equipment, include adequate filtration to contain debris removed. Locate equipment downwind and away from all air intakes and other points of entry into the building.
  2. HEPA filtration with 99.97 percent collection efficiency for particles sized 0.3 micrometer or larger shall be used where the particulate collection equipment is exhausting inside the building,
- F. Control odors and mist vapors during the cleaning and restoration process.
- G. Mark the position of manual volume dampers and air-directional mechanical devices inside the system prior to cleaning. Restore them to their marked position on completion of cleaning.
- H. System components shall be cleaned so that all HVAC system components are visibly clean. On completion, all components must be returned to those settings recorded just prior to cleaning operations.
- I. Clean all air-distribution devices, registers, grilles, and diffusers.
- J. Clean visible surface contamination deposits according to NADCA ACR 2006 and the following:
  1. Clean air-handling units, airstream surfaces, components, condensate collectors, and drains.
  2. Ensure that a suitable operative drainage system is in place prior to beginning wash-down procedures.
  3. Clean evaporator coils, reheat coils, and other airstream components.
- K. Duct Systems:
  1. Create service openings in the HVAC system as necessary to accommodate cleaning.
  2. Mechanically clean duct systems specified to remove all visible contaminants so that the systems are capable of passing the HVAC System Cleanliness Tests (see NADCA ACR 2006).
- L. Debris removed from the HVAC system shall be disposed of according to applicable Federal, state, and local requirements.
- M. Mechanical Cleaning Methodology:
  1. Source-Removal Cleaning Methods: The HVAC system shall be cleaned using source-removal mechanical cleaning methods designed to extract contaminants from within the HVAC system and to safely remove these contaminants from the facility. No cleaning

method, or combination of methods, shall be used that could potentially damage components of the HVAC system or negatively alter the integrity of the system.

- a. Use continuously operating vacuum-collection devices to keep each section being cleaned under negative pressure.
  - b. Cleaning methods that require mechanical agitation devices to dislodge debris that is adhered to interior surfaces of HVAC system components shall be equipped to safely remove these devices. Cleaning methods shall not damage the integrity of HVAC system components or damage porous surface materials such as duct and plenum liners.
2. Cleaning Mineral-Fiber Insulation Components:
- a. Fibrous-glass thermal or acoustical insulation elements present in equipment or ductwork shall be thoroughly cleaned with HEPA vacuuming equipment while the HVAC system is under constant negative pressure and shall not be permitted to get wet according to NADCA ACR 2006.
  - b. Cleaning methods used shall not cause damage to fibrous-glass components and will render the system capable of passing the HVAC System Cleanliness Tests (see NADCA ACR 2006).
  - c. Fibrous materials that become wet shall be discarded and replaced.

N. Coil Cleaning:

1. Measure static-pressure differential across each coil.
2. See NADCA ACR 2006, "Coil Surface Cleaning" Section. Type 1, or Type 1 and Type 2, cleaning methods shall be used to render the coil visibly clean and capable of passing Coil Cleaning Verification (see applicable NADCA ACR 2006).
3. Coil drain pans shall be subject to NADCA ACR 2006, "Non-Porous Surfaces Cleaning Verification." Ensure that condensate drain pans are operational.
4. Electric-resistance coils shall be de-energized, locked out, and tagged before cleaning.
5. Cleaning methods shall not cause any appreciable damage to, cause displacement of, inhibit heat transfer, or cause erosion of the coil surface or fins, and shall comply with coil manufacturer's written recommendations when available.
6. Rinse thoroughly with clean water to remove any latent residues.

O. Antimicrobial Agents and Coatings:

1. Apply antimicrobial agents and coatings if active fungal growth is reasonably suspected or where unacceptable levels of fungal contamination have been verified. Apply antimicrobial agents and coatings according to manufacturer's written recommendations and EPA registration listing after the removal of surface deposits and debris.
2. When used, antimicrobial treatments and coatings shall be applied after the system is rendered clean.
3. Apply antimicrobial agents and coatings directly onto surfaces of interior ductwork.
4. Sanitizing agent products shall be registered by the EPA as specifically intended for use in HVAC systems and ductwork.

### 3.4 CLEANLINESS VERIFICATION

- A. Maintain ductwork in accordance with SMACNA "Duct Cleanliness for New Construction Guidelines." Maintain "Advanced Cleanliness Level" as defined in the guideline.
- B. Verify cleanliness according to NADCA ACR 2013, "Verification of HVAC System Cleanliness" Section.
- C. Verify HVAC system cleanliness after mechanical cleaning and before applying any treatment or introducing any treatment-related substance to the HVAC system, including biocidal agents and coatings.
- D. Perform visual inspection for cleanliness. If no contaminants are evident through visual inspection, the HVAC system shall be considered clean. If visible contaminants are evident through visual inspection, those portions of the system where contaminants are visible shall be re-cleaned and subjected to cleanliness testing identified in "Additional Verification" paragraph below.
- E. Verification of Coil Cleaning:
  - 1. Measure static-pressure differential across each coil.
  - 2. Coil will be considered clean if the coil is free of foreign matter and chemical residue, based on a thorough visual inspection.

### 3.5 RESTORATION

- A. Restore and repair HVAC air-distribution equipment, ducts, plenums, and components according to NADCA ACR 2006, "Restoration and Repair of Mechanical Systems" Section.
- B. Restore service openings capable of future reopening. Comply with requirements in Division 23 for metal ducts. Include location of service openings in Project closeout report.
- C. Replace fibrous-glass materials that cannot be restored by cleaning or resurfacing. Comply with requirements in Division 23 for metal ducts and non-metal ducts.
- D. Replace damaged insulation according to Division 23 for duct insulation.
- E. Ensure that closures do not hinder or alter airflow.
- F. New closure materials, including insulation, shall match opened materials and shall have removable closure panels fitted with gaskets and fasteners.
- G. Reseal fibrous-glass ducts. Comply with requirements in Division 23 for nonmetal ducts.

END OF SECTION

## SECTION 230500 - COMMON WORK RESULTS FOR HVAC

### PART 1 - GENERAL

#### 1.1 RELATED DOCUMENTS

- A. Certain requirements common to all the mechanical and electrical trades (Fire Suppression, Plumbing, HVAC, Electrical, and Tele/Data) are specified in Division 20. To avoid repetition, they are not repeated in each relevant Division and Section. However, these requirements are applicable to the work of this Section and are hereby incorporated by reference.
  - 1. For example, prior to requesting an occupancy permit, the MEP documentation listed in Part 3 of Division 20 (in paragraph "MEP and Fire Protection Completion Requirements", subparagraph "Occupancy Permit" must be submitted and approved so the Engineer can certify that the MEP systems and life safety provisions are completed.
- B. Drawings and general provisions of the Contract, including General and Supplementary Conditions and Division 01 Specification Sections, apply to this Section.

#### 1.2 SUMMARY

- A. This Section includes the following:
  - 1. HVAC demolition.
  - 2. Equipment installation requirements common to equipment sections.
  - 3. Painting and finishing.
  - 4. Concrete bases.
  - 5. Supports and anchorages.
  - 6. Rated fire penetration sealants.
  - 7. Material and workmanship.
  - 8. Access panels.

#### 1.3 REFERENCES

- A. Publications listed below (including amendments, addenda, revisions, supplements, and errata) form part of this specification to the extent referenced. Publications are referenced in the text by the basic designations only.
  - 1. American Iron and Steel Institute (ASI)
  - 2. National Fire Protection Association (NFPA)
    - a. NFPA 70            National Electric Code
  - 3. American Society for Testing and Materials (ASTM)
    - a. ASTM A36            Standard Specification for Carbon Structural Steel
    - b. ASTM A53            Standard Specification for Pipe, Steel, Black and Hot-Dipped, Zinc-Coated, Welded and Seamless
    - c. ASTM A109           Standard Specification for Steel, Strip, Carbon (0.25 Maximum Percent), Cold-Rolled

- d. ASTM A123 Standard Specification for Zinc (Hot-Dip Galvanized) Coatings on Iron and Steel Products
- e. ASTM A240 Standard Specification for Chromium and Chromium-Nickel Stainless Steel Plate, Sheet, and Strip for Pressure Vessels and for General Applications
- f. ASTM A500 Standard Specification for Cold-Formed Welded and Seamless Carbon Steel Structural Tubing in Rounds and Shapes
- g. ASTM A501 Standard Specification for Hot-Formed Welded and Seamless Carbon Steel Structural Tubing
- h. ASTM A633 Standard Specification for Normalized High-Strength Low-Alloy Structural Steel Plates
- i. ASTM A635 Standard Specification for Steel, Sheet and Strip, Heavy-Thickness Coils, Carbon, Commercial Steel, Drawing Steel, Structural, High-Strength Low-Alloy, and High-Strength Low-Alloy with Improved Formability, Hot-Rolled
- j. ASTM A653 Standard Specification for Steel Sheet, Zinc-Coated (Galvanized) or Zinc-Iron Alloy-Coated (Galvannealed) by the Hot-Dip Process
- k. ASTM A682 Standard Specification for Steel, Strip, High-Carbon, Cold-Rolled
- l. ASTM A924 Standard Specification for General Requirements for Steel Sheet, Metallic-Coated by the Hot-Dip Process
- m. ASTM A1011 Standard Specification for Steel, Sheet and Strip, Hot-Rolled, Carbon, Structural, High-Strength Low-Alloy and High-Strength Low-Alloy with Improved Formability
- n. ASTM A1018 Standard Specification for Steel, Sheet and Strip, Heavy Thickness Coils, Hot Rolled, Carbon, Structural, High-Strength Low-Alloy, Columbium or Vanadium, and High-Strength Low-Alloy with Improved Formability
- o. ASTM B117 Standard Practice for Operating Salt Spray (Fog) Apparatus

  - b. AWPA C9 Plywood - Preservative Treatment by Pressure Process
  - c. AWPA C20 Structural Lumber - Fire-Retardant Treatment by Pressure Processes
  - d. AWPA C22 Lumber and Plywood for Permanent Wood Foundations- Preservative Treatment by Pressure Processes
  - e. AWPA C27 Plywood-Fire-Retardant Treatment by Pressure Processes
- 5. American Welding Society (AWS)
- 6. Code of Federal Regulations (CFR)
- 7. Metal Framing Manufacturers Association (MFMA)
  - a. MFMA Metal Framing Standards Publication
- 8. Underwriters Laboratories (UL)
  - a. UL 723 Test for Surface Burning Characteristics of Building Materials

#### 1.4 DEFINITIONS

- A. Finished Spaces: Spaces other than mechanical and electrical equipment rooms, furred spaces, pipe and duct chases, unheated spaces immediately below roof, spaces above ceilings, unexcavated spaces, crawlspaces, and tunnels.
- B. Exposed, Interior Installations: Exposed to view indoors. Examples include finished occupied spaces and mechanical equipment rooms.
- C. Exposed, Exterior Installations: Exposed to view outdoors or subject to outdoor ambient temperatures and weather conditions. Examples include rooftop locations.
- D. Concealed, Interior Installations: Concealed from view and protected from physical contact by building occupants. Examples include above ceilings and chases.
- E. Concealed, Exterior Installations: Concealed from view and protected from weather conditions and physical contact by building occupants but subject to outdoor ambient temperatures. Examples include installations within unheated shelters.
- F. The following are industry abbreviations for plastic materials:
  - 1. CPVC: Chlorinated polyvinyl chloride plastic.
  - 2. PE: Polyethylene plastic.
  - 3. PVC: Polyvinyl chloride plastic.

G. The following are industry abbreviations for rubber materials:

1. EPDM: Ethylene-propylene-diene terpolymer rubber.
2. NBR: Acrylonitrile-butadiene rubber.

#### 1.5 SUBMITTALS

A. Product Data: For the following:

- 1.
2. Rated fire construction penetration sealants.

#### 1.6 QUALITY ASSURANCE

A. Electrical Characteristics for HVAC Equipment: Equipment of higher electrical characteristics may be furnished provided such proposed equipment is approved in writing and connecting electrical services, circuit breakers, and conduit sizes are appropriately modified. If minimum energy ratings or efficiencies are specified, equipment shall comply with requirements.

#### 1.7 DELIVERY, STORAGE, AND HANDLING

A. Protect and cover equipment (VAV boxes, coils, fans, pumps, control valves, etc) and ductwork components with plastic when stored on site to prevent entrance of dirt, debris and moisture.

#### 1.8 COORDINATION

A. Coordinate requirements for access panels and doors for HVAC items requiring access that are concealed behind finished surfaces. Access panels and doors are specified in Division 08.

### PART 2 - PRODUCTS

#### 2.1 MANUFACTURERS

A. In other Part 2 articles where subparagraph titles below introduce lists, the following requirements apply for product selection:

1. Available Manufacturers: Subject to compliance with requirements, manufacturers offering products that may be incorporated into the Work include the manufacturers specified, or approved equal.

#### 2.2 FIRE RATED CONSTRUCTION PENETRATION SEALANTS

A. Description: Sealants for interior fire rated assembly penetrations:

1. Available Manufacturers: Subject to compliance with requirements, manufacturers offering products that may be incorporated into the Work include the following, or approved equal:
  - a. 3M,
  - b. Hilti,
  - c. Firespec,
  - d. Or approved equal.

- B. Sealants, caulking and devices shall be rated the same as the wall rating they are used in.
- C. Refer to Division 07 for materials and architectural drawings for listed penetration details.

### **PART 3 - EXECUTION**

#### **3.1 HVAC DEMOLITION**

- A. Refer to Division 01 and Division 02 for general demolition requirements and procedures.
- B. Refer to drawings for general description of areas requiring demolition.
- C. Refer to General Contractor's/Construction Manager's Instructions for existing equipment and materials that shall remain the property of the Owner.
- D. Where it is noted that items of value are not to be returned to the Owner, the items shall become the property of the Contractor. Storage or sale of items on the project site is prohibited. Items shall be removed from site and legally disposed of.
- E. Protection: Ensure the safe passage of persons in and around the building/site during demolition. Prevent injury to persons and damage to property. Provide adequate shoring and bracing to prevent collapse. Immediately repair damage to the condition before being damaged to the satisfaction of the architect and Owner. Take effective measures to prevent windblown dust.
- F. Utilities: Maintain utilities except those requiring removal or relocation. Keep utilities in service and protect from damage. Do not interrupt utilities serving in-use areas without first obtaining permission from the utility company and the Owner. Provide temporary services as required.
- G. Disconnect, demolish, and remove HVAC systems, equipment, and components indicated to be removed.
  - 1. Piping to Be Removed: Remove portion of piping indicated to be removed and cap remaining piping with same or compatible piping material.
  - 2. Piping to Be Abandoned in Place: Drain piping and cap piping with same or compatible piping material.
  - 3. Ducts to Be Removed: Remove portion of ducts indicated to be removed and cap remaining ducts with same or compatible ductwork material.
  - 4. Ducts to Be Abandoned in Place: Cap ducts with same or compatible ductwork material.
  - 5. Equipment to Be Removed: Disconnect and cap services and remove equipment.
  - 6. Equipment to Be Removed and Reinstalled: Disconnect and cap services and remove, clean, and store equipment; when appropriate, reinstall, reconnect, and make equipment operational.
  - 7. Equipment to Be Removed and Salvaged: Disconnect and cap services and remove equipment and deliver to Owner.
- H. If pipe, insulation, or equipment to remain is damaged in appearance or is unserviceable, remove damaged or unserviceable portions and replace with new products of equal capacity and quality.

### 3.2 EQUIPMENT INSTALLATION - COMMON REQUIREMENTS

- A. Install equipment to allow maximum possible headroom unless specific mounting heights are not indicated.
- B. Install equipment level and plumb, parallel and perpendicular to other building systems and components in exposed interior spaces, unless otherwise indicated.
- C. Install equipment to facilitate service, maintenance, and repair or replacement of components. Connect equipment for ease of disconnecting, with minimum interference to other installations. Extend grease fittings to accessible locations.
- D. Install equipment to allow right of way for piping installed at required slope.
- E. Avoid interference with structure and with work of other trades, preserving adequate headroom and clearing doors and passageways, to satisfaction of Architect and in accordance with code requirements.
- F. Distribute equipment loads on building structural members provided for equipment support. Roof-mounted equipment shall be installed and supported on structural steel.
- G. Provide suspended platforms, strap hangers, brackets, shelves, stands or legs for floor, wall or ceiling mounting of equipment.
- H. Provide steel supports and hardware for proper installation of hangers, anchors and guides.
- I. Provide cuts, weights, and other pertinent data required for proper coordination of equipment support provisions and installation.
- J. Structural steel and hardware shall conform to Standard Specifications of ASTM; use of steel and hardware shall conform to requirements of Section Five of Code of Practice of American Institute of Steel Construction.
- K. Verify site conditions and dimensions of equipment to ensure access for proper installation of equipment without disassembly that will void warrantee. Report in writing to Architect, prior to purchase or shipment of equipment involved, on conditions that may prevent proper installation.
- L. For all equipment installed external to the building; whether on roofs, supports, grade, etc., the installation shall comply with wind loading and impact requirements of the applicable codes for this project site. All equipment provided for this project shall be certified by the manufacturer that the equipment meets the applicable seismic, wind, earthquake, and hurricane impact requirements as set forth by the Authority Having Jurisdiction.

### 3.3 PAINTING

- A. Painting of HVAC systems, equipment, and components is specified in Division 09.
- B. Damage and Touchup: Repair marred and damaged factory-painted finishes with materials and procedures to match original factory finish.
- C. Equipment installed shall have shop coat of non-lead gray paint. Hangers and supports shall have one coat of non-lead red primer. Machinery (e.g. pumps, fans and air handling units) shall be stenciled with equipment name. Stencil shall be at least 6 inches high for large equipment, 2 inches high for small equipment.
- D. Note requirement for Architect's approval invoked under paragraph MATERIALS AND WORKMANSHIP regarding finish of material and equipment that is visible or subject to corrosive or atmospheric conditions.

### 3.4 CONCRETE BASES

- A. Concrete Bases: Anchor equipment to concrete base according to equipment manufacturer's written instructions and according to seismic codes at Project.
  - 1. Construct concrete bases of dimensions indicated, but not less than 4 inches larger in both directions than supported unit.
  - 2. Install dowel rods to connect concrete base to concrete floor. Unless otherwise indicated, install dowel rods on 18-inch centers around the full perimeter of the base.
  - 3. Install epoxy-coated anchor bolts for supported equipment that extend through concrete base, and anchor into structural concrete floor.
  - 4. Place and secure anchorage devices. Use supported equipment manufacturer's setting drawings, templates, diagrams, instructions, and directions furnished with items to be embedded.
  - 5. Install anchor bolts to elevations required for proper attachment to supported equipment.
  - 6. Install anchor bolts according to anchor-bolt manufacturer's written instructions.
  - 7. Use 3000 psi, 28-day compressive-strength concrete and reinforcement as specified in Division 03.

### 3.5 ERECTION OF METAL SUPPORTS AND ANCHORAGES

- A. Refer to Division 05 for structural steel.
- B. Cut, fit, and place miscellaneous metal supports accurately in location, alignment, and elevation to support and anchor HVAC materials and equipment.
- C. Field Welding: Comply with AWS D1.1.

### 3.6 ERECTION OF WOOD SUPPORTS AND ANCHORAGES

- A. Cut, fit, and place wood grounds, nailers, blocking, and anchorages to support, and anchor HVAC materials and equipment.
- B. Select fastener sizes that will not penetrate members if opposite side will be exposed to view or will receive finish materials. Tighten connections between members. Install fasteners without splitting wood members.
- C. Attach to substrates as required to support applied loads.

### 3.7 GROUTING

- A. Mix and install grout for HVAC equipment base bearing surfaces, pump and other equipment base plates, and anchors.
- B. Clean surfaces that will come into contact with grout.
- C. Provide forms as required for placement of grout.
- D. Avoid air entrapment during placement of grout.
- E. Place grout, completely filling equipment bases.
- F. Place grout on concrete bases and provide smooth bearing surface for equipment.
- G. Place grout around anchors.

- H. Cure placed grout.

### 3.8 ACCESS AND ACCESS PANELS

- A. Refer to air distribution system specification section for duct access doors and panels.
- B. Access panels in walls, ceilings and floors are generally not shown on the drawings, but shall be provided to maintain proper access to materials and equipment that require inspection, replacement, repair or service. Provide access doors or panels and coordinate their delivery with Division 08. If proper access cannot be provided, confer with Architect as to best method of approach for minimizing effect of reduced access that may result.
- C. Coordinate and prepare a location, size, and function schedule of access panels required to fully service equipment and deliver to Division 08. Furnish and install distinctively colored buttons (color as selected by Architect) in finished ceiling to identify access panels.
- D. Furnish access panels for installation under other Sections where fire dampers, smoke dampers, volume dampers, smoke detectors, controls, shut-off valves, control valves, check valves, or other items installed under this Section require access and are concealed in floor, wall, furred space or above ceiling.
- E. Ceilings consisting of lay-in or removable splined tiles do not require access panels and dampers, splitters, or test hole openings above ceiling shall have location marked with thumbtack on finished ceiling panel. Location shall be noted on record drawings.
- F. Access panels shall be at least large enough to remove the component requiring access.
  - 1. Minimum Access Door Sizes:
    - a. One-Hand or Inspection Access: 8 inches by 5 inches.
    - b. Two-Hand Access: 12 inches by 6 inches.
    - c. Head and Hand Access: 18 inches by 10 inches.
    - d. Head and Shoulders Access: 21 inches by 14 inches.
    - e. Body Access: 25 inches by 14 inches.
    - f. Body Plus Ladder Access: 25 inches by 17 inches.

### 3.9 MATERIALS AND WORKMANSHIP

- A. Work shall be neat and rectilinear. Ductwork, piping, and conduit shall run concealed except in mechanical rooms and areas where no hung ceiling exists. Install material and equipment in accordance with manufacturers written instructions. Installation shall operate safely and without leakage, undue wear, noise, vibration, corrosion or water hammer. Work shall be properly and effectively protected, and pipe and duct openings shall be temporarily closed to prevent obstruction and damage before completion.
- B. Except as specified otherwise, material and equipment shall be new. Provide supplies, appliances and connections necessary for complete and operational installation. Provide components required or recommended by OSHA and applicable NFPA documents.
- C. Owner will not be responsible for material and equipment before testing, commissioning, and acceptance.

END OF SECTION

H:\Y0586.00\DOC\SPEC\2025\_02-20\_IFB\230500\_COMMON WORK RESULTS FOR HVAC.DOC

## **SECTION 230513 - COMMON MOTOR REQUIREMENTS FOR HVAC EQUIPMENT**

### **PART 1 - GENERAL**

#### **1.1 RELATED DOCUMENTS**

- A. Certain requirements common to all the mechanical and electrical trades (Fire Suppression, Plumbing, HVAC, Electrical, and Tele/Data) are specified in Division 20. To avoid repetition, they are not repeated in each relevant Division and Section. However, these requirements are applicable to the work of this Section and are hereby incorporated by reference.
- B. Drawings and general provisions of the Contract, including General and Supplementary Conditions and Division 01 Specification Sections, apply to this Section.

#### **1.2 SUMMARY**

- A. Section includes general requirements for single-phase and polyphase, general-purpose, horizontal, small and medium, squirrel-cage induction motors for use on ac power systems up to 600 V and installed at equipment manufacturer's factory or shipped separately by equipment manufacturer for field installation.

#### **1.3 COORDINATION**

- A. Coordinate features of motors, installed units, and accessory devices to be compatible with the following:
  - 1. Motor controllers.
  - 2. Torque, speed, and horsepower requirements of the load.
  - 3. Ratings and characteristics of supply circuit and required control sequence.
  - 4. Ambient and environmental conditions of installation location.
  - 5. Variable-speed drive controllers.

### **PART 2 - PRODUCTS**

#### **2.1 GENERAL MOTOR REQUIREMENTS**

- A. Comply with requirements in this Section except when stricter requirements are specified in HVAC equipment schedules or Sections.
- B. Comply with NEMA MG 1 unless otherwise indicated.
- C. Motors under 1/2 HP shall be designed for 120V, 60 Hz, single phase, unless otherwise specified.
- D. Motors 1/2 HP and over shall be voltages as indicated in schedules on drawings.
- E. Individual pumps serving variable flow systems and VAV fans with a motor horsepower of 5 hp or larger shall be provided with variable speed drives that will result in pump or fan motor demand of no more than 30 percent of design wattage at 50 percent of design flow.

## 2.2 MOTOR CHARACTERISTICS

- A. Duty: Continuous duty at ambient temperature of 40 deg C and at altitude of 3300 feet above sea level.
- B. Capacity and Torque Characteristics: Sufficient to start, accelerate, and operate connected loads at designated speeds, at installed altitude and environment, with indicated operating sequence, and without exceeding nameplate ratings or considering service factor.

## 2.3 POLYPHASE MOTORS

- A. Description: NEMA MG 1, Design B, medium induction motor.
- B. Efficiency: All motors shall be premium efficiency type as defined in NEMA MG 1 and shall have their efficiencies determined in accordance with IEEE Standard 112 Method B. The NEMA nominal efficiency shall be listed on the motor nameplate.
- C. Minimum nominal efficiencies shall be as follows:

Premium Efficiency Motor Totally Enclosed Fan-Cooled (TEFC)				Premium Efficiency Motor Open Drip-Proof (ODP)			
Size HP	Speed (rpm)			Size HP	Speed (rpm)		
	1200	1800	3600		1200	1800	3600
	NEMA Nominal Efficiency				NEMA Nominal Efficiency		
1	82.5	85.5	78.5	1	82.5	85.5	80.0
1.5	87.5	86.5	85.5	1.5	86.5	86.5	85.5
2	88.5	86.5	86.5	2	87.5	86.5	86.5
3	89.5	89.5	88.5	3	89.5	89.5	86.5
5	89.5	89.5	89.5	5	89.5	89.5	89.5
7.5	91.7	91.7	91.0	7.5	91.7	91.0	89.5
10	91.7	91.7	91.7	10	91.7	91.7	90.2
15	92.4	92.4	91.7	15	92.4	93.0	91.0
20	92.4	93.0	92.4	20	92.4	93.0	92.4
25	93.0	93.6	93.0	25	93.0	93.6	93.0
30	93.6	93.6	93.0	30	93.6	94.1	93.0
40	94.1	94.1	93.6	40	94.1	94.1	93.6
50	94.1	94.5	94.1	50	94.1	94.5	93.6
60	94.5	95.0	94.1	60	95.0	95.0	94.1
75	95.0	95.4	94.5	75	95.0	95.0	94.5
100	95.4	95.4	95.0	100	95.0	95.4	94.5
125	95.4	95.4	95.4	125	95.4	95.4	95.0
150	95.8	95.8	95.4	150	95.8	95.8	95.4
200+	95.8	96.2	95.8	200+	95.4	95.8	95.4

- D. Multispeed Motors: Variable torque.
  - 1. For motors with 2:1 speed ratio, consequent pole, single winding.
  - 2. For motors with other than 2:1 speed ratio, separate winding for each speed.
- E. Rotor: Random-wound, squirrel cage.
- F. Bearings: Regreasable, shielded, antifriction ball bearings suitable for radial and thrust loading.
- G. Temperature Rise: One class below insulation rating. Example: Class B temperature rise for Class F insulation.

- H. Insulation: Class F or Class H as noted below.
- I. Code Letter Designation:
  - 1. Motors 15 HP and Larger: NEMA starting Code F or Code G.
  - 2. Motors Smaller than 15 HP: Manufacturer's standard starting characteristic.
- J. Enclosure Material: Cast iron for motor frame sizes 324T and larger; rolled steel for motor frame sizes smaller than 324T.

## 2.4 POLYPHASE MOTORS WITH ADDITIONAL REQUIREMENTS

- A. Premium Efficiency Motors (non-VFD): Class B temperature rise; Class F insulation.
- B. Motors Used with Variable Frequency Controllers: Ratings, characteristics, and features coordinated with and approved by controller manufacturer. Motors shall be premium efficiency "inverter-duty" or "drive duty" motors, compatible with the drive to which it is connected. Use of the motor with a VFD shall not adversely affect the operation, useful life or warranty of the motor.
  - 1. Windings: Copper magnet wire with moisture-resistant insulation varnish, designed and tested to resist transient spikes, high frequencies, and short time rise pulses produced by pulse-width modulated inverters.
  - 2. Premium-Efficient Motors: Class F temperature rise; Class H insulation.
  - 3. Motor windings shall be spike resistant to withstand 1,600 peak volts. Motors shall have shaft grounding system to protect bearings from induced voltage. Shaft grounding system shall have very low drag, less than 1/2 percent of motor HP, and shall operate for a minimum of three (3) years without periodic adjustments. All consumables of the shaft grounding system shall be replaceable without a shutdown of the motor or VFD. System shall be as manufactured by SGS (Albany, Oregon) or approved equal.
  - 4. Motors used with VFD shall have a minimum three (3) year manufacturer warranty.
- C. Thermal Protection (all polyphase motors): Comply with NEMA MG 1 requirements for thermally protected motors.

## 2.5 SINGLE-PHASE MOTORS

- A. Except where specified as part of terminal equipment (i.e. ECM motors in fan coil units), motors larger than 1/20 hp shall be one of the following, to suit starting torque and requirements of specific motor application and shall be premium efficiency type:
  - 1. Permanent-split capacitor.
  - 2. Split phase.
  - 3. Capacitor start, inductor run.
  - 4. Capacitor start, capacitor run.
- B. Multispeed Motors: Variable-torque, permanent-split-capacitor type.
- C. Bearings: Prelubricated, antifriction ball bearings or sleeve bearings suitable for radial and thrust loading.
- D. Motors 1/20 HP and Smaller: Shaded-pole type.

- E. Thermal Protection: Internal protection to automatically open power supply circuit to motor when winding temperature exceeds a safe value calibrated to temperature rating of motor insulation. Thermal-protection device shall automatically reset when motor temperature returns to normal range.
- F. Electronically Commutated Motors (ECM): Motors shall be an electronic commutation (EC) motor specifically designed for HVAC applications. AC induction type motors are not acceptable. Motors shall be permanently lubricated with heavy-duty ball bearings to match the load, and prewired to the specific voltage and phase. Internal motor circuitry shall convert AC power supplied to the equipment to DC power to operate the motor. Motor shall be speed controllable down to 20 percent of full speed (5:1 turndown). Speed shall be controlled by either a potentiometer dial mounted on the motor or by a 0-10 VDC control signal. Motor shall be a minimum of 85 percent efficient at all speeds.

## 2.6 ELECTRONICALLY COMMUTATED MOTOR (ECM)

- A. For equipment specified with ECM motors, provide the following.
  - 1. Synchronous, constant torque, ECM with permanent magnet rotor. Rotor magnets to be time-stable, nontoxic ceramic magnets (Sr-Fe).
  - 2. Driven by a frequency converter with an integrated power factor correction filter. Conventional induction motors will not be acceptable.
  - 3. Each motor with an integrated variable-frequency drive, tested as one unit by manufacturer.
  - 4. Motor speed adjustable over full range from 0 rpm to maximum scheduled speed.
  - 5. Variable motor speed to be controlled by a 0- to 10 V-dc or 4- to 20-mA input.
  - 6. Integrated motor protection verified by UL to protect the pump against over and under voltage, over temperature of motor and/or electronics, overcurrent, locked rotor, and dry run (no-load condition).

## 2.7 STARTERS

- A. Available Manufacturers: Subject to compliance with requirements, manufacturers offering products that may be incorporated into the Work include the following, or approved equal:
  - 1. Eaton Electrical Inc.; Cutler-Hammer Business Unit,
  - 2. General Electric Company; GE Consumer & Industrial - Electrical Distribution,
  - 3. Rockwell Automation, Inc.; Allen-Bradley brand,
  - 4. Siemens Energy & Automation, Inc,
  - 5. Square D; a brand of Schneider Electric,
  - 6. Cutler-Hammer,
  - 7. Clark,
  - 8. Arrow Hart,
  - 9. Or approved equal

- B. Furnish starters for HVAC equipment, except units served by variable frequency drives. Provide control and other related wiring including interlocks. Power wiring (to panelboards, disconnect switches, starters, and motors) will be provided under Division 26. Starters that are not integral to equipment will be installed and wired under Division 26, Electrical, and furnished under this Section.
- C. Starters that require interlocks or remote control shall be magnetic with HAND-OFF-AUTOMATIC switch (fast-slow-off-auto for two speed motors) in cover. Provide magnetic starters with auxiliary contacts, buttons and switches. Refer to other Division 23 sections and control drawings for interlock requirements. Starters shall be by single manufacturer.
  - 1. Each 3-phase, 60 Hz motor shall be provided with magnetic starter with hand-off-automatic switch.
  - 2. Other motors shall be provided with a manual starter with ON-OFF switch.
  - 3. Control relay for each starter shall be for operation on 120V, single phase. Provide transformer of sufficient capacity within starter case.
  - 4. Provide inverse time limit overload and under voltage protection in each leg and with pilot lights.
  - 5. Provide red and green On-Off pilot lights.
  - 6. Provide nameplates with engraved white lettering to designate area and equipment served.
  - 7. Starters for refrigeration machines shall be furnished by unit manufacturer.
  - 8. Furnish for all single speed motors, 25 HP and above, 95 percent power factor correction capacitors. Capacitors shall be in NEMA enclosure of the same rating as the motor's starter.

## 2.8 DRIVES

- A. Refer to requirements in Division 26.

## PART 3 - EXECUTION (NOT APPLICABLE)

END OF SECTION

H:\Y0586.00\DOC\SPEC\2025\_02-20\_IFB\230513\_COMMON MOTOR REQUIREMENTS.DOC

## SECTION 230529 - HANGERS AND SUPPORTS FOR HVAC PIPING AND EQUIPMENT

### PART 1 - GENERAL

#### 1.1 RELATED DOCUMENTS

- A. Certain requirements common to all the mechanical and electrical trades (Fire Suppression, Plumbing, HVAC, Electrical, and Tele/Data) are specified in Division 20. To avoid repetition, they are not repeated in each relevant Division and Section. However, these requirements are applicable to the work of this Section and are hereby incorporated by reference.
- B. Drawings and general provisions of the Contract, including General and Supplementary Conditions and Division 01 Specification Sections, apply to this Section.

#### 1.2 SUMMARY

- A. This Section includes the following hangers and supports for HVAC system piping and equipment:
  - Steel pipe hangers and supports.
  - Trapeze pipe hangers.
  - Metal framing systems.
  - Thermal-hanger shield inserts.
  - Fastener systems.
  - Pipe stands.
  - Equipment supports.
- B. Related Sections include the following:
  - Division 05 for structural-steel shapes and plates for trapeze hangers for pipe and equipment supports.

#### 1.3 DEFINITIONS

- A. MSS: Manufacturers Standardization Society for the Valve and Fittings Industry Inc.
- B. MSS SP-58-2018, "Pipe Hangers and Supports – Materials, Design, Manufacture, Selection, Application, and Installation"

#### 1.4 PERFORMANCE REQUIREMENTS

- A. Design supports for multiple pipes, including pipe stands, capable of supporting combined weight of supported systems, system contents, and test water.
- B. Design equipment supports capable of supporting combined operating weight of supported equipment and connected systems and components.

#### 1.5 ACTION SUBMITTALS

- A. Product Data: For the following:

Steel pipe hangers and supports.

Thermal-hanger shield inserts.

Components of trapeze pipe hangers and metal framing systems.

Pipe stands.

**B. Shop Drawings: Show fabrication and installation details for the following:**

Trapeze pipe hangers.

Metal framing systems.

Pipe stands.

Equipment supports.

**C. Delegated-Design Submittal: For trapeze hangers, metal framing systems and equipment supports provide analysis data verifying submitted supports meet performance requirements and design criteria, signed and sealed by the qualified professional engineer responsible for their preparation.**

Design calculations for designing trapeze hangers, metal framing systems and equipment supports based on approved piping and equipment submittal data.

Wind-Restraint Details:

- a. Design Analysis: To support selection and arrangement of wind restraints. Include calculations of combined tensile and shear loads.
- b. Details: Indicate fabrication and arrangement. Detail attachments of restraints to the restrained items and to the structure. Show attachment locations, methods, and spacing. Identify components, list their strengths, and indicate directions and values of forces transmitted to the structure during design wind speed. Indicate association with vibration isolation devices.
- c. Comply with requirements in other Sections for equipment mounted outdoors.

## **1.6 INFORMATIONAL SUBMITTALS**

**A. Welding certificates.**

## **PART 2 - PRODUCTS**

### **2.1 MANUFACTURERS**

**A. In other Part 2 articles where titles below introduce lists, the following requirements apply to product selection:**

Available Manufacturers: Subject to compliance with requirements, manufacturers offering products that may be incorporated into the Work include manufacturers specified, or approved equal.

### **2.2 PERFORMANCE REQUIREMENTS**

**A. Delegated Design: Engage a qualified professional engineer, as defined in Division 01 "Quality Requirements," to design trapeze pipe hangers and equipment supports.**

- B. Structural Performance: Hangers and supports for HVAC piping and equipment shall withstand the effects of gravity loads and stresses within limits and under conditions indicated according to ASCE/SEI 7.

Design supports for multiple pipes, including pipe stands, capable of supporting combined weight of supported systems, system contents, and test water.

2. Design equipment supports capable of supporting combined operating weight of supported equipment and connected systems and components.

Wind-Restraint Loading for Outdoor Equipment and Piping:

- a. Basic Wind Speed: 125 MPH.
- b. Building Classification Category: III.
- c. Minimum 10 lb/sq. ft. multiplied by maximum area of HVAC component projected on vertical plane normal to wind direction, and 45 degrees either side of normal.

- C. Structural Connection Design Criteria

Upper attachments to structure shall have an allowable gravity load of 25% of the failure load (proof test).

Maximum load from hangers attached to the underside of the slabs shall be 250 pounds. If higher loads are required due to space or coordination constraints, submit formal request for interpretation (RFI) to structural design professional of record for review before work commences.

Do not cut any notches or drill or cut any holes on structural members without the expressed approval of the structural design professional of record.

Core openings only in areas indicated on the documents and in additional areas only with the approval of the structural design professional.

Do not attach or suspend any MEP items from metal deck.

Survey location of concrete reinforcement before drilling anchors in reinforced concrete walls, beams, or slabs. Do not cut any reinforcing bars during drilling of anchors unless approved by the structural design professional.

Provide patching of fireproofing removed or accidentally damaged during the attachment of suspended items. Provide documentation that patch shall does not reduce performance of the fireproofing system.

For steel framing, maximum load from hangers attached to steel beams shall be 400 pounds. For the parts that will be fireproofed, if clamps or any other attachments are attached after the fireproofing is in place, enough fireproofing must be removed at the point of contact so that the attachment can be placed with the proper edge distance and develop the required "bite" on the steel. Patch fireproofing after attachment is in place.

## 2.3 STEEL PIPE HANGERS AND SUPPORTS

- A. Description: MSS SP-58, factory-fabricated components. Refer to Part 3 "Hanger and Support Applications" Article for where to use specific hanger and support types.

- B. Manufacturers:

B-Line Systems, Inc.; a division of Cooper Industries,

Carpenter & Paterson, Inc.,  
Empire Industries, Inc.,  
ERICO/Michigan Hanger Co.,  
Globe Pipe Hanger Products, Inc.,  
Grinnell Corp.,  
National Pipe Hanger Corporation,  
PHD Manufacturing, Inc.,  
PHS Industries, Inc.,  
Piping Technology & Products, Inc.,  
Or approved equal

- C. Hanger Rods: For non-aquatic environments, continuous-thread rod, nuts, and washer made of carbon steel, stainless steel or copper-plated steel washers compatible with hangers and supports. For aquatic environments, continuous-thread rod, nuts, and washer made of carbon steel with non-corrosive coating or continuous-thread rod, nuts, and washer made of Fiberglass (FRP) or Aluminum.

- D. Carbon Steel (for non-aquatic environments only), Stainless Steel, and Copper Pipe or Tube Hangers and Supports:

Select material to match piping being supported.

For carbon steel piping hangers in non-aquatic spaces provide one of the following:

- a. Galvanized, Metallic Coatings: Pre-galvanized, hot dipped or electro-galvanized.
- b. Nonmetallic Coatings: Plastic coating or epoxy powder coated.

- E. Padded Hangers: Hanger with fiberglass or other pipe insulation pad or cushion for support of bearing surface of piping.

## 2.4 TRAPEZE PIPE HANGERS

- A. Description: MSS SP-58, Type 59, shop- or field-fabricated pipe-support assembly made from structural-steel shapes with MSS SP-58 hanger rods, nuts, saddles, and hanger types specified.

## 2.5 METAL FRAMING SYSTEMS

- A. Description: Shop- or field-fabricated, pipe-support assembly made of steel channels, accessories, fittings, and other components for supporting multiple parallel pipes including cross bracing to support piping weight and resist wind loads. Provide G90 galvanized coated supports for outdoor locations.
- B. Standard: Comply with MFMA-4 factory-fabricated components for field assembly.
- C. Channels: For non-aquatic environments, continuous slotted carbon-steel, Type 304 stainless-steel or extruded-aluminum channel with in-turned lips. For aquatic environments, extruded aluminum channel with in-turned lips.
- D. Channel Width: Selected for applicable load criteria.

- E. Channel Nuts: Formed or stamped nuts or other devices designed to fit into channel slot and, when tightened, prevent slipping along channel.
- F. Hanger Rods: In non-aquatic environments, continuous-thread rod, nuts, and washer made of carbon steel or stainless-steel matching hanger material. In aquatic environments, continuous-thread rod, nuts, and washer made of Fiberglass (FRP) or aluminum.
- G. Manufacturers:
  - B-Line; an Eaton Business,
  - ERICO/Michigan Hanger Co.; ERISTRUT Div,
  - Flex-Strut, Inc.,
  - G-Strut,
  - GS Metals Corp.,
  - Haydon Corporation,
  - MIRO Industries,
  - Power-Strut Div.; Tyco International, Ltd.,
  - Thomas & Betts Corporation,
  - Unistrut Corp.; Tyco International, Ltd.,
  - Or approved equal
- H. Coatings: Manufacturer's standard finish, unless bare metal surfaces are indicated.
- I. Non-metallic Coatings: Plastic coating, jacket, or liner.

## 2.6 THERMAL-HANGER SHIELD INSERTS

- A. Description: 100-psig- minimum, compressive-strength insulation insert encased in sheet metal shield. Insert shall be capable of supporting weight of pipe, insulations and fluid without crushing.
- B. Manufacturers:
  - Carpenter & Paterson, Inc.,
  - ERICO/Michigan Hanger Co.,
  - PHS Industries, Inc.,
  - Pipe Shields, Inc.,
  - Rilco Manufacturing Company, Inc.,
  - Value Engineered Products, Inc.,
  - Or approved equal
- C. Insulation-Insert Material for Cold Piping: Water-repellent treated, ASTM C 533, Type I calcium silicate or ASTM C 552, Type II cellular glass with vapor barrier.
- D. Insulation-Insert Material for Hot Piping: Water-repellent treated, ASTM C 533, Type I calcium silicate or ASTM C 552, Type II cellular glass.
- E. For Trapeze or Clamped Systems: Insert and shield shall cover entire circumference of pipe.

- F. For Clevis or Band Hangers: Insert and shield shall cover lower 180 degrees of pipe.
- G. Insert Length: Extend 2 inches beyond sheet metal shield for piping operating below ambient air temperature.

## 2.7 FASTENER SYSTEMS

- A. Mechanical-Expansion Anchors: Insert-wedge-type zinc-coated or stainless steel, for use in hardened Portland cement concrete with pull-out, tension, and shear capacities meeting supported loads and suitable for use with building materials.

Manufacturers:

- a. B-Line Systems, Inc.; a division of Cooper Industries,
- b. Empire Industries, Inc.,
- c. Hilti, Inc.,
- d. ITW Ramset/Red Head,
- e. MKT Fastening, LLC,
- f. Powers Fasteners,
- g. Or approved equal

## 2.8 PIPE STAND FABRICATION

- A. Pipe Stands, General: Shop or field-fabricated assemblies made of manufactured corrosion-resistant components to support roof-mounted piping.
- B. Compact Pipe Stand: One-piece plastic unit with integral-rod-roller, pipe clamps, or V-shaped cradle to support pipe, for roof installation without membrane penetration.

Available Manufacturers:

- a. ERICO/Michigan Hanger Co.,
- b. MIRO Industries,
- c. Or approved equal

Base: Single, vulcanized rubber, molded polypropylene, or polycarbonate.

Hardware: Galvanized steel or polycarbonate.

Accessories: Protection pads.

- C. Low-Type, Single-Pipe Stand: One-piece stainless-steel base unit with plastic roller, for roof installation without membrane penetration.

Available Manufacturers:

- a. MIRO Industries,
- b. Or approved equal

Base: Single, vulcanized rubber, molded polypropylene, or polycarbonate.

Vertical Members: Two stainless-steel, continuous-thread 1/2-inch (12-mm) rods.

Horizontal Member: Adjustable horizontal, stainless-steel pipe support channels.

Pipe Supports: Galvanized-steel, Roller or Clevis hanger.

Hardware: Stainless steel.

Accessories: Protection pads.

Height: 12 inches (300 mm) above roof unless indicated otherwise.

- D. High-Type, Single-Pipe Stand: Assembly of base, vertical and horizontal members, and pipe support, for roof installation without membrane penetration.

Available Manufacturers:

- a. ERICO/Michigan Hanger Co.,
- b. MIRO Industries,
- c. Portable Pipe Hangers,
- d. Or approved equal

Base: Stainless steel.

Vertical Members: Two or more cadmium-plated-steel or stainless-steel, continuous-thread rods.

Horizontal Member: Cadmium-plated-steel or stainless-steel rod with plastic or stainless-steel, roller-type pipe support.

Pipe Supports: Galvanized-steel, roller or clevis hanger.

Hardware: Stainless steel.

- E. High-Type, Multiple-Pipe Stand: Assembly of bases, vertical and horizontal members, and pipe supports, for roof installation without membrane penetration.

Available Manufacturers:

- a. Portable Pipe Hangers,
- b. Or approved equal

Bases: One or more vulcanized rubber or molded polypropylene.

Vertical Members: Two or more protective-coated-steel channels.

Horizontal Member: Protective-coated-steel channel.

Pipe Supports: Galvanized-steel, roller or clevis hanger.

- F. Curb-Mounting-Type Pipe Stands: Shop- or field-fabricated pipe support made from structural-steel shape, continuous-thread rods, and rollers for mounting on permanent stationary roof curb.

## 2.9 EQUIPMENT SUPPORTS

- A. Description: Welded, shop- or field-fabricated equipment support made from structural carbon-steel shapes.

## 2.10 MISCELLANEOUS MATERIALS

- A. Carbon Steel: ASTM A1011/A1011M.
- B. Structural Steel: ASTM A 36/A 36M, steel plates, shapes, and bars; black and galvanized.

- C. Stainless Steel: ASTM A240/A240M.
- D. Stainless Steel: ASTM A240/A240M.
- E. Threaded Rods: Continuously threaded. Zinc-plated or (hot-dipped for aquatic environments) galvanized steel for indoor applications and stainless steel for outdoor applications. Mating nuts and washers of similar materials as rods.
- F. Grout: ASTM C 1107, factory-mixed and -packaged, dry, hydraulic-cement, non-shrink and nonmetallic grout; suitable for interior and exterior applications.  
Properties: Non-staining, noncorrosive, and nongaseous.  
Design Mix: 5000-psi, 28-day compressive strength.

### **PART 3 - EXECUTION**

#### **3.1 APPLICATION**

- A. Comply with requirements in Division 07 for fire-stopping materials and installation for penetrations through fire-rated walls, ceilings, and assemblies.
- B. Strength of Support Assemblies: Select sizes of components so strength will be adequate to carry present and future static loads within specified loading limits. Minimum static design load used for strength determination shall be weight of supported components plus 200 lb (90 kg).
- C. Examine areas and equipment to receive wind-control devices for compliance with requirements for installation tolerances and other conditions affecting performance of the Work.
- D. Examine roughing-in of reinforcement and cast-in-place anchors to verify actual locations before installation.
- E. Proceed with installation only after unsatisfactory conditions have been corrected.

#### **3.2 HANGER AND SUPPORT SCHEDULE**

- A. Specific hanger and support requirements are specified in other Division 23 Sections specifying piping systems and equipment.
- B. Comply with MSS SP-58 for pipe hanger selections and applications that are not specified in piping system Sections.
- C. Use hangers and supports with galvanized, metallic coatings for piping and equipment that will not have field-applied finish.
- D. Use nonmetallic coatings on attachments for electrolytic protection where attachments are in direct contact with copper tubing.
- E. Use carbon-steel pipe hangers and supports, metal trapeze pipe hangers and metal framing systems and attachments for general service applications in non-aquatic environments.
- F. Use Type 316 stainless-steel pipe hangers and stainless-steel corrosion-resistant attachments for hostile environment applications, including aquatic environments.
- G. Use copper-plated pipe hangers and copper or stainless-steel attachments for copper piping and tubing.
- H. Use padded hangers for piping that is subject to scratching.

- I. Use thermal-hanger shield inserts for insulated piping and tubing.
- J. Horizontal-Piping Hangers and Supports: Unless otherwise indicated and except as specified in piping system Sections, provide and space hangers in accordance with the following table:

Nom. Pipe Size (inches)	Max. Span (feet)	Min. Rod Size (inches)	Hanger Type
0.75 and Smaller	5	0.375	Clevis Hanger
1	6	0.375	Clevis Hanger
1.25	7	0.375	Clevis Hanger
1.5	8	0.375	Clevis Hanger
2	8	0.375	Clevis Hanger
2.5	11	0.5	Clevis Hanger
3	12	0.5	Clevis Hanger
4	12	0.625	1 Rod Roller Type Hangers
5	12	0.625	1 Rod Roller Type Hangers
6	12	0.75	1 Rod Roller Type Hangers
8 – 12	12	0.75 (two)	2 Rod Roller Type Hangers
14 – 18	12	0.875 (two)	2 Rod Roller Type Hangers
20	12	1.25 (two)	2 Rod Roller Type Hangers
24	12	1.25 (two)	2 Rod Roller Type Hangers
Vertical Piping	15		
Note: This Table is based on the 2018 IMC and 2018 MSS SP-58 Standards using acceptable spacing for copper tubing (up to 2 inch) and steel pipe (2.5 inch and larger IPS). For FRP fiberglass hangers, consult manufacturer for weight limitations.			

Adjustable, Steel Clevis Hangers (MSS Type 1): For suspension of non-insulated or insulated stationary pipes.

Pipe Saddle Supports (MSS Type 36): For support of pipes, NPS 4 to NPS 36, with steel pipe base stanchion support and cast-iron floor flange.

Adjustable, Pipe Saddle Supports (MSS Type 38): For stanchion-type support for pipes, NPS 2-1/2 to NPS 36, if vertical adjustment is required, with steel pipe base stanchion support and cast-iron floor flange.

Single Pipe Rolls (MSS Type 41): For suspension of pipes, NPS 1 to NPS 30, from 2 rods if longitudinal movement caused by expansion and contraction might occur.

Adjustable Roller Hangers (MSS Type 43): For suspension of pipes, NPS 2-1/2 to NPS 20, from single rod if horizontal movement caused by expansion and contraction might occur.

Complete Pipe Rolls (MSS Type 44): For support of pipes, NPS 2 to NPS 42, if longitudinal movement caused by expansion and contraction might occur but vertical adjustment is not necessary.

Pipe Roll and Plate Units (MSS Type 45): For support of pipes, NPS 2 to NPS 24, if small horizontal movement caused by expansion and contraction might occur and vertical adjustment is not necessary.

Adjustable Pipe Roll and Base Units (MSS Type 46): For support of pipes, NPS 2 to NPS 30, if vertical and lateral adjustment during installation might be required in addition to expansion and contraction.

- K. Vertical-Piping Clamps: Unless otherwise indicated and except as specified in piping system Sections, install the following types:

Extension Pipe or Riser Clamps (MSS Type 8): For support of pipe risers, NPS 3/4 to NPS 20.

Carbon- or Alloy-Steel Riser Clamps (MSS Type 42): For support of pipe risers, NPS 3/4 to NPS 20, if longer ends are required for riser clamps.

- L. Hanger-Rod Attachments: Unless otherwise indicated and except as specified in piping system Sections, install the following types:

Steel Turnbuckles (MSS Type 13): For adjustment up to 6 inches for heavy loads.

Steel Clevises (MSS Type 14): For 120 to 450 deg F piping installations.

Malleable-Iron Sockets (MSS Type 16): For attaching hanger rods to various types of building attachments.

Steel Weldless Eye Nuts (MSS Type 17): For 120 to 450 deg F piping installations.

- M. Building Attachments: Unless otherwise indicated and except as specified in piping system Sections, install the following types:

Steel or Malleable Concrete Inserts (MSS Type 18): For upper attachment to suspend pipe hangers from concrete ceiling.

Top-Beam C-Clamps (MSS Type 19): For use under roof installations to attach to top flange of structural shape excluding bar-joist construction.

Center-Beam Clamps (MSS Type 21): For attaching to center of bottom flange of beams.

Welded Beam Attachments (MSS Type 22): For attaching to bottom of beams if loads are considerable and rod sizes are large.

C-Clamps (MSS Type 23): For structural shapes excluding bar-joist construction.

Top-Beam Clamps (MSS Type 25): For top of beams if hanger rod is required tangent to flange edge.

Side-Beam Clamps (MSS Type 27): For bottom of steel I-beams.

Steel-Beam Clamps with Eye Nuts (MSS Type 28): For attaching to bottom of steel I-beams for heavy loads.

Linked-Steel Clamps with Eye Nuts (MSS Type 29): For attaching to bottom of steel I-beams for heavy loads, with link extensions.

Malleable Beam Clamps with Extension Pieces (MSS Type 30): For attaching to structural steel.

Welded-Steel Brackets: For support of pipes from below, or for suspending from above by using clip and rod. Use one of the following for indicated loads:

- a. Light (MSS Type 31): 750 lb.
- b. Medium (MSS Type 32): 1500 lb.
- c. Heavy (MSS Type 33): 3000 lb.

- Side-Beam Brackets (MSS Type 34): For sides of steel or wooden beams.
- Plate Lugs (MSS Type 57): For attaching to steel beams if flexibility at beam is required.
- Horizontal Travelers (MSS Type 58): For supporting piping systems subject to linear horizontal movement where headroom is limited.
- N. Saddles and Shields: Unless otherwise indicated and except as specified in piping system Sections, install the following types:
- Steel Pipe-Covering Protection Saddles (MSS Type 39): To fill interior voids with insulation that matches adjoining insulation.
- Protection Shields (MSS Type 40): Of length recommended in writing by manufacturer to prevent crushing insulation.
- Thermal-Hanger Shield Inserts: For supporting insulated pipe.
- O. Spring Hangers and Supports: Unless otherwise indicated and except as specified in piping system Sections, install the following types:
- Restraint-Control Devices (MSS Type 47): Where indicated to control piping movement.
- Spring Cushions (MSS Type 48): For light loads if vertical movement does not exceed 1-1/4 inches.
- Spring-Cushion Roll Hangers (MSS Type 49): For equipping Type 41 roll hanger with springs.
- Spring Sway Braces (MSS Type 50): To retard sway, shock, vibration, or thermal expansion in piping systems.
- Variable-Spring Hangers (MSS Type 51): Preset to indicated load and limit variability factor to 25 percent to absorb expansion and contraction of piping system from hanger.
- Variable-Spring Base Supports (MSS Type 52): Preset to indicated load and limit variability factor to 25 percent to absorb expansion and contraction of piping system from base support.
- Variable-Spring Trapeze Hangers (MSS Type 53): Preset to indicated load and limit variability factor to 25 percent to absorb expansion and contraction of piping system from trapeze support.
- Constant Supports: For critical piping stress and if necessary to avoid transfer of stress from one support to another support, critical terminal, or connected equipment. Include auxiliary stops for erection, hydrostatic test, and load-adjustment capability. These supports include the following types:
- Horizontal (MSS Type 54): Mounted horizontally.
  - Vertical (MSS Type 55): Mounted vertically.
  - Trapeze (MSS Type 56): Two vertical-type supports and one trapeze member.
- P. Comply with MSS SP-58 for trapeze pipe hanger selections and applications that are not specified in piping system Sections.
- Q. Comply with MFMA-103 for metal framing system selections and applications that are not specified in piping system Sections.
- R. Use mechanical-expansion anchors instead of building attachments where required in concrete construction.

### 3.3 HANGER AND SUPPORT INSTALLATION

- A. Comply with MSS SP-58. Install hangers, supports, clamps, and attachments to properly support piping from building structure.

- B. Pipe hangers:

Metal Pipe-Hanger Installation: Comply with MSS SP-58. Install hangers, supports, clamps, and attachments as required to properly support piping from the building structure.

Metal Trapeze Pipe-Hanger Installation: Comply with MSS SP-58. Arrange for grouping of parallel runs of horizontal piping, and support together on field-fabricated trapeze pipe hangers.

- a. Pipes of Various Sizes: Support together and space trapezes for smallest pipe size or install intermediate supports for smaller diameter pipes as specified for individual pipe hangers.
- b. Field fabricate from ASTM A36/A36M, carbon-steel shapes selected for loads being supported. Weld steel according to AWS D1.1/D1.1M.

Metal Framing Pipe Hanger System Installation: Arrange for grouping of parallel runs of piping, and support together on field-assembled strut systems.

Comply with MSS SP-58 for pipe hanger selections and applications that are not specified in piping system Sections.

Do not exceed pipe stress limits according to ASME B31.1 for power piping and ASME B31.9 for building services piping.

- C. Insulated piping installation: Install shield in pipe hanger for insulated piping.

Attach clamps and spacers to piping.

- a. Piping Operating above Ambient Air Temperature: Clamp may project through insulation.
- b. Piping Operating below Ambient Air Temperature: Use thermal-hanger shield insert with clamp sized to match OD of insert.

Install MSS SP-58, Type 39, protection saddles if insulation without vapor barrier is indicated. Fill interior voids with insulation that matches adjoining insulation.

- a. Option: Thermal-hanger shield inserts may be used. Include steel weight-distribution plate for pipe NPS 4 (DN 100) and larger if pipe is installed on rollers.

Install MSS SP-58, Type 40, protective shields on cold piping with vapor barrier. Shields shall span an arc of 180 degrees.

- a. Option: Thermal-hanger shield inserts may be used. Include steel weight-distribution plate for pipe NPS 4 (DN 100) and larger if pipe is installed on rollers.

Shield Dimensions for Pipe: Not less than the following:

- a. NPS 1/4 to NPS 3-1/2 (DN 8 to DN 90): 12 inches (305 mm) long and 0.048 inch (1.22 mm) thick.
- b. NPS 4 (DN 100): 12 inches (305 mm) long and 0.06 inch (1.52 mm) thick.
- c. NPS 5 and NPS 6 (DN 125 and DN 150): 18 inches (457 mm) long and 0.06 inch (1.52 mm) thick.

- d. NPS 8 to NPS 14 (DN 200 to DN 350): 24 inches (610 mm) long and 0.075 inch (1.91 mm) thick.
- e. NPS 16 to NPS 24 (DN 400 to DN 600): 24 inches (610 mm) long and 0.105 inch (2.67 mm) thick.

Pipes NPS 8 (DN 200) and Larger: Include wood or reinforced calcium-silicate-insulation inserts of length at least as long as protective shield.

Thermal-Hanger Shields: Install with insulation same thickness as piping insulation.

- D. Fastener System Installation: Install mechanical-expansion anchors in concrete after concrete is placed and completely cured. Install fasteners according to manufacturer's written instructions.
- E. Pipe Stand Installation:  

Pipe Stand Types except Curb-Mounted Type: Assemble components and mount on smooth roof surface. Do not penetrate roof membrane.

Curb-Mounted-Type Pipe Stands: Assemble components or fabricate pipe stand and mount on permanent, stationary roof curb. See Section 077200 "Roof Accessories" for curbs.
- F. Install hangers and supports complete with necessary attachments, inserts, bolts, rods, nuts, washers, and other accessories.
- G. Equipment Support Installation: Fabricate from welded-structural-steel shapes.
- H. Install hangers and supports to allow controlled thermal and seismic movement of piping systems, to permit freedom of movement between pipe anchors, and to facilitate action of expansion joints, expansion loops, expansion bends, and similar units.
- I. Install lateral bracing with pipe hangers and supports to prevent swaying.
- J. Install building attachments within concrete slabs or attach to structural steel. Install additional attachments at concentrated loads, including valves, flanges, and strainers, NPS 2-1/2 and larger and at changes in direction of piping. Install concrete inserts before concrete is placed; fasten inserts to forms and install reinforcing bars through openings at top of inserts. Where attachments to structure may eccentrically place weight on the bottom web of structural steel beams, alternate hangers to minimize bending moment (e.g. support supply pipe from one side of bottom flange and return pipe on other side) or provide alternate clamps that symmetrically load structural member.  

For bar joist construction, do not eccentrically load bar-joist members. Support piping from supplemental steel pipe or unistrut members spanning a minimum of two joists, attached at panel points only unless specifically approved otherwise by the joist manufacturer installation instructions. Connect supplemental supports to bar-joist in accordance with joist manufacturer installation instructions. All supports shall concentrically load bar-joist.
- K. Load Distribution: Install hangers and supports so that piping live and dead loads and stresses from movement will not be transmitted to connected equipment.
- L. Pipe Slopes: Install hangers and supports to provide indicated pipe slopes and to not exceed maximum pipe deflections allowed by ASME B31.9 for building services piping.

### 3.4 EQUIPMENT SUPPORTS

- A. Equipment Support Installation: Fabricate from welded-structural-steel shapes to suspend equipment from structure overhead or to support equipment above floor.

- B. Grouting: Place grout under supports for equipment and make bearing surface smooth.
- C. Provide lateral bracing, to prevent swaying, for equipment supports.

### 3.5 METAL FABRICATIONS

- A. Cut, drill, and fit miscellaneous metal fabrications for trapeze pipe hangers and equipment supports.
- B. Fit exposed connections together to form hairline joints. Field weld connections that cannot be shop welded because of shipping size limitations.
- C. Field Welding: Comply with AWS D1.1/D1.1M procedures for shielded, metal arc welding; appearance and quality of welds; and methods used in correcting welding work; and with the following:

Use materials and methods that minimize distortion and develop strength and corrosion resistance of base metals.

Obtain fusion without undercut or overlap.

Remove welding flux immediately.

Finish welds at exposed connections so no roughness shows after finishing and so contours of welded surfaces match adjacent contours.

### 3.6 ADJUSTING

- A. Hanger Adjustments: Adjust hangers to distribute loads equally on attachments and to achieve indicated slope of pipe.
- B. Trim excess length of continuous-thread hanger and support rods to 1-1/2 inches (40 mm).

### 3.7 PAINTING

- A. Clean field welds and abraded areas of shop paint. Paint exposed areas immediately after erecting hangers and supports. Use same materials as used for shop painting. Comply with SSPC-PA 1 requirements for touching up field-painted surfaces.  
Apply paint by brush or spray to provide a minimum dry film thickness of 2.0 mils (0.05 mm).
- B. Galvanized Surfaces: Clean welds, bolted connections, and abraded areas and apply galvanizing-repair paint to comply with ASTM A780/A780M.

## SECTION 230533 - HEAT TRACING FOR HVAC PIPING

### PART 1 - GENERAL

#### 1.1 RELATED DOCUMENTS

- A. Certain requirements common to all the mechanical and electrical trades (Fire Suppression, Plumbing, HVAC, Electrical, and Tele/Data) are specified in Division 20. To avoid repetition, they are not repeated in each relevant Division and Section. However, these requirements are applicable to the work of this Section and are hereby incorporated by reference.
- B. Drawings and general provisions of the Contract, including General and Supplementary Conditions and Division 01 Specification Sections, apply to this Section.

#### 1.2 SUMMARY

- A. Section includes heat tracing for HVAC piping with the following electric heating cables:
  - 1. Self-regulating, parallel resistance.

#### 1.3 ACTION SUBMITTALS

- A. Product Data: For each type of product.
  - 1. Include rated capacities, operating characteristics, and furnished specialties and accessories.
  - 2. Schedule heating capacity, length of cable, spacing, and electrical power requirement for each electric heating cable required.
- B. Shop Drawings: For electric heating cable.
  - 1. Include plans, elevations, sections, and attachment details.
  - 2. Include diagrams for power, signal, and control wiring.

#### 1.4 INFORMATIONAL SUBMITTALS

- A. Field quality-control reports.
- B. Sample Warranty: For special warranty.

#### 1.5 CLOSEOUT SUBMITTALS

- A. Operation and Maintenance Data: For electric heating cables to include in operation and maintenance manuals.

#### 1.6 WARRANTY

- A. Special Warranty: Manufacturer agrees to repair or replace electric heating cable that fails in materials or workmanship within specified warranty period.
  - 1. Warranty Period: Three years from date of Substantial Completion.

## PART 2 - PRODUCTS

### 2.1 SELF-REGULATING, PARALLEL-RESISTANCE HEATING CABLES

- A. Manufacturers: Subject to compliance with requirements, available manufacturers offering products that may be incorporated into the Work include the following, or approved equal:
  - 1. BriskHeat,
  - 2. Chromalox,
  - 3. Delta-Therm Corporation,
  - 4. Easy Heat; a division of EGS Electrical Group LLC,
  - 5. Pyrotenax; a brand of Tyco Thermal Controls LLC,
  - 6. Raychem; a brand of Tyco Thermal Controls LLC,
  - 7. Thermon Americas Inc.,
  - 8. Trasor Corp.,
  - 9. Or approved equal.
- B. Comply with IEEE 515.1.
- C. Heating Element: Pair of parallel No. 16 AWG, tinned, stranded copper bus wires embedded in crosslinked conductive polymer core, which varies heat output in response to temperature along its length. Terminate with waterproof, factory-assembled, nonheating leads with connectors at one end, and seal the opposite end watertight. Cable shall be capable of crossing over itself once without overheating.
- D. Electrical Insulating Jacket: Flame-retardant polyolefin.
- E. Cable Cover: Tinned-copper braid.
- F. Maximum Operating Temperature (Power On): 150 deg F.
- G. Maximum Exposure Temperature (Power Off): 185 deg F.
- H. Electrical Components, Devices, and Accessories: Listed and labeled as defined in NFPA 70, by a qualified testing agency, and marked for intended location and application.
- I. Capacities and Characteristics:
  - 1. Maximum Heat Output: 5 W/ft..
  - 2. Piping Diameter: 3 in.
  - 3. Electrical Characteristics for Single-Circuit Connection:
    - a. Volts: 120.
    - b. Phase: 1.
    - c. Hertz: 60.
    - d. Full-Load Amperes: 16.
    - e. Minimum Circuit Ampacity: 20.
    - f. Maximum Overcurrent Protection: 20.

## 2.2 CONTROLS

- A. Remote bulb unit with adjustable temperature range from 30 to 50 deg F.
- B. Snap action; open-on-rise, single-pole switch with minimum current rating adequate for connected cable.
- C. Remote bulb on capillary, resistance temperature device, or thermistor for directly sensing pipe-wall temperature.
- D. Corrosion-resistant, waterproof control enclosure.

## 2.3 ACCESSORIES

- A. Cable Installation Accessories: Fiberglass tape, heat-conductive putty, cable ties, silicone end seals and splice kits, and installation clips all furnished by manufacturer, or as recommended in writing by manufacturer.
- B. Warning Labels: Refer to Division 23 for identification of HVAC piping and equipment.
- C. Warning Tape: Continuously printed "Electrical Tracing"; vinyl, at least 3 mils thick, and with pressure-sensitive, permanent, waterproof, self-adhesive back.
  - 1. Width for Markers on Pipes with OD, Including Insulation, Less Than 6 Inches: 3/4 inch minimum.
  - 2. Width for Markers on Pipes with OD, Including Insulation, 6 Inches or Larger: 1-1/2 inches minimum.

## PART 3 - EXECUTION

### 3.1 EXAMINATION

- A. Examine surfaces and substrates to receive electric heating cables for compliance with requirements for installation tolerances and other conditions affecting performance.
  - 1. Ensure surfaces and pipes in contact with electric heating cables are free of burrs and sharp protrusions.
- B. Proceed with installation only after unsatisfactory conditions have been corrected.

### 3.2 INSTALLATION

- A. Install electric heating cable across expansion joints according to manufacturer's written instructions; use slack cable to allow movement without damage to cable.
- B. Install electric heating cables after piping has been tested and before insulation is installed.
- C. Install electric heating cables according to IEEE 515.1.
- D. Install insulation over piping with electric cables according to Division 23 for HVAC piping insulation.
- E. Install warning tape on piping insulation where piping is equipped with electric heating cables.
- F. Set field-adjustable switches and circuit-breaker trip ranges.

### 3.3 CONNECTIONS

- A. Ground equipment according to Division 26 for grounding and bonding for electrical systems.
- B. Connect wiring according to Division 26 for low-voltage electrical power conductors and cables.

### 3.4 FIELD QUALITY CONTROL

- A. Perform the following tests and inspections with the assistance of a factory-authorized service representative:
  - 1. Perform tests after cable installation but before application of coverings such as insulation, wall or ceiling construction, or concrete.
  - 2. Test cables for electrical continuity and insulation integrity before energizing.
  - 3. Test cables to verify rating and power input. Energize and measure voltage and current simultaneously.
- B. Repeat tests for continuity, insulation resistance, and input power after applying thermal insulation on pipe-mounted cables.
- C. Cables will be considered defective if they do not pass tests and inspections.
- D. Prepare test and inspection reports.

### 3.5 PROTECTION

- A. Protect installed heating cables, including nonheating leads, from damage during construction.
- B. Remove and replace damaged heat-tracing cables.

END OF SECTION

H:\Y0586.00\DOC\SPEC\2025\_02-20\_IFB\230533\_HEAT TRACING FOR HVAC PIPING.DOC

## SECTION 230548 - VIBRATION CONTROLS FOR HVAC

### PART 1 - GENERAL

#### 1.1 RELATED DOCUMENTS

- A. Certain requirements common to all the mechanical and electrical trades (Fire Suppression, Plumbing, HVAC, Electrical, and Tele/Data) are specified in Division 20. To avoid repetition, they are not repeated in each relevant Division and Section. However, these requirements are applicable to the work of this Section and are hereby incorporated by reference.
- B. Drawings and general provisions of the Contract, including General and Supplementary Conditions and Division 01 Specification Sections, apply to this Section.

#### 1.2 SUMMARY

##### A. Section Includes

- 1. Vibration Isolation Devices:
  - a. Elastomeric isolation pads.
  - b. Elastomeric isolation mounts.
  - c. Restrained elastomeric isolation mounts.
  - d. Open-spring isolators.
  - e. Restrained-spring isolators.
  - f. Pipe-riser resilient supports.
  - g. Resilient pipe guides.
  - h. Elastomeric hangers.
  - i. Spring hangers.
  - j. Vibration isolation equipment bases.
  - k. Restrained isolation roof-curb rails.

##### B. Related Requirements:

- 1. Division 21 for vibration isolation for fire-suppression equipment and systems.
- 2. Division 22 for vibration isolation for plumbing equipment and systems.

#### 1.3 ACTION SUBMITTALS

##### A. Product Data: For each type of product.

- 1. Include rated load, rated deflection, and overload capacity for each vibration isolation device.
- 2. Illustrate and indicate style, material, strength, fastening provision, and finish for each type and size of vibration isolation device type required.
- 3. Interlocking Snubbers: Include ratings for horizontal, vertical, and combined loads.

**B. Shop Drawings:**

1. Detail fabrication and assembly of equipment bases. Detail fabrication including anchorages and attachments to structure and to supported equipment. Include adjustable motor bases, rails, and frames for equipment mounting.
2. Vibration Isolation Base Details: Detail fabrication including anchorages and attachments to structure and to supported equipment. Include adjustable motor bases, rails, and frames for equipment mounting.

**C. Delegated-Design Submittal:**

1. For each vibration isolation device.
  - a. Include design calculations and details for selecting vibration isolators and vibration isolation bases.
  - b. Design Calculations: Calculate static and dynamic loading due to equipment weight and required to select vibration isolators and for designing vibration isolation bases.
    - 1) Coordinate design calculations with wind load calculations required for equipment mounted outdoors. Comply with requirements in other Sections for equipment mounted outdoors.
  - c. Riser Supports: Include riser diagrams and calculations showing anticipated expansion and contraction at each support point, initial and final loads on building structure and spring deflection changes. Include certification that riser system was examined for excessive stress and that none exists.
2. Wind-Restraint Details:
  - a. Design Analysis: To support selection and arrangement of wind restraints. Include calculations of combined tensile and shear loads.
  - b. Details: Indicate fabrication and arrangement. Detail attachments of restraints to the restrained items and to the structure. Show attachment locations, methods, and spacing. Identify components, list their strengths, and indicate directions and values of forces transmitted to the structure during design wind speed. Indicate association with vibration isolation devices.
  - c. Comply with requirements in other Sections for equipment mounted outdoors.

**1.4 INFORMATIONAL SUBMITTALS**

**A. Coordination Drawings:**

1. Show coordination of vibration isolation device installation for HVAC piping and equipment with other systems and equipment in the vicinity, including other supports and restraints, if any.

**B. Qualification Data: For professional engineer and testing agency.**

**C. Welding certificates.**

**D. Field quality-control reports.**

1.5      QUALITY ASSURANCE

- A.    Testing Agency Qualifications: An independent agency, with the experience and capability to conduct the testing indicated, that is an NRTL as defined by OSHA in 29 CFR 1910.7 and that is acceptable to authorities having jurisdiction.
- B.    Welding Qualifications: Qualify procedures and personnel according to AWS D1.1/D1.1M, "Structural Welding Code - Steel."

PART 2 - PRODUCTS

2.1      PERFORMANCE REQUIREMENTS

- A.    Wind-Restraint Loading:
  - 1.    Basic Wind Speed: 125 MPH.
  - 2.    Building Classification Category: III.
  - 3.    Minimum 10 lb/sq. ft. multiplied by maximum area of HVAC component projected on vertical plane normal to wind direction, and 45 degrees either side of normal.

2.2      ELASTOMERIC ISOLATION PADS

- A.    Elastomeric Isolation Pads:
  - 1.    Manufacturers: Subject to compliance with requirements, provide products by one of the following, or approved equal:
    - a.    Ace Mountings Co., Inc.,
    - b.    California Dynamics Corporation,
    - c.    Isolation Technology, Inc.,
    - d.    Kinetics Noise Control, Inc.,
    - e.    Mason Industries, Inc.,
    - f.    Vibration Eliminator Co., Inc.,
    - g.    Vibration Isolation,
    - h.    Vibration Mountings & Controls, Inc.,
    - i.    Or approved equal.
  - 2.    Fabrication: Single or multiple layers of sufficient durometer stiffness for uniform loading over pad area.
  - 3.    Size: Factory or field cut to match requirements of supported equipment.
  - 4.    Pad Material: Oil and water resistant with elastomeric properties.
  - 5.    Surface Pattern: Smooth, Ribbed or Waffle pattern.
  - 6.    Load-bearing metal plates adhered to pads.
  - 7.    Sandwich-Core Material: Resilient and elastomeric.
    - a.    Surface Pattern: Smooth, Ribbed or Waffle pattern.

## 2.3 ELASTOMERIC ISOLATION MOUNTS

### A. Double-Deflection, Elastomeric Isolation Mounts:

1. Manufacturers: Subject to compliance with requirements, provide products by one of the following, or approved equal:
  - a. Ace Mountings Co., Inc.,
  - b. California Dynamics Corporation,
  - c. Isolation Technology, Inc.,
  - d. Kinetics Noise Control, Inc.,
  - e. Mason Industries, Inc.,
  - f. Vibration Eliminator Co., Inc.,
  - g. Vibration Isolation,
  - h. Vibration Mountings & Controls, Inc.,
  - i. Or approved equal.
2. Mounting Plates:
  - a. Top Plate: Encapsulated steel load transfer top plates, factory drilled and threaded with threaded studs or bolts.
  - b. Baseplate: Encapsulated steel bottom plates with holes provided for anchoring to support structure.
3. Elastomeric Material: Molded, oil-resistant rubber, neoprene, or other elastomeric material.

## 2.4 RESTRAINED ELASTOMERIC ISOLATION MOUNTS

### A. Restrained Elastomeric Isolation Mounts:

1. Manufacturers: Subject to compliance with requirements, provide products by one of the following, or approved equal:
  - a. Ace Mountings Co., Inc.,
  - b. California Dynamics Corporation,
  - c. Isolation Technology, Inc.,
  - d. Kinetics Noise Control, Inc.,
  - e. Mason Industries, Inc.,
  - f. Vibration Eliminator Co., Inc.,
  - g. Vibration Isolation,
  - h. Vibration Mountings & Controls, Inc.,
  - i. Or approved equal.
2. Description: All-directional isolator with seismic restraints containing two separate and opposing elastomeric elements that prevent central threaded element and attachment hardware from contacting the housing during normal operation.

- a. Housing: Cast-ductile iron or welded steel.
- b. Elastomeric Material: Molded, oil-resistant rubber, neoprene, or other elastomeric material.

## 2.5 OPEN-SPRING ISOLATORS

### A. Freestanding, Laterally Stable, Open-Spring Isolators:

- 1. Manufacturers: Subject to compliance with requirements, provide products by one of the following, or approved equal:
  - a. Ace Mountings Co., Inc.,
  - b. California Dynamics Corporation,
  - c. Isolation Technology, Inc.,
  - d. Kinetics Noise Control, Inc.,
  - e. Mason Industries, Inc.,
  - f. Vibration Eliminator Co., Inc.,
  - g. Vibration Isolation,
  - h. Vibration Mountings & Controls, Inc.,
  - i. Or approved equal.
- 2. Outside Spring Diameter: Not less than 80 percent of the compressed height of the spring at rated load.
- 3. Minimum Additional Travel: 50 percent of the required deflection at rated load.
- 4. Lateral Stiffness: More than 80 percent of rated vertical stiffness.
- 5. Overload Capacity: Support 200 percent of rated load, fully compressed, without deformation or failure.
- 6. Baseplates: Factory-drilled steel plate for bolting to structure with an elastomeric isolator pad attached to the underside. Baseplates shall limit floor load to 500 psig.
- 7. Top Plate and Adjustment Bolt: Threaded top plate with adjustment bolt and cap screw to fasten and level equipment.

## 2.6 RESTRAINED-SPRING ISOLATORS

### A. Freestanding, Laterally Stable, Open-Spring Isolators with Vertical-Limit Stop Restraint:

- 1. Manufacturers: Subject to compliance with requirements, provide products by one of the following, or approved equal:
  - a. Ace Mountings Co., Inc.,
  - b. California Dynamics Corporation,
  - c. Isolation Technology, Inc.,
  - d. Kinetics Noise Control, Inc.,
  - e. Mason Industries, Inc.,

- f. Vibration Eliminator Co., Inc.,
  - g. Vibration Isolation,
  - h. Vibration Mountings & Controls, Inc.,
  - i. Or approved equal.
- 2. Housing: Steel housing with vertical-limit stops to prevent spring extension due to weight being removed.
  - a. Base with holes for bolting to structure with an elastomeric isolator pad attached to the underside. Bases shall limit floor load to 500 psig.
  - b. Top plate with threaded mounting holes and elastomeric pad.
  - c. Internal leveling bolt that acts as blocking during installation.
- 3. Restraint: Limit stop as required for equipment and authorities having jurisdiction.
- 4. Outside Spring Diameter: Not less than 80 percent of the compressed height of the spring at rated load.
- 5. Minimum Additional Travel: 50 percent of the required deflection at rated load.
- 6. Lateral Stiffness: More than 80 percent of rated vertical stiffness.
- 7. Overload Capacity: Support 200 percent of rated load, fully compressed, without deformation or failure.

## 2.7 PIPE-RISER RESILIENT SUPPORT

- A. Description: All-directional, acoustical pipe anchor consisting of two steel tubes separated by a minimum 1/2 inch- thick neoprene.
  - 1. Vertical-Limit Stops: Steel and neoprene vertical-limit stops arranged to prevent vertical travel in both directions.
  - 2. Maximum Load Per Support: 500 psig on isolation material providing equal isolation in all directions.

## 2.8 RESILIENT PIPE GUIDES

- A. Description: Telescopic arrangement of two steel tubes or post and sleeve arrangement separated by a minimum 1/2 inch- thick neoprene.
  - 1. Factory-Set Height Guide with Shear Pin: Shear pin shall be removable and re-insertable to allow for selection of pipe movement. Guides shall be capable of motion to meet location requirements.

## 2.9 ELASTOMERIC HANGERS

- A. Elastomeric Mount in a Steel Frame with Upper and Lower Steel Hanger Rods:
  - 1. Manufacturers: Subject to compliance with requirements, provide products by one of the following, or approved equal:
    - a. Ace Mountings Co., Inc,
    - b. California Dynamics Corporation,

- c. Isolation Technology, Inc.,
  - d. Kinetics Noise Control, Inc.,
  - e. Mason Industries, Inc.,
  - f. Vibration Eliminator Co., Inc.,
  - g. Vibration Mountings & Controls, Inc.,
  - h. Or approved equal.
2. Frame: Steel, fabricated with a connection for an upper threaded hanger rod and an opening on the underside to allow for a maximum of 30 degrees of angular lower hanger-rod misalignment without binding or reducing isolation efficiency.
  3. Dampening Element: Molded, oil-resistant rubber, neoprene, or other elastomeric material with a projecting bushing for the underside opening preventing steel to steel contact.

## 2.10 SPRING HANGERS

- A. Combination Coil-Spring and Elastomeric-Insert Hanger with Spring and Insert in Compression:
  1. Manufacturers: Subject to compliance with requirements, provide products by one of the following, or approved equal:
    - a. Ace Mountings Co., Inc.,
    - b. California Dynamics Corporation,
    - c. Kinetics Noise Control, Inc.,
    - d. Mason Industries, Inc.,
    - e. Vibration Eliminator Co., Inc.,
    - f. Vibration Isolation,
    - g. Vibration Mountings & Controls, Inc.,
    - h. Or approved equal.
  2. Frame: Steel, fabricated for connection to threaded hanger rods and to allow for a maximum of 30 degrees of angular hanger-rod misalignment without binding or reducing isolation efficiency.
  3. Outside Spring Diameter: Not less than 80 percent of the compressed height of the spring at rated load.
  4. Minimum Additional Travel: 50 percent of the required deflection at rated load.
  5. Lateral Stiffness: More than 80 percent of rated vertical stiffness.
  6. Overload Capacity: Support 200 percent of rated load, fully compressed, without deformation or failure.
  7. Elastomeric Element: Molded, oil-resistant rubber or neoprene. Steel-washer-reinforced cup to support spring and bushing projecting through bottom of frame.
  8. Adjustable Vertical Stop: Steel washer with neoprene washer "up-stop" on lower threaded rod.

9. Self-centering hanger-rod cap to ensure concentricity between hanger rod and support spring coil.

## 2.11 VIBRATION ISOLATION EQUIPMENT BASES

- A. Manufacturers: Subject to compliance with requirements, provide products by one of the following, or approved equal:
  1. California Dynamics Corporation,
  2. Kinetics Noise Control,
  3. Mason Industries, Inc.,
  4. Vibration Eliminator Co., Inc.,
  5. Vibration Isolation,
  6. Vibration Mountings & Controls, Inc.,
  7. Or approved equal.
- B. Steel Rails: Factory-fabricated, welded, structural-steel rails.
  1. Design Requirements: Lowest possible mounting height with not less than 1 inch clearance above the floor or structural support. Include equipment anchor bolts and auxiliary motor slide rails.
    - a. Include supports for suction and discharge elbows for pumps.
  2. Structural Steel: Steel shapes, plates, and bars complying with ASTM A 36/A 36M. Rails shall have shape to accommodate supported equipment.
  3. Support Brackets: Factory-welded steel brackets on frame for outrigger isolation mountings and to provide for anchor bolts and equipment support.
  4. For equipment mounted outdoor, structural steel rails and hardware shall be corrosion resistant hot dipped galvanized steel.
- C. Steel Bases: Factory-fabricated, welded, structural-steel bases and rails.
  1. Design Requirements: Lowest possible mounting height with not less than 1 inch clearance above the floor or structural support. Include equipment anchor bolts and auxiliary motor slide bases or rails.
    - a. Include supports for suction and discharge elbows for pumps.
  2. Structural Steel: Steel shapes, plates, and bars complying with ASTM A 36/A 36M. Bases shall have shape to accommodate supported equipment.
  3. Support Brackets: Factory-welded steel brackets on frame for outrigger isolation mountings and to provide for anchor bolts and equipment support.
  4. For equipment mounted outdoor, structural steel rails and hardware shall be corrosion resistant hot dipped galvanized steel.
- D. Concrete Inertia Base: Factory-fabricated or field-fabricated, welded, structural-steel bases and rails ready for placement of cast-in-place concrete.
  1. Design Requirements: Lowest possible mounting height with not less than 1-inch clearance above the floor. Include equipment anchor bolts and auxiliary motor slide bases or rails. Provide base with height saving brackets for connection to isolators. Inertia base

weight (frame + concrete) shall be a minimum of 2 times the total installed equipment weight.

- a. Include supports for suction and discharge elbows for pumps.
2. Structural Steel: Steel shapes, plates, and bars complying with ASTM A 36/A 36M. Bases shall have shape to accommodate supported equipment.
3. Support Brackets: Factory-welded steel brackets on frame for outrigger isolation mountings and to provide for anchor bolts and equipment support.
4. Fabrication: Fabricate steel templates to hold equipment anchor-bolt sleeves and anchors in place during placement of concrete. Obtain anchor-bolt templates from supported equipment manufacturer.

## 2.12 RESTRAINED ISOLATION ROOF-CURB RAILS

- A. Manufacturers: Subject to compliance with requirements, provide products by one of the following, or approved equal:
  1. Ace Mountings Co., Inc.,
  2. California Dynamics Corporation,
  3. Kinetics Noise Control,
  4. Mason Industries, Inc.,
  5. Thybar Corporation,
  6. Or approved equal.
- B. Description: Factory-assembled, fully enclosed, insulated, air- and watertight curb rail designed to resiliently support equipment and to withstand seismic and wind forces.
- C. Upper Frame: The upper frame shall provide continuous support for equipment and shall be captive to resiliently resist seismic and wind forces.
- D. Lower Support Assembly: The lower support assembly shall be formed sheet metal section containing adjustable and removable steel springs that support the upper frame. The lower support assembly shall have a means for attaching to building structure and a wood nailer for attaching roof materials, and shall be insulated with a minimum of 2 inches of rigid, glass-fiber insulation on inside of assembly. Adjustable, restrained-spring isolators shall be mounted on elastomeric vibration isolation pads and shall have access ports, for level adjustment, with removable waterproof covers at all isolator locations. Isolators shall be located so they are accessible for adjustment at any time during the life of the installation without interfering with the integrity of the roof.
- E. Snubber Bushings: All-directional, elastomeric snubber bushings at least 1/4 inch thick.
- F. Water Seal: Galvanized sheet metal with EPDM seals at corners, attached to upper support frame, extending down past wood nailer of lower support assembly, and counter-flashed over roof materials.

## 2.13 THRUST RESTRAINTS

- A. Manufacturers: Subject to compliance with requirements, provide products by one of the following, or approved equal:

1. Ace Mountings Co., Inc.,
  2. California Dynamics Corporation,
  3. Kinetics Noise Control,
  4. Mason Industries, Inc.,
  5. Thybar Corporation,
  6. Or approved equal.
- B. Description: Spring element combined with steel angles, backup plates, threaded rod, washers and nuts to produce a pair of devices capable of limiting movement of air handling equipment to 0.25 inch.
- C. Restraint shall be convertible in the field from compression type to tension type.
- D. Unit shall be pre-compressed.

### **PART 3 - EXECUTION**

#### **3.1 EXAMINATION**

- A. Examine areas and equipment to receive vibration isolation- and wind-control devices for compliance with requirements for installation tolerances and other conditions affecting performance of the Work.
- B. Examine roughing-in of reinforcement and cast-in-place anchors to verify actual locations before installation.
- C. Proceed with installation only after unsatisfactory conditions have been corrected.

#### **3.2 APPLICATIONS**

- A. Multiple Pipe Supports: Secure pipes to trapeze member with clamps approved for application by an agency acceptable to authorities having jurisdiction.

#### **3.3 VIBRATION CONTROL DEVICE INSTALLATION**

- A. Coordinate the location of embedded connection hardware with supported equipment attachment and mounting points and with requirements for concrete reinforcement and formwork specified in Division 03.
- B. Installation of vibration isolators must not cause any change of position of equipment, piping, or ductwork resulting in stresses or misalignment.
- C. Comply with requirements in Division 07 for installation of roof curbs, equipment supports, and roof penetrations.
- D. Piping Restraints:
  1. Comply with requirements in MSS SP-127.
  2. Space lateral supports a maximum of 40 feet on center, and longitudinal supports a maximum of 80 feet on center.
  3. Brace a change of direction longer than 12 feet.

- E. Install cables so they do not bend across edges of adjacent equipment or building structure.
- F. Install seismic-restraint devices using methods approved by an agency acceptable to authorities having jurisdiction that provides required submittals for component.
- G. Install bushing assemblies for anchor bolts for floor-mounted equipment, arranged to provide resilient media between anchor bolt and mounting hole in concrete base.
- H. Install bushing assemblies for mounting bolts for wall-mounted equipment, arranged to provide resilient media where equipment or equipment-mounting channels are attached to wall.
- I. Attachment to Structure: If specific attachment is not indicated, anchor bracing to structure at flanges of beams, at upper truss chords of bar joists, or at concrete members.
- J. Drilled-in Anchors:
  - 1. Identify position of reinforcing steel and other embedded items prior to drilling holes for anchors. Do not damage existing reinforcing or embedded items during coring or drilling. Notify the structural engineer if reinforcing steel or other embedded items are encountered during drilling. Locate and avoid pre-stressed tendons, electrical and telecommunications conduit, and gas lines.
  - 2. Do not drill holes in concrete or masonry until concrete, mortar, or grout has achieved full design strength.
  - 3. Wedge Anchors: Protect threads from damage during anchor installation. Heavy-duty sleeve anchors shall be installed with sleeve fully engaged in the structural element to which anchor is to be fastened.
  - 4. Adhesive Anchors: Clean holes to remove loose material and drilling dust prior to installation of adhesive. Place adhesive in holes proceeding from the bottom of the hole and progressing toward the surface in such a manner as to avoid introduction of air pockets in the adhesive.
  - 5. Set anchors to manufacturer's recommended torque, using a torque wrench.
  - 6. Install zinc-coated steel anchors for interior and stainless-steel anchors for exterior applications.

### 3.4 ADJUSTING

- A. Adjust isolators after piping system is at operating weight.
- B. Adjust limit stops on restrained-spring isolators to mount equipment at normal operating height. After equipment installation is complete, adjust limit stops so they are out of contact during normal operation.

### 3.5 VIBRATION ISOLATION EQUIPMENT BASES INSTALLATION

- A. Coordinate the location of embedded connection hardware with supported equipment attachment and mounting points and with requirements for concrete reinforcement and formwork specified in Division 03.

### 3.6 VIBRATION ISOLATION SCHEDULES

- A. Provide vibration isolators and equipment bases for all rotating, piston driven or vibrating equipment in accordance with the following schedules. Selection of equipment isolators shall be based on approved equipment shop drawings.

B.

Base & Isolator Types				
Base Types			Isolator Types	
A	No base, isolators attached directly to equipment.	1	Elastomeric pad.	
B	Structural steel rails or base.	2	Elastomeric floor mount or hanger. Use restrained elastomeric mount where seismic restraint is required.	
C	Concrete inertia base.	3	Spring floor isolator or hanger.	
D	Curb-mounted base.	4	Restrained spring isolator.	
		5	Thrust restraint.

	50 to 125	All	C	3	0.75	C	3	0.75	C	3	1.5	C	3	2.5	1
	≥150	All	C	3	0.75	C	3	0.75	C	3	2.5	C	3	3.5	1
Notes:															
1. Pumps: Type C bases strength and shape shall accommodate base elbow supports. Concrete bases (type C) shall be designed for a thickness of one-tenth the longest dimension with minimum thickness as follows: (1) for up to 30 hp, 6 in.; (2) for 40 to 75 hp, 8 in.; and (3) for 100 hp and up, 12 in. Pumps over 75 hp and multistage pumps shall be provided with supplemental restraining devices.															

Vibration Isolation - Boilers															
Boiler Type	Horsepower and Other	RPM	Floor Span												Table Notes
			Slab on Grade		Up to 20 ft			20 to 30 ft			30 to 40 ft				
			Base Type	Isolator Type	Min Defl., (in.)	Base Type	Isolator Type	Min Defl., (in.)	Base Type	Isolator Type	Min Defl., (in.)	Base Type	Isolator Type	Min Defl., (in.)	
Fire-tube	All	All	A	1	0.25	B	4	0.75	B	4	1.5	B	4	2.5	1
Notes:															
1. Where equipment manufacturer indicates component cannot be installed directly on individual isolators (type A) provide equipment manufacturer recommended supplemental support (base type).															

Vibration Isolation - Axial Fans, Fan Heads, Cabinet Fans, Fan Sections															
Fan Size	Fan Static Pressure	RPM	Floor Span												Table Notes
			Slab on Grade			Up to 20 ft			20 to 30 ft			30 to 40 ft			
			Base Type	Isolator Type	Min Defl., (in.)	Base Type	Isolator Type	Min Defl., (in.)	Base Type	Isolator Type	Min Defl., (in.)	Base Type	Isolator Type	Min Defl., (in.)	
Up to 22 in. diameter	All	All	A	2	0.25	A	3	0.75	A	3	0.75	C	3	0.75	1,2,3
24 in. diameter & up	≤2 in. SP	Up to 300	B	3	2.5	C	3	3.5	C	3	3.5	C	3	3.5	2,3
		300 to 500	B	3	0.75	B	3	1.5	C	3	2.5	C	3	2.5	2,3

		501 and up	B	3	0.75	B	3	1.5	B	3	1.5	B	3	1.5	2,3
	≥2.1 in. SP	Up to 300	C	3	2.5	C	3	3.5	C	3	3.5	C	3	3.5	2,3
		300 to 500	C	3	1.5	C	3	1.5	C	3	2.5	C	3	2.5	2,3
		501 and up	C	3	0.75	C	3	1.5	C	3	1.5	C	3	2.5	2,3
Notes: 1. Where equipment manufacturer indicates component cannot be installed directly on individual isolators (type A) provide equipment manufacturer recommended supplemental support (base type). 2. Select isolator deflection so that resonance frequency is 40 percent or less of the lowest normal operating speed of equipment. Add a 1 in. thick pad (type 1) to the base plate of spring isolators (type 3). 3. To limit undesirable movement, thrust restraints (type 5) are required for all ceiling-suspended and floor-mounted units operating at 2 in. of water or more total static pressure. 4. Concrete inertia bases (type C) shall be designed for a minimum thickness of one-tenth the longest dimension, minimum 6 inches.															

Vibration Isolation - Centrifugal Fans															
Fan Size	Fan Horse-power	RPM	Floor Span												Table Notes
			Slab on Grade			Up to 20 ft			20 to 30 ft			30 to 40 ft			
			Base Type	Isolator Type	Min Defl., (in.)	Base Type	Isolator Type	Min Defl., (in.)	Base Type	Isolator Type	Min Defl., (in.)	Base Type	Isolator Type	Min Defl., (in.)	
Up to 22 in. diameter	All	All	B	2	0.25	B	3	0.75	B	3	0.75	B	3	1.5	3,4
24 in. diameter & up	≤40	Up to 300	B	3	2.5	B	3	3.5	B	3	3.5	B	3	3.5	2,4
		300 to 500	B	3	1.5	B	3	1.5	B	3	2.5	B	3	2.5	2,4
		501 and up	B	3	0.75	B	3	0.75	B	3	0.75	B	3	1.5	2,4
	≥50	Up to 300	C	3	2.5	C	3	3.5	C	3	3.5	C	3	3.5	1,2,3,4
		300 to 500	C	3	1.5	C	3	1.5	C	3	2.5	C	3	2.5	1,2,3,4
		501 and up	C	3	1.0	C	3	1.5	C	3	1.5	C	3	2.5	1,2,3,4
	<b>Notes:</b> 1. Increase isolator deflection so isolator stiffness is less than one-tenth the stiffness of the supporting structure, as defined by the deflection due to load at the equipment support. 2. Select isolator deflection so that resonance frequency is 40 percent or less of the lowest normal operating speed of equipment. Add a 1 in. thick pad (type 1) to the base plate of spring isolators (type 3). 3. Provide thrust restraints (type 5) for all ceiling-suspended and floor-mounted units operating at 2 in. of water or more total static pressure. 4. Fans and Air-Handling Equipment: For fans operating under 300 rpm, select isolator deflection so the isolator natural frequency is 40 percent or less than the fan speed. Flexible duct connectors shall be installed at the intake and discharge of all fans and air-handling equipment to reduce vibration transmission to air duct structures. Provide inertia bases (type C) for all class 2 and 3 fans and air handling equipment. Concrete inertia bases (type C) shall be designed for a minimum thickness of one-tenth the longest dimension, minimum 6 inches. Provide thrust restraints (type 5) with same deflection as isolators for all fans and all base-mounted and suspended air-handling equipment operating at 2 in. or more total static pressure. Adjust restraint movement under normal operational static pressures.

Notes:															
1. Increase isolator deflection so isolator stiffness is less than one-tenth the stiffness of the supporting structure, as defined by the deflection due to load at the equipment support.															
2. Where equipment manufacturer indicates component cannot be installed directly on individual isolators (type A) provide equipment manufacturer recommended supplemental support (base type).															

### 3.7 PIPING SYSTEM VIBRATION ISOLATION

#### A. Vibration isolators for suspended piping:

1. Provide spring hangers for all piping in equipment rooms and up to 50 ft from vibration-isolated equipment and PRV stations. The first three hangers from the equipment shall be provided with the same deflection as the equipment isolators, with a maximum limitation of 2 in. deflection. Remaining hangers shall be spring or combination spring and elastomeric with 0.75 in. deflection. The first two hangers adjacent to the equipment shall be the positioning or pre-compressed type. Provide positioning hangers for all isolated piping 8 in. and larger. Piping over 2 inches in diameter suspended below or within 50 ft of conference rooms, classrooms and auditorium areas shall be hung with isolation hangers.

#### B. Vibration isolators for floor-supported piping:

1. Provide vibration isolators for floor supports for piping in equipment rooms to isolate equipment. Isolators shall be selected according to the guidelines for hangers. The first two adjacent floor supports shall be the restrained spring type, with a restraint/blocking feature to prevent load transfer to equipment flanges as the piping is filled or drained. Provide a slide plate where pipe is subjected to large thermal movement (PTFE, graphite, or steel) and shall be installed on top of the isolator. Provide a thermal barrier when rubber products are installed directly beneath steam or hot-water lines.

#### C. Vibration isolation for piping riser supports:

1. Provide resilient pipe riser support near to midpoint of riser and provide spring hangers at each floor or structural level to support riser and allow thermal expansion risers.
2. Provide spring hangers for first three hangers connected to branch piping at each level.

## **SECTION 230553 - IDENTIFICATION FOR HVAC PIPING AND EQUIPMENT**

### **PART 1 - GENERAL**

#### **1.1 RELATED DOCUMENTS**

- A. Certain requirements common to all the mechanical and electrical trades (Fire Suppression, Plumbing, HVAC, Electrical, and Tele/Data) are specified in Division 20. To avoid repetition, they are not repeated in each relevant Division and Section. However, these requirements are applicable to the work of this Section and are hereby incorporated by reference.
- B. Drawings and general provisions of the Contract, including General and Supplementary Conditions and Division 01 Specification Sections, apply to this Section.

#### **1.2 SUMMARY**

- A. Section Includes:
  - 1. Equipment labels.
  - 2. Warning signs and labels.
  - 3. Pipe labels.
  - 4. Duct labels.
  - 5. Valve tags.
  - 6. Warning tags.

#### **1.3 ACTION SUBMITTALS**

- A. Product Data: For each type of product indicated.
- B. Samples: For color, letter style, and graphic representation required for each identification material and device.
- C. Equipment Label Schedule: Include a listing of all equipment to be labeled with the proposed content for each label.
- D. Valve numbering scheme.
- E. Valve Schedules: For each piping system to include in maintenance manuals.

#### **1.4 COORDINATION**

- A. Coordinate installation of identifying devices with completion of covering and painting of surfaces where devices are to be applied.
- B. Coordinate installation of identifying devices with locations of access panels and doors.
- C. Install identifying devices before installing acoustical ceilings and similar concealment.

## PART 2 - PRODUCTS

### 2.1 EQUIPMENT LABELS

#### A. Metal Labels for Equipment:

1. Material and Thickness: Brass, 0.032-inch stainless steel, 0.025-inch aluminum, 0.032-inch or anodized aluminum, 0.032-inch minimum thickness, and having predrilled or stamped holes for attachment hardware.
2. Minimum Label Size: Length and width vary for required label content, but not less than 2-1/2 by 3/4 inch.
3. Minimum Letter Size: 1/4 inch for name of units if viewing distance is less than 24 inches, 1/2 inch for viewing distances up to 72 inches, and proportionately larger lettering for greater viewing distances. Include secondary lettering two-thirds to three-fourths the size of principal lettering.
4. Fasteners: Stainless-steel rivets or self-tapping screws.
5. Adhesive: Contact-type permanent adhesive, compatible with label and with substrate.

#### B. Label Content: Include equipment's Drawing designation or unique equipment number, Drawing numbers where equipment is indicated (plans, details, and schedules), plus the Specification Section number and title where equipment is specified.

#### C. Equipment Label Schedule: For each item of equipment to be labeled, on 8-1/2-by-11-inch bond paper. Tabulate equipment identification number and identify Drawing numbers where equipment is indicated (plans, details, and schedules), plus the Specification Section number and title where equipment is specified. Equipment schedule shall be included in operation and maintenance data.

### 2.2 WARNING SIGNS AND LABELS

- A. Material and Thickness: Multilayer, multicolor, plastic labels for mechanical engraving, 1/8 inch thick, and having predrilled holes for attachment hardware.
- B. Letter Color: Black .
- C. Background Color: Yellow.
- D. Maximum Temperature: Able to withstand temperatures up to 160 deg F.
- E. Minimum Label Size: Length and width vary for required label content, but not less than 2-1/2 by 3/4 inch.
- F. Minimum Letter Size: 1/4 inch for name of units if viewing distance is less than 24 inches, 1/2 inch for viewing distances up to 72 inches, and proportionately larger lettering for greater viewing distances. Include secondary lettering two-thirds to three-fourths the size of principal lettering.
- G. Fasteners: Stainless-steel rivets or self-tapping screws.
- H. Adhesive: Contact-type permanent adhesive, compatible with label and with substrate.

- I. Label Content: Include caution and warning information, plus emergency notification instructions.

## 2.3 PIPE LABELS

- A. General Requirements for Manufactured Pipe Labels: Preprinted, color-coded, with lettering indicating service, and showing flow direction.
- B. Pretensioned Pipe Labels: Precoiled, semirigid plastic formed to cover full circumference of pipe and to attach to pipe without fasteners or adhesive.
- C. Self-Adhesive Pipe Labels: Printed plastic with contact-type, permanent-adhesive backing.
- D. Pipe Label Contents: Include identification of piping service using same designations or abbreviations as used on Drawings, pipe size, and an arrow indicating flow direction.
  1. Flow-Direction Arrows: Integral with piping system service lettering to accommodate both directions, or as separate unit on each pipe label to indicate flow direction.
  2. Lettering Size: At least 1-1/2 inches high.

## 2.4 DUCT LABELS

- A. Material and Thickness: Multilayer, multicolor, polyester, vinyl or plastic labels, minimum 5 mil thick.
- B. Maximum Temperature: Able to withstand temperatures up to 160 deg F.
- C. Minimum Label Size: Length and width vary for required label content, but not less than 2-1/2 by 16 inches.
- D. Adhesive: Contact-type permanent adhesive, compatible with label and with substrate.
- E. Duct Label Contents: Include identification of duct service using same designations or abbreviations as used on Drawings, duct size, and an arrow indicating flow direction.
  1. Flow-Direction Arrows: Integral with duct system service lettering to accommodate both directions, or as separate unit on each duct label to indicate flow direction.
  2. Lettering Size: At least 1-1/2 inches high.

## 2.5 VALVE TAGS

- A. Valve Tags: Stamped or engraved with 1/4-inch letters for piping system abbreviation and 1/2-inch numbers.
  1. Tag Material: Brass, 0.032-inch stainless steel, 0.025-inch aluminum, 0.032-inch or anodized aluminum, 0.032-inch minimum thickness, and having predrilled or stamped holes for attachment hardware.
  2. Fasteners: Brass wire-link or beaded chain; or S-hook.
- B. Valve Schedules: For each piping system, on 8-1/2-by-11-inch bond paper. Tabulate valve number, piping system, system abbreviation (as shown on valve tag), location of valve (room or

space), normal-operating position (open, closed, or modulating), and variations for identification. Mark valves for emergency shutoff and similar special uses.

1. Valve-tag schedule shall be included in operation and maintenance data.

## 2.6 WARNING TAGS

- A. Warning Tags: Preprinted or partially preprinted, accident-prevention tags, of plasticized card stock with matte finish suitable for writing.

1. Size: 3 by 5-1/4 inches minimum.
2. Fasteners: Reinforced grommet and wire or string.
3. Nomenclature: Large-size primary caption such as "DANGER," "CAUTION," or "DO NOT OPERATE."
4. Color: Yellow background with black lettering.

## PART 3 - EXECUTION

### 3.1 PREPARATION

- A. Clean piping and equipment surfaces of substances that could impair bond of identification devices, including dirt, oil, grease, release agents, and incompatible primers, paints, and encapsulants.

### 3.2 EQUIPMENT LABEL INSTALLATION

- A. Install or permanently fasten labels on each major item of mechanical equipment.
- B. Locate equipment labels where accessible and visible.

### 3.3 PIPE LABEL INSTALLATION

- A. Piping Color-Coding: Painting of piping is specified in Division 09 "Interior Painting"
- B. Locate pipe labels where piping is exposed or above accessible ceilings in finished spaces; machine rooms; accessible maintenance spaces such as shafts, tunnels, and plenums; and exterior exposed locations as follows:
  1. Near each valve and control device.
  2. Near each branch connection, excluding short takeoffs for fixtures and terminal units. Where flow pattern is not obvious, mark each pipe at branch.
  3. Near penetrations through walls, floors, ceilings, and inaccessible enclosures.
  4. At access doors, manholes, and similar access points that permit view of concealed piping.
  5. Near major equipment items and other points of origination and termination.

6. Spaced at maximum intervals of 50 feet along each run. Reduce intervals to 25 feet in areas of congested piping and equipment.
  7. On piping above removable acoustical ceilings. Omit intermediately spaced labels.
- C. Pipe Label Color Schedule:
1. Chilled-Water Piping:
    - a. Background Color: Blue.
    - b. Letter Color: White.
  2. Condenser-Water Piping:
    - a. Background Color: Light Blue.
    - b. Letter Color: White.
  3. Heating Water Piping:
    - a. Background Color: Red.
    - b. Letter Color: White.
  4. Refrigerant Piping:
    - a. Background Color: White.
    - b. Letter Color: Black.

### 3.4 DUCT LABEL INSTALLATION

- A. Install **self-adhesive** duct labels with permanent adhesive on air ducts in the following color codes:
1. Background and Letter Color:
    - a. Supply Air: Green background, white letters.
    - b. General Exhaust Air: Yellow background, black letters
    - c. Outside Air, Relief, Return Ducts: Blue background, white letters.
    - d. Hazardous Exhaust Air: ASME A13.1 Colors and Designs.
- B. Locate labels near points where ducts enter into concealed spaces and at maximum intervals of 50 feet in each space where ducts are exposed or concealed by removable ceiling system.

### 3.5 VALVE-TAG INSTALLATION

- A. Install tags on valves and control devices in piping systems, except check valves; valves within factory-fabricated equipment units; shutoff valves; faucets; convenience and lawn-watering hose connections; and HVAC terminal devices and similar roughing-in connections of end-use fixtures and units. List tagged valves in a valve schedule.
- B. Valve-Tag Application Schedule: Tag valves according to size, shape, and color scheme and with captions similar to those indicated in the following subparagraphs:

1. Valve-Tag Size and Shape:
  - a. Chilled Water: 1-1/2 inches, round.
  - b. Condenser Water: 1-1/2 inches, round.
  - c. Refrigerant: 1-1/2 inches, round.
  - d. Hot Water: 1-1/2 inches, round.
  - e. Gas: 1-1/2 inches, round.
2. Valve-Tag Color:
  - a. Chilled Water: Natural.
  - b. Condenser Water: Natural.
  - c. Refrigerant: Natural.
  - d. Hot Water: Natural.
  - e. Gas: Natural.
3. Letter Color:
  - a. Chilled Water: White.
  - b. Condenser Water: White.
  - c. Refrigerant: White.
  - d. Hot Water: White.
  - e. Gas: White.

### 3.6 WARNING-TAG INSTALLATION

- A. Write required message on, and attach warning tags to, equipment and other items where required.

END OF SECTION

H:\Y0586.00\DOC\SPEC\2025\_02-20\_IFB\230553\_IDENTIFICATION FOR HVAC PIPING AND EQUIPMENT.DOC

## SECTION 230593 - TESTING, ADJUSTING, AND BALANCING FOR HVAC

### PART 1 - GENERAL

#### 1.1 RELATED DOCUMENTS

- A. Certain requirements common to all the mechanical and electrical trades (Fire Suppression, Plumbing, HVAC, Electrical, and Tele/Data) are specified in Division 20. To avoid repetition, they are not repeated in each relevant Division and Section. However, these requirements are applicable to the work of this Section and are hereby incorporated by reference.
- B. Drawings and general provisions of the Contract, including General and Supplementary Conditions and Division 01 Specification Sections, apply to this Section.
- C. Refer to Division 01 and Division 23 for systems commissioning requirements applicable to this Section.

#### 1.2 SUMMARY

- A. Section Includes:
  - 1. Testing, Adjusting, and Balancing of Air Systems:
    - a. Constant-volume air systems.
    - b. Variable-air-volume systems.
  - 2. Testing, Adjusting, and Balancing of Hydronic Piping Systems:
    - a. Variable-flow hydronic systems.
  - 3. Testing, adjusting, and balancing of steam and condensate piping systems.
  - 4. Testing, adjusting, and balancing of equipment.
  - 5. Testing, adjusting, and balancing of existing HVAC systems and equipment.
  - 6. Duct leakage test verification.
  - 7. Pipe leakage test verification.
  - 8. HVAC-control system verification.
  - 9. Smoke-control system tests.

#### 1.3 DEFINITIONS

- A. AABC: Associated Air Balance Council.
- B. ASHRAE: American Society of Heating, Refrigerating and Air Conditioning Engineers
- C. NEBB: National Environmental Balancing Bureau.
- D. SMACNA: Sheetmetal and Air Conditioning National Association
- E. TAB: Testing, adjusting, and balancing.
- F. TABB: Testing, Adjusting, and Balancing Bureau.
- G. TAB Specialist: An independent entity meeting qualifications to perform TAB work.

- H. TDH: Total dynamic head.
- I. UFAD: Underfloor air distribution.

#### 1.4 INFORMATIONAL SUBMITTALS

- A. Qualification Data: Within 30 days of Contractor's Notice to Proceed, submit documentation that the TAB specialist and this Project's TAB team members meet the qualifications specified in "Quality Assurance" Article.
- B. Contract Documents Examination Report: Within 45 days of Contractor's Notice to Proceed, submit the Contract Documents review report, as specified in Part 3.
- C. Strategies and Procedures Plan: Within 60 days of Contractor's Notice to Proceed, submit TAB strategies and step-by-step procedures, as specified in "Preparation" Article.
- D. System Readiness Checklists: Within 75 days of Contractor's Notice to Proceed, submit system readiness checklists, as specified in "Preparation" Article.
- E. Examination Report: Submit a summary report of the examination review required in "Examination" Article.
- F. Certified TAB reports.
- G. Sample report forms.
- H. Instrument calibration reports, to include the following:
  - 1. Instrument type and make.
  - 2. Serial number.
  - 3. Application.
  - 4. Dates of use.
  - 5. Dates of calibration.

#### 1.5 QUALITY ASSURANCE

- A. TAB Specialists Qualifications, Certified by AABC, NEBB or TABB:
  - 1. TAB Field Supervisor: Employee of the TAB firm certified as a TAB specialist.
  - 2. TAB Technician: Employee of the TAB firm certified as a TAB technician.
- B. Instrumentation Type, Quantity, Accuracy, and Calibration: Comply with requirements in ASHRAE 111-2008 (RA 2017) "Measurement, Testing, Adjusting, and Balancing of Building HVAC Systems," Section 4, "Instrumentation."
- C. ASHRAE 62.1-2019 Compliance: Applicable requirements in ASHRAE 62.1, Section 7.2.2 - "Air Balancing and Verification of Outdoor Air Performance."
- D. ASHRAE/IES 90.1-2019 Compliance: Applicable requirements in ASHRAE/IES 90.1, Section 6.7.3.3 - "System Balancing."
- E. Code and AHJ Compliance: TAB is required to comply with governing codes and requirements of authorities having jurisdiction.
- F. Certify TAB field data reports and perform the following:

1. Review field data reports to validate accuracy of data and to prepare certified TAB reports.
  2. Certify that the TAB team complied with the approved TAB plan and the procedures specified and referenced in this specification.
- G. TAB Report Forms: Use standard TAB contractor forms meeting requirements of this section approved by Design Professional and the Commissioning Authority.

#### 1.6 FIELD CONDITIONS

- A. Partial Owner Occupancy: Owner may occupy completed areas of building before Substantial Completion. Cooperate with Owner during TAB operations to minimize conflicts with Owner's operations.

#### 1.7 COORDINATION

- A. Notice: Provide seven-day advance notice for each test. Include scheduled test dates and times.
- B. Perform TAB after leakage and pressure tests on air and water distribution systems have been satisfactorily completed.

### PART 2 - PRODUCTS (NOT APPLICABLE)

### PART 3 - EXECUTION

#### 3.1 EXAMINATION

- A. Examine the Contract Documents to become familiar with Project requirements and to discover conditions in systems designs that may preclude proper TAB of systems and equipment.
- B. Examine installed systems for balancing devices, such as test ports, gauge cocks, thermometer wells, flow-control devices, balancing valves and fittings, and manual volume dampers. Verify that locations of these balancing devices are applicable for intended purpose and are accessible.
- C. Examine the approved submittals for HVAC systems and equipment.
- D. Examine design data, including HVAC system descriptions, statements of design assumptions for environmental conditions and systems output, and statements of philosophies and assumptions about HVAC system and equipment controls.
- E. Examine equipment performance data, including fan and pump curves.
1. Relate performance data to Project conditions and requirements, including system effects that can create undesired or unpredicted conditions that cause reduced capacities in all or part of a system.
  2. Calculate system-effect factors to reduce performance ratings of HVAC equipment when installed under conditions different from the conditions used to rate equipment performance. To calculate system effects for air systems, use tables and charts found in AMCA 201, "Fans and Systems," or in SMACNA's "HVAC Systems - Duct Design." Compare results with the design data and installed conditions.

- F. Examine system and equipment installations and verify that field quality-control testing, cleaning, and adjusting specified in individual Sections have been performed.
- G. Examine test reports specified in individual system and equipment Sections.
- H. Examine HVAC equipment and verify that bearings are greased, belts are aligned and tight, filters are clean, and equipment with functioning controls is ready for operation.
- I. Examine terminal units, such as variable-air-volume boxes, and verify that they are accessible, and their controls are connected and functioning.
- J. Examine temporary and permanent strainers. Verify that temporary strainer screens used during system cleaning and flushing have been removed and permanent strainer baskets are installed and clean.
- K. Examine control valves for proper installation for their intended function of isolating, throttling, diverting, or mixing fluid flows.
- L. Examine heat-transfer coils for correct piping connections and for clean and straight fins.
- M. Examine system pumps to ensure absence of entrained air in the suction piping.
- N. Examine operating safety interlocks and controls on HVAC equipment.
- O. Examine control dampers for proper installation for their intended function of isolating, throttling, diverting, or mixing air flows.
- P. Report deficiencies discovered before and during performance of TAB procedures. Observe and record system reactions to changes in conditions. Record default set points if different from indicated values.

### 3.2 PREPARATION

- A. Prepare a TAB plan that includes the following:
  - 1. Equipment and systems to be tested.
  - 2. Strategies and step-by-step procedures for balancing the systems.
  - 3. Instrumentation to be used.
  - 4. Sample forms with specific identification for all equipment.
- B. Perform system-readiness checks of HVAC systems and equipment to verify system readiness for TAB work. Include, at a minimum, the following:
  - 1. General:
    - a. Permanent electrical-power wiring is complete.
    - b. Automatic temperature-control systems are operational.
  - 2. Airside:
    - a. Verify that leakage and pressure tests on air distribution systems have been satisfactorily completed.
    - b. Duct systems are complete with terminals installed.
    - c. Volume, smoke, and fire dampers are open and functional.
    - d. Equipment and duct access doors are securely closed.

- e. Clean filters are installed.
  - f. Fans are operating, free of vibration, and rotating in correct direction.
  - g. Variable-frequency controllers' startup is complete, and safeties are verified.
  - h. Ceilings are installed in critical areas where air-pattern adjustments are required and access to balancing devices is provided.
  - i. Windows and doors are installed and closed so indicated conditions for system operation can be met.
  - j. Suitable access to balancing devices and equipment is provided.
3. Hydronics:
- a. Verify leakage and pressure tests on water distribution systems have been satisfactorily completed.
  - b. Piping is complete with terminals installed.
  - c. Water treatment is complete.
  - d. Systems are flushed, filled, and air purged.
  - e. Strainers are pulled and cleaned.
  - f. Control valves are functioning in accordance with the sequence of operation.
  - g. Shutoff and balance valves have been verified to be 100 percent open.
  - h. Pumps are started, and proper rotation is verified.
  - i. Pump gauge connections are installed directly at pump inlet and outlet flanges or in discharge and suction pipe prior to valves or strainers.
  - j. Variable-frequency controllers' startup is complete, and safeties are verified.
  - k. Suitable access to balancing devices and equipment is provided.

### 3.3 GENERAL PROCEDURES FOR TESTING AND BALANCING

- A. Perform testing and balancing procedures on each system in accordance with the procedures contained in this Section and the applicable portions of one of the following standards and guidelines. Where the selected standard does not include all required procedures, select from alternate standard. Where conflicting procedures are found, comply with requirements of ASHRAE Standard 111 as required by ASHRAE 62.1-2019, Section 7.2.2, "Air Balancing and Verification of Outdoor Air Performance."
  - 1. AABC "National Standards for Total System Balance."
  - 2. ASHRAE 111 "Measurement, Testing, Adjusting, and Balancing of Building HVAC Systems."
  - 3. NEBB's "Procedural Standards for Testing, Adjusting, and Balancing of Environmental Systems" and in this Section.
  - 4. SMACNA "HVAC Systems - Testing, Adjusting and Balancing."
- B. Cut insulation, ducts, pipes, and equipment casings for installation of test probes to the minimum extent necessary for TAB procedures.

1. After testing and balancing, patch probe holes in ducts with same material and thickness as used to construct ducts.
2. Where holes for probes are required in piping or hydronic equipment, install pressure and temperature test plugs to seal systems.
3. Install and join new insulation that matches removed materials. Restore insulation, coverings, vapor barrier, and finish in accordance with Division 23.
- C. Mark equipment and balancing devices, including damper-control positions, valve position indicators, fan-speed-control levers, and similar controls and devices, with paint or other suitable, permanent identification material to show final settings.
- D. Take and report testing and balancing measurements in units indicated on the drawings (IP or Metric).

### 3.4 TESTING, ADJUSTING, AND BALANCING OF HVAC EQUIPMENT

- A. Test, adjust, and balance HVAC equipment indicated on Drawings, including, but not limited to, the following:
  1. HVAC Motors.
  2. Pumps.
  3. Fans and ventilators.
  4. Terminal heating and cooling equipment.
  5. Heating Equipment.
  6. DX units (rooftop, condensing units, condensers, evaporators).
  7. Cooling and heat rejection equipment.
  8. Air-handling, heating and ventilating and energy-recovery units.

### 3.5 TOLERANCES

- A. Set HVAC system's air flow rates and water flow rates within the following tolerances:
  1. Air Systems:
    - a. Fans and Equipment with Fans: Plus or minus 10 percent. If design value is less than 100 cfm, within 10 cfm.
    - b. Air Outlets and Inlets:  
Plus or minus 10 percent
  2. Hydronic Systems - Water Flow Rate: Plus or minus 5 percent. If design value is less than 10 gpm, within 10 percent

### 3.6 GENERAL PROCEDURES FOR BALANCING AIR SYSTEMS

- A. Prepare test reports for both fans and outlets. Obtain manufacturer's outlet factors and recommended testing procedures. Crosscheck the summation of required outlet volumes with required fan volumes.
- B. Prepare schematic diagrams of systems' Record drawings duct layouts.

- C. For variable-air-volume systems, develop a plan to simulate diversity.
- D. Determine the best locations in main and branch ducts for accurate duct-airflow measurements.
- E. Check airflow patterns from the outdoor-air louvers and dampers and the return- and exhaust-air dampers through the supply-fan discharge and mixing dampers.
- F. Locate start-stop and disconnect switches, electrical interlocks, and motor starters.
- G. Verify that motor starters are equipped with properly sized thermal protection.
- H. Check dampers for proper position to achieve desired airflow path.
- I. Check for airflow blockages.
- J. Check condensate drains for proper connections and functioning.
- K. Check for proper sealing of air-handling-unit components.
- L. Check that duct sealing is complete as specified in Division 23.

### 3.7 PROCEDURES FOR CONSTANT-VOLUME AIR SYSTEMS

- A. Adjust fans to deliver total indicated airflows within the maximum allowable fan speed listed by fan manufacturer.
  - 1. Measure total airflow.
    - a. Set outside-air, return-air, and relief-air dampers for proper position that simulates minimum outdoor-air conditions.
    - b. Where duct conditions allow, measure airflow by main Pitot-tube traverse. If necessary, perform multiple Pitot-tube traverses close to the fan and prior to any outlets, to obtain total airflow.
    - c. Where duct conditions are unsuitable for Pitot-tube traverse measurements, a coil traverse may be acceptable.
  - 2. Measure fan static pressures as follows:
    - a. Measure outlet static pressure as far downstream from the fan as practical and upstream from restrictions in ducts such as elbows and transitions.
    - b. Measure inlet static pressure of single-inlet fans in the inlet duct as near the fan as possible, upstream from the flexible connection, and downstream from duct restrictions.
    - c. Measure inlet static pressure of double-inlet fans through the wall of the plenum that houses the fan.
    - d. Measure static pressure across each component that makes up an air-handling unit, rooftop unit, and other air-handling and -treating equipment.
    - e. Measure static pressures entering and leaving other devices, such as sound traps, heat-recovery equipment, and air washers, under final balanced conditions.
    - f. Report artificial loading of filters at the time static pressures are measured.
  - 3. Review Contractor-prepared shop drawings and Record drawings to determine variations in design static pressures versus actual static pressures. Calculate actual system-effect factors. Recommend adjustments to accommodate actual conditions.

4. Obtain approval from Design Professional, Owner, Construction Manager and Commissioning Authority for adjustment of fan speed higher or lower than indicated speed. Comply with requirements in HVAC Sections for air-handling units for adjustment of fans, belts, and pulley sizes to achieve indicated air-handling-unit performance.
  5. Do not make fan-speed adjustments that result in motor overload. Consult equipment manufacturers about fan-speed safety factors. Modulate dampers and measure fan-motor amperage to ensure that no overload occurs. Measure amperage in full-cooling, full-heating, economizer, and any other operating mode to determine the maximum required brake horsepower.
- B. Adjust volume dampers for main duct, submain ducts, and major branch ducts to indicated airflows within specified tolerances.
1. Measure airflow of submain and branch ducts. Where sufficient space in sub-main and branch ducts is unavailable for Pitot-tube traverse measurements, measure airflow at terminal outlets and inlets and calculate the total airflow for that zone.
  2. Adjust submain and branch duct volume dampers for specified airflow.
  3. Re-measure each submain and branch duct after all have been adjusted. Continue to adjust sub-main and branch ducts to indicated airflows within specified tolerances.
- C. Adjust air inlets and outlets for each space to indicated airflows.
1. Set airflow patterns of adjustable outlets for proper distribution without drafts.
  2. Measure inlets and outlets airflow. Measure terminal outlets using a direct-reading hood or outlet manufacturer written instructions and calculating factors.
  3. Adjust each inlet and outlet for specified airflow within specified tolerances without generating noise levels above limitations prescribed in the contract documents.
  4. Adjust patterns of adjustable outlets for proper distribution without drafts.
  5. Re-measure each inlet and outlet after they have been adjusted.
- D. Verify final system conditions.
1. Re-measure and confirm that minimum outdoor, return, and relief airflows are within design. Readjust to design if necessary.
  2. Re-measure and confirm that total airflow is within design.
  3. Re-measure all final fan operating data, speed, volts, amps, and static profile.
  4. Mark all final settings.
  5. Test system in economizer mode. Verify proper operation and adjust if necessary.
  6. Measure and record all operating data.
  7. Record final fan-performance data.

### 3.8 PROCEDURES FOR VARIABLE-AIR-VOLUME SYSTEMS

- A. Compensating for Diversity: When the total airflow of all terminal units is more than the indicated airflow of the fan, place a selected number of terminal units at minimum set-point airflow with the remainder at maximum-airflow condition until the total airflow of the terminal

units equals the indicated airflow of the fan. Select the reduced-airflow terminal units so they are distributed evenly among the branch ducts

B. Adjust pressure independent, variable-air-volume systems as follows:

1. Verify that the system static pressure sensor is located roughly two-thirds of the distance down the duct from the fan discharge.
2. Verify that the system is under static pressure control.
3. Select the terminal unit that is most critical to the supply-fan airflow. Measure inlet static pressure, and adjust system static pressure control set point so the entering static pressure for the critical terminal unit is not less than the sum of the terminal-unit manufacturer recommended minimum inlet static pressure plus the static pressure needed to overcome terminal-unit discharge system losses. Where static pressure exceeds design setpoint by more than 15 percent, provide a static pressure profile of the system between the system fan and the control static pressure sensor for review by the Design Professional. Also include profile of suction or discharge side of the system opposite of the controlling sensor. Record terminals determined to require critical pressure setpoint.
4. Calibrate and balance each terminal unit for maximum and minimum design airflow as follows:
  - a. Adjust controls so that terminal is calling for maximum airflow. Some controllers require starting with minimum airflow. Verify calibration procedure for specific project.
  - b. Measure airflow and adjust calibration factor for design maximum airflow. Record calibration factor. When maximum airflow is correct, balance the air outlets downstream from terminal units.
  - c. Adjust controls so that terminal is calling for minimum airflow. Measure airflow and adjust calibration factor for design minimum airflow. Record calibration factor. If no minimum calibration is available, note any deviation from design airflow. If air outlets are out of balance at minimum airflow, report the condition but leave outlets balanced for maximum airflow
  - d. On constant volume terminals, in critical areas where room pressure is to be maintained, verify that the airflow remains constant over the full range of full cooling to full heating. Note any deviation from design airflow or room pressure.
5. After terminals have been calibrated and balanced, test and adjust system for total airflow. Adjust fans to deliver total design airflows within the maximum allowable fan speed listed by fan manufacturer.
  - a. Set outside-air, return-air, and relief-air dampers for proper position that simulates minimum outdoor-air conditions.
  - b. Set terminals for maximum airflow. If system design includes diversity, adjust terminals for maximum and minimum airflow, so that connected total matches fan selection and simulates actual load in the building.
  - c. Where duct conditions allow, measure airflow by main Pitot-tube traverse including multiple Pitot-tube traverses close to the fan and prior to any outlets, to obtain total airflow.
  - d. Where duct conditions are unsuitable for Pitot-tube traverse measurements, a coil traverse may be acceptable.

6. Measure fan static pressures as follows:
  - a. Measure outlet static pressure as far downstream from the fan as practical and upstream from restrictions in ducts such as elbows and transitions.
  - b. Measure inlet static pressure of single-inlet fans in the inlet duct as near the fan as possible, upstream from the flexible connection, and downstream from duct restrictions.
  - c. Measure inlet static pressure of double-inlet fans through the wall of the plenum that houses the fan.
  - d. Measure static pressure across each component that makes up an air-handling unit, rooftop unit, and other air-handling and -treating equipment.
  - e. Measure static pressures entering and leaving other devices, such as sound traps, heat-recovery equipment, and air washers, under final balanced conditions.
  - f. Report artificial loading of filters at the time static pressures are measured.
7. Set final return and outside airflow to the fan while operating at maximum return airflow and minimum outdoor airflow.
  - a. Balance the return-air ducts and inlets.
  - b. Verify that terminal units are meeting design airflow under system maximum flow.
8. Re-measure the inlet static pressure at the most critical terminal unit, and adjust the system static pressure set point to the most energy-efficient set point to maintain the optimum system static pressure. Record set point and give to DDC system contractor.
9. Verify final system conditions as follows:
  - a. Re-measure and confirm that minimum outdoor, return, and relief airflows are within design. Readjust to match design if necessary.
  - b. Re-measure and confirm that total airflow is within design.
  - c. Re-measure final fan operating data, speed, volts, amps, and static profile.
  - d. Mark final settings.
  - e. Test system in economizer mode. Verify proper operation and adjust if necessary. Measure and record all operating data.
  - f. Verify tracking between supply and return fans.

### 3.9 GENERAL PROCEDURES FOR HYDRONIC SYSTEMS

- A. Prepare test reports for pumps, coils, and other equipment. Obtain approved submittals and manufacturer-recommended testing procedures.
- B. Prepare schematic diagrams of systems' Record drawings piping layouts.
- C. In addition to requirements in "Preparation" Article, prepare hydronic systems for testing and balancing as follows:
  1. Check expansion tank for proper setting.
  2. Check highest vent for adequate pressure.
  3. Check makeup water-station pressure gauge for adequate pressure for highest vent.

4. Check flow-control valves for specified sequence of operation and set at indicated flow.
  5. Set differential-pressure control valves at the specified differential pressure. Do not set at fully closed position when pump is positive-displacement type unless several terminal valves are kept open.
  6. Set system controls so automatic valves are wide open to heat exchangers.
  7. Locate start-stop and disconnect switches, electrical interlocks, and motor controllers.
  8. Verify that motor controllers are equipped with properly sized thermal protection.
  9. Check that air has been purged from the system by verifying a forceful liquid flow exiting from vents when manually operated.
  10. Check pump-motor load. If motor is overloaded, throttle main flow-balancing device so motor nameplate rating is not exceeded.
- D. Measure and record upstream and downstream pressure of each piece of equipment.
- E. Measure and record upstream and downstream pressure of pressure-reducing valves.
- F. Check settings and operation of automatic temperature-control valves, self-contained control valves, and pressure-reducing valves. Record final settings.
1. Check settings and operation of each safety valve. Record settings.

### 3.10 PROCEDURES FOR VARIABLE-FLOW HYDRONIC SYSTEMS

- A. Adjust the variable-flow hydronic system as follows:
1. Verify pressure-differential sensor(s) location at end of main bypass branches.
  2. Compensating for Diversity: When the total flow rate of all terminal units is more than the indicated flow of the pumps, place a selected number of terminal units at minimum set-point flow with the remainder at maximum-flow condition until the total flow of the terminal units equals the indicated flow of the pump. Select the reduced-flow terminal units so they are distributed evenly among the branch piping.
    - a. Determine diversity factor.
    - b. Simulate system diversity by closing required number of control valves, as approved by the Design Professional.
  3. Adjust pumps to deliver total design pump flow.
    - a. Measure pump TDH as follows:
      - 1) Measure discharge pressure directly at the pump outlet flange or in discharge pipe prior to any valves.
      - 2) Measure inlet pressure directly at the pump inlet flange or in suction pipe prior to any valves or strainers.
      - 3) Convert pressure to head and correct for differences in gauge heights.
      - 4) Verify pump impeller size by measuring the TDH with the discharge valve closed and pump at full speed. Note the point on manufacturer pump curve at zero flow, and verify that the pump has the intended impeller size.

- a) If impeller size is not correct, and actual required flow and head cannot be achieved, manufacturer shall replace impeller with correct size.
  - 5) With valves open, start pump at slow speed and then ramp speed up until design water flow is achieved. Do not operate at full speed and use throttling to achieve desired flow. If pump is operating below 45 Hz at design flow, notify the design professional who will determine if pump impellers need to be trimmed due to field conditions and to allow full range of turn down.
  - 6) Verify pump-motor brake horsepower. Calculate the intended brake horsepower for the system based on pump manufacturer performance data. Compare calculated brake horsepower with nameplate data on the pump motor. Report conditions where actual amperage exceeds motor nameplate amperage.
  - 7) Report flow rates that are not within plus or minus 10 percent of design.
  - b. Measure total water flow.
    - 1) Position valves for full flow through coils.
    - 2) Measure flow by main flow meter, if installed.
    - 3) If main flow meter is not installed, determine flow by pump TDH or known equipment pressure drop.
  - c. Monitor motor performance during procedures, and do not operate motor in an overloaded condition.
- B. Adjust flow-measuring devices installed in mains and branches to design water flows.
1. Measure flow in main and branch pipes.
  2. Adjust main and branch balance valves for design flow.
  3. Re-measure each main and branch after all have been adjusted.
- C. Adjust flow-measuring devices installed at terminals for each space to design water flows.
1. Measure flow at terminals.
  2. Adjust each terminal to design flow.
  3. Re-measure each terminal after it is adjusted.
  4. For three-way control valves, after verifying flow with valve open to the terminal, position control valves to bypass the coil, and adjust the bypass valve to maintain design flow.
  5. Perform temperature tests after flows have been balanced.
- D. For systems with pressure-independent valves at terminals:
1. Measure differential pressure, and verify that it is within manufacturer's specified range.
  2. Perform temperature tests after flows have been verified.
- E. For systems without pressure-independent valves or flow-measuring devices at terminals:
1. Measure and balance coils by either coil pressure drop or temperature method.

2. If balanced by coil pressure drop, perform temperature tests after flows have been verified.
- F. Open control valves that were shut. Close enough control valves that were previously open to maintain diversity, and balance terminals that were just opened.
- G. Prior to verifying final system conditions, determine system pressure-differential set point(s).
- H. Mark final settings and verify that memory stops have been set.
- I. Verify final system conditions as follows:
  1. Re-measure and confirm that total water flow is within design.
  2. Re-measure final pump operating data, TDH, volts, amps, and system pressure drop profile.
  3. Measure the differential-pressure-control-valve settings at conclusion of balancing.
  4. Check settings and operation of each safety valve. Record settings.
  5. Mark final settings.
- J. Verify that memory stops have been set.

### 3.11 PROCEDURES FOR MOTORS

- A. Motors 0.5 HP and Larger: Test at final balanced conditions and record the following data:
  1. Manufacturer's name, model number, and serial number.
  2. Motor horsepower rating.
  3. Motor rpm.
  4. Phase and hertz.
  5. Nameplate and measured voltage, each phase.
  6. Nameplate and measured amperage, each phase.
  7. Starter size and thermal-protection-element rating.
  8. Service factor and frame size.
- B. Motors Driven by Variable-Frequency Controllers: Test for proper operation at speeds varying from minimum to maximum. Test the manual bypass of the controller to prove proper operation. Record observations including name of controller manufacturer, model number, serial number, and nameplate data.

### 3.12 PROCEDURES FOR AIR-COOLED CONDENSING UNITS

- A. Verify proper rotation of fan(s).
- B. Measure and record entering- and leaving-air temperatures.
- C. Measure and record entering and leaving refrigerant pressures.
- D. Measure and record operating data of compressor(s), fan(s), and motors.

3.13 PROCEDURES FOR AIR-COOLED CONDENSERS

- A. Verify proper rotation of fan(s).
- B. Measure and record entering- and leaving-air temperatures.
- C. Measure and record entering and leaving refrigerant pressures.
- D. Measure and record operating data of fan(s) and motor(s).

3.14 PROCEDURES FOR BOILERS

- A. Hydronic Boilers:
  - 1. Measure and record entering- and leaving-water temperatures.
  - 2. Measure and record water flow.
  - 3. Measure and record pressure drop.
  - 4. Measure and record relief valve(s) pressure setting.
  - 5. Capacity: Calculate in Btu/h of heating output.
  - 6. Fuel Consumption: If boiler fuel supply is equipped with flow meter, measure and record consumption.
  - 7. Efficiency: Calculate operating efficiency for comparison to submitted equipment.
  - 8. Fan, motor, and motor controller operating data.

3.15 PROCEDURES FOR HEAT-TRANSFER COILS

- A. Measure, adjust, and record the following data for each hydronic coil:
  - 1. Entering- and leaving-water temperature.
  - 2. Water flow rate.
  - 3. Water pressure drop.
  - 4. Dry-bulb temperature of entering and leaving air.
  - 5. Wet-bulb temperature of entering and leaving air for cooling coils.
  - 6. Airflow.
  - 7. Air pressure drop.
- B. Measure, adjust, and record the following data for each electric heating coil:
  - 1. Nameplate data.
  - 2. Airflow.
  - 3. Entering- and leaving-air temperature at full load.
  - 4. Air pressure drop.
  - 5. Voltage and amperage input of each phase at full load.
  - 6. Calculated kilowatt at full load.
  - 7. Fuse or circuit-breaker rating for overload protection.

- C. Measure, adjust, and record the following data for each steam coil:
  - 1. Dry-bulb temperature of entering and leaving air.
  - 2. Airflow.
  - 3. Inlet steam pressure.
- D. Measure, adjust, and record the following data for each refrigerant coil:
  - 1. Dry-bulb temperature of entering and leaving air.
  - 2. Wet-bulb temperature of entering and leaving air.
  - 3. Airflow.
  - 4. Air pressure drop.
  - 5. Entering and leaving refrigerant pressure and temperatures.

### 3.16 DUCT LEAKAGE TESTS

- A. Witness the duct leakage testing performed by Installer.
- B. Verify that proper test methods are used and that leakage rates are within specified limits.
- C. Report deficiencies observed.

### 3.17 PIPE LEAKAGE TESTS

- A. Witness the pipe pressure testing performed by Installer.
- B. Verify that proper test methods are used and that leakage rates are within specified limits.
- C. Report deficiencies observed.

### 3.18 HVAC CONTROLS VERIFICATION

- A. In conjunction with system balancing, perform the following:
  - 1. Verify HVAC control system is operating within the design limitations.
  - 2. Confirm that the sequences of operation are operating in compliance with Contract Documents.
  - 3. Verify that controllers are calibrated and function as intended.
  - 4. Verify that controller set points are as indicated.
  - 5. Verify the operation of lockout or interlock systems.
  - 6. Verify the operation of valve and damper actuators.
  - 7. Verify that controlled devices are properly installed and connected to correct controller.
  - 8. Verify that controlled devices travel freely and are in position indicated by controller: open, closed, or modulating.
  - 9. Verify location and installation of sensors to ensure that they sense only intended temperature, humidity, or pressure.
- B. Reporting: Include a summary of verifications performed, remaining deficiencies, and variations from indicated conditions.

3.19 PROCEDURES FOR SMOKE-CONTROL SYSTEM TESTING

- A. Before testing smoke-control systems, review design documents to understand operating requirements and design intent:
  - 1. Review boundaries of each smoke zone.
  - 2. Review location, size, and operating characteristics of equipment, such as smoke and fire smoke dampers.
  - 3. Review sequence of operation, operating status of equipment, and position of smoke and fire dampers for each smoke zone alarm condition.
  - 4. Review location and type of alarm detection used to initiate smoke control for each smoke zone.
  - 5. Review other smoke-control system attributes not listed but required for code compliance and acceptance by authorities having jurisdiction.
- B. Before testing smoke-control systems, verify that construction is complete and verify the integrity of each smoke-control zone boundary.
  - 1. Verify that windows, doors, walls, ceilings, and floors (six-sided boundary) are closed and that applicable safing, gasket, and firestops and sealants are installed.
  - 2. Report deficiencies and postpone testing until after the reported deficiencies are corrected.
- C. Measure and record barometric pressure, wind speed and direction, outdoor-air temperature, and relative humidity on each test day.
- D. Measure, adjust, and record airflow of each smoke-control system, with all fans that are a part of system operating as intended by the design.
  - 1. Measure, adjust, and record the airflow of each fan. For ducted systems, measure fan airflow by duct Pitot-tube traverse.
  - 2. Measure, adjust, and record the airflow of each exhaust inlet and supply outlet.
  - 3. Measure, adjust, and record airflow in main and branch ducts.
- E. Operational Tests:
  - 1. Check the proper activation of each zone of each smoke-control system in response to all means of activation, both automatic and manual.
  - 2. Check automatic activation in response to fire alarm signals received from the building's fire alarm system. Initiate a separate alarm for each means of activation to ensure that the proper operation of the correct zone of each smoke-control system occurs.
  - 3. Check and record proper operation of fans, dampers, and related equipment for each separate zone of each smoke-control system:
    - a. Zone in which a smoke-control system automatically activates.
    - b. Type of signal that activates smoke-control system, such as sprinkler flow or smoke detector.
    - c. Smoke zone(s) where maximum mechanical exhaust to the outside is implemented and no supply air is provided.

- d. Positive-pressure smoke-control zone(s) where maximum air supply is implemented and no exhaust to the outside is provided.
  - e. Fan(s) "ON" to implement the smoke-control system. Multiple- or variable-speed fans should be further noted to verify that the intended control configuration is achieved.
  - f. Fan(s) "OFF" to implement the smoke-control system.
  - g. Damper(s) "OPEN" or at an adjustable position where maximum airflow must be achieved.
  - h. Damper(s) "CLOSED" where no airflow should take place.
  - i. Auxiliary functions to achieve the smoke-control system configuration, such as changes or override of normal operating pressure and temperature-control set points.
  - j. If standby power is provided for the smoke-control system, test to verify that the system functions while operating under both normal and standby power.
  - k. Check operation in accordance with design indicated.
- F. AHJ Tests: Conduct additional tests required by authorities having jurisdiction. Unless required by authorities having jurisdiction, perform testing without the use of smoke or products that simulate smoke.
- G. Report: Prepare and submit a complete report of observations, measurements, and deficiencies. Include names and contact information of individuals conducting tests and of individuals witnessing tests.
- 3.20 PROCEDURES FOR TESTING, ADJUSTING, AND BALANCING EXISTING SYSTEMS
- A. Perform a preconstruction inspection of existing equipment that is to remain and be reused.
- 1. Measure and record the operating speed, airflow, and static pressure of each fan and equipment with fan(s).
  - 2. Measure and record flows, temperatures, and pressures of each piece of equipment in each hydronic system. Compare the values to design or nameplate information, where information is available.
  - 3. Measure motor voltage and amperage. Compare the values to motor nameplate information.
  - 4. Check the refrigerant charge.
  - 5. Check the condition of filters.
  - 6. Check the condition of coils.
  - 7. Check the operation of the drain pan and condensate-drain trap.
  - 8. Check bearings and other lubricated parts for proper lubrication.
  - 9. Report on the operating condition of the equipment and the results of the measurements taken. Report deficiencies.
- B. TAB After Construction: Before performing testing and balancing of renovated existing systems, inspect existing equipment that is to remain and be reused to verify that existing

equipment has been cleaned and refurbished in accordance with renovation scope indicated by Contract Documents. Verify the following:

1. New filters are installed.
  2. Coils are clean and fins combed.
  3. Drain pans are clean.
  4. Fans are clean.
  5. Bearings and other parts are properly lubricated.
  6. Deficiencies noted in the preconstruction report are corrected.
- C. Perform testing and balancing of existing systems to the extent that existing systems are affected by the renovation work.
1. Compare the indicated airflow of the renovated work to the measured fan airflows and determine the new fan speed and the face velocity of filters and coils.
  2. Verify that the indicated airflows of the renovated work result in filter and coil face velocities and fan speeds that are within the acceptable limits defined by equipment manufacturer.
  3. If calculations increase or decrease the airflow rates and water flow rates by more than 5 percent, make equipment adjustments to achieve the calculated rates. If increase or decrease is 5 percent or less, equipment adjustments are not required.
  4. Balance each air outlet.

### 3.21 PROGRESS REPORTING

- A. Initial Construction-Phase Report: Based on examination of the Contract Documents as specified in "Examination" Article, prepare a report on the adequacy of design for system-balancing devices. Recommend changes and additions to system-balancing devices, to facilitate proper performance measuring and balancing. Recommend changes and additions to HVAC systems and general construction to allow access for performance-measuring and -balancing devices.
- B. Status Reports: Prepare biweekly progress reports to describe completed procedures, procedures in progress, and scheduled procedures. Include a list of deficiencies and problems found in systems being tested and balanced. Prepare a separate report for each system and each building floor for systems serving multiple floors.

### 3.22 FINAL REPORT

- A. General: Prepare a certified written report; tabulate and divide the report into separate sections for tested systems and balanced systems.
1. Include a certification sheet at the front of the report's binder, signed and sealed by the certified testing and balancing engineer.
  2. Include a list of instruments used for procedures, along with proof of calibration.
  3. Certify validity and accuracy of field data.
- B. Final Report Contents: In addition to certified field-report data, include the following:
1. Pump curves.

2. Fan curves.
  3. Manufacturers' test data.
  4. Field test reports prepared by system and equipment installers.
  5. Other information relative to equipment performance; do not include Shop Drawings and Product Data.
- C. General Report Data: In addition to form titles and entries, include the following data:
1. Title page.
  2. Name and address of the TAB specialist.
  3. Project name.
  4. Project location.
  5. Architect's name and address.
  6. Engineer's name and address.
  7. Contractor's name and address.
  8. Report date.
  9. Signature of TAB supervisor who certifies the report.
  10. Table of Contents with the total number of pages defined for each section of the report. Number each page in the report.
  11. Summary of contents, including the following:
    - a. Indicated versus final performance.
    - b. Notable characteristics of systems.
    - c. Description of system operation sequence if it varies from the Contract Documents.
  12. Nomenclature sheets for each item of equipment.
  13. Data for terminal units, including manufacturer's name, type, size, and fittings.
  14. Notes to explain why certain final data in the body of reports vary from indicated values.
  15. Test conditions for fans performance forms, including the following:
    - a. Settings for outdoor-, return-, and exhaust-air dampers.
    - b. Conditions of filters.
    - c. Cooling coil, wet- and dry-bulb conditions.
    - d. Heating coil, dry-bulb conditions.
    - e. Face and bypass damper settings at coils.
    - f. Fan drive settings, including settings and percentage of maximum pitch diameter.
    - g. Variable-frequency controller settings for variable-air-volume systems.
    - h. Settings for pressure controller(s).
    - i. Other system operating conditions that affect performance.

16. Test conditions for pump performance forms, including the following:
  - a. Variable-frequency controller settings for variable-flow hydronic systems.
  - b. Settings for pressure controller(s).
  - c. Other system operating conditions that affect performance.
- D. System Diagrams: Include schematic layouts of air and hydronic distribution systems. Present each system with single-line diagram and include the following:
  1. Quantities of outdoor, supply, return, and exhaust airflows.
  2. Water and steam flow rates.
  3. Duct, outlet, and inlet sizes.
  4. Pipe and valve sizes and locations.
  5. Terminal units.
  6. Balancing stations.
  7. Position of balancing devices.
- E. Air-Handling-Unit Test Reports: For air-handling units, include the following:
  1. Unit Data:
    - a. Unit identification.
    - b. Location.
    - c. Make and type.
    - d. Model number and unit size.
    - e. Manufacturer's serial number.
    - f. Unit arrangement and class.
    - g. Discharge arrangement.
    - h. Sheave make, size in inches, and bore.
    - i. Center-to-center dimensions of sheave and amount of adjustments in inches.
    - j. Number, make, and size of belts.
    - k. Number, type, and size of filters.
  2. Motor Data:
    - a. Motor make, and frame type and size.
    - b. Horsepower and speed.
    - c. Volts, phase, and hertz.
    - d. Full-load amperage and service factor.
    - e. Sheave make, size in inches, and bore.
    - f. Center-to-center dimensions of sheave and amount of adjustments in inches.
  3. Test Data (Indicated and Actual Values):
    - a. Total airflow rate in cfm.

- b. Total system static pressure in inches wg.
  - c. Fan speed.
  - d. Inlet and discharge static pressure in inches wg.
  - e. For each filter bank, filter static-pressure differential in inches wg.
  - f. Preheat-coil static-pressure differential in inches wg.
  - g. Cooling-coil static-pressure differential in inches wg.
  - h. Heating-coil static-pressure differential in inches wg.
  - i. List for each internal component with pressure-drop, static-pressure differential in inches wg.
  - j. Outdoor airflow in cfm.
  - k. Return airflow in cfm.
  - l. Outdoor-air damper position.
  - m. Return-air damper position.
  - n. Exhaust airflow to recovery coil in cfm (L/s).
- F. Apparatus-Coil Test Reports:
- 1. Coil Data:
    - a. System identification.
    - b. Location.
    - c. Coil type.
    - d. Number of rows.
    - e. Fin spacing in fins per inch o.c.
    - f. Make and model number.
    - g. Face area in sq. ft..
    - h. Tube size in NPS.
    - i. Tube and fin materials.
    - j. Circuiting arrangement.
  - 2. Test Data (Indicated and Actual Values):
    - a. Airflow rate in cfm.
    - b. Average face velocity in fpm.
    - c. Air pressure drop in inches wg.
    - d. Outdoor-air, wet- and dry-bulb temperatures in deg F.
    - e. Return-air, wet- and dry-bulb temperatures in deg F.
    - f. Entering-air, wet- and dry-bulb temperatures in deg F.
    - g. Leaving-air, wet- and dry-bulb temperatures in deg F.
    - h. Refrigerant expansion valve and refrigerant types.

- i. Refrigerant suction pressure in psig.
  - j. Refrigerant suction temperature in deg F.
- G. Gas- and Oil-Fired Heat Apparatus Test Reports: In addition to manufacturer's factory startup equipment reports, include the following:
  - 1. Unit Data:
    - a. System identification.
    - b. Location.
    - c. Make and type.
    - d. Model number and unit size.
    - e. Manufacturer's serial number.
    - f. Fuel type in input data.
    - g. Output capacity in Btu/h.
    - h. Ignition type.
    - i. Burner-control types.
    - j. Motor horsepower and speed.
    - k. Motor volts, phase, and hertz.
    - l. Motor full-load amperage and service factor.
    - m. Sheave make, size in inches, and bore.
    - n. Center-to-center dimensions of sheave and amount of adjustments in inches.
  - 2. Test Data (Indicated and Actual Values):
    - a. Total airflow rate in cfm.
    - b. Entering-air temperature in deg F.
    - c. Leaving-air temperature in deg F.
    - d. Air temperature differential in deg F.
    - e. Entering-air static pressure in inches wg.
    - f. Leaving-air static pressure in inches wg.
    - g. Air static-pressure differential in inches wg.
    - h. Low-fire fuel input in Btu/h.
    - i. High-fire fuel input in Btu/h.
    - j. Manifold pressure in psig.
    - k. High-temperature-limit setting in deg F.
    - l. Operating set point in Btu/h.
    - m. Motor voltage at each connection.
    - n. Motor amperage for each phase.
    - o. Heating value of fuel in Btu/h.

- H. Fan Test Reports: For supply, return, and exhaust fans, include the following:
1. Fan Data:
    - a. System identification.
    - b. Location.
    - c. Make and type.
    - d. Model number and size.
    - e. Manufacturer's serial number.
    - f. Arrangement and class.
    - g. Sheave make, size in inches, and bore.
    - h. Center-to-center dimensions of sheave and amount of adjustments in inches.
  2. Motor Data:
    - a. Motor make, and frame type and size.
    - b. Horsepower and speed.
    - c. Volts, phase, and hertz.
    - d. Full-load amperage and service factor.
    - e. Sheave make, size in inches, and bore.
    - f. Center-to-center dimensions of sheave and amount of adjustments in inches.
    - g. Number, make, and size of belts.
    - h. Heater size.
  3. Test Data (Indicated and Actual Values):
    - a. Total airflow rate in cfm.
    - b. Total system static pressure in inches wg.
    - c. Fan speed.
    - d. Discharge static pressure in inches wg.
    - e. Suction static pressure in inches wg.
    - f. Direction of rotation and revolutions per minute.
    - g. Fan curves showing variation of air flow with static pressure at operating speed and motor loading.
    - h. Actual air flow percentage above or below design.
- I. Duct Traverse Reports: Include a diagram with a grid representing the duct cross-section and record the following:
1. Report Data:
    - a. System fan and air-handling-unit number.
    - b. Location and zone.
    - c. Traverse air temperature in deg F.

- d. Duct static pressure in inches wg.
  - e. Duct size in inches.
  - f. Duct area in sq. ft..
  - g. Indicated airflow rate in cfm.
  - h. Indicated velocity in fpm.
  - i. Actual airflow rate in cfm.
  - j. Actual average velocity in fpm.
  - k. Barometric pressure in psig.
- J. Air-Terminal-Device Reports:
- 1. Unit Data:
    - a. System and air-handling unit identification.
    - b. Location and zone.
    - c. Apparatus used for test.
    - d. Area served.
    - e. Make.
    - f. Number from system diagram.
    - g. Type and model number.
    - h. Size.
    - i. Effective area in sq. ft..
  - 2. Test Data (Indicated and Actual Values):
    - a. Airflow rate in cfm.
    - b. Air velocity in fpm.
    - c. Preliminary airflow rate in cfm.
    - d. Preliminary velocity in fpm.
    - e. Final airflow rate in cfm.
    - f. Final velocity in fpm.
    - g. Space temperature in deg F.
- K. System-Coil Reports: For reheat coils and water coils of terminal units, include the following:
- 1. Unit Data:
    - a. System and air-handling-unit identification.
    - b. Location and zone.
    - c. Room or riser served.
    - d. Coil make and size.
    - e. Flowmeter type.

2. Test Data (Indicated and Actual Values):
  - a. Airflow rate in cfm.
  - b. Entering-water temperature in deg F.
  - c. Leaving-water temperature in deg F.
  - d. Water pressure drop in feet of head or psig.
  - e. Entering-air temperature in deg F.
  - f. Leaving-air temperature in deg F.
- L. Pump Test Reports: Calculate impeller size by plotting the shutoff head on pump curves, and include the following:
  1. Unit Data:
    - a. Unit identification.
    - b. Location.
    - c. Service.
    - d. Make and size.
    - e. Model number and serial number.
    - f. Water flow rate in gpm.
    - g. Water pressure differential in feet of head or psig.
    - h. Required net positive suction head in feet of head or psig.
    - i. Pump speed.
    - j. Impeller diameter in inches.
    - k. Motor make and frame size.
    - l. Motor horsepower and rpm.
    - m. Voltage at each connection.
    - n. Amperage for each phase.
    - o. Full-load amperage and service factor.
    - p. Seal type.
  2. Test Data (Indicated and Actual Values):
    - a. Static head in feet of head or psig.
    - b. Pump shutoff pressure in feet of head or psig.
    - c. Actual impeller size in inches.
    - d. Full-open flow rate in gpm.
    - e. Full-open pressure in feet of head or psig.
    - f. Final discharge pressure in feet of head or psig.
    - g. Final suction pressure in feet of head or psig.
    - h. Final total pressure in feet of head or psig.

- i. Final water flow rate in gpm.
  - j. Voltage at each connection.
  - k. Amperage for each phase.
- M. Boiler Test Reports
  - 1. Unit Data:
    - a. System identification.
    - b. Location.
    - c. Boiler type.
    - d. Make and model number.
  - 2. Test Data:
    - a. Hot Water Boilers
      - 1) Entering water temperature.
      - 2) Leaving water temperature.
      - 3) Water flow
- N. VFD Report Data:
  - 1. Manufacturer and model number.
  - 2. Line voltage (input).
  - 3. VA rating.
  - 4. Input current.
  - 5. Output current.
  - 6. Output frequency.
  - 7. Output voltage.
  - 8. Acceleration time.
  - 9. Deceleration time.
- O. Outdoor Air Data Report:
  - 1. Size of inlet.
  - 2. Actual free area.
  - 3. Manufacturer's test factor.
  - 4. Measured velocity.
  - 5. Outdoor air temperature.
- P. Instrument Calibration Reports:
  - 1. Report Data:
    - a. Instrument type and make.
    - b. Serial number.

- c. Application.
- d. Dates of use.
- e. Dates of calibration.

### 3.23 VERIFICATION OF TAB REPORT

#### A. TAB Specialist Initial Verification:

1. After testing and balancing are complete, TAB Specialist shall operate each system and randomly check measurements to verify that the system is operating according to the final test and balance readings documented in the final report.
2. Check the following for each system:
  - a. Measure airflow of at least 10 percent of air outlets.
  - b. Measure water flow of at least 5 percent of terminals.
  - c. Measure room temperature at each thermostat/temperature sensor. Compare the reading to the set point.
  - d. Verify that balancing devices are marked with final balance position.
  - e. Note deviations from the Contract Documents in the final report.

#### B. Final Verification:

1. The TAB specialist's test and balance engineer shall conduct the inspection in the presence of Owner, Design Professional, Construction Manager and Commissioning Authority.
2. Commissioning Authority or Design Professional shall randomly select measurements, documented in the final report, to be rechecked. Rechecking shall be limited to the lesser of either 10 percent of the total measurements recorded or the extent of measurements that can be accomplished in a normal 8-hour business day.
3. If rechecks yield measurements that differ from the measurements documented in the final report by more than the tolerances allowed, the measurements shall be noted as "FAILED."
4. If the number of "FAILED" measurements is greater than 10 percent of the total measurements checked during the final inspection, the TAB shall be considered incomplete and shall be rejected.
5. If recheck measurements find the number of failed measurements noncompliant with requirements indicated, proceed as follows:
  - a. TAB specialists shall recheck all measurements and make adjustments. Revise the final report and balancing device settings to include all changes; resubmit the final report and request a second final inspection. All changes shall be tracked to show changes made to previous report.
  - b. If the second final inspection also fails, Owner may pursue others Contract options to complete TAB work.

#### C. Prepare test and inspection reports.

3.24      ADDITIONAL TESTS

- A.      Within 90 days of completing TAB, perform additional TAB to verify that balanced conditions are being maintained throughout and to correct unusual conditions.
- B.      Seasonal Periods: If initial TAB procedures were not performed during near-peak summer and winter conditions, perform additional TAB during near-peak summer and winter conditions.

END OF SECTION

H:\Y0586.00\DOC\SPEC\2025\_02-20\_IFB\230593\_TESTING ADJUSTING AND BALANCING FOR HVAC.DOC

## SECTION 230700 - HVAC INSULATION

### PART 1 - GENERAL

#### 1.1 RELATED DOCUMENTS

- A. Certain requirements common to all the mechanical and electrical trades (Fire Suppression, Plumbing, HVAC, Electrical, and Tele/Data) are specified in Division 20. To avoid repetition, they are not repeated in each relevant Division and Section. However, these requirements are applicable to the work of this Section and are hereby incorporated by reference.
- B. Drawings and general provisions of the Contract, including General and Supplementary Conditions and Division 01 Specification Sections, apply to this Section.

#### 1.2 SUMMARY

- A. Section includes insulating the following duct services:
  - 1. Combined Heating and Cooling Ducts – Climate Zones 5, 6, 7 and 8
  - 2. Unconditioned Outside Air Intake Ducts/Plena and Exhaust Relief Duct and Plena Inside the Building Envelope – Climate Zones 2 through 8
  - 3. Unconditioned Outside Air Intake Ducts/Plena and Exhaust/Relief Duct and Plena Outside the Building Envelope – Climate Zones 2 through 8
  - 4. Shower Exhaust Ducts – Climate Zones 0 through 8
- B. Section includes insulation for breeching, flues and connectors not factory insulated.
- C. Section includes insulating the following HVAC equipment that is not factory insulated:
  - 1. Cooling Coil and Humidifier Drain Pans
  - 2. Cooling System Equipment
  - 3. Heating Hot Water Equipment
- D. Section includes insulating the following HVAC piping systems
  - 1. Heating Hot Water Systems: 141 deg F to 200 deg F
  - 2. Heating Hot Water Systems: 85 deg F to 140 deg F
  - 3. Cooling Coil Condensate Piping and Equipment Drain Piping
  - 4. Air Conditioning Refrigerant Suction, Hot Gas, Outdoor Liquid Line and Hot Gas Piping
- E. Section includes insulation for Outdoor, Underground Piping (excluding loose fill insulated piping).
- F. Referenced Standards:
  - 1. ASTM International (ASTM)
  - 2. American Society of Heating, Refrigerating and Air Conditioning Engineers, Inc. (ASHRAE).
  - 3. North American Insulation Manufacturers Association (NAIMA).

### 1.3 ACTION SUBMITTALS

- A. Product Data: For each type of product indicated. Include thermal conductivity, water-vapor permeance, thickness, and jackets (both factory- and field-applied if any).
- B. Shop Drawings: Include plans, elevations, sections, details, and attachments to other work.
  - 1. Detail application of field-applied jackets.
  - 2. Detail application at linkages of control devices.
  - 3. Detail application of protective duct shields, saddles, and inserts at hangers for each type of insulation and hanger.
  - 4. Detail insulation application at duct elbows, fittings, dampers, specialties and flanges for each type of insulation.
  - 5. Detail attachment and covering of equipment heat tracing inside insulation.
  - 6. Detail removable insulation at equipment connections.
  - 7. Detail field application for each equipment type.
  - 8. Detail application of protective piping shields, saddles, and inserts at hangers for each type of insulation and hanger.
  - 9. Detail attachment and covering of piping heat tracing inside insulation.
  - 10. Detail insulation application at pipe expansion joints for each type of insulation.
  - 11. Detail insulation application at pipe elbows, fittings, flanges, valves, and specialties for each type of insulation.
  - 12. Detail removable insulation at valves and piping specialties.

### 1.4 INFORMATIONAL SUBMITTALS

- A. Qualification Data: For qualified Installer.
- B. Material Test Reports: From a qualified testing agency acceptable to authorities having jurisdiction indicating, interpreting, and certifying test results for compliance of insulation materials, sealers, attachments, cements, and jackets, with requirements indicated. Include dates of tests and test methods employed.
- C. Field quality-control reports.

### 1.5 QUALITY ASSURANCE

- A. Installer Qualifications: Skilled mechanics who have successfully completed an apprenticeship program or another craft training program certified by the Department of Labor, Bureau of Apprenticeship and Training.
- B. Surface-Burning Characteristics: For insulation and related materials, as determined by testing identical products according to ASTM E 84, by a testing agency acceptable to authorities having jurisdiction. Factory label insulation and jacket materials and adhesive, mastic, tapes, and cement material containers, with appropriate markings of applicable testing agency.
  - 1. Insulation Installed Indoors: Flame-spread index of 25 or less, and smoke-developed index of 50 or less.

2. Insulation Installed Outdoors: Flame-spread index of 75 or less, and smoke-developed index of 150 or less.

#### 1.6 COORDINATION

- A. Coordinate sizes and locations of supports, hangers, and insulation shields specified in Division 23.
- B. Coordinate clearance requirements with duct Installer for duct insulation application. Before preparing ductwork Shop Drawings, establish and maintain clearance requirements for installation of insulation and field-applied jackets and finishes and for space required for maintenance.
- C. Coordinate clearance requirements with equipment Installer for equipment insulation application. Coordinate installation and testing of equipment heat tracing.
- D. Coordinate clearance requirements with piping Installer for piping insulation application. Coordinate installation and testing of piping heat tracing.

#### 1.7 SCHEDULING

- A. Schedule insulation application after pressure and leak testing systems and, where required, after installing and testing heat tracing. Insulation application may begin on segments that have satisfactory test results.
- B. Complete installation and concealment of plastic materials as rapidly as possible in each area of construction.

### PART 2 - PRODUCTS

#### 2.1 INSULATION MATERIALS

- A. Comply with requirements in Part 3 articles for where insulating materials shall be applied.
- B. Products shall not contain asbestos, lead, mercury, or mercury compounds.
- C. Products that come in contact with stainless steel shall have a leachable chloride content of less than 50 ppm when tested according to ASTM C 871.
- D. Insulation materials for use on austenitic stainless steel shall be qualified as acceptable according to ASTM C 795.
- E. Foam insulation materials shall not use CFC or HCFC blowing agents in the manufacturing process.
- F. Flexible Elastomeric Insulation Non-Plenum Applications: Closed-cell, sponge- or expanded-rubber materials. Comply with ASTM C 534, Type II for sheet materials and Type I for tubular materials. For indoor applications insulation meet ASTM E84 Flame Spread and Smoke Developed ratings of 25/50 for thickness required. For duct applications, color shall be selected by the architect from manufacturer standard color options.
  1. **Available Manufacturers:** Subject to compliance with requirements, available products that may be incorporated into the Work include the following, or approved equal:
    - a. Aeroflex USA, Inc.; Aerocel,

- b. Armacell LLC; AP Armaflex and Armaflex FS,
  - c. K-Flex USA; Insul-Sheet and Insul-Tube,
  - d. Or approved equal.
- G. Flexible Elastomeric Insulation in Supply, Return, Exhaust, Relief and Ventilation Air Plenums: Closed-cell, sponge- or expanded-rubber materials. Comply with ASTM C 534, Type II for sheet materials and Type I for tubular materials. For indoor applications insulation shall be listed and labelled to UL 723 or ASTM E84 Flame Spread and Smoke Developed ratings of 25/50 for thickness required. For duct applications, color shall be selected by the architect from manufacturer standard color options.
  - 1. **Manufacturers:** Subject to compliance with requirements, available products that may be incorporated into the Work include the following, or approved equal:
    - a. Armacell LLC; Armaflex ULTRA,
    - b. Or approved equal.
- H. Cellular Glass: Inorganic, incombustible, foamed or cellulated glass with annealed, rigid, hermetically sealed cells. Factory-applied jacket requirements are specified in "Factory-Applied Jackets" Article.
  - 1. **Manufacturers:** Subject to compliance with requirements, available manufacturers offering products that may be incorporated into the Work include the following, or approved equal:
    - a. Pittsburgh Corning Corporation,
    - b. Or approved equal.
  - 2. Block Insulation: ASTM C 552, Type I.
  - 3. Special-Shaped Insulation: ASTM C 552, Type III.
  - 4. Board Insulation: ASTM C 552, Type IV.
  - 5. Preformed Pipe Insulation with Factory-Applied ASJ-SSL: Comply with ASTM C 552, Type II, Class 2.
  - 6. Factory fabricate shapes according to ASTM C 450 and ASTM C 585.
- I. Mineral-Fiber (Fiberglass) Blanket Duct Insulation: Mineral or glass fibers bonded with a thermosetting resin. Comply with ASTM C 553, Type II and ASTM C 1290, Type I for insulation without jackets, Type II with factory-applied vinyl jacket, Type III with factory-applied FSK jacket or Type III with factory-applied FSP jacket. Factory-applied jacket requirements are specified in "Factory-Applied Jackets" Article.
  - 1. **Available Manufacturers:** Subject to compliance with requirements, available products that may be incorporated into the Work include the following, or approved equal:
    - a. CertainTeed Corp.; SoftTouch Duct Wrap,
    - b. Johns Manville; Microlite,
    - c. Knauf Insulation; Atmosphere Duct Wrap with ECOSE Technology,
    - d. Manson Insulation Inc.; Alley Wrap,
    - e. Owens Corning; SOFTR All-Service Duct Wrap,
    - f. Or approved equal.

- J. Rigid Mineral-Fiber (Fiberglass) Board Duct Insulation: Mineral or glass fibers bonded with a thermosetting resin. Comply with ASTM C 612, Type IA or Type IB.
1. For duct and plenum applications in mechanical rooms and concealed locations, provide insulation with factory applied FSK jacket.
  2. For duct and plenum applications exposed in occupied spaces, provide insulation with paintable factory applied ASJ jacket. Factory-applied jacket requirements are specified in "Factory-Applied Jackets" Article.
  3. Provide insulation with factory applied ASJ for equipment. Factory-applied jacket requirements are specified in "Factory-Applied Jackets" Article.
  4. **Available Manufacturers:** Subject to compliance with requirements, available products that may be incorporated into the Work include the following, or approved equal:
    - a. CertainTeed Corp.; Commercial Board,
    - b. Fibrex Insulations Inc.; FBX,
    - c. Johns Manville; 800 Series Spin-Glas,
    - d. Knauf Insulation; Earthwool Insulation Board with ECOSE Technology,
    - e. Manson Insulation Inc.; AK Board,
    - f. Owens Corning; Fiberglas 700 Series,
    - g. Or approved equal.
- K. Mineral-Fiber (Fiberglass), Preformed Pipe Insulation
1. Type I, 850 deg F (454 deg C) Materials: Mineral or glass fibers bonded with a thermosetting resin. Comply with ASTM C 547, Type I, Grade A, with factory and field installed jackets identified in pipe insulation schedules.
  2. Type II, 1200 deg F (649 deg C) Materials: Mineral or glass fibers bonded with a thermosetting resin. Comply with ASTM C 547, Type II, Grade A, with factory and field installed jackets identified in pipe insulation schedules.
  3. **Available Manufacturers:** Subject to compliance with requirements, available products that may be incorporated into the Work include the following, or approved equal:
    - a. Johns Manville; a Berkshire Hathaway company,
    - b. Knauf Insulation,
    - c. Manson Insulation Inc.,
    - d. Owens Corning,
    - e. Or approved equal.
- L. Polyisocyanurate: Prefabricated, rigid cellular polyisocyanurate material intended for use as piping thermal insulation. Comply with ASTM C591.
1. **Manufacturers:** Subject to compliance with requirements, available manufacturers offering products that may be incorporated into the Work include the following, or approved equal:
    - a. Johns Manville; a Berkshire Hathaway company,
    - b. Or approved equal.

2. Prefabricated insulation, with factory-applied ASJ or with factory-applied ASJ-SSL. Provide with specified field applied jacket.
3. Type IV, except thermal conductivity (k-value) do not exceed 0.19 Btu x in./h x sq. ft. x deg F at 75 deg F after 180 days of aging.
4. Flame-spread index is 25 or less, and smoke-developed index is 50 or less for thicknesses of up to 1.5 inch as tested in accordance with ASTM E84.
5. Fabricated shapes in accordance with ASTM C450 and ASTM C585.
6. Factory-applied jacket requirements are specified in "Factory-Applied Jackets" Article.

M. Semi-Rigid Mineral-Fiber (Fiberglass) Insulation

1. Duct Insulation: Mineral or glass fibers bonded with a thermosetting resin. Semi-rigid board material with factory-applied ASJ complying with ASTM C 1393, Type II or Type IIIA Category 2, or with properties similar to ASTM C 612, Type IB. Minimum nominal density is 2.5 lb/cu. ft.. Thermal conductivity (k-value) at 100 deg F is 0.29 Btu x in./h x sq. ft. x deg F or less. Factory-applied jacket requirements are specified in "Factory-Applied Jackets" Article.
2. Pipe and Tank Insulation: Mineral or glass fibers bonded with a thermosetting resin. Semi-rigid board material with factory-applied ASJ complying with ASTM C 1393, Type II or Type IIIA Category 2, or with properties similar to ASTM C 612, Type IB. Minimum nominal density is 2.5 lb/cu. ft.. Thermal conductivity (k-value) at 100 deg F is 0.29 Btu x in./h x sq. ft. x deg F or less. Factory-applied jacket requirements are specified in "Factory-Applied Jackets" Article.
3. [Available Manufacturers](#): Subject to compliance with requirements, available products that may be incorporated into the Work include the following, or approved equal:
  - a. CertainTeed Corp.; CrimpWrap,
  - b. Johns Manville; MicroFlex,
  - c. Knauf Insulation; Earthwool Pipe & Tank Insulation with ECOSE Technology,
  - d. Knauf Insulation: Kwik-Flex Pipe & Tank Insulation,
  - e. Manson Insulation Inc.; AK Flex,
  - f. Owens Corning; Fiberglas Pipe and Tank Insulation,
  - g. [Or approved equal.](#)

2.2 INSULATING CEMENTS

A. Mineral-Fiber Insulating Cement: Comply with ASTM C 195.

1. [Available Manufacturers](#): Subject to compliance with requirements, available products that may be incorporated into the Work include the following, or approved equal:
  - a. Ramco Insulation, Inc.; Super-Stik,
  - b. [Or approved equal.](#)

B. Expanded or Exfoliated Vermiculite Insulating Cement: Comply with ASTM C 196.

1. [Available Manufacturers](#): Subject to compliance with requirements, available products that may be incorporated into the Work include the following, or approved equal:

- a. Ramco Insulation, Inc.; Thermokote V,
  - b. Or approved equal.
- C. Mineral-Fiber, Hydraulic-Setting Insulating and Finishing Cement: Comply with ASTM C 449.
  - 1. Available Manufacturers: Subject to compliance with requirements, available products that may be incorporated into the Work include the following, or approved equal:
    - a. Ramco Insulation, Inc.; Ramcote 1200 and Quik-Cote,
    - b. Or approved equal.

## 2.3 ADHESIVES

- A. Materials shall be compatible with insulation materials, jackets, and substrates and for bonding insulation to itself and to surfaces to be insulated unless otherwise indicated.
  - 1. Adhesives shall have a VOC content of 250 g/L or less or less when calculated according to 40 CFR 59, Subpart D (EPA Method 24).
  - 2. Adhesive shall comply with the testing and product requirements of the California Department of Public Health's "Standard Method for the Testing and Evaluation of Volatile Organic Chemical Emissions from Indoor Sources Using Environmental Chambers." The building concentration of formaldehyde shall not exceed half of the indoor recommended exposure limit, 9 mcg/cu. m or 7 ppb, whichever is less, and that of acetaldehyde shall not exceed 9 mcg/cu. m.
- B. Flexible Elastomeric Adhesive: Comply with MIL-A-24179A, Type II, Class I.
  - 1. Available Manufacturers: Subject to compliance with requirements, available products that may be incorporated into the Work include the following, or approved equal:
    - a. Aeroflex USA, Inc.; Aeroseal Low VOC,
    - b. Armacell LLC; Armaflex 520BLV Adhesive,
    - c. K-Flex USA; 720-LVOC Contact Adhesive,
    - d. Foster Brand, Specialty Construction Brands, Inc., a business of H. B. Fuller Company; 85-75,
    - e. Or approved equal.
- C. Mineral-Fiber Adhesive: Comply with MIL-A-3316C, Class 2, Grade A.
  - 1. Available Manufacturers: Subject to compliance with requirements, available products that may be incorporated into the Work include the following, or approved equal:
    - a. Childers Brand, Specialty Construction Brands, Inc., a business of H. B. Fuller Company; CP-127,
    - b. Eagle Bridges - Marathon Industries; 225,
    - c. Foster Brand, Specialty Construction Brands, Inc., a business of H. B. Fuller Company; 85-60/85-70,
    - d. Or approved equal.
- D. ASJ, and FSK Jacket Adhesive: Comply with MIL-A-3316C, Class 2, Grade A for bonding insulation jacket lap seams and joints.

1. Available Manufacturers: Subject to compliance with requirements, available products that may be incorporated into the Work include the following, or approved equal:
  - a. Childers Brand, Specialty Construction Brands, Inc., a business of H. B. Fuller Company; CP-82,
  - b. Eagle Bridges - Marathon Industries; 225,
  - c. Foster Brand, Specialty Construction Brands, Inc., a business of H. B. Fuller Company; 85-50,
  - d. Mon-Eco Industries, Inc.; 22-25,
  - e. Or approved equal.
- E. PVC Jacket Adhesive: Compatible with PVC jacket.
  1. Available Manufacturers: Subject to compliance with requirements, available products that may be incorporated into the Work include the following, or approved equal:
    - a. Dow Corning Corporation; 739, Dow Silicone,
    - b. Johns Manville; Zeston Perma-Weld, CEEL-TITE Solvent Welding Adhesive,
    - c. P.I.C. Plastics, Inc.; Welding Adhesive,
    - d. Speedline Corporation; Polyco VP Adhesive,
    - e. Or approved equal.
- F. Calcium Silicate Adhesive: Fibrous, sodium-silicate-based adhesive with a service temperature range of 50 to 800 deg F Available Manufacturers: Subject to compliance with requirements, available products that may be incorporated into the Work include the following, or approved equal:
  - a. Childers Brand, Specialty Construction Brands, Inc., a business of H. B. Fuller Company; CP-97,
  - b. Eagle Bridges - Marathon Industries; 290,
  - c. Foster Brand, Specialty Construction Brands, Inc., a business of H. B. Fuller Company; 81-27,
  - d. Mon-Eco Industries, Inc.; 22-30,
  - e. Vimasco Corporation; 760,
  - f. Or approved equal.
- G. Cellular-Glass Adhesive: Two-component, thermosetting urethane adhesive containing no flammable solvents, with a service temperature range of minus 100 to plus 200 deg F.
  1. Available Manufacturers: Subject to compliance with requirements, available products that may be incorporated into the Work include the following, or approved equal:
    - a. Foster Brand, Specialty Construction Brands, Inc., a business of H. B. Fuller Company; 81-84,
    - b. Or approved equal.

## 2.4 MASTICS

- A. Materials shall be compatible with insulation materials, jackets, and substrates.

1. VOC Content: 300 g/L or less.
  2. Low-Emitting Materials: Mastic coatings shall comply with the testing and product requirements of the California Department of Public Health's "Standard Method for the Testing and Evaluation of Volatile Organic Chemical Emissions from Indoor Sources Using Environmental Chambers." The building concentration of formaldehyde shall not exceed half of the indoor recommended exposure limit, 9 mcg/cu. m or 7 ppb, whichever is less, and that of acetaldehyde shall not exceed 9 mcg/cu. m.
- B. Vapor-Barrier Mastic: Water based; suitable for indoor use on below ambient services.
1. **Available Manufacturers:** Subject to compliance with requirements, available products that may be incorporated into the Work include the following, or approved equal:
    - a. Foster Brand, Specialty Construction Brands, Inc., a business of H. B. Fuller Company; 30-80/30-90,
    - b. Vimasco Corporation; 749,
    - c. Or approved equal.
  2. Water-Vapor Permeance: ASTM E 96/E 96M, Procedure B, 0.013 perm at 43-mil dry film thickness.
  3. Service Temperature Range: Minus 20 to plus 180 deg F.
  4. Solids Content: ASTM D 1644, 58 percent by volume and 70 percent by weight.
  5. Color: White.
- C. Vapor-Barrier Mastic: Solvent based; suitable for outdoor use on below ambient services.
1. **Available Manufacturers:** Subject to compliance with requirements, available products that may be incorporated into the Work include the following, or approved equal:
    - a. Childers Brand, Specialty Construction Brands, Inc., a business of H. B. Fuller Company; Encacel,
    - b. Eagle Bridges - Marathon Industries; 570,
    - c. Foster Brand, Specialty Construction Brands, Inc., a business of H. B. Fuller Company; 60-95/60-96,
    - d. Or approved equal.
  2. Water-Vapor Permeance: ASTM F 1249, 0.05 perm at 30-mil dry film thickness.
  3. Service Temperature Range: Minus 50 to plus 220 deg F.
  4. Solids Content: ASTM D 1644, 33 percent by volume and 46 percent by weight.
  5. Color: White.
- D. Breather Mastic: Water based; suitable for indoor and outdoor use on above ambient services.
1. **Available Manufacturers:** Subject to compliance with requirements, available products that may be incorporated into the Work include the following, or approved equal:
    - a. Childers Brand, Specialty Construction Brands, Inc., a business of H. B. Fuller Company; CP-10,
    - b. Eagle Bridges - Marathon Industries; 550,

- c. Foster Brand, Specialty Construction Brands, Inc., a business of H. B. Fuller Company; 46-50,
  - d. Mon-Eco Industries, Inc.; 55-50,
  - e. Vimasco Corporation; WC-1/WC-5,
  - f. Or approved equal.
2. Water-Vapor Permeance: ASTM F 1249, 1.8 perms at 0.0625-inch dry film thickness.
  3. Service Temperature Range: Minus 20 to plus 180 deg F.
  4. Solids Content: 60 percent by volume and 66 percent by weight.
  5. Color: White.

## 2.5 LAGGING ADHESIVES

- A. Description: Comply with MIL-A-3316C, Class I, Grade A and shall be compatible with insulation materials, jackets, and substrates.
  1. Available Manufacturers: Subject to compliance with requirements, available products that may be incorporated into the Work include the following, or approved equal:
    - a. Childers Brand, Specialty Construction Brands, Inc., a business of H. B. Fuller Company; CP-50 AHV2,
    - b. Foster Brand, Specialty Construction Brands, Inc., a business of H. B. Fuller Company; 30-36,
    - c. Vimasco Corporation; 713 and 714,
    - d. Or approved equal.
  2. Adhesives shall have a VOC content of 250 g/L or less.
  3. Adhesive shall comply with the testing and product requirements of the California Department of Public Health's "Standard Method for the Testing and Evaluation of Volatile Organic Chemical Emissions from Indoor Sources Using Environmental Chambers." The building concentration of formaldehyde shall not exceed half of the indoor recommended exposure limit, 9 mcg/cu. m or 7 ppb, whichever is less, and that of acetaldehyde shall not exceed 9 mcg/cu. m.
  4. Fire-resistant, water-based lagging adhesive and coating for use indoors to adhere fire-resistant lagging cloths over duct insulation.
  5. Service Temperature Range: 0 to plus 180 deg F.
  6. Color: White.

## 2.6 SEALANTS

- A. FSK and Metal Jacket Flashing Sealants:
  1. Available Manufacturers: Subject to compliance with requirements, available products that may be incorporated into the Work include the following, or approved equal:
    - a. Childers Brand, Specialty Construction Brands, Inc., a business of H. B. Fuller Company; CP-76,

- b. Eagle Bridges - Marathon Industries; 405,
    - c. Foster Brand, Specialty Construction Brands, Inc., a business of H. B. Fuller Company; 95-44,
    - d. Mon-Eco Industries, Inc.; 44-05,
    - e. Or approved equal.
  2. Materials shall be compatible with insulation materials, jackets, and substrates.
  3. Fire- and water-resistant, flexible, elastomeric sealant.
  4. Service Temperature Range: Minus 40 to plus 250 deg F.
  5. Color: Aluminum.
  6. Sealant shall have a VOC content of 420 g/L or less.
  7. Sealant shall comply with the testing and product requirements of the California Department of Public Health's "Standard Method for the Testing and Evaluation of Volatile Organic Chemical Emissions from Indoor Sources Using Environmental Chambers." The building concentration of formaldehyde shall not exceed half of the indoor recommended exposure limit, 9 mcg/cu. m or 7 ppb, whichever is less, and that of acetaldehyde shall not exceed 9 mcg/cu. m.
- B. ASJ Flashing Sealants and PVC Flashing Sealants:
  1. Available Manufacturers: Subject to compliance with requirements, available products that may be incorporated into the Work include the following, or approved equal:
    - a. Childers Brand, Specialty Construction Brands, Inc., a business of H. B. Fuller Company; CP-76,
    - b. Or approved equal.
  2. Materials shall be compatible with insulation materials, jackets, and substrates.
  3. Fire- and water-resistant, flexible, elastomeric sealant.
  4. Service Temperature Range: Minus 40 to plus 250 deg F.
  5. Color: White.
- C. Joint Sealants:
  1. Available Manufacturers: Subject to compliance with requirements, available products that may be incorporated into the Work include the following, or approved equal:
    - a. Childers Brand, Specialty Construction Brands, Inc., a business of H. B. Fuller Company; CP-76,
    - b. Marathon Industries; 405,
    - c. Foster Brand, Specialty Construction Brands, Inc., a business of H. B. Fuller Company; 30-45,
    - d. Mon-Eco Industries, Inc.; 44-05,
    - e. Pittsburgh Corning Corporation; Pittseal 444,
    - f. Or approved equal.

## 2.7 FACTORY-APPLIED JACKETS

- A. Insulation system schedules indicate factory-applied jackets on various applications. When factory-applied jackets are indicated, comply with the following:
  - 1. ASJ: White, kraft-paper, fiberglass-reinforced scrim with aluminum-foil backing; complying with ASTM C 1136, Type I. Permeance of jacket shall not exceed 0.02 perm.
  - 2. ASJ-SSL: ASJ with self-sealing, pressure-sensitive, acrylic-based adhesive covered by a removable protective strip; complying with ASTM C 1136, Type I. Permeance of jacket shall not exceed 0.02 perm.
  - 3. FSK Jacket: Aluminum-foil, fiberglass-reinforced scrim with kraft-paper backing; complying with ASTM C 1136, Type II. Permeance of jacket shall not exceed 0.02 perm.

## 2.8 FIELD-APPLIED FABRIC-REINFORCING MESH

- A. Woven Glass-Fiber Fabric: Approximately 6 oz./sq. yd. with a thread count of 5 strands by 5 strands/sq. in. for covering ducts.
  - 1. **Available Manufacturers:** Subject to compliance with requirements, available products that may be incorporated into the Work include the following, or approved equal:
    - a. Childers Brand, Specialty Construction Brands, Inc., a business of H. B. Fuller Company; Chil-Glas No. 5,
    - b. Or approved equal
- B. Woven Polyester Fabric: Approximately 1 oz./sq. yd. with a thread count of 10 strands by 10 strands/sq. in., in a Leno weave, for ducts.
  - 1. **Available Manufacturers:** Subject to compliance with requirements, available products that may be incorporated into the Work include the following, or approved equal:
    - a. Foster Brand, Specialty Construction Brands, Inc., a business of H. B. Fuller Company; Mast-A-Fab,
    - b. Vimasco Corporation; Elastafab 894,
    - c. Or approved equal.

## 2.9 FIELD-APPLIED CLOTHS

- A. Woven Glass-Fiber Fabric: Comply with MIL-C-20079H, Type I, plain weave, and presized a minimum of 8 oz./sq. yd..
  - 1. **Available Manufacturers:** Subject to compliance with requirements, available products that may be incorporated into the Work include the following, or approved equal:
    - a. Alpha Associates, Inc.; Alpha-Maritex 84215 and 84217/9485RW, Luben 59,
    - b. Or approved equal.

## 2.10 FIELD-APPLIED JACKETS

- A. Field-applied jackets shall comply with ASTM C 921, Type I, unless otherwise indicated.
- B. Where glass-cloth jackets are indicated, install directly over bare insulation or insulation with factory-applied jackets.

1. Draw jacket smooth and tight to surface with 2-inch overlap at seams and joints.
  2. Embed glass cloth between two 0.062-inch- thick coats of lagging adhesive.
  3. Completely encapsulate insulation with coating, leaving no exposed insulation.
- C. Where FSK jackets are indicated, install as follows:
1. Draw jacket material smooth and tight.
  2. Install lap or joint strips with same material as jacket.
  3. Secure jacket to insulation with manufacturer's recommended adhesive.
  4. Install jacket with 1-1/2-inch laps at longitudinal seams and 3-inch- wide joint strips at end joints.
  5. Seal openings, punctures, and breaks in vapor-retarder jackets and exposed insulation with vapor-barrier mastic.
- D. Where PVC jackets are indicated, install with 1-inch overlap at longitudinal seams and end joints; for horizontal applications. Seal with manufacturer recommended adhesive.
1. Apply two continuous beads of adhesive to seams and joints, one bead under lap and the finish bead along seam and joint edge.
- E. Where metal jackets are indicated, install with 2-inch overlap at longitudinal seams and end joints. Overlap longitudinal seams arranged to shed water. Seal end joints with weatherproof sealant recommended by insulation manufacturer. Secure jacket with stainless-steel bands 12 inches OC and at end joints.
- F. FSK Jacket: Aluminum-foil-face, fiberglass-reinforced scrim with kraft-paper backing.
- G. PVC Jacket: 30 Mil, High-impact-resistant, UV-resistant PVC complying with ASTM D 1784, Class 16354-C; thickness as scheduled; roll stock ready for shop or field cutting and forming. Thickness is indicated in field-applied jacket schedules.
1. Available Manufacturers: Subject to compliance with requirements, available products that may be incorporated into the Work include the following, or approved equal:
    - a. [Johns Manville](#); Zeston,
    - b. [P.I.C. Plastics, Inc.](#); FG Series,
    - c. [Proto Corporation](#); LoSmoke,
    - d. [Speedline Corporation](#); SmokeSafe,
    - e. Or approved equal.
  2. Adhesive: As recommended by jacket material manufacturer.
  3. Color: White.
  4. Factory-fabricated tank heads and tank side panels.
- H. Metal Jacket:
1. [Available Manufacturers](#): Subject to compliance with requirements, available products that may be incorporated into the Work include the following, or approved equal:
    - a. [Childers Brand, Specialty Construction Brands, Inc.](#), a business of H. B. Fuller Company; Metal Jacketing Systems,

- b. [ITW Insulation Systems](#); Aluminum and Stainless Steel Jacketing,
  - c. [RPR Products, Inc.](#); Insul-Mate,
  - d. Or approved equal.
- 2. Aluminum Jacket: Comply with ASTM B 209, Alloy 3003, 3005, 3105, or 5005, Temper H-14.
  - a. Factory cut and rolled to size.
  - b. Finish and thickness are indicated in field-applied jacket schedules.
  - c. Moisture Barrier for Outdoor Applications: 3-mil- thick, heat-bonded polyethylene and kraft paper.
  - d. Factory-Fabricated Fitting Covers:
    - 1) Same material, finish, and thickness as jacket.
    - 2) Preformed two-piece or gore, 45- and 90-degree, short- and long-radius elbows.
    - 3) Tee covers.
    - 4) Flange and union covers.
    - 5) End caps.
    - 6) Beveled collars.
    - 7) Valve covers.
    - 8) Field fabricate fitting covers only if factory-fabricated fitting covers are not available.
- I. Underground Direct-Buried Piping Jacket: 125-mil- (3.2-mm-) thick vapor barrier and waterproofing membrane consisting of a rubberized bituminous resin reinforced with a woven-glass fiber or polyester scrim and laminated aluminum foil.
  - 1. [Available Manufacturers](#): Subject to compliance with requirements, available products that may be incorporated into the Work include the following, or approved equal:
    - a. [Pittsburgh Corning Corporation](#); Pittwrap,
    - b. [Polyguard Products, Inc.](#); Insulrap No Torch 125,
    - c. Or approved equal.
- J. Self-Adhesive Outdoor Jacket: Minimum 12 mil thick, vapor barrier and waterproofing membrane for installation over insulation located aboveground outdoors; UV resistant, zero permeability with white aluminum-foil facing, impact and tear resistant.
  - 1. [Available Manufacturers](#): Subject to compliance with requirements, available products that may be incorporated into the Work include the following, or approved equal:
    - a. [Polyguard Products, Inc.](#); Alumaguard CoolWrap,
    - b. Venture Tape Corporation; VentureClad (White Embossed),
    - c. Or approved equal.

2. Subject to compliance with requirements for thickness, UV resistance, tear resistance and permeability, flexible elastomeric insulation manufacturer cladding may be used for outdoor insulation in lieu of field installed jacketing.

## 2.11 TAPES

- A. ASJ Tape: White vapor-retarder tape matching factory-applied jacket with acrylic adhesive, complying with ASTM C 1136.
  1. **Available Manufacturers:** Subject to compliance with requirements, available products that may be incorporated into the Work include the following, or approved equal:
    - a. **ABI, Ideal Tape Division;** 428 AWF ASJ,
    - b. **Avery Dennison Corporation, Specialty Tapes Division;** Fasson 0836,
    - c. **Compac Corporation;** 104 and 105,
    - d. **Venture Tape;** 1540 CW Plus, 1542 CW Plus, and 1542 CW Plus/SQ,
    - e. **Knauf Insulation; EXPERT Tapes:** ASJ+ Tape OR ASJ Tape,
    - f. Or approved equal.
  2. Width: minimum 3 inches.
  3. Thickness: minimum 11.5 mils.
  4. Adhesion: 90 ounces force/inch in width.
  5. Elongation: 2 percent.
  6. Tensile Strength: 40 lbf/inch in width.
  7. ASJ Tape Disks and Squares: Precut disks or squares of ASJ tape.
- B. FSK Tape: Foil-face, vapor-retarder tape matching factory-applied jacket with acrylic adhesive; complying with ASTM C 1136.
  1. **Available Manufacturers:** Subject to compliance with requirements, available products that may be incorporated into the Work include the following, or approved equal:
    - a. **ABI, Ideal Tape Division;** 491 AWF FSK,
    - b. **Avery Dennison Corporation, Specialty Tapes Division;** Fasson 0827,
    - c. **Compac Corporation;** 110 and 111,
    - d. **Venture Tape;** 1525 CW NT, 1528 CW, and 1528 CW/SQ,
    - e. **Knauf Insulation; EXPERT Tapes:** FSK Tape,

- f. Or approved equal.
  2. Width: minimum 3 inches.
  3. Thickness: minimum 6.5 mils.
  4. Adhesion: 90 ounces force/inch in width.
  5. Elongation: 2 percent.
  6. Tensile Strength: 40 lbf/inch in width.
  7. FSK Tape Disks and Squares: Precut disks or squares of FSK tape.
- C. PVC Tape: White vapor-retarder tape matching field-applied PVC jacket with acrylic adhesive; suitable for indoor and outdoor applications.
1. Available Manufacturers: Subject to compliance with requirements, available products that may be incorporated into the Work include the following, or approved equal:
    - a. [ABI, Ideal Tape Division](#); 370 White PVC tape,
    - b. [Compac Corporation](#); 130,
    - c. [Venture Tape](#); 1506 CW NS,
    - d. Or approved equal.
  2. Width: 2 inches.
  3. Thickness: 6 mils.
  4. Adhesion: 64 ounces force/inch in width.
  5. Elongation: 500 percent.
  6. Tensile Strength: 18 lbf/inch in width.
- D. Aluminum-Foil Tape: Vapor-retarder tape with acrylic adhesive.
1. Available Manufacturers: Subject to compliance with requirements, available products that may be incorporated into the Work include the following, or approved equal:
    - a. [ABI, Ideal Tape Division](#); 488 AWF,
    - b. [Avery Dennison Corporation](#), Specialty Tapes Division; Fasson 0800,
    - c. [Compac Corporation](#); 120,
    - d. [Venture Tape](#); 3520 CW,
    - e. Knauf Insulation; EXPERT Tapes: 2 MIL Foil Tape,
    - f. Or approved equal.
  2. Width: minimum 2 inches.
  3. Thickness: minimum 3.7 mils.
  4. Adhesion: 100 ounces force/inch in width.
  5. Elongation: 5 percent.
  6. Tensile Strength: 34 lbf/inch in width.

## 2.12 SECUREMENTS

### A. Bands:

1. **Available Manufacturers:** Subject to compliance with requirements, available products that may be incorporated into the Work include the following, or approved equal:
  - a. **ITW Insulation Systems;** Gerrard Strapping and Seals.
  - b. **RPR Products, Inc.;** Insul-Mate Strapping, Seals, and Springs.
  - c. Or approved equal.
2. Wing seals are primarily used for fastening bands together. Closed seals are occasionally used for large, 84-inch- diameter applications and where fastening bands are used with springs. Wing seals are reusable; closed seals are not.
3. Stainless Steel: ASTM A 167 or ASTM A 240/A 240M, Type 304; 1/2 inch wide with wing seal.
4. Aluminum: ASTM B 209, Alloy 3003, 3005, 3105, or 5005; Temper H-14, 1/2 inch wide with wing seal.
5. Springs: Twin spring set constructed of stainless steel with ends flat and slotted to accept metal bands. Spring size determined by manufacturer for application.

### B. Insulation Pins and Hangers:

1. Capacitor-Discharge-Weld Pins: Copper- or zinc-coated steel pin, fully annealed for capacitor-discharge welding, 0.106-inch- or 0.135-inch- diameter shank, length to suit depth of insulation indicated.
  - a. **Available Manufacturers:** Subject to compliance with requirements, available products that may be incorporated into the Work include the following, or approved equal:
    - 1) **AGM Industries, Inc.;** CWP-1
    - 2) **GEMCO;** CD
    - 3) **Midwest Fasteners, Inc.;** CD
    - 4) **Nelson Stud Welding;** TPA, TPC, and TPS.
    - 5) Or approved equal.
2. Cupped-Head, Capacitor-Discharge-Weld Pins: Copper- or zinc-coated steel pin, fully annealed for capacitor-discharge welding, 0.106-inch- or 0.135-inch- diameter shank, length to suit depth of insulation indicated with integral 1-1/2-inch galvanized carbon-steel washer.
  - a. **Available Manufacturers:** Subject to compliance with requirements, available products that may be incorporated into the Work include the following, or approved equal:
    - 1) **AGM Industries, Inc.;** CHP-1.
    - 2) **GEMCO;** Cupped Head Weld Pin.
    - 3) **Midwest Fasteners, Inc.;** Cupped Head.

- 4) Nelson Stud Welding; CHP.
  - 5) Or approved equal.
3. Metal, Adhesively Attached, Perforated-Base Insulation Hangers: Baseplate welded to projecting spindle that is capable of holding insulation, of thickness indicated, and securely in position indicated when self-locking washer is in place. Comply with the following requirements:
  - a. **Available Manufacturers:** Subject to compliance with requirements, available products that may be incorporated into the Work include the following, or approved equal:
    - 1) AGM Industries, Inc.; Tactoo Perforated Base Insul-Hangers.
    - 2) GEMCO; Perforated Base.
    - 3) Midwest Fasteners, Inc.; Spindle.
    - 4) Or approved equal.
  - b. Baseplate: Perforated, galvanized carbon-steel sheet, 0.030 inch thick by 2 inches square.
  - c. Spindle: Copper- or zinc-coated, low-carbon steel, or Aluminum, or Stainless steel, fully annealed, 0.106-inch- diameter shank, length to suit depth of insulation indicated.
  - d. Adhesive: Recommended by hanger manufacturer. Product with demonstrated capability to bond insulation hanger securely to substrates indicated without damaging insulation, hangers, and substrates.
4. Nonmetal, Adhesively Attached, Perforated-Base Insulation Hangers: Baseplate fastened to projecting spindle that is capable of holding insulation, of thickness indicated, and securely in position indicated when self-locking washer is in place. Comply with the following requirements:
  - a. **Available Manufacturers:** Subject to compliance with requirements, available products that may be incorporated into the Work include the following, or approved equal:
    - 1) GEMCO; Nylon Hangers.
    - 2) Midwest Fasteners, Inc.; Nylon Insulation Hangers.
    - 3) Or approved equal.
  - b. Baseplate: Perforated, nylon sheet, 0.030 inch thick by 1-1/2 inches in diameter.
  - c. Spindle: Nylon, 0.106-inch- diameter shank, length to suit depth of insulation indicated, up to 2-1/2 inches.
  - d. Adhesive: Recommended by hanger manufacturer. Product with demonstrated capability to bond insulation hanger securely to substrates indicated without damaging insulation, hangers, and substrates.
5. Self-Sticking-Base Insulation Hangers: Baseplate welded to projecting spindle that is capable of holding insulation, of thickness indicated, and securely in position indicated when self-locking washer is in place. Comply with the following requirements:

- a. **Available Manufacturers:** Subject to compliance with requirements, available products that may be incorporated into the Work include the following, or approved equal:
    - 1) AGM Industries, Inc; Tactoo Self-Adhering Insul-Hangers.
    - 2) GEMCO; Peel and Press.
    - 3) Midwest Fasteners, Inc.; Self Stick.
    - 4) Or approved equal.
  - b. Baseplate: Galvanized carbon-steel sheet, 0.030 inch thick by 2 inches square.
  - c. Spindle: Copper- or zinc-coated, low-carbon steel, or Aluminum, or Stainless steel, fully annealed, 0.106-inch- diameter shank, length to suit depth of insulation indicated.
  - d. Adhesive-backed base with a peel-off protective cover.
6. Insulation-Retaining Washers: Self-locking washers formed from 0.016-inch- thick, galvanized-steel, or aluminum, or stainless-steel sheet matching hanger materials, with beveled edge sized to hold insulation securely in place but not less than 1-1/2 inches in diameter.
- a. **Available Manufacturers:** Subject to compliance with requirements:
    - 1) AGM Industries, Inc.; RC-150,
    - 2) GEMCO; R-150,
    - 3) Midwest Fasteners, Inc.; WA-150,
    - 4) Nelson Stud Welding; Speed Clips.
    - 5) Or approved equal.
  - b. Protect ends with capped self-locking washers incorporating a spring steel insert to ensure permanent retention of cap in exposed locations.
7. Nonmetal Insulation-Retaining Washers: Self-locking washers formed from 0.016-inch-thick nylon sheet, with beveled edge sized to hold insulation securely in place but not less than 1-1/2 inches in diameter.
- a. **Available Manufacturers:** Subject to compliance with requirements, available manufacturers offering products that may be incorporated into the Work include the following, or approved equal:
    - 1) GEMCO,
    - 2) Midwest Fasteners, Inc.,
    - 3) Or approved equal.
- C. Staples: Outward-clinching insulation staples, nominal 3/4-inch- wide, stainless steel or Monel.
- D. Wire: 0.062-inch soft-annealed, stainless steel.
- 1. **Available Manufacturers:** Subject to compliance with requirements, available manufacturers offering products that may be incorporated into the Work include the following, or approved equal:

- a. C and F Wire,
- b. Or approved equal.

## 2.13 CORNER ANGLES

- A. PVC Corner Angles: 30 mils thick, minimum 1 by 1 inch, PVC according to ASTM D 1784, Class 16354-C. White or color-coded to match adjacent surface.
- B. Aluminum Corner Angles: 0.040 inch thick, minimum 1 by 1 inch, aluminum according to ASTM B 209, Alloy 3003, 3005, 3105, or 5005; Temper H-14.
- C. Stainless-Steel Corner Angles: 0.024 inch thick, minimum 1 by 1 inch, stainless steel according to ASTM A 167 or ASTM A 240/A 240M, Type 304 or Type 316.

## PART 3 - EXECUTION

### 3.1 EXAMINATION

- A. Examine substrates and conditions for compliance with requirements for installation tolerances and other conditions affecting performance of insulation application.
  - 1. Verify that systems and equipment to be insulated have been tested and are free of defects.
  - 2. Verify that surfaces to be insulated are clean and dry.
- B. Proceed with installation only after unsatisfactory conditions have been corrected.

### 3.2 PREPARATION

- A. Duct Surface Preparation: Clean and dry surfaces to receive insulation. Remove materials that will adversely affect insulation application including dirt, scale, oil, rust and other foreign matter.
- B. Equipment Surface Preparation: Clean and dry surfaces to receive insulation. Remove materials that will adversely affect insulation application.
- C. Piping Surface Preparation: Clean and dry surfaces to receive insulation. Remove materials that will adversely affect insulation application.
- D. Coordinate insulation installation with the trade installing heat tracing. Comply with requirements for heat tracing that apply to insulation.
- E. Mix insulating cements with clean potable water; if insulating cements are to be in contact with stainless-steel surfaces, use demineralized water.

### 3.3 GENERAL INSTALLATION REQUIREMENTS

- A. Protect insulation from exposure to moisture prior to and after installation. All insulation other than flexible elastomeric that becomes wet shall be replaced at no cost to the project.
- B. Install insulation after systems have been tested, proved tight. Remove dirt, scale, oil, rust and other foreign matter prior to installation of insulation.

- C. Install insulation, mastics, adhesives, coatings, covers, weather-protection and other work in accordance with manufacturer's recommendations. Install accessories compatible with insulation materials and suitable for the service. Install accessories that do not corrode, soften, or otherwise attack insulation or jacket in either wet or dry state.
- D. Install insulation with longitudinal seams at top and bottom of horizontal runs.
- E. Install multiple layers of insulation with longitudinal and end seams staggered.
- F. Keep insulation materials dry during application and finishing.
- G. Install insulation with tight longitudinal seams and end joints. Bond seams and joints with adhesive recommended by insulation material manufacturer.
- H. Install insulation with least number of joints practical.
- I. Where vapor barrier is indicated, seal joints, seams, and penetrations in insulation at hangers, supports, anchors, and other projections with vapor-barrier mastic. Leakage in vapor barrier or voids in insulation will not be accepted.
  - 1. Install insulation continuously through hangers and around anchor attachments.
  - 2. For insulation application where vapor barriers are indicated and cannot be maintained at hanger penetrations, extend insulation on anchor legs from point of attachment to supported item to point of attachment to structure. Taper and seal ends at attachment to structure with vapor-barrier mastic.
  - 3. Where blanket type duct insulation is used, provide a 6-inch long full perimeter section of rigid board insulation with vapor barrier at each unistrut and angle iron support. Seal joints between rigid board and blanket insulation vapor barriers with vapor-barrier mastic.
  - 4. Install insulated insert materials and install insulation to tightly join the insert. Seal insulation to insulation inserts with adhesive or sealing compound recommended by insulation material manufacturer.
  - 5. Cover inserts with jacket material matching adjacent insulation. Install shields over jacket, arranged to protect jacket from tear or puncture by hanger, support, and shield.
- J. Apply adhesives, mastics, and sealants at manufacturer's recommended coverage rate and wet and dry film thicknesses.
- K. Install insulation with factory-applied non-self-sealing jackets as follows:
  - 1. Draw jacket tight and smooth.
  - 2. Cover circumferential joints with 3-inch- wide strips, of same material as insulation jacket. Secure strips with adhesive and outward clinching staples along both edges of strip, spaced 4 inches OC
  - 3. Overlap jacket longitudinal seams at least 1-1/2 inches. Clean and dry surface to receive self-sealing lap. Staple laps with outward clinching staples along edge at manufacturer recommended spacing but space no further than 4 inches OC
    - a. For below ambient services, apply vapor-barrier mastic over staples.
  - 4. Cover joints and seams with tape, according to insulation material manufacturer's written instructions, to maintain vapor seal.
- L. Install insulation with self-sealing factory-applied jackets as follows:

1. Locate all longitudinal pipe insulation jacketing laps in least visible location.
  2. Draw jacket tight and smooth.
  3. For proper sealing, seal lap joints with reasonable pressure being applied with a plastic squeegee or sealing tool.
  4. Vapor seal all circumferential joints with factory furnished matching pressure sensitive butt strips installed with reasonable pressure being applied with a plastic squeegee or sealing tool.
- M. Cut insulation in a manner to avoid compressing insulation more than 75 percent of its nominal thickness.
- N. Finish installation with systems at operating conditions. Repair joint separations and cracking due to thermal movement.
- O. Repair damaged insulation facings by applying same facing material over damaged areas. Extend patches at least 4 inches beyond damaged areas. Adhere, staple, and seal patches similar to butt joints.
- P. Insulate flex connections to same thickness as material as adjoining system
- Q. Duct Insulation Requirements:
1. Install insulation materials, accessories, and finishes with smooth, straight, and even surfaces; free of voids throughout the length of ducts and fittings.
  2. Install insulation materials, vapor barriers or retarders, jackets, and thicknesses required for each item of duct system as specified in insulation system schedules.
  3. Insulate standing seams with same material and thickness as duct.
  4. Where vapor barriers are indicated, apply vapor-barrier mastic on seams and joints and at ends adjacent to duct flanges and fittings.
  5. Insulate flex connections to same thickness as material as adjoining ductwork.
- R. Equipment Insulation Requirements:
1. Install insulation materials, accessories, and finishes with smooth, straight, and even surfaces; free of voids throughout the length of equipment.
  2. Install insulation materials, forms, vapor barriers or retarders, jackets, and thicknesses required for each item of equipment as specified in insulation system schedules.
  3. For above ambient services, do not install insulation to the following:
    - a. Vibration-control devices.
    - b. Testing agency labels and stamps.
    - c. Nameplates and data plates.
    - d. Manholes.
    - e. Handholes.
    - f. Cleanouts.
- S. Piping Insulation Requirements:

1. Install insulation materials, accessories, and finishes with smooth, straight, and even surfaces; free of voids throughout the length of piping including fittings, valves, and specialties.
2. Install insulation materials, forms, vapor barriers or retarders, jackets, and thicknesses required for each item of pipe system as specified in insulation system schedules.
3. For piping systems operating below 60 deg F, seal ends of pipe insulation onto the jacket and seal insulation onto the pipe with approved fire-retardant vapor barrier mastic, at flanges, valves and fittings and at intervals of no more than every fourth section of pre-formed insulation or 20 feet on continuous runs of piping whichever is less.
4. Do not weld brackets, clips, or other attachment devices to piping, fittings, and specialties.
5. Insulate flex connections to same thickness as material as adjoining piping.
6. For above ambient services, do not install insulation to the following:
  - a. Vibration-control devices.
  - b. Testing agency labels and stamps.
  - c. Nameplates and data plates.
  - d. Manholes.
  - e. Handholes.
  - f. Cleanouts.

### 3.4 PENETRATIONS

- A. Insulation Installation at Roof Penetrations: Install insulation continuously through roof penetrations.
  1. Seal penetrations with flashing sealant.
  2. For applications requiring only indoor insulation, terminate insulation above roof surface and seal with joint sealant.
  3. For applications requiring indoor and outdoor insulation, install insulation for outdoor applications tightly joined to indoor insulation ends. Seal joint with joint sealant.
    - a. For insulated piping penetrating the building roof, insulate section of piping passing through from 6 inches inside the envelope to 6 inches above the end of the sleeve with a section of rigid polyisocyanurate pipe insulation with thickness to match outdoor insulation thickness. Provide section with field applied aluminum jacket with moisture barrier over entire section passing through the sleeve. Seal all insulation joints and section ends with vapor retarder mastic.
  4. Extend jacket of outdoor insulation outside roof flashing at least 2 inches below top of roof flashing.
  5. Seal jacket to roof flashing with flashing sealant.
- B. Insulation Installation at Underground Exterior Wall Penetrations: Terminate insulation flush with sleeve seal. Seal terminations with flashing sealant.
- C. Insulation Installation at Aboveground Exterior Wall Penetrations: Install insulation continuously through wall penetrations.

1. Seal penetrations with flashing sealant.
  2. For applications requiring only indoor insulation, terminate insulation inside wall surface and seal with joint sealant.
  3. For applications requiring indoor and outdoor insulation, install insulation for outdoor applications tightly joined to indoor insulation ends. Seal joint with joint sealant.
    - a. For insulated piping penetrating the building exterior walls, insulate section of piping passing through from 6 inches inside the envelope to 6 inches past the end of the sleeve with a section of rigid polyisocyanurate pipe insulation with thickness to match outdoor insulation thickness. Provide section with field applied aluminum jacket with moisture barrier over entire section passing through the sleeve. Seal all insulation joints and section ends with vapor retarder mastic.
  4. Extend jacket of outdoor insulation outside wall flashing and overlap wall flashing at least 2 inches.
  5. Seal jacket to wall flashing with flashing sealant.
  - D. Insulation Installation at Interior Wall and Partition Penetrations (That Are Not Fire-Rated): Install insulation continuously through walls and partitions.
  - E. Ductwork Insulation Installation at Fire-Rated Wall and Partition Penetrations: Terminate insulation at fire damper sleeves for fire-rated wall and partition penetrations. Externally insulate damper sleeves to match adjacent insulation and overlap duct insulation at least 2 inches.
    1. Comply with requirements in Division 07 for firestopping and fire-resistive joint sealers.
  - F. Duct Insulation Installation at Floor Penetrations:
    1. Duct: For penetrations through fire-rated assemblies, terminate insulation at fire damper sleeves and externally insulate damper sleeve beyond floor to match adjacent duct insulation. Overlap damper sleeve and duct insulation at least 2 inches.
    2. Seal penetrations through fire-rated assemblies. Comply with requirements in Division 07.
  - G. Piping Insulation Installation at Fire-Rated Wall and Partition Penetrations: Install insulation continuously through penetrations of fire-rated walls and partitions.
    1. Comply with requirements in Division 07 for firestopping and fire-resistive joint sealers.
  - H. Piping Insulation Installation at Floor Penetrations:
    1. Pipe: Install insulation continuously through floor penetrations.
    2. Seal penetrations through fire-rated assemblies. Comply with requirements in Division 07.
- 3.5 INSTALLATION OF FLEXIBLE ELASTOMERIC INSULATION
- A. Seal longitudinal seams and end joints with manufacturer recommended adhesive to eliminate openings in insulation that allow passage of air to surface being insulated.
  - B. Insulation Installation on Pipe Flanges:
    1. Install pipe insulation to outer diameter of pipe flange.

2. Make width of insulation section same as overall width of flange and bolts, plus twice the thickness of pipe insulation.
  3. Fill voids between inner circumference of flange insulation and outer circumference of adjacent straight pipe segments with cut sections of sheet insulation of same thickness as pipe insulation.
  4. Secure insulation to flanges and seal seams with manufacturer recommended adhesive to eliminate openings in insulation that allow passage of air to surface being insulated.
- C. Insulation Installation on Pipe Fittings and Elbows:
1. Install mitered sections of pipe insulation.
  2. Secure insulation materials and seal seams with manufacturer's recommended adhesive to eliminate openings in insulation that allow passage of air to surface being insulated.
- D. Insulation Installation on Valves and Pipe Specialties:
1. Install removable preformed valve covers and covers for specialties manufactured of same material as pipe insulation when available.
  2. When preformed valve covers are not available, install cut sections of pipe and sheet insulation to valve body or specialties. Arrange insulation to permit access to packing and to allow operation without disturbing insulation.
  3. Install insulation to flanges as specified for flange insulation application.
- E. Secure insulation to valves and specialties and seal seams with manufacturer's recommended adhesive to eliminate openings in insulation that allow passage of air to surface being insulated.

### 3.6 INSTALLATION OF MINERAL-FIBER INSULATION

- A. Blanket Insulation Installation on Ducts and Plenums: Secure with adhesive and insulation pins.
1. Apply adhesives according to manufacturer's recommended coverage rates per unit area recommended by the insulation manufacturer but no less than for 50 percent coverage of duct and plenum surfaces.
  2. Apply adhesive to entire circumference of ducts and to all surfaces of fittings and transitions.
  3. Install either capacitor-discharge-weld pins and speed washers or cupped-head, capacitor-discharge-weld pins on sides and bottom of horizontal ducts and sides of vertical ducts as follows:
    - a. On duct sides with dimensions 18 inches and smaller, place pins along longitudinal centerline of duct. Space 3 inches maximum from insulation end joints, and 16 inches OC
    - b. On duct sides with dimensions larger than 18 inches, place pins 16 inches OC each way, and 3 inches maximum from insulation joints. Install additional pins to hold insulation tightly against surface at cross bracing.
    - c. Pins may be omitted from top surface of horizontal, rectangular ducts and plenums.
    - d. Do not over compress insulation during installation. Maximum allowable compressions shall be as recommended by the insulation manufacturer.
    - e. Impale insulation over pins and attach speed washers.

- f. Cut excess portion of pins extending beyond speed washers or bend parallel with insulation surface. Cover exposed pins and washers with tape matching insulation facing.
  - 4. For ducts and plenums with surface temperatures below ambient, install a continuous unbroken vapor barrier. Create a facing lap for longitudinal seams and end joints with insulation by removing 2 inches from one edge and one end of insulation segment. Secure laps to adjacent insulation section with 1/2-inch outward-clinching staples, 1 inch OC. Install vapor barrier consisting of factory- or field-applied jacket, adhesive, vapor-barrier mastic, and sealant at joints, seams, and protrusions.
    - a. Repair punctures, tears, and penetrations with tape or mastic to maintain vapor-barrier seal.
    - b. Install vapor stops for ductwork and plenums operating below 50 deg F at 20-foot intervals. Vapor stops shall consist of vapor-barrier mastic applied in a Z-shaped pattern over insulation face, along butt end of insulation, and over the surface. Cover insulation face and surface to be insulated a width equal to two times the insulation thickness, but not less than 3 inches.
  - 5. Overlap unfaced blankets a minimum of 2 inches on longitudinal seams and end joints. At end joints, secure with steel bands spaced a maximum of 18 inches OC.
  - 6. Install insulation on rectangular duct elbows and transitions with a full insulation section for each surface. Install insulation on round and flat-oval duct elbows with individually mitered gores cut to fit the elbow.
  - 7. Insulate duct stiffeners, hangers, and flanges that protrude beyond insulation surface with 6-inch- wide strips of same material used to insulate duct. Secure on alternating sides of stiffener, hanger, and flange with pins spaced 6 inches OC.
- B. Board Insulation Installation on Ducts and Plenums: Secure with adhesive and insulation pins.
  - 1. Apply adhesives according to manufacturer's recommended coverage rates per unit area recommended by the insulation manufacturer but no less than for 50 percent coverage of duct and plenum surfaces.
  - 2. Apply adhesive to entire circumference of ducts and to all surfaces of fittings and transitions.
  - 3. Install either capacitor-discharge-weld pins and speed washers or cupped-head, capacitor-discharge-weld pins on sides and bottom of horizontal ducts and sides of vertical ducts as follows:
    - a. On duct sides with dimensions 18 inches and smaller, place pins along longitudinal centerline of duct. Space 3 inches maximum from insulation end joints, and 16 inches OC.
    - b. On duct sides with dimensions larger than 18 inches, space pins 16 inches OC each way, and 3 inches maximum from insulation joints. Install additional pins to hold insulation tightly against surface at cross bracing.
    - c. Pins may be omitted from top surface of horizontal, rectangular ducts and plenums.
    - d. Do not over-compress insulation during installation.
    - e. Cut excess portion of pins extending beyond speed washers or bend parallel with insulation surface. Cover exposed pins and washers with tape matching insulation facing.

4. For ducts and plenums with surface temperatures below ambient, install a continuous unbroken vapor barrier. Create a facing lap for longitudinal seams and end joints with insulation by removing 2 inches from one edge and one end of insulation segment. Secure laps to adjacent insulation section with 1/2-inch outward-clinching staples, 1 inch OC. Install vapor barrier consisting of factory- or field-applied jacket, adhesive, vapor-barrier mastic, and sealant at joints, seams, and protrusions.
    - a. Repair punctures, tears, and penetrations with tape or mastic to maintain vapor-barrier seal.
    - b. Install vapor stops for ductwork and plenums operating below 50 deg F at 18-foot intervals. Vapor stops shall consist of vapor-barrier mastic applied in a Z-shaped pattern over insulation face, along butt end of insulation, and over the surface. Cover insulation face and surface to be insulated a width equal to two times the insulation thickness, but not less than 3 inches.
  5. Install insulation on rectangular duct elbows and transitions with a full insulation section for each surface. Groove and score insulation to fit as closely as possible to outside and inside radius of elbows. Install insulation on round and flat-oval duct elbows with individually mitered gores cut to fit the elbow.
  6. Insulate duct stiffeners, hangers, and flanges that protrude beyond insulation surface with 6-inch- wide strips of same material used to insulate duct. Secure on alternating sides of stiffener, hanger, and flange with pins spaced 6 inches OC.
- C. Insulation Installation on Straight Pipes and Tubes:
1. Secure each layer of preformed pipe insulation to pipe with wire or bands and tighten bands without deforming insulation materials.
  2. Where vapor barriers are indicated, seal longitudinal seams, end joints, and protrusions with vapor-barrier mastic and joint sealant.
  3. For insulation with factory-applied jackets on above-ambient surfaces, secure using the self-seal system per manufacturer's recommendations or for non-self-seal systems, secure laps with outward-clinched staples at 6 inches OC.
  4. For insulation with factory-applied jackets on below-ambient surfaces, secure using the self-seal systems per manufacturer's recommendations, or for non-self-seal systems, do not staple longitudinal tabs. Instead, secure tabs with additional adhesive as recommended by insulation material manufacturer and seal with vapor-barrier mastic and flashing sealant.
- D. Insulation Installation on Pipe Flanges:
1. Install preformed pipe insulation to outer diameter of pipe flange.
  2. Make width of insulation section same as overall width of flange and bolts, plus twice the thickness of pipe insulation.
  3. Fill voids between inner circumference of flange insulation and outer circumference of adjacent straight pipe segments with mineral-fiber blanket insulation.
  4. Install jacket material with manufacturer's recommended adhesive, overlap seams at least 1 inch, and seal joints with flashing sealant.
- E. Insulation Installation on Pipe Fittings and Elbows:

1. Install preformed sections of same material as straight segments of pipe insulation when available.
2. When preformed insulation elbows and fittings are not available, install mitered sections of pipe insulation, to a thickness equal to adjoining pipe insulation. Secure insulation materials with wire or bands.

**F. Insulation Installation on Valves and Pipe Specialties:**

1. Install removable preformed sections of same material as straight segments of pipe insulation when available.
2. When preformed sections are not available, install mitered sections of pipe insulation to valve body and specialties.
3. Arrange insulation to permit access to packing and to allow operation without disturbing insulation.
4. Install insulation to flanges as specified for flange insulation application.

**3.7 FIELD-APPLIED JACKET INSTALLATION**

- A.** Where glass-cloth jackets are indicated, install directly over bare insulation or insulation with factory-applied jackets.
1. Draw jacket smooth and tight to surface with 2-inch overlap at seams and joints.
  2. Embed glass cloth between two 0.062-inch- thick coats of lagging adhesive.
  3. Completely encapsulate insulation with coating, leaving no exposed insulation.
- B.** Where FSK jackets are indicated, install as follows:
1. Draw jacket material smooth and tight.
  2. Install lap or joint strips with same material as jacket.
  3. Secure jacket to insulation with manufacturer's recommended adhesive.
  4. Install jacket with 1-1/2-inch laps at longitudinal seams and 3-inch- wide joint strips at end joints.
  5. Seal openings, punctures, and breaks in vapor-retarder jackets and exposed insulation with vapor-barrier mastic.
- C.** Where PVC jackets are indicated, install with 1-inch (25-mm) overlap at longitudinal seams and end joints; for horizontal applications. Seal with manufacturer recommended adhesive.
1. Apply two continuous beads of adhesive to seams and joints, one bead under lap and the finish bead along seam and joint edge.
- D.** Where metal jackets are indicated, install with 2-inch overlap at longitudinal seams and end joints. Overlap longitudinal seams arranged to shed water. Seal end joints with weatherproof sealant recommended by insulation manufacturer. Secure jacket with stainless-steel bands 12 inches OC and at end joints.

**3.8 INSTALLATION OF EQUIPMENT, TANK, AND VESSEL INSULATION**

- A.** Mineral-Fiber, Pipe and Tank Insulation Installation for Tanks and Vessels: Secure insulation with adhesive and anchor pins and speed washers.

1. Apply adhesives according to manufacturer's recommended coverage rates per unit area recommended by the insulation manufacturer but no less than for 50 percent coverage of tank and vessel surfaces.
  2. Groove and score insulation materials to fit as closely as possible to equipment, including contours. Bevel insulation edges for cylindrical surfaces for tight joints. Stagger end joints.
  3. Protect exposed corners with secured corner angles.
  4. Install adhesively attached or self-sticking insulation hangers and speed washers on sides of tanks and vessels as follows:
    - a. Do not weld anchor pins to ASME-labeled pressure vessels.
    - b. Select insulation hangers and adhesive that are compatible with service temperature and with substrate.
    - c. On tanks and vessels, maximum anchor-pin spacing is 3 inches from insulation end joints, and 16 inches OC in both directions.
    - d. Do not over-compress insulation during installation.
    - e. Cut and miter insulation segments to fit curved sides and domed heads of tanks and vessels.
    - f. Impale insulation over anchor pins and attach speed washers.
    - g. Cut excess portion of pins extending beyond speed washers or bend parallel with insulation surface. Cover exposed pins and washers with tape matching insulation facing.
  5. Secure each layer of insulation with stainless-steel or aluminum bands. Select band material compatible with insulation materials.
  6. Where insulation hangers on equipment and vessels are not permitted or practical and where insulation support rings are not provided, install a girdle network for securing insulation. Stretch pre-stressed aircraft cable around the diameter of vessel and make taut with clamps, turnbuckles, or breather springs. Place one circumferential girdle around equipment approximately 6 inches from each end. Install wire or cable between two circumferential girdles 12 inches OC. Install a wire ring around each end and around outer periphery of center openings, and stretch pre-stressed aircraft cable radially from the wire ring to nearest circumferential girdle. Install additional circumferential girdles along the body of equipment or tank at a minimum spacing of 48 inches OC. Use this network for securing insulation with tie wire or bands.
  7. Stagger joints between insulation layers at least 3 inches.
  8. Install insulation in removable segments on equipment access doors, manholes, handholes, and other elements that require frequent removal for service and inspection.
  9. Bevel and seal insulation ends around manholes, handholes, ASME stamps, and nameplates.
  10. For equipment with surface temperatures below ambient, apply mastic to open ends, joints, seams, breaks, and punctures in insulation.
- B. Flexible Elastomeric Thermal Insulation Installation for Tanks and Vessels: Install insulation over entire surface of tanks and vessels.

1. Apply manufacturer recommended coverage of adhesive but no less than 50% to surface with manufacturer's recommended adhesive.
  2. Seal longitudinal seams and end joints.
- C. Insulation Installation on Pumps:
1. Fabricate metal boxes lined with insulation. Fit boxes around pumps and coincide box joints with splits in pump casings. Fabricate joints with outward bolted flanges. Bolt flanges on 6-inch centers, starting at corners. Install 3/8-inch- diameter fasteners with wing nuts. Alternatively, secure the box sections together using a latching mechanism.
  2. Fabricate boxes from galvanized steel for indoor pumps and aluminum or stainless steel, at least 0.050 inch thick.
  3. For below ambient services, install a vapor barrier at seams, joints, and penetrations. Seal between flanges with replaceable gasket material to form a vapor barrier.

### 3.9 GENERAL PIPE INSULATION INSTALLATION

- A. Requirements in this article generally apply to all insulation materials except where more specific requirements are specified in various pipe insulation material installation articles.
- B. Insulation Installation on Fittings, Valves, Strainers, Flanges, and Unions:
1. Install insulation over fittings, valves, strainers, flanges, unions, and other specialties (except steam traps)\_with continuous thermal and vapor-retarder integrity unless otherwise indicated.
  2. Insulate pipe elbows using preformed fitting insulation or mitered fittings made from same material and density as adjacent pipe insulation. Each piece shall be butted tightly against adjoining piece and bonded with adhesive. Fill joints, seams, voids, and irregular surfaces with insulating cement finished to a smooth, hard, and uniform contour that is uniform with adjoining pipe insulation.
  3. Insulate tee fittings with preformed fitting insulation or sectional pipe insulation of same material and thickness as used for adjacent pipe. Cut sectional pipe insulation to fit. Butt each section closely to the next and hold in place with tie wire. Bond pieces with adhesive.
  4. Insulate valves and specialties using removable preformed fitting insulation or sectional pipe insulation of same material, density, and thickness as used for adjacent pipe. Overlap adjoining pipe insulation by not less than two times the thickness of pipe insulation, or one pipe diameter, whichever is thicker. For valves, insulate up to and including the bonnets, valve stuffing-box studs, bolts, and nuts. Fill joints, seams, and irregular surfaces with insulating cement.
  5. Insulate strainers using preformed fitting insulation or sectional pipe insulation of same material, density, and thickness as used for adjacent pipe. Overlap adjoining pipe insulation by not less than two times the thickness of pipe insulation, or one pipe diameter, whichever is thicker. Fill joints, seams, and irregular surfaces with insulating cement. Insulate strainers so strainer basket flange or plug can be easily removed and replaced without damaging the insulation and jacket. Provide a removable reusable insulation cover. For below-ambient services, provide a design that maintains vapor barrier.

6. Insulate flanges and unions using a section of oversized preformed pipe insulation. Overlap adjoining pipe insulation by not less than two times the thickness of pipe insulation, or one pipe diameter, whichever is thicker.
  7. Cover segmented insulated surfaces with a layer of finishing cement and coat with a mastic. Install vapor-barrier mastic for below-ambient services and a breather mastic for above-ambient services. Reinforce the mastic with fabric-reinforcing mesh. Trowel the mastic to a smooth and well-shaped contour.
  8. For services not specified to receive a field-applied jacket except for flexible elastomeric and polyolefin, install fitted PVC cover over elbows, tees, strainers, valves, flanges, and unions. Terminate ends with PVC end caps. Tape PVC covers to adjoining insulation facing using PVC tape.
  9. Stencil or label the outside insulation jacket of each union with the word "union." Match size and color of pipe labels.
- C. Insulate instrument connections for thermometers, pressure gauges, pressure temperature taps, test connections, flow meters, sensors, switches, and transmitters on insulated pipes. Shape insulation at these connections by tapering it to and around the connection with insulating cement and finish with finishing cement, mastic, and flashing sealant.
- D. Install removable insulation covers. Installation shall conform to the following:
1. Make removable flange and union insulation from sectional pipe insulation of same thickness as that on adjoining pipe. Install same insulation jacket as adjoining pipe insulation.
  2. When flange and union covers are made from sectional pipe insulation, extend insulation from flanges or union long at least two times the insulation thickness over adjacent pipe insulation on each side of flange or union. Secure flange cover in place with stainless-steel or aluminum bands. Select band material compatible with insulation and jacket.
  3. Construct removable valve insulation covers in same manner as for flanges, except divide the two-part section on the vertical center line of valve body.
  4. When covers are made from block insulation, make two halves, each consisting of mitered blocks wired to stainless-steel fabric. Secure this wire frame, with its attached insulation, to flanges with tie wire. Extend insulation at least 2 inches over adjacent pipe insulation on each side of valve. Fill space between flange or union cover and pipe insulation with insulating cement. Finish cover assembly with insulating cement applied in two coats. After first coat is dry, apply and trowel second coat to a smooth finish.
  5. Unless a PVC jacket is indicated in field-applied jacket schedules, finish exposed surfaces with a metal jacket.
- 3.10 INSTALLATION OF CALCIUM SILICATE INSULATION
- A. Insulation Installation on Boiler Breechings, Flues and Connectors:
1. Secure single-layer insulation with stainless-steel bands at 12-inch intervals and tighten bands without deforming insulation material.
  2. Install two-layer insulation with joints tightly butted and staggered at least 3 inches. Secure inner layer with wire spaced at 12-inch intervals. Secure outer layer with stainless-steel bands at 12-inch intervals.

3. On exposed applications without metal jacket, finish insulation surface with a skim coat of mineral-fiber, hydraulic-setting cement. When cement is dry, apply flood coat of lagging adhesive and press on one layer of glass cloth. Overlap edges at least 1 inch. Apply finish coat of lagging adhesive over glass cloth. Thin finish coat to achieve smooth, uniform finish.

**B. Insulation Installation on Straight Pipes and Tubes:**

1. Secure single-layer insulation with stainless-steel bands at 12-inch intervals and tighten bands without deforming insulation materials.
2. Install two-layer insulation with joints tightly butted and staggered at least 3 inches. Secure inner layer with wire spaced at 12-inch intervals. Secure outer layer with stainless-steel bands at 12-inch intervals.
3. Apply a skim coat of mineral-fiber, hydraulic-setting cement to insulation surface. When cement is dry, apply flood coat of lagging adhesive and press on one layer of glass cloth or tape. Overlap edges at least 1 inch. Apply finish coat of lagging adhesive over glass cloth or tape. Thin finish coat to achieve smooth, uniform finish.

**C. Insulation Installation on Pipe Flanges:**

1. Install preformed pipe insulation to outer diameter of pipe flange.
2. Make width of insulation section same as overall width of flange and bolts, plus twice the thickness of pipe insulation.
3. Fill voids between inner circumference of flange insulation and outer circumference of adjacent straight pipe segments with cut sections of block insulation of same material and thickness as pipe insulation.
4. Finish flange insulation same as pipe insulation.

**D. Insulation Installation on Pipe Fittings and Elbows:**

1. Install preformed sections of same material as straight segments of pipe insulation when available. Secure according to manufacturer's written instructions.
2. When preformed insulation sections of insulation are not available, install mitered sections of calcium silicate insulation. Secure insulation materials with wire or bands.
3. Finish fittings insulation same as pipe insulation.

**E. Insulation Installation on Valves and Pipe Specialties:**

1. Install removable mitered segments of calcium silicate insulation to valve body and specialties. Arrange insulation to permit access to packing and to allow operation without disturbing insulation.
2. Install insulation to flanges as specified for flange insulation application.
3. Finish valve and specialty insulation same as pipe insulation.

**3.11 INSTALLATION OF CELLULAR-GLASS INSULATION**

**A. Insulation Installation on Straight Pipes and Tubes:**

1. Secure each layer of insulation to pipe with wire or bands and tighten bands without deforming insulation materials.

2. Where vapor barriers are indicated, seal longitudinal seams, end joints, and protrusions with vapor-barrier mastic and joint sealant.
3. For insulation with factory-applied jackets on above-ambient services, secure laps with outward-clinched staples at 6 inches OC
4. For insulation with factory-applied jackets on below-ambient services, do not staple longitudinal tabs. Instead, secure tabs with additional adhesive as recommended by insulation material manufacturer and seal with vapor-barrier mastic and flashing sealant.

**B. Insulation Installation on Pipe Flanges:**

1. Install preformed pipe insulation to outer diameter of pipe flange.
2. Make width of insulation section same as overall width of flange and bolts, plus twice the thickness of pipe insulation.
3. Fill voids between inner circumference of flange insulation and outer circumference of adjacent straight pipe segments with cut sections of cellular-glass block insulation of same thickness as pipe insulation.
4. Install jacket material with manufacturer's recommended adhesive, overlap seams at least 1 inch, and seal joints with flashing sealant.

**C. Insulation Installation on Pipe Fittings and Elbows:**

1. Install preformed sections of same material as straight segments of pipe insulation when available. Secure according to manufacturer's written instructions.
2. When preformed sections of insulation are not available, install mitered sections of cellular-glass insulation. Secure insulation materials with wire or bands.

**D. Insulation Installation on Valves and Pipe Specialties:**

1. Install removable preformed sections of cellular-glass insulation to valve body and specialties.
2. Arrange insulation to permit access to packing and to allow operation without disturbing insulation.
3. Install insulation to flanges as specified for flange insulation application.

**3.12 FINISHES**

**A. Insulation with ASJ, Glass-Cloth, or Other Paintable Jacket Material: Paint jacket with paint system identified below and as specified in Division 09 for exterior and interior painting.**

1. Flat Acrylic Finish: Two finish coats over a primer that is compatible with jacket material and finish coat paint. Add fungicidal agent to render fabric mildew proof.
  - a. Finish Coat Material: Interior, flat, latex-emulsion size.

**B. Flexible Elastomeric Thermal Insulation: After adhesive has fully cured, apply two coats of insulation manufacturer's recommended protective coating. Coating for outdoor insulation shall be UV resistant and waterproof.**

**C. Color: Final color as selected by Architect. Vary first and second coats to allow visual inspection of the completed Work.**

**D. Do not field paint aluminum or stainless-steel jackets.**

**3.13 FIELD QUALITY CONTROL**

- A. Perform tests and inspections.
- B. Tests and Inspections:
  - 1. Inspect ductwork, randomly selected by Architect, by removing field-applied jacket and insulation in layers in reverse order of their installation. Extent of inspection shall be limited to two location(s) for each duct system defined in the "Duct Insulation Schedule, General" Article.
  - 2. Inspect field-insulated equipment, randomly selected by Architect, by removing field-applied jacket and insulation in layers in reverse order of their installation. Extent of inspection shall be limited to two location(s) for each type of equipment defined in the Part 3. For large equipment, remove only a portion adequate to determine compliance.
  - 3. Inspect pipe, fittings, strainers, and valves, randomly selected by Architect, by removing field-applied jacket and insulation in layers in reverse order of their installation. Extent of inspection shall be limited to three locations of straight pipe, three locations of threaded fittings, three locations of welded fittings, two locations of threaded strainers, two locations of welded strainers, three locations of threaded valves, and three locations of flanged valves for each pipe service defined in the "Piping Insulation Schedule, General" Article.
- C. All insulation applications will be considered defective Work if sample inspection reveals noncompliance with requirements.

**3.14 DUCT INSULATION SCHEDULE GENERAL**

- A. Items Not Insulated:
  - 1. Fibrous-glass ducts.
  - 2. Metal ducts with duct liner of sufficient thickness to comply with energy code and ASHRAE/IESNA scheduled values below.
  - 3. Factory-insulated flexible ducts.
  - 4. Factory-insulated plenums and casings.
  - 5. Vibration-control devices.
  - 6. Factory-insulated access panels and doors.

**3.15 DUCT AND PLENUM INSULATION SCHEDULE**

- A. Provide insulation materials and thicknesses identified below. If more than one material is listed for a duct location, selection from materials listed is Division 23 option.
- B. Duct Insulation Schedules:
  - 1. Where application of rigid versus blanket insulation on components such as coils and supply fans is to be based on the height of a component, height shall be determined based on the bottom of the component listed. Extend applicable insulation over the entire component before transitioning to alternate material. For ductwork, transition from blanket to rigid insulation shall occur no lower than height listed.

2. Exposed ductwork between air volume terminal or local heating or cooling unit mounted within the space served and associated diffusers or registers does not require external insulation. Where air volume terminal or local heating or cooling unit are mounted outside the space served, insulate ductwork between the air volume terminal or local heating or cooling unit and the wall of the space served.

Combined Heating and Cooling Supply, Return and Heat/Energy Recovery System Exhaust Ducts Climate Zone 5, 6, 7 and 8						
Duct Location	Minimum As-Installed R-Value	Insulation Type	Minimum Thickness (inches)	Minimum Density (lb/cu.ft)	Factory Applied Jacket	Field Applied Jacket
All ductwork, plena, duct mounted coils and supply fans exterior to building envelope. ### 3.16 BREECHING, FLUES AND CONNECTORS INSULATION SCHEDULE

- A. Breeching, flues and connector insulation shall be one of the following:
1. Calcium Silicate: 4 inches thick.
  2. High-Temperature Mineral-Fiber Blanket: 3 inches thick and 3-lb/cu. ft. nominal density.
  3. High-Temperature Mineral-Fiber Board: 3 inches thick and 6-lb/cu. ft. nominal density.

### 3.17 EQUIPMENT INSULATION SCHEDULE

- A. Insulation materials and thicknesses are identified below. If more than one material is listed for a type of equipment, selection from materials listed is Contractor's option. Refer to duct insulation tables for supply fan and duct mounted coils requirements.
- B. Insulate indoor and outdoor equipment that is not factory insulated.

Cooling Coil and Humidifier Drain Pans		
Insulation Type	Minimum Thickness (inch)	Factory Applied Jacket
Rigid Mineral-Fiber Board: Minimum Density = 6 lb/cu.ft	1	FSK
Semi-Rigid Mineral-Fiber Board: Minimum Density = 1.5 lb/cu.ft		
Flexible Elastomeric - Provide listed and labelled insulation in active plenums.		N/A

Heating Hot Water Equipment Insulation Schedule					
Equipment Type	Insulation Type	Indoor - Minimum Thickness (inch)	Outdoor - Minimum Thickness (inch)	Factory Applied Jacket	Field Applied Jacket – Outdoor Only
Heating-hot-water pumps	Rigid Mineral-Fiber Board: Minimum Density = 6 lb/cu.ft	1	2	FSK	Self-Adhesive Outdoor Jacket
Heating-hot-water air-separator	Semi-Rigid Mineral-Fiber Board: Minimum Density = 1.5 lb/cu.ft				
Piping system filter-housing					
Heat-exchanger (water-to-water for heating service)	Rigid Mineral-Fiber Board: Minimum Density = 6 lb/cu.ft	2	4	FSK	Self-Adhesive Outdoor Jacket
Heating-hot-water system tanks, heat recovery tanks and thermal storage tanks	Semi-Rigid Mineral-Fiber Board: Minimum Density = 1.5 lb/cu.ft				
Radiant Heating Panel and Exposed Bottom Surface of Radiant Floor Heating. Adjacent building envelope insulation counts towards the specified minimum R-Value.	Mineral-Fiber Blanket: Minimum Density = 0.75 lb/cu.ft, Minimum R-Value = 3.5.	1.5	N/A	N/A	N/A

### 3.18 PIPING INSULATION SCHEDULE, GENERAL

- A. Acceptable preformed pipe and tubular insulation materials and thicknesses are identified for each piping system and pipe size range. If more than one material is listed for a piping system, selection from materials listed is Contractor's option.
- B. Items Not Insulated: Unless otherwise indicated, do not install insulation on the following:
  - 1. Drainage piping located in crawl spaces.
  - 2. Chrome-plated pipes and fittings unless there is a potential for personnel injury.

### 3.19 PIPING INSULATION SCHEDULE

- A. Provide insulation materials and thicknesses scheduled for each system type and pressure/temperature range. If more than one material is listed for a system, selection from materials listed is Division 23 option.
- B. For dual temperature systems (heating and cooling), provide thickness equal to greater of heating or cooling scheduled value. Dual temperature piping shall also meet all vapor barrier requirements for cooling insulation (perm rating).
- C. Insulation for pre-insulated piping shall meet all specified requirements.
- D. Insulate piping operating at temperatures below 40 deg F and systems operating between 40 deg F to 65 deg F in accordance with NAIMA Guide to Insulating Chilled Water Piping Systems with Mineral Fiber Pipe Insulation. Comply with all recommendations including but not limited to the requirement for vapor dams every fourth section of insulation.

- E. Outdoor piping insulation requirements apply to all piping outside the building envelope and including pipes in unconditioned piping vestibules connected to outdoor equipment.
- F. Pipe Insulation Schedules:

Heating Hot Water Systems: 85 deg F to 140 deg F						
Insulation Conductivity Btu-in/hr-deg F-SF at Mean Temp (deg F)	Insulation Type	Pipe Size (inch)	Indoor - Minimum Thickness (inch)	Outdoor - Minimum Thickness (inch)	Factory Applied Jacket	Field Applied Jacket
0.22 to 0.28 at 100	Mineral Fiber (Fiberglass) Preformed Pipe, Type I or Pipe and Tank Insulation for 14" and Larger Pipe Size	Less than 1	1.0	2.0	ASJ or ASJ-SSL	Indoor: PVC for exposed piping in mechanical rooms when mounted 10 feet or lower above finished floor  Outdoor: Aluminum with Moisture Barrier

		10 to 14	1.5	3.0		
		16 to 24	1.5	3.5		

3.20 OUTDOOR, FIELD-APPLIED JACKET SCHEDULE

- A. Install jacket over insulation material. For insulation with factory-applied jacket, install the field-applied jacket over the factory-applied jacket.
- B. Refer to Duct, Plenum, Equipment and Pipe insulation schedules for outdoor field applied jacketing requirements. If more than one material is listed, selection from materials listed is Contractor's option.
- C. For underground direct-buried piping applications, install underground direct-buried jacket over insulation material.

END OF SECTION

## SECTION 230800 - COMMISSIONING OF HVAC

### PART 1 - GENERAL

#### 1.1 RELATED DOCUMENTS

- A. Certain requirements common to all the mechanical and electrical trades (Fire Suppression, Plumbing, HVAC, Electrical, and Tele/Data) are specified in Division 20. To avoid repetition, they are not repeated in each relevant Division and Section. However, these requirements are applicable to the work of this Section and are hereby incorporated by reference.
- B. Drawings and general provisions of the Contract, including General and Supplementary Conditions and Division 01 Specification Sections, apply to this Section.

#### 1.2 SUMMARY

- A. Section includes commissioning process requirements for HVAC&R systems, assemblies, and equipment.
- B. Related Sections:
  - 1. Division 01 "General Commissioning Requirements" for general commissioning process requirements.

#### 1.3 DEFINITIONS

- A. Commissioning Plan: A document that outlines the organization, schedule, allocation of resources, and documentation requirements of the commissioning process.
- B. CxA: Commissioning Authority.
- C. HVAC&R: Heating, Ventilating, Air Conditioning, and Refrigeration.
- D. Systems, Subsystems, Equipment, and Components: Where these terms are used together or separately, they shall mean "as-built" systems, subsystems, equipment, and components.

#### 1.4 INFORMATIONAL SUBMITTALS

- A. Certificates of readiness.
- B. Certificates of completion of installation, prestart, and startup activities.

#### 1.5 ALLOWANCES

- A. Labor, instrumentation, tools, and equipment costs for technicians for the performance of commissioning testing are covered by the "Schedule of Allowances" Article in Division 01 "Allowances."

#### 1.6 UNIT PRICES

- A. Commissioning testing allowance may be adjusted up or down by the "List of Unit Prices" Article in Division 01 "Unit Prices" when actual man-hours are computed at the end of commissioning testing.

**1.7 CONTRACTOR'S RESPONSIBILITIES**

- A. Perform commissioning tests at the direction of the CxA.
- B. Attend construction phase controls coordination meeting.
- C. Attend testing, adjusting, and balancing review and coordination meeting.
- D. Participate in HVAC&R systems, assemblies, equipment, and component maintenance orientation and inspection as directed by the CxA.
- E. Provide information requested by the CxA for final commissioning documentation.
- F. Provide measuring instruments and logging devices to record test data, and provide data acquisition equipment to record data for the complete range of testing for the required test period.

**1.8 CXA'S RESPONSIBILITIES**

- A. Provide Project-specific construction checklists and commissioning process test procedures for actual HVAC&R systems, assemblies, equipment, and components to be furnished and installed as part of the construction contract.
- B. Direct commissioning testing.
- C. Verify testing, adjusting, and balancing of Work are complete.
- D. Provide test data, inspection reports, and certificates in Systems Manual.

**1.9 COMMISSIONING DOCUMENTATION**

- A. Provide the following information to the CxA for inclusion in the commissioning plan:
  - 1. Plan for delivery and review of submittals, systems manuals, and other documents and reports.
  - 2. Identification of installed systems, assemblies, equipment, and components including design changes that occurred during the construction phase.
  - 3. Process and schedule for completing construction checklists and manufacturer's prestart and startup checklists for HVAC&R systems, assemblies, equipment, and components to be verified and tested.
  - 4. Certificate of completion certifying that installation, prestart checks, and startup procedures have been completed.
  - 5. Certificate of readiness certifying that HVAC&R systems, subsystems, equipment, and associated controls are ready for testing.
  - 6. Test and inspection reports and certificates.
  - 7. Corrective action documents.
  - 8. Verification of testing, adjusting, and balancing reports.

PART 2 - PRODUCTS (NOT USED)

PART 3 - EXECUTION

3.1 TESTING PREPARATION

- A. Certify that HVAC&R systems, subsystems, and equipment have been installed, calibrated, and started and are operating according to the Contract Documents.
- B. Certify that HVAC&R instrumentation and control systems have been completed and calibrated, that they are operating according to the Contract Documents, and that pretest set points have been recorded.
- C. Certify that testing, adjusting, and balancing procedures have been completed and that testing, adjusting, and balancing reports have been submitted, discrepancies corrected, and corrective work approved.
- D. Set systems, subsystems, and equipment into operating mode to be tested (e.g., normal shutdown, normal auto position, normal manual position, unoccupied cycle, emergency power, and alarm conditions).
- E. Inspect and verify the position of each device and interlock identified on checklists.
- F. Check safety cutouts, alarms, and interlocks with smoke control and life-safety systems during each mode of operation.
- G. Testing Instrumentation: Install measuring instruments and logging devices to record test data as directed by the CxA.

3.2 TESTING AND BALANCING VERIFICATION

- A. Prior to performance of testing and balancing Work, provide copies of reports, sample forms, checklists, and certificates to the CxA.
- B. Notify the CxA at least 10 days in advance of testing and balancing Work, and provide access for the CxA to witness testing and balancing Work.
- C. Provide technicians, instrumentation, and tools to verify testing and balancing of HVAC&R systems at the direction of the CxA.
  - 1. The CxA will notify testing and balancing Contractor 10 days in advance of the date of field verification. Notice will not include data points to be verified.
  - 2. The testing and balancing Contractor shall use the same instruments (by model and serial number) that were used when original data were collected.
  - 3. Failure of an item includes, other than sound, a deviation of more than 10 percent. Failure of more than 10 percent of selected items shall result in rejection of final testing, adjusting, and balancing report. For sound pressure readings, a deviation of 3 dB shall result in rejection of final testing. Variations in background noise must be considered.
  - 4. Remedy the deficiency and notify the CxA so verification of failed portions can be performed.

### 3.3 GENERAL TESTING REQUIREMENTS

- A. Provide technicians, instrumentation, and tools to perform commissioning test at the direction of the CxA.
- B. Scope of HVAC&R testing shall include entire HVAC&R installation, from central equipment for heat generation and refrigeration through distribution systems to each conditioned space. Testing shall include measuring capacities and effectiveness of operational and control functions.
- C. Test all operating modes, interlocks, control responses, and responses to abnormal or emergency conditions, and verify proper response of building automation system controllers and sensors.
- D. The CxA along with the HVAC&R Contractor, testing and balancing Contractor, and HVAC&R Instrumentation and Control Contractor shall prepare detailed testing plans, procedures, and checklists for HVAC&R systems, subsystems, and equipment.
- E. Tests will be performed using design conditions whenever possible.
- F. Simulated conditions may need to be imposed using an artificial load when it is not practical to test under design conditions. Before simulating conditions, calibrate testing instruments. Provide equipment to simulate loads. Set simulated conditions as directed by the CxA and document simulated conditions and methods of simulation. After tests, return settings to normal operating conditions.
- G. The CxA may direct that set points be altered when simulating conditions is not practical.
- H. The CxA may direct that sensor values be altered with a signal generator when design or simulating conditions and altering set points are not practical.
- I. If tests cannot be completed because of a deficiency outside the scope of the HVAC&R system, document the deficiency and report it to the Owner. After deficiencies are resolved, reschedule tests.
- J. If the testing plan indicates specific seasonal testing, complete appropriate initial performance tests and documentation and schedule seasonal tests.

### 3.4 HVAC&R SYSTEMS, SUBSYSTEMS, AND EQUIPMENT TESTING PROCEDURES

- A. Boiler Testing and Acceptance Procedures: Testing requirements are specified in HVAC boiler Sections. Provide submittals, test data, inspector record, and boiler certification to the CxA.
- B. HVAC&R Instrumentation and Control System Testing: Field testing plans and testing requirements are specified in Division 23 for instrumentation and control for HVAC and sequence and operations for HVAC controls. Assist the CxA with preparation of testing plans.
- C. Pipe system cleaning, flushing, hydrostatic tests, and chemical treatment requirements are specified in HVAC piping Sections. HVAC&R Contractor shall prepare a pipe system cleaning, flushing, and hydrostatic testing plan. Provide cleaning, flushing, testing, and treating plan and final reports to the CxA. Plan shall include the following:
  - 1. Sequence of testing and testing procedures for each section of pipe to be tested, identified by pipe zone or sector identification marker. Markers shall be keyed to Drawings for each pipe sector, showing the physical location of each designated pipe test section. Drawings keyed to pipe zones or sectors shall be formatted to allow each section of

piping to be physically located and identified when referred to in pipe system cleaning, flushing, hydrostatic testing, and chemical treatment plan.

2. Description of equipment for flushing operations.
  3. Minimum flushing water velocity.
  4. Tracking checklist for managing and ensuring that all pipe sections have been cleaned, flushed, hydrostatically tested, and chemically treated.
- D. Energy Supply System Testing: Provide technicians, instrumentation, tools, and equipment to test performance of gas and hot water systems and equipment at the direction of the CxA. The CxA shall determine the sequence of testing and testing procedures for each equipment item and pipe section to be tested.
- E. Refrigeration System Testing: Provide technicians, instrumentation, tools, and equipment to test performance of chillers, cooling towers, refrigerant compressors and condensers, heat pumps, and other refrigeration systems. The CxA shall determine the sequence of testing and testing procedures for each equipment item and pipe section to be tested.
- F. HVAC&R Distribution System Testing: Provide technicians, instrumentation, tools, and equipment to test performance of air, steam, and hydronic distribution systems; special exhaust; and other distribution systems, including HVAC&R terminal equipment and unitary equipment.
- G. Vibration and Sound Tests: Provide technicians, instrumentation, tools, and equipment to test performance of vibration isolation and seismic controls.

## SECTION 230900 - DIRECT DIGITAL CONTROL (DDC) SYSTEM FOR HVAC

### PART 1 - GENERAL

#### 1.1 RELATED DOCUMENTS

- A. Certain requirements common to all the mechanical and electrical trades (Fire Suppression, Plumbing, HVAC, Electrical, and Tele/Data) are specified in Division 20. To avoid repetition, they are not repeated in each relevant Division and Section. However, these requirements are applicable to the work of this Section and are hereby incorporated by reference.
- B. Drawings and general provisions of the Contract, including General and Supplementary Conditions and Division 01 Specification Sections, apply to this Section.

#### 1.2 SUMMARY

- A. Section Includes:
  - 1. DDC system for monitoring and controlling of HVAC systems including control components for terminal heating and cooling units not supplied with factory-wired control components.
  - 2. This Section shall provide electric circuit breakers and all power wiring from normal and standby power panels to each DDC system component.
  - 3. Delivery of selected control devices to equipment and systems manufacturers for factory installation and to HVAC systems installers for field installation;
    - a. Ductwork automatic control dampers, airflow stations and terminal unit controllers.
    - b. Hydronic piping control valves, flow switches, flow meters, temperature sensor wells and sockets.
    - c. Refrigerant piping pressure and temperature sensor wells and sockets.
  - 4. Installation of products furnished under other sections;
    - a. Refrigerant leak detection system.
    - b. Packaged equipment thermostats and duct static pressure sensors.
  - 5. Integration with equipment furnished by other sections with packaged controls;
    - a. Boiler and boiler plant controls.
    - b. Packaged rooftop unit controls including discharge air temperature, economizer and air volume controls.
    - c. Crossflow sensors provided on VAV terminal units.
    - d. Variable frequency drives.
    - e. Duct mounted smoke detectors.
    - f. Duct fire-smoke dampers.
    - g. Lighting controls.
  - 6. Control valves and actuators for DDC systems.

7. Control dampers and actuators for DDC systems.
8. Sequence of operations outlined on the drawings.

B. Related Sections:

1. Division 26 and Division 27 for power and communications cabling, raceways, pathways, power and communication component identification requirements.

1.3 DEFINITIONS

- A. Algorithm: A logical procedure for solving a recurrent mathematical problem. A prescribed set of well-defined rules or processes for solving a problem in a finite number of steps.
- B. Analog: A continuously varying signal value, such as current, flow, pressure, or temperature.
- C. BACnet Specific Definitions:
1. BACnet: Building Automation Control Network Protocol, ASHRAE 135. A communications protocol allowing devices to communicate data over and services over a network.
  2. BACnet Interoperability Building Blocks (BIBBs): BIBB defines a small portion of BACnet functionality that is needed to perform a particular task. BIBBs are combined to build the BACnet functional requirements for a device.
  3. BACnet/IP: Defines and allows using a reserved UDP socket to transmit BACnet messages over IP networks. A BACnet/IP network is a collection of one or more IP subnetworks that share the same BACnet network number.
  4. BACnet Testing Laboratories (BTL): Organization responsible for testing products for compliance with ASHRAE 135, operated under direction of BACnet International.
  5. PICS (Protocol Implementation Conformance Statement): Written document that identifies the particular options specified by BACnet that are implemented in a device.
- D. Controller: Generic term for any standalone, microprocessor-based, digital controller residing on a network, used for local or global control. Three types of controllers are included: Network Controller, Programmable Application Controller, and Application-Specific Controller.
- E. Control System Integrator: An entity that assists in expansion of existing enterprise system and support of additional operator interfaces to I/O being added to existing enterprise system.
- F. COV: Change of value.
- G. Cv: Design valve coefficient.
- H. DDC: Direct-digital control.
- I. DDC System Provider: Authorized representative of, and trained by, DDC system manufacturer and responsible for execution of DDC system Work.
- J. Digital: Two-state signal where a high signal level represents "ON" or "OPEN" condition and a low signal level represents "OFF" or "CLOSED" condition. "Binary" is sometimes used interchangeably with "Digital" to indicate a two-state signal.
- K. Distributed Control: Processing of system data is decentralized and control decisions are made at subsystem level. System operational programs and information are provided to remote subsystems and status is reported back. On loss of communication, subsystems shall be capable of operating in a standalone mode using the last best available data.

- L. E/P: Voltage to pneumatic.
- M. Ethernet: Local area network based on IEEE 802.3 collection of standards. Trademark for a system of exchanging messages between computers on a local area network using coaxial, fiber optic, or twisted-pair cables. Ethernet is a registered trademark of Digital Equipment Corporation, Intel, and Xerox and is the basis for IEEE 8802-3
- N. Gateway: Bidirectional protocol translator that connects control systems that use different communication protocols.
- O. HLC: Heavy load conditions.
- P. I/O: System through which information is received and transmitted. I/O refers to analog input (AI), digital input (DI), analog output (AO) and digital output (DO). Analog signals are continuous and represent control influences such as flow, level, moisture, pressure, and temperature. Binary signals convert electronic signals to digital pulses (values) and generally represent two-position operating and alarm status. "Binary," (BI) and (BO) is sometimes used interchangeably with "Digital," (DI) and (DO) respectively.
- Q. I/P: Current to pneumatic.
- R. Internet Protocol (IP): Global network that connects operator workstations and other host computers, servers and other devices to share information.
- S. LAN: Local area network.
- T. Low Voltage: As defined in NFPA 70 for circuits and equipment operating at less than 50 V or for remote-control, signaling power-limited circuits.
- U. Mobile Device: A data-enabled phone or tablet computer capable of connecting to a cellular data network and running a native control application or accessing a web interface.
- V. Modbus TCP/IP: An open protocol for exchange of process data.
- W. MS/TP: Master-slave/token-passing, IEE 8802-3. Datalink protocol LAN option that uses twisted-pair wire for low-speed communication.
- X. MTBF: Mean time between failures.
- Y. NBR: Nitrile butadiene rubber.
- Z. Network Controller: Digital controller, which supports a family of programmable application controllers and application-specific controllers that communicates on peer-to-peer network for transmission of global data.
- AA. Network Repeater: Device that receives data packet from one network and rebroadcasts it to another network. No routing information is added to protocol.
- BB. PC: Personal computer
- CC. Peer to Peer: Networking architecture that treats all network stations as equal partners.
- DD. PID: Proportional plus integral plus derivative
- EE. POT: Portable operator terminal.
- FF. PTFE: Polytetrafluoroethylene
- GG. PUE: Performance usage effectiveness.
- HH. RAM: Random access memory.
- II. RF: Radio frequency.

- JJ. Router: Device connecting two or more networks at network layer.
- KK. RMS: Root-mean-square value of alternating voltage, which is the square root of the mean value of the square of the voltage values during a complete cycle.
- LL. RTD: Resistance temperature detector
- MM. TCP/IP: Transport control protocol/Internet protocol.
- NN. UPS: Uninterruptible power supply.
- OO. USB: Universal Serial Bus.
- PP. User Datagram Protocol (UDP): This protocol assumes that the IP is used as the underlying protocol.
- QQ. VAV: Variable air volume.
- RR. WLED: White light emitting diode.

#### 1.4 PRE-INSTALLATION MEETINGS

- A. Pre-installation Conference: Conduct conference at Project site.

#### 1.5 ACTION SUBMITTALS

- A. General
  - 1. Provide shop drawings and other submittals on all hardware, software and installation to be provided. No work may begin on any segment of this project until submittals have been successfully reviewed for conformity with the design intent.
- B. Multiple Submissions:
  - 1. If multiple submissions are required to execute work within schedule, submit a coordinated schedule clearly defining intent of multiple submissions. Include a proposed date of each submission with a detailed description of submittal content to be included in each submission.
  - 2. Clearly identify each submittal requirement and in which submission the information will be provided.
  - 3. Include an updated schedule in each subsequent submission with changes highlighted to easily track the changes made to previous submitted schedule.
- C. Product Data: For each type of product include the following:
  - 1. Construction details, material descriptions, dimensions of individual components and profiles, and finishes.
  - 2. Operating characteristics, electrical characteristics, and furnished accessories indicating process operating range, accuracy over range, control signal over range, default control signal with loss of power, calibration data specific to each unique application, electrical power requirements, and limitations of ambient operating environment, including temperature and humidity.
  - 3. Product description with complete technical data, performance curves, and product specification sheets.
  - 4. Installation, operation and maintenance instructions including factors affecting performance.

5. Bill of materials, technical data and installation and maintenance instructions indicating manufacturer and extended model number for each unique product including but not limited to the following:
  - a. Workstations.
  - b. Printers.
  - c. Monitors
  - d. Keyboard
  - e. Gateways.
  - f. Routers.
  - g. Protocol analyzers.
  - h. DDC controllers and control panels.
  - i. Enclosures.
  - j. Electrical power devices.
  - k. UPS units.
  - l. Accessories.
  - m. Instruments.
  - n. Control dampers and actuators.
  - o. Control valves and actuators.
  - p. Interface equipment.
  - q. Transducers/transmitters
  - r. Sensors (including accuracy data)
  - s. Actuators
  - t. Valves
  - u. Relays/switches
  - v. Control panels
  - w. Power supply
  - x. Battery Backup
  - y. Operator interface equipment
  - z. Wiring
6. When manufacturer product datasheets apply to a product series rather than a specific product model, clearly indicate and highlight only applicable information. General catalogs shall not be accepted as datasheets to fulfill submittal requirements.
7. Each submitted piece of product literature shall clearly cross reference specification and drawings that submittal is to cover.

**D. Software Submittal:**

1. Cross-referenced listing of software to be loaded on each operator workstation, gateway and DDC controller.
  2. Description and technical data of all software provided and cross-referenced to products in which software will be installed.
  3. Operating system software, operator interface and programming software, color graphic software, DDC controller software, maintenance management software, and third-party software.
  4. Include a flow diagram and an outline of each subroutine that indicates each program variable name and units of measure.
  5. Listing and description of each engineering equation used with reference source.
  6. Listing and description of each constant used in engineering equations and a reference source to prove origin of each constant.
  7. Description of operator interface to alphanumeric and graphic programming.
  8. Description of each network communication protocol.
  9. Description of system database, including all data included in database, database capacity and limitations to expand database.
  10. Description of each application program and device drivers to be generated, including specific information on data acquisition and control strategies showing their relationship to system timing, speed, processing burden and system throughout.
  11. An instrumentation list for each controlled system. Label each element of the controlled system in table format. Show, in the table element name, type of device, manufacturer, model number, and control device product data sheet number.
  12. A complete description of the operation of the control system, including sequences of operation. Include and reference a schematic diagram of the controlled system
- E. Shop Drawings:
1. General Requirements:
    - a. Include cover drawing with Project name, location, Owner, Architect, Contractor and issue date with each Shop Drawings submission.
    - b. Include a drawing index sheet listing each drawing number and title that matches information in each title block.
    - c. Drawings Size: 11 inch x 17 inch minimum, 48 inch x 36 inch maximum.
  2. Include plans, elevations and mounting details.
  3. Include details of product assemblies. Indicate dimensions, weights, loads, clearance required, recommended method of field assembly, components, and location and size of each field connection.
  4. Detail means of vibration isolation and show attachments to rotating equipment.
  5. Plan Drawings indicating the following:
    - a. Screened backgrounds of walls, structural grid lines, HVAC equipment, ductwork and piping.

- b. Room names and numbers with coordinated placement to avoid interference with control products.
  - c. Each desktop workstation, gateway, router, DDC controller, control panel instrument connecting to DDC controller, and damper and valve connecting to DDC controller.
  - d. Exact placement of products in rooms, ducts, and piping to reflect proposed installed condition.
  - e. Network communication cable and raceway routing.
  - f. Information, drawn to scale, minimum 0.25 inch = 1 foot - 0 inches.
  - g. Proposed routing of wiring, cabling, conduit, and tubing, coordinated with building services before installation.
6. Schematic drawings for each controlled HVAC system indicating the following:
- a. I/O points labeled with point names shown. Indicate instrument range, normal operating set points, and alarm set points. Indicate fail position of each damper and valve.
  - b. I/O listed in table format showing point name, type of device, manufacturer, model number, and cross-reference to product data sheet number. Include:
    - 1) Point description: Provide building designation, system type, equipment type, engineering units, and functionality; include a description of its physical location.
    - 2) Expected range (upper and lower limit).
    - 3) Type of point (e.g. AI, AO, DI, DO, Network, Virtual, Calculated).
  - c. A graphic showing location of control I/O in proper relationship to HVAC system.
  - d. Wiring diagram with each I/O point having a unique identification and indicating labels for all wiring terminals.
  - e. Unique identification of each I/O that shall be consistently used between different drawings showing same point.
  - f. Elementary wiring diagrams of controls for HVAC equipment motor circuits including interlocks, switches, relays and interface to DDC controllers.
  - g. Descriptive narrative of programs to perform sequences of operation. Narrative shall not merely duplicate design sequence of operation.
  - h. Graphic sequence of operation, showing all inputs and output logical blocks.
7. Control panel drawings indicating the following:
- a. Panel dimensions, materials, size, and location of field cable, raceways, and tubing connections.
  - b. Interior subpanel layout, drawn to scale and showing all internal components, cabling and wiring raceways, nameplates and allocated spare space.
  - c. Front, rear, and side elevations and nameplate legend.
  - d. Unique drawing for each panel.

- e. Wiring diagrams.
- 8. DDC system network riser diagram indicating the following:
  - a. Each device connected to network with unique identification for each.
  - b. Interconnection of each different network in DDC system.
  - c. For each network, indicate communication protocol, speed and physical means of interconnecting network devices, such as copper cable type, or optical fiber cable type. Indicate raceway type and size for each.
  - d. Each network port for connection of an operator workstation or other type of operator interface with unique identification for each.
- 9. DDC system electrical power riser diagram indicating the following:
  - a. Each point of connection to field power with requirements (volts, phase, hertz, amperes, connection type) listed for each.
  - b. Each control power supply including associated transformers, power-line conditioners, transient voltage suppression and high filter noise units, DC power supplies, and UPS units with unique identification for each.
  - c. Each product requiring power with requirements (volts, phase, hertz, amperes, connection type) listed for each.
  - d. Power wiring type and size, race type, and size for each.
- 10. Monitoring and control signal diagrams indicating the following:
  - a. Control signal cable and wiring between controllers and I/O.
  - b. Point-to-point schematic wiring diagrams for each product.
  - c. Control signal tubing to sensors, switches and transmitters.
  - d. Process signal tubing to sensors, switches and transmitters.
- 11. Color graphics indicating the following:
  - a. Itemized list of color graphic displays to be provided.
  - b. For each display screen to be provided, a true color copy showing layout of pictures, graphics and data displayed.
  - c. Intended operator access between related hierarchical display screens.
  - d. Provide description of procedures to access each graphics screen.
- F. System Description:
  - 1. Full description of DDC system architecture, network configuration, operator interfaces and peripherals, controller types and applications, gateways, routers and other network devices, and power supplies.
  - 2. Complete listing and description of each report, log and trend for format and timing and events which initiate generation.
  - 3. System and product operation under each potential failure condition including, but not limited to, the following:
    - a. Loss of power.

- b. Loss of network communication signal.
  - c. Loss of controller signals to inputs and outpoints.
  - d. Operator workstation failure.
  - e. Gateway failure.
  - f. Network failure
  - g. Controller failure.
  - h. Instrument failure.
  - i. Control damper and valve actuator failure.
- 4. Complete bibliography of documentation and media to be delivered to Owner.
- 5. Description of testing plans and procedures.
- 6. Description of Owner training.
- G. Delegated-Design Submittal: For DDC system products and installation below.
  - 1. Provide the following documentation showing DDC system complies with performance requirements indicated, including calculations and other documentation confirming compliance:
    - a. Schedule and design calculations for control dampers and actuators.
      - 1) Flow at project design and minimum flow conditions.
      - 2) Face velocity at project design and minimum airflow conditions.
      - 3) Pressure drop across damper at project design and minimum airflow conditions.
      - 4) AMCA 500-D damper installation arrangement used to calculate and schedule pressure drop.
      - 5) Maximum close-off pressure.
      - 6) Leakage airflow at maximum system pressure differential (fan close-off pressure).
      - 7) Torque required at worst case condition for sizing actuator.
      - 8) Actuator selection indicating torque provided.
      - 9) Actuator signal to control damper (open, close or modulate).
      - 10) Actuator position on loss of power.
      - 11) Actuator position on loss of control signal.
    - b. Schedule and design calculations for control valves and actuators.
      - 1) Flow at project design and minimum flow conditions.

- 2) Pressure-differential drop across valve at project design flow condition.
- 3) Maximum system pressure-differential drop (pump close-off pressure) across valve at project minimum flow condition.
- 4) Design and minimum control valve coefficient with corresponding valve position.
- 5) Maximum close-off pressure.
- 6) Leakage flow at maximum system pressure differential.
- 7) Torque required at worst case condition for sizing actuator.
- 8) Actuator selection indicating torque provided.
- 9) Actuator signal to control damper (open, close or modulate).
- 10) Actuator position on loss of power.
- 11) Actuator position on loss of control signal.
- c. Schedule and design calculations for selecting flow instruments.
  - 1) Instrument flow range.
  - 2) Project design and minimum flow conditions with corresponding accuracy, control signal to transmitter and output signal for remote control.
  - 3) Extreme points of extended flow range with corresponding accuracy, control signal to transmitter and output signal for remote control.
  - 4) Pressure-differential loss across instrument at Project design flow conditions.
  - 5) Where flow sensors are mated with pressure transmitters, provide information for each instrument separately and as an operating pair.

## 1.6 INFORMATIONAL SUBMITTALS

### A. Qualification Data:

1. Systems Provider Qualification Data:
  - a. Resume of project manager assigned to Project.
  - b. Resumes of application engineering staff assigned to Project.
  - c. Resumes of installation and programming technicians assigned to Project.
  - d. Resumes of service technicians assigned to Project.
  - e. Brief description of past project including physical address, floor area, number of floors, building system cooling and heating capacity and building primary function.

- f. Description of past project DDC system, noting similarities to Project scope and complexity indicated.
  - g. Names of staff assigned to past project that will also be assigned to execute work of this Project.
  - h. Owner contact information for past project including name, phone number, and e-mail address.
  - i. Contractor contact information for past project including name, phone number, and e-mail address.
  - j. Architect and Engineer contact information for past project including name, phone number, and e-mail address.
- 2. Manufacturer qualification data.
- 3. Testing agency qualifications data.
- B. Product Certificates:
  - 1. Data Communications Protocol Certificates: Certifying that each proposed DDC system component complies with ASHRAE 135.
- C. Product Test Reports: For each product that requires testing to be performed by manufacturer and witnessed by a qualified testing agency or performed by a qualified testing agency.
- D. Source quality-control reports.
- E. Field quality-control reports.
- F. Sample Warranty: For manufacturer warranty.
- G. Schedules - Within one month of contract award, provide a schedule of the work indicating the following:
  - 1. Intended sequence of work items
    - a. Start dates of individual work items
    - b. Duration of individual work items
    - c. Planned delivery dates for major material and equipment and expected lead times.
    - d. Milestones indicating possible restraints on work by other trades or situations.
  - 2. Provide monthly written status reports indicating work completed and revisions to delivery dates including software development. An updated project schedule shall be included.

## 1.7 CLOSEOUT SUBMITTALS

- A. Project Record Documents: Upon completion of installation and prior to final acceptance submit three copies of record (as-built) documents in accordance with Division 01. In addition to items specified in Division 01 include the following:
  - 1. Project Record Drawings of as-built versions of submittal Shop Drawings provided in electronic PDF format and as ANSI B (11 inch x 17 inch) prints.
  - 2. Testing and commissioning reports and checklists of completed final versions of reports, checklists, and trend logs.
  - 3. As-built versions of submittal Product Data.

4. Names, addresses, e-mail addresses and 24-hour telephone numbers of Installer and service representatives for DDC system and products.
5. Operator manual with procedures for operating control systems including logging on and off, handling alarms, producing point reports, trending data, overriding computer control and changing set points and variables.
6. Programming manuals with description of programming language and syntax, of statements for algorithms and calculations used, of point database creation and modification, of program creation and modification, and of editor use.
7. Engineering, installation, and maintenance manuals that explain how to:
  - a. Design and install new points, panels, and other hardware.
  - b. Perform preventive maintenance and calibration.
  - c. Debug hardware problems.
  - d. Repair or replace hardware.
8. Documentation of all programs created using custom programming language including set points, tuning parameters, and object database.
9. Backup copy of graphic files, programs, and database on electronic media such as DVDs or on an external hard drive.
10. List of recommended spare parts with part numbers and suppliers.
11. Complete original-issue documentation, installation, and maintenance information for furnished third-party hardware including computer equipment and sensors.
12. Complete original-issue copies of furnished software, including operating systems, custom programming language, operator workstation software, and graphics software.
13. Licenses, guarantees, and warranty documents.
14. Recommended preventive maintenance procedures for system components, including schedule of tasks such as inspection, cleaning, and calibration; time between tasks; and task descriptions.
15. Owner training materials.
16. Operation and Maintenance Data: For DDC system to include in emergency, operation and maintenance manuals.

#### 1.8 MAINTENANCE MATERIAL SUBMITTALS

- A. Furnish extra materials and parts that match products installed and that are packaged with protective covering for storage and identified with labels describing contents.
- B. Include product manufacturer recommended parts lists for proper product operation over four-year period following warranty period. Parts list shall be indicated for each year.
- C. Furnish parts, as indicated by manufacturer recommended parts list, for product operation during two-year period following warranty period.
- D. Furnish quantity indicated of matching product(s) in Project inventory for each unique size and type of following:
  1. Network Controller: One.

2. Programmable Application Controller: One.
3. Application-Specific Controller: One.
4. Room Carbon Dioxide Sensor and Transmitter: One.
5. Room Moisture Sensor and Transmitter: One.
6. Room Pressure Sensor and Transmitter: One.
7. Room Temperature Sensor and Transmitter: One.
8. General-Purpose Relay: One.
9. Multifunction Time-Delay Relay: One.
10. Latching Relay: One.
11. Current-Sensing Relay: One.
12. Combination On-Off Status Sensor and On-Off Relay: One.
13. Transformer: One.
14. DC Power Supply: One.
15. Supply of 20 percent spare optical fiber cable splice organizer cabinets for 20 re-terminations.

#### 1.9 CODES AND STANDARDS

- A. Work, materials, and equipment shall comply with the most restrictive of local, state, and federal authorities' codes and ordinances or these plans and specifications. As a minimum, the installation shall comply with current editions in effect 30 days prior to receipt of bids of the following codes:
1. National Electric Code (NEC)
  2. International Building Code (IBC)
  3. International Mechanical Code (IMC)
  4. Local codes

#### 1.10 QUALITY ASSURANCE

- A. DDC System Manufacturer Qualifications:
1. Nationally recognized manufacturer of DDC systems and products.
  2. DDC systems with similar requirements to those indicated for a continuous period of five years within time of bid.
  3. DDC systems and products that have been successfully tested and in use on at least five past projects.
  4. Having complete published catalog literature, installation, operation and maintenance manuals for all products intended for use.
  5. Having full-time in-house employees for the following:
    - a. Product research and development.
    - b. Product and application engineering.

- c. Product manufacturing, testing and quality control.
- d. Technical support for DDC system installation training, commissioning and troubleshooting of installations.
- e. Owner operator training.

**B. DDC System Provider Qualifications:**

- 1. Installer shall have an established working relationship with BAS manufacturer of not less than three years and shall be an authorized representative of, and trained by, DDC system manufacturer.
- 2. In-place facility located within 50 miles of Project.
- 3. Demonstrated past experience with installation of DDC system products being installed for period within five consecutive years before time of bid.
- 4. Demonstrated past experience on five projects of similar complexity, scope and value.
- 5. Each person assigned to Project shall have demonstrated past experience.
- 6. Staffing resources of competent and experienced full-time employees that are assigned to execute work according to schedule.
- 7. Installer shall have successfully completed BAS manufacturer control system training. Upon request, Installer shall present certification of completed training including hours of instruction and course outlines.
- 8. Service and maintenance staff assigned to support Project during warranty period.
- 9. Product parts inventory to support on-going DDC system operation for a period of not less than 5 years after Substantial Completion.
- 10. DDC system manufacturer backing to take over execution of Work to comply with requirements. Include Project-specific written letter, signed by manufacturer corporate officer.

**C. Testing Agency Qualifications: Company Member of International Electrical Testing Association (NETA).**

- 1. Testing Agency Field Supervisor: Certified by NETA to supervise on-site testing.

**1.11 WARRANTY**

**A. Manufacturer Warranty: Manufacturer and Installer agree to repair or replace products that fail in materials or workmanship within specified warranty period.**

- 1. Failures shall be adjusted, repaired, or replaced at no additional cost or reduction in service to Owner.
- 2. Include updates or upgrades to software and firmware to resolve deficiencies. Provide updates to operator workstation software, project-specific software, graphic software, database software, and firmware that resolve the contractor identified software deficiencies at no charge during warranty period. Notify owner of upgrades for functional enhancements available for purchase as part of in-warranty service agreements.
  - a. Install updates only after receiving Owner written authorization.
- 3. Warranty service shall occur during normal business hours and commence within 16 hours of Owner warranty service request.

4. Warranty Period: Two year(s) from final acceptance or date of Substantial Completion whichever is later.
  - a. For Gateway: Three-year parts and labor warranty for each.
5. Work shall have a single warranty date, even if the owner receives beneficial use due to early system start-up. Where specified work is split into multiple contracts or a multiphase contract, each contractor phase shall have a separate warranty start date and period.
6. Instrumentation shall be covered by manufacturer transferable "No Fault" warranty. If manufacturer warranty is not available, the BAS installer shall provide the same.

## **PART 2 - PRODUCTS**

### **2.1 DDC SYSTEM MANUFACTURERS**

- A. Manufacturers: Subject to compliance with requirements, provide products by the basis-of-design manufacturer by one of the following, or approved equal:
  1. Automated Logic Corporation (basis of design),
  2. Alerton Inc.,
  3. American Auto-Matrix,
  4. Delta Controls Inc.,
  5. Distech Controls,
  6. Honeywell International Inc.,
  7. Johnson Controls, Inc.,
  8. Schneider Electric USA, Inc.,
  9. Siemens Industry, Inc., Building Technologies Division,
  10. Trane,
  11. Or approved equal.
- B. The order of the above list of manufacturers does not indicate preference. Inclusion on this list does not guarantee acceptance of products or installation. DDC system shall comply with the terms of this specification and the project drawings.
- C. Provide operator workstation software, controller software, and custom application programming language, building controllers, programmable application controllers and application specific controllers from only one of the listed manufacturers.
- D. Other products specified herein (such as sensors, valves, dampers and actuators) need not be manufactured by the above manufacturers.

### **2.2 DDC SYSTEM DESCRIPTION**

- A. Microprocessor-based monitoring and control including analog/digital conversion and program logic. A control loop or subsystem in which digital and analog information is received and processed by a microprocessor, and digital control signals are generated based on control algorithms and transmitted to field devices to achieve a set of predefined conditions.

1. DDC system shall consist of a high-speed, peer-to-peer network of distributed DDC controllers, other network devices, operator interfaces, and software.
  2. The operator workstation shall provide for overall system supervision and configuration, graphical user interface, management report generation and alarm annunciation.
  3. Performance Monitoring: The BAS will provide the specified performance monitoring functionality, including required monitoring points and performance metrics, improved through system accuracy, data acquisition and data management capabilities, and required graphical and data displays.
  4. Event Response: The BAS will provide operational changes based on event response.
- B. Electrical Components, Devices, and Accessories: Listed and labeled as defined in NFPA 70, by a qualified testing agency, and marked for intended location and application.
- C. Ownership of Proprietary Material - Project-specific software and documentation shall become owner property. This includes but is not limited to the following:
1. Graphics
  2. Record drawings
  3. Database
  4. Application programming code
  5. Documentation
- D. Use new products that the manufacturer is currently manufacturing and that have been installed in a minimum of 25 installations. Do not use this installation as a product test site. Spare parts shall be available for at least five years after completion of this contract.

### 2.3 COMMUNICATION

- A. Control products, communication media, connectors, repeaters, hubs, and routers shall compose an open protocol BAS. Controller and operator interface communication shall conform to open-protocol body conformance and/or certification requirements.
- B. Each controller shall have a communication port.
- C. Where indicated on the project drawings, remote buildings or sites shall be connected to the enterprise network to allow for communication with each controller on the network.
- D. Network operator interface and value passing shall be transparent to internetwork architecture.
1. An operator interface connected to the BAS shall allow the operator to interface with each networked controller as if directly connected. BAS information such as data, status, reports, system software, and custom programs shall be viewable and editable.
  2. Inputs, outputs, and control variables used to integrate control strategies across multiple controllers shall be available on the network. Program and test all cross-controller links required to execute specified BAS operation. An authorized operator shall be able to manage, maintain, and access the BAS network of controllers.
- E. Workstations, building control panels and controllers with real-time clocks shall use the open-protocol time synchronization service. The system shall automatically synchronize system clocks daily from an operator-designated device via the internetwork. The system shall automatically adjust for daylight savings and standard time.

## 2.4 WEB ACCESS

- A. DDC system shall be Web compatible.
  - 1. Web-Compatible Access to DDC System:
    - a. Workstation shall perform overall system supervision and configuration, graphic user interface, management report generation, and alarm annunciation.
    - b. DDC system shall support Web browser access to building data. Operator using a standard Web browser shall be able to access control graphics and change adjustable set points.
    - c. Web access shall be password protected.

## 2.5 PERFORMANCE REQUIREMENTS

- A. Delegated Design: Engage a qualified professional to select components and design DDC system to satisfy system performance objectives:
  - 1. DDC system shall manage HVAC systems.
  - 2. DDC system control shall operate HVAC systems to achieve optimum operating costs while using least possible energy and maintaining specified performance.
  - 3. DDC system shall respond to power failures, HVAC equipment failures, and adverse and emergency conditions encountered through connected I/O points.
  - 4. DDC system shall operate while unattended by an operator and through operator interaction.
  - 5. DDC system shall record trends and transaction of events and produce report information such as performance, energy, occupancies, and equipment operation.
- B. ASME Compliance: Fabricate and label products to comply with ASME Boiler and Pressure Vessel Code where required by authorities having jurisdiction.
- C. Surface-Burning Characteristics: Products installed in ducts, equipment, and return-air paths shall comply with ASTM E 84; testing by a qualified testing agency. Identify products with appropriate markings of applicable testing agency.
  - 1. Flame-Spread Index: 25 or less.
  - 2. Smoke-Developed Index: 50 or less.
- D. DDC System Speed:
  - 1. Response Time of Connected Input/Output:
    - a. AI point values connected to DDC system shall be updated at least every five seconds for use by DDC controllers. Points used globally shall also comply with this requirement.
    - b. DI point values connected to DDC system shall be updated at least every five seconds for use by DDC controllers. Points used globally shall also comply with this requirement.
    - c. AO points connected to DDC system shall begin to respond to controller output commands within two second(s). Global commands shall also comply with this requirement.

- d. DO point values connected to DDC system shall respond to controller output commands within two second(s). Global commands shall also comply with this requirement.
  - 2. Display of Connected I/O:
    - a. Analog point COV connected to DDC system shall be updated and displayed at least every 10 seconds for use by operator.
    - b. Binary point COV connected to DDC system shall be updated and displayed at least every 10 seconds for use by operator.
    - c. Alarms of analog and digital points connected to DDC system shall be displayed within 15 seconds of activation or change of state.
    - d. Graphic display shall indicate current data within 10 seconds and shall refresh within eight seconds.
    - e. Point change of values and alarms displayed from workstation to workstation when multiple operators are viewing from multiple workstations shall not exceed graphic refresh rate indicated.
  - 3. Device Reaction Performance:
    - a. Devices shall react to a digital command within two seconds.
    - b. Devices shall begin to react to an analog command within two seconds.
  - 4. Program Execution Frequency: Custom and standard applications shall be capable of running as often as once every 5 seconds. Select execution times consistent with the mechanical process under control.
  - 5. Performance: Programmable controllers shall be able to completely execute DDC control system PID control loops at a frequency adjustable down to once per second. Select execution times consistent with the mechanical process under control.
  - 6. Multiple Alarm Annunciation: Each work station on the network shall receive alarms within 5 seconds of other workstations.
- E. Network Bandwidth: Design each network of DDC system to include at least 30 percent available spare bandwidth with DDC system operating under normal and heavy load conditions. Calculate bandwidth usage and apply a safety factor to ensure that requirement is satisfied when subjected to testing under worst case conditions.
- F. DDC System Data Storage:
  - 1. Include capability to store and archive:
    - a. Not less than 36 consecutive months of historical data for all I/O points connected to system, including alarms, event histories, transaction logs, trends and other information indicated.
    - b. Not less than 36 months of data from all energy meters. DDC system shall be capable of recording energy meter data on an hourly, daily, weekly, monthly and annual basis.
  - 2. Local Storage:
    - a. Provide external drive with data storage indicated using IT industry standard database platforms and be capable of functions described in "DDC Data Access" Paragraph.

**G. DDC Data Access:**

1. When logged into the system, operator shall be able to also interact with any DDC controller connected to DDC system for functional operation of DDC system.
2. System(s) shall be used for application configuration; for archiving, reporting and trending of data; for operator transaction archiving and reporting; for network information management; for alarm annunciation; and for operator interface tasks and controls application management.

**H. Future Expandability:**

1. DDC system size shall be expandable to an ultimate capacity of at least two times total I/O points indicated.
2. Additional DDC controllers, I/O and associated wiring shall be all that is needed to achieve ultimate capacity. Initial network infrastructure shall be designed and installed to support ultimate capacity.
3. Operator interfaces installed initially shall not require hardware and software additions and revisions for ultimate capacity.

**I. Input Point Displayed Accuracy and Control Accuracy:**

1. Input point displayed values shall meet following end-to-end overall system accuracy and control accuracy, including errors associated with meter, sensor, transmitter, lead wire or cable, and analog to digital conversion. Where multiple accuracies are listed, values labeled STD are for standard building controls and values labeled MV are for sensors used for measurement and verification.

TEMPERATURE AND HUMIDITY SENSORS							
Variable	Sensor Value Type	Sensor Type or Calculation Method	Range	End to End Accuracy – Plus or Minus	Refresh Interval (min)	Trend Interval (min)	Accuracy for Control - Plus or Minus
Ambient dry-bulb temperature	AI	Locate in weather station or ventilated enclosure in fully shaded location away from thermal mass bodies.	–20 deg F to 120 deg F	1.0 deg F (STD) 0.35 deg F (MV)	1	10	2 deg F
Ambient average daily outdoor temperature	Calculated	Average of instantaneous measured values	—	0.35 deg F (MV)	1	10	0.35 deg F
Ambient wet-bulb temperature	AI	Locate in weather station or ventilated enclosure in fully shaded location away from thermal mass bodies	–20 deg F to 120 deg F	3.0 deg F (STD) 0.5 deg F (MV)	1	10	3 deg F
Ambient dewpoint temperature	AI	Chilled mirror, infrared, Capacitive Locate in weather station or ventilated enclosure in fully shaded location away from thermal mass bodies	10 deg F to 100 deg F	3 deg F	1	10	3 deg F
Zone (space) air Temperature	AI	10000 ohm thermistor or 1000 ohm RTD	30 deg F to 100 deg F	1.0 deg F (STD) 0.5 deg F (MV)	1	1	1 deg F
Zone (space) wet-bulb temperature	Calculated	Calculated from temperature and relative humidity	—	2 deg F	1	1	2 deg F
Zone (space) and duct relative humidity (RH)	AI	—	20 percent to 80 percent	5 percent RH	1	1	5 percent RH
Zone (space) and duct dewpoint temperature	Calculated	Chilled mirror, infrared, Capacitive	10 deg F to 100 deg F	1.8 deg F	1	1	1.8 deg F
Ducted air temperature	AI	10000 ohm thermistor or 1000 ohm RTD	45 deg F to 140 deg F	1.0 deg F	1	1	1 deg F
Ducted air wet-bulb temperature	Calculated	Calculated from temperature and relative humidity	—	2 deg F	1	1	2 deg F
Air-handling unit supply air temperature	AI	10000 ohm thermistor or 1000 ohm RTD	45 deg F to 120 deg F	0.35 deg F	1	10	1 deg F
Air-handling unit mixed air temperature	AI	Locate in air handler mixed air section; to minimize effects of stratification use averaging sensor	40 deg F to 100 deg F	0.35 deg F	1	10	1 deg F
Air-handling unit return air temperature	AI	Locate upstream of air handler return air damper	60 deg F to 90 deg F	0.35 deg F	1	10	1 deg F
Water or glycol temperature	AI	—	32 deg F to 225 deg F	1 deg F	1	1	1 deg F
Water or glycol system delta-T	AI	10000 ohm thermistor or 1000 ohm RTD matched pair	—	0.25 deg F	1	1	0.25 deg F
Plant chilled-water temperature (supply and return)	AI	10000 ohm thermistor or 1000 ohm RTD	—	0.1 deg F (MV)	1	1	1 deg F
Plant chilled-water supply to return temperature difference	Calculated	Calculated difference of two measured values; sensors should be a matched pair	—	2 percent of reading or 0.15 deg F	1	1	0.15 deg F
Steam temperature	AI	1000 ohm RTD	0 deg F to 400 deg F	2 deg F	1	1	1 deg F

PRESSURE SENSORS							
Variable	Sensor Value Type	Sensor Type or Calculation Method	Range	End-to End Accuracy - Plus or Minus	Refresh Interval (min)	Trend Interval (min)	Accuracy for Control - Plus or Minus
Air Pressure (ducts)	AI	Variable capacitance	0 to 8 in. wg	0.1 in. wg	1	1	0.1 in. wg
Air Pressure (space)	AI	Variable capacitance	-0.35 to 0.35 in. wg	0.01 in. wg	1	1	0.005 in. wg
Water Pressure	AI	—	0 to 150 psi	2 percent of full scale	1	1	0.5 psi
Steam Pressure	AI	—	0 to 150 psi	2 percent of reading	1	1	0.5 psi

FLOW SENSORS						
Variable	Sensor Value Type	Sensor Type or Calculation Method	End-to End Accuracy - Plus or Minus	Refresh Interval (min)	Trend Interval (min)	Accuracy for Control - Plus or Minus
Fan airflow rate	AI	Duct Mounted Vortex Shedding Sensor or Piezometer Ring on Fan Inlet	5 percent of reading down to 150 ft/min	1	1	5 percent of reading down to 150 ft/min
Total air-handling unit supply airflow	Calculated	Sum of measured values	5 percent	1	10	5 percent
Airflow rate (duct and equipment except terminal units measuring stations)	AI	Electronic or differential pressure	5 percent of reading down to 150 ft/min	1	1	5 percent of reading down to 150 ft/min
Airflow (terminal units)	AI	Electronic or differential pressure	10 percent of reading	1	1	10 percent of reading
Airflow (pressurized spaces)	AI	Electronic or differential pressure	3 percent of reading	1	1	3 percent of reading
Whole-building total water flow rate	AI	Hot tapped insertion flowmeter	2 percent of reading >20:1 turndown	1	1	0.005 L/s (0.1 gpm)
Water flow	AI	—	2 percent of reading	1	1	0.1 gpm
Chilled-water plant chilled-water flowrate	AI	Full-bore magnetic flowmeter (preferred)	0.75 percent of reading	1	1	0.75 percent of reading
Steam flow rate	AI	Vortex	1.5 percent of reading >25:1 turndown	1	1	1.5 percent of reading

AIR HANDLING UNIT DAMPER POSITION AND OUTDOOR AIR FLOW CALCULATION							
Variable	Sensor Value Type	Sensor Type or Calculation Method	Range	End-to End Accuracy	Refresh Interval (min)	Trend Interval (min)	Accuracy for Control
Air-handling unit outdoor air and return air demanded damper position	AI	Virtual point that commands the damper position	0 percent to 100 percent	N/A	1	10	0.1 percent
Air-handling unit percentage outdoor air	Calculated	See Note 1	0 percent to 100 percent	N/A	1	1	0.1 percent
<p>Note 1: When temperature difference between OAT and AHU RAT is greater than 5 deg F, calculate percent OA as follows:  percent OA = (AHU MAT – AHU RAT)/(OAT – AHU RAT)  Where: MAT = Mixed air Temperature, RAT = Return Air Temperature, OAT = Outdoor Ambient Air Temperature</p>							

HVAC ENERGY USE SENSORS						
Variable	Sensor Value Type	Sensor Type or Calculation Method	End-to End Accuracy	Refresh Interval (min)	Trend Interval (min)	Accuracy for Control
Whole-building area-normalized gas energy-use intensity	Calculated	Calculated value integrated over a given interval divided by building area, ft <sup>2</sup>	±1.5 percent	1	10	±1.5 percent
Chiller Power	AI	True RMS, three-phase, integrated equipment, stand-alone analog or pulse output or networked power meter; use maximum resolution if pulse output	±1.5 percent of reading	1	1	0.001 kW
Pump power	AI/BI (pulse)	True RMS, three-phase, integrated equipment, stand-alone analog or pulse output or networked power meter; use maximum resolution if pulse output	±1.5 percent of reading; ±3.0 percent of reading if from VFD	1	1	0.001 kW
Chilled-water plant power	Calculated	Sum of measured chiller plant equipment power values	±1.5 percent	1	10	±1 kW
Fan power	AI/BI (pulse)	True RMS, three-phase, integrated equipment, stand-alone analog or pulse output or networked power meter; use maximum resolution if pulse output	±1.5 percent of reading; ±3.0 percent of reading if from VFD	1	1	0.001 kW
Total fan power	Calculated	Sum of calculated values	±1.5 percent	1	10	±1.5 percent
Chilled-water loop thermal cooling output	Calculated	Calculated value of temperature difference multiplied by measured flow rate value multiplied by 500 min-tons/deg F-gal	±3 percent	1	10	±3 percent
Chilled-water plant efficiency	Calculated	Calculated value of plant power divided by calculated value plant thermal output	±4 percent	1	10	±4 percent
Total Fan Specific power	Calculated	Calculated value of total fan power divided by calculated value of air handling unit supply airflow	±6 percent	1	10	±6 percent

GAS SENSORS							
Variable	Sensor Value Type	Sensor Type or Calculation Method	Range	End-to End Accuracy – Plus or Minus	Refresh Interval (min)	Trend Interval (min)	Accuracy for Control – Plus or Minus
Carbon dioxide	AI	Non-dispersive infrared sensor technology	0 to 2000 ppm	Greater of 5 percent of reading or 50 ppm (STD) Greater of 3 percent of reading or 40 ppm (MV)	1	1	5 percent of reading
Carbon monoxide	AI	Electrochemical sensor	0 to 100 ppm	5 ppm	1	1	5 percent of reading
Oxygen	AI	Electrochemical sensor	0 to 25 percent	0.75 percent of full scale	1	1	5 percent of full scale
Refrigerant	AI	Semiconductor cell diffusion barrier or photo-acoustic infrared	15 to 500 ppm	10 ppm of reading	1	1	10 ppm of reading

LEVEL SENSORS/SWITCHES				
Variable	Sensor Value Type	Sensor Type or Calculation Method	Refresh Interval (min)	Trend Interval (min)
Fluid Level - Tanks, Basins	DI	Single Level Float Type or Multi-Level Electronic Type	10	COV
Fluid Level - Drain Pans	DI	UL 508 Electronic Type	1	COV

ELECTRICAL METERING						
Variable	Sensor Value Type	Sensor Type or Calculation Method	End-to End Accuracy	Refresh Interval (min)	Trend Interval (min)	Accuracy for Control
Building main meter power	AI/BI (pulse)	True RMS (STD) True RMS to 50th harmonic (MV)	±1.0 percent of reading	1	1	1.0 kW (STD) 0.1 kW (MV)
Whole-building peak power	AI/BI (pulse)	Maximum of measured value over a given time interval	±1 percent	1	10	1 kW
Whole-building area-normalized electric energy-use intensity	Calculated	Measured value integrated over a given interval divided by a constant #C1 = building area, m <sup>2</sup> (ft <sup>2</sup> )	±1 percent	1	10	±1 percent
Electric power sub-meter (e.g., lighting circuits)	AI/BI (pulse)	True RMS to 50th harmonic	±1.0 percent of reading	1	1	0.001 kW
Electrical (A,V,W power factor not specified elsewhere)	AI/BI (pulse)	True RMS, three-phase, stand-alone analog or pulse output or networked meter; use maximum resolution if pulse output	±1 percent of full scale	1	1	1/100 s or less
Electrical (A,V,W power factor not specified elsewhere)	AI/BI (pulse)	True RMS, three-phase, stand-alone analog or pulse output or networked meter; use maximum resolution if pulse output	±1 percent of full scale	1	1	0.001 kW

NATURAL GAS METERS						
Variable	Sensor Value Type	Sensor Type or Calculation Method	End-to End Accuracy	Refresh Interval (min)	Trend Interval (min)	Accuracy for Control
Building main natural gas meter	BI	Positive displacement pressure compensated; continuous output	±1 percent of reading, >10:1 turndown	1	1	0.1 scfm
Whole- building natural gas heat rate (Level 3)	Calculated	Measured value divided by 0.01 therm/standard cubic feet	±1.5 percent	1	10	±1.5 percent

J. Precision of I/O Reported Values: Values reported in database and displayed shall have following precision:

1. Current:
  - a. Milliamperes: Nearest 1/10th of a milliampere.
  - b. Amperes: Nearest 1/10th of an ampere up to 100 Amp; nearest ampere for 100 Amp and more.
2. Energy:
  - a. Electric Power:
    - 1) Rate (Watts): Nearest 1/10th of a watt through 1000 W.
    - 2) Rate (Kilowatts): Nearest 1/10th of a kilowatt through 1000 kW; nearest kilowatt above 1000 kW.

- 3) Usage (Kilowatt-Hours): Nearest kilowatt through 10,000 kW; nearest 10 kW between 10,000 and 100,000 kW; nearest 100 kW for above 100,000 kW.
  - b. Thermal, Rate:
    - 1) Heating: For Btu/h, nearest Btu/h up to 1000 Btu/h; nearest 10 Btu/h between 1000 and 10,000 Btu/h; nearest 100 Btu/h for above 10,000 Btu/h. For Mbh, round to nearest Mbh up to 1000 Mbh; nearest 10 Mbh between 1000 and 10,000 Mbh; nearest 100 Mbh above 10,000 Mbh.
    - 2) Cooling: For tons, nearest ton up to 1000 tons; nearest 10 tons between 1000 and 10,000 tons; nearest 100 tons above 10,000 tons.
  - c. Thermal, Usage:
    - 1) Heating: For Btu, nearest 10 Btu up to 1000 Btu; nearest 10 Btu between 1000 and 10,000 Btu; nearest 100 Btu for above 10,000 Btu. For Mbtu, round to nearest Mbtu up to 1000 Mbtu; nearest 10 Mbtu between 1000 and 10,000 Mbtu; nearest 100 Mbtu above 10,000 Mbtu.
    - 2) Cooling: For ton-hours, nearest ton-hours up to 1000 ton-hours; nearest 10 ton-hours between 1000 and 10,000 ton-hours; nearest 100 tons above 10,000 tons.
3. Flow:
  - a. Air: Nearest cfm through 1000 cfm; nearest 10 cfm between 1000 and 10,000 cfm; nearest 100 cfm above 10,000 cfm.
  - b. Water: Nearest gpm through 1000 gpm; nearest 10 gpm between 1000 and 10,000 gpm; nearest 100 gpm above 10,000 gpm.
4. Gas:
  - a. Carbon Dioxide (ppm): Nearest ppm.
  - b. Carbon Monoxide (ppm): Nearest ppm.
  - c. Oxygen (Percentage): Nearest 1/10th of 1 percent.
  - d. Refrigerant (ppm): Nearest ppm.
5. Moisture (Relative Humidity):
  - a. Relative Humidity (Percentage): Nearest 1 percent.
6. Level: Nearest 1/100th of an inch through 10 inches; nearest 1/10 of an inch between 10 and 100 inches; nearest inch above 100 inches.
7. Speed:
  - a. Rotation (rpm): Nearest 1 rpm.
  - b. Velocity: Nearest 1/10th fpm through 100 fpm; nearest fpm between 100 and 1000 fpm; nearest 10 fpm above 1000 fpm.
8. Position, Dampers and Valves (Percentage Open): Nearest 1 percent.
9. Pressure:

- a. Air, Ducts and Equipment: Nearest 1/10th in. w.c.
  - b. Space: Nearest 1/100th in. w.c.
  - c. Water: Nearest 1/10 psig through 100 psig; nearest psig above 100 psig.
- 10. Temperature:
  - a. Air, Ducts and Equipment: Nearest 1/10th of a degree.
  - b. Outdoor: Nearest degree.
  - c. Space: Nearest 1/10th of a degree.
  - d. Heating Hot Water: Nearest degree.
  - e. Heat Recovery Runaround: Nearest 1/10th of a degree.
- 11. Vibration: Nearest 1/10th in/s.
- 12. Voltage: Nearest 1/10 volt up to 100 V; nearest volt above 100 V.
- K. Environmental Conditions for Controllers, Gateways, and Routers:
  - 1. Products shall operate without performance degradation under ambient environmental temperature, pressure and humidity conditions encountered for installed location.
    - a. If product alone cannot comply with requirement, install product in a protective enclosure that is isolated and protected from conditions impacting performance. Enclosure shall be internally insulated, electrically heated, cooled and ventilated by product and application.
  - 2. Products shall be protected with enclosures satisfying the following minimum requirements unless more stringent requirements are indicated. Products not available with integral enclosures complying with requirements indicated shall be housed in protective secondary enclosures. Installed location shall dictate the following NEMA 250 enclosure requirements:
    - a. Outdoors: Type 4X.
    - b. Indoors: Type 2.
    - c. Mechanical Equipment Rooms: Type 12.
    - d. Localized Areas Exposed to Wash Down: Type 4X.
    - e. Within Duct Systems and Air-Moving Equipment: Type 4.
    - f. Hazardous Locations: Explosion-proof rating for condition.
- L. Environmental Conditions for Instruments and Actuators:
  - 1. Instruments and actuators shall operate without performance degradation under the ambient environmental temperature, pressure, humidity, and vibration conditions specified and encountered for installed location.
    - a. If instruments and actuators alone cannot comply with requirement, install instruments and actuators in protective enclosures that are isolated and protected from conditions impacting performance. Enclosure shall be internally insulated, electrically heated, cooled and ventilated to meet specific requirements of the instrument and application.

2. Instruments, actuators and accessories shall be protected with enclosures satisfying the following minimum requirements unless more stringent requirements are indicated. Instruments and actuators not available with integral enclosures complying with requirements indicated shall be housed in protective secondary enclosures. Installed location shall dictate the following NEMA 250 enclosure requirements:
  - a. Outdoors: Type 4X.
  - b. Indoors: Type 2.
  - c. Mechanical Equipment Rooms: Type 12.
  - d. Localized Areas Exposed to Washdown: Type 4X.
  - e. Within Duct Systems and Air-Moving Equipment Exposed to Possible Condensation: Type 4.
  - f. Hazardous Locations: Explosion-proof rating for condition.
- M. DDC System Reliability:
  1. Design, install and configure DDC system including controllers, gateways and routers to yield a MTBF of at least 40,000 hours, based on a confidence level of at least 90 percent. MTBF value shall include any failure for any reason to any part of products indicated.
  2. Include DDC system and product redundancy to maintain DCC system, and associated systems and equipment that are being controlled, operational and under automatic control.
  3. Critical systems and equipment that require a higher degree of DDC system redundancy than MTBF listed shall be indicated on Drawings.
- N. Electric Power Quality:
  1. Power-Line Surges:
    - a. Protect DDC system products connected to ac power circuits from power-line surges to comply with requirements of IEEE C62.41.
    - b. Do not use fuses for surge protection.
    - c. Test protection in the normal mode and in the common mode, using the following two waveforms:
      - 1) 10-by-1000-mic.sec. waveform with a peak voltage of 1500 V and a peak current of 60 A.
      - 2) 8-by-20-mic.sec. waveform with a peak voltage of 1000 V and a peak current of 500 A.
  2. Power Conditioning:
    - a. Protect DDC system products connected to ac power circuits from irregularities and noise rejection. Characteristics of power-line conditioner shall be as follows:
      - 1) At 85 percent load, output voltage shall not deviate by more than plus or minus 1 percent of nominal when input voltage fluctuates between minus 20 percent to plus 10 percent of nominal.

- 2) During load changes from zero to full load, output voltage shall not deviate by more than plus or minus 3 percent of nominal.
    - 3) Accomplish full correction of load switching disturbances within five cycles, and 95 percent correction within two cycles of onset of disturbance.
    - 4) Total harmonic distortion shall not exceed 3-1/2 percent at full load.
  3. Ground Fault: Protect products from ground fault by providing suitable grounding. Products shall not fail due to ground fault condition.
- O. Backup Power Source:
  1. HVAC systems and equipment served by a backup power source shall have associated DDC system products that control such systems and equipment also served from a backup power source.
- P. UPS:
  1. DDC system products powered by UPS units shall include the following:
    - a. DDC controllers.
  2. DDC system instruments and actuators powered by UPS units shall include the following:
    - a. Instruments, dampers, valves and associated actuators associated with the following systems controlled by DDC system:
      - 1) Heating plant equipment including ventilation systems.
- Q. Continuity of Operation after Electric Power Interruption:
  1. Equipment and associated factory-installed controls, field-installed controls, electrical equipment, and power supply connected to building normal and backup power systems shall automatically return equipment and associated controls to operating state occurring immediately before loss of normal power, without need for manual intervention by operator when power is restored either through backup power source or through normal power if restored before backup power is brought online.

## 2.6 SYSTEM ARCHITECTURE

- A. System architecture shall consist of no more than three levels of LANs.
  1. Level one LAN shall connect network controllers and operator workstations.
  2. Level one or Level two LAN shall connect programmable application controllers to other programmable application controllers and to network controllers.
  3. Level two or Level three LAN shall connect application-specific controllers to other application-specific controllers, to programmable application controllers and to network controllers.
- B. Provide data transfer and communication speed recommended by the BAS manufacturer subject to the following minimum requirements:
  1. LAN Connecting Programmable Application Controllers: 1000 kbps.
  2. LAN Connecting Application-Specific Controllers: 115,000 bps.

- C. DDC system shall consist of dedicated and separated LANs that are not shared with other building systems and not shared with tenant data and communication networks.
- D. System architecture shall be modular and have inherent ability to expand with no impact to performance indicated.
- E. System architecture shall perform modifications without having to remove and replace existing network equipment.
- F. Number of LANs and associated communication shall be transparent to operator. All I/O points residing on any LAN shall be capable of global sharing between all DDC system LANs.
- G. System design shall eliminate dependence on any single device for system alarm reporting and control execution. Each controller shall operate independently by performing its' own control, alarm management and historical data collection.
- H. Upon loss of communication from a controller to the network or between paired controllers, an alarm shall be initiated at the DDC system head end computer.
- I. Special Network Architecture Requirements:
  - 1. Air-Handling Systems: For control applications of an air-handling system that consists of air-handling unit(s) and VAV terminal units, include a dedicated LAN of application-specific controllers serving VAV terminal units connected directly to controller that is controlling air-handling system air-handling unit(s) creating a DDC system LAN that aligns with air-handling system being controlled.

## **2.7 DDC SYSTEM OPERATOR INTERFACES**

- A. Operator Interface. PC-based workstations shall reside on a high-speed network with building controllers. Each workstation shall be able to access all BAS information. Operator shall be able to access entire DDC system through any of multiple means, including, but not limited to, the following:
  - 1. Portable operator terminal with hard wired connection through LAN port.
  - 2. Portable operator workstation with wireless connection through LAN router.
  - 3. Mobile device and application with secured wireless connection through LAN router or cellular data service.
  - 4. Remote secure connection through web access.
- B. Access to system regardless of operator means used shall be transparent to operator.
- C. Workstation and controllers shall communicate using open protocol. Workstation and control network backbone shall communicate using ISO 8802-3 (Ethernet) data link/physical layer protocol and open protocol addressing as specified in open-protocol body guidelines and requirements.
- D. DDC Network Ports: For hard wired connection of desktop or portable workstation. DDC network port shall be easily accessible, properly protected, clearly labeled, and installed at the following locations:
  - 1. Each mechanical equipment room.
  - 2. Each boiler room.
  - 3. Each different roof level with roof-mounted air-handling units or rooftop units.
  - 4. Security system command center.

5. Fire-alarm system command center.
- E. Portable Workstations:
1. Connect to DDC system Level one LAN through a communications port directly on LAN or through a communications port on a DDC controller.
  2. Able to communicate with any device located on any DDC system LAN.
  3. Connect to DDC system Level two and Level three LAN through a communications port on an application-specific controller, or a room temperature sensor connected to an application-specific controller.
  4. Connect to system through a wireless router connected to Level one LAN.
  5. Connect to system through a cellular data service.
  6. Portable workstation shall be able to communicate with any device connected to any system LAN regardless of point of physical connection to system.
  7. Monitor, program, schedule, adjust set points, and report capabilities of I/O connected anywhere in system.
  8. Have dynamic graphic displays that are identical to desktop workstations.
- F. Portable Operators Terminal (POT):
1. Connect DDC controller through a communications port local to controller.
  2. Able to communicate with any DDC system controller that is directly connected or with LAN.
- G. Mobile Device:
1. Connect to system through a wireless router connected to LAN and cellular data service.
  2. Able to communicate with any DDC controller connected to DDC system using a dedicated application and secure web access.
- H. Telephone Communications:
1. Through use of a standard modem, operator shall be able to communicate with any device connected to any system LAN.
  2. Have auto-dial and auto-answer communications to allow desktop and portable workstations and DDC controllers to communicate with remote workstations and remote DDC controllers via telephone lines.
    - a. DDC Controllers:
      - 1) Shall not have modems unless specifically indicated for a unique controller.
      - 2) Controllers with modems shall automatically place calls to report critical alarms, or to upload trend and historical information for archiving.
      - 3) Analyze and prioritize alarms to minimize initiation of calls.
      - 4) Buffer noncritical alarms in memory and report them as a group of alarms, or until an operator manually requests an upload.

- 5) Make provisions for handling busy signals, no-answers, and incomplete data transfers.
  - 6) Call default devices when communications cannot be established with primary devices.
- I. Critical Alarm Reporting:
1. Operator-selected critical alarms shall be sent by DDC system to notify operator of critical alarms that require immediate attention.
  2. DDC system shall send alarm notification to multiple recipients that are assigned for each alarm.
  3. DDC system shall notify recipients by any or all means, including e-mail, text message and prerecorded phone message to mobile and landline phone numbers.
- J. Simultaneous Operator Use: Capable of accommodating up to 10 simultaneous operators that are accessing DDC system through any one of operator interfaces indicated.

## 2.8 PORTABLE OPERATOR TERMINAL

- A. Portable Operator Terminal. Furnish a portable operator terminal capable of accessing all BAS data. This device may be connected to any point on the system network or may be connected directly to any controller for programming, setup, and troubleshooting. This device may be connected to any point on the system network or it may be connected directly to controllers using open protocol. The portable operator terminal shall be a notebook-style PC including all software and hardware required.
- B. Description: Handheld device with integral keypad or touch screen operator interface.
- C. Display: Multiple lines of text display for use in operator interaction with DDC system.
- D. Cable: Flexible cable, at least 36 inches long, with a plug-in jack for connection to DDC controllers, network ports or instruments with an integral LAN port. As an alternative to hard wired connection, POT shall be accessible to DDC controllers through a wireless network connection.
- E. POT shall be powered through network connection.
- F. Connection of POT to DDC system shall not interrupt or interfere with normal network operation in any way, prevent alarms from being transmitted, or preclude central initiated commands and system modification.
- G. POT shall give operator the ability to do the following:
1. Display and monitor BI point status.
  2. Change BO point set point (on or off, open or closed).
  3. Display and monitor analog point values.
  4. Change analog control set points.
  5. Command a setting of AO point.
  6. Display and monitor I/O point in alarm.
  7. Add a new or delete an existing I/O point.
  8. Enable and disable I/O points, initiators, and programs.

9. Display and change time and date.
10. Display and change time schedules.
11. Display and change run-time counters and run-time limits.
12. Display and change time and event initiation.
13. Display and change control application and DDC parameters.
14. Display and change programmable offset values.
15. Access DDC controller initialization routines and diagnostics.

## 2.9 NETWORKS

- A. Acceptable networks for connecting workstations, mobile devices, and network controllers include the following subject to meeting performance specified:
  1. ATA 878.1, ARCNET.
  2. CEA-709.1-C.
  3. IP.
  4. IEEE 8802-3, Ethernet.
- B. Acceptable networks for connecting programmable application controllers include the following subject to meeting performance specified:
  1. ATA 878.1, ARCNET.
  2. CEA-709.1-C.
  3. IP.
  4. IEEE 8802-3, Ethernet.
- C. Acceptable networks for connecting application-specific controllers include the following subject to meeting performance specified:
  1. ATA 878.1, ARCNET.
  2. CEA-709.1-C.
  3. EIA-485A.
  4. IP.
  5. IEEE 8802-3, Ethernet.

## 2.10 NETWORK COMMUNICATION PROTOCOL

- A. Network communication protocol(s) used throughout entire DDC system shall be open to Owner and available to other companies for use in making future modifications to DDC system.
- B. Industry Standard Protocols:
  1. DDC system shall use any one or a combination of the following industry standard protocols for network communication while complying with other DDC system requirements indicated:
    - a. ASHRAE 135.
    - b. CEA-709.1-C.

- c. Modbus Application Protocol Specification V1.1b.
2. Operator workstations and network controllers shall communicate through ASHRAE 135 or CEA-709.1-C protocol.
3. Portions of DDC system networks using ASHRAE 135 communication protocol shall be an open implementation of network devices complying with ASHRAE 135. Network devices shall be tested and listed by BACnet Testing Laboratories.
4. Portions of DDC system networks using CEA-709.1-C communication protocol shall be an open implementation of LonWorks technology using CEA-709.1-C communication protocol and using LonMark SNVTs as defined in LonMark SNVT list exclusively for DDC system.
5. Portions of DDC system networks using Modbus Application Protocol Specification V1.1b communication protocol shall be an open implementation of network devices and technology complying with Modbus Application Protocol Specification V1.1b.
6. Gateways shall be provided to connect networks and network devices using different protocols.

C. ASHRAE 135 Protocol:

1. DDC system shall not require use of gateways except to integrate HVAC equipment and other building systems and equipment, not required to use ASHRAE 135 communication protocol.
2. Gateways required for integration shall connect to DDC system using ASHRAE 135 communication protocol and Project object properties and read/write services indicated by interoperability schedule.
3. Operator workstations, controllers and other network devices shall be tested and listed by BACnet Testing Laboratories.

2.11 SYSTEM SOFTWARE

A. System Software Minimum Requirements:

1. Real-time multitasking and multiuser 32- or 64-bit operating system that allows concurrent multiple operator workstations operating and concurrent execution of multiple real-time programs and custom program development.
2. Acceptable operating systems are Windows, the latest Windows Server release, Linux, and UNIX. Operating system shall be capable of operating DOS and Microsoft Windows applications. The operating system also shall support the use of other common software applications. Examples include Microsoft Excel, Microsoft Access, or other SQL database software.
3. Database management software shall manage all data on an integrated and non-redundant basis. Additions and deletions to database shall be without detriment to existing data. Include cross linkages so no data required by a program can be deleted by an operator until that data have been deleted from respective programs.
4. Network communications software shall manage and control multiple network communications to provide exchange of global information and execution of global programs.

5. Operator interface software shall include day-to-day operator transaction processing, alarm and report handling, operator privilege level and data segregation control, custom programming, and online data modification capability.
6. Scheduling software shall schedule centrally based time and event, temporary, and exception day programs.

**B. Operator Interface Software:**

1. Minimize operator training through use of English language prorating and English language point identification.
2. Minimize use of a typewriter-style keyboard through use of a pointing device similar to a mouse.
3. Security Access:
  - a. All system security data shall be stored in an encrypted format.
  - b. Operator access to DDC system shall be under password control.
  - c. Each operator shall be required to log on to the system with a username and password in order to view, edit, add, or delete data. System security shall be selectable for each operator. An alphanumeric password shall be field assignable to each operator. Each operator password shall be able to restrict the functions accessible to viewing and/or changing each system application, editor, and object.
    - 1) Operator log-off shall be a manual operation or automatic if no keyboard or mouse activity is detected. Automatic sign-off period shall be programmable from one to 60 minutes in one-minute increments on a per operator basis.
    - 2) Operator sign-on and sign-off activity shall be recorded and sent to printer.
  - d. Operator password shall be same regardless of which computer or other interface means is used.
  - e. Additions or changes made to passwords shall be updated automatically.
  - f. Software shall have at least five access levels.
  - g. Each menu item shall be assigned an access level so that a one-for-one correspondence between operator assigned access level(s) and menu item access level(s) is required to gain access to menu item.
  - h. Display menu items to operator with those capable of access highlighted. Menu and operator access level assignments shall be online programmable and under password control.
4. Data Segregation:
  - a. Include data segregation for control of specific data routed to a workstation, to an operator or to a specific output device, such as a printer.
  - b. Include at least 32 segregation groups.
  - c. Segregation groups shall be selectable such as "fire points," "fire points on second floor," "space temperature points," "HVAC points," and so on.

- d. Points shall be assignable to multiple segregation groups. Display and output of data to printer or monitor shall occur where there is a match of operator or peripheral segregation group assignment and point segregations.
  - e. Alarms shall be displayed and printed at each peripheral to which segregation allows, but only those operators assigned to peripheral and having proper authorization level will be allowed to acknowledge alarms.
  - f. Operators and peripherals shall be assignable to multiple segregation groups and all assignments are to be online programmable and under password control.
5. Operators shall be able to perform commands including, but not limited to, the following:
- a. Start or stop selected equipment.
  - b. Adjust set points.
  - c. Add, modify, and delete time programming.
  - d. Enable and disable process execution.
  - e. Lock and unlock alarm reporting for each point.
  - f. Enable and disable totalization for each point.
  - g. Enable and disable trending for each point.
  - h. Override control loop set points.
  - i. Enter temporary override schedules.
  - j. Define holiday schedules.
  - k. Change time and date.
  - l. Enter and modify analog alarm limits.
  - m. Enter and modify analog warning limits.
  - n. View limits.
  - o. Enable and disable demand limiting.
  - p. Enable and disable duty cycle.
  - q. Display logic programming for each control sequence.
6. Reporting:
- a. Generated automatically and manually.
  - b. Sent to displays, printers and disk files.
  - c. Types of Reporting:
    - 1) General listing of points.
    - 2) List points currently in alarm.
    - 3) List of off-line points.
    - 4) List points currently in override status.
    - 5) List of disabled points.

- 6) List points currently locked out.
  - 7) List of items defined in a "Follow-Up" file.
  - 8) List weekly schedules.
  - 9) List holiday programming.
  - 10) List of limits and deadbands.
7. Summaries: For specific points, for a logical point group, for an operator selected group(s), or for entire system without restriction due to hardware configuration.

C. Graphic Interface Software:

1. The operator workstation software shall be graphically oriented. The system shall allow display of up to 10 graphic screens at once for comparison and monitoring of system status. Provide a method for the operator to easily move between graphic displays and change the size and location of graphic displays on the screen. The system graphics shall be able to be modified while online. An operator with the proper password level shall be able to add, delete, or change dynamic objects on a graphic. Dynamic objects shall include analog and binary values, dynamic text, static text, and animation files. Graphics shall have the ability to show animation by shifting image files based on the status of the object.
2. Include a full interactive graphical selection means of accessing and displaying system data to operator. Include at least ten levels with the penetration path operator assignable (for example, site, building, floor, air-handling unit, and supply temperature loop). Native language descriptors assigned to menu items are to be operator defined and modifiable under password control.
3. Include a hierarchical-linked dynamic graphic operator interface for accessing and displaying system data and commanding and modifying equipment operation. Interface shall use a pointing device with pull-down or penetrating menus, color and animation to facilitate operator understanding of system.
4. Include at least 10 levels of graphic penetration with the hierarchy operator assignable.
5. Descriptors for graphics, points, alarms and such shall be modified through operator's workstation under password control.
6. Graphic displays shall be online user definable and modifiable using the hardware and software provided.
7. Data to be displayed within a graphic shall be assignable regardless of physical hardware address, communication or point type.
8. Graphics are to be online programmable and under password control.
9. Points may be assignable to multiple graphics where necessary to facilitate operator understanding of system operation.
10. Graphics shall also contain software points.
11. Penetration within a graphic hierarchy shall display each graphic name as graphics are selected to facilitate operator understanding.

12. Back-trace feature shall permit operator to move upward in the hierarchy using a pointing device. Back trace shall show all previous penetration levels. Include operator with option of showing each graphic full screen size with back trace as horizontal header or by showing a "stack" of graphics, each with a back trace.
13. Display operator accessed data on the monitor.
14. Operator shall select further penetration using pointing device to click on a site, building, floor, area, equipment, and so on. Defined and linked graphic below that selection shall then be displayed.
15. Include operator with means to directly access graphics without going through penetration path.
16. Dynamic data shall be assignable to graphics.
17. Display points (physical and software) with dynamic data provided by DDC system with appropriate text descriptors, status or value, and engineering unit.
18. Use color, rotation, or other highly visible means, to denote status and alarm states. Color shall be variable for each class of points, as chosen by operator.
19. Points shall be dynamic with operator adjustable update rates on a per point basis from one second to over a minute.
20. For operators with appropriate privilege, points shall be commanded directly from display using pointing device.
  - a. For an analog command point such as set point, current conditions and limits shall be displayed and operator can position new set point using pointing device.
  - b. For a digital command point such as valve position, valve shall show its current state such as open or closed and operator could select alternative position using pointing device.
  - c. Keyboard equivalent shall be available for those operators with that preference.
21. Operator shall be able to split or resize viewing screen into quadrants to show one graphic on one quadrant of screen and other graphics or spreadsheet, bar chart, word processing, curve plot and other information on other quadrants on screen. This feature shall allow real-time monitoring of one part of system while displaying other parts of system or data to better facilitate overall system operation.
22. Help Features:
  - a. On-line context-sensitive help utility to facilitate operator training and understanding. Provide a context sensitive, online help system to assist the operator in operating and editing the system. Online help shall be available for all applications and shall provide the relevant data for that particular screen. Additional help information shall be available through the use of hypertext.
  - b. Bridge to further explanation of selected keywords. Document shall contain text and graphics to clarify system operation. If help feature does not have ability to bridge on keywords for more information, a complete set of user manuals shall be provided in an indexed word-processing program, which shall run concurrently with operating system software.
  - c. Available for Every Menu Item: Index items for each system menu item.
23. Graphic generation software:

- a. Custom graphic files shall be created with the use of a graphics generation package furnished with the system. The graphics generation package shall be a graphically based system that uses the mouse to create and modify graphics that are saved in industry standard formats such as PCX, TIFF, and GEM. The graphics generation package also shall provide the capability of capturing or converting graphics from other programs such as Designer or AutoCAD.
- b. Furnish a complete library of standard HVAC equipment graphics including but not limited to chillers, boilers, air handlers, terminal units, chilled beams, fan-coils, unit ventilators, fans, coils, filters, dampers, valves, piping, pumps, ductwork and electrical symbols similar to those indicated on the design drawings. The library shall be furnished in a file format compatible with the graphics generation package program.
- c. Graphic development package shall use a pointing device in conjunction with a drawing program to allow operator to perform the following:
  - 1) Define background screens.
  - 2) Define connecting lines and curves.
  - 3) Locate, orient and size descriptive text.
  - 4) Define and display colors for all elements.
  - 5) Establish correlation between symbols or text and associated system points or other displays.
- D. Project-Specific Graphics: Graphics documentation including, but not limited to, the following:
  - 1. Site plan showing each building, and additional site elements, which are being controlled or monitored by DDC system.
  - 2. Plan for each building floor, including interstitial floors, and each roof level of each building, showing the following:
    - a. Room layouts with room identification and name.
    - b. Locations and identification of all monitored and controlled HVAC equipment and other equipment being monitored and controlled by DDC system.
    - c. Location and identification of each hardware point being controlled or monitored by DDC system.
  - 3. Control schematic for each of following, including a graphic system schematic representation, similar to that indicated on Drawings, with point identification, set point and dynamic value indication, sequence of operation and control logic diagram.
  - 4. Graphic display for each piece of equipment connected to DDC system through a data communications link. Include dynamic indication of all points associated with equipment.
  - 5. DDC system network riser diagram that shows schematic layout for entire system including all networks and all controllers, gateways, operator workstations and other network devices.
- E. Customizing Software:

1. Provide software to modify and tailor DDC system to specific and unique requirements of equipment installed, to programs implemented and to staffing and operational practices planned. The operator shall be able to create, edit, and download custom programs at the same time that all other system applications are operating. The BAS shall be fully operable while custom routines are edited, compiled, and downloaded.
2. Software shall allow online modification of DDC system configuration, program parameters, and database using menu selection and keyboard entry of data into preformatted display templates.
3. As a minimum, include the following modification capability software:
  - a. Operator assignment shall include designation of operator passwords, access levels, point segregation and auto sign-off.
  - b. Peripheral assignment capability shall include assignment of segregation groups and operators to consoles and printers, designation of backup workstations and printers, designation of workstation header points and enabling and disabling of print-out of operator changes.
  - c. System configuration and diagnostic capability shall include communications and peripheral port assignments, DDC controller assignments to network, DDC controller enable and disable, assignment of command trace to points and application programs and initiation of diagnostics. The system shall automatically monitor the operation of all work-stations, printers, network connections, building management panels, and controllers. The failure of any device shall be annunciated to the operator.
  - d. System text addition and change capability shall include English or native language descriptors for points, segregation groups and access levels and action messages for alarms, run time and trouble condition.
  - e. Time and schedule change capability shall include time and date set, time and occupancy schedules, exception and holiday schedules and daylight savings time schedules.
  - f. Point related change capability shall include the following:
    - 1) System and point enable and disable.
    - 2) Run-time enable and disable.
    - 3) Assignment of points to segregation groups, calibration tables, lockout, and run time and to a fixed I/O value.
    - 4) Assignment of alarm and warning limits.
  - g. Application program change capability shall include the following:
    - 1) Enable and disable of software programs.
    - 2) Programming changes.
    - 3) Assignment of comfort limits, global points, time and event initiators, time and event schedules and enable and disable time and event programs.

4. Software shall allow operator to add points, or groups of points, to DDC system and to link them to energy optimization and management programs. Additions and modifications shall be online programmable using operator workstation, downloaded to other network devices and entered into their databases. After verification of point additions and associated program operation, database shall be uploaded and recorded on hard drive and disk for archived record.
  5. Include high-level language programming software capability for implementation of custom DDC programs. Software shall include a compiler, linker, and up- and down-load capability.
  6. Include a library of DDC algorithms, intrinsic control operators, arithmetic, logic and relational operators for implementation of control sequences. Also include, as a minimum, the following:
    - a. Proportional control (P).
    - b. Proportional plus integral (PI).
    - c. Proportional plus integral plus derivative (PID).
    - d. Adaptive and intelligent self-learning control.
      - 1) Algorithm shall monitor loop response to output corrections and adjust loop response characteristics according to time constant changes imposed.
      - 2) Algorithm shall operate in a continuous self-learning manner and shall retain in memory a stored record of system dynamics so that on system shut down and restart, learning process starts from where it left off.
  7. Fully implemented intrinsic control operators including sequence, reversing, ratio, time delay, time of day, highest select AO, lowest select AO, analog controlled digital output, analog control AO, and digitally controlled AO.
  8. Logic operators such as "And," "Or," "Not," and others that are part of a standard set available with a high-level language.
  9. Arithmetic operators such as "Add," "Subtract," "Multiply," "Divide," and others that are part of a standard set available with a high-level language.
  10. Relational operators such as "Equal To," "Not Equal To," "Less Than," "Greater Than," and others that are part of a standard set available with a high-level language.
- F. Alarm Handling Software:
1. Include alarm handling software to report all alarm conditions monitored and transmitted through DDC controllers, gateways and other network devices.
  2. Any object in the system shall be configurable to alarm in and out of normal state. The operator shall be able to configure the alarm limits, alarm limit differentials, states, and reactions for each object in the system.
  3. Include first in, first out handling of alarms according to alarm priority ranking, with most critical alarms first, and with buffer storage in case of simultaneous and multiple alarms.
  4. Alarm handling shall be active at all times to ensure that alarms are processed even if an operator is not currently signed on to DDC system.

5. Alarms display shall include the following:
  - a. Indication of alarm condition such as "Abnormal Off," "Hi Alarm," and "Low Alarm."
  - b. "Analog Value" or "Status" group and point identification with native language point descriptor such as "Space Temperature, Building 110, 2nd Floor, Room 212."
  - c. Discrete per point alarm action message, such as "Call Maintenance Dept. Ext-XXXX."
  - d. Include extended message capability to allow assignment and printing of extended action messages. Capability shall be operator programmable and assignable on a per point basis.
6. Alarms shall be directed to appropriate operator workstations, printers, and individual operators by privilege level and segregation assignments.
7. Send e-mail alarm messages to designated operators.
8. Send e-mail, page, text and voice messages to designated operators for critical alarms.
9. Alarms shall be categorized and processed by class.
  - a. Class 1:
    - 1) Associated with fire, security and other extremely critical equipment monitoring functions; have alarm, trouble, return to normal, and acknowledge conditions printed and displayed.
    - 2) Unacknowledged alarms to be placed in unacknowledged alarm buffer.
    - 3) All conditions shall cause an audible sound and shall require individual acknowledgment to silence audible sound.
  - b. Class 2:
    - 1) Critical, but not life-safety related, and processed same as Class 1 alarms, except do not require individual acknowledgment.
    - 2) Acknowledgement may be through a multiple alarm acknowledgment.
  - c. Class 3:
    - 1) General alarms; printed, displayed and placed in unacknowledged alarm buffer queues.
    - 2) Each new alarm received shall cause an audible sound. Audible sound shall be silenced by "acknowledging" alarm or by pressing a "silence" key.
    - 3) Acknowledgement of queued alarms shall be either on an individual basis or through a multiple alarm acknowledgement.
    - 4) Alarms returning to normal condition shall be printed and not cause an audible sound or require acknowledgment.

- d. Class 4:
  - 1) Routine maintenance or other types of warning alarms.
  - 2) Alarms to be printed only, with no display, no audible sound and no acknowledgment required.
- 10. Include an unacknowledged alarm indicator on display to alert operator that there are unacknowledged alarms in system. Operator shall be able to acknowledge alarms on an individual basis or through a multiple alarm acknowledge key, depending on alarm class.
- 11. To ensure that no alarm records are lost, it shall be possible to assign a backup printer to accept alarms in case of failure of primary printer.
- G. Reports and Logs:
  - 1. Provide a reporting package that allows the operator to select, modify, or create reports. Each report shall be definable as to data content, format, interval and date. Report data shall be archived on the hard disk for historical reporting. Provide the ability for the operator to obtain real-time logs of all objects by type or status (e.g., alarm, lockout, normal). Reports and logs shall be stored on the PC hard disk in a format that is readily accessible by other standard software applications, including spreadsheets and word processing. Reports and logs shall be readily printed to the system printer and shall be set to be printed either on operator command or at a specific time each day.
  - 2. Include reporting software package that allows operator to select, modify, or create reports using DDC system I/O point data available.
  - 3. Each report shall be definable as to data content, format, interval and date.
  - 4. Report data shall be sampled and stored on DDC controller, within storage limits of DDC controller, and then uploaded to archive on workstation for historical reporting.
  - 5. Operator shall be able to obtain real-time logs of all I/O points by type or status, such as alarm, point lockout, or normal.
- H. Standard Reports: Standard DDC system reports shall be provided and operator shall be able to customize reports later.
  - 1. All I/O: With current status and values.
  - 2. Alarm: All current alarms, except those in alarm lockout.
  - 3. Disabled I/O: All I/O points that are disabled.
  - 4. Alarm Lockout I/O: All I/O points in alarm lockout, whether manual or automatic.
  - 5. Alarm Lockout I/O in Alarm: All I/O in alarm lockout that are currently in alarm.
  - 6. Logs:
    - a. Alarm history.
    - b. System messages.
    - c. System events.
    - d. Trends.

- I. Custom Reports: Operator shall be able to easily define any system data into a daily, weekly, monthly, or annual report. Reports shall be time and date stamped and shall contain a report title.
- J. HVAC Equipment Reports: Prepare Project-specific reports.
- K. Utility Reports: Prepare Project-specific reports.
  - 1. Electric Report:
    - a. Include weekly report showing daily electrical consumption and peak electrical demand with time and date stamp for each meter.
    - b. Include monthly report showing the daily electrical consumption and peak electrical demand with time and date stamp for each meter.
    - c. Include annual report showing the monthly electrical consumption and peak electrical demand with time and date stamp for each meter.
    - d. For each weekly, monthly and annual report, include sum total of submeters combined by load type, such as lighting, receptacles and HVAC equipment showing daily electrical consumption and peak electrical demand.
    - e. For each weekly, monthly and annual report, include sum total of all submeters in building showing electrical consumption and peak electrical demand.
  - 2. Natural Gas Report:
    - a. Include weekly report showing daily natural gas consumption and peak natural gas demand with time and date stamp for each meter.
    - b. Include monthly report showing the daily natural gas consumption and peak natural gas demand with time and date stamp for each meter.
    - c. Include annual report showing the monthly natural gas consumption and peak natural gas demand with time and date stamp for each meter.
    - d. For each weekly, monthly and annual report, include sum total of submeters combined by load type, such as boilers and service water heaters showing daily natural gas consumption and peak natural gas demand.
    - e. For each weekly, monthly and annual report, include sum total of all submeters in building showing natural gas consumption and peak natural gas demand.
  - 3. Service Water Report:
    - a. Include weekly report showing daily service water consumption and peak service water demand with time and date stamp for each meter.
    - b. Include monthly report showing the daily service water consumption and peak service water demand with time and date stamp for each meter.
    - c. Include annual report showing the monthly service water consumption and peak service water demand with time and date stamp for each meter.
    - d. For each weekly, monthly and annual report, include sum total of submeters combined by load type, such as cooling tower makeup and irrigation showing daily service water consumption and peak service water demand.
    - e. For each weekly, monthly and annual report, include sum total of all submeters in building showing service water consumption and peak service water demand.

- L. Energy Reports: Prepare Project-specific daily, weekly, monthly, annual and since-installed energy reports.
1. Prepare report for each purchased energy utility, indicating the following:
    - a. Time period being reported with beginning and end date, and time indicated.
    - b. Consumption in units of measure commonly used to report specific utility consumption over time.
    - c. Gross area served by utility.
    - d. Consumption per unit area served using utility-specific unit of measure.
    - e. Cost per utility unit.
    - f. Utility cost per unit area.
    - g. Convert all utilities to a common energy consumption unit of measure and report for each utility.
    - h. Consumption per unit area using common unit of measure.
  2. Prepare report for each renewable energy source, indicating the following:
    - a. Time period being reported with beginning and end date, and time indicated.
    - b. Harvested energy in units of measure commonly used to report specific harvested energy consumption over time.
    - c. Gross area served by renewable energy source.
    - d. Harvested energy per unit area served using specific unit of measure.
    - e. Cost per purchased utility unit displaced by renewable energy.
    - f. Cost savings attributed to harvested energy source.
    - g. Cost savings per unit area attributed to harvested energy.
    - h. Convert all renewable energy sources to a common energy consumption unit of measure and report for each.
    - i. Harvested energy per unit area using common unit of measure.
  3. Prepare purchased energy utility report for each sub-metered area that indicates the following:
    - a. Time period being reported with beginning and end date, and time indicated.
    - b. Gross area served.
    - c. Energy consumption by energy utility type.
    - d. Energy consumption per unit area by energy utility type.
    - e. Total energy consumption of all utilities in common units of measure.
    - f. Total energy consumption of all utilities in common units of measure per unit area.
    - g. Unit energy cost by energy utility type.
    - h. Energy cost by energy utility type.
    - i. Energy cost per unit area by energy utility type.

- j. Total cost of all energy utilities.
- k. Total cost of all energy utilities per unit area.
- 4. Prepare Project total purchased energy utility report that combines all purchased energy utilities and all areas served. Project total energy report shall indicate the following:
  - a. Time period being reported with beginning and end date, and time indicated.
  - b. Gross area served.
  - c. Energy consumption by energy utility type.
  - d. Energy consumption per unit area by energy utility type.
  - e. Total energy consumption of all utilities in common units of measure.
  - f. Total energy consumption of all utilities in common units of measure per unit area.
  - g. Unit energy cost by energy utility type.
  - h. Energy cost by energy utility type.
  - i. Energy cost per unit area by energy utility type.
  - j. Total cost of all energy utilities.
  - k. Total cost of all energy utilities per unit area.
- M. HVAC System Efficiency Reports: Prepare Project-specific daily weekly monthly, annual and since-installed HVAC system efficiency reports.
  - 1. Prepare report for each chilled-water system, indicating the following:
    - a. Time period being reported with beginning and end date, and time indicated.
    - b. Cooling energy supplied during time period.
    - c. Power energy consumed during time period by cooling equipment used to produce cooling energy supplied. List power consumed for each individual piece of equipment in system and summed total of all equipment in system.
    - d. Energy efficiency coefficient of performance determined by dividing power energy consumed into cooling energy supplied.
    - e. Energy efficiency determined by dividing cooling energy supplied into power energy consumed.
    - f. Units of measure used in report shall be consistent with units indicated for system.
  - 2. Prepare report for each hot-water system, indicating the following:
    - a. Time period being reported with beginning and end date, and time indicated.
    - b. Cooling energy supplied during time period.
    - c. Fuel consumed during time period by boilers used to produce heating energy supplied. List fuel consumed for each individual piece of equipment in system and summed total of all equipment in system.
    - d. Energy efficiency determined by dividing heating energy supplied into fuel energy consumed.
    - e. Units of measure used in report shall be consistent with units indicated for system.

3. Prepare report for each steam system, indicating the following:
  - a. Time period being reported with beginning and end date, and time indicated.
  - b. Cooling energy supplied during time period.
  - c. Fuel consumed during time period by boilers used to produce heating energy supplied. List fuel consumed for each individual piece of equipment in system and summed total of all equipment in system.
  - d. Energy efficiency determined by dividing heating energy supplied into fuel energy consumed.
  - e. Units of measure used in report shall be consistent with units indicated for system.
- N. PUE Reports: Prepare Project-specific daily, weekly, monthly, annual and since-installed PUE reports.
  1. Prepare separate report for each tenant.
  2. Prepare Project PUE report that combines PUE and all tenants served.
  3. Calculate PUE following guidelines in The Green Grid, White Paper No. 22.
- O. Weather Reports:
  1. Include daily report showing the following:
    - a. Daily minimum, maximum, and average outdoor dry-bulb temperature.
    - b. Daily minimum, maximum, and average outdoor wet-bulb temperature.
    - c. Daily minimum, maximum, and average outdoor dew point temperature.
    - d. Number of heating degree-days for each day calculated from a base temperature of **55 deg F**.
    - e. Number of cooling degree-days for each day calculated from a base temperature of **65 deg F**.
    - f. Daily minimum, maximum, and average outdoor carbon dioxide level.
    - g. Daily minimum, maximum, and average relative humidity.
    - h. Daily minimum, maximum, and average barometric pressure.
    - i. Daily minimum, maximum, and average wind speed and direction.
  2. Include weekly report showing the following:
    - a. Daily minimum, maximum, and average outdoor dry-bulb temperature.
    - b. Daily minimum, maximum, and average outdoor wet-bulb temperature.
    - c. Daily minimum, maximum, and average outdoor dew point temperature.
    - d. Number of heating degree-days for each day calculated from a base temperature of **55 deg F**.
    - e. Number of cooling degree-days for each day calculated from a base temperature of **65 deg F**.
    - f. Weekly minimum, maximum, and average outdoor carbon dioxide level.
    - g. Daily minimum, maximum, and average relative humidity.

- h. Daily minimum, maximum, and average barometric pressure.
    - i. Daily minimum, maximum, and average wind speed and direction.
  - 3. Include monthly report showing the following:
    - a. Daily minimum, maximum, and average outdoor dry-bulb temperature.
    - b. Daily minimum, maximum, and average outdoor wet-bulb temperature.
    - c. Daily minimum, maximum, and average outdoor dew point temperature.
    - d. Number of heating degree-days for each day calculated from a base temperature of **55 deg F**.
    - e. Number of cooling degree-days for each day calculated from a base temperature of **65 deg F**.
    - f. Monthly minimum, maximum, and average outdoor carbon dioxide level.
    - g. Daily minimum, maximum, and average relative humidity.
    - h. Daily minimum, maximum, and average barometric pressure.
    - i. Daily minimum, maximum, and average wind speed and direction.
  - 4. Include annual (12-month) report showing the following:
    - a. Monthly minimum, maximum, and average outdoor dry-bulb temperature.
    - b. Monthly minimum, maximum, and average outdoor wet-bulb temperature.
    - c. Monthly minimum, maximum, and average outdoor dew point temperature.
    - d. Number of heating degree-days for each month calculated from a base temperature of **55 deg F**.
    - e. Number of cooling degree-days for each month calculated from a base temperature of **65 deg F**.
    - f. Annual minimum, maximum, and average outdoor carbon dioxide level.
    - g. Monthly minimum, maximum, and average relative humidity.
    - h. Daily minimum, maximum, and average barometric pressure.
    - i. Daily minimum, maximum, and average wind speed and direction.
- P. Standard Trends:
  - 1. Trend all I/O point present values, set points, and other parameters indicated for trending.
  - 2. Trends shall be associated into groups, and a trend report shall be set up for each group.
  - 3. Trends shall be stored within DDC controller and uploaded to hard drives automatically on reaching 75 percent of DDC controller buffer limit, or by operator request, or by archiving time schedule.
  - 4. Preset trend intervals for each I/O point after review with Owner.
  - 5. Trend intervals shall be operator selectable from 10 seconds up to 60 minutes. Minimum number of consecutive trend values stored at one time shall be 100 per variable.
  - 6. When drive storage memory is full, most recent data shall overwrite oldest data.

7. Archived and real-time trend data shall be available for viewing numerically and graphically by operators.
- Q. Custom Trends: Operator shall be able to define a custom trend log for any I/O point in DDC system.
1. The operator shall be able to define a custom trend log for any data object in the system. Trend data shall be sampled and stored on the building controller panel, be archived on the hard disk, and be retrievable for use in spreadsheets and standard database programs. Trend data shall be exportable in a standard electronic format (.xls, .csv, .xml) for analysis external to the BAS.
  2. Each trend shall include interval, start time, and stop time.
  3. Data shall be sampled and stored on DDC controller, within storage limits of DDC controller, and then uploaded to archive on workstation hard drives.
  4. Data shall be retrievable for use in spreadsheets and standard database programs.]
- R. Alarm Event Log:
1. The operator shall be able to view all system alarms and change of states from any location in the system. Events shall be listed chronologically. An operator with the proper security level may acknowledge and clear alarms. All that have not been cleared by the operator shall be archived to the hard disk on the workstation.
- S. Group Trend Time Series Plots:
1. Provide user-selectable Y points.
  2. Provide user-editable titles, point names, and Y axis titles.
  3. Individual trended points shall be able to be grouped in groups of up to four points per plot with up to four plots per page.
- T. X-Y Trend Plots: The user shall be able to select the beginning and ending period for each X-Y chart, within the time domain of the database being used.
1. User-selectable X and Y trend inputs.
  2. User editable titles, point names and X and Y axis titles.
  3. User-selectable time period options:
    - a. 1-day 24-hour period.
    - b. 1-week 7-day period.
    - c. 1-month period, with appropriate days for the month selected; or
    - d. 1-year period.
  4. User-selectable display of up to 6 plots per screen in 2 columns.
- U. Programming Software:
1. Include programming software to execute sequences of operation indicated.
  2. Include programming routines in simple and easy to follow logic with detailed text comments describing what the logic does and how it corresponds to sequence of operation.
  3. Programming software shall be any of the following:

- a. Graphic Based: Programming using a library of function blocks made from preprogrammed code designed for DDC control systems.
    - 1) Function blocks shall be assembled with interconnection lines that represent to control sequence in a flowchart.
    - 2) Programming tools shall be viewable in real time to show present values and logical results of each function block.
  - b. Menu Based: Programming done by entering parameters, definitions, conditions, requirements and constraints.
  - c. Line by Line and Text Based: Programming shall declare variable types such as local, global, real, integer, and so on, at the beginning of the program. Use descriptive comments frequently to describe programming code.
4. Include means for detecting programming errors and testing software control strategies with a simulation tool before implementing in actual control. Simulation tool may be inherent with programming software or as a separate product.

V. System Applications

1. Each workstation shall provide operator interface and off-line storage of system information. Provide the following applications at each workstation:
  - a. Automatic System Database Save and Restore. Each workstation shall store on the hard disk a copy of the current database of each building controller. This database shall be updated whenever a change is made in any system panel. The storage of these data shall be automatic and not require operator intervention. In the event of a database loss in a building management panel, the first work station to detect the loss shall automatically restore the database for that panel. This capability may be disabled by the operator.
  - b. Manual Database Save and Restore. A system operator with the proper password clearance shall be able to save the database from any system panel. The operator also shall be able to clear a panel database and manually initiate a download of a specified database to any panel in the system.

W. Database Management Software:

1. Where a separate SQL database is used for information storage, DDC system shall include database management software that separates database monitoring and managing functions by supporting multiple separate windows.
2. Database secure access shall be accomplished using standard SQL authentication including ability to access data for use outside of DDC system applications.
3. Database management function shall include summarized information on trend, alarm, event, and audit for the following database management actions:
  - a. Backup.
  - b. Purge.
  - c. Restore.
4. Database management software shall support the following:

- a. Statistics: Display database server information and trend, alarm, event, and audit information on database.
  - b. Maintenance: Include method of purging records from trend, alarm, event and audit databases by supporting separate screens for creating a backup before purging, selecting database, and allowing for retention of a selected number of day's data.
  - c. Backup: Include means to create a database backup file and select a storage location.
  - d. Restore: Include a restricted means of restoring a database by requiring operator to have proper security level.
5. Database management software shall include information of current database activity, including the following:
  - a. Ready.
  - b. Purging record from a database.
  - c. Action failed.
  - d. Refreshing statistics.
  - e. Restoring database.
  - f. Shrinking a database.
  - g. Backing up a database.
  - h. Resetting Internet information services.
  - i. Starting network device manager.
  - j. Shutting down the network device manager.
  - k. Action successful.
6. Database management software monitoring functions shall continuously read database information once operator has logged on.
7. Include operator notification through on-screen pop-up display and e-mail message when database value has exceeded a warning or alarm limit.
8. Monitoring settings window shall have the following sections:
  - a. Allow operator to set and review scan intervals and start times.
  - b. E-mail: Allow operator to create and review e-mail and phone text messages to be delivered when a warning or an alarm is generated.
  - c. Warning: Allow operator to define warning limit parameters, set reminder frequency and link e-mail message.
  - d. Alarm: Allow operator to define alarm limit parameters, set reminder frequency and link e-mail message.
  - e. Database Login: Protect system from unauthorized database manipulation by creating a read access and a write access for each of trend, alarm, event and audit databases as well as operator proper security access to restore a database.
9. Monitoring settings taskbar shall include the following informational icons:

- a. Normal: Indicates by color and size, or other easily identifiable means that all databases are within their limits.
- b. Warning: Indicates by color and size, or other easily identifiable means that one or more databases have exceeded their warning limit.
- c. Alarm: Indicates by color and size, or other easily identifiable means that one or more databases have exceeded their alarm limit.

## 2.12 OFFICE APPLICATION SOFTWARE

- A. Manufacturers: Subject to compliance with requirements, available manufacturers offering products that may be incorporated into the Work include the following, or approved equal:
  - 1. Microsoft,
  - 2. Or approved equal.
- B. Include current version of office application software at time of Substantial Completion.
- C. Office application software package shall include multiple separate applications and use a common platform for all applications, similar to Microsoft "Office Professional."
  - 1. Database.
  - 2. E-mail.
  - 3. Presentation.
  - 4. Publisher.
  - 5. Spreadsheet.
  - 6. Word processing.

## 2.13 MAINTENANCE MANAGEMENT SOFTWARE

- A. Scope:
  - 1. Include complete and functional software-driven maintenance management system. Software shall perform scheduling of preventive maintenance and generation of work orders, for mechanical and electrical equipment and systems.
  - 2. Work orders shall be automatically generated from alarm conditions, run time, and calendar time. Each work order generated shall list parts, tools, craftspeople, and define task to be performed.
  - 3. Work order generated shall be used to schedule a repair or preventive maintenance routine.
  - 4. Work order shall be used to track completion of work, parts used and total cost of repair.
  - 5. A database shall include an inventory tracking system. Work orders generated shall automatically update inventory database to show quantity of tools, repair parts and expendables used for a work order.
  - 6. Work orders and preventive maintenance schedules shall be printed on a dedicated printer assigned solely to maintenance management function.
- B. Additional Hardware Requirements:

1. Maintenance management software shall not require additional hardware, except for an additional printer that is dedicated to maintenance management.
  2. Maintenance management software shall be integrated into DDC system.
- C. Software Requirements:
1. From main menu of maintenance management system, it shall be possible through selection of icons to penetrate to individual functions described below.
  2. Work Orders:
    - a. Automatically generate work orders initiated from alarm conditions, accumulated run time or calendar time. Work orders generated shall specify a particular task to be accomplished including the labor, material and tools needed to accomplish work.
    - b. Include at least two of the following types of work orders:
      - 1) Corrective and emergency maintenance work orders shall be generated for a specific job or repair for emergency, breakdown, or scheduled work.
      - 2) Preventive maintenance that are used on a periodic basis to generate preventive maintenance work orders.
    - c. Include the following functions:
      - 1) Work Order Tracking: Perform every function related to processing work orders including creating, approving and initiating work orders, checking their status history and closing or reworking them when appropriate.
      - 2) Work Requests: Report any problems that require corrective maintenance activity generated by dispatchers and those people designated to request work orders.
      - 3) Quick Reporting: Report work done on an open work order or a small job.
      - 4) Work Manager: Specify the type of labor to be applied to a specific work order at specific times. It shall include the capability to dispatch one or more laborers to top-priority jobs on as-needed basis and to interrupt work in progress to reassign labor to higher priority tasks.
    - d. Reports:
      - 1) Daily Maintenance Schedule by Supervisor: List a schedule of open work orders for a specified date by supervisor.
      - 2) Equipment Cost Roll-up Report: Include a roll-up of equipment costs incurred since the date the report was last run.
      - 3) Delinquent Work Order Report: List open work orders whose target completion date is earlier than the date the report is run.
      - 4) Employee Job Assignments: List labor codes that have job assignments for the specified date.

- 5) Daily Work Order Assignment: List work orders that have labor assignments for the specified date.
  - 6) Estimated versus Actual Work Order Costs: List a cost summary of outstanding work orders.
  - 7) Open Work Orders Report: List open work orders for locations and equipment.
3. Custom Applications:
  - a. Include creation of customized database tables and application screens that supplement functions specified.
4. Setup:
  - a. Include configuration of database, security and setup applications.
  - b. Perform the following functions:
    - 1) Reports and Other Applications: Register reports and other applications for use within system.
    - 2) Documents: Enter, track and link information from Drawings to equipment and inventory items.
    - 3) Chart of Accounts: Add or modify accounts; set up financial periods; enter inventory accounts, company accounts, and resource recovery accounts; and define tax codes and rates.
    - 4) Signature Security: Establish each user access rights to modules, applications, screens and options.
    - 5) Database Configuration: Customize database, including adjusting field lengths and modifying data types.
    - 6) Application Setup: Change position of icons and menu items on the main menu screen.
    - 7) Application Launching: Allow for connecting of third-party applications to data fields and push buttons.
5. Utilities:
  - a. Include utilities module that allows system administrator to customize system and to maintain database.
  - b. Include the following functions:
    - 1) Interactive SQL: Include access to database for database management functions of import/export and backup.
    - 2) Edit Windows: Display a dialog box to customize an application.

- 3) Archive Data: Remove records from database and store them for future reference.

D. Documentation:

1. Include complete documentation for the system consisting of a User Manual and Systems Administrator Guide.
2. User Manual shall describe how to use each application module and screen with step-by-step instructions detailing entry and retrieval of data for functions specified.
3. Include a step-by-step description of how each report is defined and retrieved.
4. Bind documentation and clearly title it indicating volume number and use.]

2.14 ASHRAE 135 GATEWAYS

- A. Include gateways to connect BACnet to legacy systems, existing non-BACnet devices, and existing non-BACnet DDC-controlled equipment, only when specifically requested and approved by Owner.
- B. Include with each gateway an interoperability schedule showing each point or event on legacy side that BACnet "client" will read, and each parameter that BACnet network will write to. Describe this interoperability of BACnet services, or BIBBs, defined in ASHRAE 135, Annex K.
- C. Gateway Minimum Requirements:
  1. Read and view all readable object properties on non-BACnet network to BACnet network and vice versa where applicable.
  2. Write to all writeable object properties on non-BACnet network from BACnet network and vice versa where applicable.
  3. Include single-pass (only one protocol to BACnet without intermediary protocols) translation from non-BACnet protocol to BACnet and vice versa.
  4. Comply with requirements of Data Sharing Read Property, Data Sharing Write Property, Device Management Dynamic Device Binding-B, and Device Management Communication Control BIBBs according to ASHRAE 135.
  5. Hardware, software, software licenses, and configuration tools for operator-to-gateway communications.
  6. Backup programming and parameters on CD media and the ability to modify, download, backup, and restore gateway configuration.

2.15 ASHRAE 135 PROTOCOL ANALYZER

- A. Analyzer and required cables and fittings for connection to ASHRAE 135 network.
- B. Analyzer shall include the following minimum capabilities:
  1. Capture and store to a file data traffic on all network levels.
  2. Measure bandwidth usage.
  3. Filtering options with ability to ignore select traffic.

**2.16 WIRELESS ROUTERS FOR OPERATOR INTERFACE**

**A. Single-Band Wireless Routers:**

1. Description: High-speed router with integral Ethernet ports.
2. Technology: IEEE 802.11n; 2.4-GHz minimum speed band.
3. Speed: Up to 300 Mbps.
4. Compatibility: IEEE 802.11n/g/b/a wireless devices.
5. Ethernet Ports: Four, gigabit (1000 Mbps).
6. Wireless Security: Wi-Fi Protected Access (WPA) and WPA2 according to IEEE 802.11i.

**B. Dual-Band Wireless Routers:**

1. Description: High-speed, dual-band router with integral Ethernet ports and USB port.
2. Technology: IEEE 802.11n; 2.4- and 5-GHz speed minimum bands.
3. Speed: Up to 300 Mbps on 2.4-GHz band and up to 450 Mbps on 5-GHz band.
4. Compatibility: IEEE 802.11n/g/b/a wireless devices.
5. Ethernet Ports: Four, gigabit (1000 Mbps).
6. USB Port: One, USB 2.0 or 3.0.
7. Wireless Security: Wi-Fi Protected Access (WPA) and WPA2 according to IEEE 802.11i.

**2.17 DDC CONTROLLERS GENERAL**

- A. DDC system shall consist of a combination of network controllers, programmable application controllers and application-specific controllers to satisfy performance requirements indicated.
- B. DDC controllers shall perform monitoring, control, energy optimization and other requirements indicated.
- C. DDC controllers shall use a multitasking, multiuser, real-time digital control microprocessor with a distributed network database and intelligence.
- D. Each DDC controller shall be capable of full and complete operation as a completely independent unit and as a part of a DDC system wide distributed network.
- E. Communication. The controller shall reside on a BAS open protocol network using the device-level protocol. Each network of controllers shall be connected to one building controller.
- F. The Controller shall have a network connection for a laptop computer or a portable operator tool.
- G. Serviceability. Provide diagnostic LEDs for power, communication, and processor. All wiring connections shall be made to field-removable, modular terminal strips or to a termination card connected by a ribbon cable.
- H. Environment Requirements:
  1. All controller hardware shall be suitable for the anticipated ambient conditions.
  2. Controllers located in conditioned space shall be rated for operation at 32 to 120 deg F mounted in dust proof enclosures.

3. Controllers located outdoors shall be rated for operation at 40 to 150 deg F mounted in waterproof enclosures.
- I. Power and Noise Immunity for All Controllers:
  1. Controller shall operate at 90 to 110 percent of nominal voltage rating and shall perform an orderly shutdown below 80 percent of nominal voltage.
  2. Operation shall be protected against electrical noise of 5 to 120 Hz and from keyed radios with up to 5 W of power located within 36 inches of enclosure.
- J. Transformer. Power supply for the all controllers must be rated at minimum of 125 percent power consumption and shall be fused or current limiting type.
- K. DDC Controller Spare Processing Capacity:
  1. I/O Capacity. The controller shall contain I/O capacity to control the target system.
  2. Include spare processing memory for each controller. RAM, PROM, or EEPROM will implement requirements indicated with the following spare memory:
    - a. Network Controllers: 50 percent.
    - b. Programmable Application Controllers: Not less than 60 percent.
    - c. Application-Specific Controllers: Not less than 70 percent.
  3. Memory shall support DDC controller operating system and database and shall include the following:
    - a. Monitoring and control.
    - b. Energy management, operation and optimization applications.
    - c. Alarm management.
    - d. Historical trend data of all connected I/O points.
    - e. Maintenance applications.
    - f. Operator interfaces.
    - g. Monitoring of manual overrides.
- L. DDC Controller Spare I/O Point Capacity: Include spare I/O point capacity for each controller. Future use of spare capacity shall require providing the field device, field wiring, point database definition, and custom software. No additional controller boards or point modules shall be required to implement use of these spare points. Provide quantities as follows:
  1. Network Controllers:
    - a. 10 percent of each AI, AO, BI, and BO point connected to controller. Universal points may be used to meet this requirement.
    - b. Minimum Spare I/O Points per Controller: (3) AI; (3) AO; (3) DI; (3) DO. (12) Universal points may be used to meet this requirement.
  2. Programmable Application Controllers:
    - a. 10 percent of each AI, AO, BI, and BO point connected to controller. Universal points may be used to meet this requirement.
    - b. Minimum Spare I/O Points per Controller: (3) AI; (3) AO; (3) DI; (3) DO. (12) Universal points may be used to meet this requirement.

3. Application-Specific Controllers:
  - a. 10 percent of each AI, AO, BI, and BO point connected to controller. Universal points may be used to meet this requirement.
  - b. Minimum Spare I/O Points per Controller: (2) AI; (2) AO; (2) DI; (2) DO. (12) Universal points may be used to meet this requirement.
- M. Maintenance and Support: Include the following features to facilitate maintenance and support:
  1. Mount microprocessor components on circuit cards for ease of removal and replacement.
  2. Means to quickly and easily disconnect controller from network.
  3. Means to quickly and easily access connect to field test equipment.
  4. Visual indication that controller electric power is on, of communication fault or trouble, and that controller is receiving and sending signals to network.
- N. Input and Output Point Interface:
  1. Controlling and master sensor inputs and controlled device output points shall be hard wired to the associated controller for system and zone level controls. Communication over the network is not acceptable. Sub-master sensors used to reset master sensor setpoints and monitor only input points may connect to network, programmable application and application-specific controllers and communicated to the BAS via the network.
  2. Input/Output System Capacity. The system size shall be expandable to at least twice the number of input/output objects/points required for this project. Additional controllers (along with associated devices and wiring) shall be all that is necessary to achieve this capacity requirement. The operator interfaces installed for this project shall not require any hardware additions or software revisions in order to expand the system.
  3. Input and output points shall be protected so shorting of point to itself, to another point, or to ground will not damage controller.
  4. Input and output points shall be protected from voltage up to 24 V of any duration so that contact will not damage controller.
  5. AIs:
    - a. AIs shall include monitoring of low-voltage (zero- to 10-V dc), current (4 to 20 mA) and resistance signals from thermistor and RTD sensors.
    - b. AIs shall be compatible with, and field configurable to, sensor and transmitters installed.
    - c. Controller AIs shall perform analog-to-digital (A-to-D) conversion with a minimum resolution of 12 bits or better to comply with accuracy requirements indicated.
    - d. Signal conditioning including transient rejection shall be provided for each AI.
    - e. Capable of being individually calibrated for zero and span.
    - f. Incorporate common-mode noise rejection of at least 50 dB from zero to 100 Hz for differential inputs, and normal-mode noise rejection of at least 20 dB at 60 Hz from a source impedance of 10,000 ohms.
  6. AOs:

- a. Controller AOs shall perform analog-to-digital (A-to-D) conversion with a minimum resolution of 12 bits or better to comply with accuracy requirements indicated.
  - b. Output signals shall have a range of 4 to 20 mA dc or zero- to 10-V dc to include proper control of output device.
  - c. Capable of being individually calibrated for zero and span.
  - d. Analog outputs on building or programmable application controllers shall have status lights and a two-position (AUTO/MANUAL) switch and manually adjustable potentiometer for manual override.
  - e. AOs shall not exhibit a drift of greater than 0.4 percent of range per year.
7. DIs:
- a. Controller DIs shall accept contact closures and shall ignore transients of less than 5-ms duration.
  - b. Isolation and protection against an applied steady-state voltage of up to 180-V ac peak.
  - c. DIs shall include a wetting current of at least 12 mA to be compatible with commonly available control devices and shall be protected against effects of contact bounce and noise.
  - d. DIs shall sense "dry contact" closure without external power (other than that provided by the controller) being applied.
8. Pulse accumulation input points shall comply with all requirements of DIs and accept up to 10 pulses per second for pulse accumulation. Buffer shall be provided to totalize pulses. Pulse accumulator shall accept rates of at least 20 pulses per second. The totalized value shall be reset to zero on operator command.
9. DOs:
- a. Controller DOs shall include relay contact closures or triac outputs for momentary and maintained operation of output devices.
    - 1) Relay contact closures shall have a minimum duration of 0.1 second. Relays shall include at least 180 V of isolation. Electromagnetic interference suppression shall be provided on all output lines to limit transients to non-damaging levels. Minimum contact rating shall be 1 A at 24-V ac.
    - 2) Triac outputs shall include at least 180 V of isolation. Minimum contact rating shall be 1 A at 24-V ac.
  - b. DOs shall include for two-state operation or a pulsed low-voltage signal for pulse-width modulation control.
  - c. DOs shall be selectable for either normally open or normally closed operation.
  - d. Include tristate outputs (two coordinated DOs) for control of three-point floating-type electronic actuators without feedback.
10. Tri-State Outputs (Floating Point Control)
- a. Provide tri-state outputs (two coordinated binary outputs) for control of three-point floating type electronic actuators without feedback. Control algorithms shall run

the zone actuator to one end of its stroke once every 24 hours for verification of operator tracking.

- b. Use of floating type devices shall be limited to office, conference and corridor VAV terminal units and associated duct-mounted heating coils, zone dampers, radiation control valves and terminal unit control applications only. Use of floating type devices is not acceptable in laboratory, health care, data center and similar critical zone and system applications.

11. Universal Input/Output:

- a. I/O points shall be the universal type, i.e., controller input or output may be designated (in software) as either a binary or analog type point with appropriate properties. Application-specific controllers are exempted from this requirement.

2.18 NETWORK CONTROLLERS

A. Provide quantity of network controllers to achieve performance specified. Each of these controllers shall meet the following requirements.

- 1. The DDC system shall be composed of one or more independent, standalone, microprocessor-based network controllers to manage the global strategies described in the software paragraphs.
- 2. The network controller shall have memory capacity to support its operating system, database, and programming requirements.
- 3. Data shall be shared between network controllers.
- 4. The operating system of the network controller shall manage the input and output communication signals to allow distributed controllers to share real and virtual object/variable information and allow for central monitoring and alarms.
- 5. Controllers that perform scheduling shall have a real-time clock.
- 6. The network controller shall continually check the status of its processor and memory circuits. If an abnormal operation is detected, the controller shall
  - a. Assume a pre-determined failure mode, and
  - b. Generate an alarm notification.
- 7. Controllers shall be full programmable.

B. Communication:

- 1. The network controller shall communicate with networked BAS devices on the network using the protocol-specific communication requirements. Controller-to-controller communication shall be peer-to-peer and not require a master or host server for communication.
- 2. The network controller shall be certified, listed by or submitted for testing to a testing laboratory approved by open-protocol body.
- 3. Communication.
  - a. Each building controller shall reside on the open-protocol network.
  - b. The controller shall provide a communication port connection or network interface for a portable operator terminal.

- c. Network routers/repeaters/bridges shall be used to extend communications, change media type, or extend the network in order to ensure proper communication for the entire BAS.
  - 4. Network controller also shall perform routing if connected to a network of programmable application and application-specific controllers.
- C. Operator Interface:
  - 1. Controller shall be equipped with a service communications port for connection to a portable operator workstation or mobile device.
  - 2. Local Keypad and Display:
    - a. Equip controller with local keypad and digital display for interrogating and editing data.
    - b. The keypad shall allow for interrogating and editing data. A system security password shall be required to prevent unauthorized use of the keypad and display. If the manufacturer does not provide this keypad and display, provide a portable operator terminal.
- D. Network controller shall maintain BIOS and programming information in event of a power loss for at least 96 hours.

## 2.19 PROGRAMMABLE APPLICATION CONTROLLERS

- A. General Programmable Application Controller Requirements:
  - 1. Include quantity of controllers required to achieve performance specified.
  - 2. Controller shall have enough memory to support its operating system, database, and programming requirements.
  - 3. Data shall be shared between networked controllers and other network devices.
  - 4. Capable of standalone operation and shall continue to include control functions without being connected to the network.
  - 5. Operating system of controller shall manage input and output communication signals to allow distributed controllers to share real and virtual object information and allow for central monitoring and alarms.
  - 6. Controllers that perform scheduling shall have a real-time clock.
  - 7. Controller shall continually check status of its processor and memory circuits. If an abnormal operation is detected, controller shall assume a predetermined failure mode and generate an alarm notification.
  - 8. Controllers shall be fully programmable.
  - 9. All controllers shall be tested and certified or listed by an official open-protocol testing laboratory as being compliant with the standardized open-protocol device capabilities.
- B. Communication:
  - 1. Programmable application controllers shall communicate with other devices on network.
  - 2. Each programmable application controller shall reside on a control network using the device-level protocol.

3. The controller shall provide a service communication port or network interface using an open-protocol for connection to a portable operator's terminal.
- C. Operator Interface:
  1. Controller shall be equipped with a service communications port for connection to a portable operator workstation or mobile device.
  2. Local Keypad and Display:
    - a. Equip controller with local keypad and digital display for interrogating and editing data.
    - b. Use of keypad and display shall require security password.
- D. Serviceability:
  1. Wiring and cable connections shall be made to field-removable, modular terminal strips or to a termination card connected by a ribbon cable.
  2. Programmable application controller shall maintain BIOS and programming information in event of a power loss for at least 72 hours.

## 2.20 APPLICATION-SPECIFIC CONTROLLERS

- A. Description: Microprocessor-based controllers, which through hardware or firmware design are dedicated to control a specific piece of equipment. Controllers are not fully user-programmable but are configurable and customizable for operation of equipment they are designed to control.
  1. Capable of standalone operation and shall continue to include control functions without being connected to the network.
  2. Data shall be shared between networked controllers and other network devices.
- B. Communication: Application-specific controllers shall communicate with other application-specific controller and devices on network, and to programmable application and network controllers.
- C. Operator Interface: Controller shall be equipped with a service communications port for connection to a portable operator workstation. Connection shall extend to port on space temperature sensor that is connected to controller.
- D. Each application specific controller shall be provided with sufficient I/O capacity to control the target system.
- E. Controller shall use nonvolatile memory and maintain all BIOS and programming information in event of power loss for at least 90 days.
- F. Include BACnet communication ports as an equipment OEM standard option, for integration via a single communication cable. BACnet compliant application controllers required for, but not limited to, boilers, boiler plant, chillers, chiller plant and variable-speed drive controllers.
- G. Serviceability:
  1. Wiring and cable connections shall be made to field-removable, modular terminal strips or to a termination card connected by a ribbon cable.
  2. Application specific controller shall maintain BIOS and programming information in event of a power loss.

## 2.21 CONTROLLER SOFTWARE

### A. General Controller Software Requirements:

1. Software applications shall reside and operate in controllers. Editing of applications shall occur at operator workstations.
2. I/O points shall be identified by up to 30-character point name and up to 16-character point descriptor. Same names shall be used at operator workstations.
3. Control functions shall be executed within controllers using DDC algorithms.
4. Controllers shall be configured to use stored default values to ensure fail-safe operation. Default values shall be used when there is a failure of a connected input instrument or loss of communication of a global point value.

### B. Security:

1. Operator access shall be secured using individual security passwords and user names.
2. Passwords shall restrict operator to points, applications, and system functions as assigned by system manager.
3. Operator log-on and log-off attempts shall be recorded.
4. System shall protect itself from unauthorized use by automatically logging off after last keystroke. The delay time shall be operator-definable.

### C. Scheduling: Include capability to schedule each point or group of points in system. Each schedule shall consist of the following:

#### 1. Weekly Schedule:

- a. Include separate schedules for each day of week.
- b. Each schedule should include the capability for start, stop, optimal start, optimal stop, and night economizer.
- c. Each schedule may consist of up to 10 events.
- d. When a group of objects are scheduled together, include capability to adjust start and stop times for each member.

#### 2. Exception Schedules:

- a. Include ability for operator to designate any day of the year as an exception schedule.
- b. Exception schedules may be defined up to a year in advance. Once an exception schedule is executed, it will be discarded and replaced by regular schedule for that day of week.

#### 3. Holiday Schedules:

- a. Include capability for operator to define up to 99 special or holiday schedules.
- b. Schedules may be placed on scheduling calendar and will be repeated each year.
- c. Operator shall be able to define length of each holiday period.

### D. System Coordination:

1. Include standard application for proper coordination of equipment.

2. Application shall include operator with a method of grouping together equipment based on function and location.
  3. Group may then be used for scheduling and other applications.
- E. Digital Alarms:
1. Each binary point shall be set to alarm based on operator-specified state.
  2. Include capability to automatically and manually disable alarming.
- F. Analog Alarms:
1. Each analog object shall have both high and low alarm limits.
  2. Alarming shall be able to be automatically and manually disabled.
- G. Alarm Reporting:
1. The operator shall be able to view all system alarms and change of states from any location in the system. Events shall be listed chronologically. An operator with the proper security level may acknowledge and clear alarms. All that have not been cleared by the operator shall be archived to the hard disk on the workstation.
  2. Operator shall be able to determine action to be taken in event of an alarm.
  3. Alarms shall be routed to appropriate operator workstations based on time and other conditions.
  4. Alarm shall be able to start programs, print, be logged in event log, generate custom messages, and display graphics.
- H. Remote Communication:
1. System shall have ability to dial out in the event of an alarm.
- I. Maintenance Management: System shall monitor equipment status and generate maintenance messages based on operator-designated run-time, starts, and calendar date limits.
- J. Sequencing: Include application software based on sequences of operation indicated to properly sequence chillers, boilers, and other applicable HVAC equipment.
- K. Control Loops:
1. Include a library of DDC algorithms, intrinsic control operators, arithmetic, logic and relational operators for implementation of control sequences. Also include, as a minimum, the following:
    - a. Two-position (on/off, open/close, slow/fast) control.
    - b. Proportional control.
    - c. Proportional plus integral (PI) control.
    - d. Proportional plus integral plus derivative (PID) control.
      - 1) Include PID algorithms with direct or reverse action and anti-windup.
      - 2) Algorithm shall calculate a time-varying analog value used to position an output or stage a series of outputs.
      - 3) Controlled variable, set point, and PID gains shall be operator-selectable.

- e. Adaptive and intelligent self-learning control.
    - 1) Algorithm shall monitor loop response to output corrections and adjust loop response characteristics according to time constant changes imposed.
    - 2) Algorithm shall operate in a continuous self-learning manner and shall retain in memory a stored record of system dynamics so that on system shut down and restart, learning process starts from where it left off.
  - L. Staggered Start: Application shall prevent all controlled equipment from simultaneously restarting after a power outage. Order which equipment (or groups of equipment) is started, along with the time delay between starts, shall be operator-selectable.
  - M. Anti-Short Cycling:
    - 1. DO points shall be protected from short-cycling.
    - 2. Feature shall allow minimum on-time and off-time to be selected.
  - N. On and Off Control with Differential:
    - 1. Include an algorithm that allows a DO to be cycled based on a controlled variable and set point.
    - 2. Algorithm shall be direct- or reverse-acting and incorporate an adjustable differential.
  - O. Run-Time Totalization:
    - 1. Include software to totalize run-times for all DI and DO points.
    - 2. A high run-time alarm shall be assigned, if required, by operator.
- 2.22 RELAYS
- A. General-Purpose Relays:
    - 1. Relays shall be heavy duty and rated for at least 10 A at 250-V ac and 60 Hz.
    - 2. Relays shall be either double pole double throw (DPDT) or three-pole double throw, depending on the control application.
    - 3. Use a plug-in-style relay with an eight-pin octal plug for DPDT relays and an 11-pin octal plug for three-pole double-throw relays.
    - 4. Construct the contacts of either silver cadmium oxide or gold.
    - 5. Enclose the relay in a clear transparent polycarbonate dust-tight cover.
    - 6. Relays shall have LED indication and a manual reset and push-to-test button.
    - 7. Performance:
      - a. Mechanical Life: At least 10 million cycles.
      - b. Electrical Life: At least 100,000 cycles at rated load.
      - c. Pickup Time: 15 ms or less.
      - d. Dropout Time: 10 ms or less.
      - e. Pull-in Voltage: 85 percent of rated voltage.
      - f. Dropout Voltage: 50 percent of nominal rated voltage.

- g. Power Consumption: 2 VA.
  - h. Ambient Operating Temperatures: Minus 40 to 115 deg F.
- 8. Equip relays with coil transient suppression to limit transients to non-damaging levels.
- 9. Plug each relay into an industry-standard, 35-mm DIN rail socket. Plug all relays located in control panels into sockets that are mounted on a DIN rail.
- 10. Relay socket shall have screw terminals. Mold into the socket the coincident screw terminal numbers and associated octal pin numbers.
- B. Multifunction Time-Delay Relays:
  - 1. Relays shall be continuous duty and rated for at least 10 A at 240-V ac and 60 Hz.
  - 2. Relays shall be DPDT relay with up to eight programmable functions to provide on/off delay, interval and recycle timing functions.
  - 3. Use a plug-in-style relay with either an 8- or 11-pin octal plug.
  - 4. Construct the contacts of either silver cadmium oxide or gold.
  - 5. Enclose the relay in a dust-tight cover.
  - 6. Include knob and dial scale for setting delay time.
  - 7. Performance:
    - a. Mechanical Life: At least 10 million cycles.
    - b. Electrical Life: At least 100,000 cycles at rated load.
    - c. Timing Ranges: Multiple ranges from 0.1 seconds to 100 minutes.
    - d. Repeatability: Within 2 percent.
    - e. Recycle Time: 45 ms.
    - f. Minimum Pulse Width Control: 50 ms.
    - g. Power Consumption: 5 VA or less at 120-V ac.
    - h. Ambient Operating Temperatures: Minus 40 to 115 deg F.
  - 8. Equip relays with coil transient suppression to limit transients to non-damaging levels.
  - 9. Plug each relay into an industry-standard, 35-mm DIN rail socket. Plug all relays located in control panels into sockets that are mounted on a DIN rail.
  - 10. Relay socket shall have screw terminals. Mold into the socket the coincident screw terminal numbers and associated octal pin numbers.
- C. Latching Relays:
  - 1. Control relays shall be UL listed plug-in type with dust cover and LED "energized" indicator. Contact rating, configuration, and coil voltage shall be suitable for application.
  - 2. Relays shall be continuous duty and rated for at least 10 A at 250-V ac and 60 Hz.
  - 3. Relays shall be either DPDT or three-pole double throw, depending on the control application.
  - 4. Use a plug-in-style relay with a multi-bladed plug.
  - 5. Construct the contacts of either silver cadmium oxide or gold.

6. Enclose the relay in a clear transparent polycarbonate dust-tight cover.
  7. Performance:
    - a. Mechanical Life: At least 10 million cycles.
    - b. Electrical Life: At least 100,000 cycles at rated load.
    - c. Pickup Time: 15 ms or less.
    - d. Dropout Time: 10 ms or less.
    - e. Pull-in Voltage: 85 percent of rated voltage.
    - f. Dropout Voltage: 50 percent of nominal rated voltage.
    - g. Power Consumption: 2 VA.
    - h. Ambient Operating Temperatures: Minus 40 to 115 deg F.
  8. Equip relays with coil transient suppression to limit transients to non-damaging levels.
  9. Plug each relay into an industry-standard, 35-mm DIN rail socket. Plug all relays located in control panels into sockets that are mounted on a DIN rail.
  10. Relay socket shall have screw terminals. Mold into the socket the coincident screw terminal numbers and associated octal pin numbers.
- D. Current Sensing Relay:
1. Monitors ac current.
  2. Independent adjustable controls for pickup and dropout current.
  3. Energized when supply voltage is present and current is above pickup setting.
  4. De-energizes when monitored current is below dropout current.
  5. Dropout current is adjustable from 50 to 95 percent of pickup current.
  6. Include a current transformer, if required for application.
  7. House current sensing relay and current transformer in its own enclosure. Use NEMA 250, Type 12 enclosure for indoors and NEMA 250, Type 4 for outdoors.
- E. Combination On-Off Status Sensor and On-Off Relay:
1. Description:
    - a. On-off control and status indication in a single device.
    - b. LED status indication of activated relay and current trigger.
    - c. Closed-Open-Auto override switch located on the load side of the relay.
  2. Performance:
    - a. Ambient Temperature: Minus 30 to 140 deg F.
    - b. Voltage Rating: Single-phase loads rated for 300-V ac. Three-phase loads rated for 600-V ac.
  3. Status Indication:
    - a. Current Sensor: Integral sensing for single-phase loads up to 20 A and external solid or split sensing ring for three-phase loads up to 150 A.

- b. Current Sensor Range: Selected by application.
- c. Current Set Point: Fixed or adjustable by application.
- d. Current Sensor Output: Provide one of the following:
  - 1) Solid-state, single-pole double-throw contact rated for 30-V ac and dc and for 0.4 A.
  - 2) Solid-state, single-pole double-throw contact rated for 120-V ac and 1.0 A.
  - 3) Analog, zero- to 5- or 10-V dc.
  - 4) Analog, 4 to 20 mA, loop powered.
- 4. Relay: Single-pole double-throw, continuous-duty coil; rated for 10-million mechanical cycles.
- 5. Enclosure: NEMA 250, Type 2 enclosure.
- F. Time Delay Relays
  - 1. Time delay relays shall be UL listed solid-state plug-in type with adjustable time delay. Delay shall be adjustable  $\pm 200$  percent (minimum) from setpoint shown on plans. Contact rating, configuration, and coil voltage shall be suitable for application. Provide NEMA 2 enclosure when not installed in local control panel.

## 2.23 ELECTRICAL POWER DEVICES

- A. Transformers:
  - 1. Control transformers shall be UL listed. Furnish Class 2 current-limiting type or furnish over-current protection in both primary and secondary circuits for Class 2 service in accordance with NEC requirements. Limit connected loads to 80 percent of rated capacity.
    - a. DC power supply output shall match output current and voltage requirements. Unit shall be full-wave rectifier type with output ripple of 5.0 mV maximum peak-to-peak. Regulation shall be 1.0 percent line and load combined, with 100-microsecond response time for 50 percent load changes. Unit shall have built-in overvoltage and overcurrent protection and shall be able to withstand a 150 percent current overload for at least three seconds without trip-out or failure.
      - 1) Unit shall operate between 0 deg C and 50 deg C (32 deg F and 120 deg F). EM/RF shall meet FCC Class B and VDE 0871 for Class B and MIL-STD 810C for shock and vibration.
      - 2) Line voltage units shall be UL recognized and CSA approved.
  - 2. Transformer shall be at least 40 VA.
- B. Power-Line Conditioner:
  - 1. General Power-Line Conditioner Requirements:
    - a. Design to ensure maximum reliability, serviceability and performance.

- b. Overall function of the power-line conditioner is to receive raw, polluted electrical power and purify it for use by electronic equipment. The power-line conditioner shall provide isolated, regulated, transient and noise-free sinusoidal power to loads served.
- 2. Standards: NRTL listed per UL 1012.
- 3. Performance:
  - a. Single phase, continuous, 100 percent duty rated KVA/KW capacity. Design to supply power for linear or nonlinear, high crest factor, resistive and reactive loads.
  - b. Automatically regulate output voltage to within 2 percent or better with input voltage fluctuations of plus 10 to minus 20 percent of nominal when system is loaded 100 percent. Use Variable Range Regulation to obtain improved line voltage regulation when operating under less than full load conditions.
    - 1) At 75 Percent Load: Output voltage automatically regulated to within 3 percent with input voltage fluctuations of plus 10 to minus 35 percent of nominal.
    - 2) At 50 Percent Load: Output voltage automatically regulated to within 3 percent with input voltage fluctuations of plus 10 to minus 40 percent of nominal.
    - 3) At 25 Percent Load: Output voltage automatically regulated to within 3 percent with input voltage fluctuations of plus 10 to minus 45 percent of nominal.
  - c. With input voltage distortion of up to 40 percent, limit the output voltage sine wave to a maximum harmonic content of 5 percent.
  - d. Automatically regulate output voltage to within 2.5 percent when load (resistive) changes from zero percent to 100 percent to zero percent.
  - e. Output voltage returns to 95 percent of nominal level within two cycles and to 100 percent within three cycles when the output is taken from no load to full resistive load or vice-versa. Recovery from partial resistive load changes is corrected in a shorter period of time.
  - f. K Factor: 30, designed to operate with nonlinear, non-sinusoidal, high crest factor loads without overheating.
  - g. Input power factor within 0.95 approaching unity with load power factor as poor as 0.6.
  - h. Attenuate load-generated odd current harmonics 23 dB at the input.
  - i. Electrically isolate the primary from the secondary. Meet isolation criteria as defined in NFPA 70, Article 250-5D.
  - j. Lighting and Surge Protection: Compares to UL 1449 rating of 330 V when subjected to Category B3 (6000 V/3000 A) combination waveform as established by IEEE C62.41.
  - k. Common-mode noise attenuation of 140 dB.
  - l. Transverse-mode noise attenuation of 120 dB.

- m. With loss of input power for up to 16.6 ms, the output sine wave remains at usable ac voltage levels.
  - n. Reliability of 200,000 hours' MTBF.
  - o. At full load, when measured at 1-m distance, audible noise is not to exceed 54 dB.
  - p. Approximately 92 percent efficient at full load.
4. Transformer Construction:
- a. Ferroresonant, dry type, convection cooled, 600V class. Transformer windings of Class H (220 deg C) insulated copper.
  - b. Use a Class H installation system throughout with operating temperatures not to exceed 150 deg C over a 40-deg C ambient temperature.
  - c. Configure transformer primary for multi-input voltage. Include input terminals for source conductors and ground.
  - d. Manufacture transformer core using M-6 grade, grain-oriented, stress-relieved transformer steel.
  - e. Configure transformer secondary in a 240/120-V split with a 208-V tap or straight 120 V, depending on power output size.
  - f. Electrically isolate the transformer secondary windings from the primary windings. Bond neutral conductor to cabinet enclosure and output neutral terminal.
  - g. Include interface terminals for output power hot, neutral and ground conductors.
  - h. Label leads, wires and terminals to correspond with circuit wiring diagram.
  - i. Vacuum impregnate transformer with epoxy resin.
5. Cabinet Construction:
- a. Design for panel or floor mounting.
  - b. NEMA 250, Type 2, indoor enclosure.
  - c. Manufacture the cabinet from heavy gauge steel complying with UL 50.
  - d. Include a textured baked-on paint finish.
- C. Transient Voltage Suppression and High-Frequency Noise Filter Unit:
- 1. Provide transient voltage and surge suppression for all workstations and controllers either internally or as an external component. Surge protection shall have the following at a minimum:
    - a. Dielectric strength of 1000 V minimum
    - b. Response time of 10 nanoseconds or less
    - c. Transverse mode noise attenuation of 65 dB or greater
    - d. Common mode noise attenuation of 150 dB or better at 40 Hz to 100 Hz
  - 2. The maximum continuous operating voltage shall be at least 125 percent.
  - 3. The operating frequency range shall be 47 to 63 Hz.
  - 4. Protection modes according to NEMA LS-1.

5. The rated single-pulse surge current capacity, for each mode of protection, shall be no less than the following:
    - a. Line to Neutral: 45,000 A.
    - b. Neutral to Ground: 45,000 A.
    - c. Line to Ground: 45,000 A.
    - d. Per Phase: 90,000 A.
  6. Clamping voltages shall be in compliance with test and evaluation procedures defined in NEMA LS-1. Maximum clamping voltage shall be as follows:
    - a. Line to Neutral: 360 V.
    - b. Line to Ground: 360 V.
    - c. Neutral to Ground: 360 V.
  7. Electromagnetic interference and RF interference noise rejection or attenuation values shall comply with test and evaluation procedures defined in NEMA LS-1.
    - a. Line to Neutral:
      - 1) 100 kHz: 42 dB.
      - 2) 1 MHz: 25 dB.
      - 3) 10 MHz: 21 dB.
      - 4) 100 MHz: 36 dB.
    - b. Line to Ground:
      - 1) 100 kHz: 16 dB.
      - 2) 1 MHz: 55 dB.
      - 3) 10 MHz: 81 dB.
      - 4) 100 MHz: 80 dB.
  8. Unit shall have LED status indicator that extinguishes to indicate a failure.
  9. Unit shall be listed by an NRTL as a transient voltage surge suppressor per UL 1449, and as an electromagnetic interference filter per UL 1283.
  10. Unit shall not generate any appreciable magnetic field.
  11. Unit shall not generate an audible noise.
- D. DC Power Supply:
1. Plug-in style suitable for mating with a standard eight-pin octal socket. Include the power supply with a mating mounting socket.
  2. Enclose circuitry in a housing.
  3. Include both line and load regulation to ensure a stable output. To protect both the power supply and the load, power supply shall have an automatic current limiting circuit.

4. Performance:
  - a. Output voltage nominally 25-V dc within 5 percent.
  - b. Output current up to 100 mA.
  - c. Input voltage nominally 120-V ac, 60 Hz.
  - d. Load regulation within 0.5 percent from zero- to 100-mA load.
  - e. Line regulation within 0.5 percent at a 100-mA load for a 10 percent line change.
  - f. Stability within 0.1 percent of rated volts for 24 hours after a 20-minute warmup.

## 2.24 PIPING AND TUBING

### A. Tubing and Piping:

1. Products in this paragraph are intended for use with the following:
  - a.
2. Copper Tubing:
  - a. Seamless phosphor deoxidized copper, soft annealed or drawn tempered, with chemical and physical properties according to ASTM B 75.
  - b. Performance, dimensions, weight and tolerance according to ASTM B 280.
  - c. Diameter, by application, not less than nominal 0.25 inch.
  - d. Wall thickness, by the application, but not less than 0.030 inch.
3. Copper Tubing Connectors and Fittings:
  - a. Brass, compression type.
  - b. Brass, solder-joint type.
4. Polyethylene Tubing:
  - a. Fire-resistant black virgin polyethylene according to ASTM D 1248, Type 1, Class C and Grade 5.
  - b. Tubing shall comply with stress crack test according to ASTM D 1693.
  - c. Diameter, by application, of not less than nominal 0.25 inch.
5. Polyethylene Tubing Connectors and Fittings:
  - a. Brass, barbed fittings.
  - b. Brass, compression type.

### B. Process Tubing:

1. Products in this paragraph are intended for signals to instruments connected to liquid and steam systems.
2. Copper Tubing:
  - a. Seamless phosphor deoxidized copper, soft annealed or drawn tempered with chemical and physical properties according to ASTM B 75.
  - b. Performance, dimensions, weight and tolerance according to ASTM B 280.

- c. Diameter, by application, of not less than nominal 0.25 inch.
  - d. Wall thickness, by application, but not less than 0.030 inch.
- 3. Copper Tubing Connectors and Fittings:
  - a. Brass, compression type.
  - b. Brass, solder-joint type.

## 2.25 CONTROL WIRE AND CABLE

- A. Wire: Single conductor control wiring above 24 V.
  - 1. Wire size shall be selected to meet manufacturer recommended voltage drop based on length of run and shall be at least No. 18 AWG.
  - 2. Conductor shall be 7/24 soft annealed copper strand with 2- to 2.5-inch lay.
  - 3. Conductor insulation shall be 600 V, Type THWN or Type THHN, and 90 deg C according to UL 83.
  - 4. Conductor colors shall be black (hot), white (neutral), and green (ground).
  - 5. Furnish wire on spools.
- B. Single Twisted Shielded Instrumentation Cable above 24 V:
  - 1. Wire size shall be selected to meet manufacturer recommended voltage drop based on length of run and shall be at least No. 18 AWG.
  - 2. Conductors shall be a twisted, 7/24 soft annealed copper strand with a 2- to 2.5-inch lay.
  - 3. Conductor insulation shall have a Type THHN/THWN or Type TFN rating.
  - 4. Shielding shall be 100 percent type, 0.35/0.5-mil aluminum/Mylar tape, helically applied with 25 percent overlap, and aluminum side in with tinned copper drain wire.
  - 5. Outer jacket insulation shall have a 600-V, 90-deg C rating and shall be Type TC cable.
  - 6. For twisted pair, conductor colors shall be black and white. For twisted triad, conductor colors shall be black, red and white.
  - 7. Furnish wire on spools.
- C. Single Twisted Shielded Instrumentation Cable 24 V and Less:
  - 1. Wire size shall be selected to meet manufacturer recommended voltage drop based on length of run and shall be at least No. 18 AWG.
  - 2. Conductors shall be a twisted, 7/24 soft annealed copper stranding with a 2- to 2.5-inch lay.
  - 3. Conductor insulation shall have a nominal 15-mil thickness, constructed from flame-retardant PVC.
  - 4. Shielding shall be 100 percent type, 1.35-mil aluminum/polymer tape, helically applied with 25 percent overlap, and aluminum side in with tinned copper drain wire.
  - 5. Outer jacket insulation shall have a 300-V, 105-deg C rating and shall be Type PLTC cable.
  - 6. For twisted pair, conductor colors shall be black and white. For twisted triad, conductor colors shall be black, red and white.

7. Furnish wire on spools.
- D. LAN and Communication Cable: Comply with DDC system manufacturer requirements for network being installed.
  1. Cable shall be balanced twisted pair.
  2. Comply with the following requirements and for balanced twisted pair cable described in Division 26 and 27.
    - a. Cable shall be plenum rated.
    - b. Cable shall have a unique color that is different from other cables used on Project.
- 2.26 RACEWAYS
  - A. Comply with requirements in Division 26 and Division 27.
- 2.27 OPTICAL FIBER CABLE AND CONNECTORS
  - A. Comply with requirements in Division 27.
- 2.28 PANEL-MOUNTED, MANUAL OVERRIDE SWITCHES
  - A. Manual Override of Control Dampers:
    1. Include panel-mounted, two-position, selector switch for each automatic control damper being controlled by DDC controller.
    2. Label each switch with damper designation served by switch.
    3. Label switch positions to indicate either "Manual" or "Auto" control signal to damper.
    4. With switch in "Auto" position signal to control damper actuator shall be control loop output signal from DDC controller.
    5. With switch in "Manual" position, signal to damper actuator shall be controlled at panel with either an integral or separate switch to include local control.
      - a. For Binary Control Dampers: Manual two-position switch shall have "Close" and "Open" switch positions indicated. With switch in "Close" position, damper shall close. With switch in "Open" position, damper shall open.
      - b. For Analog Control Dampers: A gradual switch shall have "Close" and "Open" switch limits indicated. Operator shall be able to rotate switch knob to adjust damper to any position from closed to open.
    6. DDC controller shall monitor and report position of each manual override selector switch. With switch placed in "manual" position, DDC controller shall signal an override condition to alert operator that damper is under manual, not automatic, control.
    7. Configure manual override switches to allow operator to manually operate damper while at panel without DDC controller installed and operational.
    8. Dampers associated with VAV terminal units, fan-coil units, and unit heaters do not require manual override unless otherwise indicated by sequence of operation.
  - B. Manual Override of Control Valves:
    1. Include panel-mounted, two-position, selector switch for each automatic control valve being controlled by a DDC controller.

2. Label each switch with valve designation served by switch.
3. Label switch positions to indicate either "Manual" or "Auto" control signal to valve.
4. With switch in "Auto" position, signal to control-valve actuator shall be a control loop output signal from DDC controller.
5. With switch in "Manual" position, signal to valve actuator shall be controlled at panel with either an integral or a separate switch to include local control.
  - a. For Two-Position Digital Control Valves: Manual two-position switch shall have "Close" and "Open" switch positions indicated. With switch in "Close" position, valve shall close. With switch in "Open" position, valve shall open.
  - b. For Modulating Analog Control Valves: A gradual switch shall have "Open" and "Close" switch limits indicated. Operator shall be able to rotate switch knob to adjust valve to any position from closed to open.
6. DDC controller shall monitor and report position of each manual override selector switch. With switch placed in "manual" position, DDC controller shall signal an override condition to alert operator that valve is under manual, not automatic, control.
7. Configure manual override switches to allow operator to manually operate valve while at panel without DDC controller installed and operational.
8. Valves associated with VAV terminal units, fan-coil units, and unit heaters do not require manual override unless otherwise indicated by sequence of operation.

## 2.29 ACCESSORIES

### A. Pneumatic Pressure gauges:

1. Pressure gauges shall a 1.5-inch- diameter face for pressures up through 30 psig and 2.5-inch- diameter face for greater pressures.
2. Include separate gauges for branch pressure and main pressure lines.
3. White dial face with black printing.
4. Include 1-psig increment for scale ranges through 30 psig and 2-psig increment for larger ranges.
5. Accuracy: Within 1 percent of full-scale range.

### B. Pressure Electric Switches:

1. Diaphragm-operated snap acting switch.
2. Set point adjustable from 3 to 20 psig.
3. Differential adjustable from 2 to 6 psig.
4. Rated for resistance loads at 120-V ac.
5. Body and switch housing shall be metal.

### C. Damper Blade Limit Switches:

1. Sense positive open and/or closed position of the damper blades.
2. NEMA 250, Type 13, oil-tight construction.
3. Arrange for the mounting application.

4. Additional waterproof enclosure when required by its environment.
  5. Arrange to prevent "over-center" operation.
- D. I/P and E/P Transducers:
1. Commercial Grade:
    - a. The transducer shall convert an AO signal to a stepped pneumatic signal. Unless otherwise required by the operating sequence, use a 3- to 15-psig pneumatic signal for pneumatic actuation.
    - b. Construct the entire assembly so that shock and vibration will neither harm the transducer nor affect its accuracy.
    - c. Transducer shall have auto/manual output switch, manual output control and an output pressure gauge.
    - d. Accuracy: Within 1.0 percent of the output span.
    - e. Linearity: Within 0.5 percent of the output span.
    - f. Output Capacity: Not less than 550 scim at 15 psig.
    - g. Transducer shall have separate zero and span calibration adjustments.
    - h. The transducer shall withstand up to 40 psig of supply pressure without damage.
    - i. For use on only modulating pneumatic outputs that are associated with terminal units, including fan-coil units, VAV units and unit heaters.
  2. Industrial Grade:
    - a. The transducer shall convert an AO signal to a proportional pneumatic signal. Unless otherwise required by the operating sequence, use a 3- to 15-psig pneumatic signal for pneumatic actuation. A stepped pneumatic signal is unacceptable.
    - b. Construct the entire assembly so that shock and vibration will neither harm the transducer nor affect its accuracy.
    - c. Suitable for operation in an ambient temperature range of minus 40 to 150 deg F.
    - d. Accuracy: Within 0.5 percent of the output span.
    - e. Linearity: Within 0.5 percent of the output span.
    - f. Output Capacity: Not less than 5 scfm.
    - g. Transducer shall have zero and span calibration adjustments.
    - h. The transducer shall withstand up to 50 psig of supply pressure without damage.
    - i. For use on all modulating pneumatic outputs, not requiring a commercial-grade transducer.
- E. E/P Switch:
1. Construct the body of cast aluminum or brass; three pipe body (common, normally open, and normally closed).
  2. Internal construction of steel, copper or brass.
  3. Air Connections: Barb.

4. Rating of 30 psig when installed in systems below 25 psig and of 150 psig when installed in systems above 25 psig.
  5. Include coil transient suppression.
- F. Instrument Enclosures:
1. Include instrument enclosure for secondary protection to comply with requirements indicated in "Performance Requirements" Article.
  2. NRTL listed and labeled to UL 50.
  3. Sized to include at least 25 percent spare area on subpanel.
  4. Instrument(s) mounted within enclosure on internal subpanel(s).
  5. Enclosure face with engraved, laminated phenolic nameplate for each instrument within enclosure.
  6. Enclosures housing pneumatic instruments shall include main pressure gauge and a branch pressure gauge for each pneumatic device, installed inside.
  7. Enclosures housing multiple instruments shall route tubing and wiring within enclosure in a raceway having a continuous removable cover.
  8. Enclosures larger than 12 inches shall have a hinged full-size face cover.
  9. Equip enclosure with lock and common key.
- G. Manual Valves:
1. Needle Type:
    - a. PTFE packing.
    - b. Construct of brass for use with copper and polyethylene tubing and of stainless steel for use with stainless-steel tubing.
    - c. Aluminum T-bar handle.
    - d. Include tubing connections.
  2. Ball Type:
    - a. Body: Bronze ASTM B 62 or ASTM B 61.
    - b. Ball: Type 316 stainless steel.
    - c. Stem: Type 316 stainless steel.
    - d. Seats: Reinforced PTFE.
    - e. Packing Ring: Reinforced PTFE.
    - f. Lever: Stainless steel with a vinyl grip.
    - g. 600 WOG.
    - h. Threaded end connections.
- H. Wall-Mounted Portable Workstation Cabinet:
1. Surface-mounted wall cabinet for tilt-out operation of laptop computers and large-format mobile devices.
  2. Cabinet shall have a load limit of 50 lb.

3. Cabinet shall include the following:
  - a. Oil-filled dampers for controlled lowering of equipment to operational position.
  - b. 3RU EIA mounting rails.
  - c. Removable laptop shelf.
  - d. Separate top compartment with mounting area, hinged rail and security lock.
  - e. Front ventilation slots.
  - f. Knockouts for conduit connections on top and bottom of cabinet.
4. Cabinet shall be constructed of steel and painted with a powder-coat epoxy.
5. Inside center of back-box shall have provision to mount a field-furnished and -installed, single gang electrical outlet box.

## 2.30 AUXILIARY CONTROL DEVICES AND SENSORS

- A. Motorized control dampers, unless otherwise specified elsewhere, shall be as follows:
  1. Dampers shall have stable operation throughout full range of operation, from design to minimum airflow over varying pressures and temperatures encountered.
  2. Factory assemble multiple damper sections to provide a single damper assembly of size required by the application.
  3. Rectangular control dampers shall be the parallel or opposed blade type as follows unless otherwise scheduled or shown on drawings.
    - a. Outdoor and/or return air mixing dampers and face and bypass (F&BP) dampers shall be parallel blade, arranged to direct airstreams toward each other.
    - b. Other modulating dampers shall be the opposed blade type.
    - c. Two-position shutoff dampers may be parallel or opposed blade type with blade and side seals. Two-position dampers shall be full size of duct or equipment connection unless otherwise indicated.
  4. Modulating dampers shall provide a linear flow characteristic.
  5. Performance:
    - a. Leakage:
      - 1) Rectangular: AMCA 511, Class 1A. Leakage shall not exceed 3 cfm/sq. ft. (15.2 L/s per sq. m) against 1-in. wg (250-Pa) differential static pressure.
      - 2) Round: Leakage shall not exceed 0.15 cfm/in. (0.0028 L/s per mm) of perimeter blade at 4-in. wg (1000-Pa) differential static pressure.
    - b. Pressure Drop:
      - 1) Rectangular: 0.06-in. wg (12.5 Pa) at 1500 fpm (7.6 m/s) across a 24-by-24-inch (600-by-600-mm) damper when tested according to AMCA 500-D, figure 5.3.
      - 2) Round: 0.02-in. wg (5 Pa) at 1500 fpm (7.6 m/s) across a 12-inch (300-mm) damper when tested according to AMCA 500-D, figure 5.3.

- c. Velocity:
    - 1) Rectangular: Up to 6000 fpm (30 m/s).
    - 2) Round: Up to 4000 fpm (20 m/s).
  - d. Temperature: Minus 20 to plus 185 deg F (Minus 40 to plus 85 deg C).
  - e. Pressure Rating:
    - 1) Rectangular: Damper close-off pressure equal to fan shutoff pressure with a maximum blade deflection of 1/200 of blade length.
    - 2) Round: 8-in. wg (2000 Pa) for sizes through 12 inches (300 mm), 6-in. wg (1500 Pa) for larger sizes.
  - f. Damper shall have AMCA seal for both air leakage and air performance.
6. Construction:
- a. Frame:
    - 1) Rectangular select one of the following to match connecting ductwork:
      - a) ASTM B211, Alloy 6063 T5 extruded-aluminum profiles, minimum 0.07 inch (1.8 mm) thick. Hat-shaped channel with integral flange(s). Mating face shall be a minimum of 1 inch (25 mm). Width not less than 5 inches (125 mm).
      - b) ASTM A653/A653M galvanized-steel profiles, minimum 0.06 inch thick. Hat-shaped channel with integral flanges. Mating face shall be a minimum of 1 inch (25 mm). Width not less than 5 inches (125 mm).
    - 2) Round to match connecting ductwork:
      - a) Material: Galvanized or stainless steel, 0.04 in (1.0 mm) thick. Outward rolled stiffener beads positioned approximately 1 inch (25 mm) inboard of each end. Sleeve-type connection for mating to adjacent ductwork. Size Range: 4 to 24 inches (100 to 600 mm). Length not less than 7 inches (175 mm). Provide 2-inch (50-mm) sheet metal stand-off for mounting actuator.
  - b. Blades:
    - 1) Rectangular: Hollow, airfoil, extruded aluminum or galvanized-steel. Parallel or opposed blade configuration as required by application. Material: ASTM B211, Alloy 6063 T5 aluminum, 0.07 inch (1.8 mm) thick or ASTM A653/A653M galvanized steel, 0.05 inch thick. Width not to exceed 6 inches (150 mm). Length as required by close-off pressure, not to exceed 48 inches (1200 mm).
    - 2) Round: Double-thickness circular flat blades sandwiched together and constructed of galvanized or stainless steel.
  - c. Seals:

- 1) Rectangular Damper Blades: Replaceable, mechanically attached extruded silicone, vinyl, or plastic composite. Jambs: Stainless steel, compression type.
    - 2) Round Damper Blades: Polyethylene foam seal sandwiched between two sides of blades and fully encompassing blade edge.
  - d. All blade edges and top and bottom of the frame shall be provided with replaceable butyl rubber or neoprene seals. Side seals shall be spring-loaded stainless steel. The blade seals shall provide for a maximum leakage rate of 10 cfm per square foot at 4 in. wg differential pressure. Provide air foil blades suitable for a wide-open face velocity of 1500 fpm.
  - e. Individual damper sections shall not be larger than 48 x 60 in. Provide a minimum of one damper actuator per section.
  - f. Axles: 0.5-inch- (13-mm-) diameter plated or stainless steel, mechanically attached to blades.
  - g. Damper shaft bearings shall be as recommended by manufacturer for application, oil impregnated sintered bronze or better. Provide molded synthetic or stainless-steel sleeve mounted in frame. Where blade axles are installed in vertical position, provide thrust bearings.
  - h. Linkage: Dampers shall have exposed linkages. Constructed of aluminum and plated or stainless steel. Hardware: Stainless steel.
7. Flanges:
- a. Outward rolled with bolt holes on each end of frame for mating to adjacent ductwork.
  - b. Face: Not less than 1.25 inch (31 mm) for damper sizes through 12 inches (300 mm) in diameter, 1.5 inch (38 mm) for damper sizes 14 through 24 inches (350 through 600 mm) in diameter, and 2 inches (50 mm) for larger sizes.
8. Transition:
- a. For round and flat oval duct applications, provide damper assembly with integral transitions to mate to adjoining field connection.
  - b. Factory mount damper in a sleeve with a close transition to mate to field connection.
  - c. Damper size and sleeve shall be connection size plus 2 inches (50 mm).
  - d. Sleeve length shall be not less than 12 inches (300 mm) for dampers without jackshafts and shall be not less than 16 inches (450 mm) for dampers with jackshafts.
  - e. Sleeve material shall match adjacent duct.
9. Airflow Measurement and Control Dampers:
- a. Where indicated, provide damper assembly with integral airflow measurement and control.
  - b. A factory-furnished and -calibrated controller shall be programmed, in nonvolatile EPROM, with application-specific airflow set point and range.

- c. The controller and actuator shall communicate to control the desired airflow.
- d. The controller shall receive a zero- to 10-V dc input signal and report a zero- to 20-mA output signal that is proportional to the airflow.
- e. Airflow measurement and control range shall be suitable for operation between 150 to 2000 fpm (0.8 to 10 m/s).
- f. Accuracy shall be within 5 percent of the actual flow rate between the range of minimum and design airflow.
- g. Ambient Operating Temperature Range: Minus 40 to plus 140 deg F (Minus 40 to plus 60 deg C).
- h. Ambient Operating Humidity Range: 5 to 95 percent relative humidity, non-condensing.
- i. Provide unit with control transformer rated for not less than 85 VA. Provide transformer with primary and secondary protection and primary disconnecting means. Coordinate requirements with field power connection.
- j. Provide screw terminals for interface to field wiring.
- k. Factory mount electronics within a NEMA 250, Type 12 painted steel enclosure.

**B. Control Valves:**

- 1. Determine control valve sizes and flow coefficients by ISA 75.01.01.
- 2. Control valve characteristics and rangeability shall comply with ISA 75.11.01.
- 3. Control valve shutoff classifications shall be FCI 70-2, Class IV or better unless otherwise indicated.
- 4. Control valves shall be two-way or three-way type for two-position or modulating service as shown.
- 5. Modulating two-way control valves shall have equal percentage flow-throttling characteristics unless otherwise indicated.
- 6. Modulating three-way pattern water valves shall have linear flow-throttling characteristics. The total flow through the valve shall remain constant regardless of the valve's position.
- 7. Control valves shall be suitable for operation at system operating pressure and temperature identified in associated Division 23 hydronic piping and accessories section.
- 8. Selection shall consider viscosity, flashing, and cavitation corrections.
- 9. Liquid Control Valves (Water and Glycol):
  - a. Valves shall have stable operation throughout full range of operation, from design to minimum Cv.
  - b. Rotary-type non-pressure independent control valves, such as ball and butterfly valves, shall have Cv falling between 65 and 75 degrees of valve full open position and minimum valve Cv between 15 and 25 percent of open position.
  - c. Sizing Criteria
    - 1) Two-position service: Line size unless otherwise indicated.

- 2) Two-way modulating service:
    - a) For non-pressure independent control valves pressure drop shall be equal to twice the pressure drop through heat exchanger (load), 50 percent of the pressure difference between supply and return pipe mains, or 5 psi (34.5 kPa), whichever is greater. Minimum Cv shall be calculated at 10 percent of design flow, with a coincident pressure differential equal to the system design pump head.
    - b) For pressure independent valves, select for a differential pressure range of 5 to 50 psig (34 to 345 kPa).
  - 3) Three-way modulating service: Pressure drop equal to twice the pressure drop through the coil exchanger (load), 5 psi (34.5 kPa) maximum.
  - 4) Close-off (differential) Pressure Rating. Valve actuator and trim shall be furnished to provide the following minimum close-off pressure ratings:
    - a) Two-way: 150 percent of total system (pump) head.
    - b) Three-way: 300 percent of pressure differential between ports A and B at design flow or 100 percent of total system (pump) head.
10. Ball Style Control Valves:
- a. Valves NPS 1/2 inch through NPS 2 inch shall be bronze body or cast brass ANSI Class 250, spring-loaded, quick opening for two position service. Two-way valves to have replaceable composition disc or stainless steel ball.
  - b. Valves 2 1/2 inch and larger shall be cast iron ANSI Class 125.
  - c. Valve Type: Pressure Independent
  - d. Process Temperature Range: Zero to 212 deg F (Minus 18 to plus 100 deg C).
  - e. Close-off Pressure: 200 psig (1379 kPa).
  - f. Ball: Chrome-plated brass or bronze or 300 series stainless steel.
  - g. Stem and Stem Extension:
    - 1) Material to match ball.
    - 2) Blowout-proof design.
    - 3) Sleeve or other approved means to allow valve to be opened and closed without damaging the insulation or the vapor barrier seal.
  - h. Stem Seal: Reinforced PTFE packing ring with a threaded packing ring follower to retain the packing ring under design pressure with the linkage removed. Alternative means, such as EPDM O-rings, are acceptable if an equivalent cycle endurance can be demonstrated by testing.
  - i. Flow Characteristic:
    - 1) Equal percentage.
  - j. Valves up to NPS 2:

- 1) Minimum Pressure Rating for NPS 1 (DN 25) and Smaller: Nominal 600 WOG.
  - 2) Minimum Pressure Rating for NPS 1-1/2 (DN 38) through NPS 2 (DN 50): Nominal 400 WOG.
  - 3) Body and Tail Piece: Cast bronze ASTM B61, ASTM B62, ASTM B584, or forged brass with nickel plating.
  - 4) End Connections: Threaded (NPT) ends.
  - 5) Ball Seats: Reinforced PTFE.
  - k. Valves NPS 2-1/2 and Larger:
    - 1) Pressure Rating for NPS 2-1/2 (DN 65) and larger Class 150.
    - 2) Body: Carbon or stainless steel.
    - 3) End Connections: Flanged ends.
    - 4) Ball Seat: Graphite.
  - l. Minimum Rangeability: 100:1.
  - m. Pressure Independent Valves:
    - 1) Integral Pressure Regulator: Located upstream of ball to regulate pressure, to maintain a constant pressure differential while operating within pressure range specified. Pressure regulator shall be mechanical based only. Electronic flow measurement type pressure independent control valves are not acceptable.
11. Globe Type Control Valves
- a. General Globe-Style Valve Requirements:
    - 1) Globe-style control valve body dimensions shall comply with ISA 75.08.01.
    - 2) Construct the valves to be serviceable from the top.
    - 3) For cage guided valves, trim shall be field interchangeable for different valve flow characteristics, such as equal percentage, linear, and quick opening.
    - 4) Replaceable seats and plugs.
    - 5) Furnish each control valve with a corrosion-resistant nameplate indicating the following:
      - a) Manufacturer's name, model number, and serial number.
      - b) Body and trim size.
      - c) Arrow indicating direction of flow.

- 6) Globe-type control valves shall pass the design flow required with not more than 95 percent of stem lift unless otherwise indicated.
- b. Two-Way Globe Control Valve
  - 1) Globe Style: Single port.
  - 2) NPS 2 and smaller
    - a) Body: Cast bronze or forged brass with ASME B16.5, Class 250 rating.
    - b) End Connections: Threaded
    - c) Bonnet: Screwed.
  - 3) NPS 2-1/2 and larger
    - a) Body: Cast iron complying with ASME B61.1, Class 125.
    - b) End Connections: Flanged.
    - c) Bonnet: Bolted.
  - 4) Packing: PTFE.
  - 5) Plug: Top or bottom guided.
  - 6) Plug, Seat, and Stem: Brass or stainless steel.
  - 7) Process Temperature Range:
    - a) Liquid Service: 35 to 248 deg F (2 to 120 deg C).
    - b) Steam Service (100 psig maximum): Minus 20 to plus 337 deg F
  - 8) Ambient Operating Temperature: 35 to 150 deg F (2 to 65 deg C).
  - 9) Leakage: FCI 70-2, Class IV.
  - 10) Minimum Rangeability: 6 to 1.
  - 11) Equal percentage flow characteristic.
- c. Three-Way Globe Valves (Liquid Service Only)
  - 1) Globe Style: Mix flow pattern.
  - 2) Body:
    - a) NPS 2 and smaller: Cast bronze or forged brass with ASME B16.5, Class 250 rating.
    - b) NPS 2-1/2 and larger: Cast iron complying with ASME B61.1, Class 125.
  - 3) End Connections:

- a) NPS 2 and smaller: Threaded.
- b) NPS 2-1/2 and larger: Flanged.
- 4) Bonnet:
  - a) NPS 2 and smaller: Screwed.
  - b) NPS 2-1/2 and larger: Bolted.
- 5) Packing: PTFE.
- 6) Plug: Top or bottom guided.
- 7) Plug, Seat, and Stem: Brass or stainless steel.
- 8) Process Temperature Range: 35 to 248 deg F.
- 9) Ambient Operating Temperature: 35 to 150 deg F.
- 10) Leakage: FCI 70-2, Class IV.
- 11) Minimum Rangeability: 6 to 1.
- 12) Linear flow characteristic.
- 12. Butterfly Control Valves - High Performance:
  - a. Performance:
    - 1) Bi-directional bubble tight shutoff at 250 psig.
    - 2) Comply with MSS SP-67 or MSS SP-68.
    - 3) Rotation: Zero to 90 degrees.
    - 4) Modified equal percentage flow characteristic.
  - b. Body: Cast iron ASTM A126, Class B, ductile iron ASTM A536 or cast steel ASTM A216/A216M WCB fully lugged, suitable for mating to ASME B16.5 flanges.
  - c. Disc: 316 stainless steel.
  - d. Shaft: 316 or 17-4 PH stainless steel.
  - e. Seat: Reinforced EPDM or reinforced PTFE with retaining ring.
  - f. Shaft Bushings: Reinforced PTFE or stainless steel.
  - g. Replaceable seat, disc, and shaft bushings.
  - h. Corrosion-resistant nameplate indicating:
    - 1) Manufacturer's name, model number, and serial number.
    - 2) Body size.

- 3) Body and trim materials.
  - 4) Flow arrow.
  - i. Arrangement for Three-Way Valve Applications: Two valves mated to a fabricated tee with interconnecting mechanical linkage.
- C. Electric damper/valve actuators:
1. The actuator shall have mechanical or electric stall protection to prevent damage to the actuator throughout the rotation of the actuator.
  2. Where shown, for power-failure/safety applications, an internal mechanical, spring-return mechanism shall be built into the actuator housing. Alternatively, an uninterruptible power supply (UPS) may be provided.
  3. Proportional actuators shall accept a 0 to 10 VDC or 0 to 20 mA control signal and provide a 2 to 10 VDC or 4 to 20 mA operating range.
  4. All 24 VAC DC actuators shall operate on Class 2 wiring.
  5. All non-spring-return actuators shall have an external manual gear release to allow manual positioning of the damper when the actuator is not powered. Spring-return actuators with more than 7 N•m (60 in.•lb) torque capacity shall have a manual crank for this purpose.
  6. Construction:
    - a. For Actuators Less Than 100 W: Fiber or reinforced nylon gears with steel shaft, copper alloy or nylon bearings, and pressed steel enclosures.
    - b. For Actuators from 100 to 400 W: Gears ground steel, oil immersed, shaft hardened steel running in bronze, copper alloy or ball bearings. Operator and gear trains shall be totally enclosed in dustproof cast-iron, cast-steel or cast-aluminum housing.
    - c. For Actuators Larger Than 400 W: Totally enclosed reversible induction motors with auxiliary hand crank and permanently lubricated bearings.
  7. Field Adjustment:
    - a. Spring Return Actuators: Easily switchable from fail open to fail closed in the field without replacement.
    - b. Gear Type Actuators: External manual adjustment mechanism to allow manual positioning when the actuator is not powered.
  8. Two-Position Actuators: Single direction, spring return or reversing type.
  9. Modulating Actuators:
    - a. Operation: Capable of stopping at all points across full range, and starting in either direction from any point in range.
    - b. Control Input Signal:
      - 1) Three Point, Tristate, or Floating Point: Clockwise and counter-clockwise inputs. One input drives actuator to open position and other input drives actuator to close position. No signal of either input remains in last position.

- 2) Proportional: Actuator drives proportional to input signal and modulates throughout its angle of rotation. Suitable for zero- to 10-V dc and 4- to 20-mA signals.
  - 3) Pulse Width Modulation (PWM): Actuator drives to a specified position according to pulse duration (length) of signal from a dry contact closure, triac sink, or source controller.
10. Programmable Multi-Function:
  - a. Control Input, Position Feedback, and Running Time: Factory or field programmable.
  - b. Diagnostic: Feedback of hunting or oscillation, mechanical overload, mechanical travel, and mechanical load limit.
  - c. Service Data: Include, at a minimum, number of hours powered and number of hours in motion.
11. Position Feedback:
  - a. Equip two-position actuators with limits switches or other positive means of a position indication signal for remote monitoring of open and close position.
  - b. Equip modulating actuators with a position feedback through current or voltage signal for remote monitoring.
  - c. Provide a position indicator and graduated scale on each actuator indicating open and closed travel limits.
12. Fail-Safe:
  - a. Where indicated, provide actuator to fail to an end position.
  - b. Internal spring return mechanism to drive controlled device to an end position (open or close) on loss of power.
  - c. Batteries, capacitors, and other non-mechanical forms of fail-safe operation are acceptable only where uniquely indicated.
13. Integral Overload Protection:
  - a. Provide against overload throughout the entire operating range in both directions.
  - b. Electronic overload, digital rotation sensing circuitry, mechanical end switches, or magnetic clutches are acceptable methods of protection.
14. Function properly within a range of 85 to 120 percent of nameplate voltage.
15. Sound:
  - a. Spring Return: 62 dBA.
  - b. Non-Spring Return: 45 dBA.
16. Control valve actuators:
  - a. Actuators for Hydronic Control Valves: Capable of closing valve against system pump shutoff head.
  - b. Actuators for Steam Control Valves: Shutoff against 1.5 times steam design pressure.

- c. Position indicator and graduated scale on each actuator.
  - d. Type: Motor operated, with or without gears, electric and electronic.
  - e. Voltage: 24-V ac or 120-V ac.
  - f. Deliver torque required for continuous uniform movement of controlled device from limit to limit when operated at rated voltage.
  - g. Valve Attachment:
    - 1) Unless otherwise required for valve interface, provide an actuator designed to be directly coupled to valve shaft without the need for connecting linkages.
    - 2) Attach actuator to valve drive shaft in a way that ensures maximum transfer of power and torque without slippage.
    - 3) Bolt and set screw method of attachment is acceptable only if provided with at least two points of attachment.
  - h. Valve Actuator Stroke Time Except Where Noted Otherwise:
    - 1) Operate valve from fully closed to fully opened within adjustable range of 75 to 100 seconds.
    - 2) Operate valve from fully opened to fully closed within adjustable range of 75 to 100 seconds.
    - 3) Move valve to failed position in less than within 20 seconds.
    - 4) Select operating speed to be compatible with equipment and system operation.
17. Damper Actuators:
- a. Type: Motor operated, with or without gears, electric and electronic.
  - b. Actuators shall operate related damper(s) with sufficient reserve power to provide smooth modulating action or two-position action and proper speed of response at velocity and pressure conditions to which the damper is subjected.
  - c. Actuators shall produce sufficient power and torque to close off against the maximum system pressures encountered. Actuators shall be sized to close off against the fan shutoff pressure as a minimum requirement.
  - d. The total damper area operated by an actuator shall not exceed 80 percent of manufacturer's maximum area rating.
  - e. Provide one actuator for each damper assembly where possible. Multiple actuators required to drive a single damper assembly shall operate in unison.
  - f. Avoid the use of excessively oversized actuators which could overdrive and cause linkage failure when the damper blade has reached either its full open or closed position.
  - g. Use jackshafts and shaft couplings in lieu of blade-to-blade linkages when driving axially aligned damper sections.

- h. Provide mounting hardware and linkages for connecting actuator to damper.
- i. Select actuators to fail in desired position in the event of a power as indicated on the drawings.
- j. Damper Attachment:
  - 1) Unless otherwise required for damper interface, provide actuator designed to be directly coupled to damper shaft without need for connecting linkages.
  - 2) Attach actuator to damper drive shaft in a way that ensures maximum transfer of power and torque without slippage.
  - 3) Bolt and set screw method of attachment is acceptable only if provided with at least two points of attachment.
- k. Damper Stroke Time Limits Except Where Noted Otherwise:
  - 1) Operate damper from fully closed to fully open within adjustable range of 75 to 100 seconds.
  - 2) Operate damper from fully opened to fully closed within adjustable range of 75 to 100 seconds.
  - 3) Move damper to failed position in less than 25 seconds.
  - 4) Select operating speed to be compatible with equipment and system operation.
  - 5) Actuators operating in smoke control systems comply with governing code and NFPA requirements.

**D. Digital Temperature Devices**

- 1. Low-voltage space thermostat shall be 24 V, bimetal-operated, mercury-switch type, with either adjustable or fixed anticipation heater, concealed setpoint adjustment, 55 deg F to 85 deg F setpoint range, 2 deg F maximum differential, and vented ABS plastic cover.
- 2. Line-voltage space thermostat shall be bimetal-actuated, open contact type, or bellows-actuated, enclosed, snap-switch type or equivalent solid-state type, with heat anticipator, UL listed for electrical rating, concealed setpoint adjustment, 55 deg F to 85 deg F setpoint range, 2 deg F maximum differential, and vented ABS plastic cover.
- 3. Low-limit thermostats. Low-limit airstream thermostats shall be UL listed, vapor pressure type, with an element of 20 foot minimum length. Element shall respond to the lowest temperature sensed by any 1 foot section. The low-limit thermostat shall be manual reset only.

**E. Temperature Sensors**

- 1. Temperature sensors shall be RTD or thermistor.
- 2. Duct sensors shall be single point or averaging type. Averaging sensors shall be a minimum of 5 feet in length per 10 square feet of duct cross section.

3. Immersion sensors shall be provided with a separable stainless steel well. Pressure rating of well is to be consistent with the system pressure in which it is to be installed. The well must withstand the flow velocities in the pipe.
4. Space sensors shall be equipped with setpoint adjustment, override switch, display, and/or communication port.
5. Provide matched temperature sensors for temperature differential measurement.
6. Platinum RTDs: Common Requirements:
  - a. 1000 ohms at zero deg C and a temperature coefficient of 0.00385 ohm/ohm/deg C.
  - b. Two-wire, PTFE-insulated, 22-gage stranded copper leads.
  - c. Performance Characteristics:
    - 1) Repeatability: Within 0.5 deg F.
    - 2) Self-Heating: Negligible.
  - d. Transmitter Requirements:
    - 1) Transmitter optional for 1000-ohm RTD, contingent on compliance with end-to-end control accuracy.
  - e. Duct Air Temperature Sensors:
    - 1) 1000 ohms.
    - 2) Single Probe Sensors:
      - a) Probe: Single-point sensor with a stainless-steel sheath.
      - b) Length: As required by application to achieve tip at midpoint of air tunnel, up to 18 inches.
    - 3) Averaging Sensors:
      - a) Multiple sensors to provide average temperature across entire length of sensor.
      - b) Rigid probe of aluminum, brass, copper, or stainless-steel sheath.
      - c) Flexible probe of aluminum, brass, copper, or stainless-steel sheath and formable to a 4-inch (100-mm) radius.
      - d) Length: As required by application to cover entire cross section of air tunnel.
    - 4) Outdoor Air Sensors:
      - a) Probe: Single-point sensor with a stainless-steel sheath.
      - b) Solar Shield: Stainless steel.
    - 5) Enclosure: Junction box with removable cover; NEMA 250, Type 12 for indoor applications and Type 4 for outdoor applications.

- 6) Gasket for attachment to duct or equipment to seal penetration airtight.
    - 7) Conduit Connection: 1/2-inch
  - f. Space Air Temperature Sensors:
    - 1) Sensor assembly shall include a temperature sensing element mounted under a bright white, non-yellowing, plastic or flush, brushed-aluminum cover.
    - 2) Provide a mounting plate that is compatible with the surface shape that it is mounted to and electrical box used.
    - 3) Concealed wiring connection.
- 7. Thermal Resistors (Thermistors): Common Requirements:
  - a. 10,000 ohms at 25 deg C and a temperature coefficient of 23.5 ohms/ohm/deg C.
  - b. Two-wire, PTFE-insulated, 22-gage stranded copper leads.
  - c. Performance Characteristics:
    - 1) Repeatability: Within 0.5 deg F (0.3 deg C).
    - 2) Drift: Within 0.5 deg F (0.3 deg C) over 10 years.
    - 3) Self-Heating: Negligible.
  - d. Transmitter contingent on compliance with end-to-end control accuracy.
  - e. Duct Air Temperature Sensors:
    - 1) Single Probe Sensors
      - a) Probe: Single-point sensor with a stainless-steel sheath.
      - b) Length: As required by application to achieve tip at midpoint of air tunnel, up to 18 inches (450 mm) long).
    - 2) Averaging Sensors
      - a) Multiple sensors to provide average temperature across entire length of sensor.
      - b) Rigid probe of aluminum, brass, copper, or stainless-steel sheath.
      - c) Flexible probe of aluminum, brass, copper, or stainless-steel sheath and formable to a 4-inch (100-mm) radius.
      - d) Length: As required by application to cover entire cross section of air tunnel.
    - 3) Outdoor Air Temperature Sensor
      - a) Probe: Single-point sensor with a stainless-steel sheath.
      - b) Solar Shield: Stainless steel.

- 4) Enclosure: Junction box with removable cover; NEMA 250, Type 12 for indoor applications and Type 4 for outdoor applications.
    - 5) Gasket for attachment to duct or equipment to seal penetration airtight.
    - 6) Conduit Connection: 1/2- inch (16-mm) trade size.
  - f. Space Air Temperature Sensors
    - 1) Sensor assembly shall include a temperature sensing element mounted under a bright white, non-yellowing, plastic or flush, brushed-aluminum cover.
    - 2) Provide a mounting plate that is compatible with the surface shape that it is mounted to and electrical box used.
    - 3) Concealed wiring connection.
8. Air Temperature Switches
  - a. Thermostat and Switch for Low Temperature Control in Duct Applications:
    - 1) Description:
      - a) Two-position control.
      - b) Field-adjustable set point.
      - c) Manual reset.
      - d) Listed and labeled as defined in NFPA 70, by a qualified testing agency, and marked for intended location and application.
    - 2) Performance:
      - a) Operating Temperature Range: 15 to 55 deg F (Minus 9 to 13 deg C).
      - b) Temperature Differential: 5 deg F (2.8 deg C), non-adjustable and additive.
      - c) Enclosure Ambient Temperature: Minus 20 to 140 deg F (Minus 11 to 60 deg C).
      - d) Sensing Element Maximum Temperature: 250 deg F (121 deg C).
      - e) Voltage: 120-V ac.
      - f) Current: 16 FLA.
      - g) Switch Type: Two SPDT snap switches operate on coldest 12-inch (300-mm) section along element length.
    - 3) Construction:
      - a) Vapor-Filled Sensing Element: Nominal 20 feet (6 m) long.
      - b) Dual Temperature Scale: Fahrenheit and Celsius visible on face.
      - c) Set-Point Adjustment: Screw.
      - d) Enclosure: Painted metal, NEMA 250, Type 12.

- e) Electrical Connections: Screw terminals.
  - f) Conduit Connection: 1/2-inch (16-mm) trade size.
9. Air Temperature RTD Transmitters
- a. Input:
    - 1) 1000-ohm platinum RTD temperature coefficient of 0.00385 ohm/ohm/deg C, two-wire sensors.
  - b. Span (Adjustable):
    - 1) Space: 40 to 90 deg F (4 to 32 deg C).
    - 2) Supply Air Cooling and Heating: 40 to 120 deg F (4 to 49 deg C).
    - 3) Supply Air Cooling Only: 40 to 90 deg F (4 to 32 deg C).
    - 4) Supply Air Heating Only: 40 to 120 deg F (4 to 49 deg C).
    - 5) Exhaust Air: 50 to 100 deg F (10 to 38 deg C).
    - 6) Return Air: 50 to 100 deg F (10 to 38 deg C).
    - 7) Mixed Air: Minus 40 to 140 deg F (Minus 40 to 60 deg C).
    - 8) Outdoor: Minus 40 to 140 deg F (Minus 40 to 60 deg C).
  - c. Output: 4- to 20-mA dc, linear with temperature; RFI insensitive; minimum drive load of 600 ohms at 24-V dc.
  - d. Zero and span field adjustments, plus or minus 5 percent of span. Minimum span of 50 deg F (28 deg C).
  - e. Match sensor with temperature transmitter and factory calibrate together.
  - f. Performance Characteristics:
    - 1) Calibration Accuracy: Within 0.1 percent of the span.
    - 2) Stability: Within 0.2 percent of the span for at least 6 months.
    - 3) Combined Accuracy: Within 0.5 percent.
10. Liquid Temperature Switches for Temperature Control in Pipe Applications
- a. Description:
    - 1) Two-position control.
    - 2) Field-adjustable set point.
    - 3) Manual reset.
    - 4) Listed and labeled as defined in NFPA 70, by a qualified testing agency, and marked for intended location and application.

b. Performance:

- 1) Temperature Differential Deadband: 5 to 30 deg F (3 to 17 deg C), adjustable.
- 2) Enclosure Ambient Temperature: 150 deg F (66 deg C).
- 3) Sensing Element Pressure Rating: 200 psig (1379 kPa).
- 4) Voltage: 120-V ac.
- 5) Current: 8 FLA.
- 6) Switch Type: SPDT snap switch.

c. Construction:

- 1) Vapor-Filled Immersion Element: Copper, nominal 3 inches (75 mm) long.
- 2) Temperature Scale: Fahrenheit, visible on face.
- 3) Set-Point Adjustment: Screw.
- 4) Enclosure: Painted metal, NEMA 250, Type 12.
- 5) Electrical Connections: Screw terminals.
- 6) Conduit Connection: 3/4-inch (21-mm) trade size).

F. Humidity Sensors

1. Duct and room sensors shall have a sensing range of 20 percent to 80 percent.
2. Duct sensors shall be provided with a sampling chamber.
3. Outdoor air humidity sensors shall have a sensing range of 20 percent to 95 percent rh. They shall be suitable for ambient conditions of 40 deg F to 170 deg F.
4. Humidity sensor drift shall not exceed 1 percent of full scale per year.
5. Sensors and Transmitters with Digital Display:

a. Performance:

- 1) Accuracy including non-linearity, hysteresis, and repeatability: Within 2 percent from zero to 90 percent relative humidity and within 2.5 percent from 90 to 100 percent relative humidity when operating between 60 to 77 deg F (16 to 25 deg C).
- 2) Relative Humidity Range: Zero to 100 percent.
- 3) Factory calibrated and NIST traceable with certificate included.

b. Construction:

- 1) Provide housing with integral sensor for room applications.

- 2) Provide housing with remote sensor probe for ducted applications.
      - a) Duct Sensor Body: 300 series stainless steel or chrome-plated aluminum, at least 2 inches long for duct-mounted applications.
      - b) Provide sensor with cable for field installation in conduit.
      - c) For duct-mounted applications, thread the sensor assembly for connection to a threaded mounting flange.
    - 3) Provide general-purpose humidity sensor unless application requires special requirements. Provide sensor with sintered stainless-steel filter for duct applications.
    - 4) Housing shall be ABS/PC plastic or powder-coated aluminum.
    - 5) Housing Classification: NEMA 250, Type 4 or 4X.
    - 6) Provide housing with wall-mounting plate.
  - c. Output Signal: 2-wire, 4- to 20-mA output signal with a drive capacity of at least 500 ohms at 24-V dc.
  - d. Provide unit with a digital display of relative humidity in percent.
6. Sensor and Transmitter without Display:
  - a. Performance:
    - 1) Accuracy including non-linearity, hysteresis, and repeatability: Within 2 percent from zero to 90 percent relative humidity and within 3 percent from 90 to 95 percent relative humidity when operating at 68 deg F (20 deg C).
    - 2) Hysteresis: Within 1 percent.
    - 3) Relative Humidity Range:
      - a) Duct: Zero to 100 percent.
      - b) Space: Zero to 95 percent relative.
    - 4) Factory calibrated and NIST traceable with certificate included.
  - b. Construction for Space Applications:
    - 1) Housing with integral sensor.
    - 2) Housing shall be ABS plastic or powder-coated aluminum.
    - 3) Enclosure: NEMA 250, Type 4.
    - 4) Provide housing with a wall-mounting plate.
  - c. Construction for Duct and Equipment Applications:
    - 1) Housing with integral sensor.

- 2) Duct Sensor Body: 300 series stainless steel, 6 inches (150 mm) long for duct-mounted applications.
    - 3) For outdoor and duct applications, install circuitry in a NEMA 250, Type 4 or 4X enclosure
    - 4) Provide sensor with sintered stainless-steel filter for duct applications.
    - 5) Housing shall be cast aluminum.
    - 6) Enclosure: NEMA 250, Type 4.
  - d. Output Signal:
    - 1) Two-wire, 4- to 20-mA output signal with drive capacity of at least 500 ohms at 24-V dc.
    - 2) Non-interacting zero and span adjustments.
7. Combination Humidity and Temperature Sensor and Transmitter (Dewpoint Sensor):
  - a. Description:
    - 1) Factory package consisting of humidity and temperature sensor, installation hardware, interconnecting sensor cabling, installation instructions, and operating manual.
    - 2) Each transmitter shall be individually calibrated and provided with NIST traceable calibration certifications.
    - 3) Provide a service cable for connecting to a notebook computer and Microsoft Windows compatible software.
  - b. Display for Non-Duct Mounted Applications Only:
    - 1) Alphanumeric display of the following on the face of the enclosure:
      - a) Percent relative humidity.
      - b) Absolute humidity.
      - c) Mixing ratio.
      - d) Dry-bulb temperature.
      - e) Wet-bulb temperature.
      - f) Dew point temperature.
      - g) Enthalpy.
    - 2) Visual display of measurement trends, and minimum and maximum values over a one-year period.
  - c. Electronics Enclosure:
    - 1) Integral to sensors for wall-mounted applications and remote from temperature and humidity sensors for duct and equipment applications.

- 2) NEMA 250, Type 4 or 4X.
- 3) Labeled terminal strip for field wiring connections.
- 4) 0.63-inch trade size threaded conduit connection.
- d. Programming:
  - 1) Transmitter parameters shall be field programmable through keypad on the face of the enclosure.
  - 2) Programmed parameters shall be stored in nonvolatile EEPROM.
- e. Output Signals:
  - 1) Three Analog Outputs: 4 to 20 mA or zero to 10-V dc for each output. Option to use a serial communication interface.
  - 2) Provide analog dewpoint reading output compatible with associated DDC system controller.
- f. Temperature Sensor:
  - 1) Temperature range matched to application, but not less than minus 40 to 140 deg F (minus 40 to 60 deg C).
  - 2) Within 0.5 deg F (0.3 deg C) accuracy over the temperature range of 50 to 100 deg F (10 to 38 deg C) and within 1 deg F (0.6 deg C) over the remainder of the range.
  - 3) Provide duct installation kit for duct applications.
- g. Humidity Sensor:
  - 1) Relative Humidity Measurement Range: Zero to 100 percent.
  - 2) Response time in still air within 40 seconds.
  - 3) Accuracy including non-linearity, hysteresis, and repeatability:
    - a) For Temperature Between 59 and 77 Deg F (15 to 25 Deg C) and Relative Humidity between Zero and 90 Percent: Within 1 percent.
    - b) For Temperature between 59 and 77 Deg F (15 to 25 Deg C) and Relative Humidity between 90 and 100 Percent: Within 1.7 percent.
    - c) For Temperature between Minus 4 and 104 Deg F (Minus 20 to 40 Deg C): Within 1 percent plus 0.008 times relative humidity reading.
    - d) For Temperature between Minus 40 and 356 Deg F (Minus 40 to 180 Deg C): Within 1.5 percent plus 0.015 times the relative humidity reading.
  - 4) Sintered, stainless-steel filter, protecting sensor.
  - 5) Provide duct installation kit for duct applications.

- h. Power Supply:
  - 1) Field Power: 120-V ac, 60 Hz unless otherwise required by the application.
  - 2) Internal Power: As required by transmitter.
- G. Override Timers
  - 1. Override timers shall be spring-wound line voltage, UL Listed, with contact rating and configuration as required by application. Provide 0-to-6-hour calibrated dial unless otherwise specified. Timer shall be suitable for flush mounting on control panel face and located on local control panels or where shown.
- H. Current Transmitters
  - 1. AC current transmitters shall be the self-powered, combination split-core current transformer type with built-in rectifier and high-gain servo amplifier with 4 to 20 mA two-wire output. Unit ranges shall be 10 A, 20 A, 50 A, 100 A, 150 A, and 200 A full scale, with internal zero and span adjustment and  $\pm 1$  percent full-scale accuracy at 500 ohm maximum burden.
  - 2. Transmitter shall meet or exceed ANSI/ISA S50.1 requirements and shall be UUCSA Recognized.
  - 3. Unit shall be split-core type for clamp-on installation on existing wiring.
- I. Current Transformers
  - 1. AC current transformers shall be UUCSA Recognized and completely encased (except for terminals) in approved plastic material.
  - 2. Transformers shall be available in various current ratios and shall be selected for  $\pm 1$  percent accuracy at 5 A full-scale output.
  - 3. Transformers shall be fixed-core or split-core type for installation on new or existing wiring, respectively.
- J. Voltage Sensing
  - 1. AC voltage transmitters shall be self-powered single-loop (two-wire) type, 4 to 20 mA output with zero and span adjustment.
  - 2. Ranges shall include 100 to 130 VAC, 200 to 250 VAC, 250 to 330 VAC, and 400 to 600 VAC full-scale, adjustable, with  $\pm 1$  percent full-scale accuracy with 500 ohm maximum burden.
  - 3. Transmitters shall be UUCSA Recognized at 600 VAC rating and meet or exceed ANSI/ISA S50.1 requirements.
- K. Voltage Transformers
  - 1. AC voltage transformers shall be UUCSA Recognized, 600 VAC rated, complete with built-in fuse protection.
  - 2. Transformers shall be suitable for ambient temperatures of 4 degC to 55 deg C (40 deg F to 130 deg F) and shall provide  $\pm 0.5$  percent accuracy at 24 VAC and a 5 VA load.
  - 3. Windings (except for terminals) shall be completely enclosed with metal or plastic.
- L. Power Monitors

1. Selectable rate pulse output for kWh reading, 4-20 mA output for kW reading, N.O. alarm contact, and ability to operate with 5.0 amp current inputs or 0-0.33 volt inputs.
2. 1.0 percent full-scale true RMS power accuracy, +0.5 Hz, voltage input range 120-600 V, and auto range select.
3. Under voltage/phase monitor circuitry.
4. NEMA 1 enclosure.
5. Current transformers having a 0.5 percent FS accuracy, 600 VAC isolation voltage with 0-0.33V output. If 0-5 A current transformers are provided, a three-phase disconnect/shorting switch assembly is required.

**M. Flow Switches**

1. Flow-proving switches shall be either paddle or differential pressure type.
2. Paddle type switches (water service only) shall be UL listed, SPDT snap-acting with pilot duty rating (125 VA minimum) and shall have adjustable sensitivity with NEMA 1 enclosure unless otherwise specified.
3. Differential pressure type switches (air or water service) shall be UL listed, SPDT snap-acting, pilot duty rated (125 VA minimum), NEMA 2 enclosure, with scale range and differential suitable for intended application or as specified.
4. Airflow Proving Switches
  - a. Performance:
    - 1) Polymer Film Sail Switch: Suitable for applications operating at velocities up to 400 fpm (2.0 m/s). Suitable for mounting with air direction in horizontal, vertical up or down.
      - a) Normally open switch actuates at 250 fpm (1.3 m/s) and opens at 75 fpm (0.4 m/s).
      - b) Normally closed switch actuates at 75 fpm (0.4 m/s) and closes at 250 fpm (1.3 m/s).
      - c) Removable spring counterbalances sail to allow mounting in either vertical (up or down) or horizontal airflow.
    - 2) Stainless Steel Single Vane Switch: Suitable for applications operating at velocities up to 2000 fpm (10.2 m/s). Suitable for mounting with air direction in horizontal.
      - a) Field-Adjustable Velocity Set Point: 400 to 1600 fpm.
      - b) Screw setpoint adjustment.
    - 3) Listed and labeled as defined in NFPA 70, by a qualified testing agency, and marked for intended location and application.
    - 4) Voltage: 24-, 120-, 240-V ac.
    - 5) Maximum Process Temperature: 170 deg F (77 deg C).
    - 6) Maximum Ambient Temperature: 125 deg F (52 deg C).

- b. Construction:
  - 1) Polyester film sail encasing a wire frame or stainless steel vane based on velocity requirements.
  - 2) Sail or vane actuates a SPDT snap switch.
  - 3) Enclosure Material: Zinc-plated steel or die-cast metal.
  - 4) Enclosure with removable cover.
  - 5) NEMA 250, Type 12 enclosure.
  - 6) Electrical Connections: Screw terminals.
  - 7) Conduit Connections: 1 inch (16-mm) trade size conduit knock outs on top and bottom.
- 5. Liquid Flow Switch (Bellows Type):
  - a. Description:
    - 1) Field-adjustable four-vane combinations.
    - 2) Field-adjustable set-point adjustment screw.
    - 3) Suitable for pipe sizes NPS 1 through NPS 8 (DN 25 through DN 200).
    - 4) Switch mounted vertically in horizontal pipe.
  - b. Performance:
    - 1) Flow Rate Actuation and De-actuation: Varies with vane combination and set-point adjustment.
    - 2) Pressure Limit: 145 psig (1000 kPa).
    - 3) Temperature Limit: 230 deg F (110 deg C).
    - 4) Electrical Rating: 10 A resistive, 3 A conductive at 250-V ac.
    - 5) Switch Type: SPDT snap switch.
  - c. Wetted Parts Construction:
    - 1) Bellows: Tin-bronze.
    - 2) Vanes: Stainless steel.
    - 3) Body: Forged brass.
    - 4) Process Connection: NPS 1 (DN 25).
  - d. Enclosure:

- 1) Die-cast aluminum alloy.
  - 2) NEMA 250, Type 4.
  - 3) Electrical Connection: Cable gland with attached wire leads.
6. Liquid Flow Switch (Magnetic Type):
- a. Description:
    - 1) Suitable for pipe sizes NPS 1/2 through NPS 20 (DN 40 to DN 500).
    - 2) Mounting Suitable for Application: Switch vertically mounted in horizontal pipe or switch horizontally mounted in vertical pipe with flow up.
    - 3) Listed and labeled as defined in NFPA 70, by a qualified testing agency, and marked for hazardous-environment Class I, Groups C and D; Class II, Groups E, F, and G.
  - b. Performance:
    - 1) Flow Rate Actuation and De-actuation:
      - a) NPS 2-1/2 and Larger: Varies with vane combination.
      - b) NPS 2 and Smaller: Non-Adjustable
    - 2) Pressure Limit: 1000 psig (6895 kPa) for brass body, 2000 psig (13790 kPa) for Type 316 stainless steel body.
    - 3) Pressure Limit of Tee 2 NPS and Smaller: 250 psig for brass, 1000 psig for malleable iron, and 2000 psig for forged carbon steel and stainless steel.
    - 4) Temperature Range: Minus 4 to plus 220 deg F (Minus 20 to plus 135 deg C).
    - 5) Electrical Rating: 10 A at 125/250-V ac.
    - 6) Switch Type: SPDT or DPDT snap switch.
  - c. Wetted Parts Construction:
    - 1) Vanes:
      - a) NPS 2-1/2 and Larger: Type 316 stainless steel.
      - b) NPS 2 and Smaller: Brass or Type 303 stainless steel
    - 2) Body: Brass or Type 316 stainless steel.
    - 3) Magnetic Keeper: Type 430 stainless steel or Type 316 stainless steel.
    - 4) Process Connection:
      - a) NPS 1-1/2 (DN 40) for piping NPS 2-1/2 and larger.
      - b) NPS 1/2 (DN 15) for piping NPS 2 and smaller.

- d. Enclosure:
  - 1) NPS 2-1/2 and Larger: Die-cast aluminum alloy. Threaded cover.
  - 2) NPS 2 and Smaller: Brass or Type 303 stainless steel
  - 3) NEMA 250, Type 4.
  - 4) Electrical Connection: Terminal block.
  - 5) Conduit Connection: 3/4-inch (21-mm) trade size.
- e. NPS 2 and Smaller - Integral Mounting Tee Furnished with Switch:
  - 1) Acceptable Materials: Brass, forged carbon steel, malleable iron, stainless steel.
  - 2) Size: Match adjacent pipe.
  - 3) Connection: Threaded pipe.

**N. Flow Instruments**

- 1. General Requirements for Flow Instruments
  - a. Air sensors and transmitters shall have an extended range of 10 percent above Project design flow and 10 percent below minimum Project flow to signal abnormal flow conditions and to provide flexibility for changes in operation.
  - b. Liquid and steam sensors, meters, and transmitters shall have an extended range of 10 percent above Project design flow and 10 percent below Project minimum flow to signal abnormal flow conditions and to provide flexibility for changes in operation.
  - c. Source Limitations: For flow instruments, obtain products from single source from single manufacturer.
- 2. Airflow Measurement Stations and Instruments
  - a. Performance Requirements:
    - 1) Adjustable for changes in system operational parameters.
    - 2) Manufacturer shall certify that each flow instrument indicated complies with specified performance requirements and characteristics.
      - a) Product certificates are required.
  - b. Pitot-Tube Airflow Sensor Station:
    - 1) Description: Multiple total- and static-pressure sensors positioned at the center of equal area of the station cross section and interconnected by respective averaging manifolds.
    - 2) Provide the number of independent sensors recommended by the airflow station manufacturer in written instructions based on the duct size.

- 3) Casing: Galvanized sheet steel at least 0.079 inch (2.0 mm) thick with coating complying with ASTM A653/A653M, G90 (Z275). Casings shall be stainless steel, 0.0781 inch (2.0 mm) thick, when connected to stainless duct and aluminum, 0.063 inch (1.6 mm) thick, when connected to aluminum duct.
- 4) Joints and Seams: Continuously weld. Clean galvanized areas damaged by welding and coat with aluminum paint.
- 5) Casing Depth: At least 8 inches (200 mm).
- 6) Casing Flanges: Outward flange, minimum flange face 1.5 inches (38 mm).
- 7) Casing Configuration and Size: Match shape (rectangular, round, flat oval) and same size as adjacent duct unless otherwise indicated.
- 8) Include an open parallel cell air straightener or air equalizer honeycomb mechanically fastened to casing.
- 9) Construct straightener or equalizer from Type 3003 aluminum or Type 316 stainless steel, depending on casing material. Use stainless steel for units with stainless-steel casings.
- 10) Construct pressure sensor array from drawn copper or stainless-steel tubing. Use stainless steel for units with stainless-steel casings. Copper tubing shall comply with ASTM B75 and ASTM B280. Minimum tube wall thickness shall be 0.030 inch (0.8 mm). Include internal piping and external pressure transmitter ports.
- 11) Station Labeling: Identification label on each station casing indicating model number, size, area, and application-specific airflow range.
- 12) Performance:
  - a) **Pressure Loss: 0.015-inch wg (3.8 Pa) at 1000 fpm (5 m/s), or 0.085-inch wg (22.5 Pa) at 2000 fpm (10 m/s).**
  - b) **Accuracy: Within 2 percent of actual airflow.**
  - c) **Self-Generated Sound: NC 40 and sound level within the duct shall not be amplified.**
- 13) Performance rated and tested according to AMCA 610. Each station shall bear the AMCA seal.]
- c. Pitot-Tube Fan Inlet Airflow Traverse Sensor:
  - 1) Traverse manifold designed for mounting in fan inlets.
  - 2) Contain multiple total- and static-pressure sensors placed at concentric area centers along the exterior surface of cylindrical manifold and internally connected to their respective averaging manifolds. Sensors shall not

protrude beyond the surface of the manifold nor be adversely affected by particle contamination present in airstream.

- 3) Manifold (two per inlet) shall have dual end support swivel brackets suitable for mounting in the fan inlet bell and symmetrical averaging signal takeoffs and fittings.
- 4) Sensors shall be capable of producing steady, non-pulsating signals of standard total- and static-pressure without need for flow corrections or factors, with an accuracy of 3 percent of actual flow over a turndown range of 6 to 1.
- 5) Manifold Materials: Copper or anodized aluminum.
- 6) Unless otherwise required by application and without affecting the fan and sensor performance, nominal diameter copper and aluminum manifolds shall be the following:
  - a) For Fan Inlets Smaller Than 20 Inches (500 mm): 0.375 inch (9 mm).
  - b) For Fan Inlets 20 Inches (500 mm) and Larger: 0.75 inch (19 mm).
- 7) Unless otherwise required by application and without affecting the fan and sensor performance, nominal diameter stainless steel manifolds shall be the following:
  - a) For Fan Inlets Smaller Than 20 Inches (500 mm): 0.375 inch (9 mm).
  - b) For Fan Inlets 20 through 48 Inches (500 through 1200 mm): 0.75 inch (19 mm).
  - c) For Fan Inlets Larger Than 48 Inches (1200 mm): 1.0 inch (25 mm).

d. Piezometer Ring Fan Inlet Airflow Sensor:

- 1) In lieu of externally mounted fan inlet airflow sensors, option to provide fans with airflow measurement integral to fan inlet cones for continuous measurement of air volume flow rate.
- 2) Multiple pressure sensor points strategically placed along the circumference of the inlet cone and internally connected to an averaging ring manifold located behind the inlet cone.
- 3) Sensor points shall not protrude beyond the surface of the inlet cone nor be adversely affected by particle contamination present in the airstream.
- 4) Sensor shall produce steady, non-pulsating signals to achieve accuracy within 5 percent of actual airflow.
- 5) Sensor shall be non-intrusive and not impact fan performance.

3. Airflow Transmitters

- a. Transmitter shall receive total- and static-pressure signals from a primary element, amplify signals, extract the square root, and scale the signals to produce 4- to 20-mA dc output signals linear to airflow.
  - b. NEMA 250, Type 12 enclosure.
  - c. Construct assembly so that shock, vibration, and pressures surges of up to 1 psig (6.9 kPa) will neither harm transmitter, nor affect its accuracy.
  - d. Transmitter with automatic zeroing circuit capable of automatically readjusting transmitter zero at predetermined time intervals. The automatic zeroing circuit shall re-zero transmitter to within 0.1 percent of true zero.
  - e. Performance:
    - 1) Calibrated Span: Field adjustable, minus 40 percent of the range.
    - 2) Accuracy: Within 0.25 percent of natural span.
    - 3) Repeatability: Within 0.15 percent of calibrated span.
    - 4) Linearity: Within 0.2 percent of calibrated span.
    - 5) Hysteresis and Deadband (Combined): Less than 0.2 percent of calibrated span.
    - 6) Stability: Within one percent of span per year.
    - 7) Temperature Limits: Zero to 150 deg F.
    - 8) Compensate Temperature Limits: 40 to 150 deg F.
    - 9) Thermal Effects: 0.033 percent of full scale per degree F.
  - f. Integral digital LED or digital display for continuous indication of airflow.
4. Liquid Hydronic Flowmeters - Magnetic Flow-Tube Type Flowmeter
- a. Sensor shall be a magnetic flowmeter, which utilizes Faraday Law to measure volumetric fluid flow through a pipe. The flowmeter shall consist of two elements, the sensor and the electronics. The sensor shall generate a measuring signal proportional to the flow velocity in the pipe. The electronics shall convert this EMF into a standard current output.
  - b. Electric replacement shall not affect meter accuracy (electric units are not matched with specific sensors).
  - c. Four-wire, externally powered, magnetic type flow transmitter with adjustable span and zero, integrally mounted to flow tube. Output signal shall be a digital pulse proportional to the flow rate (to provide maximum accuracy and to handle abrupt changes in flow). Standard 4-20 mA or 0-10 Vdc outputs may be used provided accuracy is as specified.
  - d. Flow tube
    - 1) ANSI class 150 psig steel

- 2) ANSI flanges
    - 3) Protected with PTFE, PFA, or ETFE liner rated for 245 deg F minimum fluid temperature
  - e. Electrode and grounding material
    - 1) 316L stainless steel or Hastelloy C
    - 2) Electrodes shall be fused to ceramic liner and not require o-rings.
  - f. Electrical enclosure. NEMA 4X.
  - g. Approvals :
    - 1) UL or CSA
    - 2) NSF Drinking Water approval for domestic water applications
  - h. Performance:
    - 1) Accuracy for Velocities between 3.3 and 33 fps: Within 0.2 percent of reading.
    - 2) Accuracy for Velocities between 1.0 and 3.3 fps: Within 0.75 percent of reading.
    - 3) Accuracy for Velocities Less than 1.0 fps: Within 0.0075 fps.
    - 4) Ambient Temperature: Minus 4 to plus 140 deg F.
    - 5) Stability. 0.1 percent of rate over six months.
    - 6) Process Temperature: Minus 4 to 212 deg F.
    - 7) Pressure: Selected option to meet system requirements
      - a) 225 psig or 580 psig.
- 5. Liquid Pressure Differential Transmitter for Flow Measurement:
  - a. Performance:
    - 1) Range: Approximately 2 times the set point.
    - 2) Span: Adjustable plus or minus 1 mA, non-interactive.
    - 3) Accuracy: Within 0.25 percent of full scale.
    - 4) Maximum Operating Pressure: 2.5 times range.
    - 5) Temperature Limits: Zero to 175 deg F (Minus 18 to plus 79 deg C).
    - 6) Compensate Temperature Limits: 30 to 150 deg F (Minus 1 to plus 66 deg C).

- 7) Thermal Effects: 0.02 percent of full scale per degree F.
    - 8) Response Time: 30 to 50 ms.
    - 9) Shock and vibration shall not harm the transmitter.
  - b. Analog Output Current Signal:
    - 1) Two wire, 4- to 20-mA dc current source.
    - 2) Signal capable of operating into 1000-ohm load.
  - c. Operator Interface:
    - 1) Zero and span adjustments located behind cover.
    - 2) Bleed screws on side of body, two screws on low-pressure side and one screw on high-pressure side, for air in line and pressure cavity.
  - d. Construction:
    - 1) Aluminum and stainless steel enclosure with removable cover.
    - 2) Wetted parts of transmitter constructed of 17-4 PH or 300 series stainless steel.
    - 3) NPS 1/4 (DN 8) process connections on side of instrument enclosure.
    - 4) Knock out for 1/2-inch (15-mm) trade size conduit connection on side of instrument enclosure.
    - 5) Screw terminal block for wire connections.
    - 6) NEMA 250, Type 4X.
    - 7) Mounting bracket shall be suitable for installation.
  - e. Transmitter shall have three-valve manifold. Construct manifold of brass, bronze, or stainless steel. Manifold shall have NPS 1/4 (DN 8) process connections.
- O. Pressure Instruments
  - 1. Air Pressure Sensors
    - a. Duct Insertion Static Pressure Sensor:
      - 1) Insertion length shall be as recommended by the manufacturer for the duct size served.
      - 2) Sensor with four radial holes of 0.04-inch (1-mm) diameter.
      - 3) Brass or stainless-steel construction.
      - 4) Sensor with threaded end support, sealing washers and nuts.

- 5) Connection: NPS 1/4 (DN 6) compression fitting.
- 6) Suitable for flat oval, rectangular, and round duct configurations.
- b. Duct Insertion Static Pressure Sensor:
  - 1) Sensor probe with two opposing orifices designed to reduce error-associated air velocity.
  - 2) Sensor insertion length shall be as recommended by the manufacturer for the duct size served.
  - 3) Construct sensor of 6061-T6 aluminum alloy or Type 304 stainless steel.
  - 4) Connection: Threaded, NPS 1/8 (DN 6) swivel fitting for connection to copper tubing or NPS 1/4 (DN 10) barbed fitting for connection to polyethylene tubing.
  - 5) Sensor probe attached to a mounting flange with neoprene gasket and two holes for fasteners.
  - 6) Mounting flange shall suitable for flat oval, rectangular, and round duct configurations.
  - 7) Pressure Rating: 10 psig (69 kPa).
- c. Duct Traverse Static Pressure Sensor:
  - 1) Sensor shall traverse the duct cross section and have at least one pickup point every 6 inches (150mm) along length of sensor.
  - 2) Construct sensor of 18-gage Type T6063-T5 extruded and anodized aluminum.
  - 3) Sensor supported with threaded rod, sealing washer, and nut at one end and a mounting plate with gasket at other end.
  - 4) Mounting plate with threaded, NPS 3/8 (DN 12) compression fitting for connection to tubing.
  - 5) Accuracy within 1 percent of actual operating static pressure.
  - 6) Dual offset static sensor design shall provide accurate sensing of duct static pressure in the presence of turbulent and rotational airflows with a maximum 30 degree yaw and pitch.
  - 7) Suitable for velocities of 100 to 10000 fpm (0.51 to 51 m/s) and temperatures of up to 200 deg F (93 deg C).
  - 8) Sensor air resistance shall be less than 0.1 times the velocity pressure at probe-operating velocity.
  - 9) Suitable for flat oval, rectangular, and round duct configurations.

- d. Outdoor Static Pressure Sensor:
  - 1) Manufacturers: Subject to compliance with requirements, available manufacturers offering products that may be incorporated into the Work include the following, or approved equal:
    - a) Air Monitor Corporation - Static Outside Air Probe (SOAP),
    - b) Vaisala - Static Pressure Head,
    - c) Or approved equal.
  - 2) Provides average outdoor pressure signal.
  - 3) Sensor with no moving parts.
  - 4) Pressure Connection: Brass barbed fitting for NPS 1/4 (DN 10) tubing.
  - 5) Conduit fitting around pressure fitting for sensor support and protection to pressure connection.
  - 6) Include sensor, tubing and mounting hardware.
  - 7) Operation not affected and impaired by rain and snow.
  - 8) Sensing plates constructed of type 316 stainless steel or aluminum.
  - 9) Accuracy within:
    - a) 1 percent of the actual outdoor atmospheric pressure when subjected to varying horizontal radial wind velocities up to 40 mph.
    - b) 2 percent of the actual outdoor atmospheric pressure while subjected to varying radial wind velocities up to 40 mph with approach angles up to 30 degrees to horizontal.
    - c) 3 percent of the actual outdoor atmospheric pressure while subjected to varying radial wind velocities up to 40 mph with approach angles up to 60 degrees to horizontal.
- e. Space Static Pressure Sensor for Wall Mounting
  - 1) Aluminum or Stainless-steel wall plate with sensing port, perforated center or multiple sensing ports arranged to sense space static pressure. Include pressure impulse suppression chamber and airflow shielding. Exposed metal surfaces are provided with brush finish.
  - 2) Back of sensor plate fitted with brass barbed or brass union fitting for tubing connection.
  - 3) Wall plate provided with matching color screws and sized to fit standard single-gang electrical box.

- 4) Performance: Within 1 percent of actual room static pressure in vicinity of sensor while being subjected to an air velocity of 1000 fpm (5.1 m/s) from a 360-degree radial source.
    - 5) Pressure rating: 10 psig (69kPa).
  - f. Space Static Pressure Sensor for Exposed or Suspended Mounting
    - 1) Performance: Within 1 percent of actual room static pressure in vicinity of sensor while being subjected to an air velocity of 1000 fpm (5.1 m/s) from a 360-degree radial source.
    - 2) Aluminum or stainless steel with perforations arranged to sense space static pressure. Exposed surfaces provided with brush finish.
    - 3) Sensor fitted with multiple sensing ports, pressure impulse suppression chamber, and airflow shielding.
    - 4) Surface-mounted sensor provided with solid mounting plate intended for mount to ceiling with pressure chamber exposed to view and 0.125-inch (3-mm) fitting for exposed tubing connection.
    - 5) Suspended sensor intended for pendent mount with pressure chamber exposed to view and NPS 1/2 (DN 15) fitting for exposed pipe or tubing connection.
2. Air Pressure Switches
  - a. Air-Pressure Differential Switch
    - 1) UL listed, diaphragm-operated SPDT snap-acting, with scale range and differential suitable for intended application.
      - a) Fan safety shutdown applications: Switch with manual reset.
    - 2) Electrical Connections: Three-screw configuration, including one screw for common operation and two screws for field-selectable normally open or closed operation.
    - 3) Enclosure Conduit Connection: Knock out or threaded connection.
    - 4) User Interface: Screw-type set-point adjustment with enclosed set-point indicator and scale.
    - 5) High and Low Process Connections: Threaded, NPS 1/8 (DN 6).
    - 6) Enclosure:
      - a) Dry Indoor Installations: NEMA 250, Type 12.
      - b) Outdoor and Wet Indoor Installations: NEMA 250, Type 4.
      - c) Hazardous Environments: Explosion proof.
    - 7) Operating Data:

- a) Electrical Rating: 15 A at 120- to 480-V ac.
  - b) Pressure Limit Continuous: 45 inches wg (11.2 kPa).
  - c) Pressure Limit Surge: 10 psig (68.9 kPa).
  - d) Temperature Limits: Minus 30 to 180 deg F (Minus 34 to 82 deg C).
  - e) Operating Range: Approximately 2 times set point.
  - f) Repeatability: Within 3 percent.
  - g) Listed and labeled as defined in NFPA 70, by a qualified testing agency, and marked for intended location and application.
- b. Air-Pressure Differential Indicating Switch
- 1) Combination gauge with low- and high-limit switches.
  - 2) Nominal 4-inch- (100-mm-) diameter analog indication with white dial face, graduated black markings, pointer to indicate measured value, and a separate adjustable pointer for each switch set point.
  - 3) Switch zero and set-point tamperproof adjustment screws or knobs on the dial face.
  - 4) Each switch used as a safety limit shall have a manual reset button local to switch.
  - 5) Switch Type: Each set point shall have two Form C relays, DPDT.
  - 6) Electrical Connections: Screw terminals.
  - 7) Enclosure Conduit Connection: NPS 3/4 (DN 20) threaded connection.
  - 8) High and Low Process Connections: Threaded, NPS 1/8 (DN 6).
  - 9) Enclosure:
    - a) Dry Indoor Installations: NEMA 250, Type 12.
    - b) Outdoor and Wet Indoor Installations: NEMA 250, Type 4.
    - c) Hazardous Environments: Explosion proof.
  - 10) Operating Data:
    - a) Electrical Rating: 10 A at 120- to 240-V ac.
    - b) Pressure Limits: 25 psig (172 kPa).
    - c) Temperature Limits: 20 to 120 deg F (Minus 7 to 49 deg C).
    - d) Operating Range: Approximately twice normal operating range unless otherwise required for application.
    - e) Accuracy: 4 percent for ranges through 0.5 in. wg (125 Pa), 2 percent for ranges 1 in. wg (250 Pa) and greater.
    - f) Repeatability: Within 1 percent of full scale.

- g) Switch Deadband: One pointer width and within 1 percent of full scale for each switch set point.
  - h) Power Supply: 24 or 120-V ac, 50/60 Hz.
  - i) Listed and labeled as defined in NFPA 70, by a qualified testing agency, and marked for intended location and application.
- 3. Air Pressure Differential Transmitters
  - a. Transmitter with automatic zeroing circuit capable of automatically readjusting the transmitter to zero at predetermined time intervals. The automatic zeroing circuit shall re-zero the transmitter to within 0.1 percent of true zero.
  - b. Integral digital display for continuous indication of pressure differential
  - c. Performance:
    - 1) Range: Approximately 2 times set point or as required by application and at least 10 percent below minimum airflow and 10 percent greater than design airflow.
    - 2) Calibrated Span: Field adjustable, minus 40 percent of the range.
    - 3) Accuracy: Within 0.10 percent of natural span.
    - 4) Repeatability: Within 0.15 percent of calibrated span.
    - 5) Linearity: Within 0.2 percent of calibrated span.
    - 6) Hysteresis and deadband (combined): Less than 0.2 percent of calibrated span.
    - 7) Stability: Within 0.25 percent of span per year.
    - 8) Overpressure: 1 psig (69 kPa).
    - 9) Temperature Limits: Zero to 150 deg F (Minus 18 to 66 deg C).
    - 10) Compensate Temperature Limits: 40 to 135 deg F (4 to 57 deg C).
    - 11) Thermal Effects: 0.033 percent of full scale per degree F.
    - 12) Warm-up Time: Within 5 seconds.
    - 13) Response Time: 5 ms.
    - 14) Shock and vibration shall not harm the transmitter.
  - d. Output Signals:
    - 1) Analog Current Signal: 4- to 20-mA dc current source. Signal capable of operating into 800-ohm load.
  - e. Display: Four-digit digital display with minimum 0.4-inch- (10-mm-) high numeric characters.

- f. Operator Interface: Zero and span adjustments within 10 percent of full span. Potentiometer adjustments located on face of transmitter.
- g. Construction:
  - 1) Type 300 stainless-steel enclosure.
  - 2) Threaded, NPS 1/4 (DN 10) swivel fittings for connection to copper tubing or NPS 3/16 (DN 7) barbed fittings for connection to polyethylene tubing. Fittings on bottom of instrument case.
  - 3) Screw terminal block for wire connections.
  - 4) Vertical plane mounting.
  - 5) NEMA 250, Type 4.
  - 6) Provide mounting bracket suitable for installation.
  - 7) Reverse wiring protected.
  - 8) Calibrate to NIST-traceable standards and provide each transmitter with a certificate of calibration.
- 4. Liquid gauge Pressure Switch:
  - a. Bourdon tube or 316 stainless-steel double opposing bellows operated to actuate a SPDT snap switch.
  - b. Provide switches used in safety limiting applications with auto reset.
  - c. Wetted Materials: Brass or Type 403 stainless steel or Type 316 stainless steel.
  - d. Seal: Viton.
  - e. Electrical Connections: Screw terminal.
  - f. Enclosure Conduit Connection: Knock out or threaded connection.
  - g. User Interface: Thumbscrew set-point adjustment with enclosed set-point indicator and scale.
  - h. Process Connection: Threaded, NPS 1/4 (DN 10).
  - i. Enclosure:
    - 1) Dry Indoor Installations: NEMA 250, Type 12.
    - 2) Outdoor and Wet Indoor Installations: NEMA 250, Type 4.
    - 3) Hazardous Environments: Explosion proof.
  - j. Operating Data:
    - 1) Electrical Rating: 120-V ac.
    - 2) Pressure Limits: Equal to maximum pressure in full-scale range, but not less than system design pressure rating.

- 3) Ambient Temperature Limits: Minus 20 to 150 deg F (Minus 29 to 66 deg C).
  - 4) Process Temperature Limits: 20 to 300 deg F (Minus 7 to 149 deg C). Temperature Limits: 180 deg F (82 deg C).
  - 5) Operating Range: Approximately 2 times set point, but not less than system design pressure rating.
  - 6) Deadband: Adjustable or fixed as required by application.
  - k. Listed and labeled as defined in NFPA 70, by a qualified testing agency, and marked for intended location and application.
5. Liquid Pressure Transmitter
- a. Transmitter shall have linear output signal. Zero and span shall be field adjustable.
  - b. Transmitter sensing elements shall with-stand continuous operating conditions of positive or negative pressure 50 percent greater than calibrated span without damage.
  - c. Water pressure transmitter shall have stainless steel diaphragm construction, proof pressure of 150 psi minimum. Transducer shall be complete with 4 to 20 mA output, required mounting brackets, and block and bleed valves.
  - d. Water differential pressure transmitter shall have stainless-steel diaphragm construction, proof pressure of 150 psi minimum. Over-range limit (differential pressure) and maximum static pressure shall be 300 psi. Transducer shall be complete with 4 to 20 mA output, required mounting brackets, and five-valve manifold as shown below:

- e. Performance:
- 1) Range: Approximately 2 times the set point.
  - 2) Span: Adjustable plus or minus one milliamp, non-interactive.
  - 3) Accuracy: Within 0.25 percent of full scale.
  - 4) Hysteresis: Within 0.1 percent of full scale.
  - 5) Repeatability: Within 0.05 percent of full scale.
  - 6) Maximum Working Pressure: 250 psig (1724 kPa).

- 7) Temperature Limits: Zero to 175 deg F (Minus 18 to 79 deg C).
- 8) Compensate Temperature Limits: 30 to 150 deg F (Minus 1 to 66 deg C).
- 9) Thermal Effects: 0.02 percent of full scale per degree F.
- 10) Response Time: 30 to 50 ms.
- 11) Shock and vibration shall not harm the transmitter.

**P. Differential Pressure Type Switches (Water Service)**

1. Shall be UL listed, SPDT snap-acting, pilot duty rated (125 VA minimum), NEMA 1 enclosure, with scale range and differential suitable for intended application.

**Q. Level Sensors and Switches**

1. Cooling Coil Condensate Drain Pan Water Level Sensor
  - a. Low profile, solid state, high amperage sensor to shut down unit on detection of water.
  - b. Detection level as low as 1/16 inch.
  - c. Normally open or normally closed.
  - d. Vertical and adjustable horizontal mounting.
  - e. No moving parts.
  - f. Not affected by sticky, dusty, or clingy materials that coat or build up on probe
  - g. Sensor shall be UL 508 listed,
  - h. Normally open external alarm connection.
  - i. Clip on base for cleaning and drying of sensor.
2. Liquid-Level Switch (Magnetic Type with Float)
  - a. Description:
    - 1) Mounting Suitable for Application: Horizontal or vertical switch mounting.
    - 2) Float arm with hinge design limits vertical movement to prevent sticking.
    - 3) Replaceable float with threaded connection.
    - 4) Listed and labeled as defined in NFPA 70, by a qualified testing agency, and marked for hazardous environments (Class I, Groups C and D; Class II, Groups E, F, and G).
  - b. Performance:
    - 1) Level Actuation and De-Actuation: 0.75-inch (20-mm) deadband.
    - 2) Body Pressure Limit: 1000 psig (6895kPa) for brass body; 2000 psig (13790 kPa) for Type 316 stainless-steel body.
    - 3) Float Pressure Limit: 150 psig (1034 kPa).

- 4) Temperature Range: Minus 4 to 275 deg F (Minus 20 to 135 deg C).
    - 5) Electrical Rating: 10 A at 125/250-V ac.
    - 6) Switch Type: SPDT or DPDT snap switch.
  - c. Wetted Parts Construction:
    - 1) Float and Rod: Type 316 stainless steel.
    - 2) Body: Brass or Type 316 stainless steel.
    - 3) Magnetic Keeper: Type 316 stainless steel.
    - 4) Process Connection: NPS 1-1/2 (DN 40) NPT.
    - 5) Enclosure:
      - a) Die-cast aluminum alloy.
      - b) Threaded cover.
      - c) NEMA 250, Type 4.
      - d) Electrical Connection: Terminal block.
      - e) Conduit Connection: NPS 3/4 (NPS 20) NPT.
3. Electrode-Type Liquid-Level Switches:
  - a. Description:
    - 1) Conductivity technology.
    - 2) Dual point level settings.
    - 3) No moving parts.
    - 4) Adjustable sensitivity.
  - b. Performance:
    - 1) Pressure Limit: 30 psig (207 kPa).
    - 2) Temperature Limit: 212 deg F (100 deg C).
    - 3) Power Supply: 120-V ac, 50 or 60 Hz.
    - 4) Electrical Rating: 5 A at 240-V ac.
    - 5) Switch Type: SPDT snap switch.
  - c. Probes:
    - 1) Electrodes: 0.125-inch (6-mm) diameter.
    - 2) Material: Type 316 stainless steel.

- 3) Length: To suit application up to 72 inches (1800 mm).
- 4) Process Connection: NPS 1 (DN 25) NPT.
- 5) Enclosure:
  - a) Polypropylene.
  - b) NEMA 250, Type 6.
  - c) Electrical Connection: Cable and standard octal socket.
4. RF Admittance-Type Liquid-Level Switches:
  - a. Description:
    - 1) Capacitive technology.
    - 2) No moving parts.
    - 3) Not affected by sticky, dusty, or clingy materials that coat or build up on probe.
    - 4) Immune to external radio frequency (RF) sources.
    - 5) Sensitivity: Eight selectable settings.
    - 6) Mounting: Horizontal or vertical.
  - b. Performance:
    - 1) Pressure Limit: 365 psig (2517 kPa).
    - 2) Ambient Temperature Range: Minus 40 to 185 deg F (Minus 40 to 85 deg C).
    - 3) Process Temperature Range: Minus 40 to 250 deg F (Minus 40 to 121 deg C).
    - 4) Universal Power Supply: 12- to 240-V ac and dc.
    - 5) Electrical Rating: 8 A at 120- and 240-V ac.
    - 6) Switch Type: SPDT snap switch, selectable for normally open or closed operation.
    - 7) Response Time: 0.2 seconds.
    - 8) Time Delay: Adjustable, zero to 60 seconds.
  - c. Probes:
    - 1) Material: Type 316 stainless steel.
    - 2) Insulator Material: PVDF.

- 3) Length: To suit application up to 72 inches (1800 mm).
- 4) Process Connection: NPS 1 (DN 25) NPT.
- 5) Enclosure:
  - a) NEMA 250, Type 4X.
  - b) Electrical Connection: Screw terminals on removable terminal block.
  - c) Conduit Connection: NPS 1/2 (DN 15) NPT.
5. Liquid-Level Sensor and Transmitter - RF Admittance-Type:
  - a. Description: Complete package with electronic unit, sensing element, connecting cable.
  - b. Continuous level transmitter shall produce an output signal that is proportional to level.
  - c. Measurement shall be free from effects of changes in temperature, density, or acoustic noise in vapor space above level.
  - d. Continuous measurement shall be independent of changes in material density and unaffected by presence of material clinging to sensing element.
  - e. No moving parts and no routine cleaning and recalibration necessary.
  - f. Electronic unit shall be integral to sensing element or mounted remotely up to 100 feet (30 m) away from sensor.
  - g. Listed and labeled as defined in NFPA 70, by a qualified testing agency, and marked for hazardous environments (Class I, Groups C and D; Class II, Groups E, F, and G).
  - h. Sensor:
    - 1) Material: Teflon-coated Type 304 or Type 316 stainless steel.
    - 2) Length: To suit installation.
    - 3) Connection: NPS 3/4 (NPS 20) NPT or flanged.
  - i. Electronic unit housed in NEMA 250, Type 4X enclosure.
    - 1) Calibrated Range: Varies with application. At least 10 percent beyond high- and low-level set point and alarm levels.
    - 2) Accuracy: Within 1 percent of calibrated range.
    - 3) Two wire, loop powered.
    - 4) Supply Voltage: 11.5 to 50-V dc.
    - 5) Maximum Load: 625 ohms at 24-V dc.
    - 6) Output Signal: 4 to 20 mA dc.

- 7) Response Time: 0.5 to 30 seconds, adjustable.
- 8) Temperature Range: Minus 40 to 165 deg F (Minus 40 to 74 deg C).
- 9) Zero and Span Adjustments: Non-interacting.
- 10) Visual Indication: Continuous digital display of level.
- 11) Field-changeable failsafe condition and phasing in event measurement requires changes to optimize level reading.
- 12) Free from effects of radio frequency interference.
- 13) Free from harmful effects of static electricity on sensing element with discharges of up to 10 A without damage.
- 14) Adjustable time delay (signal dampening).

**R. Position Limit Switches**

1. Description: Select type of actuating head (plunger, roller lever, or rod) to suit application.
  - a. Listed and labeled as defined in NFPA 70, by a qualified testing agency, and marked for intended location and application.
2. Performance:
  - a. Life expectancy: Not less than 30 million mechanical operations and 750,000 electrical operations.
  - b. Operating Frequency: 300 mechanical operations per minute and 30 electrical operations per minute.
  - c. Voltage: 125-, 250-, 480-, and 600-V ac or 8-, 12-, 14-, 24-, 30-, 48-, 125-, and 250-V dc, as required by application.
  - d. Current Rating: As required by application.
  - e. Temperature Rise: 50 deg C.
  - f. Ambient Temperature: 14 to 175 deg F (Minus 10 to 79 deg C).
  - g. Ambient Relative Humidity: 35 to 95 percent.
3. Construction:
  - a. NEMA 250, Type 4X enclosure.
  - b. Switch Type: SPDT or DPDT, as required by application.
  - c. Status indicator integral to switch. Field switchable to light when contacts are actuated and operating, or contacts are free and not operating.
  - d. Electrical Connection: Screw or plug-in terminals.
  - e. Conduit Connection: NPS 1/2 (DN 50).

**S. Motion Sensors**

1. Indoor Motion Sensors

- a. Description: Wall- or ceiling-mounted, solid-state units with a separate relay unit.
  - 1) Operation: Unless otherwise indicated, turn on when covered area is occupied and off when unoccupied; with a time delay for turning off, adjustable over a minimum range of 1 to 15 minutes.
  - 2) Sensor Output: Contacts rated to operate the connected relay, complying with UL 773A. Sensor shall be powered from the relay unit.
  - 3) Relay Unit: Dry contacts rated for 20-A load at 120- and 277-V ac. Power supply to sensor shall be 24-V dc, 150 mA, Class 2 power source as defined by NFPA 70.
  - 4) Mounting:
    - a) Sensor: Suitable for mounting in any position on a standard outlet box.
    - b) Relay: Externally mounted through a 1/2-inch (13-mm) knock out in a standard electrical enclosure.
    - c) Time-Delay and Sensitivity Adjustments: Recessed and concealed behind hinged door.
  - 5) Indicator: Digital display, to show when motion is being detected during testing and normal operation of the sensor.
  - 6) Bypass Switch: Override the on function in case of sensor failure.
- b. PIR Type: Ceiling mounting; detect occupancy by sensing a combination of heat and movement in coverage area.
  - 1) Detector Sensitivity: Detect occurrences of 6-inch- (150-mm-) minimum movement of any portion of a human body that presents a target of not less than 36 sq. in. (232 sq. cm).
  - 2) Detection Coverage (Room): Detect occupancy anywhere in a circular area of 1000 sq. ft. (93 sq. m) when mounted on a 96-inch- (2440-mm-) high ceiling.
  - 3) Detection Coverage (Corridor): Detect occupancy within 90 feet (27.4 m) when mounted on a 10-foot- (3-m-) high ceiling.
- c. Ultrasonic Type: Ceiling mounting; detect occupancy by sensing a change in pattern of reflected ultrasonic energy in coverage area.
  - 1) Detector Sensitivity: Detect a person of average size and weight moving not less than 12 inches (305 mm) in either a horizontal or a vertical manner at an approximate speed of 12 inches/s (305 mm/s).
  - 2) Detection Coverage (Small Room): Detect occupancy anywhere within a circular area of 600 sq. ft. (56 sq. m) when mounted on a 96-inch- (2440-mm-) high ceiling.

- 3) Detection Coverage (Standard Room): Detect occupancy anywhere within a circular area of 1000 sq. ft. (93 sq. m) when mounted on a 96-inch- (2440-mm-) high ceiling.
    - 4) Detection Coverage (Large Room): Detect occupancy anywhere within a circular area of 2000 sq. ft. (186 sq. m) when mounted on a 96-inch- (2440-mm-) high ceiling.
    - 5) Detection Coverage (Corridor): Detect occupancy anywhere within 90 feet (27.4 m) when mounted on a 10-foot- (3-m-) high ceiling in a corridor not wider than 14 feet (4.3 m).
  - d. Dual-Technology Type: Ceiling mounting; detect occupancy by using a combination of PIR and ultrasonic detection methods in coverage area. A particular technology or combination of technologies that controls on-off functions shall be field selectable by operating controls on unit.
    - 1) Sensitivity Adjustment: Separate for each sensing technology.
    - 2) Detector Sensitivity: Detect occurrences of 6-inch- (150-mm-) minimum movement of any portion of a human body that presents a target of not less than 36 sq. in. (232 sq. cm), and detect a person of average size and weight moving not less than 12 inches (305 mm) in either a horizontal or a vertical manner at an approximate speed of 12 inches/s (305 mm/s).
    - 3) Detection Coverage (Standard Room): Detect occupancy anywhere within a circular area of 1000 sq. ft. (93 sq. m) when mounted on a 96-inch- (2440-mm-) high ceiling. Apply occupancy detectors where indicated.
2. Switchbox-Mounted Motion Sensors
  - a. General Requirements for Sensors: Automatic-wall-switch occupancy sensor, suitable for mounting in a single gang switchbox.
    - 1) Listed and labeled as defined in NFPA 70, by a qualified testing agency, and marked for intended location and application.
    - 2) Operating Ambient Conditions: Dry interior conditions, 32 to 120 deg F (zero to 49 deg C).
    - 3) Switch Rating: Not less than 800-VA fluorescent at 120 V, 1200-VA fluorescent at 277 V, and 800-W incandescent.
  - b. Wall-Switch Sensor:
    - 1) Standard Range: 180-degree field of view, field adjustable from 180 to 40 degrees; with a minimum coverage area of 900 sq. ft. (84 sq. m).
    - 2) Sensing Technology: Dual technology - PIR and ultrasonic.
    - 3) Switch Type: SP, field selectable automatic "on," or manual "on" automatic "off."

- 4) Voltage: Match the circuit voltage; dual-technology type.
  - 5) Ambient-Light Override: Concealed, field-adjustable, light-level sensor from 10 to 150 fc (108 to 1600 lux). The switch prevents the lights from turning on when the light level is higher than the set point of the sensor.
  - 6) Concealed, field-adjustable, "off" time-delay selector at up to 30 minutes.
  - 7) Concealed "off" time-delay selector at 30 seconds, and 5, 10, and 20 minutes.
  - 8) Adaptive Technology: Self-adjusting circuitry detects and memorizes usage patterns of the space and helps eliminate false "off" switching.
- c. Wall-Switch Sensor for Square or Near Square Spaces:
- 1) Standard Range: 210-degree field of view, with a minimum coverage area of 900 sq. ft. (84 sq. m).
  - 2) Sensing Technology: PIR.
  - 3) Switch Type: SP, field selectable automatic "on," or manual "on" automatic "off."
  - 4) Voltage: Match the circuit voltage; dual-technology type.
  - 5) Ambient-Light Override: Concealed, field-adjustable, light-level sensor from 10 to 150 fc (108 to 1600 lux). The switch prevents the lights from turning on when the light level is higher than the set point of the sensor.
  - 6) Concealed, field-adjustable, "off" time-delay selector at up to 30 minutes.
  - 7) Concealed "off" time-delay selector at 30 seconds, and 5, 10, and 20 minutes.
  - 8) Adaptive Technology: Self-adjusting circuitry detects and memorizes usage patterns of the space and helps eliminate false "off" switching.

T. Rotational Speed Switches

1. Non-Contact Type Speed Switches

a. Description:

- 1) Speed switch, sensor, and electronics housed in enclosure.
- 2) Shaft-end-mounted disc, or split collar wrap generates an alternating magnetic field sensed by the switch.
- 3) Dust, dirt, and grease proof.
- 4) Listed and labeled as defined in NFPA 70, by a qualified testing agency, and marked for hazardous environments Class I, Group D; Class II, Groups E, F, and G; and Class III.

- b. Performance:
    - 1) Field-Adjustable Range: 100 to 5000 rpm.
    - 2) Temperature Limits: Minus 40 to 140 deg F (Minus 40 to 60 deg C).
    - 3) Electrical Rating: 5 A at 115-V ac.
    - 4) Switch Type: SPDT.
    - 5) Gap Distance: Approximately 0.375 inch (9) mm).
  - c. Operator Interface: Potentiometer.
  - d. Enclosure Construction:
    - 1) Cast aluminum.
    - 2) Removable cover.
    - 3) NEMA 250, Type 4X.
    - 4) Electrical Connection: Wiring, 12 inches (300 mm) long, furnished with switch.
    - 5) Conduit Connection: 1-inch (27-mm) trade size.
    - 6) Disc, Guard, and Mounting Bracket Construction:
    - 7) Magnetic Disc: Nylon or PVC.
    - 8) Disc Guard: Stainless steel.
    - 9) Mounting Bracket: Aluminum with stainless-steel shaft.
2. Contact Type Speed Switches
- a. Description:
    - 1) Speed switch, sensor, and electronics housed in one enclosure.
    - 2) Photoelectric technology.
    - 3) Suitable for mounting in any orientation.
    - 4) Listed and labeled as defined in NFPA 70, by a qualified testing agency, and marked for hazardous environments Class I, Groups C and D; and Class II, Groups F and G.
  - b. Performance:
    - 1) Three Field-Adjustable Ranges: 0.1 to 10, 1 to 100, and 10 to 1000 rpm.
    - 2) De-Energize Set Point: 15 to 20 percent lower than energize speed range.

- 3) Repeatability: Within 2 percent of maximum speed in range.
- 4) Rotation: Clockwise or counterclockwise.
- 5) Temperature Limits: Minus 40 to 140 deg F (Minus 40 to 60 deg C).
- 6) Electrical Rating: 3 A at 120- or 240-V ac.
- 7) Switch Type: SPDT.
- c. Operator Interface: Adjustment screw.
- d. Enclosure Construction:
  - 1) Aluminum.
  - 2) Screw cover.
  - 3) NEMA 250, Type 4X.
  - 4) Electrical Connection: Screw terminals.
  - 5) Conduit Connection: Two, 3/4-inch (21-mm) trade size.

U. Current Switches

- 1. Current-operated switches shall be self-powered, solid-state with adjustable trip current. The switches shall be selected to match the current of the application and output requirements of the DDC system.

V. Local Control Panels General Requirements

- 1. A single key shall be common to all field panels and subpanels.
- 2. Interconnections between internal and face-mounted devices shall be prewired with color-coded stranded conductors neatly installed in plastic troughs and/or tie-wrapped. Terminals for field connections shall be UL listed for 600 volt service, individually identified per control/ interlock drawings, with adequate clearance for field wiring. Control terminations for field connection shall be individually identified per control drawings.
- 3. Provide on/off power switch with overcurrent protection for control power sources to each local panel.

2.31 WIRING AND RACEWAYS

- A. General. Provide copper wiring, plenum cable, and raceways as specified in Division 26.
- B. All insulated wire to be copper conductors, UL labeled for 194 deg F minimum service.

2.32 FIBER OPTIC CABLE SYSTEM

- A. Optical Cable. Optical cables shall be duplex 900 mm tight-buffer construction designed for intra-building environments. The sheath shall be UL Listed OFNP in accordance with NEC Article 770. The optical fiber shall meet the requirements of FDDI, ANSI X3T9.5 PMD for 62.5/125 pm.

- B. Connectors. All optical fibers shall be field-terminated with ST type connectors. Connectors shall have ceramic ferrules and metal bayonet latching bodies.

#### 2.33 SOURCE QUALITY CONTROL

- A. Testing Agency: Engage a qualified testing agency to evaluate the following according to industry standards for each product, and to verify DDC system reliability specified in performance requirements:
  - 1. DDC controllers.
  - 2. Gateways.
  - 3. Routers.
  - 4. Operator workstations.
- B. Product(s) and material(s) will be considered defective if they do not pass tests and inspections.
- C. Prepare test and inspection reports.

#### 2.34 IDENTIFICATION

- A. Instrument Air Pipe and Tubing:
  - 1. Engraved tag shall bear the following information:
    - a. Service (Example): "Instrument Air."
    - b. Pressure Range (Example): 0 to 30 psig.
  - 2. Letter size shall be a minimum of 0.25 inch high.
  - 3. Tag shall consist of white lettering on blue background.
  - 4. Tag shall be engraved phenolic consisting of three layers of rigid laminate. Top and bottom layers are color-coded blue with contrasting white center exposed by engraving through outer layer.
  - 5. Include tag with a brass grommet, chain and S-hook.
- B. Control Equipment, Instruments, and Control Devices:
  - 1. Laminated acrylic or melamine plastic sign bearing unique identification.
    - a. Include instruments with unique identification identified by equipment being controlled or monitored, followed by point identification.
  - 2. Letter size shall be as follows:
    - a. Operator Workstations: Minimum of 0.5 inch high.
    - b. Printers: Minimum of 0.5 inch high.
    - c. DDC Controllers: Minimum of 0.5 inch high.
    - d. Gateways: Minimum of 0.5 inch high.
    - e. Repeaters: Minimum of 0.5 inch high.
    - f. Enclosures: Minimum of 0.5 inch high.
    - g. Electrical Power Devices: Minimum of 0.25 inch high.
    - h. UPS units: Minimum of 0.5 inch high.

- i. Accessories: Minimum of 0.25 inch high.
  - j. Instruments: Minimum of 0.25 inch high.
  - k. Control Damper and Valve Actuators: Minimum of 0.25 inch high.
- 3. Legend shall consist of white lettering on black background.
- 4. Laminated acrylic or melamine plastic sign shall be engraved phenolic consisting of three layers of rigid laminate. Top and bottom layers are color-coded black with contrasting white center exposed by engraving through outer layer and shall be fastened with drive pins.
- 5. Instruments, control devices and actuators with Project-specific identification tags having unique identification numbers following requirements indicated and provided by original manufacturer do not require additional identification.
- C. Valve Tags:
  - 1. Brass tags and brass chains attached to valve.
  - 2. Tags shall be at least 1.5 inches in diameter.
  - 3. Include tag with unique valve identification indicating control influence such as flow, level, pressure, or temperature; followed by location of valve, and followed by three-digit sequential number. For example: TV-1.001.
  - 4. Valves with Project-specific identification tags having unique identification numbers following requirements indicated and provided by original manufacturer do not require an additional tag.
- D. Raceway and Boxes:
  - 1. Comply with requirements for identification specified in Division 26.
  - 2. Paint cover plates on junction boxes and conduit same color as the tape banding for conduits. After painting, label cover plate "HVAC Controls," using an engraved phenolic tag.
  - 3. For raceways housing air signal tubing, add a phenolic tag labeled "HVAC Air Signal Tubing."
- E. Equipment Warning Labels:
  - 1. Self-adhesive label with pressure-sensitive adhesive back and peel-off protective jacket.
  - 2. Lettering size shall be at least 14-point type with white lettering on red background.
  - 3. Warning label shall read "CAUTION-Equipment operated under remote automatic control and may start or stop at any time without warning. Switch electric power disconnecting means to OFF position before servicing."
  - 4. Lettering shall be enclosed in a white line border. Edge of label shall extend at least 0.25 inch beyond white border.

## **2.35 SUPPLEMENTAL REQUIREMENTS ZONE AIRFLOW CONTROLS**

- A. Description: Except as specified otherwise, provide control components to perform zone control sequence of operations indicated on the contract drawings.

1. Zone control system shall fully communicate all monitored and controlled data with the DDC system. All alarms and setpoints shall be monitored and adjustable by the DDC system head end computer and via control system service tool.
- B. Performance Requirements: Comply with the following:
  1. Airflow control valves and terminal boxes shall be pressure independent controlled using actual airflow measurement feedback.
- C. Components
  1. Air Volume Control Terminal Box Actuators and Controllers
    - a. Provide controllers and actuators from the selected DDC system manufacturer.
    - b. Actuators shall be proportional modulating electric type directly coupled to the air volume control box damper shaft. Actuators shall be factory-mounted to the valve.
    - c. Actuators shall have a full stroke time of no greater than 95 seconds.
    - d. Actuators shall function within 85 to 110 percent of their power supply rating.
    - e. Actuators shall be provided with mounting and connecting hardware.
  2. Air Volume Terminal Box Airflow Measuring
    - a. Terminal airflow measuring shall be accomplished using terminal box manufacturer standard airflow measuring stations.
    - b. Provide control system manufacturer controller with flow measuring transmitter. Airflow station and transmitter combination shall be capable of maintaining control setpoint to terminal box minimum airflows listed in the schedules. Flow measurement station accuracy shall be +/- 5 percent of full scale down to minimum airflow shown on the drawings.
  3. Air Volume Control Valve Electronic Airflow Controller
    - a. Electronic Controller Requirements - Air volume control terminal box controllers shall have imbedded pressure transducers suitable for variable air volume control applications.
    - b. Sensors - Transmitters shall be calibrated to provide an electric or electronic output signal of 4 to 20 mA over the indicated span or range. Provide controller with electronic airflow measurement transmitter selected to match the terminal air valve flow station (where applicable) with range from 125 to 2600 fpm to match the inlet air velocity of the air volume control terminal box.

## EXECUTION

### 2.36 EXAMINATION

- A. Thoroughly examine plans for control device and equipment locations. Discrepancies, conflicts, or omissions shall be reported to the architect for resolution before rough-in work is started.
- B. Inspect the site to verify that equipment may be installed as shown. Discrepancies, conflicts, or omissions shall be reported to the architect for resolution before rough-in work is started.
- C. Examine the drawings and specifications for other parts of the work. If head room or space conditions appear inadequate or if any discrepancies occur between the plans and the work of this Section and the plans and the work of others, report these discrepancies to the architect and

obtain written instructions for any changes necessary to accommodate the work of this Section with the work of others. Changes in the work of this Section made necessary by the failure or neglect to report such discrepancies shall be made by, and at the expense of this Section.

- D. Examine roughing-in for products to verify actual locations of connections before installation.
  - 1. Examine roughing-in for instruments installed in piping and duct systems to verify actual locations of connections before installation.
- E. Examine walls, floors, roofs, and ceilings for suitable conditions where product will be installed.
- F. Prepare written report with input from installers listing conditions detrimental to performance of the Work.
- G. Proceed with installation only after unsatisfactory conditions have been corrected.

#### 2.37 PROTECTION

- A. Protect all work and material from damage. This Section shall be liable for damage caused by work or employees of this Section.
- B. This Section shall be responsible for work and equipment until finally inspected, tested, and accepted. Protect material that is not immediately installed. Close all open ends of work with temporary covers or plugs during storage and construction to prevent entry of foreign objects.

#### 2.38 COORDINATION

- A. Where the work will be installed in close proximity to, or will interfere with, work of other trades, assist in working out space conditions to make adjustments. If work is installed before coordinating with other trades causing interference with work of other trades, make changes to work to correct the condition without extra charge.
- B. Coordinate and schedule work with all other work in the same area, or with work that is dependent upon other work, to facilitate mutual progress.
- C. Test and Balance
  - 1. Furnish a single set of all tools necessary to interface to the BAS for test and balance purposes.
  - 2. Provide training in the use of these tools. This training will be planned for a minimum of 4 hours.
  - 3. In addition, provide a qualified technician to assist in the test and balance process, until the first 20 terminal units are balanced.
  - 4. The tools used during the test and balance process will be returned at the completion of the testing and balancing.
- D. Life Safety
  - 1. Duct smoke detectors required for air handler shutdown are supplied under Division 28 of this specification. This Section shall interlock smoke detectors to equipment (e.g. air handlers) for shutdown.
  - 2. Smoke dampers and actuators required for duct smoke isolation are provided under a Section of Division 23. This Section shall interlock these dampers to associated equipment for shutdown.

3. Fire/smoke dampers and actuators are provided under another Section of Division 23. Control of these dampers shall be by Division 28.
- E. Coordination with Controls Specified in Other Sections or Divisions; Other sections and/or divisions of this specification include controls and control devices that are to be part of or interfaced to the BAS specified in this section. These controls shall be integrated into the system. Coordinate as follows:
  1. Provide communication media and equipment.
  2. Each supplier of a controls product is responsible for the configuration, programming, start-up, and testing of that product to meet the sequences of operation described in this section.
  3. Coordinate and resolve incompatibility issues that arise between the control products provided under this section and those provided under other sections or divisions of this specification.
  4. Provide controls described in the contract documents regardless of where within the contract documents these controls are described.
  5. Interface control products provided by multiple suppliers regardless of where this interface is described within the contract documents.

#### 2.39 GENERAL WORKMANSHIP

- A. Install equipment, piping, and wiring/raceway parallel to building lines (i.e., horizontal, vertical, and parallel to walls) wherever possible.
- B. Provide slack and flexible connections to allow for vibration of piping and equipment.
- C. Install all equipment in readily accessible locations as defined by Chapter 1, Article 100, Part A of the National Electrical Code (NEC).
- D. Verify integrity of all wiring to ensure continuity and freedom from shorts and grounds.
- E. All equipment, installation, and wiring shall comply with acceptable industry specifications and standards for performance, reliability, and compatibility and be executed in strict adherence to local codes and standard practices.

#### 2.40 INSTRUMENT APPLICATIONS

- A. Temperature Instruments:
  1. Provide device identified in "Input Point Displayed Accuracy and Control Accuracy" table.
- B. Humidity Sensors
  1. Sensor and transmitter with digital display or a combination humidity and temperature sensor and transmitter with display.
- C. Airflow Measurement Stations:
  1. For Air-Ducted/Plenum:
    - a. Measured Velocities Greater Than 200 fpm (1.0 m/s): Thermal airflow measurement station.)
    - b. Provide a remotely mounted microprocessor-based transmitter at each measurement location.

2. Duct-Mounted Airflow Sensors:
    - a. Thermal airflow station.
    - b. Provide a remotely mounted microprocessor-based transmitter at each measurement location.
  3. Damper-Mounted Airflow Sensors:
    - a. Measured Velocities 400 fpm (2.0 m/s) and Less: Thermal airflow station.
    - b. Measured Velocities Greater than 500 fpm (2.5 m/s): Damper with integral flow measurement or damper with integral flow control.
    - c. Provide a remotely mounted microprocessor-based transmitter at each measurement location.
  4. Fan Airflow Sensors:
    - a. Fan-Mounted
      - 1) Measured Velocities 500 fpm (2.5 m/s) and Less: Vortex shedding airflow station.
      - 2) Measured Velocities Greater than 500 fpm (2.5 m/s): Piezometer ring fan inlet airflow sensor.
    - b. Provide a remotely mounted microprocessor-based transmitter at each measurement location.
  - D. Airflow Switches:
    1. Measured Velocities 400 fpm (2.0 m/s) and Less: Polymer film sail switch.
    2. Measured Velocities Greater than 400 fpm (2.0 m/s): Stainless steel single-vane switch.
  - E. Liquid Flow Meters
    1. Provide electromagnetic flow meter.
  - F. Liquid Flow Switches:
    1. Bellows or magnetic type.
  - G. Liquid Flow Transmitters:
    1. Liquid pressure differential transmitter.
- 2.41 WIRING
- A. Control and interlock wiring shall comply with national and local electrical codes and Division 26 of this specification. Where the requirements of this section differ from those in Division 26, the requirements of this section shall take precedence.
  - B. NEC Class 1 (line voltage) wiring shall be UL Listed in approved raceway according to NEC and Division 26 requirements.
  - C. Low-voltage wiring shall meet NEC Class 2 requirements. (Low-voltage power circuits shall be sub-fused when required to meet Class 2 current limit.)
  - D. Where NEC Class 2 (current-limited) wires are in concealed and accessible locations, including ceiling return air plenums, approved cables not in raceway may be used provided that cables are

UL Listed for the intended application. For example cables used in ceiling plenums shall be UL Listed specifically for that purpose.

- E. Wiring in mechanical, electrical, or service rooms—or where subject to mechanical damage—shall be installed in raceway at levels below 10 ft.
- F. Do not install Class 2 wiring in raceway containing Class 1 wiring. Boxes and panels containing high-voltage wiring and equipment may not be used for low-voltage wiring except for the purpose of interfacing the two (e.g., relays and transformers).
- G. Do not install wiring in raceway containing tubing.
- H. Where Class 2 wiring is run exposed, wiring is to be run parallel along a surface or perpendicular to it and neatly tied at 10 ft intervals.
- I. Where plenum cables are used without raceway, they shall be supported from or anchored to structural members. Cables shall not be supported by or anchored to ductwork, electrical raceways, piping, or ceiling suspension systems.
- J. All wire-to-device connections shall be made at a terminal block or terminal strip. All wire-to-wire Connections shall be at a terminal block.
- K. All wiring within enclosures shall be neatly bundled and anchored to permit access and prevent restriction to devices and terminals.
- L. Maximum allowable voltage for control wiring shall be 120 V. If only higher voltages are available, provide step-down transformers.
- M. All wiring shall be installed as continuous lengths, with no splices permitted between termination points.
- N. Install plenum wiring in sleeves where it passes through walls and floors. Maintain fire rating at all penetrations.
- O. Size of raceway and size and type of wire shall be the responsibility of the contractor, in keeping with the manufacturer recommendations and NEC requirements, except as noted elsewhere.
- P. Include one pull string in each raceway 1 in. or larger.
- Q. Use coded conductors throughout with conductors of different colors.
- R. Control and status relays are to be located in designated enclosures only. These enclosures include packaged equipment control panel enclosures unless they also contain Class 1 starters.
- S. Conceal all raceways, except within mechanical, electrical, or service rooms. Install raceway to maintain a minimum clearance of 6 in. from high-temperature equipment (e.g., steam pipes or flues).
- T. Secure raceways with raceway clamps fastened to the structure and spaced according to code requirements. Raceways and pull boxes may not be hung on flexible duct strap or tie rods. Raceways may not be run on or attached to ductwork.
- U. Adhere to Division 26 requirements where raceway crosses building expansion joints.
- V. Install insulated bushings on all raceway ends and openings to enclosures. Seal top end of all vertical raceways.
- W. Terminate all control and/or interlock wiring and shall maintain updated (as-built) wiring diagrams with terminations identified at the job site.

- X. Flexible metal raceways and liquid-tight, flexible metal raceways shall not exceed 3 ft in length and shall be supported at each end. Flexible metal raceway less than 1/2 in. electrical trade size shall not be used. In areas exposed to moisture, including chiller and boiler rooms, liquid-tight, flexible metal raceways shall be used.
- Y. Raceway must be rigidly installed, adequately supported, properly reamed at both ends, and left clean and free of obstructions. Raceway sections shall be joined with couplings (according to code). Terminations must be made with fittings at boxes, and ends not terminating in boxes shall have bushings installed.

#### 2.42 COMMUNICATION WIRING

- A. Adhere to "Wiring" paragraphs of this Section.
- B. Cabling shall be installed in a neat and work-manlike manner. Follow manufacturer installation recommendations for all communication cabling.
- C. Do not install communication wiring in raceway and enclosures containing Class 1 or other Class 2 wiring.
- D. Maximum pulling, tension, and bend radius for cable installation, as specified by the cable manufacturer, shall not be exceeded during installation.
- E. Verify the integrity of the entire network following the cable installation. Use test measures specific to each particular cable.
- F. When a cable enters or exits a building, a lightning arrestor must be installed between the lines and ground. The lightning arrestor shall be installed according to the manufacturer instructions.
- G. All runs of communication wiring shall be un-spliced length when that length is commercially available.
- H. All communication wiring shall be labeled to indicate origination and destination data.
- I. Grounding of coaxial cable shall be in accordance with NEC regulations article on "Communications Circuits, Cable, and Protector Grounding."

#### 2.43 FIBER OPTIC CABLE INSTALLATION

- A. Maximum pulling tensions as specified by the cable manufacturer shall not be exceeded during installation. Post-installation residual cable tension shall be within cable manufacturer specifications.
- B. All cabling and associated components shall be installed in accordance with manufacturers' instructions. Minimum cable and unjacketed fiber bend radii, as specified by cable manufacturer, shall be maintained.

#### 2.44 INSTALLATION OF SENSORS

- A. Install sensors in accordance with the manufacturer recommendations.
- B. Mount sensors rigidly and adequately for the environment within which the sensor operates.
- C. Room temperature sensors shall be installed on concealed junction boxes supported by the wall framing.
- D. All wires attached to sensors shall be air sealed in their raceways or in the wall to stop air transmitted from other areas affecting sensor readings.

- E. Sensors used in mixing plenums and hot and cold decks shall be of the averaging type. Averaging sensors shall be installed in a serpentine manner vertically across the duct. Each bend shall be supported with a capillary clip.
- F. Low-limit sensors used in mixing plenums shall be installed in a serpentine manner horizontally across duct. Each bend shall be supported with a capillary clip. Provide 1 foot of sensing element for each 1 square foot of coil area.
- G. All pipe-mounted temperature sensors shall be installed in wells. Install all liquid temperature sensors with heat-conducting fluid in thermal wells.
- H. Install outdoor air temperature sensors on north wall, complete with sun shield at designated location
- I. Differential Air Static Pressure
  - 1. Duct Pressure Sensors
    - a. Supply Duct Static Pressure. Pipe the high-pressure tap to the duct using a pitot tube. Pipe the low-pressure port to a tee in the high-pressure tap tubing of the corresponding building static pressure sensor (if applicable) or to the location of the duct high-pressure tap and leave open to the plenum.
    - b. Return Duct Static Pressure. Pipe the high-pressure tap to the duct using a pitot tube. Pipe the low-pressure port to a tee in the low-pressure tap tubing of the corresponding building static pressure sensor.
    - c. Install sensors using manufacturer's recommended upstream and downstream distances.
    - d. Unless indicated on Drawings, locate sensors approximately 50 percent of distance of longest hydraulic run. Location of sensors shall be submitted and approved before installation.
    - e. Install mounting hardware and gaskets to make sensor installation airtight.
    - f. Route tubing from the sensor to transmitter.
    - g. Use compression fittings at terminations.
    - h. Install sensor in accordance with manufacturer's instructions.
    - i. Support sensor to withstand maximum air velocity, turbulence, and vibration encountered to prevent instrument failure.
  - 2. Building Static Pressure. Pipe the low-pressure port of the pressure sensor to the static pressure port located on the outside of the building through a shielded outside air probe and a high-volume accumulator. Pipe the high-pressure port to a location behind a thermostat cover.
    - a. Install roof-mounted sensor in least-noticeable location and as far away from exterior walls as possible.
    - b. Locate wall-mounted sensor in an inconspicuous location.
    - c. Submit sensor location for approval before installation.
    - d. Verify signal from sensor is stable and consistent to all connected transmitters. Modify installation to achieve proper signal.

- e. Route outdoor signal pipe full size of sensor connection to transmitters. Install branch connection of size required to match to transmitter.
  - f. Install sensor signal pipe with dirt leg and drain valve below roof penetration.
  - g. Insulate signal pipe with flexible elastomeric insulation as required to prevent condensation.
  - h. Connect roof-mounted signal pipe exposed to outdoors to building grounding system.
- 3. The piping to the pressure ports on all pressure transducers shall contain a capped test port located adjacent to the transducer.
- 4. All pressure transducers, other than those controlling VAV boxes, shall be located in field device panels, not on the equipment monitored or on ductwork. Mount transducers in a location accessible for service without use of ladders or special equipment.
- 5. All air and water differential pressure sensors shall have gauge tees mounted adjacent to the taps. Water gauges shall also have shutoff valves installed before the tee.
- J. Flow Switch Installation
  - 1. Provide paddle sized specifically for the pipe diameter.
  - 2. Adjust flow switch in accordance with manufacturer instructions.
- K. Air-Pressure Differential Switches
  - 1. Install air-pressure sensor in system for each switch connection. Install sensor in an accessible location for inspection and replacement.
  - 2. A single sensor may be used to share a common signal to multiple pressure instruments.
  - 3. Install access door in duct and equipment to access sensors that cannot be inspected and replaced from outside.
  - 4. Route NPS 3/8 (DN 12) tubing from sensor to switch connection.
  - 5. Do not mount switches on rotating equipment.
  - 6. Install switches in a location free from vibration, heat, moisture, or adverse effects, which could damage the switch and hinder accurate operation.
  - 7. Install switches in an easily accessible location serviceable from floor.
  - 8. Install switches adjacent to system control panel if within 50 feet; otherwise, locate switch in vicinity of system connection.
- L. Liquid-Pressure Differential Switches
  - 1. Where process connections are located in mechanical equipment room, install switch in convenient and accessible location near system control panel.
  - 2. Where process connections are installed outside mechanical rooms, route processing tubing to mechanical room housing system control panel and locate switch near system control panel.
  - 3. Where multiple switches serving same system are installed in same room, install switches by system to provide service personnel a single and convenient location for inspection and service.

4. System process tubing connection shall be full size of switch connection, but not less than NPS 3/4 (DN 20). Install stainless-steel bushing if required to mate switch to system connection.
5. Connect process tubing from point of system connection and extend to switch.
6. Install isolation valves in process tubing as close to system connection as practical.
7. Install dirt leg and drain valve at each switch connection.
8. Do not mount switches on rotating equipment.
9. Install switches in a location free from vibration, heat, moisture, or adverse effects, which could damage the switch and hinder accurate operation.
10. Install switches in an easily accessible location serviceable from floor.

**M. Liquid Pressure Transmitters**

1. Where process connections are located in mechanical equipment room, install switch in convenient and accessible location near system control panel.
2. Where process connections are installed outside mechanical rooms, route processing tubing to mechanical room housing system control panel and locate switch near system control panel.
3. Where multiple switches serving same system are installed in same room, install switches by system to provide service personnel a single and convenient location for inspection and service.
4. System process tubing connection shall be full size of switch connection, but not less than NPS 3/4 (DN 20). Install stainless-steel bushing if required to mate switch to system connection.
5. Connect process tubing from point of system connection and extend to switch.
6. Install isolation valves in process tubing as close to system connection as practical.
7. Install dirt leg and drain valve at each switch connection.
8. Do not mount switches on rotating equipment.
9. Install switches in a location free from vibration, heat, moisture, or adverse effects, which could damage the switch and hinder accurate operation.
10. Install switches in an easily accessible location serviceable from floor.

**2.45 ACTUATOR INSTALLATION**

**A. Mount and link control damper actuators according to manufacturer instructions.**

1. To compress seals when spring-return actuators are used on normally closed dampers, power actuator to approximately 5 degrees open position, manually close the damper, and then tighten the linkage.
2. Check operation of damper/actuator combination to confirm that actuator modulates damper smoothly throughout stroke to both open and closed positions.
3. Provide all mounting hardware and linkages for actuator installation.

**B. Electric/Electronic**

1. Dampers. Actuators shall be direct-mounted on damper shaft or jackshaft unless shown as a linkage installation. For low-leakage dampers with seals, the actuator shall be mounted with a minimum 5 degrees available for tightening the damper seals. Actuators shall be mounted following manufacturer recommendations.
2. Valves. Actuators shall be connected to valves with adapters approved by the actuator manufacturer. Actuators and adapters shall be mounted following the actuator manufacturer recommendations.

#### 2.46 WARNING LABELS

- A. Permanent warning labels shall be affixed to all equipment that can be automatically started by the BAS.
1. Labels shall use white lettering (12-point type or larger) on a red background.
  2. Warning labels shall read as follows:

**CAUTION**

This equipment is operating under automatic control and may start or stop at any time without warning. Switch disconnect to off position before servicing.

- B. Permanent warning labels shall be affixed to all motor starters and all control panels that are connected to multiple power sources utilizing separate disconnects.
1. Labels shall use white lettering (12-point type or larger) on a red background.
  2. Warning labels shall read as follows:

**CAUTION**

This equipment is fed from more than one power source with separate disconnects. Disconnect all power sources before servicing.

#### 2.47 IDENTIFICATION OF HARDWARE AND WIRING

- A. All wiring and cabling, including that within factory-fabricated panels, shall be labeled at each end within 2 in. of termination with the BAS address or termination number.
- B. All pneumatic tubing shall be labeled at each end within 2 in. of termination with a descriptive identifier.
- C. Permanently label or code each point of field terminal strips to show the instrument or item served.
- D. Identify control panels with minimum 1/2 in. letters on laminated plastic nameplates.
- E. Identify all other control components with permanent labels. All plug-in components shall be labeled such that removal of the component does not remove the label.
- F. Identify room sensors relating to terminal box or valves with nameplates.

- G. Manufacturers' nameplates and UL or CSA labels are to be visible and legible after equipment is installed.
- H. Identifiers shall match record documents.

#### 2.48 CONTROLLER INSTALLATION

- A. In addition to zone control requirements identified, provide a separate programmable application controller for each of the following to minimize impact of a controller failure on system operation:
  - 1. Air handling unit.
  - 2. Exhaust fan.
  - 3. Chiller and directly associated pumps and towers.
  - 4. Boiler and directly associated pumps and towers.
  - 5. Each pump not directly associated with main equipment shall be on separate controllers.
- B. A BAS controller may control more than one system provided that all points associated with the system are assigned to the same BAS controller. Points used for control loop reset, such as outside air or space temperature, are exempt from this requirement.

#### 2.49 SOFTWARE PROGRAMMING

- A. Provide internal memory capacity for the specified sequences of operation and trend logging. Provide a minimum of 25 percent of available memory free for future use.
- B. Point Naming. Request in writing project owner standard point naming convention. Where owner written response indicates no standard is available, system point names shall be modular in design, allowing easy operator interface without the use of a written point index and use the following naming convention:
  - 1. AA.BBB.CCDDE where:
    - a. AA is used to designate the location of the point within the building, such as mechanical room, wing, or level, or the building itself in a multi-building environment;
    - b. BBB is used to designate the mechanical system with which the point is associated (e.g., A01, HTG, CLG, LTG);
    - c. CC represents the equipment or material referenced (e.g., SF for supply fan, RW for return water, EA for exhaust air, ZN for zone).
    - d. D or DD may be used for clarification or for identification if more than one CC exists (e.g., SF10, ZNB);
    - e. E represents the action or state of the equipment or medium (e.g., T for temperature, H for humidity, C for control, S for status, D for damper control, I for current).
- C. Software Programming
  - 1. Provide programming for the system and adhere to the sequences of operation. Provide other system programming required for the operation of the system, but not specified in this document. Imbed into the control program comment statements to clearly describe each section of the program. The comment statements shall reflect the language used in

the sequences of operation. Use the appropriate technique based on the following programming types:

- a. Text-based
  - 1) Must provide actions for all possible situations
  - 2) Must be modular and structured
  - 3) Must be commented
- b. Graphic-based
  - 1) Must provide actions for all possible situations
  - 2) Must be documented
- c. Parameter-based
  - 1) Must provide actions for all possible situations
  - 2) Must be documented

**D. Operator Interface**

- 1. Standard graphics: Provide graphics for all mechanical systems and floor plans of the building. This includes each chilled water system, hot water system, chiller, boiler, air handler, and all terminal equipment. Point information on the graphic displays shall dynamically update. Show on each graphic all points for the system. Show relevant calculated points such as setpoints.
- 2. Show terminal equipment information on a graphic summary table. Provide dynamic information for each point shown.
- 3. Provide all the labor necessary to install, initialize, start up, and troubleshoot all operator interface software and its functions as described in this section. This includes any operating system software, the operator interface database, and any third-party software installation and integration required for successful operation of the operator interface.

**2.50 DDC SYSTEM INTERFACE WITH OTHER SYSTEMS AND EQUIPMENT**

**A. Communication Interface to Equipment with Integral Controls:**

- 1. DDC system shall have communication interface with equipment having integral controls and having a communication interface for remote monitoring or control.
- 2. Equipment to Be Connected:
  - a. Domestic water booster pumps specified in Division 22.
  - b. Air-terminal units specified in Division 23.
  - c. Boilers specified in Division 23.
  - d. Heat wheels and heat exchangers specified Division 23.
  - e. Air-handling units specified in Division 23.
  - f. Roof-top units specified in Division 23.

- g. Dedicated outdoor-air units specified in Division 23.
- h. Terminal units including but not limited to computer room units, fan coil units and unit heaters specified in Division 23.
- i. Humidifiers specified in Division 23.
- j. Dehumidification units specified in Division 23.
- k. Switchboards specified in Division 26.
- l. Motor-control centers specified in Division 26.
- m. Variable-frequency controllers specified in Division 26.
- n. Emergency engine generators specified in Division 26.
- o. UPS specified in Division 26.
- p. Refrigerant monitoring.

**B. Communication Interface to Other Building Systems:**

- 1. DDC system shall have a communication interface with systems having a communication interface.
- 2. Systems to Be Connected:
  - a. Elevators and escalators specified in Division 14.
  - b. Automated water treatment systems specified in Division 23.
  - c. Power monitoring specified in Division 26.
  - d. Lighting controls specified in Division 26.
  - e. Fire-alarm system specified in Division 28.
  - f. Access controls specified in Division 28.
  - g. Intrusion detection specified in Division 28.
  - h. Perimeter security specified in Division 28.

**2.51 DDC SYSTEM INTERFACE WITH EXISTING SYSTEMS**

**A. Interface with Existing Systems:**

- 1. DDC systems shall interface existing systems to achieve integration.
- 2. Monitoring and Control of DDC System by Existing Control System:
  - a. DDC system performance requirements shall be satisfied when monitoring and controlling DDC system by existing control system.
  - b. Operator of existing system shall be able to upload, download, monitor, trend, control and program every input and output point in DDC system from existing control system using existing control system software and operator workstations.
  - c. Remote monitoring and control from existing control system shall not require operators of existing control system to learn new software.
  - d. Interface of DDC system into existing control system shall be transparent to operators of existing control system and allow operators to program, monitor, and

control DDC system from any operator workstation connected to existing control system.

3. Integration of Existing Control System into DDC System:
  - a. Existing control system performance requirements shall be satisfied when monitoring and controlling existing control system through DDC system.
  - b. Operator shall be able to upload, download, monitor, alarm, report, trend, control and program every input and output point in existing system from DDC system using operator workstations and software provided. The combined systems shall share one database.
  - c. Interface of existing control system I/O points into DDC system shall be transparent to operators. All operational capabilities shall be identical regardless of whether I/O already exists or I/O is being installed.

## 2.52 CONTROL DEVICES FOR INSTALLATION BY INSTALLERS

- A. Deliver selected control devices, specified in this Section, to installers for field installation.
- B. Deliver the following to duct fabricator and Installer for installation in ductwork. Include installation instructions to Installer and supervise installation for compliance with requirements.
  1. DDC control dampers.
  2. Airflow sensors and switches.
  3. Duct pressure sensors.
- C. Deliver the following to plumbing and HVAC piping installers for installation in piping. Include installation instructions to Installer and supervise installation for compliance with requirements.
  1. DDC control valves.
  2. Pipe-mounted flow meters.
  3. Pipe-mounted sensors, switches and transmitters.
  4. Tank-mounted sensors, switches and transmitters.
  5. Pipe- and tank-mounted thermowells.

## 2.53 CONTROL DEVICES FOR EQUIPMENT MANUFACTURER FACTORY INSTALLATION

- A. Deliver the following to air-handling unit manufacturer for factory installation. Include installation instructions to air-handling unit manufacturer and supervise installation for compliance with requirements.
  1. Programmable application controller.
  2. Unit-mounted DDC control dampers and actuators.
  3. Unit-mounted airflow sensors, switches and transmitters.
  4. Unit-mounted gas sensors and transmitters.
  5. Unit-mounted leak-detection switches.
  6. Unit-mounted speed sensors, switches and transmitters.
  7. Unit-mounted pressure sensors, switches and transmitters.

8. Unit-mounted temperature sensors, switches and transmitters.
9. Relays.
- B. Deliver the following to terminal unit manufacturer for factory installation. Include installation instructions to terminal unit manufacturer.
  1. Programmable application controller.
  2. Electric damper actuator.
  3. Unit-mounted flow and pressure sensors, transmitters and transducers.
  4. Unit-mounted temperature sensors.
  5. Relays.
- C. Deliver the following to fan-coil unit manufacturer for factory installation. Include installation instructions to fan-coil unit manufacturer.
  1. Programmable application controller.
  2. Unit-mounted temperature sensors.
  3. Flow and pressure switches.
  4. Leak-detection switches.
  5. Relays.

#### 2.54 GENERAL INSTALLATION REQUIREMENTS

- A. Install products to satisfy more stringent of requirements indicated.
- B. Install products level, plumb, parallel, and perpendicular with building construction.
- C. Support products, tubing, piping wiring and raceways. Brace products to prevent lateral movement and sway or a break in attachment.
- D. If codes and referenced standards are more stringent than requirements indicated, comply with requirements in codes and referenced standards.
- E. Fabricate openings and install sleeves in ceilings, floors, roof, and walls required by installation of products. Before proceeding with drilling, punching, and cutting, check for concealed work to avoid damage. Patch, flash, grout, seal, and refinish openings to match adjacent condition.
- F. Firestop Penetrations Made in Fire-Rated Assemblies: Comply with requirements in Division 07.
- G. Seal penetrations made in acoustically rated assemblies. Comply with requirements in Division 07.
- H. Welding Requirements:
  1. Restrict welding and burning to supports and bracing.
  2. No equipment shall be cut or welded without approval. Welding or cutting will not be approved if there is risk of damage to adjacent Work.
  3. Welding, where approved, shall be by inert-gas electric arc process and shall be performed by qualified welders according to applicable welding codes.
  4. If requested on-site, show satisfactory evidence of welder certificates indicating ability to perform welding work intended.

- I. Fastening Hardware:
  - 1. Stillson wrenches, pliers, and other tools that damage surfaces of rods, nuts, and other parts are prohibited for work of assembling and tightening fasteners.
  - 2. Tighten bolts and nuts firmly and uniformly. Do not overstress threads by excessive force or by oversized wrenches.
  - 3. Lubricate threads of bolts, nuts and screws with graphite and oil before assembly.
- J. Install products in locations that are accessible and that will permit calibration, service and maintenance from floor, equipment platforms, or catwalks without removal of permanently installed furniture and equipment.
- K. Corrosive Environments:
  - 1. Avoid or limit use of materials in corrosive airstreams and environments, including, but not limited to, the following:
    - a. Laboratory exhaust-air streams.
    - b. Process exhaust-air streams.
  - 2. When conduit is in contact with a corrosive airstream and environment, use Type 316L stainless-steel conduit and fittings or conduit and fittings that are coated with a corrosive-resistant coating that is suitable for environment. Comply with requirements for installation of raceways and boxes specified in Division 26.
  - 3. Where instruments are located in a corrosive airstream and are not corrosive resistant from manufacturer, field install products in NEMA 250, Type 4X enclosure constructed of Type 316L stainless steel.

## 2.55 WORKSTATION INSTALLATION

- A. Desktop Workstations Installation:
  - 1. Install workstation(s) at location(s) directed by Owner.
  - 2. Install multiple-receptacle power strip with cord for use in connecting multiple workstation components to a single duplex electrical power receptacle.
  - 3. Install software on workstation(s) and verify software functions properly.
  - 4. Develop Project-specific graphics, trends, reports, logs and historical database.
  - 5. Power each workstation through a dedicated UPS unit. Locate UPS adjacent to workstation.

## 2.56 POT INSTALLATION

- A. Install two portable operator terminal(s).
- B. Turn over POTs to Owner at Substantial Completion.
- C. Install software on each POT and verify that software functions properly.]

## 2.57 GATEWAY INSTALLATION

- A. Install gateways if required for DDC system communication interface requirements indicated.
  - 1. Install gateway(s) required to suit indicated requirements.

- B. Test gateway to verify that communication interface functions properly.

## 2.58 ROUTER INSTALLATION

- A. Install routers if required for DDC system communication interface.
- B. Test router to verify that communication interface functions properly.

## 2.59 CONTROLLER INSTALLATION

- A. Install controllers in enclosures to comply with indicated requirements.
- B. Connect controllers to field power supply and to UPS units.
- C. Install controller with latest version of applicable software and configure to execute requirements indicated.
- D. Test and adjust controllers to verify operation of connected I/O to achieve performance indicated requirements while executing sequences of operation.
- E. Installation of Network Controllers:
  - 1. Quantity and location of network controllers shall be determined by DDC system manufacturer to satisfy requirements indicated.
  - 2. Install controllers in a protected location that is easily accessible by operators.
  - 3. Top of controller shall be within 72 inches of finished floor.
- F. Installation of Programmable Application Controllers:
  - 1. Quantity and location of programmable application controllers shall be determined by DDC system manufacturer to satisfy requirements indicated.
  - 2. Install controllers in a protected location that is easily accessible by operators.
  - 3. Top of controller shall be within 72 inches of finished floor.
- G. Application-Specific Controllers:
  - 1. Quantity and location of application-specific controllers shall be determined by DDC system manufacturer to satisfy requirements indicated.
  - 2. For controllers not mounted directly on equipment being controlled, install controllers in a protected location that is easily accessible by operators.

## 2.60 INSTALLATION OF WIRELESS ROUTERS FOR OPERATOR INTERFACE

- A. Install wireless routers to achieve optimum performance and best possible coverage.
- B. Mount wireless routers in a protected location that is within 60 inches of floor and easily accessible by operators.
- C. Connect wireless routers to field power supply and to UPS units if network controllers are powered through UPS units.
- D. Install wireless router with latest version of applicable software and configure wireless router with WPA2 security and password protection. Create access password with not less than 12 characters consisting of letters and numbers and at least one special character. Document password in operations and maintenance manuals for reference by operators.

- E. Test and adjust wireless routers for proper operation with portable workstation and other wireless devices intended for use by operators.'

## 2.61 ENCLOSURES INSTALLATION

- A. Install the following items in enclosures, to comply with indicated requirements:
  - 1. Gateways.
  - 2. Routers.
  - 3. Controllers.
  - 4. Electrical power devices.
  - 5. UPS units.
  - 6. Relays.
  - 7. Accessories.
  - 8. Instruments.
  - 9. Actuators
- B. Attach wall-mounted enclosures to wall using the following types of steel struts:
  - 1. For NEMA 250, Type 2 and Type 12 Enclosures: Use painted steel, galvanized-steel or corrosion-resistant-coated steel strut and hardware.
  - 2. For NEMA 250, Type 4 and Type 4X Enclosures and Enclosures Located Outdoors: Use stainless-steel strut and hardware.
  - 3. Install plastic caps on exposed cut edges of strut.
- C. Align top or bottom of adjacent enclosures of like size.
- D. Install floor-mounted enclosures located in mechanical equipment rooms on concrete housekeeping pads. Attach enclosure legs using galvanized- or stainless-steel anchors.
- E. Install continuous and fully accessible wireways to connect conduit, wire, and cable to multiple adjacent enclosures. Wireway used for application shall have protection equal to NEMA 250 rating of connected enclosures.

## 2.62 INSTRUMENTS, GENERAL INSTALLATION REQUIREMENTS

- A. Mounting Location:
  - 1. Rough-in: Outline instrument-mounting locations before setting instruments and routing cable, wiring, tubing, and conduit to final location.
  - 2. Install switches and transmitters for air and liquid flow associated with individual air-handling units and connected ductwork and piping near air-handlings units co-located in air-handling unit system control panel, to provide service personnel a single and convenient location for inspection and service.
  - 3. Install liquid and steam flow switches and transmitters for indoor applications in mechanical equipment rooms. Do not locate in user-occupied space unless indicated specifically on Drawings.
  - 4. Install airflow switches and transmitters for indoor applications in mechanical equipment rooms. Do not locate in user-occupied space unless indicated specifically on Drawings.

5. Mount switches and transmitters not required to be mounted within system control panels on walls, floor-supported freestanding pipe stands, or floor-supported structural support frames. Use manufacturer mounting brackets to accommodate field mounting. Securely support and brace products to prevent vibration and movement.
  6. Install instruments in steam, liquid, and liquid-sealed-piped services below their process connection point. Slope tubing down to instrument with a slope of 2 percent.
  7. Install instruments in dry gas and non-condensable-vapor piped services above their process connection point. Slope process connection lines up to instrument with a minimum slope of 2 percent.
  8. Install transmitters for gas associated with individual air-handling units and associated connected ductwork and piping near air-handlings units co-located in air-handling unit system control panel, to provide service personnel a single and convenient location for inspection and service.
  9. Install gas switches and transmitters for indoor applications in mechanical equipment rooms. Do not locate in user-occupied space unless indicated specifically on Drawings.
- B. Mounting Height:
1. Mount instruments in user-occupied space to match mounting height of light switches unless otherwise indicated on Drawings. Mounting height shall comply with codes and accessibility requirements.
  2. Mount switches and transmitters, located in mechanical equipment rooms and other similar space not subject to code, state, and federal accessibility requirements, within a range of 42 to 72 inches above the adjacent floor, grade, or service catwalk or platform.
    - a. Make every effort to mount at 60 inches.
- C. Special Mounting Requirements
1. Protect products installed outdoors from solar radiation, building and wind effect with stand-offs and shields constructed of Type 316 stainless.
  2. Temperature instruments having performance impacted by temperature of mounting substrate shall be isolated with an insulating barrier located between instrument and substrate to eliminate effect. Where instruments requiring insulation are located in finished space, conceal insulating barrier in a cover matching the instrument cover.
- D. Seal penetrations to ductwork, plenums, and air-moving equipment to comply with duct static-pressure class and leakage and seal classes indicated using neoprene gaskets or grommets.
- E. Space Temperature Sensor Installation
1. Conceal assembly in an electrical box of sufficient size to house sensor and transmitter, if provided.
  2. Install electrical box with a faceplate to match sensor cover if sensor cover does not completely cover electrical box.
  3. In finished areas, recess electrical box within wall.
  4. In unfinished areas, electrical box may be surface mounted if electrical light switches are surface mounted. Use a cast-aluminum electric box for surface-mounted installations.

5. Align electrical box with other electrical devices such as visual alarms and light switches located in the vicinity to provide a neat and well-thought-out arrangement. Where possible, align in both horizontal and vertical axis.
- F. Outdoor Temperature Sensor Installation
1. Mount sensor in a discrete location facing north.
  2. Protect installed sensor from solar radiation and other influences that could impact performance.
  3. If required to have a transmitter, mount transmitter remote from sensor in an accessible and serviceable location indoors.
- G. Single-Point Duct Temperature Sensor Installation
1. Install single-point-type, duct-mounted, supply- and return-air temperature sensors. Install sensors in ducts with sensitive portion of the element installed in center of duct cross section and located to sense near average temperature. Do not exceed 24 inches (610 mm) in sensor length.
  2. Install return-air sensor in location that senses return-air temperature without influence from outdoor or mixed air.
  3. Rigidly support sensor to duct and seal penetration airtight.
  4. If required to have transmitter, mount transmitter remote from sensor at accessible and serviceable location.
- H. Averaging Duct Temperature Sensor Installation
1. Install averaging-type air temperature sensor for temperature sensors located within air-handling units, similar equipment, and large ducts with air tunnel cross-sectional area of 20 sq. ft. (1.86 sq. m) and larger.
  2. Install sensor length to maintain coverage over entire cross-sectional area. Install multiple sensors where required to maintain the minimum coverage.
  3. Fasten and support sensor with manufacturer-furnished clips to keep sensor taut throughout entire length.
  4. If required to have transmitter, mount transmitter in an accessible and serviceable location.
- I. Low-Limit Air Temperature Switch Installation
1. Install multiple low-limit switches to maintain coverage over entire cross-sectional area of air tunnel.
  2. Fasten and support sensing element with manufacturer-furnished clips to keep element taut throughout entire length.
  3. Mount switches outside of airstream at a location and mounting height to provide easy access for switch set-point adjustment and manual reset.
  4. Install on entering side of cooling coil unless otherwise indicated on Drawings.
- J. Liquid Temperature Sensor Installation
1. Assembly shall include sensor, thermowell and connection head.

2. For pipe NPS 4 (DN 100) and larger, install sensor and thermowell length to extend into pipe between 50 to 75 percent of pipe cross section.
3. For pipe smaller than NPS 4 (DN 100):
  - a. Install reducers to increase pipe size to NPS 4 (DN 100) at point of thermowell installation.
  - b. For pipe sizes NPS 2-1/2 and NPS 3 (DN 65 and DN 80), thermowell and sensor may be installed at pipe elbow or tee to achieve manufacturer-recommended immersion depth in lieu of increasing pipe size.
  - c. Minimum insertion depth shall be 2-1/2 inches (65 mm).
4. Install matching thermowell.
5. Fill thermowell with heat-transfer fluid before inserting sensor.
6. Tip of spring-loaded sensors shall contact inside of thermowell.
7. For insulated piping, install thermowells with extension neck to extend beyond face of insulation.
8. Install thermowell in top dead center of horizontal pipe positioned in an accessible location to allow for inspection and replacement. If top dead center location is not possible due to field constraints, install thermowell at location along top half of pipe.
9. For applications with transmitters, mount transmitter remote from sensor in an accessible and serviceable location from floor, service platform or catwalk.

## 2.63 FLOW INSTRUMENTS INSTALLATION

### A. Airflow Sensors:

1. Install sensors in straight sections of duct with manufacturer-recommended straight duct upstream and downstream of sensor.
2. Installed sensors shall be accessible for visual inspection and service. Install access door(s) in duct or equipment located upstream of sensor, to allow service personnel to hand clean sensors.

### B. Liquid and Steam Sensors:

1. Install sensors in straight sections of piping with manufacturer-recommended straight piping upstream and downstream of sensor.
2. Alert manufacturer where installation cannot accommodate recommended clearance, and solicit recommendations for field modifications to installation, such as flow straighteners, to improve condition.
3. Install pipe reducers for in-line sensors smaller than line size. Position reducers at distance from sensor to avoid interference and impact on accuracy.
4. Install in-line sensors with flanges or unions to provide drop-in and -out installation.

### C. Liquid Flow Meters:

1. Install meters in straight sections of piping with manufacturer-recommended straight piping upstream and downstream of sensor.
2. Install pipe reducers for in-line meters smaller than line size. Install reducers at distance from meter to avoid interference and impact on accuracy.

3. Install in-line meters with flanges or unions to provide drop-in and -out installation.
4. Insertion Meters:
  - a. Install system process connections full size of meter connection, but not less than NPS 1. Provide stainless steel bushing if required to mate to system connection.
  - b. Install meter in top dead center of horizontal pipe positioned in an accessible location to allow for inspection and replacement.
  - c. In applications where top-dead-center location is not possible due to field constraints, install meter at location along top half of pipe if acceptable by manufacturer for mounting orientation.

D. Liquid Switches:

1. Install system process connection full size of switch connection, but not less than NPS 1. Install stainless steel bushing if required to mate switch to system connection.
2. Install switch in top dead center of horizontal pipe positioned in an accessible location to allow for inspection and replacement.
3. In applications where top-dead-center location is not possible due to field constraints, install switch at location along top half of pipe if switch is acceptable by manufacturer for mounting orientation.

E. Transmitters:

1. Install airflow transmitters serving an air system in a single location adjacent to or within system control panel.
2. Install liquid flow transmitters, not integral to sensors, in vicinity of sensor. Where multiple flow transmitters serving same system are located in same room, co-locate transmitters by system to provide service personnel a single and convenient location for inspection and service.

F. Airflow Direction Indicators:

1. The HVAC system must be operational with a proper directional minimum differential pressure of 0.01 inches of water column prior to the installation and testing of the indicators.
2. The installing contractor shall mount and test every indicator for proper operation. The installation shall be per the manufacturer Installation Instructions and the Operation and Maintenance Manual. Turn over the pitch levels and installation documents to the Owner during job start-up. Provide 8 hours of training to the Owner for field orientation and operation of a typical indicator.
3. For units provided with local alarm device, provide an NEC and local code conforming wiring and service disconnect to each controller.

2.64 CARBON-MONOXIDE MONITORING SYSTEM

- A. Install sample points in monitored area to provide accurate measurement of gas concentration.
- B. Install exposed sampling points with a finished appearance consistent with other materials in space. Submit proposed products to be installed for review and approval.
- C. Individually install each sample point to the carbon-monoxide monitoring system.
- D. Install tubing in a minimum size of **NPS 3/8**.

- E. Use compression fittings at connections to equipment.
- F. If not indicated on Drawings, locate carbon-monoxide monitoring system in a secured and serviceable location accessible to authorized personnel.
- G. Support carbon-monoxide monitoring system from floor or wall. Support floor-mounted systems using a structural channel frame. Provide mounting brackets.]

## 2.65 ELECTRIC POWER CONNECTIONS

- A. Connect electrical power to DDC system products requiring electrical power connections. All power wiring and connections required to operate the DDC system and all control components shall be provided by this Section. Provide normal and standby power wiring to all devices to perform sequences outlined. As a minimum the DDC system (all control panels, workstations or host computers) shall be connected to standby power source. Power circuits for all DDC system component shall be dedicated only to the DDC system and components. All wiring from and including dedicated circuit breakers to the point of use shall be provided by this Section.
- B. Work shall comply with NFPA 70 and other requirements indicated.
- C. Comply with requirements in Division 26 for electrical power circuit breakers.
- D. Comply with requirements in Division 26 for electrical power conductors and cables.
- E. Comply with requirements in Division 26 for electrical power raceways and boxes.

## 2.66 IDENTIFICATION

- A. Install laminated acrylic or melamine plastic signs with unique identification on face for each of the following:
  - 1. Operator workstation.
  - 2. Printer.
  - 3. Gateway.
  - 4. Router.
  - 5. Protocol analyzer.
  - 6. DDC controller.
  - 7. Enclosure.
  - 8. Electrical power device.
  - 9. UPS unit.
  - 10. Accessory.
- B. Install unique instrument identification on face of each instrument connected to a DDC controller.
- C. Install engraved phenolic nameplate with valve identification on control damper and valve and on face of ceiling directly below valves concealed above ceilings connected to a DDC controller.
- D. Where product is installed above accessible tile ceiling, also install matching identification on face of ceiling grid located directly below.

- E. Where product is installed above an inaccessible ceiling, also install identification on face of access door directly below.
- F. Warning Labels and Signs:
  - 1. Shall be permanently attached to equipment that can be automatically started by DDC control system.
  - 2. Shall be located in highly visible location near power service entry points.
- G. Identify system components, wiring, cabling, and terminals. Each piece of wire, cable, and tubing shall have the same designation at each end for operators to determine continuity at points of connection. Comply with requirements for identification specified in Division 26.

## 2.67 NETWORK INSTALLATION

- A. Install optical fiber cable when connecting between the following network devices and when located in different buildings on campus and when required to meet communication speeds specified:
  - 1. Operator workstations.
  - 2. Operator workstations and network controllers.
  - 3. Network controllers.
- B. Install balanced twisted pair or optical fiber cable when connecting between the following network devices located in same building while meeting communication speeds specified:
  - 1. Operator workstations.
  - 2. Operator workstations and network controllers.
  - 3. Network controllers.
- C. Install balanced twisted pair or copper cable when connecting between the following:
  - 1. Gateways.
  - 2. Gateways and network controllers or programmable application controllers.
  - 3. Routers.
  - 4. Routers and network controllers or programmable application controllers.
  - 5. Network controllers and programmable application controllers.
  - 6. Programmable application controllers.
  - 7. Programmable application controllers and application-specific controllers.
  - 8. Application-specific controllers.
- D. Install cable in continuous raceway.
  - 1. Cable trays may be used for copper cable in lieu of conduit.

## 2.68 NETWORK NAMING AND NUMBERING

- A. Coordinate with Owner and provide unique naming and addressing for networks and devices.
- B. ASHRAE 135 Networks:
  - 1. MAC Address:

- a. Every network device shall have an assigned and documented MAC address unique to its network.
  - b. Ethernet Networks: Document MAC address assigned at its creation.
  - c. ARCNET or MS/TP networks: Assign from 00 to 64.
2. Network Numbering:
  - a. Assign unique numbers to each new network.
  - b. Provide ability for changing network number through device switches or operator interface.
  - c. DDC system, with all possible connected LANs, can contain up to 65,534 unique networks.
3. Device Object Identifier Property Number:
  - a. Assign unique device object identifier property numbers or device instances for each device network.
  - b. Provide for future modification of device instance number by device switches or operator interface.
  - c. LAN shall support up to 4,194,302 unique devices.
4. Device Object Name Property Text:
  - a. Device object name property field shall support 32 minimum printable characters.
  - b. Assign unique device "Object Name" property names with plain-English descriptive names for each device.
    - 1) Example 1: Device object name for device controlling boiler plant at Building 1000 would be "HW System B1000."
    - 2) Example 2: Device object name for a VAV terminal unit controller could be "VAV unit 102".
5. Object Name Property Text for Other Than Device Objects:
  - a. Object name property field shall support 32 minimum printable characters.
  - b. Assign object name properties with plain-English names descriptive of application.
    - 1) Example 1: "Zone 1 Temperature."
    - 2) Example 2 "Fan Start and Stop."
6. Object Identifier Property Number for Other Than Device Objects:
  - a. Object identifier property numbers may be assigned at Installer discretion but must be approved by Owner in advance, be documented and be unique for like object types within device.

## **2.69 PIPING AND TUBING INSTALLATION**

### **A. Above-Grade Piping and Tubing Installation:**

1. Material Application:

- a. Install copper tubing, except as follows:
  - 1) Tubing Exposed to View: Polyethylene tubing installed in raceways may be used in lieu of copper tubing.
  - 2) Concealed Tubing: Polyethylene tubing may be used in lieu of copper tubing when concealed behind accessible ceilings and concealed in walls and connecting wall-mounted instruments with recessed connections.
  - 3) Control-Air Tubing for Smoke Control and Pressurization Systems:
    - a) Control-air tubing shall be of sufficient size to meet the required response times. Tubing shall be flushed clean and dry prior to final connections. Tubing shall be adequately supported and protected from damage. Tubing passing through concrete or masonry shall be sleeved and protected from abrasion and electrolytic action.
    - b) Control-air tubing shall be hard-drawn copper, Type L, ACR in accordance with ASTM B42, ASTM B43, ASTM B68, ASTM B88, ASTM B251 and ASTM B280. Fittings shall be wrought copper or copper alloy, solder type in accordance with ASME B16.18 or ASME B16.22. Changes in direction shall be made with appropriate tool bends. Copper-alloy compression-type fittings shall be used at final connection to devices; other joints shall be brazed using a BCuP5 brazing alloy with solidus above 1,100°F (593°C) and liquidus below 1,500°F (816°C). Brazing flux shall be used on copper-to-copper alloy joints only.
    - c) Nonmetallic tubing used within control panels and at the final connection to devices provided all of the following conditions are met: Combustible pneumatic tubing exposed within a plenum shall be listed and labeled as having a peak optical density not greater than 0.50, an average optical density not greater than 0.15, and a flame spread distance not greater than 5 feet (1524 mm) when tested in accordance with UL 1820; Tubing and connected device shall be completely enclosed within a galvanized or paint-grade steel enclosure having a minimum thickness of 0.0296 inch (0.7534 mm) (No. 22 gauge). Entry to the enclosure shall be by copper tubing with a protective grommet of Neoprene or Teflon or by suitable brass compression to male barbed adapter; Tubing shall be identified by appropriately documented coding; Tubing shall be neatly tied and supported within the enclosure. Tubing bridging cabinets and doors or movable devices shall be of sufficient length to avoid tension and excessive stress. Tubing shall be protected against abrasion. Tubing connected to devices on doors shall be fastened along hinges.
- b. Install copper tubing, unless other accessible materials are indicated, for air signals to instruments including, but not limited to, the following:
  - 1) Sensors.
  - 2) Switches.

- 3) Transmitters.
  - c. Install drawn-temper copper tubing, except within 36 inches of device terminations tubing shall be annealed-tempered copper tubing.
  - d. Install compression fittings to connect copper tubing to instruments, control devices, and accessories.
  - e. Install barbed or compression fittings to connect polyethylene tubing to instruments, control devices, and accessories.
- 2. Routing:
  - a. Do not expose tubing in finished spaces, such as spaces with ceilings; occupied spaces, offices, and conference rooms, unless expressly approved in writing by Architect. Tubing may be exposed in areas without ceilings.
  - b. Where tubing is installed in finished occupied spaces, install the tubing in surface metal raceway with appropriate fittings only where not feasible to conceal in wall, above ceiling or behind architectural enclosures or covers.
  - c. Install piping and tubing plumb and parallel to and at right angles with building construction.
  - d. Install multiple runs of tubing or piping in equally spaced parallel lines.
  - e. Piping and tubing shall not interfere with access to valves, equipment, duct and equipment access doors, or obstruct personnel access and passageways of any kind.
  - f. Coordinate with other trades before installation to prevent proposed piping and tubing from interfering with pipe, duct, terminal equipment, light fixtures, conduit and cable tray space. If changes to Shop Drawings are necessary due to field coordination, document changes on record Drawings.
  - g. Install vibration loops in copper tubing when connecting to instrument and actuators that vibrate.
- 3. Support:
  - a. According to MSS SP-69, Table 3, except support spacing shall not exceed 60 inches.
  - b. Support copper tubing with copper hangers, clips, and tube trays.
  - c. Do not use tape for support or dielectric isolation.
  - d. Install supports at each change in direction and at each branch take off.
  - e. Attached supports to building structure independent of work of other trades. Support from ducts, pipes, cable trays, and conduits is prohibited.
  - f. Attached support from building structure with threaded rods, structural shapes, or channel strut.
  - g. Install and brace supports to carry static load plus a safety margin, which will allow tubing to be serviced.
  - h. Brace supports to prevent lateral movement.
  - i. Paint steel support members that are not galvanized or zinc coated.

- j. Support polyethylene tubing same as copper tubing.
- 4. Do not attach piping and tubing to equipment that may be removed frequently for maintenance or that may impart vibration and expansion from temperature change.
- 5. Protect exposed tubing in mechanical equipment rooms from mechanical damage within 96 inches above floor. Use aluminum channel reversed and secured over tubing to protect tubing from damage.
- 6. Joining and Makeup:
  - a. Where joining and mating dissimilar metals where galvanic action could occur, install dielectric isolation.
  - b. Make threaded joints for connecting to instrument equipment with connectors with a compression tubing connector on one end and threaded connection on other end.
  - c. Make tubing bends with a tube-bending tool. Hard bends, wrinkled or flattened bends are unacceptable.
  - d. Install tube fittings according to manufacturer written instructions.
  - e. Do not make tubing connections to a fitting before completing makeup of the connection.
  - f. Align tubing with the fitting. Avoid springing tube into position, as this may result in excessive stress on both tubing and fitting with possible resulting leaks.
  - g. Do not install fittings close to a bend. A length of straight tubing, not deformed by bending, is required for a proper connection.
  - h. Check tubing for correct diameter and wall thickness.
  - i. Tube ends shall be cut square and deburred. Exercise care during cutting to keep tubing round.
  - j. Thread pipe on a threading machine. Ream inner edges of pipe ends, file and grind to remove burrs.
  - k. Wrap pipe threads of fittings on pneumatic lines with a single wrap of PTFE tape.
  - l. Protect piping and tubing from entrance of foreign matter.
- 7. Conduit in which nonmetallic tubing is installed shall not exceed 50 percent fill. Support conduit according to NFPA 70 unless otherwise indicated.
- B. Below-Grade Piping and Tubing Installation:
  - 1. Install tubing below grade in a continuous 4-inch, Schedule 80, PVC conduit.
  - 2. Install at a depth of at least 24 inches below finished grade.
  - 3. Install tubing in raceways dedicated to tubing. Do not combine electrical conductors and tubing in raceways.
- C. Identify piping and tubing as follows:
  - 1. Every 50 feet of straight run.
  - 2. At least once for each branch within 36 inches of main tee.
  - 3. At each change in direction.
  - 4. Within 36 inches of each ceiling, floor, roof and wall penetration.

5. Where exposed to and where concealed from view, including above ceiling plenums, shafts, and chases.
6. At each valve.
7. Mark each instrument tube connection with a number-coded identification. Each unique tube shall have same unique number at instrument connection and termination at opposite end of tube.

**D. Isolation Valves Installation:**

1. Install valves full size of piping and tubing.
2. Install at the following locations:
  - a. At each branch.
3. Valves shall be located to be readily accessible from floor.

**2.70 CONTROL WIRE, CABLE AND RACEWAYS INSTALLATION**

**A. Comply with NECA 1.**

**B. Wire and Cable Installation:**

1. Comply with installation requirements in Division 26 and 27.
2. Install cables with protective sheathing that is waterproof and capable of withstanding continuous temperatures of 90 deg C with no measurable effect on physical and electrical properties of cable.
  - a. Provide shielding to prevent interference and distortion from adjacent cables and equipment.
3. Terminate wiring in a junction box.
  - a. Clamp cable over jacket in junction box.
  - b. Individual conductors in the stripped section of the cable shall be slack between the clamping point and terminal block.
4. Terminate field wiring and cable not directly connected to instruments and control devices having integral wiring terminals using terminal blocks.
5. Install signal transmission components according to IEEE C2, REA Form 511a, NFPA 70, and as indicated.
6. Use shielded cable to transmitters.
7. Use shielded cable to temperature sensors.
8. Perform continuity and meager testing on wire and cable after installation.

**C. Conduit Installation:**

1. Comply with Division 26 for control-voltage conductors.
2. Comply with Division 27 for balanced twisted pair cabling and optical fiber installation.

**2.71 OPTICAL FIBER CABLE SYSTEM INSTALLATION**

**A. Comply with installation requirements in Division 27.**

2.72 CONTROL VALVE INSTALLATION

- A. Liquid (water and glycol) controls valves:
  - 1. In liquid systems, use characterized v-notch ball, pressure-independent (PICV) or globe-style control valves for valves NPS 6 and smaller and high performance butterfly style for valves for larger than NPS 6.
  - 2. Liquid control valves shall fail normally open or closed, as indicated on plans, or as follows:
    - a. Chilled Water: Closed.
    - b. Condenser Water: Closed.
    - c. Heat Recovery: Closed.
    - d. Heating Hot Water in Air Handlers: Open.
    - e. Heating Hot Water Reheat: Closed.
    - f. Other applications—as shown or as required by sequences of operation.
- B. Steam Control Valves:
  - 1. In steam systems, use globe-style control valves.
  - 2. Fail positions unless otherwise indicated: Steam: Last position.
- C. Valve submittals shall be coordinated for listed type, quantity, size, and piping configuration to ensure compatibility with pipe design.
- D. Slip-stem control valves shall be installed so that the stem position is not more than 60 degrees from the vertical up position. Ball type control valves shall be installed with the stem in the horizontal position.
- E. Valves shall be installed in accordance with the manufacturer recommendations.
- F. Control valves shall be installed so that they are accessible and serviceable and so that actuators may be serviced and removed without interference from structure or other pipes and/or equipment.
- G. Isolation valves shall be installed so that the control valve body may be serviced without draining the supply/return side piping system. Unions shall be installed at all connections to screw-type control valves.
- H. Provide tags for all control valves indicating service and number. Tags shall be brass, 1-1/2 in. in diameter, with 1/4 in. high letters. Securely fasten with chain and hook. Match identification numbers as shown on approved controls shop drawings.
- I. Support instruments, tubing, piping, wiring, and conduits.
- J. Fastening Hardware:
  - 1. Stillson wrenches, pliers, and other tools that will cause injury to or mar surfaces of rods, nuts, and other parts are prohibited for assembling and tightening nuts.
  - 2. Tighten bolts and nuts firmly and uniformly. Do not overstress threads by excessive force or by oversized wrenches.
  - 3. Lubricate threads of bolts, nuts, and screws with graphite and oil before assembly.

- K. Install products in locations that are accessible and that will permit calibration and maintenance from floor, equipment platforms, or catwalks. Where ladders are required for Owner's access, confirm unrestricted ladder placement is possible under occupied condition.
- L. Install pipe reducers for valves smaller than line size. Position reducers as close to valve as possible but at distance to avoid interference and impact to performance. Install with manufacturer-recommended clearance.
- M. Install flanges or unions to allow drop-in and -out valve installation.
- N. Where indicated, install control valve with three-valve bypass manifold to allow for control valve isolation and removal without interrupting system flow by providing manual throttling valve in bypass pipe. Install drain valves in piping upstream and downstream of each three-valve bypass control valve assembly.
- O. Install drain valves in piping upstream and downstream of each control valve larger than NPS 2 (DN 50).
- P. Install pressure temperature taps in piping upstream and downstream of each control valve.
- Q. Valve Orientation:
  - 1. Install globe and ball valves installed in horizontal piping with stems upright and not more than 15 degrees off of vertical, not inverted.
  - 2. Install valves in a position to allow full stem movement.
  - 3. Install butterfly valves that are installed in horizontal piping with stems in horizontal position and with low point of disc opening with direction of flow.
- R. Clearance:
  - 1. Locate valves for easy access and provide separate support of valves that cannot be handled by service personnel without hoisting mechanism.
  - 2. Install valves with at least 12 inches of clear space around valve and between valves and adjacent surfaces.
- S. Threaded Valves:
  - 1. Note internal length of threads in valve ends, and proximity of valve internal seat or wall, to determine how far pipe should be threaded into valve.
  - 2. Align threads at point of assembly.
  - 3. Apply thread compound to external pipe threads, except where dry seal threading is specified.
  - 4. Assemble joint, wrench tight. Apply wrench on valve end as pipe is being threaded.
- T. Flanged Valves:
  - 1. Align flange surfaces parallel.
  - 2. Assemble joints by sequencing bolt tightening to make initial contact of flanges and gaskets as flat and parallel as possible. Use suitable lubricants on bolt threads. Tighten bolts gradually and uniformly with a torque wrench.

## 2.73 CONTROL DAMPER INSTALLATION

- A. Damper submittals shall be coordinated for type, quantity, and size to ensure compatibility with sheet metal design.

- B. Duct openings shall be free of any obstruction or irregularities that might interfere with blade or linkage rotation or actuator mounting. Duct openings shall measure 1/4 in. larger than damper dimensions and shall be square, straight, and level.
- C. Individual damper sections, as well as entire multiple section assemblies, must be completely square and free from racking, twisting, or bending. Measure diagonally from upper corners to opposite lower corners of each damper section. Both dimensions must be within 1/8 in. of each other.
- D. Follow the manufacturer instructions for field installation of control dampers. Unless specifically designed for vertical blade application, dampers must be mounted with blade axis horizontal.
- E. Install extended shaft or jackshaft according to manufacturer instructions. (Typically, a sticker on the damper face shows recommended extended shaft location. Attach shaft on labeled side of damper to that blade.)
- F. Damper blades, axles, and linkage must operate without binding. Before system operation, cycle damper after installation to ensure proper operation. On multiple section assemblies, all sections must open and close simultaneously.
- G. Provide a visible and accessible indication of damper position on the drive shaft end.
- H. Support ductwork in area of damper when required to prevent sagging due to damper weight.
- I. After installation of low-leakage dampers with seals, caulk between frame and duct or opening to prevent leakage around perimeter of damper.
- J. Install smooth transitions, not exceeding 15 degrees, to dampers smaller than adjacent duct. Install transitions as close to damper as possible but at distance to avoid interference and impact to performance. Consult manufacturer for recommended clearance.
- K. Clearance:
  - 1. Locate dampers for easy access and provide separate support of dampers that cannot be handled by service personnel without hoisting mechanism.
  - 2. Install dampers with at least 24 inches (600 mm) of clear space on sides of dampers requiring service access.
- L. Service Access:
  - 1. Dampers and actuators shall be accessible for visual inspection and service.
  - 2. Install access door(s) in duct or equipment located upstream of damper to allow service personnel to hand clean any portion of damper, linkage, and actuator. Comply with requirements in Division 23.
- M. Install dampers straight and true, level in all planes, and square in all dimensions. Install supplementary structural steel reinforcement for large multiple-section dampers if factory support alone cannot handle loading.
- N. Attach actuator(s) to damper drive shaft.
- O. For duct-mounted and equipment-mounted dampers installed outside of equipment, install a visible and accessible indication of damper position from outside.

**2.74 SMOKE AND FIRE-SMOKE DAMPER INSTALLATION**

- A. Coordinate smoke and fire-smoke damper installation, wiring, and checkout to ensure that these dampers function properly and that they respond to the proper fire alarm system general, zone, and/or detector trips. Report discrepancies to the architect no less than two weeks prior to inspection by the code authority having jurisdiction.
- B. Obtain complete submittal data for smoke and fire-smoke dampers and coordinate duct smoke detector interface to HVAC systems.

**2.75 DUCT SMOKE DETECTION**

- A. Coordinate duct smoke detector installation with Division 27. Connect to dry-contact alarm output in the same room as the HVAC equipment to be controlled.

**2.76 FIELD QUALITY CONTROL**

- A. All work, materials, and equipment shall comply with the rules and regulations of applicable local, state, and federal codes and ordinances as identified in Part 1, "General," of this specification.
- B. Continually monitor the field installation for code compliance and quality of workmanship.
- C. Have work inspected by local and/or state authorities having jurisdiction over the work.
- D. Testing Agency: Engage a qualified testing agency to perform tests and inspections.
- E. Manufacturer Field Service: Engage a factory-authorized service representative to test and inspect components, assemblies, and installations, including connections.
- F. Perform the following tests and inspections with the assistance of a factory-authorized service representative:
  - 1. Perform each visual and mechanical inspection and electrical test stated in NETA Acceptance Testing Specification. Certify compliance with test parameters.
  - 2. Test and adjust controls and safeties. Replace damaged and malfunctioning controls and equipment.
- G. Testing:
  - 1. Perform pre-installation, in-progress, and final tests, supplemented by additional tests.
  - 2. Pre-installation Cable Verification: Verify integrity and serviceability for new cable lengths before installation. This assurance may be provided by using vendor verification documents, testing, or other methods. As a minimum, furnish evidence of verification for cable attenuation and bandwidth parameters.
  - 3. In-Progress Testing: Perform standard tests for correct pair identification and termination during installation to ensure proper installation and cable placement. Perform tests in addition to those specified if there is any reason to question condition of material furnished and installed. Testing accomplished is to be documented by agency conducting tests. Submit test results for Project record.
  - 4. Final Testing: Perform final test of installed system to demonstrate acceptability as installed. Testing shall be performed according to a test plan supplied by DDC system manufacturer. Defective Work or material shall be corrected and retested. As a minimum, final testing for cable system, including spare cable, shall verify conformance of attenuation, length, and bandwidth parameters with performance indicated.

5. Test Equipment: Use an optical fiber time domain reflectometer for testing of length and optical connectivity.
6. Test Results: Record test results and submit copy of test results for Project record.

## 2.77 DDC SYSTEM CHECKOUT – GENERAL

- A. Start-up Testing. Testing listed in this article shall be performed and shall make up part of the necessary verification of an operating BAS. This testing shall be completed before the owner representative is notified of the system demonstration.
  1. Furnish labor and test apparatus required to calibrate and prepare for service of all instruments, controls, and accessory equipment furnished under this specification.
  2. Verify that all control wiring is properly connected and free of all shorts and ground faults. Verify that terminations are tight.
  3. Enable the BAS and verify calibration of all input devices individually. Perform calibration procedures according to manufacturer recommendations.
  4. Verify that all binary output devices (relays, solenoid valves, two-position actuators and control valves, magnetic starters, etc.) operate properly and that the normal positions are correct.
  5. Verify that all analog output devices (modulating actuators, etc.) are functional, that start and span are correct, and that direction and normal positions are correct. Check all control valves and automatic dampers to ensure proper action and closure. Make adjustments to valve stem and damper blade travel.
  6. Verify that the system operation adheres to the sequences of operation. Simulate and observe all modes of operation by overriding and varying inputs and schedules. Tune all DDC loops and optimum start/stop routines.
  7. Alarms and Interlocks:
    - a. Check each alarm separately by including an appropriate signal at a value that will trip the alarm.
    - b. Interlocks shall be tripped using field contacts to check the logic, as well as to ensure that the fail-safe condition for all actuators is in the proper direction.
    - c. Interlock actions shall be tested by simulating alarm conditions to check the initiating value of the variable and interlock action.
- B. Start up, check out, and test all hardware and software and verify communication between all components.
  1. Verify control wiring is properly connected and free of all shorts and ground faults. Verify terminations are tight.
  2. Verify analog and binary input/ output points read properly.
  3. Verify alarms and interlocks. Verify operation of the integrated system.

## 2.78 DDC SYSTEM I/O CHECKOUT PROCEDURES

- A. Check installed products before continuity tests, leak tests and calibration.
- B. Check instruments for proper location and accessibility.

- C. Check instruments for proper installation on direction of flow, elevation, orientation, insertion depth, or other applicable considerations that will impact performance.
- D. Check instrument tubing for proper isolation, fittings, slope, dirt legs, drains, material and support.
- E. Control Damper Checkout:
  - 1. Check installed products before continuity tests, leak tests, and calibration.
  - 2. Check dampers for proper location and accessibility.
  - 3. Check instrument tubing for proper isolation, fittings, slope, dirt legs, drains, material, and support.
  - 4. Verify that control dampers are installed correctly for flow direction.
  - 5. Verify that proper blade alignment, either parallel or opposed, has been provided.
  - 6. Verify that damper frame attachment is properly secured and sealed.
  - 7. Verify that damper actuator and linkage attachment are secure.
  - 8. Verify that actuator wiring is complete, enclosed, and connected to correct power source.
  - 9. Verify that damper blade travel is unobstructed.
- F. Control Valve Checkout:
  - 1. Verify that control valves are installed correctly for flow direction.
  - 2. Verify that valve body attachment is properly secured and sealed.
  - 3. Verify that valve actuator and linkage attachment is secure.
  - 4. Verify that actuator wiring is complete, enclosed and connected to correct power source.
  - 5. Verify that valve ball, disc or plug travel is unobstructed.
  - 6. After piping systems have been tested and put into service, but before insulating and balancing, inspect each valve for leaks. Adjust or replace packing to stop leaks. Replace the valve if leaks persist.
- G. Instrument Checkout:
  - 1. Check out installed products before continuity tests, leak tests, and calibration.
  - 2. Check instruments for proper installation with respect to direction of flow, elevation, orientation, insertion depth, or other applicable considerations that will impact performance.
  - 3. Check instruments for proper location and accessibility.
  - 4. Check instrument tubing for proper isolation, fittings, slope, dirt legs, drains, material, and support.
  - 5. Verify that attachment is properly secured and sealed.
  - 6. Verify that conduit connections are properly secured and sealed.
  - 7. Verify that wiring is properly labeled with unique identification, correct type and size and is securely attached to proper terminals.
  - 8. Inspect instrument tag against approved submittal.

9. For instruments with tubing connections, verify that tubing attachment is secure and isolation valves have been provided.
10. For flow instruments, verify that recommended upstream and downstream distances have been maintained.
11. For temperature instruments:
  - a. Verify sensing element type and proper material.
  - b. Verify length and insertion.

**2.79 DDC SYSTEM I/O ADJUSTMENT, CALIBRATION AND TESTING:**

- A. Calibrate each instrument installed that is not factory calibrated and provided with calibration documentation.
- B. Provide a written description of proposed field procedures and equipment for calibrating each type of instrument. Submit procedures before calibration and adjustment.
- C. For each analog instrument, make a three-point test of calibration for both linearity and accuracy.
- D. Equipment and procedures used for calibration shall comply with instrument manufacturer written instructions.
- E. Provide diagnostic and test equipment for calibration and adjustment.
- F. Field instruments and equipment used to test and calibrate installed instruments shall have accuracy at least twice the instrument accuracy being calibrated. An installed instrument with an accuracy of 1 percent shall be checked by an instrument with an accuracy of 0.5 percent.
- G. Calibrate each instrument according to instrument instruction manual supplied by manufacturer.
- H. If after calibration indicated performance cannot be achieved, replace out-of-tolerance instruments.
- I. Comply with field testing requirements and procedures indicated by ASHRAE Guideline 11, "Field Testing of HVAC Control Components," in the absence of specific requirements, and to supplement requirements indicated.
- J. Analog Signals:
  1. Check analog voltage signals using a precision voltage meter at zero, 50, and 100 percent.
  2. Check analog current signals using a precision current meter at zero, 50, and 100 percent.
  3. Check resistance signals for temperature sensors at zero, 50, and 100 percent of operating span using a precision-resistant source.
- K. Digital Signals:
  1. Check digital signals using a jumper wire.
  2. Check digital signals using an ohmmeter to test for contact making or breaking.
- L. Control Dampers:
  1. Stroke and adjust control dampers following manufacturer recommended procedure, from 100 percent open to 100 percent closed and back to 100 percent open.

2. Check and document open and close cycle times for applications with a cycle time less than 30 seconds.
3. For control dampers equipped with positive position indication, check feedback signal at multiple positions to confirm proper position indication.

**M. Control Valves:**

1. Stroke and adjust control valves following manufacturer recommended procedure, from 100 percent open to 100 percent closed and back to 100 percent open.
2. Check and document open and close cycle times for applications with a cycle time less than 30 seconds.
3. For control valves equipped with positive position indication, check feedback signal at multiple positions to confirm proper position indication.

**N. Meters:** Check sensors at zero, 50, and 100 percent of Project design values.

**O. Sensors:** Check sensors at zero, 50, and 100 percent of Project design values.

**P. Switches:** Calibrate switches to make or break contact at set points indicated.

**Q. Transmitters:**

1. Check and calibrate transmitters at zero, 50, and 100 percent of Project design values.
2. Calibrate resistance temperature transmitters at zero, 50, and 100 percent of span using a precision-resistant source.

**2.80 DDC SYSTEM CONTROLLER CHECKOUT**

**A. Verify power supply.**

1. Verify voltage, phase and hertz.
2. Verify that protection from power surges is installed and functioning.
3. Verify that ground fault protection is installed.
4. If applicable, verify if connected to UPS unit.
5. If applicable, verify if connected to a backup power source.
6. If applicable, verify that power conditioning units, transient voltage suppression and high-frequency noise filter units are installed.

**B. Verify that wire and cabling is properly secured to terminals and labeled with unique identification.**

**C. Verify that spare I/O capacity is provided.**

**2.81 DDC CONTROLLER I/O CONTROL LOOP TESTS**

**A. Testing:**

1. Test every I/O point connected to DDC controller to verify that safety and operating control set points to operate controlled system safely and at optimum performance.
2. Test every I/O point throughout its full operating range.
3. Test every control loop to verify operation is stable and accurate.

4. Adjust control loop proportional, integral and derivative settings to achieve optimum performance while complying with performance requirements indicated. Document testing of each control loop precision and stability via trend logs.
5. Test and adjust every control loop for proper operation according to sequence of operation.
6. Test software and hardware interlocks for proper operation. Correct deficiencies.
7. Operate each analog point at the following:
  - a. Upper quarter of range.
  - b. Lower quarter of range.
  - c. At midpoint of range.
8. Exercise each binary point.
9. For every I/O point in DDC system, read and record each value at operator workstation, at DDC controller and at field instrument simultaneously. Value displayed at operator workstation, at DDC controller and at field instrument shall match.
10. Prepare and submit a report documenting results for each I/O point in DDC system and include in each I/O point a description of corrective measures and adjustments made to achieve desired results.

## 2.82 DDC SYSTEM VALIDATION TESTS

- A. Perform validation tests before requesting final review of system. Before beginning testing, first submit Pretest Checklist and Test Plan.
- B. After approval of Test Plan, execute all tests and procedures indicated in plan.
- C. After testing is complete, submit completed test checklist.
- D. Pretest Checklist: Submit the following list with items checked off once verified:
  1. Detailed explanation for any items that are not completed or verified.
  2. Required mechanical installation work is successfully completed and HVAC equipment is working correctly.
  3. HVAC equipment motors operate below full-load amperage ratings.
  4. Required DDC system components, wiring, and accessories are installed.
  5. Installed DDC system architecture matches approved Drawings.
  6. Control electric power circuits operate at proper voltage and are free from faults.
  7. Required surge protection is installed.
  8. DDC system network communications function properly, including uploading and downloading programming changes.
  9. Using BACnet protocol analyzer, verify that communications are error free.
  10. Each controller programming is backed up.
  11. Equipment, products, tubing, wiring cable and conduits are properly labeled.
  12. All I/O points are programmed into controllers.

13. Testing, adjusting and balancing work affecting controls is complete.
14. Dampers and actuators zero and span adjustments are set properly.
15. Each control damper and actuator goes to failed position on loss of power.
16. Valves and actuators zero and span adjustments are set properly.
17. Each control valve and actuator goes to failed position on loss of power.
18. Meter, sensor and transmitter readings are accurate and calibrated.
19. Control loops are tuned for smooth and stable operation.
20. View trend data where applicable.
21. Each controller works properly in standalone mode.
22. Safety controls and devices function properly.
23. Interfaces with fire-alarm system function properly.
24. Electrical interlocks function properly.
25. Operator workstations and other interfaces are delivered, all system and database software is installed, and graphic are created.
26. Record Drawings are completed.

E. Test Plan:

1. Prepare and submit a validation test plan including test procedures for performance validation tests.
2. Test plan shall address all specified functions of DDC system and sequences of operation.
3. Explain detailed actions and expected results to demonstrate compliance with requirements indicated.
4. Explain method for simulating necessary conditions of operation used to demonstrate performance.
5. Include a test checklist to be used to check and initial that each test has been successfully completed.
6. Submit test plan documentation 20 business days before start of tests.

F. Validation Test:

1. Verify operating performance of each I/O point in DDC system.
  - a. Verify analog I/O points at operating value.
  - b. Make adjustments to out-of-tolerance I/O points.
    - 1) Identify I/O points for future reference.
    - 2) Simulate abnormal conditions to demonstrate proper function of safety devices.
    - 3) Replace instruments and controllers that cannot maintain performance indicated after adjustments.
2. Simulate conditions to demonstrate proper sequence of control.

3. Readjust settings to design values and observe ability of DDC system to establish desired conditions.
  4. After 24 Hours following Initial Validation Test:
    - a. Re-check I/O points that required corrections during initial test.
    - b. Identify I/O points that still require additional correction and make corrections necessary to achieve desired results.
  5. After 24 Hours of Second Validation Test:
    - a. Re-check I/O points that required corrections during second test.
    - b. Continue validation testing until I/O point is normal on two consecutive tests.
  6. Completely check out, calibrate, and test all connected hardware and software to ensure that DDC system performs according to requirements indicated.
  7. After validation testing is complete, prepare and submit a report indicating all I/O points that required correction and how many validation re-tests it took to pass. Identify adjustments made for each test and indicate instruments that were replaced.
- G. DDC System Response Time Test:
1. Simulate HLC.
    - a. Heavy load shall be an occurrence of 50 percent of total connected binary COV, one-half of which represent an "alarm" condition, and 50 percent of total connected analog COV, one-half of which represent an "alarm" condition, that are initiated simultaneously on a one-time basis.
  2. Initiate 10 successive occurrences of HLC and measure response time to typical alarms and status changes.
  3. Measure with a timer having at least 0.1-second resolution and 0.01 percent accuracy.
  4. Purpose of test is to demonstrate DDC system, as follows:
    - a. Reaction to COV and alarm conditions during HLC.
    - b. Ability to update DDC system database during HLC.
  5. Passing test is contingent on the following:
    - a. Alarm reporting at printer beginning no more than two seconds after the initiation (time zero) of HLC.
    - b. All alarms, both binary and analog, are reported and printed; none are lost.
    - c. Compliance with response times specified.
  6. Prepare and submit a report documenting HLC tested and results of test including time stamp and print out of all alarms.
- H. DDC System Network Bandwidth Test:
1. Test network bandwidth usage on all DDC system networks to demonstrate bandwidth usage under DDC system normal operating conditions and under simulated HLC.
  2. To pass, none of DDC system networks shall use more than 70 percent of available bandwidth under normal and HLC operation.

**2.83 DDC SYSTEM WIRELESS NETWORK VERIFICATION**

- A. DDC system Installer shall design wireless DDC system networks to comply with performance requirements indicated.
- B. Installer shall verify wireless network performance through field testing and shall document results in a field test report.
- C. Testing and verification of all wireless devices shall include, but not be limited to, the following:
  - 1. Speed.
  - 2. Online status.
  - 3. Signal strength.

**2.84 FINAL REVIEW**

- A. Submit written request to Architect and Construction Manager when DDC system is ready for final review. Written request shall state the following:
  - 1. DDC system has been thoroughly inspected for compliance with contract documents and found to be in full compliance.
  - 2. DDC system has been calibrated, adjusted and tested and found to comply with requirements of operational stability, accuracy, speed and other performance requirements indicated.
  - 3. DDC system monitoring and control of HVAC systems results in operation according to sequences of operation indicated.
  - 4. DDC system is complete and ready for final review.
- B. Review by Architect and Construction Manager shall be made after receipt of written request. A field report shall be issued to document observations and deficiencies.
- C. Take prompt action to remedy deficiencies indicated in field report and submit a second written request when all deficiencies have been corrected. Repeat process until no deficiencies are reported.
- D. Should more than two reviews be required, DDC system manufacturer and Installer shall compensate entity performing review for total costs, labor and expenses, associated with third and subsequent reviews. Estimated cost of each review shall be submitted and approved by DDC system manufacturer and Installer before making the review.
- E. Prepare and submit closeout submittals when no deficiencies are reported.
- F. A part of DDC system final review shall include a demonstration to parties participating in final review.
  - 1. Provide staff familiar with DDC system installed to demonstrate operation of DDC system during final review.
  - 2. Provide testing equipment to demonstrate accuracy and other performance requirements of DDC system that is requested by reviewers during final review.
  - 3. Demonstration shall include, but not be limited to, the following:
    - a. Accuracy and calibration of (10) I/O points randomly selected by the Architect. If review finds that some I/O points are not properly calibrated and not satisfying

performance requirements indicated, additional I/O points may be selected by reviewers until total I/O points being reviewed that satisfy requirements equals quantity indicated.

- b. HVAC equipment and system hard wired and software safeties and life-safety functions are operating according to sequence of operation. Up to (20) I/O points shall be randomly selected by reviewers. Additional I/O points may be selected by reviewers to discover problems with operation.
- c. Correct sequence of operation after electrical power interruption and resumption after electrical power is restored for randomly selected HVAC systems.
- d. Operation of randomly selected dampers and valves in normal-on, normal-off and failed positions.
- e. Reporting of alarm conditions for randomly selected alarms, including different classes of alarms, to ensure that alarms are properly received by operators and operator workstations.
- f. Trends, summaries, logs and reports set-up for Project.
- g. For up to three HVAC systems randomly selected by reviewers, use graph trends to show that sequence of operation is executed in correct manner and that HVAC systems operate properly through complete sequence of operation including different modes of operations indicated. Show that control loops are stable and operating at set points and respond to changes in set point of 20 percent or more.
- h. Software ability to communicate with controllers, operator workstations, uploading and downloading of control programs.
- i. Software ability to edit control programs off-line.
- j. Data entry to show Project-specific customizing capability including parameter changes.
- k. Step through penetration tree, display all graphics, demonstrate dynamic update, and direct access to graphics.
- l. Execution of digital and analog commands in graphic mode.
- m. Spreadsheet and curve plot software and its integration with database.
- n. Online user guide and help functions.
- o. Multitasking by showing different operations occurring simultaneously on four quadrants of split screen.
- p. System speed of response compared to requirements indicated.
- q. For Each Network and Programmable Application Controller:
  - 1) Memory: Programmed data, parameters, trend and alarm history collected during normal operation is not lost during power failure.
  - 2) Operator Interface: Ability to connect directly to each type of digital controller with a portable workstation and mobile device. Show that maintenance personnel interface tools perform as indicated in manufacturer technical literature.

- 3) Standalone Ability: Demonstrate that controllers provide stable and reliable standalone operation using default values or other method for values normally read over network.
  - 4) Electric Power: Ability to disconnect any controller safely from its power source.
  - 5) Wiring Labels: Match control drawings.
  - 6) Network Communication: Ability to locate a controller location on network and communication architecture matches Shop Drawings.
  - 7) Nameplates and Tags: Accurate and permanently attached to control panel doors, instrument, actuators and devices.
- r. For Each Operator Workstation:
- 1) I/O points lists agree with naming conventions.
  - 2) Graphics are complete.
  - 3) UPS unit, if applicable, operates.
- s. Communications and Interoperability: Demonstrate proper interoperability of data sharing, alarm and event management, trending, scheduling, and device and network management. Use ASHRAE 135 protocol analyzer to help identify devices, view network traffic, and verify interoperability. Requirements must be met even if only one manufacturer equipment is installed.
- 1) Data Presentation: On each operator workstation, demonstrate graphic display capabilities.
  - 2) Reading of Any Property: Demonstrate ability to read and display any used readable object property of any device on network.
  - 3) Set Point and Parameter Modifications: Show ability to modify set points and tuning parameters indicated. Modifications are made with messages and write services initiated by an operator using workstation graphics, or by completing a field in a menu with instructional text.
  - 4) Peer-to-Peer Data Exchange: Network devices are installed and configured to perform without need for operator intervention to implement Project sequence of operation and to share global data.
  - 5) Alarm and Event Management: Alarms and events are installed and prioritized according to Owner. Demonstrate that time delays and other logic are set up to avoid nuisance tripping. Show that operators with approved privileges are permitted.
  - 6) Schedule Lists: Schedules are configured for start and stop, mode change, occupant overrides, and night setback as defined in sequence of operations.

- 7) Schedule Display and Modification: Ability to display any schedule with start and stop times for calendar year. Show that all calendar entries and schedules are modifiable from any connected operator workstation by an operator with approved privilege.
- 8) Archival Storage of Data: Data archiving is handled by operator workstation and local trend archiving and display is accomplished.
- 9) Modification of Trend Log Object Parameters: Operator with approved privilege can change logged data points, sampling rate, and trend duration.
- 10) Device and Network Management:
  - a) Display of network device status.
  - b) Display of BACnet Object Information.
  - c) Silencing devices transmitting erroneous data.
  - d) Time synchronization.
  - e) Remote device re-initialization.
  - f) Backup and restore network device programming and master database(s).
  - g) Configuration management of routers.

#### 2.85 ADJUSTING

- A. Occupancy Adjustments: When requested within (12) months from date of Substantial Completion, provide on-site assistance in adjusting system to suit actual occupied conditions. Provide up to two visits to Project during other-than-normal occupancy hours for this purpose.

#### 2.86 MAINTENANCE SERVICE

- A. Maintenance Service: Beginning at Substantial Completion, maintenance service shall include 12 months' full maintenance by DDC system manufacturer authorized service representative. Include monthly preventive maintenance, repair or replacement of worn or defective components, cleaning, calibration and adjusting for proper operation. Parts and supplies shall be manufacturer authorized replacement parts and supplies.

#### 2.87 SOFTWARE SERVICE AGREEMENT

- A. Technical Support: Beginning at Substantial Completion, service agreement shall include software support for one year.
- B. Upgrade Service: At Substantial Completion, update software to latest version. Install and program software upgrades that become available within one year from date of Substantial Completion. Upgrading software shall include operating system and new or revised licenses for using software.
  1. Upgrade Notice: At least 30 days to allow Owner to schedule and access system and to upgrade computer equipment if necessary.

2.88 DEMONSTRATION

- A. Prior to acceptance, the BAS shall undergo a series of performance tests to verify operation and compliance with this specification. These tests shall occur after completion of the installation, startup of the system, and successful performance of preliminary testing by this Section.
- B. The tests described in this section are to be performed in addition to the tests that the contractor performs as a necessary part of the installation, start-up, and debugging process. The architect will be present to observe and review these tests. The architect shall be notified at least ten days in advance of the start of the testing procedures.
- C. The demonstration process shall follow approved checklists and forms. Checklists and forms shall be completed for all systems as part of the demonstration.
- D. Provide at least two persons equipped with two-way communication and shall demonstrate actual field operation of each control and sensing point for all modes of operation including day, night, occupied, unoccupied, fire/smoke alarm, seasonal changeover, and power failure modes. The purpose is to demonstrate the calibration, response, and action of every point and system. Any test equipment required to prove the proper operation shall be provided by and operated by this Section.
- E. As each control input and output is checked, a log shall be completed showing the date, technician initials, and any corrective action taken or needed.
- F. Demonstrate compliance with sequences of operation through all modes of operation.
- G. Demonstrate complete operation of operator interface.
- H. Additionally, the following items shall be demonstrated:
  - 1. DDC loop response. The contractor shall supply trend data output in a graphical form showing the step response of each DDC loop. The test shall show the loop response to a change in setpoint, which represents a change of actuator position of at least 25 percent of its full range. The sampling rate of the trend shall be from 10 seconds to 3 minutes, depending on the speed of the loop. The trend data shall show for each sample the setpoint, actuator position, and controlled variable values. Any loop that yields unreasonably under-damped or over-damped control shall require further tuning by this Section.
  - 2. Demand limiting. Supply a trend data output showing the action of the demand limiting algorithm. The data shall document the action on a minute-by-minute basis over at least a 30-minute period. Included in the trend shall be building kW, demand limiting setpoint, and the status of sheddable equipment outputs.
  - 3. Optimum start/stop. Supply a trend data output showing the capability of the algorithm. The change-of-value or change-of-state trends shall include the output status of all optimally started and stopped equipment, as well as temperature sensor inputs of affected areas.
  - 4. Interface to the building fire alarm system.
  - 5. Operational logs for each system that indicate all setpoints, operating points, valve positions, mode, and equipment status shall be submitted to the architect. These logs shall cover three 48-hour periods and have a sample frequency of not more than 10 minutes. The logs shall be provided in both printed and disk formats.
- I. Any tests that fail to demonstrate the operation of the system shall be repeated at a later date. Provide repairs or revisions to the hardware or software to successfully complete all tests.

2.89 ACCEPTANCE

- A. All tests described in this specification shall have been performed to the satisfaction of both the architect and owner prior to the acceptance of the BAS as meeting the requirements of completion. Any tests that cannot be performed due to circumstances beyond the control of the contractor may be exempt from the completion requirements if stated as such in writing by the owner. Such tests shall then be performed as part of the warranty.
- B. The system shall not be accepted until all forms and checklists completed as part of the demonstration are submitted and approved.

2.90 CLEANING

- A. Clean up debris resulting from daily work. Remove all cartons, containers, crates, etc., under his/her control as soon as their contents have been removed. Waste shall be collected and placed in a designated location.
- B. At the completion of work in any area, clean all work, equipment, etc., keeping it free from dust, dirt, and debris, etc.
- C. At the completion of work, all equipment furnished under this section shall be checked for that has been damaged shall be repaired to match the adjacent areas. Any cabinet or enclosure that has been deformed shall be replaced with new material and repainted to match the adjacent areas.
- D. Remove grease, mastic, adhesives, dust, dirt, stains, fingerprints, labels, and other foreign materials from exposed interior and exterior surfaces.
- E. Wash and shine glazing.
- F. Polish glossy surfaces to a clean shine.

2.91 TRAINING

- A. Provide a minimum of four on-site or classroom training sessions, two days each, throughout the contract period for personnel designated by the owner.
- B. Provide two additional training sessions at 6 and 12 months following building turnover. Each session shall be three days in length and must be coordinated with the building owner.
- C. Base extent of training on scope and complexity of DDC system indicated and training requirements indicated. Provide extent of training required to satisfy requirements indicated even if more than minimum training requirements are indicated
- D. Train the designated staff of owner representative and owner to enable them to do the following:
  - 1. Day-to-day Operators:
    - a. Basic operation of system. Proficiently operate the system
    - b. Understand BAS architecture and configuration
    - c. Understand system components. Understanding each unique product type installed including performance and service requirements for each.
    - d. Understanding operation of each system and equipment controlled by DDC system including sequences of operation, each unique control algorithm and each unique optimization routine

- e. Operate the workstation and peripherals
- f. Log on and off the system
- g. Access graphics, point reports, and logs
- h. Adjust and change system setpoints, time schedules, and holiday schedules
- i. Recognize malfunctions of the system by observation of the printed copy and graphical visual signals
- j. Understand system drawings and Operation and Maintenance manual
- k. Understanding physical location and placement of DDC controllers and I/O hardware
- l. Access data from controllers and ASCs
- m. Operate portable operator terminals
- n. Review of DDC testing results to establish basic understanding of DDC system operating performance and HVAC system limitations as of Substantial Completion.
- o. Running each specified report and log.
- p. Displaying and demonstrating each data entry to show Project-specific customizing capability. Demonstrating parameter changes.
- q. Stepping through graphics penetration tree, displaying all graphics, demonstrating dynamic updating, and direct access to graphics.
- r. Executing digital and analog commands in graphic mode.
- s. Demonstrating control loop precision and stability via trend logs of I/O for not less than 10 percent of I/O installed.
- t. Demonstrating DDC system performance through trend logs and command tracing.
- u. Demonstrating scan, update, and alarm responsiveness.
- v. Demonstrating spreadsheet and curve plot software, and its integration with database.
- w. Demonstrating on-line user guide, and help function and mail facility.
- x. Demonstrating multitasking by showing dynamic curve plot, and graphic construction operating simultaneously via split screen.
- y. Demonstrating the following for HVAC systems and equipment controlled by DDC system:
  - 1) Operation of HVAC equipment in normal-off, -on and failed conditions while observing individual equipment, dampers and valves for correct position under each condition.
  - 2) For HVAC equipment with factory-installed software, show that integration into DDC system is able to communicate with DDC controllers or gateways, as applicable.

- 3) Using graphed trends, show that sequence of operation is executed in correct manner, and HVAC systems operate properly through complete sequence of operation including seasonal change, occupied and unoccupied modes, warm-up and cool-down cycles and other modes of operation indicated.
  - 4) Hardware interlocks and safeties function properly and DDC system performs correct sequence of operation after electrical power interruption and resumption after power is restored.
  - 5) Reporting of alarm conditions for each alarm, and confirm that alarms are received at assigned locations, including operator workstations.
  - 6) Each control loop responds to set point adjustment and stabilizes within time period indicated.
  - 7) Sharing of previously graphed trends of all control loops to demonstrate that each control loop is stable and set points are being maintained.
2. Advanced Operators:
- a. Make and change graphics on the workstation
  - b. Create, delete, and modify alarms, including annunciation and routing of these
  - c. Create, delete, and modify point trend logs and graph or print these both on an ad-hoc basis and at user-definable time intervals
  - d. Create, delete, and modify reports
  - e. Add, remove, and modify system physical points
  - f. Create, modify, and delete programming
  - g. Adding DDC controllers and other network communication devices such as gateways and routers
  - h. Add panels when required
  - i. Add operator interface stations
  - j. Create, delete, and modify system displays, both graphical and others
  - k. Perform DDC field checkout procedures
  - l. Perform DDC controller unit operation and maintenance procedures
  - m. Perform workstation and peripheral operation and maintenance procedures
  - n. Perform DDC diagnostic procedures
  - o. Configure hardware including PC boards, switches, communication, and I/O points
  - p. Maintain, calibrate, troubleshoot, diagnose, and repair hardware
  - q. Adjust, calibrate, and replace system components
3. System Managers/Administrators:
- a. Maintain DDC software and prepare backups
  - b. Interface with job-specific, third-party operator software

- c. Uploading, downloading and off-line archiving of all DDC system software and databases.
  - d. Understanding password and security procedures.
  - e. Adding new operators and making modifications to existing operators.
  - f. Operator password assignments and modification.
  - g. Operator authority assignment and modification.
  - h. Workstation data segregation and modification.
- E. These objectives will be divided into three logical groupings. Participants may attend one or more of these, depending on level of knowledge required.
  - 1. Day-to-day Operators.
  - 2. Advanced Operators.
  - 3. System Managers/Administrators.
- F. Provide course outline and materials. The instructor(s) shall provide one copy of training material per student.
- G. The instructor(s) shall be factory-trained instructors experienced in presenting this material.
- H. Classroom training shall be done using a network of working controllers, representative of the installed hardware.
- I. Training Schedule:
  - 1. Schedule training with Owner 20 business days before expected Substantial Completion.
  - 2. Schedule training to provide Owner with at least 10 business days of notice in advance of training.
  - 3. Training shall occur within normal business hours at a mutually agreed on time. Unless otherwise agreed to, training shall occur Monday through Friday, except on U.S. Federal holidays, with two morning sessions and two afternoon sessions. Each morning session and afternoon session shall be split in half with 15-minute break between sessions. Morning and afternoon sessions shall be separated by 30-minute lunch period. Training, including breaks and excluding lunch period, shall not exceed eight hours per day.
  - 4. Provide staggered training schedule as requested by Owner.
- J. Training Attendee List and Sign-in Sheet:
  - 1. Request from Owner in advance of training a proposed attendee list with name, phone number and e-mail address.
  - 2. Provide a preprinted sign-in sheet for each training session with proposed attendees listed and no fewer than six blank spaces to add additional attendees.
  - 3. Preprinted sign-in sheet shall include training session number, date and time, instructor name, phone number and e-mail address, and brief description of content to be covered during session. List attendees with columns for name, phone number, e-mail address and a column for attendee signature or initials.
  - 4. Circulate sign-in sheet at beginning of each session and solicit attendees to sign or initial in applicable location.

5. At end of each training day, send Owner an e-mail with an attachment of scanned copy (PDF) of circulated sign-in sheet for each session.
- K. Attendee Training Manuals:
1. Provide each attendee with a color hard copy of all training materials and visual presentations.
  2. Hard-copy materials shall be organized in a three-ring binder with table of contents and individual divider tabs marked for each logical grouping of subject matter. Organize material to provide space for attendees to take handwritten notes within training manuals.
  3. In addition to hard-copy materials included in training manual, provide each binder with a sleeve or pocket that includes a DVD or flash drive with PDF copy of all hard-copy materials.
- L. Instructor Requirements:
1. One or multiple qualified instructors to provide training.
  2. Instructors shall have not less than five years of providing instructional training on not less than five past projects with similar DDC system scope and complexity to DDC system installed.
- M. Training Outline:
1. Submit training outline for Owner review at least 10 business day before scheduling training.
  2. Outline shall include a detailed agenda for each training day that is broken down into each of four training sessions that day, training objectives for each training session and synopses for each lesson planned.
- N. On-Site Training:
1. Owner will provide conditioned classroom or workspace with ample desks or tables, chairs, power and data connectivity for instructor and each attendee.
  2. Instructor shall provide training materials, projector and other audiovisual equipment used in training.
  3. Provide as much of training located on-site as deemed feasible and practical by Owner.
  4. On-site training shall include regular walk-through tours to observe each unique product type installed with hands-on review of operation, calibration and service requirements.
  5. Operator workstation provided with DDC system shall be used in training. If operator workstation is not indicated, provide a temporary workstation to convey training content.
- O. Off-Site Training:
1. Provide conditioned training rooms and workspace with ample tables, desks or tables, chairs, power and data connectivity for each attendee.
  2. Provide a workstation for use by each attendee.
- P. Video of Training Sessions:
1. Provide a digital video and audio recording of each training session. Create a separate recording file for each session.
  2. Stamp each recording file with training session number, session name and date.

3. Provide Owner with two copies of digital files on DVDs or flash drives for later reference and for use in future training.
4. Owner retains right to make additional copies for intended training purposes without having to pay royalties.

HVAC.DOC

## SECTION 232100 - HYDRONIC PIPING DISTRIBUTION SYSTEMS

### PART 1 - GENERAL

#### 1.1 RELATED DOCUMENTS

- A. Certain requirements common to all the mechanical and electrical trades (Fire Suppression, Plumbing, HVAC, Electrical, and Tele/Data) are specified in Division 20. To avoid repetition, they are not repeated in each relevant Division and Section. However, these requirements are applicable to the work of this Section and are hereby incorporated by reference.
- B. Drawings and general provisions of the Contract, including General and Supplementary Conditions and Division 01 Specification Sections, apply to this Section.

#### 1.2 SUMMARY

- A. Section includes:
  - 1. Hydronic system pumps
  - 2. Hydronic piping materials and fittings
  - 3. Hydronic system valves and accessories
  - 4. Hydronic piping system air control devices.
  - 5. Hydronic system meters and gauges
  - 6. Hydronic piping specialties and components
- B. Requirements apply to the following hydronic systems:
  - 1. Hot-water heating piping.
  - 2. Glycol cooling or heating-water piping.
  - 3. Makeup-water piping.
  - 4. Condensate-drain piping.
  - 5. Blowdown-drain piping.
  - 6. Air-vent piping.
  - 7. Safety-valve-inlet and -outlet piping.

#### 1.3 DEFINITIONS

- A. ECM: Electronically commutated motor.
- B. WP: Cold working pressure.
- C. EPDM: Ethylene propylene copolymer rubber.
- D. EPR: Ethylene propylene rubber.
- E. ERW: Electric resistance welded steel piping.
- F. FKM: Fluoroelastomer polymer.

- G. HI: Hydraulic Institute.
- H. NBR: Acrylonitrile-butadiene, Buna-N, or nitrile rubber.
- I. NRS: Non-rising stem.
- J. OS&Y: Outside screw and yoke.
- K. RS: Rising stem.
- L. PTFE: Polytetrafluoroethylene
- M. TFE: Tetrafluoroethylene

#### 1.4 ACTION SUBMITTALS

- A. Product Data: For each type of the following:
  - 1. Hydronic pumps
    - a. Include certified performance curves and rated capacities, operating characteristics, furnished specialties, final impeller dimensions, and accessories for each type of product indicated.
    - b. Indicate pump's operating point on curves.
  - 2. Pipe, fittings and joining materials.
  - 3. Bypass chemical feeder.
  - 4. Expansion joints, alignment guides, and anchors.
  - 5. Thermometers, thermowells, pressure gauges, and test plugs
  - 6. Ball valves, butterfly valves, check valves, and globe valves
  - 7. Strainers
  - 8. Suction diffusers
  - 9. Hydronic specialty valves: Include flow and pressure drop curves based on manufacturer's testing for calibrated-orifice balancing valves and automatic flow-control valves.
    - a. Calibrated balancing valves
    - b. Automatic flow control valves
  - 10. Pressure reducing valves
  - 11. Triple duty valves
  - 12. Chainwheel operators
  - 13. Air-control devices.
  - 14. Flexible connectors and expansion fittings.
  - 15. Sleeves
  - 16. Sleeve-seal systems.
  - 17. Grout
  - 18. Escutcheons.

- B. Shop Drawings: For each pump.
  - 1. Show pump layout and connections.
  - 2. Include setting drawings with templates for installing foundation and anchor bolts and other anchorages.
  - 3. Include diagrams for power, signal, and control wiring.
- C. Delegated-Design Submittal:
  - 1. Design calculations and detailed fabrication and assembly of hangers and supports for multiple pipes and attachments of the same to the building structure.
  - 2. Locations of and details for penetrations, including sleeves and sleeve seals for exterior walls, floors, basement, and foundation walls.
  - 3. Locations of and details for penetration and firestopping for fire- and smoke-rated wall and floor and ceiling assemblies.
  - 4. Expansion fittings and loops: For each anchor and alignment guide indicated to comply with performance requirements and design criteria, include analysis data signed and sealed by the qualified professional engineer responsible for their preparation.
    - a. Design Calculations: Calculate requirements for thermal expansion of piping systems and for selecting and designing expansion joints, loops, and swing connections. Design and prepare drawings and calculations for restraint of pipe expansion loops, joints, pipe alignment guides, and pipe anchors, supports and attachments of the same to the building structure. Include seal and signature of Registered Engineer, licensed in jurisdiction where Project is located, certifying compliance with specifications. Submit maximum anchor reaction loads for review and approval to the Structural Engineer.
    - b. Anchor Details: Detail fabrication of each anchor indicated. Show dimensions and methods of assembly and attachment to building structure.
    - c. Alignment Guide Details: Detail field assembly and attachment to building structure.
    - d. Schedule: Indicate type, manufacturer's number, size, material, pressure rating, end connections, and location for each expansion joint.
    - e. Locations: Indicate locations of pipe anchors, alignment guides, and expansion joints and loops.
- D. Wiring Diagrams: For power, signal, and control wiring.

#### 1.5 INFORMATIONAL SUBMITTALS

- A. Coordination Drawings: Piping layout, drawn to scale, on which the following items are shown and coordinated with each other, using input from installers of the items involved:
  - 1. Suspended ceiling components.
  - 2. Other building services.
  - 3. Structural members.
- B. Qualification Data: For Installer.
- C. Welding certificates.

- D. Field quality-control reports.
- E. Product Certificates:
  - 1. For each type of expansion joint, from manufacturer.
  - 2. For each type of meter and gauge, from manufacturer.

#### 1.6 CLOSEOUT SUBMITTALS

- A. Operation and Maintenance Data:
  - 1. For pumps to include in emergency, operation, and maintenance manuals.
  - 2. For expansion joints to include in maintenance manuals.
  - 3. For meters and gauges to include in operation and maintenance manuals.
  - 4. For air-control devices, hydronic specialties, and special-duty valves to include in emergency, operation, and maintenance manuals.
  - 5. Differential pressure meter: For each type of balancing valve and automatic flow control valve, include flow meter, probes, hoses, flow charts, and carrying case.
- B. Maintenance Materials
  - 1. Furnish extra materials that match products installed and that are packaged with protective covering for storage and identified with labels describing contents.
    - a. Mechanical Seals: One mechanical seal(s) for each pump.

#### 1.7 QUALITY ASSURANCE

- A. All welding processes (including, but not limited to, procedures and welding operator qualifications) shall be in strict accordance with the requirements of Section IX of the ASME Boiler and Pressure Vessel Code (edition, including any addenda, in effect at the time of contract execution). On butt weld joints, provide full penetration welds. On socket weld fittings it is required that the toe of weld blends smoothly with no undercut in pipe wall.
- B. Installations, equipment and material provided shall comply with federal, state and local laws, regulations, codes, specifications and standards. In the event of any apparent conflict among standards, codes or this specification, refer conflict to the Owner for written resolution. If work is performed or installation is completed in variance with applicable codes and regulations, remove and replace work to rectify the installation.
- C. Welding of stanchions, brackets, anchors and other welding not performed on pipe joints shall be in accordance with requirements of AWS specifications and requirements.
- D. Welder Qualification:
  - 1. Test welders to demonstrate ability to make acceptable welds. Tests conducted for qualification of welder for work under one Division or Section shall not qualify welder for work under another Division or Section.
    - a. Steel Support Welding Qualifications: Qualify procedures and personnel according to AWS D1.1/D1.1M, "Structural Welding Code - Steel."
    - b. Pipe Welding Qualifications: Qualify procedures and personnel according to Section IX ASME Boiler and Pressure Vessel Code.

2. Records of tests shall be as follows: Each welder shall be assigned an identifying number, letter or symbol. Identifying mark shall be stamped adjacent to welds made by this welder. Identification shall be at top of horizontal piping and at front of vertical piping.
  3. Maintain record of welders employed, showing dates and results of tests and identifying mark assigned to each welder. Certify records and make them accessible to Owner's project representative and/or project manager. Before completion of project, one copy of records
  4. No qualification shall be older than three years when welder commences work on this project. If welder has not welded in required welding process for a period of six months, he shall be re-certified.
- E. Safety valves and pressure vessels shall bear the appropriate ASME label. Fabricate and stamp air separators and expansion tanks to comply with ASME Boiler and Pressure Vessel Code: Section VIII, Division 1.
- F. Source Limitations for Valves: Obtain each type of valve from single source from single manufacturer.
- G. ASME Compliance:
1. ASME B16.10 and ASME B16.34 for ferrous valve dimensions and design criteria.
  2. ASME B31.1 for power piping valves.
  3. ASME B31.9 for building services piping valves.

#### 1.8 PIPING AND VALVE DELIVERY STORAGE AND HANDLING

- A. Packing, shipping, handling, unloading of piping and valves:
1. Ship pipe with capped ends. Maintain end caps through shipping, storage, and handling to prevent pipe end damage and to prevent entrance of dirt, debris, and moisture.
- B. Storage and Protection
1. Store pipe, tube, fittings and valves on site in accordance with manufacturer recommendations.
  2. Place materials indoors and on elevated platforms in a dry location away from construction activity that may cause damage or contamination.
  3. Maintain packaging, caps and seals on all materials until ready for immediate installation.
- C. Prepare valves for shipping as follows:
1. Protect internal parts against rust and corrosion.
  2. Protect threads, flange faces, grooves, and weld ends.
  3. Set angle and globe valves closed to prevent rattling.
  4. Set ball and plug valves open to minimize exposure of functional surfaces.
  5. Set butterfly valves closed or slightly open.
  6. Block check valves in either closed or open position.
  7. Use the following precautions during storage:
    - a. Maintain valve end protection.

- b. Store valves indoors and maintain at higher than ambient dew point temperature. If outdoor storage is necessary, store valves off the ground in watertight enclosures.
- 8. Use sling to handle large valves; rig sling to avoid damage to exposed parts. Do not use handwheels or stems as lifting or rigging points.

## 1.9 COORDINATION

- A. Arrange for pipe spaces, chases, slots, and openings in building structure during progress of construction, to allow for HVAC installations.
- B. Coordinate installation of required supporting devices and set sleeves in poured-in-place concrete and other structural components as they are constructed.
- C. Coordinate requirements for access panels and doors for HVAC items requiring access that are concealed behind finished surfaces. Access panels and doors are specified in Division 08.

## PART 2 - PRODUCTS

### 2.1 PERFORMANCE REQUIREMENTS

- A. Refer to Part 3 for system pressure rating requirements for all components.
- B. System design temperatures:
  - 1. Hot-water heating piping.
    - a. Maximum Temperature = 200 deg F
  - 2. Glycol heating-water or heat recovery piping.
    - a. Minimum Temperature = 32 deg F
    - b. Maximum Temperature = 100 deg F
- C. Expansion fittings and loops:
  - 1. Compatibility: Products shall be suitable for piping service fluids, materials, working pressures, and temperatures.
  - 2. Capability: Products to absorb 100 percent of maximum axial movement between anchors.
  - 3. For field fabricated expansion loops, design shall be based on 2016 ASHRAE Systems and Equipment Handbook Chapter 46. Allowable stress ( $S_A$ ) shall not exceed 2016 ASHRAE Handbook recommended limit of 15,000 psi.
    - a. Design for heating hot water or glycol heating-water piping system loops shall be based on 0 deg F initial pipe temperature and 200 deg F final temperature.
  - 4. Basis of design expansion loops for copper piping are based on brazed or high temperature solder joints only. Where press joints are selected, use only factory fabricated expansion joints and loops (stainless steel hose) for expansion compensation.
  - 5. Basis of design expansion loops for steel piping are based on welded fittings only. Where grooved fittings are selected, modify layout (may require relocation of anchors or loops) to meet grooved coupling manufacturer written installation instructions.

- D. Electrical Components, Devices, and Accessories: Listed and labeled as defined in NFPA 70, by a qualified testing agency, and marked for intended location and application.

## 2.2 HYDRONIC DISTRIBUTION PUMPS

- A. Manufacturers: Subject to compliance with requirements, provide products by one of the following, or approved equal:
  - 1. Armstrong Pumps, Inc.,
  - 2. Aurora Pump; Pentair Ltd,
  - 3. Bell & Gossett a Xylem Brand,
  - 4. Grundfos Pumps Corporation,
  - 5. ITT Goulds Pumps,
  - 6. Peerless Pump Company,
  - 7. Taco Comfort Solutions, Inc,
  - 8. Or approved equal.
- B. General Requirements:
  - 1. Source Limitations: Except automatic condensate pump units, obtain pumps from single source from single manufacturer.
  - 2. Description: Factory-assembled and -tested, centrifugal, pump as defined in HI-1.1, HI-1.2 and HI-1.3.
  - 3. Pump Motors: Comply with NEMA designation, temperature rating, service factor, and efficiency requirements for motors specified in Division 23.
    - a. Enclosure Type: Refer to schedules.
    - b. NEMA Premium Efficient motors as defined in NEMA MG 1.
    - c. Motor Sizes: Minimum size as indicated. If not indicated, large enough so driven load will not require motor to operate in service factor.
    - d. Controllers, Electrical Devices, and Wiring: Comply with requirements for electrical devices and connections specified in electrical Sections.
    - e. Variable-speed motor. For pumps that are not frequency-drive controlled, trim impeller to match specified performance.
    - f. Electrical Characteristics: Refer to schedules on drawings.
- C. Inline Pumps:
  - 1. Pump Type: Match scheduled equipment pump type.
    - a. Close-coupled in-line pumps shall be designed for installation with pump and motor shafts mounted horizontally or vertically.
    - b. Split-coupled pumps shall be designed for installation pump and motor shafts mounted vertically.
    - c. Maximum Operating Conditions: 225 deg F and 175 psig working pressure.
  - 2. Pump Construction:

- a. Casing: Radially split, cast iron, with threaded gauge tappings at inlet and outlet, and threaded companion-flange connections.
  - b. Impeller: Cast bronze or stainless-steel; statically and dynamically balanced, and keyed to shaft.
  - c. Pump Shaft: Carbon or alloy steel, with copper-alloy shaft sleeve.
  - d. Seal: Mechanical seal consisting of carbon rotating ring against a ceramic seat rated for a minimum of 250 deg F.
  - e. Pump Bearings: Permanently lubricated ball bearings.
  - f. Shaft Coupling: Molded rubber insert with interlocking spider or interlocking frame with interconnecting springs capable of absorbing vibration.
  - g. Provide integral pump motor variable-speed controller.
- D. End Suction Pumps, Base Mounted:
- 1. General
    - a. The pump internals shall be capable of being serviced without disturbing piping connections, electrical motor, connections or pump to motor alignment. Pump shall be designed to allow for true back pull-out allowing access to the pump's working components for ease of maintenance.
    - b. The pumps shall be composed of three separable components a motor, bearing assembly, and pump end (wet end). The motor shaft shall be connected to the pump shaft via a replaceable flexible coupling.
    - c. Maximum Operating Conditions: 225 deg F and 175 PSIG working pressure.
    - d. Base plate shall be of structural steel or fabricated steel channel with fully open grouting area (for field grouting). The minimum base plate stiffness shall conform to ANSI/HI 1.3.8-2019 for grouted Horizontal Baseplate Design standards.
  - 2. Pump Type: Match scheduled equipment pump type
    - a. Flex-coupled pumps shall be designed for installation with pump and motor shafts mounted horizontally.
  - 3. Pump Construction:
    - a. Casing: Vertically split, cast iron, with replaceable bronze wear rings, drain plug at bottom and air vent at top of volute, threaded gauge tappings at inlet and outlet, and flanged connections.
      - 1) Pump volute shall be of a cast iron design with integrally cast pedestal volute support with integral cast iron flanges. Volute shall include gauge ports at nozzles, and vent and drain ports.
    - b. Impeller: Cast bronze or stainless-steel; statically and dynamically balanced to ANSI/HI 9.6.4-2016, balance grade G6.3, keyed to shaft, and secured with a stainless-steel locking cap screw or nut.
    - c. Pump Shaft and Sleeve: The pump shall incorporate a dry shaft design to prevent the circulating fluid from contacting the shaft. The pump shaft shall be of carbon or stainless steel with field replaceable bronze or stainless-steel sleeve covering all wetted areas under the sleeve. Shaft sleeve shall be slip on (press on not allowable) and must be easily replaced in the field.

- d. Pump Stub Shaft: Where manufacturer uses a stub shaft, shaft shall be type 304 stainless steel.
- e. Coupling: Capable of absorbing torsional vibration, between the pump and motor. Pumps for variable speed application shall be provided with a manufacturer recommended coupling sleeve. Coupling shall allow for removal of pump wetted end without disturbing pump volute or movement of the pump motor and electrical connections.
  - 1) An ANSI and OSHA rated coupling guard shall shield the coupling during operation. Coupling guard shall be dual rated ANSI B15.1 and OSHA 1910.219 compliant and contain viewing windows for inspection of the coupling. No more than 0.25 inches of either rotating assembly shall be visible beyond the coupling guard.
- f. A bearing assembly shall support the shaft via two heavy-duty re-greaseable ball bearings or permanently sealed bearings with an L10 life of 60,000 hours. Bearing assembly shall be replaceable without disturbing the system piping and shall have foot support at the coupling end. Pump bearings shall be re-greaseable without removal of the bearings from the bearing assembly.
- g. Thermal expansion of the shaft toward the impeller shall be prevented via an inboard thrust bearing.
- h. Seal: Manufacturer recommended mechanical seal selected to meet pressure and temperature rating based on system fluid (water or glycol). Seal shall consist of rotating ring against a seat held by a stainless-steel spring, bellows and seat gasket. Include water slinger on shaft between motor and seal.
- i. Pump shall be equipped with either an internally flushed mechanical seal assembly installed in an enlarged tapered seal chamber or manufacturer optional external seal flush line assembly.
  - 1) For pumps used on open systems (cooling towers) include manufacturer recommended replaceable cartridge filter or separator with shut-off isolation valve installed in the seal flushing line. The filter shall have the ability to remove particles down to five microns in size.

**E. Automatic Condensate Pump Units**

- 1. Manufacturers: Subject to compliance with requirements, provide products by one of the following, or approved equal:
  - a. Beckett Corporation,
  - b. Crane Pumps & Systems,
  - c. Grundfos Pumps Corporation,
  - d. Hartell Pumps; Milton Roy,
  - e. Little Giant Pump Co.,
  - f. Or approved equal.
- 2. Source Limitations: Obtain pump units from single source from single manufacturer.
- 3. Description: Packaged units with corrosion-resistant pump, plastic tank with cover, and automatic controls. Collects and removes condensate from fan coil units, air handling

units, condensing boilers, and similar components. Include factory- or field-installed check valve and 72-inch- minimum, electrical power cord with plug.

4. Capacities and characteristics as scheduled on drawings.
  - a. For condensate pumps mounted in plenum applications, pumps shall be hard wired and shall be UL 2043 listed for the application.

## 2.3 HYDRONIC PIPING MATERIALS AND FITTINGS

### A. Copper Tube and Fittings

1. Drawn-Temper Copper Tubing Above Ground: ASTM B 88, Type L.
2. Brazed Joint Fittings
  - a. Wrought-Copper Fittings, Unions and Couplings: ASME B16.22
3. Press Joint Fittings (125 psig pressure rated systems only):
  - a. Manufacturer: Subject to compliance with requirements, provide products by one of the following, or approved equal:
    - 1) Anvil International,
    - 2) NIBCO,
    - 3) Viega ProPress,
    - 4) Apollo,
    - 5) Or approved equal.
  - b. Wrought-Copper Fittings, Unions and Couplings: ASME B16.51
  - c. EPDM Gasket: Manufacturer standard O-rings for specific application. Provide O-ring and indicator lubricant. Manufacturer shall verify water quality at the site will not negatively affect O-ring or lubricant.

### B. Steel Pipe and Fittings

1. Steel Pipe: ASTM A 53/A 53M, black steel with plain ends; welded and seamless, Grade B, and wall thickness as indicated in "Piping, Specialty and Valve Applications" Article.
2. Cast-Iron Threaded Fittings: ASME B16.4; Classes 125 and 250 as indicated in "Piping, Specialty and Valve Applications" Article.
3. Malleable-Iron Threaded Fittings: ASME B16.3, Classes 150 and 300 as indicated in "Piping, Specialty and Valve Applications" Article.
4. Malleable-Iron Unions: ASME B16.39; Classes 150, 250, and 300 as indicated in "Piping, Specialty and Valve Applications" Article.
5. Cast-Iron Pipe Flanges and Flanged Fittings: ASME B16.1, Classes 25, 125, and 250; raised ground face, and bolt holes spot faced as indicated in "Piping, Specialty and Valve Applications" Article.
6. Wrought-Steel Fittings: ASTM A 234/A 234M, wall thickness to match adjoining pipe.
7. Wrought Cast and Forged-Steel Flanges and Flanged Fittings: ASME B16.5, including bolts, nuts, and gaskets of the following material group, end connections, and facings:

- a. Material Group: 1.1.
  - b. End Connections: Butt welding.
  - c. Facings: Raised face.
8. Grooved Mechanical-Joint Fittings and Couplings:
- a. Manufacturers: Subject to compliance with requirements, available manufacturers offering products that may be incorporated into the Work include the following, or approved equal:
    - 1) Anvil International, Inc.,
    - 2) Star Pipe Products,
    - 3) Victaulic Company,
    - 4) Or approved equal.
  - b. Joint Fittings: ASTM A 536, Grade 65-45-12 ductile iron; ASTM A 47/A 47M, Grade 32510 malleable iron; ASTM A 53/A 53M, Type F, E, or S, Grade B fabricated steel; or ASTM A 106/A 106M, Grade B steel fittings with grooves or shoulders constructed to accept grooved-end couplings; with nuts, bolts, locking pin, locking toggle, or lugs to secure grooved pipe and fittings.
  - c. Couplings: Ductile- or malleable-iron housing and EPDM gasket rated for minimum 230 deg F and of central cavity pressure-responsive design; with nuts, bolts, locking pin, locking toggle, or lugs to secure grooved pipe and fittings. Couplings used for expansion compensation including loops shall be flexible type couplings.
9. Steel Pipe Nipples: ASTM A 733, made of same materials and wall thicknesses as pipe in which they are installed.

C. Joining Materials

1. Pipe-Flange Gasket Materials: Suitable for chemical and thermal conditions of piping system contents.
  - a. Available Manufacturers: Subject to compliance with requirements, manufacturers offering products that may be incorporated into the Work include the following, or approved equal:
    - 1) Grafoil,
    - 2) Flexitallic,
    - 3) Or approved equal.
  - b. ASME B16.21, nonmetallic, flat, asbestos free, 1/8-inch maximum thickness unless otherwise indicated.
    - 1) Full-Face Type: For flat-face, Class 125, cast-iron and cast-bronze flanges.
    - 2) Narrow-Face Type: For raised-face, Class 250, cast-iron and steel flanges.
2. Flange Bolts and Nuts: ASME B18.2.1, carbon steel, unless otherwise indicated.
3. Solder Filler Metals: ASTM B 32, lead-free silver alloys. Include water-flushable flux according to ASTM B 813.

4. Brazing Filler Metals: AWS A5.8/A5.8M, BCuP Series, copper-phosphorus alloys for joining copper with copper; or BAg-1, silver alloy for joining copper with bronze or steel.
  5. Welding Filler Metals: Comply with AWS D10.12M/D10.12 for welding materials appropriate for wall thickness and chemical analysis of steel pipe being welded.
    - a. Gasket Material: Thickness, material, and type suitable for fluid to be handled and working temperatures and pressures.
- D. Transition Fittings
1. Plastic-to-Metal Transition Fittings:
    - a. Manufacturers: Subject to compliance with requirements, available manufacturers offering products that may be incorporated into the Work include the following, or approved equal:
      - 1) Charlotte Pipe and Foundry Company,
      - 2) IPEX Inc.,
      - 3) KBI (King Bros. Industries),
      - 4) Or approved equal.
    - b. One-piece fitting with one threaded brass or copper insert and one solvent-cement-joint end of material and wall thickness to match plastic pipe material.
  2. Plastic-to-Metal Transition Unions:
    - a. Manufacturers: Subject to compliance with requirements, available manufacturers offering products that may be incorporated into the Work include the following, or approved equal:
      - 1) Charlotte Pipe and Foundry Company,
      - 2) IPEX Inc.,
      - 3) KBI (King Bros. Industries),
      - 4) NIBCO INC; Model #T/S-1710,
      - 5) Or approved equal.
    - b. Brass or copper end, solvent-cement-joint end of material and wall thickness to match plastic pipe material, rubber gasket, and threaded union.
- E. Flexible Hose Connectors - Maximum Pipe Size 1 inch NPS.
1. Manufacturers: Subject to compliance with requirements, available manufacturers offering products that may be incorporated into the Work include the following, or approved equal:
    - a. IMI Flow Design,
    - b. Macon,
    - c. Nexus,
    - d. Or approved equal.
  2. Minimum Operating Pressure Rating: 225 psig at 230 deg F.
  3. 304 stainless steel braided hose with EPDM core.

4. End connections: Match piping and equipment connections.
  5. Maximum length: 18 inches unless noted otherwise.
- F. Dielectric Fittings
1. General Requirements: Assembly of copper alloy and ferrous materials with separating nonconductive insulating material. Include end connections compatible with pipes to be joined.
  2. Dielectric Unions:
    - a. Manufacturers: Subject to compliance with requirements, available manufacturers offering products that may be incorporated into the Work include the following, or approved equal:
      - 1) A.Y. McDonald Mfg. Co.,
      - 2) Capitol Manufacturing Company,
      - 3) Central Plastics Company,
      - 4) Hart Industries International, Inc,
      - 5) Jomar International, Ltd,
      - 6) Matco-Norca,
      - 7) Watts Regulator Co,
      - 8) Zurn Industries, LLC; AquaSpec Commercial Faucet Products,
      - 9) Or approved equal.
    - b. Description:
      - 1) Standard: ASSE 1079.
      - 2) Refer to Part 3 for pressure and temperature rating.
    - c. End Connections: Solder-joint copper alloy and threaded ferrous.
      - 1) Fittings in "Dielectric Flanges" Paragraph below are available in NPS 1-1/2 to NPS 4 (DN 40 to DN 100).
  3. Dielectric Flanges:
    - a. Manufacturers: Subject to compliance with requirements, available manufacturers offering products that may be incorporated into the Work include the following, or approved equal:
      - 1) Capitol Manufacturing Company,
      - 2) Central Plastics Company,
      - 3) Matco-Norca,
      - 4) Watts Regulator Co,
      - 5) Zurn Industries, LLC; AquaSpec Commercial Faucet Products,
      - 6) Or approved equal.
    - b. Description:
      - 1) Standard: ASSE 1079.

- 2) Factory-fabricated, bolted, companion-flange assembly.
    - 3) Refer to Part 3 for pressure and temperature rating.
    - 4) End Connections: Solder-joint copper alloy and threaded ferrous; threaded solder-joint copper alloy and threaded ferrous.
  4. Dielectric Nipples:
    - a. Manufacturers: Subject to compliance with requirements, available manufacturers offering products that may be incorporated into the Work include the following, or approved equal:
      - 1) Elster Perfection Corporation,
      - 2) Grinnell G-Fire by Johnson Controls Company,
      - 3) Matco-Norca,
      - 4) Precision Plumbing Products,
      - 5) Victaulic Company,
      - 6) Or approved equal.
    - b. Description:
      - 1) Standard: IAPMO PS 66.
      - 2) Electroplated steel nipple, complying with ASTM F 1545.
      - 3) End Connections: Male threaded or grooved.
      - 4) Lining: Inert and noncorrosive, propylene.
  5. Dielectric-Flange Insulating Kits:
    - a. Manufacturers: Subject to compliance with requirements, available manufacturers offering products that may be incorporated into the Work include the following, or approved equal:
      - 1) Advance Products & Systems, Inc,
      - 2) Calpico, Inc,
      - 3) Central Plastics Company,
      - 4) Or approved equal.
    - b. Description:
      - 1) Nonconducting materials for field assembly of companion flanges.
      - 2) Refer to Part 3 for pressure and temperature rating.
      - 3) Gasket: Neoprene or phenolic.
      - 4) Bolt Sleeves: Phenolic or polyethylene.
      - 5) Washers: Phenolic with steel backing washers.
- G. Bypass Chemical Feeder
1. Provide bypass feeder(s) with a 5-gallon capacity. The feeder shell and tank heads shall be constructed of steel.

2. Bypass feeder at a minimum shall be rated at same pressure and temperature as system served.
3. The tank shall have a wide mouth, to allow chemical addition without the need of a funnel. The bypass feeder shall have a continuous threaded closure requiring multiple turns to close and seal. Closures using partial threads or lugs shall not be considered.
4. Cap shall be constructed of cast iron with manufacturer recommended treatment of underside to prevent corrosion. Provide with gasket seal.
5. Bypass feeder shall be provided with legs to elevate the feeder off the floor. The legs shall have holes to allow mounting by anchor bolts.

H. Expansion Loops, Joints, Swing Connections, Alignment Guides and Anchors

1. Field Fabricated Expansion Loops: Fabricate expansion loops using piping materials and fittings to dimensions shown on the approved shop drawings. Sizes must be confirmed using actual field location of anchors and guides .
2. Factory Fabricated Expansion Joints and Loops (Stainless Steel Hose)
  - a. Manufacturers: Subject to compliance with requirements, available manufacturers offering products that may be incorporated into the Work include the following, or approved equal:
    - 1) Flex-Hose Co., Inc,
    - 2) Hyspan,
    - 3) Linetics Noise Control,
    - 4) Metraflex, Inc,
    - 5) Or approved equal.
  - b. U-shaped or V-shaped subject to meeting expansion requirements and space limitations of the project.
  - c. Connections to match system.
  - d. Class: 150
  - e. 300 Series Stainless Steel or Bronze Hose and Braid
  - f. 90 and 180 degree turns: Carbon steel schedule 40
3. Standards: ASTM F 1120 and EJMA's "Standards of the Expansion Joint Manufacturers Association, Inc."
4. Type: Circular, externally pressurized corrugated bellows.
5. Refer to Part 3 for pressure and temperature rating.
6. Configuration: Single joint class(es) unless otherwise indicated.
7. Expansion Joints for Copper Tubing: Multi-ply phosphor-bronze bellows, copper pipe ends, and brass shrouds.
  - a. End Connections for Copper Tubing NPS 2 and Smaller: Solder joint.
8. Expansion Joints for Steel Piping: Multi-ply stainless-steel bellows, steel pipe ends, and carbon-steel shroud.
  - a. End Connections for Steel Pipe NPS 2 and Smaller: Threaded.

- b. End Connections for Steel Pipe NPS 2-1/2 and Larger: Flanged or Weld.
- 9. Alignment Guides and Anchors
  - a. Alignment Guides:
    - 1) Manufacturers: Subject to compliance with requirements, available manufacturers offering products that may be incorporated into the Work include the following, or approved equal:
      - a) Adscio Manufacturing LLC,
      - b) Advanced Thermal Systems, Inc,
      - c) Flex-Hose Co., Inc,
      - d) Flexicraft Industries,
      - e) Flex-Weld, Inc,
      - f) Hyspan Precision Products, Inc,
      - g) Metraflex, Inc,
      - h) Senior Flexonics Pathway,
      - i) Unisource Manufacturing, Inc,
      - j) U.S. Bellows, Inc,
      - k) Or approved equal.
    - 2) Description: Steel, factory-fabricated alignment guide, with bolted two-section outer cylinder and base for attaching to structure; with two-section guiding spider for bolting to pipe.
    - 3) Anchor Materials:
      - a) Steel Shapes and Plates: ASTM A 36/A 36M.
      - b) Bolts and Nuts: ASME B18.10 or ASTM A 183, steel hex head.
      - c) Washers: ASTM F 844, steel, plain, flat washers.
      - d) Mechanical Fasteners: Insert-wedge-type stud with expansion plug anchor for use in hardened Portland cement concrete, with tension and shear capacities appropriate for application.
      - e) Stud: Threaded, zinc-coated carbon steel.
      - f) Expansion Plug: Zinc-coated steel.
      - g) Washer and Nut: Zinc-coated steel.
  - b. Chemical Fasteners: Insert-type-stud, bonding-system anchor for use with hardened portland cement concrete, with tension and shear capacities appropriate for application.
  - c. Bonding Material: ASTM C 881/C 881M, Type IV, Grade 3, two-component epoxy resin suitable for surface temperature of hardened concrete where fastener is to be installed.
  - d. Stud: ASTM A 307, zinc-coated carbon steel with continuous thread on stud unless otherwise indicated.

- e. Washer and Nut: Zinc-coated steel.

## 2.4 HYDRONIC SYSTEM METERS AND GAUGES

### A. Liquid-in-glass Thermometers

1. Manufacturers: Subject to compliance with requirements, available manufacturers offering products that may be incorporated into the Work include the following, or approved equal:
  - a. Flo Fab Inc,
  - b. Miljoco Corporation,
  - c. Palmer Wahl Instrumentation Group,
  - d. Tel-Tru Manufacturing Company,
  - e. Trerice, H. O. Co,
  - f. Weiss Instruments, Inc,
  - g. Winters Instruments - U.S.,
  - h. Or approved equal.
2. Standard: ASME B40.200.
3. Case: Cast aluminum or plastic; 9-inch nominal size unless otherwise indicated.
4. Case Form:
  - a. When mounted between 3 and 7 feet above the floor: straight.
  - b. When mounted at all other heights: adjustable angle
5. Tube: Glass with magnifying lens and blue or red organic liquid.
6. Tube Background: Nonreflective aluminum with permanently etched scale markings graduated in deg F.
7. Window: Glass or plastic.
8. Stem: Aluminum, brass, or stainless steel and of length to suit installation.
  - a. Design for Air-Duct Installation: With ventilated shroud.
  - b. Design for Thermowell Installation: Bare stem.
9. Connector: 1-1/4 inches, with ASME B1.1 screw threads.
10. Accuracy: Plus or minus 1 percent of scale range or one scale division, to a maximum of 1.5 percent of scale range.

### B. Thermowells

1. Standard: ASME B40.200.
2. Description: Pressure-tight, socket-type fitting made for insertion into piping tee fitting.
3. Material for Use with Copper Tubing: CNR or CUNI.
4. Material for Use with Steel Piping: CRES or CSA.
5. Type: Stepped shank unless straight or tapered shank is indicated.

6. External Threads: NPS 1/2, NPS 3/4, or NPS 1, ASME B1.20.1 pipe threads.
7. Internal Threads: 1/2, 3/4, and 1 inch, with ASME B1.1 screw threads.
8. Bore: Diameter required to match thermometer bulb or stem.
9. Insertion Length: Length required to match thermometer bulb or stem.
10. Lagging Extension: Include on thermowells for insulated piping and tubing.
11. Bushings: For converting size of thermowell's internal screw thread to size of thermometer connection.
12. Heat-Transfer Medium: Mixture of graphite and glycerin.

**C. Pressure gauges**

1. Direct-Mounted, Metal-Case, Dial-Type Pressure gauges:
  - a. Manufacturers: Subject to compliance with requirements, available manufacturers offering products that may be incorporated into the Work include the following, or approved equal:
    - 1) Ernst Flow Industries,
    - 2) Flo Fab Inc,
    - 3) Marsh Bellofram,
    - 4) Trerice, H. O. Co.,
    - 5) Watts Regulator Co.; a div. of Watts Water Technologies, Inc,
    - 6) Weiss Instruments, Inc,
    - 7) Or approved equal.
  - b. Standard: ASME B40.100.
  - c. Case: Liquid-filled Sealed type(s); cast aluminum or drawn steel; 4-1/2-inch nominal diameter.
  - d. Pressure-Element Assembly: Bourdon tube unless otherwise indicated.
  - e. Pressure Connection: Brass, with NPS 1/2, ASME B1.20.1 pipe threads and bottom-outlet type unless back-outlet type is indicated.
  - f. Movement: Mechanical, with link to pressure element and connection to pointer.
  - g. Dial: Nonreflective aluminum with permanently etched scale markings graduated in psi and kPa.
  - h. Pointer: Dark-colored metal.
  - i. Window: Glass.
  - j. Ring: Metal.
  - k. Accuracy: Grade A, plus or minus 1 percent of middle half of scale range.

**D. Gage Attachments**

1. Snubbers: ASME B40.100, brass; with NPS 1/2, ASME B1.20.1 pipe threads and piston or porous-metal-type surge-dampening device. Include extension for use on insulated piping.

2. Siphons: Loop-shaped section of stainless-steel pipe with NPS 1/2 pipe threads.
3. Valves: Brass or stainless-steel needle, with NPS 1/2, ASME B1.20.1 pipe threads.

E. Test Plugs

1. Manufacturers: Subject to compliance with requirements, available manufacturers offering products that may be incorporated into the Work include the following, or approved equal:
  - a. Flow Design, Inc,
  - b. Miljoco Corporation,
  - c. National Meter, Inc,
  - d. Peterson Equipment Co., Inc,
  - e. Sisco Manufacturing Company, Inc,
  - f. Trerice, H. O. Co.,
  - g. Watts Regulator Co.; a div. of Watts Water Technologies, Inc,
  - h. Weiss Instruments, Inc,
  - i. Or approved equal.
2. Description: Test-station fitting made for insertion into piping tee fitting.
3. Body: Brass or stainless steel with core inserts and gasketed and threaded cap. Include extended stem on units to be installed in insulated piping.
4. Thread Size: NPS 1/2, ASME B1.20.1 pipe thread.
5. Minimum Pressure and Temperature Rating: 500 psig at 200 deg F.
6. Core Inserts: Chloro-sulfonated polyethylene synthetic and EPDM self-sealing rubber.

2.5 HYDRONIC SYSTEMS VALVES AND ACCESSORIES

A. General Valve Requirements

1. Valve Pressure and Temperature Ratings: Not less than indicated and as required for system pressures and temperatures. Valves shall have name of manufacturer and guaranteed working pressure cast or stamped on bodies. Gaskets and packings shall not contain asbestos.
2. Valve Sizes: Same as upstream piping unless otherwise indicated.
3. Valve Actuator Types:
  - a. Gear Actuator: For quarter-turn valves NPS 8 and larger.
  - b. Handwheel: For valves other than quarter-turn types.
  - c. Handlever: For quarter-turn valves NPS 6 and smaller except plug valves.
  - d. Wrench: For plug valves with square heads. Furnish Owner with 1 wrench for every 5 plug valves, for each size square plug-valve head.
  - e. Chainwheel: Device for attachment to valve handwheel, stem, or other actuator; of size and with chain for mounting height, as indicated in the "Valve Installation" Article.

4. Valves in Insulated Piping: With 2-inch stem extensions and the following features:
    - a. Ball Valves: With extended operating handle of non-thermal-conductive material, and protective sleeve that allows operation of valve without breaking the vapor seal or disturbing insulation.
    - b. Butterfly Valves: With extended neck.
  5. Valve-End Connections:
    - a. Flanged: With flanges according to ASME B16.1 for iron valves.
    - b. Threaded: With threads according to ASME B1.20.1.
  6. Valve Bypass and Drain Connections: MSS SP-45.
- B. Two-Piece, Full-Port, Bronze Ball Valves with Stainless-Steel Trim:
1. Manufacturers: Subject to compliance with requirements, available manufacturers offering products that may be incorporated into the Work include the following, or approved equal:
    - a. Cannon,
    - b. Conbraco Industries, Inc.; Apollo Valves,
    - c. Crane Co.; Crane Valve Group; Crane Valves,
    - d. Grinnell,
    - e. Hammond Valve,
    - f. Kitz,
    - g. Milwaukee Valve Company,
    - h. NIBCO INC,
    - i. Rockwell,
    - j. Stockham,
    - k. Watts Regulator Co.; a division of Watts Water Technologies, Inc,
    - l. Or approved equal.
  2. Description:
    - a. Standard: MSS SP-110.
    - b. Stem: Stainless steel.
    - c. Ball: Stainless steel, vented.
    - d. Refer to schedules in Part 3 for specific application requirements.
- C. Cast Steel Ball Valves, Flanged (2.5 inch and larger)
1. Manufacturers: Subject to compliance with requirements, available manufacturers offering products that may be incorporated into the Work include the following, or approved equal:
    - a. Apollo: 88A-200 Series,
    - b. Bray,

- c. Keckley,
    - d. Or approved equal.
  - 2. Description:
    - a. Class: 150.
    - b. Stem: Carbon Steel
    - c. Ball: Stainless steel, vented.
    - d. Seal: PTFE
    - e. Refer to schedules in Part 3 for specific application requirements.
- D. Iron General Service Butterfly Valves
- 1. Manufacturers: Subject to compliance with requirements, available manufacturers offering products that may be incorporated into the Work include the following, or approved equal:
    - a. ABZ Valve and Controls; a division of ABZ Manufacturing, Inc,
    - b. Centerline,
    - c. Conbraco Industries, Inc.; Apollo Valves,
    - d. Crane Co.; Crane Valve Group; Stockham Division,
    - e. DeZurik Water Controls,
    - f. Grinnell,
    - g. Hammond Valve,
    - h. Jomar,
    - i. Keystone,
    - j. Milwaukee Valve Company,
    - k. NIBCO INC,
    - l. Watts Regulator Co.; a division of Watts Water Technologies, Inc,
    - m. Or approved equal.
  - 2. Description:
    - a. Standard: MSS SP-67, Type I
    - b. Stem: One- or two-piece stainless steel.
    - c. Disc: Aluminum bronze.
    - d. Refer to schedules in Part 3 for specific application requirements.
- E. Carbon Steel High-Performance Butterfly Valves
- 1. Manufacturers: Subject to compliance with requirements, available manufacturers offering products that may be incorporated into the Work include the following, or approved equal:
    - a. ABZ Valve and Controls; a division of ABZ Manufacturing, Inc,
    - b. Bray Controls; a division of Bray International,

- c. DeZurik Water Controls,
    - d. Flowseal,
    - e. Jomar,
    - f. Keystone,
    - g. NIBCO INC,
    - h. Posi-Seal,
    - i. Or approved equal.
  - 2. Description:
    - a. Standard: MSS SP-68
    - b. Stem: Stainless steel; offset from seat plane.
    - c. Disc: 316 stainless steel.
    - d. Service: Bidirectional.
    - e. Refer to schedules in Part 3 for specific application requirements.
- F. Bronze Globe Valves
- 1. Manufacturers: Subject to compliance with requirements, available manufacturers offering products that may be incorporated into the Work include the following, or approved equal:
    - a. Crane Co.; Crane Valve Group; Crane Valves,
    - b. Crane Co.; Crane Valve Group; Stockham Division (Class 125),
    - c. Grinnell,
    - d. Hammond Valve,
    - e. Jomar,
    - f. Milwaukee Valve Company,
    - g. NIBCO INC,
    - h. Walworth,
    - i. Or approved equal.
  - 2. Description:
    - a. Standard: MSS SP-80, Type 1 (Class 125).
    - b. Standard: MSS SP-80, Type 2 (Class 150)
    - c. Packing: Asbestos free.
    - d. Handwheel: Malleable iron or bronze.
    - e. Refer to schedules in Part 3 for specific application requirements.
- G. Iron Globe Valves
- 1. Manufacturers: Subject to compliance with requirements, available manufacturers offering products that may be incorporated into the Work include the following, or approved equal:

- a. Crane Co.; Crane Valve Group; Crane Valves,
    - b. Crane Co.; Crane Valve Group; Jenkins Valves,
    - c. Crane Co.; Crane Valve Group; Stockham Division,
    - d. Grinnell,
    - e. Hammond Valve,
    - f. Milwaukee Valve Company,
    - g. NIBCO INC. (Class 125),
    - h. Walworth,
    - i. Or approved equal.
  - 2. Description:
    - a. Standard: MSS SP-85, Type I
    - b. Packing and Gasket: Asbestos free.
    - c. Refer to schedules in Part 3 for specific application requirements.
- H. Eccentric Plug Valves
- 1. Manufacturers: Subject to compliance with requirements, available manufacturers offering products that may be incorporated into the Work include the following, or approved equal:
    - a. DeZurik Water Controls,
    - b. Mueller,
    - c. Rockwell,
    - d. Stockham,
    - e. Walworth,
    - f. Or approved equal.
  - 2. Description:
    - a. Standard: MSS SP-108.
    - b. Bearings: Oil-impregnated bronze or stainless steel.
    - c. Stem-Seal Packing: Asbestos free.
    - d. Plug, Resilient-Seating Material: Suitable for potable-water service unless otherwise indicated.
    - e. Refer to schedules in Part 3 for specific application requirements.
- I. Bronze Silent Check Valves (Pump Discharge)
- 1. Manufacturers: Subject to compliance with requirements, available manufacturers offering products that may be incorporated into the Work include the following, or approved equal:
    - a. Crane Co.; Crane Valve Group; Crane Valves,
    - b. Crane Co.; Crane Valve Group; Jenkins Valves,

- c. Crane Co.; Crane Valve Group; Stockham Division,
    - d. Milwaukee Valve Company,
    - e. Mueller Steam Specialty; a division of SPX Corporation,
    - f. Or approved equal.
  - 2. Description:
    - a. Standard: MSS SP-80, Type 1.
    - b. Disc: BUNA/TFE.
    - c. Refer to schedules in Part 3 for specific application requirements.
- J. Iron, Globe Silent Check Valves (Pump Discharge)
  - 1. Manufacturers: Subject to compliance with requirements, available manufacturers offering products that may be incorporated into the Work include the following, or approved equal:
    - a. Crane Co.; Crane Valve Group; Crane Valves,
    - b. Crane Co.; Crane Valve Group; Jenkins Valves,
    - c. Crane Co.; Crane Valve Group; Stockham Division,
    - d. Milwaukee Valve Company,
    - e. Mueller Steam Specialty; a division of SPX Corporation,
    - f. Or approved equal.
  - 2. Description:
    - a. Standard: MSS SP-125.
    - b. Disc: Bronze.
    - c. Refer to schedules in Part 3 for specific application requirements.
- K. Bronze Swing Check Valves
  - 1. Bronze Swing Check Valves with Nonmetallic Disc:
    - a. Manufacturers: Subject to compliance with requirements, available manufacturers offering products that may be incorporated into the Work include the following, or approved equal:
      - 1) Crane Co.; Crane Valve Group; Crane Valves,
      - 2) Crane Co.; Crane Valve Group; Jenkins Valves,
      - 3) Crane Co.; Crane Valve Group; Stockham Division,
      - 4) Hammond Valve,
      - 5) Kitz Corporation,
      - 6) Milwaukee Valve Company,
      - 7) NIBCO INC,
      - 8) Watts Regulator Co.; a division of Watts Water Technologies, Inc,
      - 9) Or approved equal.

- b. Description:
    - 1) Standard: MSS SP-80, Type 4.
    - 2) Body Design: Horizontal flow.
    - 3) Disc: PTFE unless indicated otherwise in table.
    - 4) Refer to schedules in Part 3 for specific application requirements.
- 2. Bronze Swing Check Valves with Bronze Disc:
  - a. Manufacturers: Subject to compliance with requirements, available manufacturers offering products that may be incorporated into the Work include the following, or approved equal:
    - 1) Crane Co.; Crane Valve Group; Crane Valves,
    - 2) Crane Co.; Crane Valve Group; Jenkins Valves,
    - 3) Crane Co.; Crane Valve Group; Stockham Division,
    - 4) Kitz Corporation,
    - 5) Milwaukee Valve Company,
    - 6) NIBCO INC,
    - 7) Or approved equal.
  - b. Description:
    - 1) Standard: MSS SP-80, Type 3.
    - 2) Body Design: Horizontal flow.
    - 3) Refer to schedules in Part 3 for specific application requirements.
- L. Iron Swing Check Valves
  - 1. Manufacturers: Subject to compliance with requirements, available manufacturers offering products that may be incorporated into the Work include the following, or approved equal:
    - a. Crane Co.; Crane Valve Group; Crane Valves,
    - b. Crane Co.; Crane Valve Group; Jenkins Valves,
    - c. Crane Co.; Crane Valve Group; Stockham Division,
    - d. Hammond Valve,
    - e. Kitz Corporation (Class 125),
    - f. Legend Valve (Class 125),
    - g. Milwaukee Valve Company,
    - h. NIBCO INC,
    - i. Powell Valves (Class 125),
    - j. Or approved equal.
  - 2. Description:
    - a. Standard: MSS SP-71, Type I.

- b. Body Design: Clear or full waterway.
- c. Gasket: Asbestos free.
- d. Refer to schedules in Part 3 for specific application requirements.

**M. Strainers**

1. Manufacturers: Subject to compliance with requirements, available manufacturers offering products that may be incorporated into the Work include the following, or approved equal:
  - a. Sarco,
  - b. Mueller,
  - c. Watts,
  - d. Armstrong,
  - e. Jomar,
  - f. Or approved equal.
2. Description:
  - a. For water service, strainers shall be full size of entering pipe size and have a maximum clean pressure drop of one psi.
  - b. Pump start up strainer screens shall be used for cleaning and removed afterwards.
  - c. Provide blow-off valve on each strainer.
    - 1) Provide bronze strainers with end cap with threaded connection for blow off valve.
    - 2) Provide iron valves with bolted cover with threaded connection for blow off valve.
  - d. Refer to schedules in Part 3 for specific application requirements.

**N. Suction Diffusers**

1. Manufacturers: Subject to compliance with requirements, available manufacturers offering products that may be incorporated into the Work include the following, or approved equal:
  - a. Armstrong,
  - b. Bell & Gossett,
  - c. Mueller,
  - d. Watts,
  - e. Or approved equal.
2. Suction diffuser/strainers shall have 200 psi cast iron body and stainless-steel sleeve with 5/32" perforations. Units shall include flanged connections, removable gasketed cover and straightening vanes.
3. Provide 16 mesh start-up strainer.
4. Provide blow off tapping on bottom of unit.

5. Provide full pipe size inlet and outlet (reducing suction diffusers are not acceptable).
- O. Hydronic Specialty Valves
  1. Automatic Temperature-Control Valves, Actuators, and Sensors: Comply with requirements specified in Division 23.
  2. Brass or Bronze, Calibrated-Orifice, Balancing Valves:
    - a. Manufacturers: Subject to compliance with requirements, available manufacturers offering products that may be incorporated into the Work include the following, or approved equal:
      - 1) Armstrong Pumps, Inc,
      - 2) Bell & Gossett Domestic Pump,
      - 3) Flow Design Inc,
      - 4) Gerand Engineering Co,
      - 5) Griswold Controls,
      - 6) Macon,
      - 7) NuTech Hydronic Specialty Products,
      - 8) Nexus Valve, Inc,
      - 9) Taco,
      - 10) Tour & Andersson; available through Victaulic Company,
      - 11) Or approved equal.
    - b. Valves shall perform the following functions:
      - 1) Flow balancing
      - 2) Flow measurement
      - 3) Positive shut-off
    - c. Valves type shall be one of the following:
      - 1) Ball or plug type with calibrated orifice or venturi.
      - 2) Y-pattern globe style.
    - d. Body: Brass, bronze or copper alloy.
    - e. Ball: Brass or stainless steel.
    - f. Plug: Resin.
    - g. Seat: PTFE, stainless steel or cast copper alloy.
    - h. End Connections: Threaded or socket.
    - i. Pressure gauge Connections: Integral seals for portable differential pressure meter.
    - j. Handle Style: Lever or knob, with memory stop to retain set position.
    - k. Provide removable pre-formed insulation to permit access for balancing and readouts.
    - l. Refer to Part 3 for pressure and temperature rating.

3. Cast-Iron or Steel, Calibrated-Orifice, Balancing Valves:
  - a. Manufacturers: Subject to compliance with requirements, available manufacturers offering products that may be incorporated into the Work include the following, or approved equal:
    - 1) Armstrong Pumps, Inc,
    - 2) Bell & Gossett Domestic Pump,
    - 3) Flow Design Inc,
    - 4) Gerand Engineering Co,
    - 5) Griswold Controls,
    - 6) Macon,
    - 7) NuTech Hydronic Specialty Products,
    - 8) Nexus Valve, Inc,
    - 9) Taco,
    - 10) Tour & Andersson,
    - 11) Or approved equal.
  - b. Valves shall perform the following functions:
    - 1) Flow balancing
    - 2) Flow measurement
    - 3) Positive shut-off
  - c. Body: Cast-iron or steel body, ball, plug, or globe pattern with calibrated orifice or venturi.
  - d. Ball: Brass or stainless steel.
  - e. Stem Seals: EPDM O-rings.
  - f. Disc: Manufacturer standard construction.
  - g. Seat: PTFE or EPDM.
  - h. End Connections: Flanged.
  - i. Pressure gauge Connections: Integral seals for portable differential pressure meter.
  - j. Handle Style: Lever or knob, with memory stop to retain set position.
  - k. Provide removable pre-formed insulation to permit access for balancing and readouts.
  - l. Refer to Part 3 for pressure and temperature rating.
4. Diaphragm-Operated, Pressure-Reducing Valves: ASME labeled.
  - a. Manufacturers: Subject to compliance with requirements, available manufacturers offering products that may be incorporated into the Work include the following, or approved equal:
    - 1) AMTROL, Inc,

- 2) Armstrong Pumps, Inc,
    - 3) Bell & Gossett Domestic Pump,
    - 4) Conbraco Industries, Inc,
    - 5) Spence Engineering Company, Inc,
    - 6) Watts Regulator Co,
    - 7) Or approved equal.
  - b. Body: Bronze or brass.
  - c. Disc: Glass and carbon-filled PTFE.
  - d. Seat: Brass.
  - e. Stem Seals: EPDM O-rings.
  - f. Diaphragm: EPT.
  - g. Low inlet-pressure check valve.
  - h. Inlet Strainer: 304 or 316 stainless steel, removable without system shutdown.
  - i. Valve Seat and Stem: Noncorrosive.
  - j. Valve Size, Capacity, and Operating Pressure: Selected to suit system in which installed, with operating pressure and capacity factory set and field adjustable.
5. Diaphragm-Operated Safety Valves: ASME labeled.
- a. Manufacturers: Subject to compliance with requirements, available manufacturers offering products that may be incorporated into the Work include the following, or approved equal:
    - 1) AMTROL, Inc,
    - 2) Armstrong Pumps, Inc,
    - 3) Bell & Gossett Domestic Pump,
    - 4) Conbraco Industries, Inc,
    - 5) Spence Engineering Company, Inc,
    - 6) Watts Regulator Co,
    - 7) Or approved equal.
  - b. Body: Bronze or brass.
  - c. Disc: Glass and carbon-filled PTFE.
  - d. Seat: Brass.
  - e. Stem Seals: EPDM O-rings.
  - f. Diaphragm: EPT.
  - g. Wetted, Internal Work Parts: Brass and rubber.
  - h. Inlet Strainer: 304 or 316 stainless steel, removable without system shutdown.
  - i. Valve Seat and Stem: Non-corrosive.

- j. Valve Size, Capacity, and Operating Pressure: Comply with ASME Boiler and Pressure Vessel Code: Section IV for heating hot water boilers and piping up to 160 psig and Section VIII for heat exchangers and higher-pressure applications, selected to suit system in which installed, with operating pressure and capacity factory set and field adjustable.
- 6. Automatic Flow-Control Valves:
  - a. Manufacturers: Subject to compliance with requirements, available manufacturers offering products that may be incorporated into the Work include the following, or approved equal:
    - 1) Flow Design Inc,
    - 2) Griswold Controls,
    - 3) Hays Fluid Controls,
    - 4) Macon,
    - 5) NuTech Hydronic Specialty Products,
    - 6) Nexus Valve, Inc.,
    - 7) Or approved equal.
  - b. Body: Brass, bronze or ferrous metal.
  - c. Flow Limiting Assembly: Corrosion resistant stainless-steel piston/spring or elastomeric diaphragm, tamper proof, self-cleaning, and removable.
  - d. Combination Assemblies: Include bronze or brass ball valve.
  - e. Identification Tag: Marked with zone identification, valve number, and flow rate.
  - f. Size: Same as pipe in which installed.
  - g. Performance: Maintain constant flow, plus or minus 10 percent over system pressure fluctuations.
  - h. Factory set range: 2 to 80 psid.
  - i. Refer to Part 3 for pressure and temperature ratings.
- 7. Triple Duty Valves:
  - a. Angle or straight pattern.
  - b. 175-psig (1204-kPa) pressure rating, cast or ductile-iron body, pump-discharge fitting.
  - c. Valve with multi-turn stem and memory stop to allow valve to be returned to its original position after shutoff.
  - d. Brass valve disc with EPDM rubber seat.
  - e. Type 304 stainless steel valve stem.
  - f. Drain plug and bronze-fitted shutoff, balancing, and check valve features.
  - g. Brass gauge ports with integral check valve and orifice for flow measurement.

## 2.6 HYDRONIC PIPING SYSTEM AIR-CONTROL DEVICES

### A. Manual Air Vents:

1. Manufacturers: Subject to compliance with requirements, available manufacturers offering products that may be incorporated into the Work include the following, or approved equal:
  - a. AMTROL, Inc,
  - b. Armstrong Pumps, Inc,
  - c. Bell & Gossett Domestic Pump,
  - d. Nexus Valve, Inc,
  - e. NuTech Hydronic Specialty Products,
  - f. Taco, Inc,
  - g. Or approved equal.
2. Body: Brass or stainless steel.
3. Internal Parts: Non-ferrous.
4. Operator: Screwdriver or thumbscrew.
5. Inlet Connection: NPS 1/2.
6. Refer to Part 3 for pressure and temperature rating.

### B. Automatic Air Vents:

1. Manufacturers: Subject to compliance with requirements, available manufacturers offering products that may be incorporated into the Work include the following, or approved equal:
  - a. AMTROL, Inc,
  - b. Armstrong Pumps, Inc,
  - c. Bell & Gossett Domestic Pump,
  - d. Nexus Valve, Inc,
  - e. Taco, Inc,
  - f. Or approved equal.
2. Body: Brass, stainless steel or cast iron.
3. Internal Parts: Non-ferrous.
4. Operator: Non-corrosive metal float.
5. Inlet Connection: NPS 1/2.
6. Refer to Part 3 for pressure and temperature rating.

### C. Bladder-Type Expansion Tanks:

1. Manufacturers: Subject to compliance with requirements, available manufacturers offering products that may be incorporated into the Work include the following, or approved equal:

- a. AA Tanks,
  - b. AMTROL, Inc,
  - c. Armstrong Pumps, Inc,
  - d. Bell & Gossett Domestic Pump,
  - e. Taco, Inc,
  - f. Or approved equal.
2. Tank: Welded steel. Factory test after taps are fabricated and supports installed and are labeled according to ASME Boiler and Pressure Vessel Code: Section VIII, Division 1.
  3. Refer to Part 3 Piping and Specialty for system pressure and temperature rating required.
  4. Bladder: Securely sealed into tank to separate air charge from system water to maintain required expansion capacity.
  5. Air-Charge Fittings: Schrader valve, stainless steel with EPDM seats.
- D. In-Line Air Separators:
1. Manufacturers: Subject to compliance with requirements, available manufacturers offering products that may be incorporated into the Work include the following, or approved equal:
    - a. AMTROL, Inc,
    - b. Armstrong Products, Inc,
    - c. Bell & Gossett Domestic Pump,
    - d. Taco, Inc,
    - e. Or approved equal.
  2. Tank: One-piece cast iron with an integral weir constructed to decelerate system flow to maximize air separation.
  3. Refer to Part 3 for pressure and temperature rating.

## 2.7 HYDRONIC PIPING SPECIALTIES

- A. Stainless-Steel Bellow, Flexible Connectors:
1. Body: Stainless-steel bellows with woven, flexible, bronze, wire-reinforcing protective jacket.
  2. End Connections: Threaded or flanged to match equipment connected.
  3. Performance: Capable of 3/4-inch misalignment.
  4. Refer to Part 3 for pressure and temperature rating.
- B. Spherical, Rubber, Flexible Connectors:
1. Body: Fiber-reinforced rubber body.
  2. End Connections: Steel flanges drilled to align with Classes 150 and 300 steel flanges.
  3. Performance: Capable of misalignment.
  4. Refer to Part 3 for pressure and temperature rating.

**C. Sleeves**

1. Galvanized-Steel-Pipe Sleeves: ASTM A 53/A 53M, Type E, Grade B, Schedule 40, zinc coated, with plain ends.
2. Galvanized-Steel-Sheet Sleeves: 0.0239-inch minimum thickness; round tube closed with welded longitudinal joint.
3. Stack Sleeve Fittings: Manufactured, cast-iron sleeve with integral clamping flange. Include clamping ring and bolts and nuts for membrane flashing.
  - a. Underdeck Clamp: Clamping ring with set screws.

**D. Sleeve Seal Systems**

1. Manufacturers: Subject to compliance with requirements, available manufacturers offering products that may be incorporated into the Work include the following, or approved equal:
  - a. Advance Products & Systems, Inc,
  - b. CALPICO, Inc,
  - c. Metraflex Company (The),
  - d. Pipeline Seal and Insulator, Inc,
  - e. Proco Products, Inc,
  - f. Or approved equal.
2. Description: Modular sealing-element unit, designed for field assembly, for filling annular space between piping and sleeve.
  - a. Sealing Elements: EPDM-rubber interlocking links shaped to fit surface of pipe. Include type and number required for pipe material and size of pipe.
  - b. Pressure Plates: Carbon steel, plastic, or stainless steel.
  - c. Connecting Bolts and Nuts: Carbon steel, with corrosion-resistant coating or stainless steel of length required to secure pressure plates to sealing elements.

**E. Grout**

1. Standard: ASTM C 1107/C 1107M, Grade B, post-hardening and volume-adjusting, dry, hydraulic-cement grout.
2. Characteristics: Non-shrink; recommended for interior and exterior applications.
3. Design Mix: 5000-psi, 28-day compressive strength.
4. Packaging: Premixed and factory packaged.

**F. Escutcheons**

1. Description: Manufactured wall and ceiling escutcheons and floor plates, with an ID to closely fit around pipe, tube, and insulation of insulated piping and an OD that completely covers opening.
2. One-Piece, Deep-Pattern Type: Deep-drawn, box-shaped brass with chrome-plated finish and spring-clip fasteners.
3. One-Piece, Stamped-Steel Type: With chrome-plated finish and spring-clip fasteners.

4. Split-Plate, Stamped-Steel Type: With chrome-plated finish, concealed hinge, and spring-clip fasteners.
5. One-Piece, Cast-Brass Type: With polished, chrome-plated finish and setscrew fastener.
6. Split-Casting Brass Type: With polished, chrome-plated finish and with concealed hinge and setscrew.

### **PART 3 - EXECUTION**

#### **3.1 EXAMINATION**

- A. Examine equipment foundations and anchor-bolt locations for compliance with requirements for installation tolerances and other conditions affecting performance of the Work.
- B. Examine roughing-in for piping systems to verify actual locations of piping connections before pump installation.
- C. Examine foundations and inertia bases for suitable conditions where pumps are to be installed.
- D. Proceed with installation only after unsatisfactory conditions have been corrected.

#### **3.2 PUMP INSTALLATION**

- A. Comply with HI 1.4.
- B. Install pumps to provide access for periodic maintenance including removing motors, impellers, couplings, and accessories.
- C. Independently support pumps and piping so weight of piping is not supported by pumps and weight of pumps is not supported by piping.
- D. Automatic Condensate Pump Units: Install units for collecting condensate and extend to open drain.
- E. Equipment Mounting: Install base-mounted pumps on cast-in-place concrete equipment base(s). Comply with requirements for equipment bases specified in Division 03. Comply with requirements for vibration isolation devices specified in Division 23.
  1. Coordinate sizes and locations of concrete bases with actual equipment provided. Cast anchor-bolt inserts into bases.
  2. Install dowel rods to connect concrete base to concrete floor. Unless otherwise indicated, install dowel rods on 18-inch centers around full perimeter of concrete base.
  3. For supported equipment, install epoxy-coated anchor bolts that extend through concrete base and anchor into structural concrete floor.
  4. Place and secure anchorage devices. Use setting drawings, templates, diagrams, instructions, and directions furnished with items to be embedded.
  5. Install anchor bolts to elevations required for proper attachment to supported equipment.
  6. Install on 4-inch- high concrete base.
- F. Equipment Mounting: Install in-line pumps with continuous-thread hanger rods and of size required to support weight of in-line pumps. Provide vibration isolators specified in Division 23.

1. Comply with requirements for seismic-restraint devices specified in Division 23.
2. Comply with requirements for hangers and supports specified in Division 23.

**G. Alignment**

1. Engage a factory-authorized service representative to perform alignment service.
2. Comply with requirements in Hydronics Institute standards for alignment of pump and motor shaft. Add shims to the motor feet and bolt motor to base frame. Do not use grout between motor feet and base frame.
3. Comply with pump and coupling manufacturers' written instructions.
4. After alignment is correct, tighten foundation bolts evenly but not too firmly. Completely fill baseplate with non-shrink, non-metallic grout while metal blocks and shims or wedges are in place. After grout has cured, fully tighten foundation bolts.

**H. Pump Connections**

1. Comply with requirements for piping specified in Division 23 for steam and condensate heating piping. Drawings indicate general arrangement of piping, fittings, and specialties.
2. Where installing piping adjacent to pump, allow space for service and maintenance.
3. Connect piping to pumps. Install valves that are same size as piping connected to pumps.
4. Install suction and discharge pipe sizes equal to or greater than diameter of pump nozzles.
5. Install check, shutoff, and throttling valves or triple-duty valve on discharge side of pumps as indicated on drawings.
6. Install Y-type strainer or suction diffuser and shutoff valve on suction side of pumps as indicated on the drawings.
7. Install flexible connectors on suction and discharge sides of base-mounted pumps between pump casing and valves.
8. Install pressure gauges on pump suction and discharge or at integral pressure-gage tapping, or install single gauge with multiple-input selector valve.
9. Install check valve and gate or ball valve on each condensate pump unit discharge.
10. Ground equipment according to Division 26, Grounding and Bonding for Electrical Systems.
11. Connect wiring according to Division 26, Low-Voltage Electrical Power Conductors and Cables.

**3.3 PIPING INSTALLATION**

- A. Drawing plans, schematics, and diagrams indicate general location and arrangement of piping systems. Piping locations and arrangements indicated were used to size pipe and calculate friction loss, expansion, and other design considerations. Install piping as indicated unless deviations to layout are approved on Coordination Drawings.
- B. Verify final equipment locations for roughing-in.
- C. Installation of piping must allow for expansion using offsets, loops, swing joints or expansion joints to prevent undue strain.

1. Mains and risers with loops or offsets shall be securely anchored to structure so as to impart expansion towards loops or offsets. Anchors shall be constructed of heavy forged wrought iron, secured to pipe and to structure. Provide vibration isolation.
  2. Provide pipe alignment guides to guide expanding pipe to move freely from anchor points toward expansion joints, offsets, etc.
- D. Install piping in concealed locations unless otherwise indicated and except in equipment rooms and service areas.
  - E. Install piping indicated to be exposed and piping in equipment rooms and service areas at right angles or parallel to building walls. Diagonal runs are prohibited unless specifically indicated otherwise.
  - F. Install piping above accessible ceilings to allow sufficient space for ceiling panel removal.
  - G. Install piping to permit valve servicing.
  - H. Install piping at indicated slopes.
  - I. Install piping free of sags and bends.
  - J. Install fittings for changes in direction and branch connections.
  - K. Install piping to allow application of insulation.
  - L. Select system components with pressure rating equal to or greater than specified system pressure rating.
  - M. Install groups of pipes parallel to each other, spaced to permit applying insulation and servicing of valves.
  - N. Install drains, consisting of a tee fitting, NPS 3/4 ball valve, and short NPS 3/4 threaded nipple with cap, at low points in piping system mains and elsewhere as required for system drainage.
  - O. Install piping at a uniform grade of 0.2 percent upward in direction of flow.
  - P. Reduce pipe sizes using eccentric reducer fitting installed with level side up.
  - Q. Install branch connections to mains using tee fittings in main pipe, with the branch connected to the bottom of the main pipe. For up-feed risers, connect the branch to the top of the main pipe.
  - R. Install unions in piping, NPS 2 and smaller, adjacent to valves, at final connections of equipment, and elsewhere as indicated.
  - S. Install flanges in piping, NPS 2-1/2 and larger, at final connections of equipment and elsewhere as indicated.
  - T. Install shutoff valve immediately upstream of each dielectric fitting.
  - U. Comply with requirements in Division 23 for HVAC piping and equipment identification.
  - V. Install expansion loops and expansion loops.

### 3.4 PIPE JOINT CONSTRUCTION

- A. Ream ends of pipes and tubes and remove burrs. Bevel plain ends of steel pipe.
- B. Remove scale, slag, dirt, and debris from inside and outside of pipe and fittings before assembly.

- C. Align components. No strain shall be placed on weld during welding. No part of pipe shall be offset more than 20 percent of thickness. Set flanges and branches properly.
- D. Soldered Joints: Apply ASTM B 813, water-flushable flux, unless otherwise indicated, to tube end. Construct joints according to ASTM B 828 or CDA's "Copper Tube Handbook," using lead-free solder alloy complying with ASTM B 32.
- E. Brazed Joints: Construct joints according to AWS's "Brazing Handbook," "Pipe and Tube" Chapter, using copper-phosphorus brazing filler metal complying with AWS A5.8/A5.8M.
- F. Threaded Joints: Thread pipe with tapered pipe threads according to ASME B1.20.1. Cut threads full and clean using sharp dies. Ream threaded pipe ends to remove burrs and restore full ID. Join pipe fittings and valves as follows:
  - 1. Apply appropriate tape or thread compound to external pipe threads unless dry seal threading is specified.
  - 2. Damaged Threads: Do not use pipe or pipe fittings with threads that are corroded or damaged. Do not use pipe sections that have cracked or open welds.
- G. Welded Joints: Construct joints according to AWS D10.12M/D10.12, using qualified processes and welding operators according to "Quality Assurance" Article.
- H. Flanged Joints: Select appropriate gasket material, size, type, and thickness for service application. Install gasket concentrically positioned. Use suitable lubricants on bolt threads.
- A. Pressed Joints: Assemble joints in strict accordance with manufacturer written instructions including but not limited to cutting pipe to square the end, removal of burrs from cut inside and outside, restoration of full inside diameter and a smooth, chamfered exterior surface, marking of insert depth on the pipe, inspection of gasket to ensure proper seating all prior to clamping and pressing. Maintain manufacturer minimum distance between press type fittings and brazed fittings. Press-connect joints shall be made using a press-connect tool and jaws approved for use for the manufacturer's specific fitting configuration.
- B. Grooved Joints: Assemble joints with coupling and gasket, lubricant, and bolts in accordance with manufacturer written instructions. Cut or roll grooves in ends of pipe based on pipe wall thickness per coupling installation instructions. Use grooved-end fittings and grooved-end-pipe couplings. Grooved couplings used at expansion devices shall be flexible type, all others shall be rigid type.

### 3.5 CORE DRILLING

- A. Core drilling shall be avoided in new construction. Set sleeves prior to installation of structure for passage of pipes, conduit and ducts. Where core drilling is unavoidable (e.g. when individual sleeves are not installed or incorrectly located) or required by renovation projects, locate required openings prior to coring and submit locations for review.
- B. Coordinate openings with other Divisions.
- C. Do not disturb existing systems. Protect areas from damage.
- D. Thoroughly investigate existing conditions in vicinity of required opening prior to coring.

### 3.6 PIPING, SPECIALTIES AND VALVE APPLICATIONS

- A. Hydronic piping components and installation shall be rated for the following minimum pressures and temperatures unless otherwise indicated:

HOT WATER/GLYCOL AND DUAL TEMPERATURE PIPING AND SPECIALTIES - Table 1 of 2 Minimum Component Rating <sup>2</sup> - 125 psig at 250 deg F for NPS 1/2 - NPS 24			
Size	Pipe Material	Joints	Fittings
NPS 2	Type L, drawn-temper copper tubing	Brazed or high temperature silver soldered	Wrought copper
	Schedule 40 steel, Grade B, Seamless	Threaded	Class 125 cast-iron
NPS 2-1/2 NPS 12	Schedule 40 steel, Grade B, ERW	Welded	Wrought steel
		Flanged	Class 150 Wrought-cast or forged-steel
		Flanged	Class 125 cast-iron
NPS 12	Standard weight steel, Grade B, ERW	Welded	Wrought steel
		Flanged	Class 150 Wrought-cast or forged-steel
		Flanged	Class 125 cast-iron
NPS 14 - and larger	Standard weight steel, Grade B, ERW	Welded	Wrought steel
		Flanged	Class 150 Wrought-cast or forged-steel
<div>1. Minimum rating for all piping specialties shall be 125 psig at 250 deg F (121 deg C). Piping specialties include: dielectric unions; dielectric flanges; test plugs; packless expansion joints; brass or bronze, calibrated orifice, balancing valves; cast iron or steel, calibrated orifice, balancing valves; automatic flow control valves; manual air vents; automatic air vents; air separators; expansion tanks, stainless-steel bellows flexible connectors; spherical, rubber, flexible connectors.</div> <div>2. For copper piping, press-joints and fittings meeting system pressure and temperature requirements may be used in lieu of brazed or high temperature solder and threaded joints.</div> <div>3. Where grooved mechanical joint fittings and joints are specified in Part 2, grooved mechanical joint fittings and joints meeting system pressure and temperature requirements may be used in lieu of welded or flanged joints <b>ONLY IN ACCESSIBLE LOCATIONS</b>. Locations prohibited from using grooved joints of any type include shafts, chases, and above ANY ceiling installations (regardless of type).</div>			

HOT WATER/ GLYCOL AND DUAL TEMPERATURE SYSTEM VALVES- Table 2 of 2 Maximum 250 deg F and 125 psig for NPS 1/2 - NPS 24						
Specialty	Application	Type	Size (inches)	Body/Seat, Body/Trim	Connection	Minimum Rating <sup>1,2</sup>
Ball Valve	Isolation (with locking handle) and Modulation	Full Port 2 pc.	1/2 - 2	Bronze/Teflon	Threaded	400 psig WOG
Globe Valve	ATC Modulation	Control Valve	1/2 - 2	Bronze/Metal	Threaded	400 psig WOG

Locations prohibited from using grooved joints of any type include shafts, chases, and above ANY ceiling installations (regardless of type).

B. Miscellaneous Piping and Valve Applications

1. Makeup-water piping shall be the following:
  - a. Type L, drawn-temper copper tubing, wrought-copper fittings, and soldered or high temperature soldered joints.
  - b. System Rating: 125 psig at 150 deg F
2. Condensate-Drain Piping: Type L, drawn-temper copper tubing, wrought-copper fittings, and soldered or high temperature soldered joints.
  - a. System Rating: 125 psig at 150 deg F
3. Humidifier-Drain Piping: Same materials and joining methods as for piping specified for the service in which blowdown drain is installed.
  - a. Type L, drawn-temper copper tubing, wrought-copper fittings, and soldered joints.
  - b. System Rating: 125 psig at 150 deg F
4. Blowdown-Drain Piping: Same materials and joining methods as for piping specified for the service in which blowdown drain is installed.
  - a. System Rating: 125 psig at 150 deg F
5. Air-Vent Piping:
  - a. Inlet: Same as service where installed according to piping manufacturer's written instructions.
  - b. Outlet: Type L, annealed-temper copper tubing with soldered or flared joints.
  - c. System Rating: 125 psig at 150 deg F
6. Safety-Valve-Inlet and -Outlet Piping: Same materials and joining methods as for piping specified for the service in which safety valve is installed according to valve manufacturer's written instructions.

3.7 VALVE EXAMINATION

- A. Examine valve interior for cleanliness, freedom from foreign matter, and corrosion. Remove special packing materials, such as blocks, used to prevent disc movement during shipping and handling.
- B. Operate valves in positions from fully open to fully closed. Examine guides and seats made accessible by such operations.
- C. Examine threads on valve and mating pipe for form and cleanliness.
- D. Examine mating flange faces for conditions that might cause leakage. Check bolting for proper size, length, and material. Verify that gasket is of proper size, that its material composition is suitable for service, and that it is free from defects and damage.

- E. Do not attempt to repair defective valves; replace with new valves.

### 3.8 VALVE INSTALLATION

- A. Install valves with unions or flanges at each piece of equipment arranged to allow service, maintenance, and equipment removal without system shutdown.
- B. Locate valves for easy access and provide separate support where necessary.
- C. Install valves in horizontal piping with stem at or above center of pipe.
- D. Install valves in position to allow full stem movement.
- E. Install chainwheels on operators for ball, butterfly, and globe valves NPS 3 and larger and more than 84 inches above floor. Extend chains to 60 inches above finished floor.
- F. Install check valves for proper direction of flow and as follows:
  - 1. Swing Check Valves: In horizontal position with hinge pin level.
  - 2. Silent Check Valves: In horizontal or vertical position, between flanges.

### 3.9 VALVE ADJUSTMENT

- A. Adjust or replace valve packing after piping systems have been tested and put into service but before final adjusting and balancing. Replace valves if persistent leaking occurs.

### 3.10 GENERAL REQUIREMENTS FOR VALVE APPLICATIONS

- A. Valves on condenser water, chilled water, hot water and glycol services shall be as shown in the above application tables. If valve applications are not indicated, use the following:
  - 1. Shutoff Service: Ball or butterfly valves
  - 2. Butterfly Valve Dead-End Service: Single-flange (lug) type
  - 3. Modulating Service: Globe valves
  - 4. Pump-Discharge Check Valves:
    - a. NPS 2 and Smaller: Spring wafer check valve with bronze disc.
    - b. NPS 2-1/2 and Larger: Iron, center-guided, metal -seat check valves.
- B. If valves with specified CWP ratings are not available, the same types of valves with higher CWP ratings may be substituted.
- C. Select valves with end connections as indicated in the tables. For applications not listed in the tables select valves, except wafer types, with the following end connections
- D. For Copper Tubing, NPS 2 and Smaller: Threaded ends
- E. For Steel Piping, NPS 2 and Smaller: Threaded ends
- F. For Steel Piping, NPS 2-1/2 and larger: Flanged ends.

### 3.11 VALVE APPLICATIONS

- A. Install shut off-duty valves at each branch connection to supply mains and at supply connection to each piece of equipment.

- B. Install calibrated-orifice, balancing valves at each branch connection to return main.
- C. Install calibrated-orifice, balancing valves in the return pipe of each heating or cooling terminal.
- D. Install check valves at each pump discharge and elsewhere as required to control flow direction.
- E. Install safety valves at hot-water generators and elsewhere required by ASME Boiler and Pressure Vessel Code. Pipe drain to nearest floor drain or as indicated on Drawings. Comply with ASME Boiler and Pressure Vessel Code: Section VIII, Division 1, for installation requirements.
- F. Install pressure-reducing valves at makeup-water connection to regulate system fill pressure.

### 3.12 DIELECTRIC FITTING INSTALLATION

- A. Install dielectric fittings in piping at connections of dissimilar metal piping and tubing.
- B. Dielectric Fittings for NPS 2 and Smaller: Use dielectric unions.
- C. Dielectric Fittings for NPS 2-1/2 and larger: Use dielectric flanges or dielectric flange kits.

### 3.13 HYDRONIC PIPING HANGERS AND SUPPORTS

- A. Comply with requirements in Division 23 for hanger, support, anchor devices and vibration isolation. Comply with the following requirements for maximum spacing of supports.
- B. Install the following pipe attachments:

Nominal Pipe Size (inches)	Maximum Horizontal Span (feet)	Minimum Rod Size (inches)	Hanger Type
1/2	5	0.375	Clevis Hanger
3/4	5	0.375	Clevis Hanger
1	6	0.375	Clevis Hanger
1.25	7	0.375	Clevis Hanger
1.5	8	0.375	Clevis Hanger
2	8	0.375	Clevis Hanger
2.5	11	0.5	Clevis Hanger
3	12	0.5	Clevis Hanger
4	12	0.625	Single Rod Roller Hanger
5	12	0.625	Single Rod Roller Hanger
6	12	0.75	Single Rod Roller Hanger
8 to 12	12	Two at 0.875	Dual Rod Roller Hanger
14 to 18	12	Two at 1	Dual Rod Roller Hanger
20	12	Two at 1.25	Dual Rod Roller Hanger
24	12	Two at 1.5	Dual Rod Roller Hanger

- C. Provide copper-clad hangers and supports for hangers and supports in direct contact with copper pipe.
- D. Support horizontal piping within 12 inches (300 mm) of each fitting and coupling.
- E. Provide spring hangers to support vertical runs. Vertical supports shall be spaced to prevent the pipe from being overstressed from the combination of all loading effects including the entire weight of the riser, and adjacent piping, hydrostatic test load conditions, line temperature, other

live load conditions, and available supporting structure. On a riser subject to expansion, only one support of the rigid type shall be used.

- F. Riser clamps shall have a positive means of engagement (i.e. shear lugs) between the pipe and the clamp.
- G. Rigid riser clamps, when used for deadweight purposes, shall be sized for two times the calculated load.

### 3.14 TERMINAL EQUIPMENT CONNECTIONS

- A. Sizes for supply and return piping connections shall be the same as or larger than equipment connections.
- B. Install control valves in accessible locations close to connected equipment.
- C. Install bypass piping with globe valve around control valve. If parallel control valves are installed, only one bypass is required.
- D. Install ports for pressure gauges and thermometers at coil inlet and outlet connections.
- E. For local terminal units with rotating components (e.g. fan coils, heat pumps, fan powered boxes) and where indicated on drawings, provide flexible hose connectors between unit and supply and return valve assemblies. Connector length shall no longer than 12 inches for chilled beam applications or 18 inches for other applications.

### 3.15 EXPANSION JOINT AND LOOP INSTALLATION

- A. Install expansion joints and loops of sizes matching sizes of piping in which they are installed.
- B. Install expansion loops in accordance with approved delegated design submittal.
- C. Install manufactured flexible hose loops and joints in accordance with manufacturer installation instructions.
- D. Install metal-bellows expansion joints according to EJMA's "Standards of the Expansion Joint Manufacturers Association, Inc."
- E. Install rubber packless expansion joints according to FSA-NMEJ-702.
- F. Install grooved-joint expansion joints to grooved-end steel piping

### 3.16 PIPING SWING CONNECTION INSTALLATION

- A. Connect risers and branch connections to mains with at least three elbows.
- B. Connect risers and branch connections to terminal units with at least three elbows.
- C. Connect mains and branch connections to terminal units with at least three elbows.

### 3.17 ALIGNMENT-GUIDE AND ANCHOR INSTALLATION

- A. Install alignment guides to guide expansion and to avoid end-loading and torsional stress.
- B. Install one guide on each side of pipe expansion fittings and loops. Per ASHRAE Handbook, distance for guides is "2H" for expansion loops and "L" for Z-bends. At expansion joints, alignment guide locations shall be in accordance with joint manufacturer recommendations.
- C. Attach guides to pipe and secure guides to building structure.

- D. Install anchors at locations to prevent stresses from exceeding those permitted by ASME B31.9 and to prevent transfer of loading and stresses to connected equipment.
- E. Anchor Attachments:
- F. Anchor Attachment to Steel Pipe: Attach by welding. Comply with ASME B31.9 and ASME Boiler and Pressure Vessel Code: Section IX, "Welding and Brazing Qualifications."
- G. Fabricate and install steel anchors by welding steel shapes, plates, and bars. Comply with ASME B31.9 and AWS D1.1/D1.1M.
- H. Use grout to form flat bearing surfaces for guides and anchors attached to concrete.
- I. Concrete inserts shall be iron or steel of type to receive machine bolt head or nut after installation. Inserts shall permit adjustment of bolt in one horizontal direction and shall develop strength of bolt when installed in properly cured concrete.

### 3.18 SLEEVE INSTALLATION

#### A. General

- 1. Lay out penetration and sleeve openings in advance, to permit provision in work. Coordinate work carefully with architectural and structural work. Set sleeves and conduit in forms before concrete is poured. Provide remedial work where sleeves and conduits are omitted or improperly placed. Remedial work includes core drilling (see requirements below) for penetrations if walls are poured, or otherwise constructed, without required sleeves. Provide core drilling (see requirements below) of existing construction. Do not penetrate structural members without Structural Engineer's/Architect's written approval.
- 2. Provide sleeves and packing materials at penetrations of foundations, walls, basement floors, slabs (except on grade), partitions and floors. Sleeve installation shall meet NFPA 101 requirements, UL rated assembly requirements, and materials requirements of these specifications. Submit a list of the UL listed details that the Contractor intends on using on this project in all rated assemblies.
- 3. Sleeves that penetrate outside walls, basement slabs, footings and beams shall be waterproof. Sleeves that penetrate floors shall be fireproof and waterproof.
- 4. Sleeves for insulated pipe and duct in non-fire rated construction shall accommodate continuous insulation without compression. Sleeves and/or penetrations in fire rated construction that do not require fire dampers shall be packed with fire rated material that shall maintain the fire rating of the wall. Seal ends of penetrations to provide continuous vapor barrier where insulation is interrupted. Where fire dampers are required, install sleeve and damper assembly in accordance with damper listing.
- 5. Where pipes passing through openings are exposed in finished rooms, finishes of filling materials shall match and be flush with adjoining floor, ceiling, and wall finishes.
- 6. Identify unused sleeves and slots for future installation. Fill slots, sleeves and other openings in floors or walls if not used. Fill spaces in openings after installation of pipe, duct, conduit or cable. Fill for floor penetrations shall prevent passage of water, smoke, fire, and fumes. Fill shall be fire resistant in fire floors and walls, and shall prevent passage of air, smoke and fumes.
- 7. Do not support piping risers or conduit on sleeves.

8. Fire-Barrier Penetrations: Maintain indicated fire rating of walls, partitions, ceilings, and floors at pipe penetrations. Seal pipe penetrations with firestop materials. Refer to Division 7 for materials.
9. Verify final equipment locations for roughing-in.
10. Installation Testing, Listings and Approvals
  - a. Installation of sleeves, fill and packing shall meet material manufacturer's recommendations exactly, particularly as regards safety, ventilation, removal of foreign materials and other details of installation. Dam openings as recommended. Remove flammable materials used for damming and forming seals in fire-rated construction.
  - b. Sleeve penetration methods shall be water- and gas-tight and shall meet requirements of ASTM E-119 Standard Methods of Fire Tests of Building Construction and Materials.
  - c. Fire-stop penetration seal methods and materials shall be FM-approved and UL-listed as applicable. They shall have the same rating as the structure penetrated. Submit manufacturer's detail sheet indicating assembly rating.
    - 1) Inspect foamed sealants to ensure manufacturer's optimum cell structure and color ranges.
    - 2) Maintain indicated fire rating of walls, partitions, ceilings, and floors at pipe penetrations. Seal pipe penetrations with firestop materials. Comply with requirements for firestopping specified in Division 07.
- B. Install sleeves for pipes passing through concrete and masonry walls, gypsum-board partitions, and concrete floor and roof slabs.
- C. Sleeves are not required for slab-on-grade floors.
- D. Sleeves are required for core-drilled holes on any floor.
- E. Install sleeves in new walls and slabs as new walls and slabs are constructed.
- F. For sleeves that will have sleeve-seal system installed, select sleeves of size large enough to provide 1-inch annular clear space between piping and concrete slabs and walls.
- G. Cut sleeves to length for mounting flush with both surfaces.
  1. Exception: Extend sleeves installed in floors of mechanical equipment areas or other wet areas 2 inches above finished floor level. Extend cast-iron sleeve fittings below floor slab to secure clamping ring if ring is specified.
- H. Install sleeves that are large enough to provide 0.25-inch annular clear space between sleeve and pipe or pipe insulation. Use the following sleeve materials:
  1. Steel Pipe Sleeves: For pipes smaller than NPS 6.
  2. Steel Sheet Sleeves: For pipes NPS 6 and larger, penetrating gypsum-board partitions.
  3. Stack Sleeve Fittings: For pipes penetrating floors with membrane waterproofing. Secure flashing between clamping flanges. Install section of cast-iron soil pipe to extend sleeve to 2 inches above finished floor level. Refer to Division 07 Section "Sheet Metal Flashings and Trim" for flashing.
    - a. Seal space outside of sleeve fittings with grout.

4. Install sleeves that are large enough to provide 1/4-inch annular clear space between sleeve and pipe or pipe insulation.
5. Seal annular space between sleeve and piping or piping insulation; use joint sealants appropriate for size, depth, and location of joint. Comply with requirements for sealants specified in Division 07, Joint Sealants.
- I. Except for underground wall penetrations, seal annular space between sleeve and pipe or pipe insulation, using joint sealants appropriate for size, depth, and location of joint. Refer to Division 07 for materials and installation.
- J. Install sleeve seals for piping penetrations of exterior concrete walls and slabs.
- K. Aboveground, Exterior-Wall Pipe Penetrations: Seal penetrations using sleeves and mechanical sleeve seals. Select sleeve size to allow for 1-inch annular clear space between pipe and sleeve for installing mechanical sleeve seals.
  1. Install steel pipe for sleeves smaller than 6 inches in diameter.
  2. Install cast-iron "wall pipes" for sleeves 6 inches and larger in diameter.
  3. Mechanical Sleeve Seal Installation: Select type and number of sealing elements required for pipe material and size. Position pipe in center of sleeve. Assemble mechanical sleeve seals and install in annular space between pipe and sleeve. Tighten bolts against pressure plates that cause sealing elements to expand and make watertight seal.

### 3.19 SLEEVE-SEAL-SYSTEM INSTALLATION

- A. Install sleeve-seal systems in sleeves in exterior concrete walls and slabs-on-grade at service piping entries into building.
- B. Select type, size, and number of sealing elements required for piping material and size and for sleeve ID or hole size. Position piping in center of sleeve. Center piping in penetration, assemble sleeve-seal system components, and install in annular space between piping and sleeve. Tighten bolts against pressure plates that cause sealing elements to expand and make a watertight seal.

### 3.20 SLEEVE AND SLEEVE-SEAL SCHEDULE

- A. Use sleeves and sleeve seals for the following piping-penetration applications:
  1. Exterior Concrete Walls above Grade: Galvanized-steel-pipe sleeves.
  2. Exterior Concrete Walls below Grade: Galvanized-steel-pipe sleeves with sleeve-seal system.
    - a. Select sleeve size to allow for 1-inch annular clear space between piping and sleeve for installing sleeve-seal system.
  3. Concrete Slabs-on-Grade:
    - a. Galvanized-steel-pipe sleeves with sleeve-seal system.
      - 1) Select sleeve size to allow for 1-inch annular clear space between piping and sleeve for installing sleeve-seal system.
  4. Concrete Slabs above Grade:

- a. Galvanized-steel-pipe sleeves.
- 5. Interior Partitions:
  - a. Piping Smaller Than NPS 6: Galvanized-steel-pipe sleeves.
  - b. Piping NPS 6 and Larger: Galvanized-steel-sheet sleeves.

### 3.21 ESCUTCHEON INSTALLATION

- A. Install escutcheons at piping penetrations of walls, ceilings, and finished floors exposed to view in finished spaces (not required in utility spaces or mechanical rooms).
- B. Install escutcheons with ID to closely fit around pipe, tube, and insulation of piping and with OD that completely covers opening.
  - 1. New Piping: Use the following:
    - a. Piping with Fitting or Sleeve Protruding from Wall: One-piece, deep-pattern type.
    - b. Insulated Piping: One-piece, stamped-steel type or split-plate, stamped-steel type.
    - c. Bare Piping at Wall and Floor Penetrations in Finished Spaces: One-piece, cast-brass or split-casting brass type.
    - d. Bare Piping at Ceiling Penetrations in Finished Spaces: One-piece, cast-brass or split-casting brass type.
  - 2. Existing Piping: Use the following:
    - a. Chrome-Plated Piping: Split-casting, cast-brass type with chrome-plated finish.
    - b. Insulated Piping: Split-plate, stamped-steel type hinge
    - c. Bare Piping at Wall and Floor Penetrations in Finished Spaces: Split-casting, cast-brass type with chrome-plated finish.
    - d. Bare Piping at Ceiling Penetrations in Finished Spaces: Split-casting, cast-brass type with chrome-plated finish.
    - e. Bare Piping in Unfinished Service Spaces: Split-casting, cast-brass type.
    - f. Bare Piping in Equipment Rooms: Split-casting, cast-brass type.
    - g. Bare Piping at Floor Penetrations in Equipment Rooms: Split-casting, floor-plate type.

### 3.22 METER AND GAUGE INSTALLATION

- A. Install all meters and gauges in locations readable from the floor without the use of a ladder.
- B. Install meters and gauges where indicated on plans and details.
- C. Install thermowells with socket extending 2 inches into fluid or one-third of pipe diameter, whichever is shorter. Socket shall be installed in vertical position in piping tees.
- D. Install thermowells of sizes required to match thermometer connectors. Include bushings if required to match sizes.
- E. Install thermowells with extension on insulated piping.
- F. Fill thermowells with heat-transfer medium.

- G. Install direct-mounted thermometers in thermowells and adjust vertical and tilted positions.
- H. Install direct-mounted pressure gauges in piping tees with pressure gauge located on pipe at the most readable position.
- I. Install remote-mounted pressure gauges on panel.
- J. Install valve and snubber in piping for each pressure gauge for fluids.
- K. Install test plugs in piping tees.
- L. Install flow indicators in piping systems in accessible positions for easy viewing.
- M. Assemble and install connections, tubing, and accessories between flow-measuring elements and flowmeters according to manufacturer's written instructions.
  - 1. Install flowmeter elements in accessible positions in piping systems.
  - 2. Install flowmeter elements, with at least minimum straight lengths of pipe, upstream and downstream from element according to manufacturer's written instructions.
  - 3. Install permanent indicators on walls or brackets in accessible and readable positions.
  - 4. Install connection fittings in accessible locations for attachment to portable indicators.
  - 5. .
- N. Install thermometers in the following locations:
  - 1. Inlet and outlet of each hydronic zone.
  - 2. Inlet and outlet of each major hydronic coil bank (10 gpm or more)
  - 3. Inlet and outlet of each hydronic boiler.
  - 4. Two inlets and two outlets of each chiller.
  - 5. Inlet and outlet of each hydronic coil in air-handling units.
  - 6. Two inlets and two outlets of each hydronic heat exchanger.
  - 7. Inlet and outlet of each thermal-storage tank.
  - 8. At inlet and outlet of each bridge in primary/secondary systems.
- O. Install pressure gauges in the following locations:
  - 1. Inlet and outlet of each major hydronic coil bank (10 gpm or more)
  - 2. Discharge of each pressure-reducing valve.
  - 3. Inlet and outlet of each chiller chilled-water and condenser-water connection.
  - 4. Suction and discharge of each pump.
  - 5. Expansion tank connections.
  - 6. Makeup water connections.
- P. Meter and gauge Connections
  - 1. Install meters and gauges adjacent to machines and equipment to allow service and maintenance of meters, gauges, machines, and equipment.
  - 2. Connect flowmeter-system elements to meters.
  - 3. Connect flowmeter transmitters to meters and DDC system.

4.

Q. Meter and gauge Adjustment

1. After installation, calibrate meters according to manufacturer's written instructions.
2. Adjust faces of meters and gauges to proper angle for best visibility.

3.23 THERMOMETER SCALE-RANGE SCHEDULE

- A. Scale Range for Chilled-Water Piping: 0 to 100 deg F.
- B. Scale Range for Heating, Hot-Water and Dual Temperature Piping: 30 to 240 deg F.

3.24 PRESSURE-GAGE SCALE-RANGE SCHEDULES

- A. Scale Range for Chilled-Water Piping: 0 to 100 psi.
- B. Scale Range for Heating, Hot-Water Piping: 0 to 100 psi.

3.25 FLOW METER SCHEDULE

- A. Flow Meters for Chilled-Water Piping: Full-bore Magnetic type.
- B. Flow Meters for Heating Hot-Water and Dual Temperature Piping: Full-bore Magnetic type.

3.26 HYDRONIC PIPING SPECIALTIES INSTALLATION

- A. Install manual air vents at high points in piping, at heat-transfer coils, and elsewhere as required for system air venting.
- B. Install automatic air vents at high points of system piping in mechanical equipment rooms only. Install manual vents at heat-transfer coils and elsewhere as required for air venting.
- C. Install piping from boiler air outlet, air separator, to expansion tank with a 2 percent upward slope toward tank.
- D. Install in-line air separators in pump suction. Install drain valve on air separators NPS 2 and larger.
- E. Install expansion tanks. Install tank fitting in tank bottom and charge tank. Use manual vent for initial fill to establish proper water level in tank.
  1. Install tank fittings that are shipped loose.
  2. Support tank from floor or structure above with sufficient strength to carry weight of tank, piping connections, fittings, plus tank full of water. Do not overload building components and structural members.
- F. Vent and purge air from hydronic system.

3.27 FIELD QUALITY CONTROL

- A. Prepare hydronic piping according to ASME B31.9 and as follows:
  1. Leave joints, including welds, uninsulated and exposed for examination during test.
  2. Provide temporary restraints for expansion joints that cannot sustain reactions due to test pressure. If temporary restraints are impractical, isolate expansion joints from testing.

3. Isolate equipment from piping. If a valve is used to isolate equipment, its closure shall be capable of sealing against test pressure without damage to valve. Install blinds in flanged joints to isolate equipment.
  4. Install safety valve, set at a pressure no more than one-third higher than test pressure, to protect against damage by expanding liquid or other source of overpressure during test.
- B. Perform the following tests on hydronic piping:
1. Use ambient temperature water as a testing medium unless there is risk of damage due to freezing. Another liquid that is safe for workers and compatible with piping may be used.
  2. While filling system, use vents installed at high points of system to release air. Use drains installed at low points for complete draining of test liquid.
  3. Isolate expansion tanks and determine that hydronic system is full of water.
  4. Subject piping system to hydrostatic test pressure that is not less than 1.5 times the system's working pressure. Test pressure shall not exceed maximum pressure for any vessel, pump, valve, or other component in system under test. Verify that stress due to pressure at bottom of vertical runs does not exceed 90 percent of specified minimum yield strength or 1.7 times the "SE" value in Appendix A in ASME B31.9, "Building Services Piping."
  5. After hydrostatic test pressure has been applied for at least 10 minutes, examine piping, joints, and connections for leakage. Eliminate leaks by tightening, repairing, or replacing components, and repeat hydrostatic test until there are no leaks.
  6. Prepare written report of testing.
- C. Provide a complete flushing and cleaning of each piping system.
1. Coordinate requirements with selected water treatment provider. Request recommended cleaning solutions, passivation chemicals and dosages to be used from the treatment vendor to ensure system is acceptable for water treatment provided.
  2. Provide temporary connections to allow cleaning, purging and circulating water through the system. Provide temporary bypasses at each coil and heat exchanger during cleaning.
  3. After testing is completed, systems shall be flushed with chemical cleaner and degreaser to remove deposits such as pipe dope, loose rust, mill scale and other materials in the piping system. Chemicals shall be circulated through the entire system while bypassing end use equipment. System will then be drained, refilled and flushed until no foreign matter is observed and alkalinity of water is equal to or better than makeup water.
  4. Use temporary pumps for circulation. Where permanent pumps are proposed for use for circulating cleaning solution, provide minimum 2 year extended pump warranty from date of substantial completion including all parts and labor. Request written approval from owner before using permanent pumps for flushing.
  5. Provide the following:
    - a. Initial clear water flush: Fill the piping system with clean water and circulate through the system to loosen debris and flush to draining points.
    - b. Cleaning and passivation: Refill and flush system and add cleaning and passivation chemicals. Circulate through the system at a minimum 3 fps velocity. Water treatment vendors shall review report to confirm acceptable results.

- c. Final clear water flush: Drain system containing cleaning and passivation chemicals and refill with fresh makeup water.
- 6. Once final clear water flush is completed, the water treatment vendor shall inject recommended water treatment chemicals. Do not allow system to stagnate before final chemical treatment is provided.
- D. Perform the following before operating the system:
  - 1. Open manual valves fully.
  - 2. Inspect pumps for proper rotation.
  - 3. Set makeup pressure-reducing valves for required system pressure.
  - 4. Inspect air vents at high points of system and determine if all are installed and operating freely (automatic type), or bleed air completely (manual type).
  - 5. Set temperature controls so all coils are calling for full flow.
  - 6. Inspect and set operating temperatures of hydronic equipment, such as boilers, chillers, cooling towers, to specified values.
  - 7. Verify lubrication of motors and bearings.
- E. Replace broken and damaged escutcheons using new materials.

### 3.28 PUMP STARTUP SERVICE

- A. Engage a factory-authorized service representative to perform startup service.
  - 1. Complete installation and startup checks according to manufacturer's written instructions.
  - 2. Check piping connections for tightness.
  - 3. Clean strainers on suction piping.
  - 4. Perform the following startup checks for each pump before starting:
    - a. Verify bearing lubrication.
    - b. Verify that pump is free to rotate by hand and that pump for handling hot liquid is free to rotate with pump hot and cold. If pump is bound or drags, do not operate until cause of trouble is determined and corrected.
    - c. Verify that pump is rotating in the correct direction.
  - 5. Prime pump by opening suction valves and closing drains and prepare pump for operation.
  - 6. Start motor.
  - 7. Open discharge valve slowly.

### 3.29 DEMONSTRATION

- A. Engage a factory-authorized service representative to train Owner's maintenance personnel to adjust, operate, and maintain hydronic pumps.

H:\Y0586.00\DOC\SPEC\2025\_02-20\_IFB\232100\_HYDRONIC DISTRIBUTION SYSTEMS.DOC

## SECTION 232300 - REFRIGERANT PIPING

### PART 1 - GENERAL

#### 1.1 RELATED DOCUMENTS

- A. Certain requirements common to all the mechanical and electrical trades (Fire Suppression, Plumbing, HVAC, Electrical, and Tele/Data) are specified in Division 20. To avoid repetition, they are not repeated in each relevant Division and Section. However, these requirements are applicable to the work of this Section and are hereby incorporated by reference.
- B. Drawings and general provisions of the Contract, including General and Supplementary Conditions and Division 01 Specification Sections, apply to this Section.

#### 1.2 SUMMARY

- A. This Section includes refrigerant piping used for air-conditioning applications.

#### 1.3 PERFORMANCE REQUIREMENTS

- A. Line Test Pressure for Refrigerant R-32:
  - 1. Suction Lines for Air-Conditioning Applications:
  - 2. Suction Lines for Heat-Pump Applications:
  - 3. Hot-Gas and Liquid Lines:
- B. Line Test Pressure for Refrigerant R-454b:
  - 1. Suction Lines for Air-Conditioning Applications:
  - 2. Suction Lines for Heat-Pump Applications:
  - 3. Hot-Gas and Liquid Lines:

#### 1.4 ACTION SUBMITTALS

- A. Product Data: For each type of valve and refrigerant piping specialty indicated. Include pressure drop, based on manufacturer's test data, for the following:
  - 1. Thermostatic expansion valves.
  - 2. Solenoid valves.
  - 3. Hot-gas bypass valves.
  - 4. Filter dryers.
  - 5. Strainers.
  - 6. Pressure-regulating valves.
- B. Shop Drawings: Show layout of refrigerant piping and specialties, including pipe, tube, and fitting sizes, flow capacities, valve arrangements and locations, slopes of horizontal runs, oil traps, double risers, wall and floor penetrations, and equipment connection details. Show interface and spatial relationships between piping and equipment.

1. Shop Drawing Scale: 1/4 inch equals 1 foot.
2. Refrigerant piping indicated on Drawings is schematic only. Size piping and design actual piping layout, including oil traps, double risers, specialties, and pipe and tube sizes to accommodate, as a minimum, equipment provided, elevation difference between compressor and evaporator, and length of piping to ensure proper operation and compliance with warranties of connected equipment.

#### 1.5 INFORMATIONAL SUBMITTALS

- A. Welding certificates.
- B. Field quality-control test reports.

#### 1.6 CLOSEOUT SUBMITTALS

- A. Operation and Maintenance Data: For refrigerant valves and piping specialties to include in maintenance manuals.

#### 1.7 QUALITY ASSURANCE

- A. Welding: Qualify procedures and personnel according to ASME Boiler and Pressure Vessel Code: Section IX, "Welding and Brazing Qualifications."
- B. Comply with ASHRAE 15, "Safety Code for Refrigeration Systems."
- C. Comply with ASME B31.5, "Refrigeration Piping and Heat Transfer Components."

#### 1.8 PRODUCT STORAGE AND HANDLING

- A. Store piping in a clean and protected area with end caps in place to ensure that piping interior and exterior are clean when installed.

#### 1.9 COORDINATION

- A. Coordinate size and location of roof curbs, equipment supports, and roof penetrations. These items are specified in Division 07, Roof Accessories.

### PART 2 - PRODUCTS

#### 2.1 COPPER TUBE AND FITTINGS

- A. Copper Tube: ASTM B 88, Type K or L.
- B. Wrought-Copper Fittings: ASME B16.22.
- C. Wrought-Copper Unions: ASME B16.22.
- D. Solder Filler Metals: ASTM B 32. Use 95-5 tin antimony or alloy HB solder to join copper socket fittings on copper pipe.
- E. Brazing Filler Metals: AWS A5.8.
- F. Flexible Connectors:

1. Body: Tin-bronze bellows with woven, flexible, tinned-bronze-wire-reinforced protective jacket.
2. End Connections: Socket ends.
3. Offset Performance: Capable of minimum 3/4-inch misalignment in minimum 7-inch-long assembly.
4. Pressure Rating: Factory test at minimum 500 psig.
5. Maximum Operating Temperature: 250 deg F.

## 2.2 STEEL PIPE AND FITTINGS

- A. Steel Pipe: ASTM A 53/A 53M, black steel with plain ends; Type, Grade, and wall thickness as selected in Part 3 piping applications articles.
- B. Wrought-Steel Fittings: ASTM A 234/A 234M, for welded joints.
- C. Steel Flanges and Flanged Fittings: ASME B16.5, steel, including bolts, nuts, and gaskets, bevel-welded end connection, and raised face.
- D. Welding Filler Metals: Comply with AWS D10.12/D10.12M for welding materials appropriate for wall thickness and chemical analysis of steel pipe being welded.
- E. Flanged Unions:
  1. Body: Forged-steel flanges for NPS 1 to NPS 1-1/2 and ductile iron for NPS 2 to NPS 3. Apply rust-resistant finish at factory.
  2. Gasket: Fiber asbestos free.
  3. Fasteners: Four plated-steel bolts, with silicon bronze nuts. Apply rust-resistant finish at factory.
  4. End Connections: Brass tailpiece adapters for solder-end connections to copper tubing.
  5. Offset Performance: Capable of minimum 3/4-inch misalignment in minimum 7-inch-long assembly.
  6. Pressure Rating: Factory test at minimum 400 psig.
  7. Maximum Operating Temperature: 330 deg F.
- F. Flexible Connectors:
  1. Body: Stainless-steel bellows with woven, flexible, stainless-steel-wire-reinforced protective jacket
  2. End Connections:
    - a. NPS 2 and Smaller: With threaded-end connections.
    - b. NPS 2-1/2 and Larger: With flanged-end connections.
  3. Offset Performance: Capable of minimum 3/4-inch misalignment in minimum 7-inch-long assembly.
  4. Pressure Rating: Factory test at minimum 500 psig.
  5. Maximum Operating Temperature: 250 deg F.

## 2.3 VALVES AND SPECIALTIES

### A. Diaphragm Packless Valves:

1. Body and Bonnet: Forged brass or cast bronze; globe design with straight-through or angle pattern.
2. Diaphragm: Phosphor bronze and stainless steel with stainless-steel spring.
3. Operator: Rising stem and hand wheel.
4. Seat: Nylon.
5. End Connections: Socket, union, or flanged.
6. Working Pressure Rating: 500 psig.
7. Maximum Operating Temperature: 275 deg F.

### B. Packed-Angle Valves:

1. Body and Bonnet: Forged brass or cast bronze.
2. Packing: Molded stem, back seating, and replaceable under pressure.
3. Operator: Rising stem.
4. Seat: Nonrotating, self-aligning polytetrafluoroethylene.
5. Seal Cap: Forged-brass or valox hex cap.
6. End Connections: Socket, union, threaded, or flanged.
7. Working Pressure Rating: 500 psig.
8. Maximum Operating Temperature: 275 deg F.

### C. Check Valves:

1. Body: Ductile iron, forged brass, or cast bronze; globe pattern.
2. Bonnet: Bolted ductile iron, forged brass, or cast bronze; or brass hex plug.
3. Piston: Removable polytetrafluoroethylene seat.
4. Closing Spring: Stainless steel.
5. Manual Opening Stem: Seal cap, plated-steel stem, and graphite seal.
6. End Connections: Socket, union, threaded, or flanged.
7. Maximum Opening Pressure: 0.50 psig.
8. Working Pressure Rating: 500 psig.
9. Maximum Operating Temperature: 275 deg F.

### D. Service Valves:

1. Body: Forged brass with brass cap including key end to remove core.
2. Core: Removable ball-type check valve with stainless-steel spring.
3. Seat: Polytetrafluoroethylene.
4. End Connections: Copper spring.
5. Working Pressure Rating: 500 psig.

- E. Solenoid Valves: Comply with ARI 760 and UL 429; listed and labeled by an NRTL.
  - 1. Body and Bonnet: Plated steel.
  - 2. Solenoid Tube, Plunger, Closing Spring, and Seat Orifice: Stainless steel.
  - 3. Seat: Polytetrafluoroethylene.
  - 4. End Connections: Threaded.
  - 5. Electrical: Molded, watertight coil in NEMA 250 enclosure of type required by location with 1/2-inch conduit adapter, and 24-V ac coil.
  - 6. Working Pressure Rating: 400 psig.
  - 7. Maximum Operating Temperature: 240 deg F.
- F. Safety Relief Valves: Comply with ASME Boiler and Pressure Vessel Code; listed and labeled by an NRTL.
  - 1. Body and Bonnet: Ductile iron and steel, with neoprene O-ring seal.
  - 2. Piston, Closing Spring, and Seat Insert: Stainless steel.
  - 3. Seat Disc: Polytetrafluoroethylene.
  - 4. End Connections: Threaded.
  - 5. Working Pressure Rating: 400 psig.
  - 6. Maximum Operating Temperature: 240 deg F.
- G. Thermostatic Expansion Valves: Comply with ARI 750.
  - 1. Body, Bonnet, and Seal Cap: Forged brass or steel.
  - 2. Diaphragm, Piston, Closing Spring, and Seat Insert: Stainless steel.
  - 3. Packing and Gaskets: Non-asbestos.
  - 4. Capillary and Bulb: Copper tubing filled with refrigerant charge.
  - 5. Suction Temperature: 40 deg F.
  - 6. Superheat: Adjustable.
  - 7. Reverse-flow option (for heat-pump applications).
  - 8. End Connections: Socket, flare, or threaded union.
  - 9. Working Pressure Rating: 450 psig.
- H. Hot-Gas Bypass Valves: Comply with UL 429; listed and labeled by an NRTL.
  - 1. Body, Bonnet, and Seal Cap: Ductile iron or steel.
  - 2. Diaphragm, Piston, Closing Spring, and Seat Insert: Stainless steel.
  - 3. Packing and Gaskets: Non-asbestos.
  - 4. Solenoid Tube, Plunger, Closing Spring, and Seat Orifice: Stainless steel.
  - 5. Seat: Polytetrafluoroethylene.
  - 6. Equalizer: Internal.

7. Electrical: Molded, watertight coil in NEMA 250 enclosure of type required by location with 1/2-inch conduit adapter, and 24-V ac coil.
  8. End Connections: Socket.
  9. Throttling Range: Maximum 5 psig.
  10. Working Pressure Rating: 500 psig.
  11. Maximum Operating Temperature: 240 deg F.
- I. Straight-Type Strainers:
1. Body: Welded steel with corrosion-resistant coating.
  2. Screen: 100-mesh stainless steel.
  3. End Connections: Socket or flare.
  4. Working Pressure Rating: 500 psig.
  5. Maximum Operating Temperature: 275 deg F.
- J. Angle-Type Strainers:
1. Body: Forged brass or cast bronze.
  2. Drain Plug: Brass hex plug.
  3. Screen: 100-mesh monel.
  4. End Connections: Socket or flare.
  5. Working Pressure Rating: 500 psig.
  6. Maximum Operating Temperature: 275 deg F.
- K. Moisture/Liquid Indicators:
1. Body: Forged brass.
  2. Window: Replaceable, clear, fused glass window with indicating element protected by filter screen.
  3. Indicator: Color coded to show moisture content in ppm.
  4. Minimum Moisture Indicator Sensitivity: Indicate moisture above 60 ppm.
  5. End Connections: Socket or flare.
  6. Working Pressure Rating: 500 psig.
  7. Maximum Operating Temperature: 240 deg F.
- L. Permanent Filter Dryers: Comply with ARI 730.
1. Body and Cover: Painted-steel shell.
  2. Filter Media: 10 micron, pleated with integral end rings; stainless-steel support.
  3. Desiccant Media: Activated alumina or charcoal.
  4. End Connections: Socket.
  5. Access Ports: NPS 1/4 connections at entering and leaving sides for pressure differential measurement.

6. Maximum Pressure Loss: 2 psig.
7. Working Pressure Rating: 500 psig.
8. Maximum Operating Temperature: 240 deg F.

M. Mufflers:

1. Body: Welded steel with corrosion-resistant coating.
2. End Connections: Socket or flare.
3. Working Pressure Rating: 500 psig.
4. Maximum Operating Temperature: 275 deg F.

N. Receivers: Comply with ARI 495.

1. Comply with ASME Boiler and Pressure Vessel Code; listed and labeled by an NRTL.
2. Comply with UL 207; listed and labeled by an NRTL.
3. Body: Welded steel with corrosion-resistant coating.
4. Tappings: Inlet, outlet, liquid level indicator, and safety relief valve.
5. End Connections: Socket or threaded.
6. Working Pressure Rating: 500 psig.
7. Maximum Operating Temperature: 275 deg F.

O. Liquid Accumulators: Comply with ARI 495.

1. Body: Welded steel with corrosion-resistant coating.
2. End Connections: Socket or threaded.
3. Working Pressure Rating: 500 psig.
4. Maximum Operating Temperature: 275 deg F.

## 2.4 REFRIGERANTS

A. Available Manufacturers: Subject to compliance with requirements, manufacturers offering products that may be incorporated into the Work include the following, or approved equal:

1. Atofina Chemicals, Inc.
2. DuPont Company; Fluorochemicals Div.
3. Honeywell, Inc.; Genetron Refrigerants.
4. INEOS Fluor Americas LLC.
5. Or approved equal.

B. ASHRAE 34, R-32: Difluoromethane/Difluoromethylene.

C. ASHRAE 34, R-454b: Difluoromethane/2,3,3,3-Tetrafluoropropene

## PART 3 - EXECUTION

### 3.1 PIPING APPLICATIONS FOR REFRIGERANT R-32

- A. Suction Lines NPS 1-1/2 and Smaller for Conventional Air-Conditioning Applications: Copper, Type ACR, annealed-temper tubing and wrought-copper fittings with brazed or soldered joints.
- B. Suction Lines NPS 2 to NPS 4 for Conventional Air-Conditioning Applications: Copper, Type L, drawn-temper tubing and wrought-copper fittings with brazed or soldered joints.
- C. Hot-Gas and Liquid Lines: Copper, Type ACR, annealed-temper tubing and wrought-copper fittings with brazed or soldered joints.
- D. Hot-Gas and Liquid Lines: Copper, Type L, drawn-temper tubing and wrought-copper fittings with soldered joints.
- E. Hot-Gas and Liquid Lines:
  - 1. NPS 1 and Smaller: Copper, Type L, drawn-temper tubing and wrought-copper fittings with brazed or soldered joints.
  - 2. NPS 1-1/4 to NPS 2: Copper, Type K, annealed- or drawn-temper tubing and wrought-copper fittings with brazed or soldered joints.
  - 3. NPS 4: Copper, Type K, drawn-temper tubing and wrought-copper fittings with soldered joints.
- F. Safety-Relief-Valve Discharge Piping: Schedule 40, black-steel and wrought-steel fittings with welded joints.
- G. Safety-Relief-Valve Discharge Piping: Copper, Type K, drawn-temper tubing and wrought-copper fittings with soldered joints.
- H. Safety-Relief-Valve Discharge Piping:
  - 1. NPS 1 and Smaller: Copper, Type L, drawn-temper tubing and wrought-copper fittings with brazed or soldered joints.
  - 2. NPS 1-1/4 to NPS 2: Copper, Type K, annealed- or drawn-temper tubing and wrought-copper fittings with brazed or soldered joints.
  - 3. NPS 4: Copper, Type K, drawn-temper tubing and wrought-copper fittings with soldered joints.

### 3.2 PIPING APPLICATIONS FOR REFRIGERANT R-454B

- A. Suction Lines NPS 4 and Smaller for Conventional Air-Conditioning Applications: Copper, Type K, drawn-temper tubing and wrought-copper fittings with soldered joints.
- B. Hot-Gas and Liquid Lines: Copper, Type L, annealed- or drawn-temper tubing and wrought-copper fittings with brazed or soldered joints.
- C. Safety-Relief-Valve Discharge Piping: Copper, Type L, annealed- or drawn-temper tubing and wrought-copper fittings with brazed or soldered joints.

### 3.3 PIPING INSTALLATION

- A. Drawing plans, schematics, and diagrams indicate general location and arrangement of piping systems; indicated locations and arrangements were used to size pipe and calculate friction loss, expansion, pump sizing, and other design considerations. Install piping as indicated unless deviations to layout are approved on Shop Drawings.
- B. Install refrigerant piping according to ASHRAE 15.
- C. Install piping in concealed locations unless otherwise indicated and except in equipment rooms and service areas.
- D. Install piping indicated to be exposed and piping in equipment rooms and service areas at right angles or parallel to building walls. Diagonal runs are prohibited unless specifically indicated otherwise.
- E. Install piping above accessible ceilings to allow sufficient space for ceiling panel removal.
- F. Install piping adjacent to machines to allow service and maintenance.
- G. Install piping free of sags and bends.
- H. Install fittings for changes in direction and branch connections.
- I. Select system components with pressure rating equal to or greater than system operating pressure.
- J. Refer to Division 23 for instrumentation and control and sequence of operations for HVAC controls for solenoid valve controllers, control wiring, and sequence of operation.
- K. Install piping as short and direct as possible, with a minimum number of joints, elbows, and fittings.
- L. Arrange piping to allow inspection and service of refrigeration equipment. Install valves and specialties in accessible locations to allow for service and inspection. Install access doors or panels as specified in Division 08, if valves or equipment requiring maintenance is concealed behind finished surfaces.
- M. Install refrigerant piping in protective conduit where installed belowground.
- N. Install refrigerant piping in rigid or flexible conduit in locations where exposed to mechanical injury.
- O. Slope refrigerant piping as follows:
  - 1. Install horizontal hot-gas discharge piping with a uniform slope downward away from compressor.
  - 2. Install horizontal suction lines with a uniform slope downward to compressor.
  - 3. Install traps and double risers to entrain oil in vertical runs.
  - 4. Liquid lines may be installed level.
- P. When brazing or soldering, remove solenoid-valve coils and sight glasses; also remove valve stems, seats, and packing, and accessible internal parts of refrigerant specialties. Do not apply heat near expansion-valve bulb.
- Q. Install piping with adequate clearance between pipe and adjacent walls and hangers or between pipes for insulation installation.
- R. Identify refrigerant piping and valves according to Division 23.

- S. Install sleeves for piping penetrations of walls, ceilings, and floors. Comply with requirements for sleeves specified in Division 23 for hydronic piping distribution systems.
- T. Install escutcheons for piping penetrations of walls, ceilings, and floors. Comply with requirements for escutcheons specified in Division 23 for hydronic piping distribution systems.

### 3.4 PIPE JOINT CONSTRUCTION

- A. Ream ends of pipes and tubes and remove burrs. Bevel plain ends of steel pipe.
- B. Remove scale, slag, dirt, and debris from inside and outside of pipe and fittings before assembly.
- C. Soldered Joints: Construct joints according to ASTM B 828 or CDA's "Copper Tube Handbook."
- D. Brazed Joints: Construct joints according to AWS's "Brazing Handbook," Chapter "Pipe and Tube."
  - 1. Use Type BcuP, copper-phosphorus alloy for joining copper socket fittings with copper pipe.
  - 2. Use Type BAg, cadmium-free silver alloy for joining copper with bronze or steel.
- E. Threaded Joints: Thread steel pipe with tapered pipe threads according to ASME B1.20.1. Cut threads full and clean using sharp dies. Ream threaded pipe ends to remove burrs and restore full ID. Join pipe fittings and valves as follows:
  - 1. Apply appropriate tape or thread compound to external pipe threads unless dry-seal threading is specified.
  - 2. Damaged Threads: Do not use pipe or pipe fittings with threads that are corroded or damaged. Do not use pipe sections that have cracked or open welds.
- F. Steel pipe can be threaded, but threaded joints must be seal brazed or seal welded.
- G. Welded Joints: Construct joints according to AWS D10.12/D10.12M.
- H. Flanged Joints: Select appropriate gasket material, size, type, and thickness for service application. Install gasket concentrically positioned. Use suitable lubricants on bolt threads.

### 3.5 HANGERS AND SUPPORTS

- A. Hanger, support, and anchor products are specified in Division 23.
- B. Install the following pipe attachments:
  - 1. Adjustable steel clevis hangers for individual horizontal runs less than 20 feet long.
  - 2. Roller hangers and spring hangers for individual horizontal runs 20 feet or longer.
  - 3. Pipe Roller: MSS SP-58, Type 44 for multiple horizontal piping 20 feet or longer, supported on a trapeze.
  - 4. Spring hangers to support vertical runs.
  - 5. Copper-clad hangers and supports for hangers and supports in direct contact with copper pipe.
- C. Install hangers for copper tubing with the following maximum spacing and minimum rod sizes:

1. NPS 1/2: Maximum span, 60 inches; minimum rod size, 1/4 inch.
  2. NPS 5/8: Maximum span, 60 inches; minimum rod size, 1/4 inch.
  3. NPS 1: Maximum span, 72 inches; minimum rod size, 1/4 inch.
  4. NPS 1-1/4: Maximum span, 96 inches; minimum rod size, 3/8 inch.
  5. NPS 1-1/2: Maximum span, 96 inches; minimum rod size, 3/8 inch.
  6. NPS 2: Maximum span, 96 inches; minimum rod size, 3/8 inch.
  7. NPS 2-1/2: Maximum span, 108 inches; minimum rod size, 3/8 inch.
  8. NPS 3: Maximum span, 10 feet; minimum rod size, 3/8 inch.
  9. NPS 4: Maximum span, 12 feet; minimum rod size, 1/2 inch.
- D. Install hangers for steel piping with the following maximum spacing and minimum rod sizes:
1. NPS 2: Maximum span, 10 feet; minimum rod size, 3/8 inch.
  2. NPS 2-1/2: Maximum span, 11 feet; minimum rod size, 3/8 inch.
  3. NPS 3: Maximum span, 12 feet; minimum rod size, 3/8 inch.
  4. NPS 4: Maximum span, 14 feet; minimum rod size, 1/2 inch.
- E. Support multi-floor vertical runs at least at each floor.

### 3.6 FIELD QUALITY CONTROL

- A. Perform tests and inspections and prepare test reports.
- B. Tests and Inspections:
1. Comply with ASME B31.5, Chapter VI.
  2. Test refrigerant piping, specialties, and receivers. Isolate compressor, condenser, evaporator, and safety devices from test pressure if they are not rated above the test pressure.
  3. Test high- and low-pressure side piping of each system separately at not less than the pressures indicated in Part 1 "Performance Requirements" Article.
    - a. Fill system with nitrogen to the required test pressure.
    - b. System shall maintain test pressure at the manifold gauge throughout duration of test.
    - c. Test joints and fittings with electronic leak detector or by brushing a small amount of soap and glycerin solution over joints.
    - d. Remake leaking joints using new materials, and retest until satisfactory results are achieved.

### 3.7 SYSTEM CHARGING

- A. Charge system using the following procedures:
1. Install core in filter dryers after leak test but before evacuation.

2. Evacuate entire refrigerant system with a vacuum pump to 500 micrometers. If vacuum holds for 12 hours, system is ready for charging.
3. Break vacuum with refrigerant gas, allowing pressure to build up to 2 psig.
4. Charge system with a new filter-dryer core in charging line.

### 3.8 ADJUSTING

- A. Adjust thermostatic expansion valve to obtain proper evaporator superheat.
- B. Adjust high- and low-pressure switch settings to avoid short cycling in response to fluctuating suction pressure.
- C. Adjust set-point temperature of air-conditioning or chilled-water controllers to the system design temperature.
- D. Perform the following adjustments before operating the refrigeration system, according to manufacturer's written instructions:
  1. Open shutoff valves in condenser water circuit.
  2. Verify that compressor oil level is correct.
  3. Open compressor suction and discharge valves.
  4. Open refrigerant valves except bypass valves that are used for other purposes.
  5. Check open compressor-motor alignment and verify lubrication for motors and bearings.
- E. Replace core of replaceable filter dryer after system has been adjusted and after design flow rates and pressures are established.

## SECTION 232500 - HVAC WATER TREATMENT

### PART 1 - GENERAL

#### 1.1 RELATED DOCUMENTS

- A. Certain requirements common to all the mechanical and electrical trades (Fire Suppression, Plumbing, HVAC, Electrical, and Tele/Data) are specified in Division 20. To avoid repetition, they are not repeated in each relevant Division and Section. However, these requirements are applicable to the work of this Section and are hereby incorporated by reference.
- B. Drawings and general provisions of the Contract, including General and Supplementary Conditions and Division 01 Specification Sections, apply to this Section.

#### 1.2 SUMMARY

- A. This Section includes the following HVAC water-treatment systems:
  - 1. Bypass chemical-feed equipment and controls.
  - 2. Biocide chemical-feed equipment and controls.
  - 3. Chemical treatment test equipment.
  - 4. HVAC water-treatment chemicals.
  - 5. Makeup water softeners.
  - 6. Water filtration units for HVAC makeup water.

#### 1.3 DEFINITIONS

- A. EEPROM: Electrically erasable, programmable read-only memory.
- B. Low Voltage: As defined in NFPA 70 for circuits and equipment operating at less than 50 V or for remote-control, signaling power-limited circuits.
- C. PPB: Parts per billion.
- D. PPM: Parts per million.
- E. RO: Reverse osmosis.
- F. TDS: Total dissolved solids.
- G. TSS: Total suspended solids include both organic and inorganic solids that are suspended in the water. These solids may include silt, plankton, and industrial wastes.
- H. UV: Ultraviolet.

#### 1.4 ACTION SUBMITTALS

- A. Product Data: Include rated capacities, operating characteristics, furnished specialties, and accessories for the following products:
  - 1. Bypass feeders.
  - 2. Water meters.

3. Inhibitor injection timers.
4. pH controllers.
5. Biocide feeder timers.
6. Chemical solution tanks.
7. Injection pumps.
8. Chemical test equipment.
9. Chemical material safety data sheets.
10. Glycol makeup system.
11. Inhibited ethylene glycol.
12. Inhibited propylene glycol.
13. Water softeners.
14. RO units.
15. Multimedia filters.
16. Centrifugal separators.

B. Shop Drawings: Pretreatment and chemical treatment equipment showing tanks, maintenance space required, and piping connections to HVAC systems.

1. Include plans, elevations, sections, details, and attachments to other work.
2. Wiring Diagrams: Power and control wiring.

#### 1.5 INFORMATIONAL SUBMITTALS

A. Field quality-control test reports.

B. Other Informational Submittals:

1. Water-Treatment Program: Written sequence of operation on an annual basis for the application equipment required to achieve water quality defined in the "Performance Requirements" Article.
2. Water Analysis: Illustrate water quality available at Project site. At a minimum, measure the following five (5) parameters and document concentration levels.
  - a. Hardness (Ca as  $\text{CaCO}_3$ )
  - b. Total alkalinity
  - c. Silicon Dioxide ( $\text{SiO}_2$ )
  - d. Chloride
  - e. Conductivity

#### 1.6 CLOSEOUT SUBMITTALS

A. Operation and Maintenance Data: For sensors, injection pumps, and controllers to include in emergency, operation, and maintenance manuals.

1.7 QUALITY ASSURANCE

- A. HVAC Water-Treatment Service Provider Qualifications: An experienced HVAC water-treatment service provider capable of analyzing water qualities, installing water-treatment equipment, and applying water treatment as specified in this Section.
- B. Electrical Components, Devices, and Accessories: Listed and labeled as defined in NFPA 70, Article 100, by a testing agency acceptable to authorities having jurisdiction, and marked for intended use.

PART 2 - PRODUCTS

2.1 MANUFACTURERS

- A. Available Manufacturers: Subject to compliance with requirements, manufacturers offering products that may be incorporated into the Work include the following, or approved equal:
  - 1. Anderson Chemical Co, Inc.
  - 2. Aqua-Chem, Inc.; Cleaver-Brooks Div.
  - 3. Barclay Chemical Co.; Water Management, Inc.
  - 4. Boland Trane Services.
  - 5. Cascade Water Services, Inc.
  - 6. Earthwise Environmental Inc.
  - 7. H-O-H Chemicals, Inc.
  - 8. Metro Group. Inc. (The); Metropolitan Refining Div.
  - 9. Nalco; an Ecolab company.
  - 10. Sonitec-Vortisand Inc.
  - 11. Suez Water Technologies (Formerly GE Water).
  - 12. Watcon, Inc.
  - 13. Or approved equal.

2.2 PERFORMANCE REQUIREMENTS

- A. Provide all hardware, chemicals, and other material necessary to maintain HVAC water quality in all systems. Water quality for HVAC systems shall minimize corrosion, scale buildup, and biological growth for optimum efficiency of HVAC equipment without creating a hazard to operating personnel or the environment.
- B. Base HVAC water treatment on quality of water available at Project site, HVAC system equipment material characteristics and functional performance characteristics, operating personnel capabilities, and requirements and guidelines of authorities having jurisdiction.
- C. Coordinate requirements for piping system cleaning with Division 23. Provide recommendation for cleaning and passivation chemicals including dosages needed to provide system cleanliness consistent with recommended final water treatment.

- D. Closed hydronic systems, including hot-water heating and glycol heating/energy recovery, shall meet recommendations of the water treatment provider and shall have the following minimum water qualities:
1. pH: Maintain a value within 7.0 to 9.0.
  2. Scale Control: Provide softened water for initial fill and makeup. Where softened water is not used, provide sufficient scale inhibitors to prevent formation of scale and maintain all scale-forming material in solution.
  3. Dispersants: Provide sufficient dispersants to prevent sedimentation of fine particulate matter.
  4. Microbiological Limits:
    - a. Total Aerobic Plate Count: Maintain a maximum value of 1000 organisms/ml.
    - b. Total Anaerobic Plate Count: Maintain a maximum value of 100 organisms/ml.
    - c. Nitrate Reducers: Maintain a maximum value of 100 organisms/ml.
    - d. Sulfate Reducers: Maintain a maximum value of 0 organisms/ml.
    - e. Iron Bacteria: Maintain a maximum value of 0 organisms/ml.

## 2.3 MANUAL CHEMICAL-FEED EQUIPMENT

- A. Bypass Feeders: Steel, with corrosion-resistant exterior coating, minimum 3-1/2-inch fill opening in the top, and NPS 3/4 bottom inlet and top side outlet. Quarter turn or threaded fill cap with gasket seal and diaphragm to lock the top on the feeder when exposed to system pressure in the vessel.
1. Capacity: 5 gal..
  2. Minimum Working Pressure: 125 psig.

## 2.4 AUTOMATIC CHEMICAL-FEED EQUIPMENT

- A. Water Meter, Turbine Type, Flanged:
1. AWWA C701, turbine-type, totalization meter.
  2. Body: Bronze or Epoxy-coated cast iron.
  3. Minimum Working-Pressure Rating: 150 psig.
  4. Maximum Pressure Loss at Design Flow: 3 psig.
  5. Registration: Gallons or cubic feet.
  6. End Connections: Flanged.
  7. Controls: Flow-control switch with normally open contacts; rated for maximum 10 A, 250-V ac; and that will close at adjustable increments of total flow.
  8. Provide an electronic or digital interface for flow rate indication at central workstation compatible with DDC system, as described in Division 23. Low-voltage signal must be capable of transmitting 1000 feet (305 m).
- B. Chemical Solution Tanks:

1. Chemical-resistant reservoirs fabricated from high-density opaque polyethylene with minimum 110 percent containment vessel.
  2. Molded cover with recess for mounting pump.
  3. Capacity: 50 gal..
- C. Chemical Solution Injection Pumps:
1. Self-priming, positive-displacement; rated for intended chemical with minimum 25 percent safety factor for design pressure and temperature.
  2. Adjustable flow rate.
  3. Metal and thermoplastic construction.
  4. Built-in relief valve.
  5. Fully enclosed, continuous-duty, single-phase motor. Comply with requirements in Division 23.
- D. Chemical Solution Tubing: Polyethylene tubing with compression fittings and joints except ASTM A 269, Type 304, stainless steel for steam boiler injection assemblies.
- E. Injection Assembly:
1. Quill: Minimum NPS 1/2 with insertion length sufficient to discharge into at least 25 percent of pipe diameter.
  2. Ball Valve: Two-piece, stainless steel as described in "Stainless-Steel Pipes and Fittings" Article below; and selected to fit quill.
  3. Packing Gland: Mechanical seal on quill of sufficient length to allow quill removal during system operation.
  4. Assembly Pressure/Temperature Rating: Minimum 600 psig at 200 deg F.

## 2.5 STAINLESS-STEEL PIPES AND FITTINGS

- A. Stainless-Steel Tubing: Comply with ASTM A 269, Type 316.
- B. Stainless-Steel Fittings: Complying with ASTM A 815/A 815M, Type 316, Grade WP-S.
- C. Two-Piece, Full-Port, Stainless-Steel Ball Valves: ASTM A 351, Type 316 stainless-steel body; ASTM A 276, Type 316 stainless-steel stem and vented ball, carbon-filled TFE seats, threaded body design with adjustable stem packing, threaded ends, and 250-psig SWP and 600-psig CWP ratings.

## 2.6 CHEMICAL TREATMENT TEST EQUIPMENT

- A. Test Kit: Manufacturer-recommended equipment and chemicals in a wall-mounting cabinet for testing pH, TDS, inhibitor, chloride, alkalinity, and hardness; sulfite and testable polymer tests for high-pressure boilers, and oxidizing biocide test for open cooling systems.
- B. Corrosion Test-Coupon Assembly: Constructed of corrosive-resistant material, complete with piping, valves, and mild steel and copper coupons. Locate copper coupon downstream from mild steel coupon in the test-coupon assembly.
1. Two-station rack for closed-loop systems.

## 2.7 CHEMICALS

- A. Chemicals shall be as recommended by water-treatment system manufacturer that are compatible with piping system components and connected equipment, and that can attain water quality specified in "Performance Requirements" Article.
- B. Chemicals for direct steam injection humidification and for steam used in direct contact with food to be FDA approved and safe for these uses.

## 2.8 INHIBITED PROPYLENE GLYCOL

### A. Inhibited Propylene Glycol:

- 1. Propylene glycol with inhibitor additive, to provide freeze protection for heat-transfer fluid and corrosion protection for carbon-steel, brass, copper, stainless steel, and cast-iron piping and fittings.
- 2. Inhibitor creates a passive layer on all surfaces that contact propylene glycol to prevent corrosion and stabilizes fluid pH, to compensate for acids formed from glycol degradation.
- 3. Operating Temperature Range: minus 50 deg F (minus 46 deg C) to 250 deg F (121 deg F)
- 4. Concentrated inhibited propylene glycol is to be 95.5 percent propylene glycol by weight and 4.5 percent performance additives.
- 5. Concentrated inhibited propylene glycol is mixed with water in proper proportion specified by the manufacturer to provide freeze protection to minus 20 deg F (minus 29 deg C). Premixed heat-transfer fluid may be used, or glycol/water mixture may be prepared at the time of installation. Use only deionized water for mixing.
- 6. Provide only propylene glycol that is specifically blended for HVAC application. Automotive-type antifreeze is unacceptable.

## 2.9 GLYCOL MAKEUP SYSTEM

- A. Glycol makeup system shall be comprised of solution tank, fill pump and accessories and may be provided as separate components and control or may be a packaged system. System shall include the following:
  - 1. Tank and pump base.
  - 2. Polyethylene or steel, minimum 50-gallon storage solution tank with removable lid.
  - 3. Visible solution level gauge with readings in gallons and liters.
  - 4. System fill pump with Y-strainer, isolation valves, silent check valve on pump discharge, open drip proof 115 volt/1 phase/60 Hz motor, motor contactor, balancing valve, expansion tank, discharge pressure gauge.
  - 5. Interconnecting piping.
  - 6. Controls shall include green power indicator light and pressure controls to activate pump on pressure drop below setpoint. Include a red indicator light and alarm contacts to indicate low reservoir level. Include low level cut out sensor and high-level alarm.

7. Capacity 10 gpm at 30 psig.

## 2.10 FILTRATION EQUIPMENT

### A. Multimedia Filters:

1. Description: Factory-fabricated and -tested, simplex, multimedia filter system of filter tank, media, strainer, circulating pump, piping, and controls for removing particles from water.
  - a. Filter Tank: Corrosion resistant with distribution system and media.
    - 1) Fabricate and label steel filter tanks to comply with ASME Boiler and Pressure Vessel Code: Section VIII, Division 1.
    - 2) Fabricate and label FRP filter tanks to comply with ASME Boiler and Pressure Vessel Code: Section X, if indicated.
    - 3) Pipe Connections NPS 2 and Smaller: Threaded according to ASME B1.20.1.
    - 4) Steel Tank Pipe Connections NPS 2-1/2 and Larger: Steel, Class 150 flanges according to ASME B16.5 or grooved according to AWWA C606.
    - 5) FRP Tank Pipe Connections NPS 2-1/2 and Larger: Type A, integral; Designation E, 125-psig or F, 150-psig pressure category flanges of grade same as tank material according to ASTM D 5421.
  - b. Motorized Valves: Flanged or grooved-end, ductile-iron butterfly type with EPDM valve seat and stem seal; with ASTM B 148 aluminum bronze disc.
  - c. Strainer: Basket type mounted on pump suction.
  - d. Piping: ASTM B 88, Type L copper water tube, copper-alloy solder-joint fittings, and brazed, flanged, or grooved joints.
  - e. Safety Valves: Automatic pressure relief.
  - f. Circulating Pump: Overhung impeller, close coupled, single stage, end suction, centrifugal. Comply with UL 778 and with HI 1.1-1.2 and HI 1.3.
    - 1) Casing: Radially split, cast iron.
    - 2) Pressure Rating: 125 psig minimum.
    - 3) Impeller: ASTM B 584, cast bronze; statically and dynamically balanced, closed, and keyed to shaft.
    - 4) Shaft and Shaft Sleeve: Steel shaft, with copper-alloy shaft sleeve.
    - 5) Seal: Mechanical.
    - 6) Motor: ODP motor supported on the pump-bearing frame. General requirements for motors are specified in Division 23.
  - g. Controls: Automatic control of circulating pump and tank backwash; factory wired for single electrical connection.
    - 1) Panel: NEMA 250, Type 4 enclosure with time clock and pressure gauges.
    - 2) Pump: Automatic and manual switching; manual switch position bypasses safeties and controls.

- 3) Backwash: Automatic; with time clock and differential pressure switch.
  - 4) Backwash Valve: Tank mounted with valves interlocked to single actuator.
  - h. Support: Skid mounting.
- B. Centrifugal Separators:
- 1. Available Manufacturers: Subject to compliance with requirements, manufacturers offering products that may be incorporated into the Work include the following, or approved equal:
    - a. Culligan International.
    - b. Griswold Controls.
    - c. LAKOS; a div. of Claude Laval Corporation.
    - d. PEP Filters, Inc.
    - e. Puroflux Corporation.
    - f. Rosedale Products, Inc.
    - g. Or approved equal.
  - 2. Description: Simplex separator housing with baffles and chambers for removing particles from water by centrifugal action and gravity.
  - 3. Housing: With manufacturer's proprietary system of baffles and chambers.
    - a. Construction: Fabricate and label steel separator housing to comply with ASME Boiler and Pressure Vessel Code: Section VIII, Division 1.
    - b. Inlet: Designed with tangential entry to produce centrifugal flow of feedwater.
    - c. Vortex Chamber: Designed for downward vortex flow and gravity separation of particles.
    - d. Collection Chamber: Designed to hold separated particles.
    - e. Outlet: Near top of unit.
    - f. Purge: At bottom of collection chamber.
    - g. Pipe Connections NPS 2 and Smaller: Threaded according to ASME B1.20.1.
    - h. Pipe Connections NPS 2-1/2 and Larger: Steel, Class 150 flanges according to ASME B16.5 or grooved according to AWWA C606. Provide stainless-steel flanges if tank is stainless steel.
  - 4. Motorized Purge Valve: Gate or plug pattern valve.
    - a. Motorized Valves: Butterfly-type, flanged or grooved-end, ductile-iron body, with EPDM valve seat and stem seal; with ASTM B 148 aluminum bronze disc.
  - 5. Strainer: Stainless-steel basket type mounted on pump suction.
  - 6. Piping: ASTM B 88, Type L copper water tube, copper-alloy solder-joint fittings, and brazed, flanged, or grooved joints.
  - 7. Circulating Pump: Overhung impeller, close coupled, single stage, end suction, centrifugal. Comply with UL 778 and with HI 1.1-1.2 and HI 1.3.
    - a. Casing: Radially split, cast iron.

- b. Pressure Rating: 125 psig minimum.
  - c. Impeller: ASTM B 584, cast bronze; statically and dynamically balanced, closed, and keyed to shaft.
  - d. Shaft and Shaft Sleeve: Steel shaft, with copper-alloy shaft sleeve.
  - e. Seal: Mechanical.
  - f. Motor: ODP motor supported on the pump-bearing frame. General requirements for motors are specified in Division 23.
  - g. Electrical Components, Devices, and Accessories: Listed and labeled as defined in NFPA 70, by a qualified testing agency, and marked for intended location and application.
8. Controls: Automatic control of circulating pump and separator purge; factory wired for single electrical connection.
- a. Panel: NEMA 250, Type 4 enclosure.
  - b. Pump: Automatic and manual switching; manual switch position bypasses safeties and controls.
  - c. Separator Purge: Automatic and manual.
  - d. TDS Controller Interlock: Open separator purge valve with bleed-off control.
9. Support: Skid mounting.

### **PART 3 - EXECUTION**

#### **3.1 WATER ANALYSIS**

- A. Perform an analysis of supply water to determine quality of water available at Project site.

#### **3.2 INSTALLATION**

- A. Install chemical application equipment on concrete bases, level and plumb. Maintain manufacturer's recommended clearances. Arrange units so controls and devices that require servicing are accessible. Anchor chemical tanks and floor-mounting accessories to substrate.
- B. Install water testing equipment on wall near water chemical application equipment.
- C. Install interconnecting control wiring for chemical treatment controls and sensors.
- D. Mount sensors and injectors in piping circuits.
- E. Bypass Feeders: Install in closed hydronic systems, including hot-water heating, and equipped with the following:
  - 1. Install bypass feeder in a bypass circuit around circulating pumps, unless otherwise indicated on Drawings.
  - 2. Install water meter in makeup water supply.
  - 3. Install test-coupon assembly in bypass circuit around circulating pumps, unless otherwise indicated on Drawings.

4. Install a gate or full-port ball isolation valves on inlet, outlet, and drain below feeder inlet.
5. Install a swing check on inlet after the isolation valve.
- F. Install automatic chemical-feed equipment for steam boiler and steam condensate systems and include the following:
  1. Install makeup water softener.
  2. Install water meter in makeup water supply.
  3. Install inhibitor injection pumps and solution tanks with injection timer sensing contacts in water meter.
    - a. Pumps shall operate for timed interval when contacts close at water meter in makeup water supply connection. Injection pump shall discharge into boiler feedwater tank or feedwater supply connection at boiler.
  4. Install test equipment and furnish test-kit to Owner.

### 3.3 CONNECTIONS

- A. Piping installation requirements are specified in other Sections. Drawings indicate general arrangement of piping, fittings, and specialties.
- B. Install piping adjacent to equipment to allow service and maintenance.
- C. Make piping connections between HVAC water-treatment equipment and dissimilar-metal piping with dielectric fittings. Dielectric fittings are specified in Division 23.
- D. Install shutoff valves on HVAC water-treatment equipment inlet and outlet. Metal general-duty valves are specified in Division 23.
- E. Refer to Division 22 for backflow preventers required in makeup water connections to potable-water systems.
- F. Confirm applicable electrical requirements in electrical Sections for connecting electrical equipment.
- G. Ground equipment according to Division 26.
- H. Connect wiring according to Division 26.

### 3.4 FIELD QUALITY CONTROL

- A. Manufacturer's Field Service: Engage a factory-authorized service representative to inspect, test, and adjust components, assemblies, and equipment installations, including connections. Report results in writing.
- B. Tests and Inspections:
  1. Inspect field-assembled components and equipment installation, including piping and electrical connections.
  2. Inspect piping and equipment to determine that systems and equipment have been cleaned, flushed, and filled with water, and are fully operational before introducing chemicals for water-treatment system.

3. Place HVAC water-treatment system into operation and calibrate controls during the preliminary phase of HVAC systems' startup procedures.
  4. Do not enclose, cover, or put piping into operation until it is tested and satisfactory test results are achieved.
  5. Test for leaks and defects. If testing is performed in segments, submit separate report for each test, complete with diagram of portion of piping tested.
  6. Leave uncovered and unconcealed new, altered, extended, and replaced water piping until it has been tested and approved. Expose work that has been covered or concealed before it has been tested and approved.
  7. Cap and subject piping to static water pressure of 50 psig above operating pressure, without exceeding pressure rating of piping system materials. Isolate test source and allow test pressure to stand for four hours. Leaks and loss in test pressure constitute defects.
  8. Repair leaks and defects with new materials and retest piping until no leaks exist.
- C. Remove and replace malfunctioning units and retest as specified above. Equipment will be considered defective if it does not pass tests and inspections.
- D. Sample boiler water at one-week intervals after boiler startup for a period of five weeks, and prepare test report advising Owner of changes necessary to adhere to Part 1 "Performance Requirements" Article for each required characteristic. Sample boiler water at eight-week intervals following the testing noted above to show that automatic chemical-feed systems are maintaining water quality within performance requirements specified in this Section.
- E. At eight-week intervals following Substantial Completion, perform separate water analyses on hydronic systems to show that automatic chemical-feed systems are maintaining water quality within performance requirements specified in this Section. Submit written reports of water analysis advising Owner of changes necessary to adhere to Part 1 "Performance Requirements" Article.
- F. Comply with ASTM D 3370 and with the following standards:
1. Silica: ASTM D 859.
  2. Steam System: ASTM D 1066.
  3. Acidity and Alkalinity: ASTM D 1067.
  4. Iron: ASTM D 1068.
  5. Water Hardness: ASTM D 1126.
- G. Prepare test and inspection reports.
- 3.5 MAINTENANCE SERVICE
- A. Scope of Maintenance Service: Provide chemicals and service program to maintain water conditions required above, to inhibit corrosion, scale formation, and biological growth for heating, hot-water piping and equipment. Services and chemicals shall be provided for a period of one year from date of Substantial Completion and shall include the following:
1. Initial water analysis and HVAC water-treatment recommendations.
  2. Startup assistance for Contractor to flush the systems, clean with detergents, and initially fill systems with required chemical treatment prior to operation.

3. Periodic field service and consultation.
4. Customer report charts and log sheets.
5. Laboratory technical analysis.
6. Analyses and reports of all chemical items concerning safety and compliance with government regulations.

**3.6 DEMONSTRATION**

- A. Engage a factory-authorized service representative to train Owner's maintenance personnel to adjust, operate, and maintain HVAC water-treatment systems and equipment. Refer to Division 01, Demonstration and Training.
- B. Training: Provide a "how-to-use" self-contained breathing apparatus video that details exact operating procedures of equipment.

**END OF SECTION**

H:\Y0586.00\DOC\SPEC\2025\_02-20\_IFB\232500\_HVAC WATER TREATMENT.DOC

## **SECTION 233113 - AIR DISTRIBUTION SYSTEMS-METAL DUCTS**

### **PART 1 - GENERAL**

#### **1.1 RELATED DOCUMENTS**

Certain requirements common to all the mechanical and electrical trades (Fire Suppression, Plumbing, HVAC, Electrical, and Tele/Data) are specified in Division 20. To avoid repetition, they are not repeated in each relevant Division and Section. However, these requirements are applicable to the work of this Section and are hereby incorporated by reference.

Drawings and general provisions of the Contract, including General and Supplementary Conditions and Division 01 Specification Sections, apply to this Section.

#### **1.2 SUMMARY**

Section Includes:

1. Sheet metal materials.
2. Rectangular ducts and fittings.
3. Round ducts and fittings.
4. Single wall plenums and connections to louvers.
5. Drain Pans
6. Exhaust stacks
7. Duct liner.
8. Sealant and gaskets.
9. Hangers and supports.
10. Backdraft and pressure relief dampers.
11. Barometric relief dampers.
12. Manual volume dampers.
13. Fire dampers.
14. Smoke dampers, combination fire and smoke dampers, corridor ceiling dampers.
15. Flanged breakaway connectors.
16. Duct silencers.
17. Short radius elbow splitter vanes.
18. Remote damper operators.
19. Duct-mounted access doors.
20. Flexible connectors.
21. Flexible ducts.
22. Duct accessory hardware.

- 23. Diffusers, registers and grilles.
- 24. Duct leakage testing and allowable duct leakage rate calculations

Related Sections:

- 25. Division 08 for fixed and adjustable louvers and wall vents whether or not they are connected to ducts.
- 26. Division 28 for duct-mounted fire and smoke detectors not provided as integral option with smoke and fire-smoke dampers.

### 1.3 PERFORMANCE REQUIREMENTS

Delegated Duct Construction Design: Unless noted otherwise duct construction including sheet metal thicknesses, seam and joint construction, reinforcements, and hangers and supports, shall comply with 2005 SMACNA "HVAC Duct Construction Standards - Metal and Flexible" Third Edition, performance and design criteria indicated in "Duct Schedule" Article.

- 1. In addition to the above basic requirements, the following supplemental requirements apply to this project:
  - a. Minimum sheet metal thickness for welded sections of ductwork shall meet the requirements identified in Part 2 of this Section.

Airstream Surfaces: Surfaces in contact with the airstream shall comply with requirements in 2016 ASHRAE Standard 62.1 "Ventilation for Acceptable Indoor Air Quality".

#### Structural Support of Air Distribution Systems

- 2. Install ducts with support systems indicated in Tables 5-1 through 5-3 and Figures 5-1 through 5-10 of SMACNA Duct Construction Manual.
  - a. Select hangers and supports to withstand the effects of gravity loads and stresses within limits and under conditions described in Tables 5-1 through 5-3 and Figures 5-1 through 5-10.
  - b. Horizontal duct shall have a support within 2 feet of each elbow and within 4 feet of each branch connection.
  - c. Upper attachments to structure shall have an allowable gravity load of 25 percent of the failure load (proof test).
- 3. Maximum load from hangers attached to the underside of slabs shall be 250 pounds. If these criteria cannot be met due to field identified space or coordination constraints, submit formal request for interpretation (RFI) to structural design professional of record for review and approval before proceeding with the installation.
- 4. Do not drill or cut notches or holes in any structural member without the express written approval of the structural design professional of record.
- 5. Provide core openings. Submit a formal request for interpretation, identifying location of desired cores to the structural design professional of record for guidance and approval.
- 6. Do not attach or suspend MEP components from metal decking.
- 7. Survey location of concrete reinforcement before drilling for anchors in reinforced concrete walls, beams or slabs. Do not cut reinforcing bars during the drilling of anchors without the express written approval of the structural design professional of record.

8. Provide patching of fireproofing removed or damaged during the attachment of suspended MEP components. Provide documentation that the patching maintains the performance of the fire proofing system.
9. For steel frames, maximum load from hangers attached to steel beams shall be 400 pounds. If clamps or other attachments are made to fireproofed beams, remove ample fireproofing at the point of contact to ensure the attachment device is placed with proper edge distance to develop the required pressure ("bite") on the steel. Patch fireproofing after attachment device is in place. Arrange clamps to equally load each side of flange.
10. Ductwork and Support Wind-Restraint Details:
  - a. Design Analysis: To support selection and arrangement of wind restraints based on duct construction and support spacing. Include calculations of combined tensile and shear loads.
  - b. Details: Indicate fabrication and arrangement. Detail attachments of restraints to the restrained items and to the structure. Show attachment locations, methods, and spacing. Identify components, list their strengths, and indicate directions and values of forces transmitted to the structure during design wind speed. Indicate association with vibration isolation devices.
  - c. Comply with requirements in other Sections for equipment mounted outdoors.
  - d. Wind-Restraint Loading:
    - 1) Basic Wind Speed: 125 MPH.
    - 2) Building Classification Category: III.
    - 3) Minimum 10 lb/sq. ft. multiplied by maximum area of HVAC component projected on vertical plane normal to wind direction, and 45 degrees either side of normal.

#### 1.4 ACTION SUBMITTALS

Product Data: For each type of the following products:

1. Liners and adhesives.
2. Sealants and gaskets.
3. Adhesives.
4. Diffusers, registers and grilles.
5. Data Sheet: Indicate materials of construction, finish, and mounting details; and performance data including throw and drop, static-pressure drop, and noise ratings.
6. Schedule: Indicate drawing designation, room location, quantity, model number, size, and accessories furnished.
7. Duct silencers, provide pressure drop, dynamic insertion loss data and breakout noise characteristics.

Samples: for the smallest indicated size of each exposed diffuser, register and grille:

8. Each factory applied color finish.
9. Each texture.

Sustainable Design Submittals:

10. Product data showing compliance with 2016 ASHRAE Standard 62.1 "Ventilation for Acceptable Indoor Air Quality" sections identified below.
  - a. Documentation indicating that duct systems comply with Section 5 - "Systems and Equipment."
  - b. Duct-Cleaning Test Report: Documentation of work performed for compliance with Section 7.2.4 - "Ventilation System Start-up."
11. Product Data: Documentation indicating that duct systems comply with 2016 ASHRAE/IES Standard 90.1 "Energy Standard for Buildings Except Low-Rise Residential Buildings", Section 6.4.4 - "HVAC System Construction and Insulation."
12. Leakage Test Report: Documentation of work performed for compliance with 2016 ASHRAE/IES Standard 90.1 "Energy Standard for Buildings Except Low-Rise Residential Buildings", Section 6.4.4.2 - "Duct and Plenum Leakage." Leak test reports shall be submitted as a single comprehensive report for a complete system (e.g. supply, return, exhaust) and not as individual section by section reports.
13. Product Data: For adhesives and sealants, documentation including printed statement of VOC content.

Shop Drawings: For air distribution systems - metal ducts:

14. Fabrication, assembly, and installation, including plans, elevations, sections, components, and attachments to other work.
15. Factory- and shop-fabricated ducts and fittings.
16. Duct layout indicating sizes, configuration, liner material, and static-pressure classes.
17. Elevation of top of ducts.
18. Dimensions of main duct runs from building grid lines.
19. Fittings.
20. Reinforcement and spacing.
21. Seam and joint construction.
22. Penetrations through fire-rated and other partitions.
23. Equipment installation based on approved equipment submittals.
24. Locations for duct accessories, including dampers, full length splitter vanes, access doors and panels.
25. Hangers and supports, including methods for duct and building attachment and vibration isolation.
26. Detail metal duct accessories fabrication and installation in ducts and other construction. Include dimensions, weights, loads, and required clearances; and method of field assembly into duct systems and other construction. Include the following:
  - a. Special fittings.
  - b. Manual volume damper installations.
  - c. Control-damper installations.

- d. Fire-damper, smoke-damper, combination fire- and smoke-damper, ceiling, and corridor damper installations, including sleeves; and duct-mounted access doors and remote damper operators.
- e. Wiring Diagrams: For power, signal, and control wiring for smoke and fire-smoke dampers.

Delegated-Design Submittal:

- 27. Sheet metal thicknesses.
- 28. Joint and seam construction and sealing.
- 29. Reinforcement details and spacing.
- 30. Materials, fabrication, assembly, and spacing of hangers and supports.
- 31. Design Calculations:
  - a. For each system provide calculation of duct leakage class and allowable duct leakage required to meet specified system leakage in accordance with ASHRAE recommendations.
  - b. Calculations for selecting hangers and supports.

## 1.5 INFORMATIONAL SUBMITTALS

Air Distribution System Coordination Drawings: Plans, drawn to scale, on which the following items are shown and coordinated with each other, using input from installers of the items involved:

- 1. Duct installation, indicating coordination with general construction, building components, and other building services. Indicate proposed changes to duct layout.
- 2. Suspended ceiling components.
- 3. Structural members to which duct will be attached.
- 4. Size and location of initial access modules for acoustical tile.
- 5. Penetrations of smoke barriers and fire-rated construction.
- 6. Items penetrating finished ceiling including the following:
  - a. Lighting fixtures.
  - b. Air outlets and inlets (diffusers, registers and grilles).
  - c. Speakers.
  - d. Sprinklers.
  - e. Ceiling and duct access panels.
  - f. Perimeter moldings.
  - g. Ceiling suspension assembly members
  - h. Methods of attaching hangers to building structure
  - i. Size and location of initial access modules for acoustical tile.
  - j. Duct accessories requiring ceiling-mounted access panels and access doors with input from Installers of the items involved.

7. Refer to Division 20 for additional coordination drawing requirements.
8. Duct Cleanliness Verification Report.

Welding certificates.

Duct leakage factors and duct leakage fraction calculations based on installed duct sizes and final routing.

Field quality-control reports.

Source quality-control reports.

#### 1.6 CLOSEOUT SUBMITTALS

Operation and Maintenance Data: For air duct accessories to include in operation and maintenance manuals.

Final duct leakage test reports

#### 1.7 MAINTENANCE MATERIAL SUBMITTALS

Furnish extra materials that match products installed and that are packaged with protective covering for storage and identified with labels describing contents.

1. Fusible Links: Furnish quantity equal to 10 percent of amount installed.

#### 1.8 QUALITY ASSURANCE

Comply with applicable requirements of the following performance standards and agencies as referenced in this section:

1. 2005 SMACNA "HVAC Duct Construction Standards - Metal and Flexible" Third Edition (SMACNA Duct Construction Manual). Comply with requirements only as the chapters, subchapters, sections, appendices, figures and/or tables of the standard are specifically referenced in Articles in this Section.
  - a. Nothing in this Section shall be interpreted to mean SMACNA Duct Construction Manual is adopted in its entirety.
2. 2012 SMACNA "HVAC Air Duct Leakage Test Manual" (SMACNA Leak Test Manual). Comply with requirements only as the chapters, subchapters, sections, appendices, figures and/or tables of the manual are explicitly referenced in the Articles in this Section.
  - a. Nothing in this Section shall be interpreted to mean SMACNA Leak Test Manual is adopted in its entirety.
3. 2002 SMACNA "Fire, Smoke and Radiation Damper Installation Guide for HVAC Systems – 5<sup>th</sup> Edition".
4. 2008 SMACNA "Accepted Industry Practice for Industrial Duct Construction – 2<sup>nd</sup> Edition".
5. 2015 NFPA 90A "Installation of Air Conditioning and Ventilation Systems" (NFPA 90A).
6. 2016 ASHRAE "HVAC Systems and Equipment Handbook" (ASHRAE Systems Handbook).

7. 2015 ASHRAE "HVAC Applications Handbook" (ASHRAE Applications Handbook).
8. 2016 ASHRAE Standard 62.1 "Ventilation for Acceptable Indoor Air Quality" (ASHRAE 62.1).
  - a. Comply with Section 5 - "Systems and Equipment" and Section 7 - "Construction and System Start-up".
9. 2016 ASHRAE/IES Standard 90.1 "Energy Standard for Buildings Except Low-Rise Residential Buildings" (ASHRAE/IES 90.1).
  - a. Comply with requirements in Section 6.4.4 - "HVAC System Construction and Insulation."
10. 2006 (RA2011) ASHRAE Standard 70 "Method of Testing the Performance of Air Outlets and Air Inlets" (ASHRAE 70).
11. 2013 ASHRAE Standard 113 "Method of Testing for Room Air Diffusion" (ASHRAE 113).
12. 2002 North American Insulation Manufacturers Association, "Fibrous Glass Duct Liner Standard AH124" Third Edition (NAIMA).
13. 2013 National Air Duct Cleaning Association, "Assessment, Cleaning, Restoration of HVAC Systems" (NADCA).

Welding Qualifications: Qualify procedures and personnel according to the following:

14. AWS D1.1/D1.1M, "Structural Welding Code - Steel," for hangers and supports.
15. AWS D9.1M/D9.1, "Sheet Metal Welding Code," for duct joint and seam welding.

AMCA Standard 510-D "Laboratory Methods of Testing Dampers for Rating."

American Society of Testing and Materials (ASTM) standards referenced in other Articles of this Section.

Underwriters Laboratory (UL) standards referenced in other Articles of this Section.

Nationally Recognized Testing Labs (NRTL).

Environmental Protection Agency (EPA).

## **PART 2 - PRODUCTS**

### **2.1 AIR DISTRIBUTION SYSTEM GENERAL REQUIREMENTS**

Comply with NFPA 90A.

Only as referenced in this Section, comply with SMACNA Duct Construction Manual requirements for acceptable materials, material thicknesses, duct sealing methods, and duct construction methods unless otherwise indicated in the Articles of this Section or on the Drawings.

1. All metal materials shall be free of pitting, seam marks, roller marks, stains, discolorations, and other imperfections.

## 2.2 SHEETMETAL MATERIALS

Galvanized Sheet Steel: Comply with ASTM A653/A653M.

1. Galvanized Coating Designation: G90.
2. Finishes for Surfaces Exposed to View: Mill phosphatized.

PVC-Coated, Galvanized Sheet Steel: Comply with ASTM A653/A653M.

3. Galvanized Coating Designation: G90.
4. Minimum Thickness for Factory-Applied PVC Coating: 4 mils thick on sheet metal surface of ducts and fittings exposed to corrosive conditions, and minimum 1 mil thick on opposite surface.
5. Coating Materials: Acceptable to authorities having jurisdiction for use on ducts listed and labeled by an NRTL for compliance with UL 181, Class 1.

Stainless-Steel Sheets: Comply with ASTM A480/A480M, Type 304L or 316L, as indicated in the "Duct Schedule" Article; cold rolled, annealed, sheet. Exposed surface finish shall be as indicated in the "Duct Schedule" Article.

Reinforcement Shapes and Plates: ASTM A36/A36M, steel plates, shapes, and bars; black and galvanized.

6. Where black- and galvanized-steel shapes and plates are used to reinforce aluminum ducts, isolate the different metals with butyl rubber, neoprene, or EPDM gasket materials.

Tie Rods: Galvanized steel, 1/4-inch minimum diameter for lengths 36 inches or less; 3/8-inch minimum diameter for lengths longer than 36 inches.

## 2.3 RECTANGULAR DUCTS AND FITTINGS

General Material Thickness Requirements for Rectangular Duct: Unless otherwise indicated in the Articles of this Section or on the drawings, comply with SMACNA Duct Construction Manual, Tables 2-1 through 2-33 inclusive of the associated details and notes as they relate to acceptable material thicknesses based on duct dimension, static pressure class, reinforcement code and reinforcement spacing.

1. Materials shall be as indicated in the Article "Duct Schedule" in Part 3 of this Section.
2. The thicknesses indicated in Tables 2-1 through 2-33 in the SMACNA Duct Construction Manual shall be acceptable for galvanized steel, carbon steel, stainless steel, and PVC coated galvanized steel.
3. If aluminum duct is specified, the thickness of the material shall be adjusted according to Tables 2-50 through 2-52 of the SMACNA Duct Construction Manual.
4. In addition to the basic requirements of SMACNA Duct Construction Manual, minimum sheet metal thickness for welded section of ductwork shall be 16 gauge and minimum metal thickness for welded elbows shall be 14 gauge. All welded duct construction shall be air and liquid tight. Provide SMACNA thickness where duct pressure class requires heavier gauge.

5. Minimum sheet metal thickness, joint construction and supports for fire-wrap insulated ductwork shall comply with fire-wrap NTRL listing requirements. Coordinate requirements with fire-wrap insulation provided.

General Fabrication Requirements: Except as otherwise noted, comply with Sub-Chapter 2.1 "Introduction to the Rectangular Duct Construction Schedules" of the SMACNA Duct Construction Manual.

6. Coordinate duct wall thickness, seams, joints, joint spacing, support intervals, sealing requirements, reinforcement code, and reinforcement spacing based on the static pressure class, duct material, and duct dimensions indicated in the design documents.
7. Joints and seams shall be formed and assembled with dimensions and proportions for a tight and secure assembly.

Transverse Joints (Non-Welded):

8. For pressure class less than 3 inches of water column, select and fabricate joint types according to Figure 2.1, Tables 2-31 through 2-33 and Sub-Chapter 2.4 (except reference to Chapter 11) of the SMACNA Duct Construction Manual.
9. For pressure classes 3 inches of water column and greater, mechanical joints shall be pre-manufactured joint systems.
  - a. Manufacturers: Subject to compliance with requirements, provide products by one of the following, or approved equal:
    - 1) Ductmate Industries, Inc.
    - 2) Ward Industries.
    - 3) Dyn Air - Nexus Flange System.
    - 4) Or approved equal.

Longitudinal Seams (Non-Welded):

10. For duct pressure class of 2 inches water column or less, select seam type and fabricate according to Figure 2.2 and Sub-Chapter 2.3 of the SMACNA Duct Construction Manual.
11. For duct pressure classes 3 inches water column or greater provide Type L-1 Pittsburgh Lock seams fabricated according to Figure 2.2 of the SMACNA Duct Construction Manual.

Elbows, Transitions, Offsets, Branch Connections, and Other Duct Construction: Unless otherwise indicated, select types and fabricate according to Figures 4.2 through 4.9 and Chart 4.1 of the SMACNA Duct Construction Manual.

12. Provide only the SMACNA fittings described in Part 3 of this specification, without substitution, as these fittings are the basis of design used to calculate system static pressure losses and motor horsepower requirements. Substitutions from indicated fittings will not be accepted.
13. The following fittings, shown in Figures 4.2 through 4.9 and Chart 4.1 of the SMACNA Duct Construction Manual noted above, shall NOT be used.
  - a. Figure 4-2
    - 1) Type RE-2, RE-4, RE-7, RE-9 and R-10 elbows shall not be used.

- b. Figure 4-3
  - 1) Turning vanes are not acceptable.
- c. Figure 4-4
  - 1) Turning vanes are not acceptable.
- d. Figure 4-5
  - 1) Type 2 is not acceptable.
  - 2) Optional square throat with turning vanes shown for Type 4A and 4B branch connections are not acceptable.
- e. Figure 4-6
  - 1) Straight tap, butt flange or cinch-lick branch connections are not acceptable.
  - 2) Flanged or spin-in round connections without a bell-mouth or conical form are not acceptable.
- f. Figure 4-8
  - 1) Figure D is not acceptable. Figure B is preferable, however, if an offset of this type (I.E. four 90 degree elbows) is needed, use type RE-3 or RE-8 elbows and short radius elbows with full length splitter vanes in accordance with Chart 4-1 and Figure 4-9.

## 2.4 ROUND DUCTS AND FITTINGS

Available Manufacturers: Subject to compliance with requirements, manufacturers offering products that may be incorporated into the Work include the following, or approved equal:

- 1. Ductmate Industries, Inc.
- 2. Linx Industries (formerly Lindab).
- 3. McGill AirFlow LLC.
- 4. SEMCO LLC.
- 5. Or approved equal.

General Material Thickness Requirements for Round and Flat Oval Duct: Unless otherwise indicated in the Articles of this Section or the drawings, comply with SMACNA Duct Construction Manual, Tables 3-4 through 3-13 for round and table 3-15 for flat oval duct inclusive of the associated details and notes as they relate to acceptable material thickness based on duct dimension, static pressure class, reinforcement class and stiffener spacing.

- 1. Materials shall be as indicated in the Article “Duct Schedule” in Part 3 of this Section.
- 2. The thicknesses indicated in Tables 3-4 through 3-13 for round and Table 3-15 for flat oval duct in the SMACNA Duct Construction Manual shall be acceptable for galvanized steel, carbon steel, stainless steel, and PVC coated galvanized steel.
- 3. If aluminum duct is specified, the thickness of the material shall be adjusted according to Table 3-14 of the SMACNA Duct Construction Manual.

General Fabrication Requirements: Except as otherwise noted in the Articles of this Section or the Drawings, round duct fabrication shall comply with Sub-Chapter 3.1 (excluding sections S3.0, S3.3, S3.4, S3.5, S3.9 and S3.10) and flat oval duct shall comply with Sub-Chapter 3.3

(the reference to Chapter 11 in section S3.17 applies only as referenced and for the purposes of the requirements of section S3.17 in Sub-Chapter 3.3) of the SMACNA Duct Construction Manual.

1. Duct wall thickness, seams, joints, joint spacing, stiffener spacing, support intervals, sealing requirements and reinforcement class shall be coordinated by the Contractor, based on the static pressure class, duct material, and duct dimensions indicated in the design documents, to ensure a proper assembly.
2. Joints and seams shall be formed and assembled with proper dimensions and proportions for a tight and secure assembly.

Flat-Oval Ducts: Indicated dimensions are the duct width (major dimension) and diameter of the round sides connecting the flat portions of the duct (minor dimension).

Transverse Joints: Select and fabricate according to Figure 3.1 of the SMACNA Duct Construction Manual with the exception that draw-band joints and crimp type joints (RT-3 and RT-5 respectively) are not permitted.

1. Transverse Joints in Ducts Larger Than 60 Inches in Diameter: Flanged.

Longitudinal Seams: Select and fabricate seam types shown Figure 3-2 of the SMACNA Duct Construction Manual.

1. Fabricate round ducts larger than 90 inches in diameter with butt-welded longitudinal seams.
2. Fabricate flat-oval ducts larger than 72 inches in width (major dimension) with butt-welded longitudinal seams.

Tees and Laterals: Unless otherwise noted, select types and fabricate according to Figures 3-5 and 3-6 for round duct and Figure 3-7 for flat oval duct of the SMACNA Duct Construction Manual.

1. The following Tees and Laterals shown in Figures 3.5 through 3.7 shall not be used
  - a. Figure 3-5
    - 1) 90 degree tee fitting
    - 2) 90 degree tap
    - 3) 90 degree saddle fitting
    - 4) Rectangular tap straight

## **2.5 SINGLE WALL PLENUMS AND CONNECTIONS TO LOUVERS**

General Fabrication Requirements: Plenums shall be constructed as an insulated single wall casing in accordance with SMACNA Duct Construction Manual, Chapter 9, Equipment and Casings. Insulation shall be applied to the room side of the plenum and shall have a minimum insulation value specified in Division 23 HVAC insulation Section.

Minimum Wall Material: 18 gauge galvanized, solid sheet.

Corner seams and where applicable bottom seams shall be soldered watertight at least 12" up from bottom.

Plenums shall have neoprene gaskets or other corrosion resistant material to make connections to louvers or to base curbs watertight.

For elevated plenum, pitch floor down in direction of louver. Provide 2" half-coupling drain connection at floor of plenum unless noted otherwise. Pipe connection to nearest floor drain.

For plenums 36 inches deep and 80 inches high or larger, provide access 30" wide x 72" high access doors in accordance with SMACNA Duct Construction Manual, Chapter 9, Equipment and Casings. Provide continuous piano hinge. Latches shall be operable from both sides of door. For smaller plenums, provide double wall access door with dimensions 6 inches smaller than the plenum depth and height. Doors shall open against system pressure.

## 2.6 CLOTHES DRYER EXHAUST

Domestic clothes dryer exhaust:

1. Duct shall be constructed in compliance with SMACNA duct construction standard and shall be G90 galvanized steel material, minimum 26 gauge with smooth interior finish.
2. Exhaust duct size shall be in accordance with the manufacturer installation instructions for the specific duct equivalent length, minimum of 4 inches nominal diameter. Do not deform ducts where enclosed in a wall or ceiling cavity.
3. Transition ducts used to connect dryer to exhaust duct system shall be listed and labelled in accordance with UL 2158A. Maximum length of transition duct shall be 8 feet.

## 2.7 DRAIN PANS

General Fabrication Requirements: Drain pans, including their outlets and seals, shall be designed and constructed in accordance with this section and ASHRAE 62.1-2019.

Drain pans shall be aluminum or 304L stainless steel construction. Pans shall be seamless construction or joints soldered or welded liquid tight. Minimum depth shall be 2 inches.

Drain Pan Slope. Pans shall be sloped at least 0.125 in./ft (10 mm/m) from the horizontal toward the drain outlet such that water drains freely from the pan whether the fan is ON or OFF.

Drain Outlet. The drain pan outlet shall be located at the lowest point(s) of the drain pan.

1. Drain pan outlet shall be as follows:

Drain Line Size (inches)	Approximate Equivalent Unit Cooling Coil Airflow (cfm)	Approximate Cooling Capacity for Unit Cooling Coil (tons)
0.75	1,500	15
1	3,850	35
1.25	6,900	65

2. Steam humidifier drain pan outlet shall be 0.75 inches.

Drain Seal. For configurations that result in negative static pressure at the drain pan relative to the drain outlet (such as a draw-through unit), the drain line shall include a P-trap or other sealing device designed to maintain a seal against ingestion of ambient air, while allowing complete drainage of the drain pan under any normally expected operating condition, whether the fan is ON or OFF.

Pan Size. The drain pan shall be located under the water producing device. Drain pan width shall be sized to collect water droplets across the entire width of the water producing device or assembly.

3. For horizontal airflow configurations, cooling coil drain pan length shall begin at the leading face or edge of the water producing device or assembly and extend downstream from the leaving face or edge to a distance of either:
  - a. one half of the installed vertical dimension of the water producing device or assembly or
  - b. as necessary to limit water droplet carryover beyond the drain pan to 0.0044 oz/ft<sup>2</sup> (1.5 mL/m<sup>2</sup>) of face area per hour under peak sensible and peak dew-point design conditions, accounting for both latent load and coil face velocity.
4. Secondary (supplemental) drain pans for terminal units shall extend the full width of unit and shall extend under the cooling coil and 1 foot beyond the main drain pan pipe connection.
5. Duct mounted steam humidifiers shall be installed in an aluminum or 304L stainless steel section of ductwork with the bottom 2 inches of the duct section seamless or welded liquid tight. Humidifier drain pan section shall be 8 feet minimum and shall extend from 2 feet upstream of the humidifier to 3 feet downstream of the provided humidifier dispersion distance.

## 2.8 EXHAUST STACKS

Exhaust stacks shall be all welded minimum 16 gauge 304L stainless steel and shall be air and liquid tight. Stacks shall be factory or shop fabricated and shall be vertically self-supporting. Stacks shall withstand maximum code required design wind speed identified on the structural drawings.

1. Factory Fabricated Exhaust Stacks:
  - a. Available Manufacturers: Subject to compliance with requirements, manufacturers offering products that may be incorporated into the Work include the following, or approved equal:
    - 1) Van Packer.
    - 2) Warren Environment, Inc.
    - 3) Or approved equal.
  - b. Provide factory fabricated exhaust stacks supported at the base only without use of guy wires.
    - 1) Construct free standing exhaust stacks in accordance with the "Guide for Free Standing Stack Construction – 3rd Edition 2011" manual issued by the Sheetmetal and Air Conditioning Contractors' National Association (SMACNA).

Provide 2 inch stainless steel threaded drain connection at base of each stack. Provide interior sloped drain baffle for positive drainage. Minimum slope shall be 0.125 inch per foot from horizontal in accordance with ASHRAE 62.1 for drain pans.

Provide mounting flanges at the base of each stack to allow attachment to structure or housekeeping pads. Design of stacks shall be based on a free standing stack from the mounting base to the top of stack and shall be based on the code mandated wind velocities indicated on the structural drawings.

All bracing shall be external to stacks (internal bracing will be allowed for shipping and erection as long as it is removed after erection).

Provide stainless steel exhaust stack sections in maximum lengths allowed by structural design to minimize seams. Maximize vertical distance between stiffeners as allowed by structural design. Vertical dimension between stiffeners and at top and bottom of stack shall be equal.

All welds to be ground and polished to match surrounding material.

Prior to shipment remove any inconsistencies, burn marks, slag, or other byproduct of the welding process to ensure a uniform material appearance.

All external stiffeners to be fabricated of material to match exhaust stack material. All stacks, stiffeners, copings, or other visible appurtenances both inside and outside the building shall be No. 3 finish.

## 2.9 DUCT LINER

Fibrous-Glass Duct Liner: Comply with ASTM C 1071, NFPA 90A and with NAIMA AH124, "Fibrous Glass Duct Liner Standard."

1. Available Manufacturers: Subject to compliance with requirements, manufacturers offering products that may be incorporated into the Work include the following, or approved equal:
  - a. CertainTeed Corporation.
  - b. Johns Manville; a Berkshire Hathaway company.
  - c. Knauf Insulation.
  - d. Owens Corning.
  - e. Or approved equal.
2. Maximum Thermal Conductivity:
  - a. Type I, Flexible: 0.27 Btu x in./h / sf / deg F at 75 deg F mean temperature.
  - b. Type II, Rigid: 0.23 Btu x in./h /sf / deg F at 75 deg F mean temperature.
3. Antimicrobial Erosion-Resistant Coating: Apply to the surface of the liner that will form the interior surface of the duct to act as a moisture repellent and erosion-resistant coating. Antimicrobial compound shall be tested for efficacy by an NRTL and registered by the EPA for use in HVAC systems.
4. Water-Based Liner Adhesive: Comply with NFPA 90A and with ASTM C 916.
  - a. For indoor applications, adhesive shall have a VOC content of 80 g/L or less when calculated according to 40 CFR 59, Subpart D (EPA Method 24).

Flexible Elastomeric Duct Liner: Preformed, cellular, closed-cell, sheet materials complying with ASTM C 534, Type II, Grade 1; and with NFPA 90A.

5. Available Manufacturers: Subject to compliance with requirements, manufacturers offering products that may be incorporated into the Work include the following, or approved equal:
  - a. Aeroflex USA, Inc.
  - b. Armacell LLC.

- c. K-Flex USA.
  - d. Rubatex International, LLC.
  - e. Or approved equal.
- 6. Maximum Thermal Conductivity: 0.25 Btu x in./h x sf x deg F (0.034 W/m x K) at 75 deg F (24 deg C) mean temperature.
  - 7. Surface-Burning Characteristics: Maximum flame-spread index of 25 and maximum smoke-developed index of 50 when tested according to UL 723; certified by an NRTL.
  - 8. Liner Adhesive: As recommended by insulation manufacturer and complying with NFPA 90A.
    - a. For indoor applications, adhesive shall have a VOC content of 50 g/L or less when calculated according to 40 CFR 59, Subpart D (EPA Method 24).

Insulation Pins and Washers:

- 9. Cupped-Head: Copper- or zinc-coated steel pin, fully annealed for capacitor-discharge welding, 0.135-inch- diameter shank, length to suit depth of insulation indicated with integral 1-1/2-inch galvanized carbon-steel washer.
- 10. Insulation-Retaining Washers: Self-locking washers formed from 0.016-inch- thick galvanized steel, aluminum or stainless steel; with beveled edge sized as required to hold insulation securely in place but not less than 1-1/2 inches in diameter.

Shop Application of Duct Liner: Comply with SMACNA Duct Construction Manual, Figure 7-11, "Flexible Duct Liner Installation".

- 11. Adhere a single layer of indicated thickness of duct liner with at least 90 percent adhesive coverage at liner contact surface area. Attaining indicated thickness with multiple layers of duct liner is prohibited.
- 12. Apply adhesive to transverse edges of liner facing upstream that do not receive metal nosing.
- 13. Butt transverse joints without gaps, and coat joint with adhesive.
- 14. Fold and compress liner in corners of rectangular ducts or cut and fit to ensure butted-edge overlapping.
- 15. Do not apply liner in rectangular ducts with longitudinal joints, except at corners of ducts, unless duct size and dimensions of standard liner make longitudinal joints necessary.
- 16. Secure liner with mechanical fasteners 4 inches from corners and at intervals not exceeding 12 inches transversely; at 3 inches from transverse joints and at intervals not exceeding 18 inches longitudinally.
- 17. Secure transversely oriented liner edges facing the airstream with metal nosing that have either channel or "Z" profiles or are integrally formed from duct wall. Fabricate edge facings at the following locations:
  - a. Fan discharges.
  - b. Intervals of lined duct preceding unlined duct.
- 18. Terminate inner ducts with build-outs attached to fire-damper sleeves, dampers, turning vane assemblies, or other devices. Fabricated build-outs (metal hat sections) or other

build-out means are optional; when used, secure build-outs to duct walls with bolts, screws, rivets, or welds.

## 2.10 SEALANT AND GASKETS

General Sealant and Gasket Requirements: Surface-burning characteristics for sealants and gaskets shall be a maximum flame-spread index of 25 and a maximum smoke-developed index of 50 when tested according to UL 723; certified by an NRTL.

Two-Part Tape Sealing System:

1. Tape: Woven cotton fiber impregnated with mineral gypsum and modified acrylic/silicone activator to react exothermically with tape to form hard, durable, airtight seal.
2. Tape Width: 4 inches.
3. Sealant: Modified styrene acrylic.
4. Water resistant.
5. Mold and mildew resistant.
6. Maximum Static-Pressure Class: 10-inch wg, positive and negative.
7. Service: Indoor and outdoor.
8. Service Temperature: Minus 40 to plus 200 deg F.
9. Substrate: Compatible with galvanized sheet steel (both PVC coated and bare), stainless steel, or aluminum.
10. For indoor applications, sealant shall have a VOC content of 250 g/L or less when calculated according to 40 CFR 59, Subpart D (EPA Method 24).

Water-Based Joint and Seam Sealant For Duct Air Temperatures Above 0 deg F:

11. Application Method: Brush on.
12. Solids Content: Minimum 65 percent.
13. Shore A Hardness: Minimum 20.
14. Water resistant.
15. Mold and mildew resistant.
16. VOC: Maximum 75 g/L (less water).
17. Maximum Static-Pressure Class: 10-inch wg, positive and negative.
18. Service: Indoor or outdoor.
19. Service Temperature: 0 to plus 200 deg F.
20. Substrate: Compatible with galvanized sheet steel (both PVC coated and bare), stainless steel, or aluminum sheets.
21. For indoor applications, sealant shall have a VOC content of 250 g/L or less when calculated according to 40 CFR 59, Subpart D (EPA Method 24).

22. Sealant shall comply with the testing and product requirements of the California Department of Health Services' "Standard Practice for the Testing of Volatile Organic Emissions from Various Sources Using Small-Scale Environmental Chambers."
23. Maximum Static-Pressure Class: 10-inch wg, positive or negative.
24. Service: Indoor or outdoor.
25. Substrate: Compatible with galvanized sheet steel (both PVC coated and bare), stainless steel, or aluminum sheets.

Solvent-Based Joint and Seam Sealant For Duct Air Temperatures Below 0 deg F (e.g. outside air ductwork in cold climates):

26. Application Method: Brush on.
27. Base: Synthetic rubber resin.
28. Solvent: Toluene and heptane.
29. Solids Content: Minimum 60 percent.
30. Shore A Hardness: Minimum 60.
31. Water resistant.
32. Mold and mildew resistant.
33. Sealant shall have a VOC content of 420 g/L or less.
34. Sealant shall comply with the testing and product requirements of the California Department of Public Health's "Standard Method for the Testing and Evaluation of Volatile Organic Chemical Emissions from Indoor Sources Using Environmental Chambers." The building concentration of formaldehyde shall not exceed half of the indoor recommended exposure limit, or 33 mcg/cu. m, and that of acetaldehyde shall not exceed 9 mcg/cu. m.
35. Maximum Static-Pressure Class: 10-inch wg, positive or negative.
36. Service: Indoor or outdoor.
37. Service Temperature: Minus 20 to plus 200 deg F.
38. Substrate: Compatible with galvanized sheet steel (both PVC coated and bare), stainless steel, or aluminum sheets.

Flanged Joint Sealant: Comply with ASTM C 920.

39. General: Single-component, acid-curing, silicone, elastomeric.
40. Type: S.
41. Grade: NS.
42. Class: 25.
43. Use: O.
44. For indoor applications, sealant shall have a VOC content of 250 g/L or less when calculated according to 40 CFR 59, Subpart D (EPA Method 24).

Flange Gaskets: Butyl rubber, neoprene, or EPDM polymer with polyisobutylene plasticizer.

Round Duct Joint O-Ring Seals:

45. Seal shall provide maximum leakage class of 3 cfm/100 sf at 1-inch wg and shall be rated for 10-inch wg static-pressure class, positive or negative.
46. EPDM O-ring to seal in concave bead in coupling or fitting spigot.
47. Double-lipped, EPDM O-ring seal, mechanically fastened to factory-fabricated couplings and fitting spigots.

## 2.11 HANGERS AND SUPPORTS

Hanger Rods for Corrosive Environments, including natatorium and natatorium support spaces: Electrogalvanized, all-thread rods or galvanized rods with threads painted with zinc-chromate primer after installation.

Hanger Rods for Non-corrosive Environments: Cadmium-plated steel rods and nuts.

Strap and Rod Sizes: Comply with SMACNA Duct Construction Manual, Table 5-1, "Rectangular Duct Hangers Minimum Size," and Table 5-2, "Minimum Hanger Sizes for Round Duct."

Steel Cables for Galvanized-Steel Ducts: Galvanized steel complying with ASTM A 603.

Steel Cables for Stainless-Steel Ducts: Stainless steel complying with ASTM A 492.

Steel Cable End Connections: Cadmium-plated steel assemblies with brackets, swivel, and bolts designed for duct hanger service; with an automatic-locking and clamping device.

Duct Attachments: Sheet metal screws, blind rivets, or self-tapping metal screws; compatible with duct materials.

Trapeze and Riser Supports:

1. Supports for Galvanized-Steel Ducts: Galvanized-steel shapes and plates.
2. Supports for Stainless-Steel Ducts: Stainless-steel shapes and plates.
3. Supports for Aluminum Ducts: Aluminum or galvanized steel coated with zinc chromate.

Outdoor Ductwork Supports: Coordinate connections to structure and base supports with project roofing construction. Ductwork supports shall be hot-dipped galvanized, wind load rated, shall prevent uplift and shall comply with one of the following:

4. Provide outdoor ductwork supports in accordance with SMACNA Figure 6-3 "Rooftop Duct installation" and Figure 6-4 "Equipment and Duct Support Flashing" when supported by curbs or posts. Flashed into the roofing system when roof mounted.
5. Provide pre-engineered outdoor duct support system when supported by curbs, posts or weight distributing pads or bases. Flash curbs or posts into the roofing system or provide wind load rated weight distributing pads or bases on top of the roofing system where roof mounted:
  - a. Manufacturers: Subject to compliance with requirements, provide products by one of the following, or approved equal:
    - 1) Unistrut Service Company - HVAC Duct Supports.
    - 2) Kinetics Noise Control.
    - 3) PHP System Design.
    - 4) Or approved equal.

## 2.12 BACKDRAFT AND PRESSURE RELIEF DAMPERS

Available Manufacturers: Subject to compliance with requirements, manufacturers offering products that may be incorporated into the Work include the following, or approved equal:

1. American Warming and Ventilating.
2. Greenheck Fan Corporation.
3. Nailor Industries, Inc.
4. Ruskin Company.
5. Vent Products Company, Inc.
6. Or approved equal.

Description: Commercial grade, gravity balanced.

Maximum Air Velocity:

7. For duct systems that do not include air volume control terminals and ductwork between room inlets or outlets and associated air volume terminals, provide backdraft damper with a minimum velocity rating of 1250 fpm.
8. For ductwork between air volume control terminals and equipment (e.g. fan or air handling unit) provide backdraft damper with a minimum velocity rating of 2000 fpm.
9. For fan inlets or outlets provide backdraft damper with a minimum velocity rating of 3000 fpm.

Maximum System Back Pressure:

10. Backdraft Dampers
  - a. For duct systems that do not include air volume control terminals and ductwork between room inlets or outlets and associated air volume terminals, provide backdraft damper with a maximum system backpressure rating of 2 inch water column (0.5 kPa).
  - b. For ductwork between air volume control terminals and equipment (e.g. fan or air handling unit) and for fan inlets or outlets provide backdraft damper with a maximum system backpressure rating of 10 inch water column (2.5 kPa).
11. Pressure Relief Dampers
  - a. For pressure relief dampers with a setpoint of 0.1 to 2 inches water column, dampers shall be rated for a maximum backpressure of 8.5 inches water column.
  - b. For pressure relief dampers with a setpoint of 2.1 to 4 inches water column, dampers shall be rated for a maximum backpressure of 13.5 inches water column.
  - c. For pressure relief dampers with a setpoint of 4.1 to 6 inches water column, dampers shall be rated for a maximum backpressure of 20 inches water column.

Backdraft Damper Maximum Start-Open Pressure:

12. For duct systems that do not include air volume control terminals and ductwork between room inlets or outlets and associated air volume terminals, provide backdraft damper with a maximum start open pressure of 0.05 inch water column when installed vertically and when installed horizontally with upward airflow. Provide damper with 0.075 inch water

column maximum start-open pressure for dampers mounted horizontally with downward airflow.

13. For ductwork between air volume control terminals and equipment (e.g. fan or air handling unit) and for fan inlets or outlets provide backdraft damper with a maximum start open pressure of 0.05 inch water column when installed vertically and when installed horizontally with upward airflow. Provide damper with 0.075 inch water column maximum start-open pressure for dampers mounted horizontally with downward airflow.

Maximum Leakage Rate:

14. Exhaust and relief applications in buildings with fewer than 3 stories only: 20 cfm per square foot at 1 inch water column.
15. Outside air applications in ASHRAE 90.1 Climate Zones 1, 2 and 3 only: 20 cfm per square foot at 1 inch water column.
16. Provide motorized control dampers in all other applications.

Frame: Manufacturer standard shape, minimum 0.05-inch- thick (18 gauge), galvanized sheet steel, minimum 0.063-inch- thick extruded aluminum (14 gauge) or minimum 0.05-inch- thick stainless steel (18 gauge), with welded corners or mechanically attached and mounting flange. Material to match associated duct material.

Blades: Multiple single-piece blades, center pivoted or end pivoted, maximum 6-inch width, minimum 0.03-inch- thick, roll-formed aluminum with sealed edges. Orientation of blades for backdraft dampers located on fan discharge shall be selected to minimize system effect pressure drop.

Blade Action: Parallel.

Blade Seals: Extruded vinyl, mechanically locked or neoprene, mechanically locked.

Blade Axles:

17. Material: Nonferrous metal, galvanized steel, plated steel, stainless steel or aluminum and shall be compatible with blade material and frame material.
18. Diameter: Minimum 0.20 inch.

Tie Bars and Brackets: Aluminum or galvanized steel and shall be compatible with blade and frame material.

Return Spring: Adjustable tension.

Bearings: Steel ball or synthetic pivot bushings.

Accessories:

19. Provide adjustment device to permit setting of varying differential static pressure.
20. Provide counterweights or spring-assist to assist in opening damper blades.
21. 90-degree stops.

## **2.13 BAROMETRIC RELIEF DAMPERS**

Available Manufacturers: Subject to compliance with requirements, manufacturers offering products that may be incorporated into the Work include the following, or approved equal:

1. American Warming and Ventilating.

2. Greenheck Fan Corporation.
3. Nailor Industries, Inc.
4. Ruskin Company.
5. Vent Products Company, Inc.
6. Or approved equal.

Suitable for horizontal or vertical mounting.

Maximum Air Velocity: Provide barometric relief damper with velocity rating of 2000 fpm.

Maximum System Back-Pressure: Provide barometric relief damper with a maximum back pressure of 2 inch water column (0.5 kPa).

Maximum Start-Open Pressure: Provide barometric relief damper with a maximum start-open pressure of 0.05 inch water column (0.01 kPa) adjustable to 0.10 inch water column (0.02 kPa).

Maximum Leakage Rate:

7. Exhaust and relief applications in buildings with fewer than 3 stories only: 20 cfm per square foot at 1 inch water column.
8. Outside air applications in ASHRAE 90.1 Climate Zones 1, 2 and 3 only: 20 cfm per square foot at 1 inch water column.
9. Provide motorized control dampers in all other applications.

Frame: Manufacturer standard shape, minimum 0.05-inch- thick (18 gauge), galvanized sheet steel, minimum 0.063-inch- thick extruded aluminum or minimum 0.03-inch- thick stainless steel as recommended by the manufacturer for the specific application, with welded corners or mechanically attached and mounting flange. Material to match associated duct material.

Blades:

10. Multiple, minimum 0.050-inch- thick aluminum sheet.
11. Maximum Width: 6 inches.
12. Action: Parallel.
13. Balance: Gravity.
14. End pivoted.

Blade Seals: Vinyl or Neoprene.

Jamb Seals: EPDM.

Blade Axles: Galvanized steel, non-ferrous metal, plated steel or stainless steel compatible with blade material.

Tie Bars and Brackets:

15. Material: Aluminum or galvanized steel and shall be compatible with blade material
16. Rattle free with 90-degree stop.

Bearings: Stainless steel.

Counterbalance: Blade mounted with adjustable weights.

2.14 MANUAL VOLUME DAMPERS

Standard, Steel, Manual Volume Dampers: Dampers shall be shop or factory fabricated.

1. Shop Fabricated Volume Dampers:
  - a. Dampers shall meet the requirements of SMACNA Duct Construction Manual Section 7.1.
2. Factory Fabricated Volume Dampers:
  - a. Available Manufacturers: Subject to compliance with requirements, manufacturers offering products that may be incorporated into the Work include the following, or approved equal:
    - 1) American Warming and Ventilating; a Mestek Architectural Group company.
    - 2) Flexmaster U.S.A., Inc.
    - 3) Greenheck Fan Corporation.
    - 4) McGill AirFlow LLC.
    - 5) Nailor Industries Inc.
    - 6) Ruskin Company.
    - 7) Trox USA Inc.
    - 8) Vent Products Co., Inc.
    - 9) Or approved equal.
3. Provide dampers that meet the following requirements:
  - a. Standard leakage rating, with linkage outside airstream.
  - b. Minimum differential pressure rating: 1 inch water column.
  - c. Minimum velocity rating: 2000 fpm.
  - d. Suitable for horizontal or vertical applications.
  - e. Frames:
    - 1) Frame: Manufacturer standard shape, minimum 0.0396-inch thick, galvanized sheet steel or stainless steel. Material shall match connecting duct materials.
    - 2) Corners shall be mitered, welded or shall be provided with gusset reinforcements.
    - 3) Flanges for attaching to walls or flanged ductwork. For other application provide flangeless frames for installing in ducts.
  - f. Blades:
    - 1) Multiple or single blade.
    - 2) Opposed-blade design for multiple blade dampers.
    - 3) Stiffen damper blades for stability.

- 4) Galvanized or stainless-steel, minimum 0.0635-inch thick. Material shall match connecting duct materials
- g. Blade Axles: Galvanized steel, plated steel or stainless steel.
- h. Bearings:
  - 1) Oil-impregnated bronze or oil-impregnated stainless-steel sleeve.
- i. Dampers in ducts with pressure classes of 3-inch w.g. or less shall have axle length that matches full length of damper blades and bearings at both ends of operating shaft.
- j. Tie Bars and Brackets: Galvanized steel.
- k. Provide with locking quadrant arm and standoff bracket. For ductwork requiring Seal Class A, provide sealed end bearing and regulator arms assembly to prevent leakage through the shaft core.
  - 1) Available Manufacturers: Subject to compliance with requirements, manufacturers offering products that may be incorporated into the Work include the following, or approved equal:
    - a) Ventfabrics - Ventlok HIVEL.
    - b) DuroDyne.
    - c) Or approved equal.
  - 2) Air tight regulator arm.
    - a) For solid core shafts, where the damper shaft penetration of duct is not air tight, provide a shaft seal assembly similar to a Ventlok Model 617 air seal.

Standard, Aluminum, Manual Volume Dampers:

- 4. Dampers shall meet the requirements of SMACNA Duct Construction Manual Section 7.1 and shall meet the following requirements.
  - a. Standard leakage rating, with linkage outside airstream.
  - b. Minimum differential pressure rating: 1 inch water column.
  - c. Minimum velocity rating: 2000 fpm.
  - d. Suitable for horizontal or vertical applications.
  - e. Frames: Hat-shaped, minimum 0.10-inch thick, aluminum sheet channels; frames with flanges for attaching to walls and flangeless frames for installing in ducts.
  - f. Blades:
    - 1) Multiple or single blade.
    - 2) Parallel- or opposed-blade design.
    - 3) Stiffen damper blades for stability.
    - 4) Roll-formed aluminum blades: minimum 0.10-inch thick sheet or extruded-aluminum blades: minimum 0.050-inch thick sheet.
  - g. Blade Axles: Galvanized steel or stainless steel.

- h. Bearings: Oil-impregnated bronze or stainless-steel sleeve.
- i. Dampers in ducts with pressure classes of 3-inch wg or less shall have axle length that matches full length of damper blades and bearings at both ends of operating shaft.
- j. Tie Bars and Brackets: Aluminum.
- k. Provide with locking quadrant arm and standoff bracket. For ductwork requiring Seal Class A, provide sealed end bearing and regulator arm assembly to prevent leakage through the shaft core.
  - 1) Available Manufacturers: Subject to compliance with requirements, manufacturers offering products that may be incorporated into the Work include the following, or approved equal:
    - a) Ventfabrics - Ventlok HIVEL.
    - b) DuroDyne.
    - c) Or approved equal.
  - 2) Air tight regulator arm.
    - a) For solid core shafts, where the damper shaft penetration of duct is not air tight, provide a shaft seal assembly similar to a Ventlok Model 617 air seal.

## **2.15 AIRFLOW REGULATING DEVICE - SELF-CONTAINED**

Available Manufacturers: Subject to compliance with requirements, manufacturers offering products that may be incorporated into the Work include the following, or approved equal:

- 1. Aldes - Constant Airflow Regulator.
- 2. Greenheck - Automatic Balancing Damper.
- 3. Ruskin - Automatic Balancing Damper.
- 4. Young Regulator Company - Constant Volume Regulator.
- 5. Or approved equal.

Provide airflow regulating device that meet the following requirements:

- 6. Self-contained regulator shall maintain constant supply, return and exhaust airflow within plus/minus 10 percent of design document airflow rate without external power or sensors.
  - a. Airflow setpoint shall be manually field adjustable.
- 7. Operating Pressure Range: 0.2 to 0.8 inches water column.
- 8. Temperature Rating: 25 to 140 degrees F.
- 9. Regulating device shall be UL listed for flame and smoke spread.
- 10. Material: Thermoplastic resin or ABS plastic. Include gasket seal at joints.

## **2.16 FIRE DAMPERS**

Available Manufacturers: Subject to compliance with requirements, manufacturers offering products that may be incorporated into the Work include the following, or approved equal:

1. American Warming and Ventilating; a Mestek Architectural Group company.
2. Arrow United Industries.
3. Greenheck Fan Corporation.
4. Nailor Industries Inc.
5. Pottorff.
6. Prefco.
7. Ruskin Company.
8. Vent Products Co., Inc.
9. Or approved equal.

Type: Dynamic; rated and labeled according to UL 555 by an NRTL.

Closing rating in ducts up to 4-inch wg static pressure class (differential pressure) and minimum 2000-fpm velocity.

Fire Rating: 1-1/2 hour rated damper for walls rated for less than 3 hours and 3 hour rated damper for walls with higher fire rating. Refer to architectural drawings for wall fire ratings.

Frame: For duct mounted dampers provide curtain type with blades outside air stream or multiple opposed blade type with blades in air stream. For dampers located behind grilles curtain type dampers, blades inside airstream are acceptable. Fabricate with hat channel of galvanized steel or stainless steel to match duct material with thickness (gage) required by the damper U.L. listing.

10. Curtain type fire dampers shall be Case 2 or 3 with blades out of airstream Type "B or C" as defined in SMACNA "Fire, Smoke and Radiation Damper Installation Guide for HVAC Systems – 5<sup>th</sup> Edition" pages 5.8, 5.11, and 7.2.
11. Where duct dimensions require multiple damper sections, provide curtain type identified above with dampers arranged out of airstream (limited to two stacked dampers with blades on perimeter) or provide multiple opposed blade type dampers.

Mounting Sleeve: Factory- or field-installed, galvanized sheet steel.

12. Minimum Thickness: Thickness (gage) required by the damper U.L. listing.
13. Omit sleeve where damper-frame width permits direct attachment of perimeter mounting angles on each side of wall or floor; thickness of damper frame shall comply with sleeve requirements.

Provide breakaway connections at all fire dampers. Seal all breakaway connections with manufacturer UL approved sealant to prevent air leakage.

Mounting Orientation: Vertical and horizontal - refer to plans for orientation. Confirm orientation based on approved coordination drawings.

Blades: Roll-formed, galvanized or stainless steel sheet steel to match duct construction in thickness required by damper U.L. listing. Blades shall be one of the following:

14. Interlocking blade, or
15. Constructed with full-length blade connectors matching blade material.

Horizontal Dampers: Include blade lock and stainless-steel closure spring where required by manufacturer UL listing.

Heat-Responsive Device: Replaceable, 165 deg F rated, fusible links.

**2.17 SMOKE DAMPERS, COMBINATION FIRE-SMOKE DAMPERS, CORRIDOR (CEILING) DAMPERS**

Available Manufacturers: Subject to compliance with requirements, available manufacturers offering products that may be incorporated into the Work include the following, or approved equal:

1. American Warming and Ventilating; a Mestek Architectural Group company.
2. Cesco Products; a division of MESTEK, Inc.
3. Greenheck Fan Corporation.
4. Nailor Industries Inc.
5. Pottorff.
6. Ruskin Company.
7. Or approved equal.

General Requirements:

1. Combination Fire-Smoke Damper Type: Dynamic; rated and labeled according to UL 555 and UL 555S by an NRTL.
2. Smoke Damper: rated and labeled according to UL 555S by an NRTL.

Closing rating in ducts up to 4-inch wg static pressure class and minimum 2000-fpm velocity.

Fire-Smoke Damper Fire Rating: 1-1/2 hour rated damper for walls rated for less than 3 hours and 3 hour rated damper for walls with higher fire rating. Refer to architectural drawings for wall fire ratings.

Heat-Responsive Device: Resettable, 165 deg F rated, fire-closure device or electric fuse link.

1. Smoke Detector: provided by Division 28.
  - a. Smoke detector shall be no-flow rated.

Frame: Fabricate with hat channel of galvanized steel or stainless steel to match duct material with thickness (gage) required by the damper U.L. listing. Frame shall have welded, interlocking gusseted or reinforced mechanically attached corners and mounting flange.

Mounting Sleeve: Factory-installed, galvanized sheet steel in thickness required by the damper U.L. listing; length to suit wall or floor application with factory-furnished silicone calking.

Blades: Roll-formed galvanized sheet steel or extruded aluminum in thickness (gage) required by the damper U.L. listing.

Leakage: Class I.

Mounting Sleeve: Factory-installed, galvanized sheet steel in thickness required by the damper U.L. listing; length to suit wall or floor application with factory-furnished silicone calking.

Master control panel for use in dynamic smoke-management systems.

Damper Actuators: Provide two-position action unless modulating type action is indicated otherwise on the drawings.

1. Actuators shall be provided by and factory mounted by the damper manufacturer in accordance with the damper U.L Listing.
2. Actuators shall be electric unless noted otherwise.
3. Electrical Connection: 115 V, single phase, 60 Hz.

Accessories:

4. Auxiliary switches for position indication. Provide additional switches for signaling and fan control where indicated on drawings.
5. Test and reset switches with red (closed) and green (open) LED indicator lights, remote mounted.

## **2.18 FLANGED BREAKAWAY CONNECTORS**

Available Manufacturers: Subject to compliance with requirements, available manufacturers offering products that may be incorporated into the Work include the following, or approved equal:

1. Ductmate Industries, Inc.
2. Hardcast, Inc.
3. Nexus PDQ.
4. Ward Industries; a brand of Hart & Cooley, Inc.
5. Or approved equal.

Description: Add-on or roll-formed, factory-fabricated, slide-on transverse flange connectors, gaskets, and components.

Material: Galvanized steel.

Gage and Shape: Match connecting ductwork.

Seal all breakaway connections with manufacturer UL approved sealant to prevent air leakage.

## **2.19 SOUND ATTENUATORS (SILENCERS) FOR AIR DISTRIBUTION SYSTEMS**

Available Manufacturers: Subject to compliance with requirements, available manufacturers offering products that may be incorporated into the Work include the following, or approved equal:

1. Price Industries.
2. Vibro-Acoustics.
3. VAW Systems, LTD.
4. Or approved equal.

General:

1. Factory fabricated.
2. Media-filled silencers

- a. Fire-Performance Characteristics: Adhesives, sealants, packing materials, and accessory materials shall have flame-spread index not exceeding 25 and smoke-developed index not exceeding 50 when tested according to ASTM E84.
- b. Airstream Surfaces: Surfaces in contact with the airstream shall comply with requirements in ASHRAE 62.1 Section 5.4 "Airstream Surfaces."

Shapes indicated on the drawings (e.g. linear, elbow, round).

Outer Casing Material Shall Match Attached Ductwork:

3. ASTM A653/A653M, G90, galvanized sheet steel,

Inner Casing and Baffle Material Shall Match Outer Casing Material:

4. ASTM A653/A653M, G90 galvanized sheet metal, thickness and perforations as determined by the manufacturer to meet the specified performance.

Special Construction:

5. Suitable for outdoor use where indicated on drawings.

Connection Sizes: Match connecting ductwork or fans unless otherwise indicated.

6. For axial fans, silencers shall be tubular with center cone consisting of a shell with fill material.

Principal Sound-Absorbing Mechanism:

7. Media-filled Silencers
  - a. Film-lined type with fill material.
    - 1) Fill Material: Inert and vermin-proof fibrous material.
    - 2) Erosion Barrier: Polymer bag enclosing fill, and heat sealed before assembly.
    - 3) Lining: Mylar, Tedlar or Foil Lined meeting flame and smoke spread fire performance requirements.

Fabricate silencers to form rigid units that will not pulsate, vibrate, rattle, or otherwise react to system pressure variations. Do not use mechanical fasteners for unit assemblies.

8. Joints: Lock formed and sealed, continuously welded or flanged connections to match connected ductwork.
9. Suspended Units: Factory-installed suspension hooks or lugs attached to frame in quantities and spaced to prevent deflection or distortion.
10. Reinforcement: Cross or trapeze angles for rigid suspension.

Accessories:

11. Factory-installed end caps to prevent contamination during shipping.

Source Quality Control: Performance shall be verified according to ASTM E477-13 verified in an NVLAP accredited laboratory.

12. Selections shall be made based on published acoustic ratings, including dynamic insertion loss and self-generated-noise power levels with minimum airflow face velocity matching schedule. Performance data shall be provided with airflow in same direction as attenuation for supply ducts and in opposite direction of airflow for return or exhaust

systems. Attenuation shall not be less than the scheduled performance in each octave band.

13. Leak Test: Test units for airtightness at 200 percent of associated fan static pressure or 6-inch wg static pressure, whichever is greater.

## 2.20 SHORT RADIUS ELBOW SPLITTER VANES (FULL LENGTH SPLITTER VANES)

Provide short radius (full length splitter) vanes for elbows with a centerline radius less than 1.5 times the duct width in the plane of the elbow.

1. Comply with SMACNA Duct Construction Manual; Chart 4-1 and Figure 4-2 (Type RE-3) elbows for spacing of vanes and figure 4-9 for construction of short radius full length splitter vanes. Refer to detail on drawings for quantity of full length splitter vanes required based on ratio of centerline to duct width dimensions.

## 2.21 REMOTE DAMPER OPERATORS

Manufacturers: Subject to compliance with requirements, available manufacturers offering products that may be incorporated into the Work include the following, or approved equal:

1. Pottorff.
2. Ventfabrics, Inc.
3. Young Regulator Company.
4. Or approved equal.

Description: Cable system designed for remote manual damper adjustment.

Cable: Sheathed stainless steel.

Rack and Pinion Controller:

1. Controller with embedded sheetrock ceiling or wall cup.
  - a. Cup Mounting: Recessed unless noted otherwise.
  - b. Cup Cover-Plate Material: Stainless steel.

## 2.22 DUCT-MOUNTED ACCESS DOORS

Duct Mounted Sandwich (Clamp) Type Access Doors – Ductwork and Plena Greater Than 2 inch Pressure Class.

1. Available Manufacturers: Subject to compliance with requirements, available manufacturers offering products that may be incorporated into the Work include the following, or approved equal:
  - a. Aire Technologies.
  - b. Ductmate Industries, Inc.
  - c. Nailor Industries Inc.
  - d. Ward Industries; a brand of Hart & Cooley, Inc.
  - e. Or approved equal.

2. Duct-Mounted Access Doors: Factory fabricated, leak free insulated sandwich (clamp) type access door with minimum pressure rating equal to or greater than the attached ductwork. Material shall match connecting ductwork.
3. Provide with manufacturer standard gasket, bolts and springs between inner and outer door.
4. Provide wing nuts or molded knobs for low temperature applications and wing nuts for high temperature applications.

SMACNA Access Doors – Ductwork and Plena 2” and Lower Pressure Class.

5. Fabricate access panels according to SMACNA Duct Construction Manual, Figures 7-2, "Duct Access Doors and Panels," and 7-3, "Access Doors - Round Duct."
  - a. Door:
    - 1) Double wall, rectangular.
    - 2) Galvanized sheet metal with insulation fill and thickness for duct pressure class.
    - 3) Vision panel.
    - 4) Hinges and Latches: 1-by-1-inch butt or piano hinge and cam latches.
    - 5) Fabricate doors airtight and suitable for duct pressure class.
  - b. Frame: Galvanized sheet steel, with bend-over tabs and foam gaskets.
  - c. Number of Hinges and Locks:
    - 1) Access Doors Less Than 12 Inches Square: No hinges and two sash locks.
    - 2) Access Doors up to 18 Inches Square: Continuous hinge and two sash locks.
    - 3) Access Doors up to 24 by 48 Inches: Continuous hinge and two compression latches with outside and inside handles.
    - 4) Access Doors Larger than 24 by 48 Inches: Continuous hinge and two compression latches with outside and inside handles.

Pressure Relief Access Door:

6. Door and Frame Material: Galvanized sheet steel.
7. Door: Single wall for non-insulated ductwork and double wall with insulation fill for insulated ductwork with metal thickness applicable for duct pressure class.
8. Operation: Open outward for positive-pressure ducts and inward for negative-pressure ducts.
9. Factory set at 3.0- to 8.0-inch wg.
10. Doors close when pressures are within set-point range.
11. Hinge: Continuous piano.
12. Latches: Cam.
13. Seal: Neoprene or foam rubber.
14. Insulation Fill: 1-inch- thick, fibrous-glass or polystyrene-foam board.

## 2.23 FLEXIBLE CONNECTORS

Available Manufacturers: Subject to compliance with requirements, available manufacturers offering products that may be incorporated into the Work include the following, or approved equal:

1. Laboratory exhaust fan discharge and biological safety cabinet discharge collar connections:
  - a. Proco Style 501.
  - b. Mercer.
  - c. Pathway.
  - d. Dynex.
  - e. Or approved equal.
2. For other non-grease exhaust systems and applications:
  - a. CL WARD & Family Inc.
  - b. Ductmate Industries, Inc.
  - c. Duro Dyne Inc.
  - d. Elgen Manufacturing.
  - e. Hardcast, Inc.
  - f. JP Lamborn Co.
  - g. Ventfabrics, Inc.
  - h. Ward Industries; a brand of Hart & Cooley, Inc.
  - i. Or approved equal.

Materials: Flame-retardant or noncombustible fabrics.

Coatings and Adhesives: Comply with UL 181, Class 1.

Metal-Edged Connectors: Factory fabricated with a fabric strip with the following minimum dimensions: 3-1/2 inches wide attached to two strips of 2-3/4 inch wide, 0.028 inch thick, galvanized sheet steel or 0.032-inch- thick aluminum sheets. Provide metal compatible with connected ducts.

Indoor System, Flexible Connector Fabric:

3. Unless noted otherwise fan discharge connections shall be glass fabric double coated with neoprene.
  - a. Minimum Weight: 26 oz./sq. yd..
  - b. Minimum Tensile Strength: 480 lbf/inch in the warp and 360 lbf/inch in the filling.
  - c. Service Temperature: Minus 40 to plus 200 degrees F.

Outdoor System, Flexible Connector Fabric: Glass fabric double coated with weatherproof, synthetic rubber resistant to UV rays and ozone.

4. Minimum Weight: 24 oz./sq. yd..
5. Minimum Tensile Strength: 530 lbf/inch in the warp and 440 lbf/inch in the filling.

6. Service Temperature: Minus 50 to plus 250 deg F.

Thrust Limits: Combination coil spring and elastomeric insert with spring and insert in compression, and with a load stop. Include rod and angle-iron brackets for attaching to fan discharge and duct.

7. Frame: Steel, fabricated for connection to threaded rods and to allow for a maximum of 30 degrees of angular rod misalignment without binding or reducing isolation efficiency.
8. Outdoor Spring Diameter: Not less than 80 percent of the compressed height of the spring at rated load.
9. Minimum Additional Travel: 50 percent of the required deflection at rated load.
10. Lateral Stiffness: More than 80 percent of rated vertical stiffness.
11. Overload Capacity: Support 200 percent of rated load, fully compressed, without deformation or failure.
12. Elastomeric Element: Molded, oil-resistant rubber or neoprene.
13. Coil Spring: Factory set and field adjustable for a maximum of 1/4-inch movement at start and stop.

## 2.24 FLEXIBLE DUCTS

Available Manufacturers: Subject to compliance with requirements, manufacturers offering products that may be incorporated into the Work include the following, or approved equal:

1. Buckley Associates, Inc.
2. Flexmaster U.S.A., Inc.
3. JP Lamborn Co.
4. McGill AirFlow LLC.
5. Thermaflex; a Flex-Tek Group company.
6. Ward Industries; a brand of Hart & Cooley, Inc.
7. Or approved equal.

### Non-Insulated Flexible Duct

8. Performance:
  - a. UL 181, Class 1.
  - b. Pressure Rating: Minimum 4-inch wg positive and 0.5-inch wg negative.
  - c. Maximum Air Velocity: 4000 fpm.
  - d. Temperature Range: Minus 20 to plus 175 deg F.

### Insulated Flexible Ducts

9. Performance:
  - a. UL 181, Class 1, fibrous-glass insulation, vapor-barrier film.
  - b. Pressure Rating: Minimum 4-inch wg positive and 0.5-inch wg negative.
  - c. Maximum Air Velocity: 4000 fpm.

- d. Temperature Range: Minus 20 to plus 175 deg F.
- e. Insulation R-Value: Comply with ASHRAE/IES 90.1.

Flexible Duct Connectors:

- 10. Clamps: Stainless-steel band with cadmium-plated hex screw to tighten band with a worm-gear action in sizes 3 through 18 inches, to suit duct size.

## 2.25 DUCT ACCESSORY HARDWARE

Instrument Test Holes: Cast iron or cast aluminum to suit duct material, including screw cap and gasket. Size to allow insertion of pitot-tube and other testing instruments and of length to suit duct-insulation thickness.

Adhesives: High strength, quick setting, neoprene based, waterproof, and resistant to gasoline and grease.

## 2.26 DIFFUSERS, REGISTERS & GRILLES

Available Manufacturers: Subject to compliance with requirements, available manufacturers offering products that may be incorporated into the Work include the following, or approved equal:

- 1. Anemostat Products; a Mestek Company.
- 2. Carnes Company.
- 3. Hart & Cooley Inc.
- 4. Kreuger.
- 5. Metalaire, Inc.
- 6. Nailor Industries Inc.
- 7. Price Industries.
- 8. Titus.
- 9. Tuttle & Bailey.
- 10. Or approved equal.

Provide diffusers, registers, and grilles for supply, return and exhaust outlets of size, type and, material of construction matching the basis of design devices scheduled on the drawings.

Equipment shall be tested and rated according to ASHRAE Standard 70-2006 (RA 2011), "Method of Testing for Rating the Performance of Air Outlets and Inlets".

Room air velocities shall be determined in accordance with ASHRAE Standard 113-2013.

Equipment shall handle air quantities at operating velocities:

- 1. With maximum diffusion within space supplied or exhausted.
- 2. Without objectionable air movement as determined by Architect.
- 3. With rated sound level not to exceed NC30.

Supply, return and exhaust outlets shall have opposed blade volume dampers operable from front.

Supply registers shall have two sets of directional control blades.

Diffusers within same room or area shall be of same type and style to provide uniformity of appearance.

Surface mount diffusers, registers and grilles shall be furnished with gaskets and installed with faces set level and plumb, tightly against mounting surface.

Coordinate diffusers, registers and grilles with ceiling and wall construction. Refer to Architectural Drawings for exact lengths and for framing and mitering arrangements that may differ from those shown on Division 23 Drawings.

#### General Construction and Performance Requirements

1. Supply diffusers shall be specifically designed for variable-air-volume flows.
2. Material: Steel, aluminum or stainless steel consistent with basis of design scheduled diffuser, register or grille.
3. Finish: Steel and aluminum diffusers, registers and grilles shall have a baked enamel finish with color selected by Architect. Stainless steel diffusers and grilles shall have a brushed finish.
4. Mounting: Coordinate selections with ceiling grid indicated on the architectural drawings.
5. Pattern: Provide fully adjustable or fixed pattern consistent with scheduled basis of design diffuser, register or grille.
6. Dampers: Opposed blade or butterfly.
7. Accessories:
  - a. Equalizing grid where length of straight duct in the section of duct connected to the device is less than 18 inches long.
  - b. Plaster ring for devices mounted in dry wall construction.
  - c. Safety chain for devices with a face area equal to or larger than 3 square feet.

#### Supplemental Requirements for Continuous Linear Diffusers

1. Provide materials and accessories for a complete installation of linear and modular slot air diffusers. Installation shall include appurtenances to meet performance indicated. Provide plenums, hoods, blank-offs and sheet metal components including duct connections to the plenums.
2. For ceiling mounted continuous linear slot and modular slot diffusers, diffusers shall integrate into the ceiling system. Where curved linear slot diffusers are indicated, they shall be stretch formed to the exact radii required. Rolled or segmented linear slot diffusers will not be accepted.
3. Linear slot diffusers shall have the number of slots scheduled and shall be capable of being used for supply air, return air, exhaust air or any combination.
4. Provide hanger wire support clips that are integral with the linear slot diffusers in lay in ceilings to allow diffusers to be supported from the building structure. For hard ceilings, provide clips integral with the linear slot diffusers to allow diffusers to be secured directly to the ceiling framing without need for hanger supports. Provide spline clips to secure joints and ceiling tees to the diffusers.

5. Provide ends and corners. Ends shall be butt type, field installed, or mitered picture frame type factory installed. Corners shall be mitered one piece unit.
  6. Pattern controllers shall be one piece positioned between spring loaded spacers. Pattern controllers shall allow the airstream to be directed flat against the ceiling in either direction or downward as well as allowing throw reduction every two feet along the entire length of the linear slot diffusers. Airstream shall be maintained at the ceiling plane and shall not dump when volume is reduced.
  7. Material shall match the basis of design product specified. Spring steel retainers shall be used under the spacers to hold the slot diffusers assembly tightly together and allow the slot diffusers to be disassembled easily for field trimming.
  8. Flanges exposed to view shall be painted factory standard white. All other surfaces shall be painted flat black. Provide paint samples for approval prior to shipment.
  9. Slot diffusers shall be manufactured by the same manufacturer of the plenums and hoods.
  10. Plenums shall be minimum 24-gauge galvanized steel and lined inside with black matte fiberglass insulation with antimicrobial spray coating.
  11. Provide a friction type volume damper located in the entry collar of the supply air plenum, accessible for adjustment through the slot diffuser.
  12. Position pattern controllers in their normal operation positions before performing air testing and balancing.
  13. Slot diffusers shall be performance tested with air plenums as a composite assembly.
- Specialized Diffusers, Registers and Grilles.

## **PART 3 - EXECUTION**

### **3.1 DUCT INSTALLATION**

Drawing plans, schematics, and diagrams indicate general location and arrangement of duct system. Indicated duct locations, configurations, and arrangements were used to size ducts and calculate friction loss for air-handling equipment sizing and for other design considerations. Install duct systems as indicated unless deviations to layout are approved on Shop Drawings and Coordination Drawings.

Install ducts and specified fittings in accordance with procedures outlined in SMACNA Duct Construction Manual unless otherwise indicated.

Examine areas and ductwork to receive wind-control devices for compliance with requirements for installation tolerances and other conditions affecting performance of the Work.

Install ducts in maximum practical lengths to minimize quantity of joints in the system.

Install factory- or shop-fabricated fittings for changes in direction, size, and shape and for branch connections.

Unless otherwise indicated, install ducts vertically and horizontally, and parallel and perpendicular to building lines.

Install ducts close to walls, overhead construction, columns, and other structural and permanent enclosure elements of building.

Install drain pans.

Install ducts with a clearance of 1 inch plus allowance for insulation thickness.

Route ducts to avoid passing through transformer vaults and electrical equipment rooms and enclosures.

Where supply, return, makeup air and non-hazardous exhaust ducts pass through fire-rated assemblies identified on the architectural drawings including but not limited to interior partitions, floors and exterior walls, install fire dampers. Where supply, return, makeup air and non-hazardous exhaust pass through a fire rated shaft enclosure provide fire and smoke dampers or combination fire-smoke dampers except where a code acceptable alternate 22-inch sub-duct assembly is indicated on the drawings (e.g. hazardous exhaust duct risers or some toilet exhaust risers in hospitality occupancies).

Protect duct interiors from moisture, construction debris and dust, and other foreign materials. Comply with SMACNA "IAQ Guidelines for Occupied Buildings Under Construction," Appendix G, "Duct Cleanliness for New Construction Guidelines."

#### Duct Sleeves and Prepared Openings

1. Provide galvanized-steel sheet duct sleeves for round ducts 15 inches and smaller. Provide prepared, framed openings for round ducts larger than 15 inches and for square, rectangular and flat oval ducts, except as specified otherwise. Sleeves shall meet SMACNA requirements.
2. Provide galvanized-steel sheet duct sleeves for ducts through 1-, 2- or 3-hour fire-rated construction and smoke partitions, regardless of size and shape of ducts. Sleeves shall maintain fire rating of construction penetrated. Sleeve and seal materials, construction and clearances shall meet requirements of SMACNA Fire Damper and Heat Stop Guide for Air Handling Systems.
3. Prepared openings shall be framed to provide 1-inch clearance between framing and duct or duct insulation.
4. Provide 4 inches wide 20-gauge galvanized sheet metal collars at sleeves and prepared openings, sized to cover entire duct penetration including sleeve and seal, and to accommodate duct and insulation as necessary. Edges shall have milled lips ground smooth. Paint to match finish of duct or as directed by Architect.
5. All duct penetrations through concrete floors in mechanical rooms shall be provided with 2 inches high water stopped curbs surrounding the openings. This applies to mechanical rooms located above the lowest floor level.

Where ducts pass through non-fire-rated interior partitions and exterior walls and are exposed to view in finished spaces, cover the opening between the partition and duct or duct insulation with sheet metal flanges of same metal thickness as the duct. Overlap openings on four sides by at least 1-1/2 inches.

Fire-Barrier Penetrations: Maintain indicated fire rating of walls, partitions, ceilings, and floors at pipe penetrations. Seal pipe penetrations with firestop materials. Refer to Division 07 for materials.

Verify final equipment locations for roughing-in.

### 3.2 DRYER EXHAUST DUCT INSTALLATION

#### Domestic Dryer Exhaust Ducts

1. Provide protective shields where nails or screws from finish or other work may penetrate the dryer exhaust duct in accordance with the applicable mechanical code.
2. Ducts shall be supported and secured in place on at 4-foot intervals.
3. Ducts shall be joined by extending each section into the adjoining section or fitting in direction of airflow.
4. Screws and fasteners shall not protrude into the ducts more than 0.125 inches.
5. Duct design is based on a maximum 35 feet code equivalent duct length.. Where equivalent duct length exceeds 35 feet, provide a permanent label or tag identifying the installed equivalent duct length and mount within 6 feet of the dryer connection.
6. Offsets in risers are prohibited. Dampers and screens are prohibited in system except at the discharge.
7. Provide a backdraft damper at the system discharge.

### 3.3 INSTALLATION OF EXPOSED DUCTWORK

Protect ducts exposed in finished spaces from being dented, scratched, or damaged.

Trim duct sealants flush with metal. Create a smooth and uniform exposed bead. Do not use two-part tape sealing system.

Grind welds to provide smooth surface free of burrs, sharp edges, and weld splatter. When welding stainless steel with a No. 2B, 3 or 4 finish, grind the welds flush, polish the exposed welds, and treat the welds to remove discoloration caused by welding.

Maintain consistency, symmetry, and uniformity in the arrangement and fabrication of fittings, hangers and supports, duct accessories, and air outlets.

Repair or replace damaged sections and finished work that does not comply with these requirements.

### 3.4 HANGER AND SUPPORT INSTALLATION

Provide hangers and supports in compliance with SMACNA Duct Construction Manual, Chapter 5, "Hangers and Supports" And Chapter 6, Section 6.2 "Rooftop Equipment Installation."

Building Attachments: Concrete inserts, powder-actuated fasteners, or structural-steel fasteners appropriate for construction materials to which hangers are being attached.

Hanger Spacing: Comply with SMACNA Duct Construction Manual, Table 5-1, "Rectangular Duct Hangers Minimum Size," and Table 5-2, "Minimum Hanger Sizes for Round Duct," for maximum hanger spacing; install hangers and supports within 24 inches of each elbow and within 48 inches of each branch intersection.

Hangers Exposed to View: Threaded rod and angle or channel supports.

Support vertical ducts with steel angles or channel secured to the sides of the duct with welds, bolts, sheet metal screws, or blind rivets; support at each floor and at a maximum interval of 16 feet.

Install upper attachments to structures. Select and size upper attachments with pull-out, tension, and shear capacities appropriate for supported loads and building materials where used.

Install outdoor duct supports. Comply with support manufacturer installation instructions.

### 3.5 INSTALLATION OF METAL DUCT ACCESSORIES

Install duct accessories according to applicable details in SMACNA Duct Construction Manual for metal ducts.

Install duct accessories of materials suited to duct materials; use galvanized-steel accessories in galvanized-steel ductwork, stainless-steel accessories in stainless-steel ducts, and aluminum accessories in aluminum ducts.

Install backdraft and control dampers at inlet of exhaust fans or exhaust ducts as close as possible to exhaust fan unless otherwise indicated. Refer drawings for applicable damper types.

Install volume dampers at points on supply, return, and exhaust systems where branches extend from larger ducts. Where dampers are installed in ducts having duct liner, install dampers with hat channels of same depth as liner, and terminate liner with nosing at hat channel.

1. Install steel volume dampers in steel ducts.
2. Install aluminum volume dampers in aluminum ducts.

Set dampers to fully open position before testing, adjusting, and balancing.

Install test holes at fan inlets and outlets and elsewhere as indicated.

Install fire and smoke dampers according to UL listing.

Installation of sound attenuators (silencers):

1. Rigidly connect ducts to sound attenuators.
2. Sound attenuator manufacturer basic installation instructions shall not be compromised to ensure pressure drops and self-generated sound power levels do exceed scheduled values. Install sound attenuators with baffles oriented in plane of turn when distance to nearest change in direction is less than attenuator manufacturer optimal distance.
3. Duct sound attenuator supplier or qualified representative shall provide supervision to ensure correct installation of duct sound attenuators.
4. Resiliently isolate sound attenuators from building construction at points of penetration of building structure with 0.75 inch minimum of 3 pound per cubic foot density fibrous glass. Seal penetration ends airtight with non-hardening caulk.
5. Multiple attenuators grouped together in parallel within duct system shall be sealed airtight with the same sealant used on the attached ductwork.

Install duct access doors on sides of ducts to allow for inspecting, adjusting, and maintaining accessories and equipment at the following locations:

1. On both sides of duct coils.
2. Upstream from duct mounted filters.
3. At outdoor-air intakes and mixed-air plenums.
4. At drain pans and seals.

5. Downstream from manual volume dampers, control dampers, backdraft dampers, and equipment.
6. Adjacent to and close enough to fire or smoke dampers, to reset or reinstall fusible links. Access doors for access to fire or smoke dampers having fusible links shall be pressure relief access doors and shall be outward operation for access doors installed upstream from dampers and inward operation for access doors installed downstream from dampers.
7. At each change in direction and at maximum 50-foot spacing.
8. Upstream from splitter vanes.
9. Upstream or downstream from sound attenuators (silencers).
10. Control devices requiring inspection.
11. Elsewhere as indicated.
12. Install access doors with swing against duct static pressure.
13. Minimum Access Door Sizes:
  - a. One-Hand or Inspection Access: 8 inches by 5 inches.
  - b. Two-Hand Access: 12 inches by 6 inches.
  - c. Head and Hand Access: 18 inches by 10 inches.
  - d. Head and Shoulders Access: 21 inches by 14 inches.
  - e. Body Access: 25 inches by 14 inches.
  - f. Body Plus Ladder Access: 25 inches by 17 inches.
  - g. Access doors for fire dampers shall be located so that the spring catch and fusible links are accessible when the damper is closed. Fire damper access doors shall be no smaller than 12 inches by 12 inches. Where duct size does not permit the minimum size access door, provide a minimum 12-inch long removable duct section to allow access for reset of fusible link. As duct size increases beyond 16 inches in any one direction, access door shall be no less than 2 inches smaller than the larger duct dimension by a minimum of 12" long. As the shorter dimension increases above 16 inches the length of the damper shall be no less than 2 inches smaller than the duct in each dimension but shall not exceed 18 inches x 16 inches. For dampers that are too large for an ordinary person's arms to reach from outside the duct to reset the damper and replace the fusible link, the minimum size for the access door shall be increased to 24 inches x 16 inches to allow the entrance of an individual.

Label access doors according to Division 23 to indicate the purpose of access door.

Install flexible connectors to connect ducts to equipment.

For fans developing static pressures of 5 inches water column and more, cover flexible connectors with loaded vinyl sheet held in place with metal straps.

Connect terminal units with fans to supply and return ducts with flexible connectors. Do not use flexible connectors to change directions.

Connect diffusers or light troffer boots to ducts directly or with maximum 6 foot lengths of flexible duct clamped or strapped in place.

Connect flexible ducts to metal ducts with ty-wrap tool or reusable stainless steel draw bands.

Install duct test holes where required for testing and balancing purposes.

Install thrust limits at centerline of thrust, symmetrical on both sides of equipment. Attach thrust limits at centerline of thrust and adjust to a maximum of 1/4-inch movement during start and stop of fans.

### 3.6 INSTALLATION OF DIFFUSERS, REGISTERS AND GRILLES

Prior to installation, examine areas where diffusers, registers and grilles are to be installed for compliance with requirements for installation tolerances and other conditions affecting performance of equipment.

1. Proceed with installation only after unsatisfactory conditions have been corrected.

Install diffusers, registers and grilles level and plumb.

Outlets and Inlets Locations: Drawings indicate general arrangement of ducts, fittings, and accessories. Air outlet and inlet locations have been indicated to achieve design requirements for air volume, noise criteria, airflow pattern, throw, and pressure drop. Make final locations where indicated, as much as practical. For units installed in lay-in ceiling panels, locate units in the center of panel. Where architectural features or other items conflict with installation, notify Architect for a determination of final location.

Install diffusers, registers and grilles with airtight connections to ducts and to allow service and maintenance of dampers, air extractors, and fire dampers.

### 3.7 CONNECTIONS TO EQUIPMENT

Comply with SMACNA Duct Construction Manual for branch, outlet and inlet, and terminal unit connections.

Make connection to motorized equipment with flexible connectors.

### 3.8 PAINTING

Paint interior of metal ducts that are visible through diffusers, registers and grilles and that do not have duct liner. Apply one coat of flat, black, latex paint over a compatible galvanized-steel primer. Paint materials and application requirements are specified in Division 09.

### 3.9 AIR DISTRIBUTION SYSTEM CLEANLINESS

Maintain new ductwork in accordance with SMACNA "Duct Cleanliness for New Construction Guidelines." Maintain "Advanced Cleanliness Level" as defined in the guideline.

Air Distribution System Cleanliness Verification and Testing:

1. Visually inspect duct system per NADCA ACR 2013 to ensure that no visible contaminants are present. If no contaminants are evident through visual inspection, the HVAC system shall be considered clean. If visible contaminants are evident through visual inspection, those portions of the system where contaminants are visible shall be re-cleaned and subjected to cleanliness testing identified in "Additional Verification" paragraph below.
2. Additional Verification (only where visible contaminants are evident):

- a. Perform NADCA Surface Comparison Testing. Ductwork is considered clean if there is no significant visible difference in the surface characteristics. If Surface Comparison Testing test is inconclusive, perform NADCA Vacuum Test. To be considered clean according to the NADCA Vacuum Test, the net weight of the debris collected on the filter media shall not exceed 0.75 mg/100 sq. cm. Conduct NADCA vacuum gravimetric test analysis for nonporous surfaces.
3. Air distribution system will be considered defective if it does not pass tests and inspections.

Unless noted otherwise (e.g. existing ductwork), clean duct systems and components that do not pass visual inspection or random testing as follows:

1. Use service openings for entry and inspection.
  - a. Create new openings and install access panels or doors appropriate for static-pressure class if required for cleaning access. Provide insulated panels for insulated or lined duct. Patch insulation and liner as recommended by duct liner manufacturer.
  - b. Disconnect and reconnect flexible ducts as needed for cleaning and inspection.
  - c. Remove and reinstall ceiling to gain access during the cleaning process.
2. Particulate Collection and Odor Control:
  - a. When venting vacuuming system inside the building, use HEPA filtration with 99.97 percent collection efficiency for 0.3-micron-size (or larger) particles.
  - b. When venting vacuuming system to outdoors, use filter to collect debris removed from HVAC system, and locate exhaust downwind and away from air intakes and other points of entry into building.
3. Clean the following components by removing surface contaminants and deposits:
  - a. Air outlets and inlets (registers, grilles, and diffusers).
  - b. Supply, return, and exhaust fans including fan housings, plenums (except ceiling supply and return plenums), scrolls, blades or vanes, shafts, baffles, dampers, and drive assemblies.
  - c. Air-handling unit internal surfaces and components including mixing box, coil section, air wash systems, spray eliminators, condensate drain pans, humidifiers and dehumidifiers, filters and filter sections, and condensate collectors and drains.
  - d. Coils and related components.
    - 1) Measure static-pressure differential across each coil.
    - 2) Coil will be considered clean if cleaning restored the coil static-pressure differential within 10 percent of the differential measured when the coil was first installed and if the coil is free of foreign matter and chemical residue, based on a thorough visual inspection.
  - e. Return-air ducts, dampers, actuators, and splitter vanes except in ceiling plenums and mechanical equipment rooms.
  - f. Supply-air ducts, dampers, actuators, and splitter vanes.
  - g. Dedicated exhaust, ventilation and makeup air system components.

- h. Plenums.
- 4. Mechanical Cleaning Methodology:
  - a. Clean metal duct air distribution systems using mechanical cleaning methods that extract contaminants from within duct systems and remove contaminants from building.
  - b. Use vacuum-collection devices that are operated continuously during cleaning. Connect vacuum device to downstream end of duct sections so areas being cleaned are under negative pressure.
  - c. Use mechanical agitation to dislodge debris adhered to interior duct surfaces without damaging integrity of metal ducts, duct liner, or duct accessories.
  - d. Clean fibrous-glass duct liner with HEPA vacuuming equipment; do not permit duct liner to get wet. Replace fibrous-glass duct liner that is damaged, deteriorated, or delaminated or that has friable material, mold, or fungus growth.
  - e. Clean coils and coil drain pans according to NADCA ACR 2013. Keep drain pan operational. Rinse coils with clean water to remove latent residues and cleaning materials; comb and straighten fins.
  - f. Provide drainage and cleanup for wash-down procedures.
  - g. Antimicrobial Agents and Coatings: Apply EPA-registered antimicrobial agents if fungus is present. Apply antimicrobial agents according to manufacturer's written instructions after removal of surface deposits and debris.

Prepare a written cleanliness verification report. At a minimum, include the following:

- 1. Written documentation of the success of the cleaning.
- 2. Site inspection reports, initialed by supervisor, including notation on areas of inspection, as verified through visual inspection.
- 3. Surface comparison and vacuum test results where required.
- 4. System areas found to be damaged.

Photographic Documentation: Comply with requirements in Division 01, Photographic Documentation.

### 3.10 START UP AND ADJUSTING

Air Balance: Comply with requirements in other Sections of Division 23.

After installation, adjust diffusers, registers and grilles to air patterns indicated or as directed, before the start of air balancing.

### 3.11 DUCT SEALING

Duct Sealant and Leakage Fraction: Seal ducts to the following seal and leak classes. For purposes of this specification seal class identified shall be used only to define specific seams and joints to be sealed and applies to all duct pressure classes. Openings for rotating shafts shall be sealed with bushings or other devices that seal off air leakage. Pressure-sensitive tape shall not be used as the primary sealant unless it has been certified to comply with UL-181A or UL-181B by an independent testing laboratory, and the tape is used in accordance with that certification. All connections shall be sealed, including but not limited to spin-ins, taps, other

branch connections, access doors, access panels, and duct connections to equipment. Sealing that would void product listings is not required. Spiral lock seams need not be sealed.

1. Seal Class A as defined by ASHRAE 90.1: A ductwork sealing category that requires sealing all transverse joints, longitudinal seams, and duct wall penetrations. Duct wall penetrations are openings made by pipes, holes, conduit, tie rods, or wires. Longitudinal seams are joints oriented in the direction of airflow. Transverse joints are connections of two duct sections oriented perpendicular to airflow.
2. Leakage factors specified are as recommended in the ASHRAE Systems and Equipment Handbook.

Duct Construction Class	Pressure	SMACNA Seal Class	Maximum Allowable Leakage Fraction***
10 inches water column (2500 Pa)	Pos. or Neg.	A	2 percent * 5 percent**
6 inches water column (1500 Pa)	Pos. or Neg.	A	2 percent * 5 percent**
4 inches water column (1000 Pa)	Pos. or Neg.	A	2 percent * 5 percent**
3 inches water column (750 Pa)	Pos. or Neg.	A	2 percent * 5 percent**
2 inches water column (500 Pa)	Pos. or Neg.	A	2 percent * 5 percent**
*2 percent of system air flow rate for return and supply ducts outdoors and exhaust ducts indoors. **5 percent of system air flow rate for all other duct. ***See "FIELD QUALITY CONTROL" Article, Sub-Articles "Duct System Leakage Tests" and "Leakage Factor/Leakage Fraction" in this Section.			

### 3.12 DUCT SCHEDULE

Duct Construction: Fabricate ducts with galvanized sheet steel except as otherwise indicated.  
Duct pressure classification criteria: Duct system pressure classification shall be determined based on the following criteria:

General Duct Service	Duct Construction Minimum Pressure Classification Criteria Fan Discharge = Positive Return Inlet = Negative Exhaust Inlet = Negative	Duct Material of Construction
VAV air handling unit supply ductwork from AHU to terminal box inlet	125 percent of unit external static pressure shown in the equipment schedules – minimum 4 inches water column	G90 galvanized
Constant volume air handling unit supply ductwork (systems with no terminal boxes)	125 percent of supply fan external static pressure shown in equipment schedules – minimum 2 inches water column	G90 galvanized

General Duct Service	Duct Construction Minimum Pressure Classification Criteria Fan Discharge = Positive Return Inlet = Negative Exhaust Inlet = Negative	Duct Material of Construction
Constant volume return ductwork (systems with no terminal boxes) and all ductwork on return fan discharge	125 percent of return fan external static pressure shown in equipment schedules and when system has no separate return fan – minimum 2 inches water column	G90 galvanized
Non-laboratory constant volume exhaust ductwork (systems with no terminal boxes) and all ductwork on exhaust fan discharge	125 percent of exhaust fan external static pressure shown in equipment schedules – minimum 2 inches water column.	G90 galvanized
Ductwork downstream of supply air terminal boxes	2 inches water column	G90 galvanized (except where noted otherwise)
All ducts connected to local terminal units including fan coil units, furnaces, and heat pumps.	2 inches water column	G90 galvanized
Ductwork containing unconditioned air from outside intake location to equipment being served	100 percent of air handling unit or fan external static pressure, minimum 2 inches water column	G90 galvanized
Supply, return and exhaust ducts connected to equipment not listed or otherwise identified in this Section	4 inches water column	G90 galvanized
Toilet room and shower (wet exhaust) – slope 1 percent back to room	125 percent of fan external static pressure or 2 inches water column whichever is greater, air and watertight.	304L stainless steel or aluminum for first 20 feet from the space then G90 galvanized for remainder of the system
Supply ducts within wet corrosive spaces exposed to high concentrations of chlorine (natatoriums and chlorine storage spaces)	125 percent of fan external static pressure or 2 inches water column, whichever is greater.	PVC-coated galvanized steel or Aluminum
Return and Exhaust ducts within wet corrosive spaces exposed to high concentrations of chlorine (natatoriums and chlorine storage spaces)	125 percent of fan external static pressure or 2 inches water column whichever is greater, air and watertight.	PVC-coated galvanized steel or Aluminum
Ducts immediately before and after duct mounted humidifiers – slope 1 percent back to drain	Match duct pressure class, air and watertight.	304L stainless steel or aluminum
All outdoor non-insulated ductwork.	125 percent of fan or unit external static pressure shown in the equipment schedules – minimum of 4 inches water column, air and watertight.	Welded 304L stainless steel with No. 3 Finish
**Construct at the next higher SMACNA pressure class when calculation results in a fractional condition. (e.g. where fan external static is 4 inches water column and test pressure is defined as 110 percent of the		

General Duct Service	Duct Construction Minimum Pressure Classification Criteria Fan Discharge = Positive Return Inlet = Negative Exhaust Inlet = Negative	Duct Material of Construction
fans external static pressure, $1.1 \times 4 = 4.4$ ; duct shall be constructed at 6 inches water column pressure class).		
All ductwork exposed in occupied spaces shall be considered finished material and shall be cleaned of all contractor markings. Provide Number 4 finish for all exposed stainless-steel ductwork. Concealed stainless steel ductwork shall be 2B finish.		

Intermediate Reinforcement:

1. Galvanized-Steel Ducts: Galvanized steel.
2. Stainless-Steel Ducts:
  - a. Exposed to Airstream: Match duct material.
  - b. Not Exposed to Airstream: Galvanized.
3. Aluminum Ducts: Aluminum.

Liner:

4. Provide the following liner material:
  - a. Supply Air Ducts: Fibrous glass, Type I or Flexible elastomeric.
  - b. Return Air Ducts: Fibrous glass, Type I or Flexible elastomeric.
  - c. Exhaust Air Ducts: Fibrous glass, Type I or Flexible elastomeric.
  - d. Supply Fan Plenums: Fibrous glass, Type II or Flexible elastomeric.
  - e. Return- and Exhaust-Fan Plenums: Fibrous glass, Type II or Flexible elastomeric.
  - f. Transfer Ducts: Fibrous glass, Type I or Natural fiber.
5. Thickness of liner shall meet the following requirements:
  - a. For acoustical duct lining provide the following thicknesses:
    - 1) Supply Air Ducts: 1 inch thick.
    - 2) Return Air Ducts: 1 inch thick.
    - 3) Exhaust Air Ducts: 1 inch thick.
    - 4) Supply Fan Plenums: 2 inches thick.
    - 5) Return- and Exhaust-Fan Plenums: 2 inches thick.
    - 6) Transfer Ducts: 1 inch thick.

Ductwork Fittings:

6. Use only the following fittings, shown in Figures 4.2 through 4.9 and Chart 4.1 of the SMACNA Duct Construction Manual.
  - a. Rectangular Elbows - Figure 4.2
    - 1) Type RE-1

- 2) Type RE-3. See also Chart 4-1 and Figure 4-9
- 3) Type RE-5
- 4) Type RE-6
- 5) Type RE-8
- b. Round Elbows – Figure 3-4
  - 1) Round Mitered Elbows Minimum Radius-to-Diameter Ratio and Elbow Segments: Comply with SMACNA Duct Construction Manual, Table 3-1, "Mitered Elbows." Elbows with less than 90-degree change of direction have proportionately fewer segments.
    - a) Velocity 1000 fpm or Lower: 0.5 radius-to-diameter ratio and three segments for 90-degree elbow.
    - b) Velocity 1000 to 1500 fpm: 1.0 radius-to-diameter ratio and four segments for 90-degree elbow.
    - c) Velocity 1500 fpm or Higher: 1.5 radius-to-diameter ratio and five segments for 90-degree elbow.
  - 2) Round Elbows, 12 Inches and Smaller in Diameter: Stamped or pleated.
  - 3) Round Elbows, 14 Inches and Larger in Diameter: Standing seam for non-welded ductwork. Provide welded elbows where welded ductwork is provided.
- c. Divided Flow Branches - Figure 4-5
  - 1) Type 1
  - 2) Type 3
  - 3) Type 4A (optional mitered elbow not acceptable)
  - 4) Type 4B (optional mitered elbow not acceptable)

### 3.13 FIELD QUALITY CONTROL

Perform tests and inspections.

1. Operate dampers to verify full range of movement.
2. Inspect locations of access doors and verify that purpose of access door can be performed.
3. Operate fire, smoke, and combination fire and smoke dampers to verify full range of movement and verify that proper heat-response device is installed.
4. Inspect splitter vanes for proper and secure installation.
5. Operate remote damper operators to verify full range of movement of operator and damper.

Duct System Leakage Tests:

6. The following chapters, articles and appendices of 2012 SMACNA Leakage Test Manual are not applicable to this construction of this project.
  - a. Chapter 1
  - b. Chapter 2.
  - c. Chapter 3, Article 3.1
  - d. Chapter 3, Article 3.2.1.j.
  - e. Chapter 5
  - f. Appendix A
  - g. Appendix B
  - h. Appendix C
  - i. Appendix D
  - j. Appendix E
  - k. Appendix F
  - l. Appendix G
7. The following appendices of 2012 SMACNA Leakage Test Manual are informational and may be of some assistance to the contractor, though they are not a requirement of the Project Specifications
  - a. Appendix H
  - b. Appendix I
  - c. Appendix J
  - d. Appendix K
  - e. Appendix L
  - f. Appendix M

- g. Appendix N
  - h. Appendix O
8. Unless otherwise noted in this specification section, the leakage test procedures shall comply with chapter 4 of the 2012 SMACNA Leak Test Manual except as follows:
- a. Article 4.1.3 be replaced with the text: “Calculate the allowable leakage in accord with the Project Specifications Section 233113, Field Quality Control article, Duct System Leakage Test sub-article and the example in the ASHRAE Systems Handbook Compliant Leakage Allowance Calculation article.”
  - b. Article 4.1.7 shall be replaced with the text: “Read the flow meter and compare the leakage in CFM to the allowable leakage calculated in 4.1.3 above. If it meets allowable leakage, proceed to step 4.1.8. If it does not meet the allowable limit, proceed to steps 4.1.7.a through 4.1.7.c”.
  - c. Article 4.1.7.a shall be replaced with the text: “Inspect pressurized duct (and all connections between the flow meter and the duct) for sensible leaks. If necessary, apply a soap solution to locate small leaks. If deemed appropriate by the contractor, submit a request to the Architect to utilize a smoke bomb to identify leaks. Under no circumstances shall a smoke bomb be used without the written approval of the architect.”
  - d. The reference to Appendix G shall be deleted in article 4.1.7.b.
  - e. Article 4.1.10.d shall be replaced with the text: “Isolate equipment (fans, air handling units, air valves, VAV terminals, fan coil units, heat pumps, etc.) from the tested ductwork. Contractor shall obtain leakage of this equipment from the manufacturers of the equipment and use it directly as described in the Project Specifications Section 233113 article addressing ‘Fixed Leakages’ in the sub-article ‘Total System Leakage’”.
  - f. Delete article 4.1.10.e.
9. Leakage test apparatus shall comply with Chapter 6 of the SMACNA Leak Test Manual. Flow measuring equipment shall have a calibrated accuracy of plus or minus 3 percent of the maximum allowable air flow leakage rate (calculated in accordance with the project specifications in the articles below) of the duct section being tested. Calibration certificates, showing acceptable instrument accuracy and dated within 90 days of leakage tests, of all instrumentation (flow, temperature, pressure) shall be submitted with test reports
10. Unless otherwise noted, allowable system leakage shall be expressed as a fraction (percentage) of the total system flow as recommended in Chapter 19 of the ASHRAE Systems Handbook, article “Leakage Testing” beginning on page 19.3.
- a. All outdoor supply and return ductwork shall have a leakage fraction less than or equal to 2 percent of the system air flow.
  - b. All indoor exhaust ductwork shall have a leakage fraction less than or equal to 2 percent of the system air flow.
  - c. All other ductwork shall have a leakage fraction less than or equal to 5 percent of the system air flow.
11. Leakage tests shall be conducted at the pressure classification of the ductwork being tested. Do not exceed the installed duct pressure class rating.

12. Submit a test report for the entire system with each test represented and totaled showing the total duct leakage measured during the tests plus the fixed leakage is less than or equal to the allowable leakage of the system.
  - a. Reports shall be based on the requirements of 2012 SMACNA Leak Test Manual, Chapter 7 as modified by the Project Specifications.
    - 1) Article 7.1 delete the fourth bullet referencing Section 5.1.
    - 2) Article 7.2 delete the reference to table 5-1 in the second bullet.
    - 3) Article 7.2 delete the parenthetical content (10 percent, 20 percent, 50 percent, all) and replace with the phrase “as specified in the Project Specifications.
    - 4) Article 7.3 delete the term “leakage class” at the end of the first sentence and replace with the phrase “allowable leakage, calculated in accord with the Project specifications”.
    - 5) Article 7.4 shall be deleted in its entirety and replaced with the following:
      - a) The test results form shall be similar to and contain all the information noted in the “Test Results Form” in the project specifications.
      - b) The heading of the form shall include the project name, contractor’s project number, air system to which the tested sections are attached, testing company information and logo, air system design air flow rate, connected equipment total allowable leakage.
      - c) The test results form shall include the results of the duct section calculations including the duct section calculation number (cross referenced to the sheet metal shop drawings), the design air flow in the calculated section, the surface area of the calculated section, maximum leakage class of the calculated section, allowable leakage rate (CFM) in the calculated section and pressure class of the calculated section.
      - d) The proposed duct test sections (cross referenced to the sheet metal shop drawings) identifying which duct calculation sections are included in the test section, the resultant total air leakage in the test section (i.e. the sum of the calculation sections in the test section) if calculated sections are combined into one test section
      - e) The test result form shall include field test data including the test date, the name of the technician performing the test, the name of the witness of the test, the test equipment identification (manufacturer, model number, serial number), the pressure in the duct during the test, test equipment raw data (i.e. pressure differential across the orifice) and resultant measured air flow based orifice differential pressure.
      - f) The test results form shall also identify resultant allowable leakage if the test static pressure is not equal to the design duct pressure classification.
      - g) Test reports are to be submitted to the architect for review.

13. See Article “Leakage Factor/Leakage Fraction”, “ASHRAE Systems Handbook Compliant Duct Leakage Calculation”, and “Total System Leakage” articles in this specification section for calculation methodology
14. As recommended in the ASHRAE Systems Handbook, duct leakage testing shall be performed with takeoffs, dampers (fire, smoke, control, combination fire/smoke manual volume control, etc.) duct mounted coils, and access doors installed.
15. Duct leakage tests shall not include the leakage of air handlers or terminal equipment (e.g., VAV air valves, fan coil units, heat pumps). Provide necessary arrangements so these devices are isolated from the duct sections under test.
16. Duct leakage tests shall not include the leakage of air handlers or terminal equipment (e.g., VAV boxes).
  - a. Air handlers and terminal equipment shall be tested separately by the manufacturers. The associated leakage shall be obtained by the contractor from the selected manufacturers on the project. Their leakage shall be included in the overall system leakage. The total system (e.g. Duct, ahu, dampers, access doors, duct coils) leakage shall not exceed 5 percent of the total airflow of the system generated at the fan (e.g. Ahu).
17. Refer to Division 23 for testing, adjusting, and balancing for HVAC for additional requirements.
18. Leak test the following systems:
  - a. 100 percent of exterior ductwork regardless of pressure class.
  - b. 100 percent of interior ductwork with a pressure class 3 inches water column or higher.
  - c. All other ductwork: Test representative duct sections, selected by Architect from sections installed, totaling no less than 25 percent of total installed duct area.
19. Disassemble, reassemble, and seal segments of systems to accommodate leakage testing and for compliance with test requirements.
20. Test for leaks before applying external insulation.
21. Give seven-day advance notice for testing to the Architect.
  - a. Notification regarding testing of Smoke Management systems shall be directed to the Owner, Architect and Special Inspector for Smoke Control systems.

**Leakage Factor/Leakage Fraction**

22. Conduct tests at static pressures equal to maximum design pressure class of the system or section being tested. Do not pressurize systems above maximum design pressure class.
23. For each fan system (fan system includes air handling unit fans) with ductwork required to be leak tested, the contractor shall determine the normalized air flow rate per square foot of duct surface area (Q<sub>fn</sub>) based on the ductwork shop drawings and the approved fan (AHU, etc) shop drawings.
24. Contractor shall determine the duct surface area for each main, branch main branch and subbranch of duct connected to each fan system with ductwork required to be leak tested for each change in designed air flow carried in the duct.

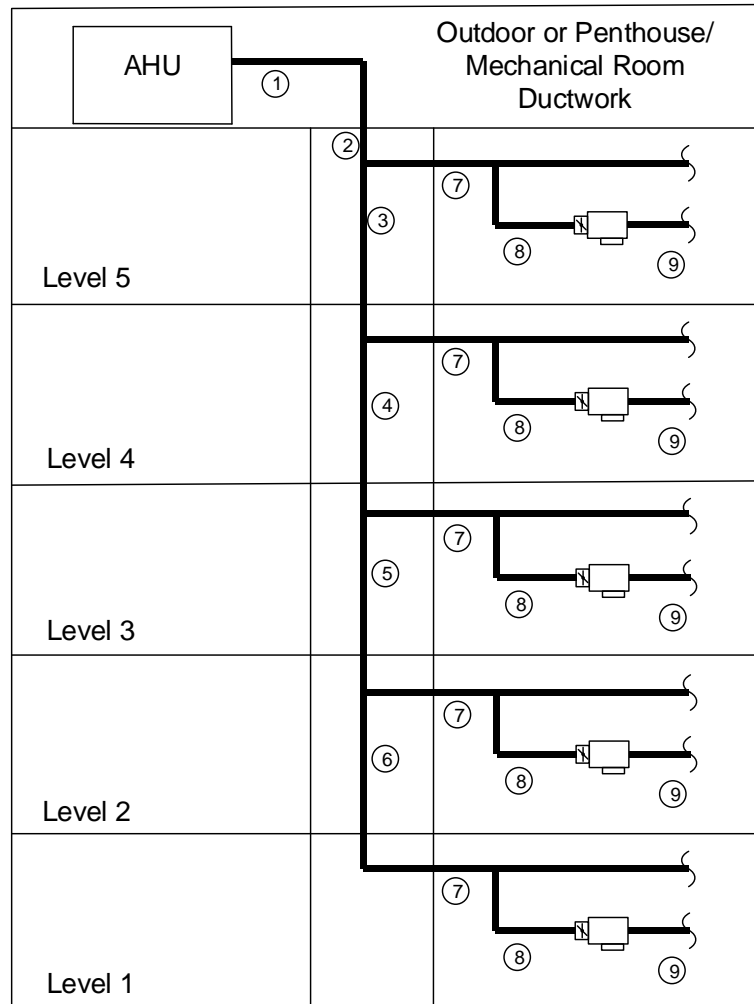

25. Leakage class (Cl) can be determined in accordance with ASHRAE/IES 90.1 by using the leakage fraction (Qlf), translated into a decimal, specified duct pressure class (Cp) and system air flow rate normalized per square foot of system duct surface area (Qfn) as follows:
  - a.  $Cl = (Qlf * Qfn) / (Cp ^ 0.65)$
  - b. To comply with ASHRAE/IES 90.1 Article 6.4.4.2.2, leakage class (Cl) shall be no greater than 4. When calculating leakage class, contractor shall reduce the leakage fraction, Qlf, as necessary to ensure leakage class does not exceed 4. See calculation example in the Article below.
26. For those systems wherein leakage testing will be conducted in sub-sections of the overall duct system, comply with the recommended procedures for calculating the allowable leakage fraction in a test sub-section described in Chapter 19 of the ASHRAE Systems Handbook Article “Calculating Test Section Allowable Leakage” beginning on page 19.4
27. Should testing reveal greater than the allowable leakage, inspect, re-seal and re-test as necessary and as described in the 2012 SMACNA Leak Test Manual as modified by the Project Specification to attain a measured air flow leakage from the test section equal to or less than the allowable air flow leakage from the test section.
28. For an example of the preceding paragraphs, refer to the Article “Leakage Test Example Calculations” in this Section.
29. Duct sections used for calculations shall be of constant air flow, constant cross section, constant design pressure class.
30. Duct sections for testing may combine the duct sections used for calculations so long as the combined section does not exceed the capacity of the test apparatus, the combined section is of the same design pressure class and the combined section is contiguous.
  - a. Note in the example in the article “ASHRAE Systems Handbook Compliant Leakage Allowance Calculation” below, the six duct sections associated with the leakage calculation for the 6” pressure class duct could be combined into one test section with an allowable leakage rate equal to the sum of the individual calculated sections as long as the combined section does not exceed the capacity of the test apparatus.

### 3.14 ASHRAE SYSTEMS HANDBOOK COMPLIANT DUCT LEAKAGE ALLOWANCE SAMPLE CALCULATION

#### Example System Description and Diagram

1. The supply side of a penthouse air handling unit designed to produce 100,000 CFM with an external static pressure of 4.5 inches water column is connected to a 6 inches water column pressure class duct riser system, serving five stories of office space. Each story will be supplied 20,000 CFM through a 4 inches water column pressure class branch main duct routed on the office floor and connected to 25 VAV terminal units. Downstream of the VAV terminal will be 2 inches water column pressure class duct routed to ceiling diffusers. The penetrations through the shaft on each floor will be protected by a combination smoke/fire damper with associated access doors, the branch connections will have manual volume dampers for balancing; VAV boxes will have duct mounted reheat coils.

- a. Section 1: The surface area of the supply duct work in the penthouse is measured to be 750 square feet between the AHU discharge and the riser shaft and carries 100,000 CFM
- b. Section 2 The surface area of the supply riser between the shaft entrance and the first take-off connection is 270 square feet and carries 100,000 CFM.
- c. Section 3 – 6: The surface area between each subsequent take-off on the next four floors is 360 square feet between levels 5 and 4 (80,000 CFM); 325 square feet between level 4 and 3 (60,000 CFM); 265 square feet between levels 3 and 2 (40,000 CFM) and 200 square feet between levels 2 and 1 (20,000 CFM).
- d. Section 7 – 8: The surface area of the branch main duct, including access doors, fire/smoke dampers and manual volume dampers, on each floor is 3,500 square feet, each VAV terminal has a 40 square foot surface area inlet connection (800 CFM).
- e. Section 9: Downstream of each VAV box there is 150 square feet of surface area, including manual volume dampers, access doors and reheat coils, of distribution duct to 4 diffusers.

f. Duct Leakage Test Example Diagram

Calculations for 6 inches water column pressure class in the example. Contractor to perform calculations for all pressure classes and duct sections to be tested.

2. The total surface area of the duct is:
  - a.  $750$  (duct in penthouse) +  $270$  (duct between penthouse and level 5) +  $360$  (duct between L5 and L4) +  $325$  (duct between L4 and L3) +  $265$  (duct between L3 and L2) +  $200$  (duct between L2 and L1) +  $3500 * 5$  (total branch main duct on all floors) +  $25 * 5 * 40$  (total VAV inlet branch connections) +  $25 * 5 * 150$  (total duct downstream of VAV) =  $43,420$  square feet.
3. Determine the normalized air flow of each section of duct (example continues for the 6 inches water column pressure class duct only, contractor to continue for all duct and pressures classes required to be leakage tested).
  - a. Penthouse duct;  $Q_{fn} = 100,000 / 750 = 133.33$  CFM/SF
  - b. Riser between PH and Level 5:  $Q_{fn} = 100,000 / 270 = 370.37$  CFM/SF
  - c. Riser between L5 and L4:  $Q_{fn} = 80,000 / 360 = 222.22$  CFM/SF
  - d. Riser between L4 and L3:  $Q_{fn} = 60,000 / 325 = 184.61$  CFM/SF
  - e. Riser between L3 and L2:  $Q_{fn} = 40,000 / 265 = 150.94$  CFM/SF
  - f. Riser between L2 and L1:  $Q_{fn} = 20,000 / 200 = 100$  CFM/SF
4. Determine the leakage class each section of duct (example continues for the 6 inches water column pressure class duct only, contractor to continue for all duct and pressure classes required to be leakage tested).  $Cl = Q_{fl} * Q_{fn} / (C_p ^{0.65})$ .  $Q_{fl}$  shall be set to allowable leakage fraction (0.02 for outdoor/mechanical room ductwork. 0.02 for all exhaust ductwork and 0.05 for all other ductwork). If calculations result in a leakage class greater than 4, reduce the allowable leakage fraction  $Q_{fl}$  for that section to attain  $Cl = 4$  or less. The adjusted value of  $Q_{fl}$  for that section shall be used in subsequent calculations to determine allowable leakage from the affected duct section.
  - a. Penthouse duct:  $Cl = .02 * 133.33 / (6 ^{0.65}) = .83$
  - b. Riser between PH and Level 5:  $Cl = .05 * 370.37 / (6 ^{0.65}) = 5.77$
  - c. Riser between L5 and L4:  $Cl = .05 * 222.22 / (6 ^{0.65}) = 3.46$
  - d. Riser between L4 and L3:  $Cl = .05 * 184.61 / (6 ^{0.65}) = 2.88$
  - e. Riser between L3 and L2:  $Cl = .05 * 150.94 / (6 ^{0.65}) = 2.35$
  - f. Riser between L2 and L1:  $Cl = .05 * 100 / (6 ^{0.65}) = 1.56$
5. Determine the duct section area to total duct area ratio for each section of duct (example continues for the 6 inches water column pressure class duct only, contractor to continue for all duct and pressure classes required to be leakage tested).
  - a. Penthouse duct: Section Area / Total Area =  $750 / 43,420 = 0.017$
  - b. Riser between PH and Level 5:  $270 / 43,420 = 0.006$
  - c. Riser between L5 and L4:  $360 / 43,420 = 0.0083$
  - d. Riser between L4 and L3:  $325 / 43,420 = 0.0075$
  - e. Riser between L3 and L2:  $265 / 43,420 = 0.0061$
  - f. Riser between L2 and L1:  $200 / 43,420 = 0.0046$

6. Determine the allowable leakage per section of duct (example continues for the 6 inches water column pressure class duct only, contractor to continue for all duct and pressure classes required to be leakage tested). Allowable leakage = (Section to total area ratio) \* (Section air flow rate) \* (Section Leakage Fraction, Qlf, adjusted if necessary as described above)
  - a. Penthouse duct: Allowable leakage =  $0.017 * 100,000 * .02 = 34 \text{ CFM}$
  - b. Riser between PH and Level 5:  $0.006 * 100,000 * .05 = 30 \text{ CFM}$
  - c. Riser between L5 and L4:  $0.0083 * 80,000 * .05 = 33.2 \text{ CFM}$
  - d. Riser between L4 and L3:  $0.0075 * 60,000 * .05 = 22.5 \text{ CFM}$
  - e. Riser between L3 and L2:  $0.0061 * 40,000 * .05 = 12.2 \text{ CFM}$
  - f. Riser between L2 and L1:  $0.0046 * 20,000 * .05 = 4.6 \text{ CFM}$
7. The allowable leakage in the duct system, is the sum of the allowable leakage from each section of duct. For this example, the allowable leakage in the 6 inches water column pressure class duct sections is 136.5 CFM. Contractor shall continue these calculations for all pressure-classes to be tested to get a resulting total leakage allowed from the duct system.

#### Total System Leakage

8. The calculations above are for duct and accessories testing only and do not include leakage from air handlers or terminal equipment (see the Article “Duct System Leakage Tests” in the “Field Quality Control” Article) which are tested separately, or leakage is published by the manufacturer and are considered “fixed” leakages.
9. The total system leakage, including “fixed” leakage, shall not exceed 5 percent of the total air flow for the fan (AHU, etc.) system being tested. If calculations of allowable duct leakage indicate a total system leakage, including “fixed” leakage values, exceeds 5 percent of the total fan (AHU, etc.) system flow; the leakage fraction (Qlf) of some or all of ductwork shall be reduced and the calculations repeated until total calculated leakage is less than or equal to 5 percent of the fan (AHU, etc.) system, total flow rate.
10. “Fixed” leakages may be determined by the manufacturer (published data and/or factory tests) or field tested by the contractor with the assistance and in the presence of the manufacturer at the design pressure class. If the manufacturers’ data are to be utilized, the leakage rate published by the manufacturers shall be adjusted to the design pressure class and calculated leakage class of the ductwork in which the item is installed.
  - a. For example, the AHU described above has been determined by the manufacturer to leak 1 percent of the total air flow at 4 inches water column. As the AHU is installed in 6 inches water column pressure class duct, the “fixed” leakage rate for the AHU shall be calculated as follows:
    - 1) AHU “fixed” leakage = Manufacturers stated leakage rate \* AHU design flow rate \* (design pressure class / manufacturer’s test pressure class) <sup>.65</sup> =  $0.01 * 100,000 * (6/4) ^{.65} = 1301.55 \text{ CFM}$
    - 2) In this example, 1.3 percent of the total system allowable leakage is allotted to the AHU; meaning either the duct construction (plus other “fixed” leakages) must result in no more than 3.7 percent of the total system flow rate in leaks or the manufacturer must be consulted to reduce the AHU leakage.

## SECTION 233400 - HVAC FANS AND VENTILATORS

### PART 1 - GENERAL

#### 1.1 RELATED DOCUMENTS

- A. Certain requirements common to all the mechanical and electrical trades (Fire Suppression, Plumbing, HVAC, Electrical, and Tele/Data) are specified in Division 20. To avoid repetition, they are not repeated in each relevant Division and Section. However, these requirements are applicable to the work of this Section and are hereby incorporated by reference.
- B. Drawings and general provisions of the Contract, including General and Supplementary Conditions and Division 01 Specification Sections, apply to this Section.

#### 1.2 SUMMARY

- A. Section Includes:
  - 1. Centrifugal Fans
    - a. Square in-line centrifugal fans.
  - 2. HVAC Power Ventilators
    - a. Centrifugal ventilators - roof up blast and sidewall.

#### 1.3 ACTION SUBMITTALS

- A. Product Data: For each type of product.
  - 1. Construction details, material descriptions, dimensions of individual components and profiles, and finishes for fans.
  - 2. Rated capacities, operating characteristics, and furnished specialties and accessories.
  - 3. Certified fan performance curves with system operating conditions indicated.
  - 4. Certified fan sound-power ratings.
  - 5. Motor ratings and electrical characteristics, plus motor and electrical accessories.
  - 6. Material thickness and finishes, including color charts.
  - 7. Dampers, including housings, linkages, and operators.
  - 8. Prefabricated roof curbs.
  - 9. Fan speed controllers.
- B. Shop Drawings:
  - 1. Include plans, elevations, sections, and attachment details.
  - 2. Include details of equipment assemblies. Indicate dimensions, weights, loads, required clearances, method of field assembly, components, and location and size of each field connection.
  - 3. Include diagrams for power, signal, and control wiring.

4. Design Calculations: Calculate requirements for selecting vibration isolators and for designing vibration isolation bases.
5. Vibration Isolation Base Details: Detail fabrication, including anchorages and attachments to structure and to supported equipment. Include adjustable motor bases, rails, and frames for equipment mounting.
- C. Delegated Design Submittal: For vibration isolation, hangers and supports, indicated to comply with performance requirements and design criteria, including analysis data signed and sealed by the qualified professional engineer responsible for their preparation.
  1. Design Calculations: Calculate requirements for selecting vibration isolators, supports,.

#### 1.4 INFORMATIONAL SUBMITTALS

- A. Coordination Drawings: Fan room layout and relationships between components and adjacent structural and mechanical elements, drawn to scale, and coordinated with each other, using input from installers of the items involved.
- B. Product Certificates: Submit certificates that specified equipment will withstand required wind forces, from manufacturer.
  1. Basis for Certification: Indicate whether withstand certification is based on actual test of assembled components or on calculations.
  2. Dimensioned Outline Drawings of Equipment Unit: Identify center of wind force and locate and describe mounting and anchorage provisions.
  3. Detailed description of equipment anchorage devices on which the certification is based and their installation requirements.
- C. Startup service reports.
- D. Field quality-control reports.

#### 1.5 CLOSEOUT SUBMITTALS

- A. Operation and Maintenance Data: For fans to include:
  1. Operation in normal and emergency modes.
  2. Operation, and maintenance manuals with replacement parts listing.

### PART 2 - PRODUCTS

#### 2.1 PERFORMANCE REQUIREMENTS

- A. Electrical Components, Devices, and Accessories: Listed and labeled as defined in NFPA 70, by a qualified nationally recognized testing laboratory (NRTL), and marked for intended location and application.
- B. NFPA Compliance: Comply with NFPA 90A for design, fabrication, and installation of unit components.
- C. ASHRAE 62.1 Compliance: Applicable requirements in ASHRAE 62.1, Section 5 - "Systems and Equipment" and Section 7 - "Construction and System Startup."

- D. ASHRAE/IES 90.1 Compliance: Applicable requirements in ASHRAE/IES 90.1, Section 6 - "Heating, Ventilating, and Air-Conditioning."
- E. Delegated Design: Engage a qualified professional engineer, as defined in Section 014000 "Quality Requirements," to design vibration isolation, supports, including comprehensive engineering analysis by a qualified professional engineer, using performance and design criteria indicated.
- F. Wind Performance: Fans shall withstand the effects of wind determined in accordance with ASCE/SEI 7. See Division 23 for vibration and seismic requirements where applicable.
- G. Capacities and Characteristics: Refer to schedules on drawings.

## 2.2 GENERAL

- A. Source Limitations: Obtain each individual fan type from single manufacturer.
- B. Refer to Division 23 for duct silencer requirements.
- C. Motors
  - 1. Comply with NEMA designation, temperature rating, service factor, and efficiency requirements for motors specified in Division 23.
  - 2. Motor Sizes: Minimum size as indicated. If not indicated, large enough so driven load will not require motor to operate in service factor range above 1.0.
  - 3. Where variable-frequency drives are indicated or scheduled, provide fan motor compatible with variable-frequency drive.
- D. Bearings:
  - 1. Heavy-duty regreasable ball or roller type in a cast iron self-aligning pillow block housing.
  - 2. Ball-Bearing Rating Life: ABMA 9, L(50) of 200,000 hours.
  - 3. Roller-Bearing Rating Life: ABMA 11, L(50) of 200,000 hours.
  - 4. Extend grease fitting to accessible location outside of unit.
  - 5. Where fans are required to be spark resistant, bearing shall be located outside the airstream.
- E. Source Quality Control
  - 1. AMCA Certification for Fan Sound Performance Rating: Test, rate, and label in accordance with AMCA 311.
  - 2. AMCA Certification for Fan Aerodynamic Performance Ratings: Test, rate, and label in accordance with AMCA 211.
  - 3. AMCA Certification for Fan Energy Index (FEI): Test, rate, and label in accordance with AMCA 211.
  - 4. Operating Limits: Classify fans in accordance with AMCA 99, Section 14.
  - 5. UL Standards: Power ventilators shall comply with UL 705. Power ventilators for use for restaurant kitchen exhaust shall also comply with UL 762.

## 2.3 SQUARE IN-LINE CENTRIFUGAL FANS

- A. Manufacturers: Subject to compliance with requirements, provide products by one of the following, or approved equal:
  - 1. Acme Engineering & Manufacturing Corp.
  - 2. Aerovent; a division of Twin City Fan Companies, Ltd.
  - 3. Carnes Company.
  - 4. Greenheck Fan Corporation.
  - 5. Hartzell Fan Incorporated.
  - 6. Loren Cook Company.
  - 7. Penn Barry.
  - 8. Or approved equal.
- B. Description: Square in-line centrifugal fans.
- C. Housing:
  - 1. Housing Material: Reinforced steel.
  - 2. Housing Coating: None.
  - 3. Housing Construction: Side panels shall be easily removable for service. Include inlet and outlet flanges, and support bracket adaptable to floor, side wall, or ceiling mounting.
- D. Direct-Drive Units: Motor mounted in airstream, factory wired to disconnect switch located on outside of fan housing.
- E. Fan Wheels: Aluminum airfoil blades welded to aluminum hub.
- F. Motor Enclosure: Open, dripproof.
- G. Accessories:
  - 1. Access for Inspection, Cleaning, and Maintenance: Comply with requirements in ASHRAE 62.1.
  - 2. Variable-Speed Controller: Solid-state control to reduce speed from 100 to less than 50 percent.
  - 3. Volume-Control Damper: Manually operated with quadrant lock, located in fan outlet.
  - 4. Companion Flanges: For inlet and outlet duct connections.
  - 5. Fan Guards: 1/2- by 1-inch mesh of galvanized steel in removable frame. Provide guard for inlet or outlet for units not connected to ductwork.
  - 6. Motor and Drive Cover (Belt Guard): Epoxy-coated steel.
  - 7. Side Discharge: Flange connector and attachment hardware to provide right-angle discharge on side of unit.

## 2.4 CENTRIFUGAL VENTILATORS - ROOF UPBLAST OR SIDEWALL

- A. Manufacturers: Subject to compliance with requirements, provide products by one of the following, or approved equal:

1. Aerovent; a division of Twin City Fan Companies, Ltd.
  2. Carnes Company.
  3. Greenheck Fan Corporation.
  4. Jenco Fan.
  5. Loren Cook Company.
  6. New York Blower Company (The).
  7. Penn Barry.
  8. Or approved equal.
- B. Configuration: Centrifugal roof upblast ventilator.
- C. Housing: Removable spun-aluminum dome top and outlet baffle; square, one-piece aluminum base with venturi inlet cone.
1. Upblast Units: Provide spun-aluminum discharge baffle to direct discharge air upward, with rain and snow drains.
- D. Fan Wheels: Aluminum hub and wheel with backward-inclined blades.
- E. Fan Shaft: Turned, ground, and polished steel; keyed to wheel hub.
- F. Accessories:
1. Variable-Frequency Motor Controller: Solid-state control to reduce speed from 100 to less than 50 percent.
  2. Disconnect Switch: Nonfusible type, with thermal-overload protection mounted outside fan housing, factory wired through an internal aluminum conduit.
  3. Bird Screens: Removable, 1/2-inch mesh, aluminum or brass wire.
  4. Dampers: Counterbalanced, parallel-blade, backdraft dampers mounted in curb base; factory set to close when fan stops.
  5. Motorized Dampers: Parallel-blade dampers mounted in curb base with electric actuator; wired to close when fan stops.
  6. Spark-resistant, all-aluminum wheel construction.
  7. Mounting Pedestal: Galvanized steel with removable access panel.
  8. Wall Mount Adapter: Attach wall-mounted fan to wall.
  9. Restaurant Kitchen Exhaust: UL 762 listed for grease-laden air exhaust.
- G. Prefabricated Roof Curbs: Galvanized steel; mitered and welded corners; 1-1/2-inch- thick, rigid, fiberglass insulation adhered to inside walls; and 1-1/2-inch wood nailer. Size as required to suit roof opening and fan base.
1. Configuration: Built-in raised cant and mounting flange.

## PART 3 - EXECUTION

### 3.1 INSTALLATION, GENERAL

- A. Install fans level and plumb.
- B. Disassemble and reassemble units, as required for moving to the final location, according to manufacturer's written instructions.
- C. Lift and support units with manufacturer's designated lifting or supporting points.
- D. Equipment Mounting:
  - 1. Support duct-mounted and other hanging fans directly from the building structure, using suitable hanging systems as specified in Division 23.
  - 2. Comply with requirements for vibration isolation and seismic-control devices specified in Division 23.
  - 3. Comply with requirements for vibration isolation devices specified in Division 23.
- E. Curb Support, Prefabricated: Rail-type wood support provided by fan manufacturer.
- F. Unit Support: Install fans level on structural curbs. Coordinate with duct connections. Secure units to structural support with anchor bolts.
- G. Install units with clearances for service and maintenance.
- H. Label fans according to requirements specified in Division 23.

### 3.2 DUCTWORK AND PIPING CONNECTIONS

- A. Drawings indicate general arrangement of ducts and duct accessories. Make final duct connections with flexible connectors. Flexible connectors are specified in Division 23.
- B. Install ducts adjacent to fans to allow service and maintenance.
- C. Install piping from scroll drain connection, with trap with seal equal to 1.5 times specified static pressure, to nearest floor drain with pipe sizes matching the drain connection.

### 3.3 ELECTRICAL CONNECTIONS

- A. Connect wiring according to Division 26.
- B. Ground equipment according to Division 26.
- C. Install electrical devices furnished by manufacturer, but not factory mounted, according to NFPA 70 and NECA 1.
- D. Install nameplate for each electrical connection, indicating electrical equipment designation and circuit number feeding connection.
  - 1. Nameplate shall be laminated acrylic or melamine plastic signs, as specified in Division 26.
  - 2. Nameplate shall be laminated acrylic or melamine plastic signs with a black background and engraved white letters at least 1/2 inch high.

### 3.4 CONTROL CONNECTIONS

- A. Install control and electrical power wiring to field-mounted control devices.
- B. Connect wiring in accordance with Division 26.
- C. Connect control wiring according to Division 26.

### 3.5 STARTUP SERVICE:

- A. Perform startup service.
  - 1. Complete installation and startup checks in accordance with manufacturer's written instructions.
  - 2. Verify that shipping, blocking, and bracing are removed.
  - 3. Verify that unit is secure on mountings and supporting devices and that connections to ducts and electrical components are complete. Verify that proper thermal-overload protection is installed in motors, starters, and disconnect switches.
  - 4. Verify that cleaning and adjusting are complete.
  - 5. For direct-drive fans, verify proper motor rotation direction and verify fan wheel free rotation and smooth bearing operation.
  - 6. Adjust damper linkages for proper damper operation.
  - 7. Verify lubrication for bearings and other moving parts.
  - 8. Verify that manual and automatic volume control and fire and smoke dampers in connected ductwork systems are in fully open position.
  - 9. Disable automatic temperature-control operators, energize motor and confirm proper motor rotation and unit operation, adjust fan to indicated rpm, and measure and record motor voltage and amperage.
  - 10. Shut unit down and reconnect automatic temperature-control operators.
  - 11. Remove and replace malfunctioning units and retest as specified above.

### 3.6 ADJUSTING

- A. Adjust damper linkages for proper damper operation.
- B. Adjust belt tension.
- C. Lubricate bearings.
- D. Comply with requirements in Division 23.

### 3.7 CLEANING

- A. After completing system installation and testing, adjusting, and balancing and after completing startup service, clean fans internally to remove foreign material and construction dirt and dust

### 3.8 FIELD QUALITY CONTROL

- A. Testing Agency: Contractor will engage a qualified testing agency to perform tests and inspections.

- B. Manufacturer's Field Service: Engage a factory-authorized service representative to test and inspect components, assemblies, and equipment installations, including connections.
  - C. Perform tests and inspections.
    - 1. Fan Operational Test: After electrical circuitry has been energized, start units to confirm proper motor rotation and unit operation.
    - 2. Test and adjust controls and safeties. Replace damaged and malfunctioning controls and equipment.
    - 3. Fans and components will be considered defective if they do not pass tests and inspections.
  - D. Prepare test and inspection reports.
- 3.9 DEMONSTRATION
- A. Train Owner's maintenance personnel to adjust, operate, and maintain fans.

END OF SECTION

H:\Y0586.00\DOC\SPEC\2025\_02-20\_IFB\233400\_HVAC FANS AND VENTILATORS.DOC

## SECTION 233600 - AIR TERMINAL UNITS

### PART 1 - GENERAL

#### 1.1 RELATED DOCUMENTS

- A. Certain requirements common to all the mechanical and electrical trades (Fire Suppression, Plumbing, HVAC, Electrical, and Tele/Data) are specified in Division 20. To avoid repetition, they are not repeated in each relevant Division and Section. However, these requirements are applicable to the work of this Section and are hereby incorporated by reference.
- B. Drawings and general provisions of the Contract, including General and Supplementary Conditions and Division 01 Specification Sections, apply to this Section.

#### 1.2 SUMMARY

- A. Section Includes:
  - 1. Shutoff, single-duct air terminal units.

#### 1.3 ACTION SUBMITTALS

- A. Product Data: For each type of the following products, including rated capacities, furnished specialties, sound-power ratings, and accessories.
  - 1. Air terminal units.
  - 2. Liners and adhesives.
  - 3. Sealants and gaskets.
- B. Shop Drawings: For air terminal units. Include plans, elevations, sections, details, and attachments to other work.
  - 1. Detail equipment assemblies and indicate dimensions, weights, loads, required clearances, method of field assembly, components, and location and size of each field connection.
  - 2. Wiring Diagrams: For power, signal, and control wiring.
  - 3. Hangers and supports, including methods for duct and building attachment and vibration isolation.
- C. Delegated-Design Submittal:
  - 1. Materials, fabrication, assembly, and spacing of hangers and supports.
  - 2. Design Calculations: Calculations, including analysis data signed and sealed by the qualified professional engineer responsible for their preparation for selecting hangers and supports.

#### 1.4 INFORMATIONAL SUBMITTALS

- A. Coordination Drawings: Reflected ceiling plans, drawn to scale, on which the following items are shown and coordinated with each other, using input from Installers of the items involved:

1. Ceiling suspension assembly members.
2. Size and location of initial access modules for acoustic tile.
3. Ceiling-mounted items including lighting fixtures, diffusers, grilles, speakers, sprinklers, access panels, and special moldings.

B. Field quality-control reports.

#### 1.5 CLOSEOUT SUBMITTALS

- A. Operation and Maintenance Data: For air terminal units to include in emergency, operation, and maintenance manuals. In addition to items specified in Division 01, Operation and Maintenance Data, include the following:
1. Instructions for resetting minimum and maximum air volumes.
  2. Instructions for adjusting software set points.

#### 1.6 QUALITY ASSURANCE

- A. ASHRAE Compliance: Applicable requirements in ASHRAE 62.1, Section 5 - "Systems and Equipment" and Section 7 - "Construction and System Start-Up."

### PART 2 - PRODUCTS

#### 2.1 PERFORMANCE REQUIREMENTS

- A. Structural Performance: Hangers and supports shall withstand the effects of gravity loads and stresses within limits and under conditions described in SMACNA's "HVAC Duct Construction Standards - Metal and Flexible" and ASCE/SEI 7.

#### 2.2 SYSTEM DESCRIPTION

- A. Electrical Components, Devices, and Accessories: Listed and labeled as defined in NFPA 70, by a qualified testing agency, and marked for intended location and application.

#### 2.3 SHUTOFF, SINGLE-DUCT AIR TERMINAL UNITS

- A. Manufacturers: Subject to compliance with requirements, provide products by one of the following, or approved equal:
1. Anemostat Products; a Mestek Company.
  2. Environmental Technologies, Inc.
  3. Krueger.
  4. Nailor Industries Inc.
  5. Price Industries.
  6. Titus.
  7. Tuttle & Bailey.
  8. Or approved equal.

- B. Configuration: Volume-damper assembly inside unit casing with control components inside a protective metal shroud.
- C. Casing: 0.034-inch steel, double wall.
  - 1. Casing Lining: Adhesive attached, 1/2-inch- thick, coated, fibrous-glass duct liner complying with ASTM C 1071, and having a maximum flame-spread index of 25 and a maximum smoke-developed index of 50, for both insulation and adhesive, when tested according to ASTM E 84.
    - a. Cover liner with nonporous foil.
    - b. Cover liner with nonporous foil and perforated metal.
  - 2. Air Inlet: Round stub connection or S-slip and drive connections for duct attachment.
  - 3. Air Outlet: S-slip and drive connections, size matching inlet size.
  - 4. Access: Removable panels for access to parts requiring service, adjustment, or maintenance; with airtight gasket.
  - 5. Airstream Surfaces: Surfaces in contact with the airstream shall comply with requirements in ASHRAE 62.1.
- D. Volume Damper: Galvanized steel with peripheral gasket and self-lubricating bearings.
  - 1. Maximum Damper Leakage: ARI 880 rated, 2 percent of nominal airflow at 3-inch wg inlet static pressure.
  - 2. Damper Position: Normally open.
- E. Attenuator Section: 0.034-inch steel sheet.
  - 1. Lining: Adhesive attached, 1/2-inch- thick, coated, fibrous-glass duct liner complying with ASTM C 1071, and having a maximum flame-spread index of 25 and a maximum smoke-developed index of 50, for both insulation and adhesive, when tested according to ASTM E 84.
    - a. Cover liner with nonporous foil.
    - b. Cover liner with nonporous foil and perforated metal.
  - 2. Airstream Surfaces: Surfaces in contact with the airstream shall comply with requirements in ASHRAE 62.1.
- F. Hydronic Coils: Copper tube, with mechanically bonded aluminum fins spaced no closer than 0.1 inch, and rated for a minimum working pressure of 200 psig and a maximum entering-water temperature of 220 deg F. Include manual air vent and drain valve.
- G. Direct Digital Controls: Bidirectional damper operators and microprocessor-based controller and room sensor. Control devices shall be compatible with temperature controls specified in Division 23 and shall have the following features:
  - 1. Damper Actuator: 24 V, powered closed, spring return open.
  - 2. Terminal Unit Controller: Pressure-independent, variable-air-volume controller with electronic airflow transducer with multipoint velocity sensor at air inlet, factory calibrated to minimum and maximum air volumes, and having the following features:
    - a. Occupied and unoccupied operating mode.
    - b. Remote reset of airflow or temperature set points.

- c. Adjusting and monitoring with portable terminal.
  - d. Communication with temperature-control system specified in Division 23 for instrumentation and control.
- 3. Room Sensor: Wall mounted with temperature set-point adjustment and access for connection of portable operator terminal.
- H. Control Sequence:
  - 1. Suitable for operation with duct pressures between 0.25- and 3.0-inch wg inlet static pressure.
  - 2. System-powered, wall-mounted thermostat.

## 2.4 HANGERS AND SUPPORTS

- A. Hanger Rods for Noncorrosive Environments: Cadmium-plated steel rods and nuts.
- B. Hanger Rods for Corrosive Environments: Electrogalvanized, all-thread rods or galvanized rods with threads painted with zinc-chromate primer after installation.
- C. Steel Cables: Galvanized steel complying with ASTM A 603.
- D. Steel Cable End Connections: Cadmium-plated steel assemblies with brackets, swivel, and bolts designed for duct hanger service; with an automatic-locking and clamping device.
- E. Air Terminal Unit Attachments: Sheet metal screws, blind rivets, or self-tapping metal screws; compatible with duct materials.
- F. Trapeze and Riser Supports: Steel shapes and plates for units with steel casings; aluminum for units with aluminum casings.

## 2.5 SOURCE QUALITY CONTROL

- A. Factory Tests: Test assembled air terminal units according to ARI 880.
  - 1. Label each air terminal unit with plan number, nominal airflow, maximum and minimum factory-set airflows, coil type, and ARI certification seal.

## PART 3 - EXECUTION

### 3.1 INSTALLATION

- A. Install air terminal units according to NFPA 90A, "Standard for the Installation of Air Conditioning and Ventilating Systems."
- B. Install air terminal units level and plumb. Maintain sufficient clearance for normal service and maintenance.
- C. Install wall-mounted thermostats.

### 3.2 HANGER AND SUPPORT INSTALLATION

- A. Comply with SMACNA's "HVAC Duct Construction Standards - Metal and Flexible," Chapter 5, "Hangers and Supports."

- B. Building Attachments: Concrete inserts, powder-actuated fasteners, or structural-steel fasteners appropriate for construction materials to which hangers are being attached.
  - 1. Where practical, install concrete inserts before placing concrete.
  - 2. Install powder-actuated concrete fasteners after concrete is placed and completely cured.
  - 3. Use powder-actuated concrete fasteners for standard-weight aggregate concretes and for slabs more than 4 inches thick.
  - 4. Do not use powder-actuated concrete fasteners for lightweight-aggregate concretes and for slabs less than 4 inches thick.
  - 5. Do not use powder-actuated concrete fasteners for seismic restraints.
- C. Hangers Exposed to View: Threaded rod and angle or channel supports.
- D. Install upper attachments to structures. Select and size upper attachments with pull-out, tension, and shear capacities appropriate for supported loads and building materials where used.

### 3.3 CONNECTIONS

- A. Install piping adjacent to air terminal unit to allow service and maintenance.
- B. Hot-Water Piping: In addition to requirements in Division 23 for hydronic piping, connect heating coils to supply with shutoff valve, strainer, control valve, and union or flange; and to return with balancing valve and union or flange.
- C. Connect ducts to air terminal units according to Division 23 for metal ducts.
- D. Make connections to air terminal units with flexible connectors complying with requirements in Division 23 for air duct accessories.

### 3.4 IDENTIFICATION

- A. Label each air terminal unit with plan number, nominal airflow, and maximum and minimum factory-set airflows. Comply with requirements in Division 23 for identification for HVAC piping for equipment labels and warning signs and labels.

### 3.5 FIELD QUALITY CONTROL

- A. Testing Agency: Engage a qualified testing agency to perform tests and inspections.
- B. Manufacturer's Field Service: Engage a factory-authorized service representative to inspect, test, and adjust components, assemblies, and equipment installations, including connections.
- C. Perform tests and inspections.
  - 1. Manufacturer's Field Service: Engage a factory-authorized service representative to inspect components, assemblies, and equipment installations, including connections, and to assist in testing.
- D. Tests and Inspections:
  - 1. After installing air terminal units and after electrical circuitry has been energized, test for compliance with requirements.
  - 2. Leak Test: After installation, fill water coils and test for leaks. Repair leaks and retest until no leaks exist.

3. Operational Test: After electrical circuitry has been energized, start units to confirm proper motor rotation and unit operation.
  4. Test and adjust controls and safeties. Replace damaged and malfunctioning controls and equipment.
- E. Air terminal unit will be considered defective if it does not pass tests and inspections.
- F. Prepare test and inspection reports.

### 3.6 STARTUP SERVICE

- A. Perform startup service.
1. Complete installation and startup checks according to manufacturer's written instructions.
  2. Verify that inlet duct connections are as recommended by air terminal unit manufacturer to achieve proper performance.
  3. Verify that controls and control enclosure are accessible.
  4. Verify that control connections are complete.
  5. Verify that nameplate and identification tag are visible.
  6. Verify that controls respond to inputs as specified.

### 3.7 DEMONSTRATION

- A. Train Owner's maintenance personnel to adjust, operate, and maintain air terminal units.

END OF SECTION

H:\Y0586.00\DOC\SPEC\2025\_02-20\_IFB\233600\_AIR TERMINAL UNITS.DOC

## SECTION 235216 - CONDENSING BOILERS

### PART 1 - GENERAL

#### 1.1 RELATED DOCUMENTS

- A. Certain requirements common to all the mechanical and electrical trades (Fire Suppression, Plumbing, HVAC, Electrical, and Tele/Data) are specified in Division 20. To avoid repetition, they are not repeated in each relevant Division and Section. However, these requirements are applicable to the work of this Section and are hereby incorporated by reference.
- B. Drawings and general provisions of the Contract, including General and Supplementary Conditions and Division 01 Specification Sections, apply to this Section.

#### 1.2 SUMMARY

- A. Section includes packaged, factory-fabricated and -assembled, gas-fired, fire-tube condensing boilers, trim, and accessories for generating hot water.

#### 1.3 ACTION SUBMITTALS

- A. Product Data: Include performance data, operating characteristics, furnished specialties, and accessories.
- B. Shop Drawings: For boilers, boiler trim, and accessories. Include plans, elevations, sections, details, and attachments to other work.
  - 1. Design calculations and vibration isolation base details, signed and sealed by a qualified professional engineer.
    - a. Design Calculations: Calculate requirements for selecting vibration isolators and seismic restraints and for designing vibration isolation bases.
    - b. Vibration Isolation Base Details: Detail fabrication including anchorages and attachments to structure and to supported equipment. Include auxiliary motor slides and rails and equipment mounting frames.
  - 2. Include diagrams for power, signal, and control wiring.

#### 1.4 INFORMATIONAL SUBMITTALS

- A. Manufacturer Seismic Qualification Certification: Submit certification that boiler, accessories, and components will withstand seismic forces defined in Division 23. Include the following:
  - 1. Basis for Certification: Indicate whether withstand certification is based on actual test of assembled components or on calculation.
    - a. The term "withstand" means "the unit will remain in place without separation of any parts from the device when subjected to the seismic forces specified."

- b. The term "withstand" means "the unit will remain in place without separation of any parts from the device when subjected to the seismic forces specified and the unit will be fully operational after the seismic event."
- 2. Dimensioned Outline Drawings of Equipment Unit: Identify center of gravity and locate and describe mounting and anchorage provisions.
- 3. Detailed description of equipment anchorage devices on which the certification is based and their installation requirements.
- B. Source quality-control reports.
- C. Field quality-control reports.
- D. Warranty: Special warranty specified in this Section.
- E. Other Informational Submittals:
  - 1. ASME Stamp Certification and Report: Submit "A," "S," or "PP" stamp certificate of authorization, as required by authorities having jurisdiction, and document hydrostatic testing of piping external to boiler.

#### 1.5 CLOSEOUT SUBMITTALS

- A. Operation and Maintenance Data: For boilers to include in emergency, operation, and maintenance manuals.

#### 1.6 QUALITY ASSURANCE

- A. Electrical Components, Devices, and Accessories: Listed and labeled as defined in NFPA 70, Article 100, by a testing agency acceptable to authorities having jurisdiction, and marked for intended use.
- B. ASME Compliance: Fabricate and label boilers to comply with ASME Boiler and Pressure Vessel Code.
- C. ASHRAE/IESNA 90.1 Compliance: Boilers shall have minimum efficiency according to "Gas and Oil Fired Boilers - Minimum Efficiency Requirements."
- D. DOE Compliance: Minimum efficiency shall comply with 10 CFR 430, Subpart B, Appendix N, "Uniform Test Method for Measuring the Energy Consumption of Furnaces and Boilers."
- E. UL Compliance: Test boilers for compliance with UL 795, "Commercial-Industrial Gas Heating Equipment." Boilers shall be listed and labeled by a testing agency acceptable to authorities having jurisdiction.

#### 1.7 COORDINATION

- A. Coordinate size and location of concrete bases. Cast anchor-bolt inserts into bases. Concrete, reinforcement, and formwork requirements are specified with concrete.

1.8 WARRANTY

- A. Special Warranty: Manufacturer's standard form in which manufacturer agrees to repair or replace components of boilers that fail in materials or workmanship within specified warranty period.
  - 1. Warranty Period for Fire-Tube Condensing Boilers:
    - a. Leakage and Materials: 10 years from date of Substantial Completion.
    - b. Heat Exchanger Damaged by Thermal Stress and Corrosion: Nonprorated for five years from date of Substantial Completion.

PART 2 - PRODUCTS

2.1 FIRE-TUBE CONDENSING BOILERS

- A. Manufacturers: Subject to compliance with requirements, provide products by the following, or approved equal:
  - 1. AERCO International.
  - 2. Bosch Thermotechnology Corp.
  - 3. Heat Transfer Products, Inc.
  - 4. Or approved equal.
- B. Description: Factory-fabricated, -assembled, and -tested, fire-tube condensing boiler with heat exchanger sealed pressure tight, built on a steel base; including insulated jacket; flue-gas vent; combustion-air intake connections; water supply, return, and condensate drain connections; and controls. Water heating service only.
- C. Heat Exchanger: Nonferrous, corrosion-resistant combustion chamber.
- D. Pressure Vessel: Carbon steel with welded heads and tube connections.
- E. Burner: Natural gas, forced draft.
- F. Blower: Centrifugal fan to operate during each burner firing sequence and to prepurge and postpurge the combustion chamber.
  - 1. Motors: Comply with requirements specified in Division 23 for common motor requirements.
    - a. Motor Sizes: Minimum size as indicated. If not indicated, large enough so driven load will not require motor to operate in service factor range above 1.0.
- G. Gas Train: Combination gas valve with manual shutoff and pressure regulator.
- H. Ignition: Spark ignition with 100 percent main-valve shutoff with electronic flame supervision.
- I. Casing:
  - 1. Jacket: Sheet metal, with snap-in or interlocking closures.

2. Control Compartment Enclosures: NEMA 250, Type 1A.
3. Finish: Baked-enamel protective finish.
4. Insulation: Minimum 2-inch- thick, mineral-fiber insulation surrounding the heat exchanger.
5. Combustion-Air Connections: Inlet and vent duct collars.
6. Mounting base to secure boiler.

## 2.2 TRIM

- A. Include devices sized to comply with ANSI B31.1, "Power Piping."
- B. Aquastat Controllers: Operating, firing rate, and high limit.
- C. Safety Relief Valve: ASME rated.
- D. Pressure and Temperature gauge: Minimum 3-1/2-inch- diameter, combination water-pressure and -temperature gauge. gauges shall have operating-pressure and -temperature ranges so normal operating range is about 50 percent of full range.
- E. Boiler Air Vent: Automatic.
- F. Drain Valve: Minimum NPS 3/4 hose-end gate valve.
- G. Circulation Pump: Non-overloading, in-line pump with split-capacitor motor having thermal-overload protection and lubricated bearings; designed to operate at specified boiler pressures and temperatures.

## 2.3 CONTROLS

- A. Refer to Division 23 for instrumentation and control.
- B. Boiler operating controls shall include the following devices and features:
  1. Control transformer.
  2. Set-Point Adjust: Set points shall be adjustable.
  3. Operating Pressure Control: Factory wired and mounted to cycle burner.
  4. Low-Water Cutoff and Pump Control: Cycle feedwater pump(s) for makeup water control.
  5. Sequence of Operation: Electric, factory-fabricated and field-installed panel to control burner firing rate to maintain space temperature in response to thermostat with heat anticipator located in heated space.
  6. Sequence of Operation: Electric, factory-fabricated and field-installed panel to control burner firing rate to reset supply-water temperature inversely with outside-air temperature. At 0 deg F outside-air temperature, set supply-water temperature at 200 deg F; at 60 deg F outside-air temperature, set supply-water temperature at 140 deg F.

7. Sequence of Operation: Electric, factory-fabricated and field-installed panel to control burner firing rate to maintain a constant steam pressure. Maintain pressure set point plus or minus 10 percent.
  - a. Include automatic, alternating-firing sequence for multiple boilers to ensure maximum system efficiency throughout the load range and to provide equal runtime for boilers.
- C. Burner Operating Controls: To maintain safe operating conditions, burner safety controls limit burner operation.
  1. High Cutoff: Manual reset stops burner if operating conditions rise above maximum boiler design pressure.
  2. Low-Water Cutoff Switch: Float and electronic probe shall prevent burner operation on low water. Cutoff switch shall be manual-reset type.
  3. Blocked Inlet Safety Switch: Manual-reset pressure switch field mounted on boiler combustion-air inlet.
  4. Audible Alarm: Factory mounted on control panel with silence switch; shall sound alarm for above conditions.
- D. Building Automation System Interface: Factory install hardware and software to enable building automation system to monitor, control, and display boiler status and alarms.
  1. Hardwired Points:
    - a. Monitoring: On/off status, common trouble alarm low water level alarm.
    - b. Control: On/off operation, hot water supply temperature set-point adjustment.
  2. A communication interface with building automation system shall enable building automation system operator to remotely control and monitor the boiler from an operator workstation. Control features available, and monitoring points displayed, locally at boiler control panel shall be available through building automation system.

## 2.4 ELECTRICAL POWER

- A. Controllers, Electrical Devices, and Wiring: Electrical devices and connections are specified in electrical Sections.
- B. Single-Point Field Power Connection: Factory-installed and -wired switches, motor controllers, transformers, and other electrical devices necessary shall provide a single-point field power connection to boiler.
  1. House in NEMA 250, Type 1 enclosure.
  2. Wiring shall be numbered and color-coded to match wiring diagram.
  3. Install factory wiring outside of an enclosure in a metal raceway.
  4. Field power interface shall be to wire lugs.

5. Provide branch power circuit to each motor and to controls with a disconnect switch or circuit breaker.
6. Provide each motor with overcurrent protection.

## 2.5 VENTING KITS

- A. Kit: Complete system, ASTM A 959, Type 29-4C stainless steel, pipe, vent terminal, thimble, indoor plate, vent adapter, condensate trap and dilution tank, and sealant.
- B. Combustion-Air Intake: Complete system, stainless steel, pipe, vent terminal with screen, inlet air coupling, and sealant.

## 2.6 SOURCE QUALITY CONTROL

- A. Burner and Hydrostatic Test: Factory adjust burner to eliminate excess oxygen, carbon dioxide, oxides of nitrogen emissions, and carbon monoxide in flue gas and to achieve combustion efficiency; perform hydrostatic test.
- B. Test and inspect factory-assembled boilers, before shipping, according to ASME Boiler and Pressure Vessel Code.
- C. Allow Owner access to source quality-control testing of boilers. Notify Architect 14 days in advance of testing.

# PART 3 - EXECUTION

## 3.1 EXAMINATION

- A. Before boiler installation, examine roughing-in for concrete equipment bases, anchor-bolt sizes and locations, and piping and electrical connections to verify actual locations, sizes, and other conditions affecting boiler performance, maintenance, and operations.
  1. Final boiler locations indicated on Drawings are approximate. Determine exact locations before roughing-in for piping and electrical connections.
- B. Examine mechanical spaces for suitable conditions where boilers will be installed.
- C. Proceed with installation only after unsatisfactory conditions have been corrected.

## 3.2 BOILER INSTALLATION

- A. Equipment Mounting: Install boilers on cast-in-place concrete equipment base(s). Comply with requirements for equipment bases specified in Division 03 for cast in place concrete.
  1. Coordinate sizes and locations of concrete bases with actual equipment provided.
  2. Construct bases to withstand, without damage to equipment, seismic force required by code.
  3. Construct concrete bases 4 inches high and extend base not less than 6 inches in all directions beyond the maximum dimensions of boiler unless otherwise indicated or unless required for seismic anchor support.

4. Minimum Compressive Strength: 5000 psi at 28 days.
  5. Install dowel rods to connect concrete base to concrete floor. Unless otherwise indicated, install dowel rods on 18-inch centers around the full perimeter of concrete base.
  6. For supported equipment, install epoxy-coated anchor bolts that extend through concrete base, and anchor into structural concrete floor.
  7. Place and secure anchorage devices. Use setting drawings, templates, diagrams, instructions, and directions furnished with items to be embedded.
  8. Install anchor bolts to elevations required for proper attachment to supported equipment.
- B. Equipment Mounting: Install boilers using elastomeric pads. Comply with requirements for vibration isolation devices specified in Division 23.
1. Minimum Deflection: 1/4 inch.
- C. Install gas-fired boilers according to NFPA 54.
- D. Assemble and install boiler trim.
- E. Install electrical devices furnished with boiler but not specified to be factory mounted.
- F. Install control wiring to field-mounted electrical devices.

### 3.3 CONNECTIONS

- A. Piping installation requirements are specified in other Sections. Drawings indicate general arrangement of piping, fittings, and specialties.
- B. Install piping adjacent to boiler to allow service and maintenance.
- C. Install piping from equipment drain connection to nearest floor drain. Piping shall be at least full size of connection. Provide an isolation valve if required.
- D. Connect piping to boilers, except safety relief valve connections, with flexible connectors of materials suitable for service. Flexible connectors and their installation are specified in Division 23 for hydronic piping.
- E. Connect gas piping to boiler gas-train inlet with union. Piping shall be at least full size of gas train connection. Provide a reducer if required.
- F. Connect hot-water piping to supply- and return-boiler tapings with shutoff valve and union or flange at each connection.
- G. Connect steam and condensate piping to supply-, return-, and blowdown-boiler tapings with shutoff valve and union or flange at each connection.
- H. Install piping from safety relief valves to nearest floor drain.
- I. Install piping from safety valves to drip-pan elbow and to nearest floor drain.
- J. Boiler Venting:
1. Install flue venting kit and combustion-air intake.
  2. Connect full size to boiler connections.

- K. Ground equipment according to Division 26.
- L. Connect wiring according to Division 26.

### 3.4 FIELD QUALITY CONTROL

- A. Testing Agency: Engage a qualified testing agency to perform tests and inspections.
- B. Manufacturer's Field Service: Engage a factory-authorized service representative to test and inspect components, assemblies, and equipment installations, including connections.
- C. Perform the following tests and inspections:
  - 1. Perform installation and startup checks according to manufacturer's written instructions.
  - 2. Leak Test: Hydrostatic test. Repair leaks and retest until no leaks exist.
  - 3. Operational Test: Start units to confirm proper motor rotation and unit operation. Adjust air-fuel ratio and combustion.
  - 4. Test and adjust controls and safeties. Replace damaged and malfunctioning controls and equipment.
    - a. Check and adjust initial operating set points and high- and low-limit safety set points of fuel supply, water level and water temperature.
    - b. Set field-adjustable switches and circuit-breaker trip ranges as indicated.
- D. Remove and replace malfunctioning units and retest as specified above.
- E. Prepare test and inspection reports.
- F. Occupancy Adjustments: When requested within 12 months of date of Substantial Completion, provide on-site assistance in adjusting system to suit actual occupied conditions. Provide up to two visits to Project during other than normal occupancy hours for this purpose.
- G. Performance Tests:
  - 1. Engage a factory-authorized service representative to inspect component assemblies and equipment installations, including connections, and to conduct performance testing.
  - 2. Boilers shall comply with performance requirements indicated, as determined by field performance tests. Adjust, modify, or replace equipment to comply.
  - 3. Perform field performance tests to determine capacity and efficiency of boilers.
    - a. Test for full capacity.
    - b. Test for boiler efficiency at low fire 20, 40, 60, 80, 100, 80, 60, 40, and 20 percent of full capacity. Determine efficiency at each test point.
  - 4. Repeat tests until results comply with requirements indicated.
  - 5. Provide analysis equipment required to determine performance.

6. Provide temporary equipment and system modifications necessary to dissipate the heat produced during tests if building systems are not adequate.
7. Notify Architect in advance of test dates.
8. Document test results in a report and submit to Architect.

**3.5 DEMONSTRATION**

- A. Train Owner's maintenance personnel to adjust, operate, and maintain boilers. Refer to Division 01, Demonstration and Training.

**END OF SECTION**

H:\Y0586.00\DOC\SPEC\2025\_02-20\_IFB\235216\_CONDENSING BOILERS.DOC

## SECTION 237413 - PACKAGED, OUTDOOR, CENTRAL-STATION AIR-HANDLING UNITS

### PART 1 - GENERAL

#### 1.1 RELATED DOCUMENTS

- A. Certain requirements common to all the mechanical and electrical trades (Fire Suppression, Plumbing, HVAC, Electrical, and Tele/Data) are specified in Division 20. To avoid repetition, they are not repeated in each relevant Division and Section. However, these requirements are applicable to the work of this Section and are hereby incorporated by reference.
- B. Drawings and general provisions of the Contract, including General and Supplementary Conditions and Division 01 Specification Sections, apply to this Section.

#### 1.2 SUMMARY

- A. This Section includes packaged, outdoor, central-station air-handling units (rooftop units) with the following components and accessories:
  - 1. Direct-expansion cooling.
  - 2. Hot-gas reheat.
  - 3. Gas furnace.
  - 4. Economizer outdoor- and return-air damper section.
  - 5. Integral, space temperature controls.
  - 6. Roof curbs.

#### 1.3 DEFINITIONS

- A. DDC: Direct-digital controls.
- B. ECM: Electrically commutated motor.
- C. Outdoor-Air Refrigerant Coil: Refrigerant coil in the outdoor-air stream to reject heat during cooling operations and to absorb heat during heating operations. "Outdoor air" is defined as the air outside the building or taken from outdoors and not previously circulated through the system.
- D. Outdoor-Air Refrigerant-Coil Fan: The outdoor-air refrigerant-coil fan in RTUs. "Outdoor air" is defined as the air outside the building or taken from outdoors and not previously circulated through the system.
- E. RTU: Rooftop unit. As used in this Section, this abbreviation means packaged, outdoor, central-station air-handling units. This abbreviation is used regardless of whether the unit is mounted on the roof or on a concrete base on ground.
- F. Supply-Air Fan: The fan providing supply air to conditioned space. "Supply air" is defined as the air entering a space from air-conditioning, heating, or ventilating apparatus.
- G. Supply-Air Refrigerant Coil: Refrigerant coil in the supply-air stream to absorb heat (provide cooling) during cooling operations and to reject heat (provide heating) during heating

operations. "Supply air" is defined as the air entering a space from air-conditioning, heating, or ventilating apparatus.

- H. VVT: Variable-air volume and temperature.

#### 1.4 PERFORMANCE REQUIREMENTS

- A. Delegated Design: Design RTU supports to comply with wind performance requirements, including comprehensive engineering analysis by a qualified professional engineer, using performance requirements and design criteria indicated.
- B. Wind-Restraint Performance:
1. Basic Wind Speed: 125 MPH.
  2. Building Classification Category: III.
  3. Minimum 10 lb/sq. ft multiplied by the maximum area of the mechanical component projected on a vertical plane that is normal to the wind direction, and 45 degrees either side of normal.
  4. The term "withstand" means "the unit will remain in place without separation of any parts from the device when subjected to the seismic forces specified."

#### 1.5 ACTION SUBMITTALS

- A. Product Data: Include manufacturer's technical data for each RTU, including rated capacities, dimensions, required clearances, characteristics, furnished specialties, and accessories.
- B. Shop Drawings: Detail equipment assemblies and indicate dimensions, weights, loads, required clearances, method of field assembly, components, and location and size of each field connection.
1. Wiring Diagrams: Power, signal, and control wiring.
- C. Delegated-Design Submittal: For RTU supports indicated to comply with performance requirements and design criteria, including analysis data signed and sealed by the qualified professional engineer responsible for their preparation.
1. Design Calculations: Calculate requirements for selecting vibration isolators and for designing vibration isolation bases.
  2. Detail mounting, securing, and flashing of roof curb to roof structure. Indicate coordinating requirements with roof membrane system.
  3. Wind-Restraint Details: Detail fabrication and attachment of wind and seismic restraints and snubbers. Show anchorage details and indicate quantity, diameter, and depth of penetration of anchors.

#### 1.6 INFORMATIONAL SUBMITTALS

- A. Coordination Drawings: Plans and other details, drawn to scale, on which the following items are shown and coordinated with each other, using input from installers of the items involved:
1. Structural members to which RTUs will be attached.
  2. Roof openings
  3. Roof curbs and flashing.

- B. Manufacturer Wind Loading Qualification Certification: Submit certification that specified equipment will withstand wind forces identified in "Performance Requirements" Article and in Division 23, Vibration and Seismic Controls for HVAC Piping and Equipment.
  - 1. Basis for Certification: Indicate whether withstand certification is based on actual test of assembled components or on calculations.
  - 2. Dimensioned Outline Drawings of Equipment Unit: Identify center of wind force and locate and describe mounting and anchorage provisions.
  - 3. Detailed description of equipment anchorage devices on which the certification is based and their installation requirements.
- C. Field quality-control test reports.
- D. Warranty: Special warranty specified in this Section.

#### 1.7 CLOSEOUT SUBMITTALS

- A. Operation and Maintenance Data: For RTUs to include in emergency, operation, and maintenance manuals.

#### 1.8 MAINTENANCE MATERIAL SUBMITTALS

- A. Furnish extra materials described below that match products installed and that are packaged with protective covering for storage and identified with labels describing contents.
  - 1. Filters: One set of filters for each unit.

#### 1.9 QUALITY ASSURANCE

- A. ARI Compliance:
  - 1. Comply with ARI 203/110 and ARI 303/110 for testing and rating energy efficiencies for RTUs.
  - 2. Comply with ARI 270 for testing and rating sound performance for RTUs.
- B. ASHRAE Compliance:
  - 1. Comply with ASHRAE 15 for refrigeration system safety.
  - 2. Comply with ASHRAE 33 for methods of testing cooling and heating coils.
  - 3. Comply with applicable requirements in ASHRAE 62.1, Section 5 - "Systems and Equipment" and Section 7 - "Construction and Startup."
- C. ASHRAE/IESNA 90.1 Compliance: Applicable requirements in ASHRAE/IESNA 90.1, Section 6 - "Heating, Ventilating, and Air-Conditioning."
- D. NFPA Compliance: Comply with NFPA 90A and NFPA 90B.
- E. UL Compliance: Comply with UL 1995 (except when compliant with ASHRAE 15 and NFPA 90A and 90B).
- F. Electrical Components, Devices, and Accessories: Listed and labeled as defined in NFPA 70, Article 100, by a testing agency acceptable to authorities having jurisdiction, and marked for intended use.

## 1.10 WARRANTY

- A. Special Warranty: Manufacturer's standard form in which manufacturer agrees to replace components of RTUs that fail in materials or workmanship within specified warranty period.
  - 1. Warranty Period for Compressors: Manufacturer's standard, but not less than five years from date of Substantial Completion.
  - 2. Warranty Period for Gas Furnace Heat Exchangers: Manufacturer's standard, but not less than 10 years from date of Substantial Completion.
  - 3. Warranty Period for Solid-State Ignition Modules: Manufacturer's standard, but not less than three years from date of Substantial Completion.
  - 4. Warranty Period for Control Boards: Manufacturer's standard, but not less than three years from date of Substantial Completion.

## PART 2 - PRODUCTS

### 2.1 MANUFACTURERS

- A. Available Manufacturers: Subject to compliance with requirements, manufacturers offering products that may be incorporated into the Work include the following, or approved equal:
  - 1. AAON, Inc.
  - 2. Addison Products Company.
  - 3. Carrier Corporation (Basis of Design).
  - 4. Annexair (Basis of Design).
  - 5. Engineered Air.
  - 6. Lennox Industries Inc.
  - 7. McQuay International.
  - 8. Trane; American Standard Companies, Inc.
  - 9. YORK International Corporation.
  - 10. Or approved equal.

### 2.2 CASING

- A. General Fabrication Requirements for Casings: Formed and reinforced double-wall insulated panels, fabricated to allow removal for access to internal parts and components, with joints between sections sealed.
- B. Exterior Casing Material: Galvanized steel with factory-painted finish, with pitched roof panels and knockouts with grommet seals for electrical and piping connections and lifting lugs.
  - 1. Exterior Casing Thickness: 0.052 inch thick.
- C. Inner Casing Fabrication Requirements:
  - 1. Inside Casing: Galvanized steel, 0.028 inch thick.
- D. Casing Insulation and Adhesive: Comply with NFPA 90A or NFPA 90B.

1. Materials: ASTM C 1071, Type I.
  2. Thickness: 2 inch (50 mm).
  3. Liner materials shall have air-stream surface coated with an erosion- and temperature-resistant coating or faced with a plain or coated fibrous mat or fabric.
  4. Liner Adhesive: Comply with ASTM C 916, Type I.
- E. Condensate Drain Pans: Formed sections of galvanized-steel sheet, a minimum of 2 inches deep, and complying with ASHRAE 62.1.
1. Double-Wall Construction: Fill space between walls with foam insulation and seal moisture tight.
  2. Drain Connections: Threaded nipple both sides of drain pan.
  3. Pan-Top Surface Coating: Corrosion-resistant compound.
- F. Airstream Surfaces: Surfaces in contact with the airstream shall comply with requirements in ASHRAE 62.1.

## 2.3 FANS

- A. Direct-Driven Supply-Air Fans: Plenum fan array; with permanently lubricated, multispeed motor resiliently mounted in the fan inlet. Aluminum or painted-steel wheels, and galvanized- or painted-steel fan scrolls.
- B. Condenser-Coil Fan: Propeller, mounted on shaft of permanently lubricated motor.
- C. Relief-Air Fan: Plenum fan array, shaft mounted on permanently lubricated motor.
- D. Fan Motor: Comply with requirements in Division 23 for common motor requirements, in addition to the following:
1. Comply with NEMA MG 1 unless otherwise indicated.
  2. Comply with IEEE 841 for severe-duty motors.
  3. Motors under 1/2 HP shall be designed for 120V, 60 Hz, single phase, unless otherwise specified.
  4. Motors 1/2 HP and over shall be voltages as indicated in schedules on drawings.
  5. Efficiency: All motors shall be premium efficiency type as defined in NEMA MG 1 and shall have their efficiencies determined in accordance with IEEE Standard 112 Method B. The NEMA nominal efficiency shall be listed on the motor nameplate.
  6. Motor windings shall be spike resistant to withstand 1,600 peak volts. Motors shall have shaft grounding system to protect bearings from induced voltage. Shaft grounding system shall have very low drag, less than 1/2 percent of motor HP, and shall operate for a minimum of three (3) years without periodic adjustments. All consumables of the shaft grounding system shall be replaceable without a shutdown of the motor or VFD. System shall be as manufactured by SGS (Albany, Oregon) or approved equal.
- E. Each fan in a fan array shall be provided with an isolation backdraft damper.
- F. Fans selected shall be capable of accommodating static pressure and flow variations of +/-15 percent of scheduled values.
- G. Each direct drive fan shall be in AMCA arrangement 4 according to drawings.

- H. Fans are to be equipped with lifting points.
- I. Fan array shall be equipped with piezometer rings to measure airflow. One piezometer ring shall be supplied on each fan in the fan array.

## 2.4 COILS

- A. Supply-Air Refrigerant Coil:
  - 1. Aluminum-plate fin and seamless internally grooved copper tube in steel casing with equalizing-type vertical distributor.
  - 2. Coil Split: Interlaced.
  - 3. Baked phenolic coating.
  - 4. Condensate Drain Pan: Galvanized steel with corrosion-resistant coating formed with pitch and drain connections complying with ASHRAE 62.1.
- B. Outdoor-Air Refrigerant Coil:
  - 1. Aluminum-plate fin and seamless internally grooved copper tube in steel casing with equalizing-type vertical distributor.
  - 2. Baked phenolic coating.
- C. Hot-Gas Reheat Refrigerant Coil:
  - 1. Aluminum-plate fin and seamless internally grooved copper tube in steel casing with equalizing-type vertical distributor.
  - 2. Baked phenolic coating.

## 2.5 REFRIGERANT CIRCUIT COMPONENTS

- A. Number of Refrigerant Circuits: Two.
- B. Compressor: Hermetic, reciprocating or Hermetic, scroll, mounted on vibration isolators; with internal overcurrent and high-temperature protection, internal pressure relief.
- C. Refrigeration Specialties:
  - 1. Refrigerant: R-454B.
  - 2. Expansion valve with replaceable thermostatic element.
  - 3. Refrigerant filter/dryer.
  - 4. Manual-reset high-pressure safety switch.
  - 5. Automatic-reset low-pressure safety switch.
  - 6. Minimum off-time relay.
  - 7. Automatic-reset compressor motor thermal overload.
  - 8. Brass service valves installed in compressor suction and liquid lines.
  - 9. Low-ambient kit high-pressure sensor.
  - 10. Hot-gas reheat solenoid valve with a replaceable magnetic coil.
  - 11. Hot-gas bypass solenoid valve with a replaceable magnetic coil.

12. Four-way reversing valve with a replaceable magnetic coil, thermostatic expansion valves with bypass check valves, and a suction line accumulator.

## 2.6 AIR FILTRATION

- A. Minimum arrestance according to ASHRAE 52.1, and a minimum efficiency reporting value (MERV) according to ASHRAE 52.2.
  1. Pleated: Minimum 90 percent arrestance, and MERV 8 and 13.

## 2.7 GAS FURNACE

- A. Description: Factory assembled, piped, and wired; complying with ANSI Z21.47 and NFPA 54.
  1. CSA Approval: Designed and certified by and bearing label of CSA.
- B. Burners: Stainless steel.
  1. Fuel: Natural gas.
  2. Ignition: Electronically controlled electric spark or hot-surface igniter with flame sensor.
- C. Heat-Exchanger and Drain Pan: Stainless steel.
- D. Venting: Gravity vented with vertical extension.
- E. Safety Controls:
  1. Gas Control Valve: Modulating.
  2. Gas Train: Single-body, regulated, redundant, 24-V ac gas valve assembly containing pilot solenoid valve, pilot filter, pressure regulator, pilot shutoff, and manual shutoff.

## 2.8 DAMPERS

- A. Outdoor- and Return-Air Mixing Dampers: Parallel- or opposed-blade galvanized-steel dampers mechanically fastened to cadmium plated for galvanized-steel operating rod in reinforced cabinet. Connect operating rods with common linkage and interconnect linkages so dampers operate simultaneously.
  1. Damper Motor: Modulating with adjustable minimum position.
  2. Relief-Air Damper: Gravity actuated or motorized, as required by ASHRAE/IESNA 90.1, with bird screen and hood.

## 2.9 UV RADIATION (AHU-1 ONLY)

- A. Provide UV light in supply airstream that emits UV-C radiation to kill airborne pathogens.

## 2.10 ELECTRICAL POWER CONNECTION

- A. Provide for single connection of power to unit with unit-mounted disconnect switch accessible from outside unit and control-circuit transformer with built-in overcurrent protection.

## 2.11 CONTROLS

- A. Control equipment and sequence of operation are specified in Division 23, Instrumentation and Control for HVAC.
- B. Basic Unit Controls:
  - 1. Control-voltage transformer.
  - 2. Wall-mounted thermostat or sensor for single-zone units with the following features:
    - a. Heat-cool-off switch.
    - b. Fan on-auto switch.
    - c. Fan-speed switch.
    - d. Automatic changeover.
    - e. Adjustable deadband.
    - f. Exposed set point.
    - g. Exposed indication.
    - h. Degree F indication.
    - i. Unoccupied-period-override push button.
    - j. Data entry and access port to input temperature and humidity set points, occupied and unoccupied periods, and output room temperature and humidity, supply-air temperature, operating mode, and status.
  - 3. Wall-mounted humidistat or sensor with the following features:
    - a. Exposed set point.
    - b. Exposed indication.
  - 4. Unit-Mounted Annunciator Panel for Each Unit:
    - a. Lights to indicate power on, cooling, heating, fan running, filter dirty, and unit alarm or failure.
    - b. DDC controller or programmable timer and interface with HVAC instrumentation and control system.
    - c. Digital display of outdoor-air temperature, supply-air temperature, return-air temperature, economizer damper position, indoor-air quality, and control parameters.
- C. DDC Controller:
  - 1. Controller shall have volatile-memory backup.
  - 2. Safety Control Operation:
    - a. Smoke Detectors: Stop fan and close outdoor-air damper if smoke is detected. Provide additional contacts for alarm interface to fire alarm control panel.
    - b. Firestats: Stop fan and close outdoor-air damper if air greater than 130 deg F enters unit. Provide additional contacts for alarm interface to fire alarm control panel.

- c. Fire Alarm Control Panel Interface: Provide control interface to coordinate with operating sequence described in Division 28, Digital, Addressable Fire-Alarm System and Division 28, Zoned (DC Loop) Fire-Alarm System.
  - d. Low-Discharge Temperature: Stop fan and close outdoor-air damper if supply air temperature is less than 40 deg F.
- 3. Scheduled Operation: Occupied and unoccupied periods on 365-day clock with a minimum of four programmable periods per day.
- 4. Unoccupied Period:
  - a. Heating Setback: 10 deg F.
  - b. Cooling Setback: System off.
  - c. Override Operation: Two hours.
- 5. Supply Fan Operation:
  - a. Occupied Periods: Run fan continuously.
  - b. Unoccupied Periods: Cycle fan to maintain setback temperature.
- 6. Refrigerant Circuit Operation:
  - a. Occupied Periods: Cycle or stage compressors, and operate hot-gas bypass to match compressor output to cooling load to maintain discharge temperature and humidity. Cycle condenser fans to maintain maximum hot-gas pressure. Operate low-ambient control kit to maintain minimum hot-gas pressure.
  - b. Unoccupied Periods: Cycle compressors and condenser fans for heating to maintain setback temperature.
- 7. Hot-Gas Reheat-Coil Operation:
  - a. Occupied Periods: Humidistat opens hot-gas valve to provide hot-gas reheat, and cycles compressor.
  - b. Unoccupied Periods: Reheat not required.
- 8. Gas Furnace Operation:
  - a. Occupied Periods: Modulate burner to maintain discharge temperature.
  - b. Unoccupied Periods: Cycle burner to maintain setback temperature.
- 9. Economizer Outdoor-Air Damper Operation:
  - a. Occupied Periods: Open to fixed minimum intake percentage as defined by schedules, and maximum 100 percent of the fan capacity to comply with ASHRAE Cycle II. Controller shall permit air-side economizer operation when outdoor air is less than 60 deg F. Use mixed-air temperature and select between outdoor-air and return-air enthalpy to adjust mixing dampers. Start relief-air fan with end switch on outdoor-air damper. During economizer cycle operation, lock out cooling.
  - b. Unoccupied Periods: Close outdoor-air damper and open return-air damper.
  - c. Outdoor-Airflow Monitor: Accuracy maximum plus or minus 5 percent within 15 and 100 percent of total outdoor air. Monitor microprocessor shall adjust for temperature, and output shall range from 2- to 10-V dc.

10. Carbon Dioxide Sensor Operation:
  - a. Occupied Periods: Reset minimum outdoor-air ratio down to minimum 10 percent to maintain maximum 1000-ppm concentration.
  - b. Unoccupied Periods: Close outdoor-air damper and open return-air damper.
11. VVT Relays:
  - a. Provide heating- and cooling-mode changeover relays compatible with VVT terminal control system required in Division 23, Air Terminal Units and Division 23, Instrumentation and Control for HVAC.
- D. Interface Requirements for HVAC Instrumentation and Control System:
  1. Interface relay for scheduled operation.
  2. Interface relay to provide indication of fault at the central workstation and diagnostic code storage.
  3. Provide BACnet compatible interface for central HVAC control workstation for the following:
    - a. Adjusting set points.
    - b. Monitoring supply fan start, stop, and operation.
    - c. Inquiring data to include outdoor-air damper position, supply- and room-air temperature and humidity.
    - d. Monitoring occupied and unoccupied operations.
    - e. Monitoring constant and variable motor loads.
    - f. Monitoring variable-frequency drive operation.
    - g. Monitoring cooling load.
    - h. Monitoring economizer cycles.
    - i. Monitoring air-distribution static pressure and ventilation air volume.

## 2.12 ACCESSORIES

- A. Electric heater with integral thermostat maintains minimum 50 deg F temperature in gas burner compartment.
- B. Duplex, 115-V, ground-fault-interrupter outlet with 15-A overcurrent protection. Include transformer if required. Outlet shall be energized even if the unit main disconnect is open.
- C. Low-ambient kit using variable-speed condenser fans for operation down to 35 deg F.
- D. Filter differential pressure switch with sensor tubing on either side of filter. Set for final filter pressure loss.
- E. Coil guards of painted, galvanized-steel wire.
- F. Hail guards of galvanized steel, painted to match casing.
- G. Concentric diffuser with white louvers and polished aluminum return grilles, insulated diffuser box with mounting flanges, and interior transition.

## 2.13 ROOF CURBS

- A. Roof curbs with vibration isolators and wind or seismic restraints are specified in Division 23, Vibration and Seismic Controls for HVAC Piping and Equipment.
- B. Materials: Galvanized steel with corrosion-protection coating, watertight gaskets, and factory-installed wood nailer; complying with NRCA standards.
  - 1. Curb Insulation and Adhesive: Comply with NFPA 90A or NFPA 90B.
    - a. Materials: ASTM C 1071, Type I or II.
    - b. Thickness: 1-1/2 inches.
  - 2. Application: Factory applied with adhesive and mechanical fasteners to the internal surface of curb.
    - a. Liner Adhesive: Comply with ASTM C 916, Type I.
    - b. Mechanical Fasteners: Galvanized steel, suitable for adhesive attachment, mechanical attachment, or welding attachment to duct without damaging liner when applied as recommended by manufacturer and without causing leakage in cabinet.
    - c. Liner materials applied in this location shall have air-stream surface coated with a temperature-resistant coating or faced with a plain or coated fibrous mat or fabric depending on service air velocity.
    - d. Liner Adhesive: Comply with ASTM C 916, Type I.
- C. Curb Height: 24 inches.
- D. Wind Restraints: Metal brackets compatible with the curb and casing, painted to match RTU, used to anchor unit to the curb, and designed for loads at Project site. Comply with requirements in Division 23, Vibration and Seismic Controls for HVAC Piping and Equipment for wind-load requirements.

## PART 3 - EXECUTION

### 3.1 EXAMINATION

- A. Examine substrates, areas, and conditions, with Installer present, for compliance with requirements for installation tolerances and other conditions affecting performance of RTUs.
- B. Examine roughing-in for RTUs to verify actual locations of piping and duct connections before equipment installation.
- C. Examine roofs for suitable conditions where RTUs will be installed.
- D. Proceed with installation only after unsatisfactory conditions have been corrected.

### 3.2 INSTALLATION

- A. Roof Curb: Install on roof structure or concrete base, level and secure, according to ARI Guideline B. Install RTUs on curbs and coordinate roof penetrations and flashing with roof construction specified in Division 07, Roof Accessories. Secure RTUs to upper curb rail, and secure curb base to roof framing or concrete base with anchor bolts.

- B. Install wind restraints according to manufacturer's written instructions. Wind restrained vibration isolation roof-curb rails are specified in Division 23, Vibration Controls for HVAC Piping and Equipment.

### 3.3 CONNECTIONS

- A. Install condensate drain, minimum connection size, with trap and indirect connection to nearest roof drain or area drain.
- B. Install piping adjacent to RTUs to allow service and maintenance.
  - 1. Gas Piping: Comply with applicable requirements in Division 22, Plumbing Natural-Gas Piping. Connect gas piping to burner, full size of gas train inlet, and connect with union and shutoff valve with sufficient clearance for burner removal and service.
- C. Duct installation requirements are specified in other HVAC Sections. Drawings indicate the general arrangement of ducts. The following are specific connection requirements:
  - 1. Install ducts to termination at top of roof curb.
  - 2. Remove roof decking only as required for passage of ducts. Do not cut out decking under entire roof curb.
  - 3. Connect supply ducts to RTUs with flexible duct connectors specified in Division 23, Air Duct Accessories.
  - 4. Install return-air duct continuously through roof structure.

### 3.4 FIELD QUALITY CONTROL

- A. Manufacturer's Field Service: Engage a factory-authorized service representative to inspect, test, and adjust components, assemblies, and equipment installations, including connections. Report results in writing.
- B. Tests and Inspections:
  - 1. After installing RTUs and after electrical circuitry has been energized, test units for compliance with requirements.
  - 2. Inspect for and remove shipping bolts, blocks, and tie-down straps.
  - 3. Operational Test: After electrical circuitry has been energized, start units to confirm proper motor rotation and unit operation.
  - 4. Test and adjust controls and safeties. Replace damaged and malfunctioning controls and equipment.
- C. Remove and replace malfunctioning units and retest as specified above.

### 3.5 STARTUP SERVICE

- A. Engage a factory-authorized service representative to perform startup service.
- B. Complete installation and startup checks according to manufacturer's written instructions and do the following:
  - 1. Inspect for visible damage to unit casing.
  - 2. Inspect for visible damage to furnace combustion chamber.

3. Inspect for visible damage to compressor, coils, and fans.
4. Inspect internal insulation.
5. Verify that labels are clearly visible.
6. Verify that clearances have been provided for servicing.
7. Verify that controls are connected and operable.
8. Verify that filters are installed.
9. Clean condenser coil and inspect for construction debris.
10. Clean furnace flue and inspect for construction debris.
11. Connect and purge gas line.
12. Remove packing from vibration isolators.
13. Verify lubrication on fan and motor bearings.
14. Inspect fan-wheel rotation for movement in correct direction without vibration and binding.
15. Adjust fan belts to proper alignment and tension.
16. Start unit according to manufacturer's written instructions.
  - a. Start refrigeration system.
  - b. Do not operate below recommended low-ambient temperature.
  - c. Complete startup sheets and attach copy with Contractor's startup report.
17. Inspect and record performance of interlocks and protective devices; verify sequences.
18. Operate unit for an initial period as recommended or required by manufacturer.
19. Perform the following operations for both minimum and maximum firing. Adjust burner for peak efficiency.
  - a. Measure gas pressure on manifold.
  - b. Inspect operation of power vents.
  - c. Measure combustion-air temperature at inlet to combustion chamber.
  - d. Measure flue-gas temperature at furnace discharge.
  - e. Perform flue-gas analysis. Measure and record flue-gas carbon dioxide and oxygen concentration.
  - f. Measure supply-air temperature and volume when burner is at maximum firing rate and when burner is off. Calculate useful heat to supply air.
20. Calibrate thermostats.
21. Adjust and inspect high-temperature limits.
22. Inspect outdoor-air dampers for proper stroke and interlock with return-air dampers.
23. Start refrigeration system and measure and record the following when ambient is a minimum of 15 deg F above return-air temperature:
  - a. Coil leaving-air, dry- and wet-bulb temperatures.

- b. Coil entering-air, dry- and wet-bulb temperatures.
  - c. Outdoor-air, dry-bulb temperature.
  - d. Outdoor-air-coil, discharge-air, dry-bulb temperature.
- 24. Inspect controls for correct sequencing of heating, mixing dampers, refrigeration, and normal and emergency shutdown.
- 25. Measure and record the following minimum and maximum airflows. Plot fan volumes on fan curve.
  - a. Supply-air volume.
  - b. Return-air volume.
  - c. Relief-air volume.
  - d. Outdoor-air intake volume.
- 26. Simulate maximum cooling demand and inspect the following:
  - a. Compressor refrigerant suction and hot-gas pressures.
  - b. Short circuiting of air through condenser coil or from condenser fans to outdoor-air intake.
- 27. Verify operation of remote panel including pilot-light operation and failure modes. Inspect the following:
  - a. High-temperature limit on gas-fired heat exchanger.
  - b. Low-temperature safety operation.
  - c. Filter high-pressure differential alarm.
  - d. Economizer to minimum outdoor-air changeover.
  - e. Relief-air fan operation.
  - f. Smoke and firestat alarms.
- 28. After startup and performance testing and prior to Substantial Completion, replace existing filters with new filters.

### 3.6 CLEANING AND ADJUSTING

- A. Occupancy Adjustments: When requested within 12 months of date of Substantial Completion, provide on-site assistance in adjusting system to suit actual occupied conditions. Provide up to two visits to site during other-than-normal occupancy hours for this purpose.
- B. After completing system installation and testing, adjusting, and balancing RTU and air-distribution systems, clean filter housings and install new filters.

### 3.7 DEMONSTRATION

- A. Engage a factory-authorized service representative to train Owner's maintenance personnel to adjust, operate, and maintain RTUs. Refer to Division 01, Demonstration and Training.

AIR-HANDLING UNITS.DOC

## SECTION 238126 - SPLIT-SYSTEM AIR-CONDITIONERS

### PART 1 - GENERAL

#### 1.1 RELATED DOCUMENTS

- A. Certain requirements common to all the mechanical and electrical trades (Fire Suppression, Plumbing, HVAC, Electrical, and Tele/Data) are specified in Division 20. To avoid repetition, they are not repeated in each relevant Division and Section. However, these requirements are applicable to the work of this Section and are hereby incorporated by reference.
- B. Drawings and general provisions of the Contract, including General and Supplementary Conditions and Division 01 Specification Sections, apply to this Section.

#### 1.2 SUMMARY

- A. Section includes split-system air-conditioning and heat-pump units consisting of separate evaporator-fan and compressor-condenser components.

#### 1.3 ACTION SUBMITTALS

- A. Product Data: For each type of product indicated. Include rated capacities, operating characteristics, and furnished specialties and accessories. Include performance data in terms of capacities, outlet velocities, static pressures, sound power characteristics, motor requirements, and electrical characteristics.
- B. Shop Drawings: Include plans, elevations, sections, details, and attachments to other work.
  - 1. Detail equipment assemblies and indicate dimensions, weights, loads, required clearances, method of field assembly, components, and location and size of each field connection.
  - 2. Wiring Diagrams: For power, signal, and control wiring.
- C. Samples for Initial Selection: For units with factory-applied color finishes.

#### 1.4 INFORMATIONAL SUBMITTALS

- A. Field quality-control reports.
- B. Warranty: Sample of special warranty.

#### 1.5 CLOSEOUT SUBMITTALS

- A. Operation and Maintenance Data: For split-system air-conditioning units to include in emergency, operation, and maintenance manuals.

#### 1.6 MAINTENANCE MATERIAL SUBMITTALS

- A. Furnish extra materials that match products installed and that are packaged with protective covering for storage and identified with labels describing contents.
  - 1. Filters: One set(s) for each air-handling unit.

2. Gaskets: One set(s) for each access door.
3. Fan Belts: One set(s) for each air-handling unit fan.

#### 1.7 QUALITY ASSURANCE

- A. Electrical Components, Devices, and Accessories: Listed and labeled as defined in NFPA 70, by a qualified testing agency, and marked for intended location and application.
- B. ASHRAE Compliance:
  1. Fabricate and label refrigeration system to comply with ASHRAE 15, "Safety Standard for Refrigeration Systems."
  2. ASHRAE Compliance: Applicable requirements in ASHRAE 62.1, Section 4 - "Outdoor Air Quality," Section 5 - "Systems and Equipment," Section 6 - "Procedures," and Section 7 - "Construction and System Start-up."
- C. ASHRAE/IESNA Compliance: Applicable requirements in ASHRAE/IESNA 90.1.

#### 1.8 COORDINATION

- A. Coordinate sizes and locations of concrete bases with actual equipment provided. Cast anchor-bolt inserts into bases. Concrete, reinforcement, and formwork are specified in Division 03, Cast-in-Place Concrete.
- B. Coordinate sizes and locations of roof curbs, equipment supports, and roof penetrations with actual equipment provided.

#### 1.9 WARRANTY

- A. Special Warranty: Manufacturer's standard form in which manufacturer agrees to repair or replace components of split-system air-conditioning units that fail in materials or workmanship within specified warranty period.
  1. Warranty Period:
    - a. For Compressor: Five year(s) from date of Substantial Completion.
    - b. For Parts: One year(s) from date of Substantial Completion.
    - c. For Labor: One year(s) from date of Substantial Completion.

### PART 2 - PRODUCTS

#### 2.1 MANUFACTURERS

- A. Manufacturers: Subject to compliance with requirements, provide products by one of the following, or approved equal:
  1. Carrier Corporation; Home Comfort and HVAC Building & Industrial Systems.
  2. Friedrich Air Conditioning Company.
  3. Koldwave, Inc.; a Mestek company.
  4. Lennox International Inc.

5. Mitsubishi Electric & Electronics USA, Inc.; HVAC Advanced Products Division.
6. Mitsubishi Electric Sales Canada Inc.
7. Mitsubishi Heavy Industries America, Inc.
8. SANYO North America Corporation; SANYO Fisher Company.
9. Trane; a business of American Standard companies.
10. YORK; a Johnson Controls company.
11. Or approved equal.

## 2.2 INDOOR UNITS (5 TONS OR LESS)

### A. Wall-Mounted, Evaporator-Fan Components:

1. Cabinet: Enameled steel with removable panels on front and ends in color selected by Architect, and discharge drain pans with drain connection.
2. Refrigerant Coil: Copper tube, with mechanically bonded aluminum fins and thermal-expansion valve. Comply with ARI 210/240.
3. Fan: Direct drive, centrifugal.
4. Fan Motors:
  - a. Comply with NEMA designation, temperature rating, service factor, enclosure type, and efficiency requirements specified in Division 23 for common motor requirements.
  - b. Multitapped, multispeed with internal thermal protection and permanent lubrication.
  - c. Enclosure Type: Totally enclosed, fan cooled.
  - d. NEMA Premium (TM) efficient motors as defined in NEMA MG 1.
  - e. Controllers, Electrical Devices, and Wiring: Comply with requirements for electrical devices and connections specified in electrical Sections.
  - f. Mount unit-mounted disconnect switches on exterior of unit.
5. Airstream Surfaces: Surfaces in contact with the airstream shall comply with requirements in ASHRAE 62.1.
6. Condensate Drain Pans:
  - a. Fabricated with one percent slope in at least two planes to collect condensate from cooling coils (including coil piping connections, coil headers, and return bends) and humidifiers, and to direct water toward drain connection.
    - 1) Length: Extend drain pan downstream from leaving face to comply with ASHRAE 62.1.
    - 2) Depth: A minimum of 1 inch deep.
  - b. Double-wall, galvanized-steel sheet with space between walls filled with foam insulation and moisture-tight seal.

- c. Drain Connection: Located at lowest point of pan and sized to prevent overflow. Terminate with threaded nipple on one end of pan.
    - 1) Minimum Connection Size: NPS 1 <Insert size>.
  - d. Pan-Top Surface Coating: Asphaltic waterproofing compound.
7. Air Filtration Section:
- a. General Requirements for Air Filtration Section:
    - 1) Comply with NFPA 90A.
    - 2) Minimum Arrestance: According to ASHRAE 52.1 and MERV according to ASHRAE 52.2.
    - 3) Filter-Holding Frames: Arranged for flat or angular orientation, with access doors on both sides of unit. Filters shall be removable from one side or lifted out from access plenum.
  - b. Disposable Panel Filters:
    - 1) Factory-fabricated, viscous-coated, flat-panel type.
    - 2) Thickness: 1 inch.
    - 3) Merv according to ASHRAE 52.2: 5.
    - 4) Frame: Galvanized steel, with metal grid on outlet side, steel rod grid on inlet side, and hinged; with pull and retaining handles.

## 2.3 OUTDOOR UNITS (5 TONS OR LESS)

### A. Air-Cooled, Compressor-Condenser Components:

- 1. Casing: Steel, finished with baked enamel in color selected by Architect, with removable panels for access to controls, weep holes for water drainage, and mounting holes in base. Provide brass service valves, fittings, and gauge ports on exterior of casing.
- 2. Compressor: Hermetically sealed with crankcase heater and mounted on vibration isolation device. Compressor motor shall have thermal- and current-sensitive overload devices, start capacitor, relay, and contactor.
  - a. Compressor Type: Scroll.
  - b. Two-speed compressor motor with manual-reset high-pressure switch and automatic-reset low-pressure switch.
  - c. Refrigerant Charge: R-410A.
  - d. Refrigerant Coil: Copper tube, with mechanically bonded aluminum fins and liquid subcooler. Comply with ARI 210/240.
- 3. Heat-Pump Components: Reversing valve and low-temperature-air cutoff thermostat.
- 4. Fan: Aluminum-propeller type, directly connected to motor.
- 5. Motor: Permanently lubricated, with integral thermal-overload protection.

6. Low Ambient Kit: Permits operation down to 45 deg F.
7. Mounting Base: Polyethylene.

## 2.4 ACCESSORIES

- A. Control equipment and sequence of operation are specified in Division 23, Instrumentation and Control for HVAC and Division 23, Sequence and Operations for HVAC Controls.
- B. Thermostat: Low voltage with subbase to control compressor and evaporator fan.
- C. Thermostat: Wireless infrared functioning to remotely control compressor and evaporator fan, with the following features:
  1. Compressor time delay.
  2. 24-hour time control of system stop and start.
  3. Liquid-crystal display indicating temperature, set-point temperature, time setting, operating mode, and fan speed.
  4. Fan-speed selection including auto setting.
- D. Automatic-reset timer to prevent rapid cycling of compressor.
- E. Refrigerant Line Kits: Soft-annealed copper suction and liquid lines factory cleaned, dried, pressurized, and sealed; factory-insulated suction line with flared fittings at both ends.
- F. Drain Hose: For condensate.
- G. Additional Monitoring:
  1. Monitor constant and variable motor loads.
  2. Monitor variable-frequency-drive operation.
  3. Monitor economizer cycle.
  4. Monitor cooling load.
  5. Monitor air distribution static pressure and ventilation air volumes.

## PART 3 - EXECUTION

### 3.1 INSTALLATION

- A. Install units level and plumb.
- B. Install evaporator-fan components using manufacturer's standard mounting devices securely fastened to building structure.
- C. Install roof-mounted, compressor-condenser components on equipment supports specified in Division 07, Roof Accessories. Anchor units to supports with removable, cadmium-plated fasteners.
- D. Install compressor-condenser components on restrained, spring isolators with a minimum static deflection of 1 inch. See Division 23, Vibration Controls for HVAC Piping and Equipment.
- E. Install and connect precharged refrigerant tubing to component's quick-connect fittings. Install tubing to allow access to unit.

### 3.2 CONNECTIONS

- A. Piping installation requirements are specified in other Sections. Drawings indicate general arrangement of piping, fittings, and specialties.
- B. Where piping is installed adjacent to unit, allow space for service and maintenance of unit.

### 3.3 FIELD QUALITY CONTROL

- A. Manufacturer's Field Service: Engage a factory-authorized service representative to inspect, test, and adjust components, assemblies, and equipment installations, including connections.
- B. Perform tests and inspections.
  - 1. Manufacturer's Field Service: Engage a factory-authorized service representative to inspect components, assemblies, and equipment installations, including connections, and to assist in testing.
- C. Tests and Inspections:
  - 1. Leak Test: After installation, charge system and test for leaks. Repair leaks and retest until no leaks exist.
  - 2. Operational Test: After electrical circuitry has been energized, start units to confirm proper motor rotation and unit operation.
  - 3. Test and adjust controls and safeties. Replace damaged and malfunctioning controls and equipment.
- D. Remove and replace malfunctioning units and retest as specified above.
- E. Prepare test and inspection reports.

### 3.4 STARTUP SERVICE

- A. Perform startup service.
  - 1. Complete installation and startup checks according to manufacturer's written instructions.

### 3.5 DEMONSTRATION

- A. Train Owner's maintenance personnel to adjust, operate, and maintain units.

END OF SECTION

H:\Y0586.00\DOC\SPEC\2025\_02-20\_IFB\238126\_SPLIT-SYSTEM AIR-CONDITIONERS.DOC

## **SECTION 238216 - AIR COILS**

### **PART 1 - GENERAL**

#### **1.1 RELATED DOCUMENTS**

- A. Certain requirements common to all the mechanical and electrical trades (Fire Suppression, Plumbing, HVAC, Electrical, and Tele/Data) are specified in Division 20. To avoid repetition, they are not repeated in each relevant Division and Section. However, these requirements are applicable to the work of this Section and are hereby incorporated by reference.
- B. Drawings and general provisions of the Contract, including General and Supplementary Conditions and Division 01 Specification Sections, apply to this Section.

#### **1.2 SUMMARY**

- A. This Section includes the following types of air coils that are not an integral part of air-handling units:
  - 1. Electric.

#### **1.3 ACTION SUBMITTALS**

- A. Product Data: For each type of product indicated. Include construction details, material descriptions, dimensions of individual components and profiles, and finishes for each air coil. Include rated capacity and pressure drop for each air coil.
- B. Shop Drawings: Diagram power, signal, and control wiring.

#### **1.4 INFORMATIONAL SUBMITTALS**

- A. Coordination Drawings: Reflected ceiling plans, drawn to scale, on which coil location and ceiling-mounted access panels are shown and coordinated with each other.
- B. Field quality-control test reports.

#### **1.5 CLOSEOUT SUBMITTALS**

- A. Operation and Maintenance Data: For air coils to include in operation and maintenance manuals.

#### **1.6 QUALITY ASSURANCE**

- A. Electrical Components, Devices, and Accessories: Listed and labeled as defined in NFPA 70, Article 100, by a testing agency acceptable to authorities having jurisdiction, and marked for intended use.
- B. ASHRAE Compliance:
  - 1. Comply with ASHRAE 15 for refrigeration system safety.
  - 2. Comply with ASHRAE 33 for methods of testing cooling and heating coils.

3. Comply with applicable requirements in ASHRAE 62.1, Section 5 - "Systems and Equipment" and Section 7 - "Construction and Startup."

## PART 2 - PRODUCTS

### 2.1 ELECTRIC COILS

- A. Available Manufacturers: Subject to compliance with requirements, manufacturers offering products that may be incorporated into the Work include the following, or approved equal:
  1. Brasch Manufacturing Co., Inc.
  2. Chromalox, Inc., Wiegand Industrial Division; Emerson Electric Company.
  3. Dunham-Bush, Inc.
  4. INDEECO.
  5. Trane.
  6. Or approved equal.
- B. Coil Assembly: Comply with UL 1995.
- C. Heating Elements: Open-coil resistance wire of 80 percent nickel and 20 percent chromium, supported and insulated by floating ceramic bushings recessed into casing openings, and fastened to supporting brackets.
- D. High-Temperature Coil Protection: Disk-type, automatically reset, thermal-cutout, safety device; serviceable through terminal box without removing heater from duct or casing.
  1. Secondary Protection: Load-carrying, manually reset or manually replaceable, thermal cutouts; factory wired in series with each heater stage.
- E. Frames: Galvanized-steel channel frame, minimum 0.052 inch thick for flanged mounting.
- F. Control Panel: Unit mounted with disconnecting means and overcurrent protection. Include the following controls:
  1. Magnetic contactor.
  2. Mercury contactor.
  3. Toggle switches; one per step.
  4. Step controller.
  5. Time-delay relay.
  6. Pilot lights; one per step.
  7. Airflow proving switch.
- G. Refer to Division 23, Instrumentation and Control for HVAC for thermostat.

## **PART 3 - EXECUTION**

### **3.1 EXAMINATION**

- A. Examine ducts, plenums, and casings to receive air coils for compliance with requirements for installation tolerances and other conditions affecting coil performance.
- B. Proceed with installation only after unsatisfactory conditions have been corrected.

### **3.2 INSTALLATION**

- A. Install coils level and plumb.
- B. Install coils in metal ducts and casings constructed according to SMACNA's "HVAC Duct Construction Standards, Metal and Flexible."

### **3.3 CONNECTIONS**

- A. Ground equipment according to Division 26, Grounding and Bonding for Electrical Systems.
- B. Connect wiring according to Division 26, "Low-Voltage Electrical Power Conductors and Cables."

### **3.4 FIELD QUALITY CONTROL**

- A. Perform the following field tests and inspections and prepare test reports:
  - 1. Operational Test: After electrical circuitry has been energized, operate electric coils to confirm proper unit operation.
  - 2. Test and adjust controls and safeties. Replace damaged and malfunctioning controls and equipment.

**END OF SECTION**

H:\Y0586.00\DOC\SPEC\2025\_02-20\_IFB\238216\_AIR COILS.DOC

## SECTION 238239.13 - CABINET UNIT HEATERS

### PART 1 - GENERAL

#### 1.1 RELATED DOCUMENTS

- A. Certain requirements common to all the mechanical and electrical trades (Fire Suppression, Plumbing, HVAC, Electrical, and Tele/Data) are specified in Division 20. To avoid repetition, they are not repeated in each relevant Division and Section. However, these requirements are applicable to the work of this Section and are hereby incorporated by reference.
- B. Drawings and general provisions of the Contract, including General and Supplementary Conditions and Division 01 Specification Sections, apply to this Section.

#### 1.2 SUMMARY

- A. Section includes cabinet unit heaters with centrifugal fans and hot-water coils.

#### 1.3 DEFINITIONS

- A. BAS: Building automation system.
- B. CWP: Cold working pressure.
- C. PTFE: Polytetrafluoroethylene plastic.
- D. TFE: Tetrafluoroethylene plastic.

#### 1.4 ACTION SUBMITTALS

- A. Product Data: For each type of product.
  - 1. Include rated capacities, operating characteristics, furnished specialties, and accessories.
- B. Shop Drawings:
  - 1. Include plans, elevations, sections, and details.
  - 2. Include details of equipment assemblies. Indicate dimensions, weights, loads, required clearances, method of field assembly, components, and location and size of each field connection.
  - 3. Include location and size of each field connection.
  - 4. Include details of anchorages and attachments to structure and to supported equipment.
  - 5. Include equipment schedules to indicate rated capacities, operating characteristics, furnished specialties, and accessories.
  - 6. Indicate location and arrangement of piping valves and specialties.
  - 7. Indicate location and arrangement of integral controls.

8. Wiring Diagrams: Power, signal, and control wiring.

#### 1.5 INFORMATIONAL SUBMITTALS

- A. Coordination Drawings: Floor plans, reflected ceiling plans, and other details, drawn to scale, on which the following items are shown and coordinated with each other, using input from installers of the items involved:
  1. Suspended ceiling components.
  2. Structural members to which cabinet unit heaters will be attached.
  3. Method of attaching hangers to building structure.
  4. Size and location of initial access modules for acoustical tile.
  5. Items penetrating finished ceiling, including the following:
    - a. Lighting fixtures.
    - b. Air outlets and inlets.
    - c. Speakers.
    - d. Sprinklers.
    - e. Access panels.
  6. Perimeter moldings for exposed or partially exposed cabinets.
- B. Field quality-control reports.

#### 1.6 CLOSEOUT SUBMITTALS

- A. Operation and Maintenance Data: For cabinet unit heaters to include in emergency, operation, and maintenance manuals.

#### 1.7 MAINTENANCE MATERIAL SUBMITTALS

- A. Furnish extra materials described below that match products installed and that are packaged with protective covering for storage and identified with labels describing contents.
  1. Cabinet Unit-Heater Filters: Furnish one spare filter(s) for each filter installed.

### PART 2 - PRODUCTS

#### 2.1 MANUFACTURERS

- A. Manufacturers: Subject to compliance with requirements, available manufacturers offering products that may be incorporated into the Work include the following, or approved equal:

1. Airtherm; a Mestek company.
2. Berko; Marley Engineered Products.
3. Carrier Corporation; a UTC company.
4. Chromalox, Inc.
5. Dunham-Bush, Inc.
6. Engineered Air.
7. Indeeco.
8. International Environmental Corporation.
9. Markel Products Company; TPI Corporation.
10. Marley Engineered Products.
11. McQuay International.
12. Ouellet Canada Inc.
13. QMark; Marley Engineered Products.
14. Rosemex Products.
15. Trane Inc.
16. USA Coil & Air.
17. Or approved equal.

## 2.2 DESCRIPTION

- A. Factory-assembled and -tested unit complying with AHRI 440.
- B. Electrical Components, Devices, and Accessories: Listed and labeled as defined in NFPA 70, by a qualified testing agency, and marked for intended location and application.

## 2.3 PERFORMANCE REQUIREMENTS

- A. ASHRAE Compliance: Applicable requirements in ASHRAE 62.1, Section 5 - "Systems and Equipment" and Section 7 - "Construction and Startup."
- B. ASHRAE/IESNA 90.1 Compliance: Applicable requirements in ASHRAE/IESNA 90.1, Section 6 - "Heating, Ventilating, and Air-Conditioning."

## 2.4 COIL SECTION INSULATION

- A. Insulation Materials: ASTM C 1071; surfaces exposed to airstream shall have erosion-resistant coating to prevent erosion of glass fibers.

1. Thickness: 1 inch.
2. Thermal Conductivity (k-Value): 0.26 Btu x in./h x sq. ft. at 75 deg F mean temperature.
3. Fire-Hazard Classification: Maximum flame-spread index of 25 and smoke-developed index of 50 when tested according to ASTM E 84.
4. Adhesive: Comply with ASTM C 916 and with NFPA 90A or NFPA 90B.
5. Airstream Surfaces: Surfaces in contact with the airstream shall comply with requirements in ASHRAE 62.1.

## 2.5 CABINETS

- A. Material: Steel with baked-enamel finish with manufacturer's standard paint, in color selected by Architect.
  1. Horizontal Unit, Exposed Bottom Panels: Minimum 0.0528-inch- thick galvanized sheet steel, removable panels secured with tamperproof cam fasteners and safety chain.
  2. Recessed Flanges: Steel, finished to match cabinet.
  3. Control Access Door: Key operated.
  4. Base: Minimum 0.0528-inch- thick steel, finished to match cabinet, 4 inches high with leveling bolts.
  5. Extended Piping Compartment for concealed piping connections.
  6. False Back: Minimum 0.0428-inch- thick steel, finished to match cabinet.

## 2.6 FILTERS

- A. Minimum Arrestance: According to ASHRAE 52.1 and a minimum efficiency reporting value (MERV) according to ASHRAE 52.2.
  1. Pleated: 90 percent arrestance and MERV 7.

## 2.7 COILS

- A. Hot-Water Coil: Copper tube, with mechanically bonded aluminum fins spaced no closer than 0.1 inch and rated for a minimum working pressure of 200 psig and a maximum entering-water temperature of 220 deg F. Include manual air vent and drain.

## 2.8 CONTROLS

- A. Fan and Motor Board: Removable.
  1. Fan: Forward curved, double width, centrifugal, directly connected to motor; thermoplastic or painted-steel wheels and aluminum, painted-steel, or galvanized-steel fan scrolls.

2. Motor: Permanently lubricated, multispeed; resiliently mounted on motor board. Comply with requirements in Division 23 for common motor requirements.
3. Wiring Terminations: Connect motor to chassis wiring with plug connection.
- B. Factory, Hot-Water Piping Package: ASTM B 88, Type L copper tube with wrought-copper fittings and brazed joints. Label piping to indicate service, inlet, and outlet.
  1. Two-way, modulating control valve.
  2. Hose Kits: Minimum 400-psig working pressure, and operating temperatures from 33 to 211 deg F. Tag hose kits to equipment designations.
    - a. Length: 24 inches.
    - b. Minimum Diameter: Equal to cabinet unit-heater connection size.
  3. Two-Piece, Ball Valves: Bronze body with full-port, chrome-plated bronze ball; PTFE or TFE seats; and 600-psig minimum CWP rating and blowout-proof stem.
  4. Calibrated-Orifice Balancing Valves: Bronze body, ball type, 125-psig working pressure, 250 deg F maximum operating temperature; with calibrated orifice or venture, connection for portable differential pressure meter with integral seals, threaded ends, and equipped with a memory stop to retain set position.
  5. Automatic Flow-Control Valve: Brass or ferrous-metal body, 300-psig working pressure at 250 deg F, with removable, corrosion-resistant, tamperproof, self-cleaning piston spring; factory set to maintain constant indicated flow within plus or minus 10 percent of differential pressure range of 2 to 80 psig.
  6. Y-Pattern, Hot-Water Strainers: Cast-iron body (ASTM A 126, Class B); 125-psig minimum working pressure; with threaded connections, bolted cover, perforated stainless-steel basket, and bottom drain connection. Include minimum NPS 1/2 threaded pipe and full-port ball valve in strainer drain connection.
  7. Wrought-Copper Unions: ASME B16.22.
- C. Control devices and operational sequences are specified in Division 23, Instrumentation and Control for HVAC and Division 23, Sequence of Operations for HVAC Controls.
- D. Basic Unit Controls:
  1. Control voltage transformer.
  2. Unit-mounted thermostat with the following features:
    - a. Heat-off switch.
    - b. Fan on-auto switch.
    - c. Manual fan-speed switch.
    - d. Adjustable deadband.

- e. Concealed set point.
  - f. Concealed indication.
  - g. Deg F indication.
- 3. Unit-mounted temperature sensor.
- 4. Unoccupied period override push button.
- 5. Data entry and access port.
  - a. Input data includes room temperature and occupied and unoccupied periods.
  - b. Output data includes room temperature, supply-air temperature, entering-water temperature, operating mode, and status.
- E. DDC Terminal Controller:
  - 1. Scheduled Operation: Occupied and unoccupied periods on seven-day clock with a minimum of four programmable periods per day.
  - 2. Unoccupied Period Override: Two hours.
  - 3. Unit Supply-Air Fan Operations:
    - a. Occupied Periods: Fan runs continuously.
    - b. Unoccupied Periods: Fan cycles to maintain setback room temperature.
  - 4. Heating-Coil Operations:
    - a. Occupied Periods: Modulate control valve to provide heating if room temperature falls below thermostat set point.
    - b. Unoccupied Periods: Start fan and modulate control valve if room temperature falls below setback temperature.
  - 5. Controller shall have volatile-memory backup.
- F. BAS Interface Requirements:
  - 1. Interface relay for scheduled operation.
  - 2. Interface relay to provide indication of fault at central workstation.
  - 3. Interface shall be BAC-net compatible for central BAS workstation and include the following functions:
    - a. Adjust set points.
    - b. Cabinet unit-heater start, stop, and operating status.

- c. Data inquiry, including supply-air and room-air temperature.
- d. Occupied and unoccupied schedules.
- G. Electrical Connection: Factory-wired motors and controls for a single field connection.

## 2.9 CAPACITIES AND CHARACTERISTICS

- A. Cabinet:
  - 1. Vertical, Surface Mounted: Upflow.
    - a. Top: Flat.
    - b. Air Inlet: Open bottom.
    - c. Air Outlet: Top, punched louver.

## PART 3 - EXECUTION

### 3.1 EXAMINATION

- A. Examine areas to receive cabinet unit heaters for compliance with requirements for installation tolerances and other conditions affecting performance of the Work.
- B. Examine roughing-in for piping and electrical connections to verify actual locations before unit-heater installation.
- C. Proceed with installation only after unsatisfactory conditions have been corrected.

### 3.2 INSTALLATION

- A. Install wall boxes in finished wall assembly; seal and weatherproof. Joint-sealant materials and applications are specified in Division 07, Joint Sealants.
- B. Install cabinet unit heaters to comply with NFPA 90A.
- C. Suspend cabinet unit heaters from structure with elastomeric hangers. Vibration isolators are specified in Section 23, Vibration and Seismic Controls for HVAC Piping and Equipment.
- D. Install new filters in each fan-coil unit within two weeks of Substantial Completion.

### 3.3 CONNECTIONS

- A. Piping installation requirements are specified in Division 23, Hydronic Piping and Division 23, Steam and Condensate Heating Piping. Drawings indicate general arrangement of piping, fittings, and specialties.
- B. Install piping adjacent to machine to allow service and maintenance.
- C. Connect piping to cabinet unit heater's factory, hot-water piping package. Install the piping package if shipped loose.
- D. Comply with safety requirements in UL 1995.

- E. Unless otherwise indicated, install union and gate or ball valve on supply-water connection and union and calibrated balancing valve on return-water connection of cabinet unit heater. Hydronic specialties are specified in Division 23, Hydronic Piping.
- F. Ground equipment according to Division 26, Grounding and Bonding for Electrical Systems.
- G. Connect wiring according to Division 26, Low-Voltage Electrical Power Conductors and Cables.

### 3.4 FIELD QUALITY CONTROL

- A. Perform the following tests and inspections with the assistance of a factory-authorized service representative:
  - 1. Operational Test: After electrical circuitry has been energized, start units to confirm proper motor rotation and unit operation.
  - 2. Test and adjust controls and safety devices. Replace damaged and malfunctioning controls and equipment.
- B. Units will be considered defective if they do not pass tests and inspections.
- C. Prepare test and inspection reports.

### 3.5 ADJUSTING

- A. Adjust initial temperature set points.
- B. Occupancy Adjustments: When requested within 12 months of date of Substantial Completion, provide on-site assistance in adjusting system to suit actual occupied conditions. Provide up to two visits to Project during other-than-normal occupancy hours for this purpose.

### 3.6 DEMONSTRATION

- A. Engage a factory-authorized service representative to train Owner's maintenance personnel to adjust, operate, and maintain cabinet unit heaters.

## SECTION 238239.19 - WALL AND CEILING UNIT HEATERS

### PART 1 - GENERAL

#### 1.1 RELATED DOCUMENTS

- A. Certain requirements common to all the mechanical and electrical trades (Fire Suppression, Plumbing, HVAC, Electrical, and Tele/Data) are specified in Division 20. To avoid repetition, they are not repeated in each relevant Division and Section. However, these requirements are applicable to the work of this Section and are hereby incorporated by reference.
- B. Drawings and general provisions of the Contract, including General and Supplementary Conditions and Division 01 Specification Sections, apply to this Section.

#### 1.2 SUMMARY

- A. Section includes wall and ceiling heaters with propeller fans and electric-resistance heating coils.

#### 1.3 ACTION SUBMITTALS

- A. Product Data: For each type of product.
  - 1. Include rated capacities, operating characteristics, furnished specialties, and accessories.
- B. Shop Drawings:
  - 1. Include plans, elevations, sections, and details.
  - 2. Include details of equipment assemblies. Indicate dimensions, weights, loads, required clearances, method of field assembly, components, and location and size of each field connection.
  - 3. Include details of anchorages and attachments to structure and to supported equipment.
  - 4. Include equipment schedules to indicate rated capacities, operating characteristics, furnished specialties, and accessories.
  - 5. Wiring Diagrams: Power, signal, and control wiring.

#### 1.4 CLOSEOUT SUBMITTALS

- A. Operation and Maintenance Data: For wall and ceiling unit heaters to include in emergency, operation, and maintenance manuals.

## PART 2 - PRODUCTS

### 2.1 MANUFACTURERS

- A. Manufacturers: Subject to compliance with requirements, available manufacturers offering products that may be incorporated into the Work include the following, or approved equal:
1. Modine.
  2. Berko; Marley Engineered Products.
  3. Chromalox, Inc.
  4. Indeeco.
  5. Markel Products Company; TPI Corporation.
  6. Marley Engineered Products.
  7. Ouellet Canada Inc.
  8. QMark; Marley Engineered Products.
  9. Trane Inc.
  10. Or approved equal.

### 2.2 DESCRIPTION

- A. Assembly including chassis, electric heating coil, fan, motor, and controls. Comply with UL 2021.
- B. Electrical Components, Devices, and Accessories: Listed and labeled as defined in NFPA 70, by a qualified testing agency, and marked for intended location and application.

### 2.3 CABINET

- A. Front Panel: Extruded-aluminum bar grille, with removable panels fastened with tamperproof fasteners.
- B. Finish: Baked enamel over baked-on primer with manufacturer's standard color selected by Architect, applied to factory-assembled and -tested wall and ceiling heaters before shipping.
- C. Airstream Surfaces: Surfaces in contact with the airstream shall comply with requirements in ASHRAE 62.1.
- D. Surface-Mounted Cabinet Enclosure: Steel with finish to match cabinet.

### 2.4 COIL

- A. Electric-Resistance Heating Coil: Nickel-chromium heating wire, free from expansion noise and 60-Hz hum, embedded in magnesium oxide refractory and sealed in corrosion-resistant

metallic sheath. Terminate elements in stainless-steel, machine-staked terminals secured with stainless-steel hardware, and limit controls for high-temperature protection.

## 2.5 FAN AND MOTOR

- A. Fan: Aluminum propeller directly connected to motor.
- B. Motor: Permanently lubricated. Comply with requirements in Division 23 for common motor requirements for HVAC equipment.

## 2.6 CONTROLS

- A. Controls: Unit-mounted thermostat.
- B. Electrical Connection: Factory wire motors and controls for a single field connection with disconnect switch.

## 2.7 CAPACITIES AND CHARACTERISTICS

- A. Refer to schedules.

# PART 3 - EXECUTION

## 3.1 EXAMINATION

- A. Examine areas to receive wall and ceiling unit heaters for compliance with requirements for installation tolerances and other conditions affecting performance of the Work.
- B. Examine roughing-in for electrical connections to verify actual locations before unit-heater installation.
- C. Proceed with installation only after unsatisfactory conditions have been corrected.

## 3.2 INSTALLATION

- A. Install wall and ceiling unit heaters to comply with NFPA 90A.
- B. Install wall and ceiling unit heaters level and plumb.
- C. Ground equipment according to Division 26, Grounding and Bonding for Electrical Systems.
- D. Connect wiring according to Division 26, Low-Voltage Electrical Power Conductors and Cables.

END OF SECTION

H:\Y0586.00\DOC\SPEC\2025\_02-20\_IFB\238239\_19\_WALL AND CEILING UNIT HEATERS.DOC

## SECTION 238323 - RADIANT-HEATING ELECTRIC PANELS

### PART 1 - GENERAL

#### 1.1 RELATED DOCUMENTS

- A. Certain requirements common to all the mechanical and electrical trades (Fire Suppression, Plumbing, HVAC, Electrical, and Tele/Data) are specified in Division 20. To avoid repetition, they are not repeated in each relevant Division and Section. However, these requirements are applicable to the work of this Section and are hereby incorporated by reference.
- B. Drawings and general provisions of the Contract, including General and Supplementary Conditions and Division 01 Specification Sections, apply to this Section.

#### 1.2 SUMMARY

- A. Section includes prefabricated radiant-heating electric panels.

#### 1.3 ACTION SUBMITTALS

- A. Product Data: For each type of product.
  - 1. Include rated capacities, operating characteristics, and furnished specialties and accessories.
- B. Shop Drawings: For electric heating panels.
  - 1. Include plans, sections, details, and attachments to other work.
  - 2. Include diagrams for power, signal, and control wiring.

#### 1.4 INFORMATIONAL SUBMITTALS

- A. Coordination Drawings: Reflected ceiling plans, drawn to scale, on which the following items are shown and coordinated with each other, using input from installers of the items involved:
  - 1. Method of attaching hangers to building structure.
- B. Field quality-control reports.
- C. Sample Warranty: For special warranty.

#### 1.5 CLOSEOUT SUBMITTALS

- A. Operation and Maintenance Data: For electric heating panels to include in operation and maintenance manuals.

#### 1.6 WARRANTY

- A. Special Warranty: Manufacturer agrees to repair or replace electric heating panels that fail in materials or workmanship within specified warranty period.
  - 1. Warranty Period: Three years from date of Substantial Completion.

## **PART 2 - PRODUCTS**

### **2.1 GENERAL REQUIREMENTS FOR RADIANT-HEATING ELECTRIC PANELS**

- A. Electrical Components, Devices, and Accessories: Listed and labeled as defined in NFPA 70, by a qualified testing agency, and marked for intended location and application.

### **2.2 PREFABRICATED RADIANT-HEATING ELECTRIC PANELS**

- A. Manufacturers: Subject to compliance with requirements, available manufacturers offering products that may be incorporated into the Work include the following, or approved equal:
  - 1. Brasch (basis-of-design).
  - 2. Berko; c/o Marley Engineered Products.
  - 3. QMark; c/o Marley Engineered Products.
  - 4. SSHC, Inc.
  - 5. Or approved equal.
- B. Description: Sheet-metal-enclosed panel with heating element suitable for wall surface mounting. Comply with UL 2021.
  - 1. Panel: Minimum 0.0276-inch- thick, galvanized sheet steel back panel riveted to minimum 0.0396-inch- thick, galvanized sheet steel front panel with fused-on crystalline surface.
  - 2. Heating Element: Powdered graphite sandwiched between sheets of electric insulation.
  - 3. Electrical Connections: Nonheating, high-temperature, insulated-copper leads, factory connected to heating element.
  - 4. Exposed-Side Panel Finish: Baked-enamel finish in manufacturer's standard paint color as selected by Architect.

## **PART 3 - EXECUTION**

### **3.1 EXAMINATION**

- A. Examine surfaces and substrates to receive electric heating panels for compliance with requirements for installation tolerances and other conditions affecting performance.
  - 1. Ensure surfaces in contact with electric heating panels are free of burrs and sharp protrusions.
  - 2. Ensure surfaces and substrates are level and plumb.
- B. Proceed with installation only after unsatisfactory conditions have been corrected.

### **3.2 INSTALLATION**

- A. Install radiant-heating panels level and plumb.

### 3.3 CONNECTIONS

- A. Ground equipment according to Division 26, Grounding and Bonding for Electrical Systems.
- B. Connect wiring according to Division 26, Low-Voltage Electrical Power Conductors and Cables.

### 3.4 FIELD QUALITY CONTROL

- A. Testing Agency: Engage a qualified testing agency to perform tests and inspections.
- B. Perform the following tests and inspections:
  - 1. Operate electric-heating elements through each stage to verify proper operation and electrical connections.
  - 2. Test and adjust controls and safeties.
- C. Radiant-heating electric panels will be considered defective if they do not pass tests and inspections.
- D. Prepare test and inspection reports.

### 3.5 PROTECTION

- A. Protect installed radiant-heating electric panels from damage during construction.
- B. Remove and replace damaged radiant-heating electric panels.

END OF SECTION

H:\Y0586.00\DOC\SPEC\2025\_02-20\_IFB\238323\_RADIANT-HEATING ELECTRIC PANELS.DOC

## SECTION 238416 - MECHANICAL DEHUMIDIFICATION UNITS

### PART 1 - GENERAL

#### 1.1 RELATED DOCUMENTS

- A. Certain requirements common to all the mechanical and electrical trades (Fire Suppression, Plumbing, HVAC, Electrical, and Tele/Data) are specified in Division 20. To avoid repetition, they are not repeated in each relevant Division and Section. However, these requirements are applicable to the work of this Section and are hereby incorporated by reference.
- B. Drawings and general provisions of the Contract, including General and Supplementary Conditions and Division 01 Specification Sections, apply to this Section.

#### 1.2 SUMMARY

- A. Section includes packaged, factory-assembled and -tested, refrigerant-type, mechanical dehumidification units designed for outdoor installation.

#### 1.3 PERFORMANCE REQUIREMENTS

#### 1.4 ACTION SUBMITTALS

- A. Product Data: For each dehumidification unit indicated. Include rated capacities, operating characteristics, electrical characteristics, and furnished specialties and accessories.
- B. LEED Submittals:
  - 1. Product Data for Credit EA 4: Documentation indicating that equipment and refrigerants comply.
  - 2. Product Data for Prerequisite IEQ 1: Documentation indicating that units comply with ASHRAE 62.1, Section 5, "Systems and Equipment."
- C. Shop Drawings: For each dehumidification unit indicated. Include plans, elevations, sections, details, and attachments to other work.
  - 1. Detail equipment assemblies and indicate dimensions, weights, loads, required clearances, method of field assembly, components, and location and size of each field connection.
  - 2. Wiring Diagrams: For power, signal, and control wiring.
- D. Delegated-Design Submittal: For dehumidification units indicated to comply with performance requirements and design criteria, including analysis data signed and sealed by the qualified professional engineer responsible for their preparation.
  - 1. Vibration Isolation Base Details: Detail fabrication including anchorages and attachments to structure and to supported equipment. Include adjustable motor bases, rails, and frames for equipment mounting.
  - 2. Design Calculations: Calculate requirements for selecting vibration isolators and for designing vibration isolation bases.

1.5 INFORMATIONAL SUBMITTALS

- A. Source quality-control reports.
- B. Field quality-control reports.
- C. Warranty: Sample of special warranty.

1.6 CLOSEOUT SUBMITTALS

- A. Operation and Maintenance Data: For dehumidification units to include in emergency, operation, and maintenance manuals.

1.7 MAINTENANCE MATERIAL SUBMITTALS

- A. Furnish extra materials that match products installed and that are packaged with protective covering for storage and identified with labels describing contents.
  - 1. Filters: One set(s) of each type of filter specified.
  - 2. Fan Belts: One set(s) for each belt-drive fan.

1.8 QUALITY ASSURANCE

- A. Electrical Components, Devices, and Accessories: Listed and labeled as defined in NFPA 70, by a qualified testing agency, and marked for intended location and application.
- B. ASHRAE Compliance:
  - 1. Applicable requirements in ASHRAE 62.1, Section 5, "Systems and Equipment" and Section 7, "Construction and Startup."
  - 2. Applicable requirements in ASHRAE 15, "Safety Standard for Refrigeration Systems."
- C. ASHRAE/IESNA 90.1 Compliance: Applicable requirements in ASHRAE/IESNA 90.1, Section 6, "Heating, Ventilating, and Air-Conditioning."

1.9 COORDINATION

- A. Coordinate sizes and locations of concrete bases. Cast anchor-bolt inserts into bases.
- B. Coordinate installation of roof curbs, equipment supports, and roof penetrations.

1.10 WARRANTY

- A. Special Warranty: Manufacturer's standard form in which manufacturer agrees to repair or replace components of dehumidification units that fail in materials or workmanship within specified warranty period.
  - 1. Warranty Period for Compressors: Manufacturer's standard, but not less than five years from date of Substantial Completion.
  - 2. Warranty Period for Refrigerant Coils: Manufacturer's standard, but not less than five years from date of Substantial Completion.

## PART 2 - PRODUCTS

### 2.1 MANUFACTURERS

- A. Manufacturers: Subject to compliance with requirements, provide products by one of the following, or approved equal:
  - 1. Comitale National Inc.
  - 2. Dectron Internationale.
  - 3. Dehumidifier Corporation of America.
  - 4. Desert Aire.
  - 5. DryAire Systems.
  - 6. Nautica Dehumidifiers, Inc.
  - 7. PoolPak Technologies Corporation.
  - 8. Thermoplus Air Inc.
  - 9. Or approved equal.

### 2.2 CASINGS

- A. Casing: Double-wall construction with corrosion-protective coating and exterior baked-enamel or powder-coated finish, stainless-steel fasteners, knockouts for electrical and piping connections, condensate drain connection, and lifting lugs.
  - 1. Access: Hinged access doors with neoprene gaskets.
  - 2. Insulation: Minimum 2-inch- thick, glass-fiber-insulation fill with no metal structure through the insulation.
  - 3. Airstream Surfaces: Surfaces in contact with the airstream shall comply with requirements in ASHRAE 62.1.
- B. Drain Pan and Connection: baked powder paint coated aluminum with fully welded corners; insulated and complying with ASHRAE 62.1.

### 2.3 FANS

- A. Supply Fans: Airfoil plenum; galvanized steel with baked-enamel powder-coated finish; belt driven with adjustable sheaves and self-aligning, grease-lubricated ball bearings with extended grease fittings easily accessible inside the casing of dehumidification unit.
- B. Exhaust Fans: Airfoil plenum; galvanized steel with baked-enamel powder-coated finish; belt driven with adjustable sheaves and self-aligning, grease-lubricated ball bearings with extended grease fittings easily accessible inside the casing of dehumidification unit.
- C. Fan Motor: Comply with requirements in Division 23.
  - 1. Enclosure Type: Totally enclosed, fan cooled.

## 2.4 FILTERS

- A. Pleated: Minimum 90 percent arrestance according to ASHRAE 52.1, and MERV 8 and MERV 13 according to ASHRAE 52.2.

## 2.5 REFRIGERATION SYSTEM

- A. Energy Efficiency: Equal to or greater than prescribed by ASHRAE/IESNA 90.1.
- B. Refrigerant Coils: Copper tubes with mechanically bonded aluminum fins; factory fabricated and tested to comply with ASHRAE 33 and ARI 410; with multiple refrigerant circuits, seamless-copper headers with brazed connections, and galvanized-steel frame. Coil and fins shall have a polyester coating. Coils shall have a minimum 300-psig working-pressure rating and be factory tested to 450 psig and to 300 psig while underwater.
- C. Compressors: Hermetic, scroll compressors with integral vibration isolators and crankcase heaters that de-energize during compressor operation; with thermal-expansion valves, filter-dryers, sight glasses, compressor service valves, and liquid- and suction-line service valves.
  - 1. Number of Refrigerant Circuits: Two for compressor capacities more than 7-1/2 tons.
  - 2. Refrigerant: R-454b.
  - 3. Capacity Control:
    - a. Hot-gas bypass valve and piping on one compressor.
  - 4. Low-Pressure Cutout: Manual reset after three automatic-reset failures.
  - 5. High-Pressure Cutout: Manual reset.
  - 6. Compressor Motor Overload Protection: Manual reset.
  - 7. Antirecycling Timing Device: Prevent compressor restart for five minutes after shutdown.
- D. Energy Recovery Heat Exchanger (Pool Heater): Cupronickel, coaxial, vented, double-wall construction for potable-water service.

## 2.6 PACKAGED, AIR-COOLED CONDENSER UNIT

- A. Casing: Steel, finished with baked enamel; with removable panels for access to controls, weep holes for water drainage, and mounting holes in base. Provide brass service valves, fittings, and gauge ports on exterior of casing.
- B. Refrigerant Coil: ARI 210/240, copper tube with mechanically bonded aluminum fins; with liquid subcooler.
- C. Fan: Aluminum-propeller type, directly connected to permanently lubricated motor with integral thermal-overload protection.
- D. Adjustable, Low Ambient Head-Pressure Control: Designed to operate at temperatures as low as 0 deg F by cycling condenser fans and controlling speed of last fan of each circuit.

## 2.7 REHEATING COILS

- A. Hot-Water Coil: Continuous circuit coil fabricated according to ARI 410.
  - 1. Tubes: Copper.

2. Fins: Aluminum.
3. Fin and Tube Joints: Mechanical bond.
4. Headers: Cast iron with drain and air vent tappings.
5. Frames: Galvanized-steel channel, 0.052 inch.
6. Ratings: Design tested and rated according to ASHRAE 33 and ARI 410.
  - a. Working-Pressure Ratings: 200 psig, 325 deg F.
7. Source Quality Control: Test to 300 psig.

## 2.8 DAMPERS

- A. Outdoor and Exhaust-Air Dampers: Opposed-blade, extruded-aluminum dampers with steel operating rod rotating in sintered bronze or nylon bearings. Provide blade gaskets and edge seals, and mechanically fasten blades to operating rod. Size for 0 to 25 percent outdoor air, with motorized operator and filter.
- B. Damper Operator: Close coupled, with gear train sealed in oil and with spring return.

## 2.9 CONTROLS

- A. Control Panel: Integral service compartment containing fan-motor thermal and overload cutouts, compressor thermal and overload cutouts, 115-V control transformer if required, magnetic contactors for fan and compressor motors, and a nonfused factory-mounted and -wired disconnect switch for single external electrical power connection.
- B. Building Automation System Interface: Factory-installed hardware and software to enable the building automation system to monitor, control, and display status and alarms.
- C. Operating Controls: Factory-installed microprocessor controller, capable of being remotely mounted.
  1. Display the following on the face of controller:
    - a. System on.
    - b. System dehumidifying mode.
    - c. System air-conditioning mode.
    - d. System outdoor-air (economizer) mode.
    - e. System heating pool water.
    - f. Auxiliary space heat is operating.
    - g. Unit requires service.
    - h. Return-air (space) temperature.
    - i. Return-air (space) humidity.
    - j. Outdoor-air temperature.
  2. Indicate the following sensor failures on panel:
    - a. Airflow: Dirty air filter, blocked airflow, and fan failure.
    - b. Refrigerant high and low pressure.

- c. High water temperature.
  - d. High and low evaporator temperature.
  - e. Low water flow.
  - f. Communication fault.
  - g. System off.
  - h. Antishort cycle delay.
  - i. Power failure.
3. Provide access to the following set points on panel:
- a. Space temperature.
  - b. Space relative humidity.
  - c. Outdoor ventilation/air-conditioning changeover temperature.
  - d. Airflow alarm.
4. Provide the following displays on panel:
- a. Space temperature.
  - b. Space relative humidity.
  - c. Outdoor-air temperature.
  - d. Supply-air temperature.
  - e. Return-air temperature.
  - f. Airflow rating.
  - g. Air-off evaporator temperature.
  - h. Return-air relative humidity.
  - i. Service codes.
5. Provide the following controls on panel:
- a. System on-off, fan continues to run.
  - b. Fan on-off.
  - c. Service code access.
  - d. System dehumidifying mode.
  - e. System air-conditioning mode.
  - f. System outdoor-air (economizer) mode.
  - g. Auxiliary space heat is operating.
  - h. Outdoor-air-temperature, conditioned-space-temperature, and control set-point-temperature digital display.
  - i. Outdoor enthalpy digital display.
  - j. Filter pressure drop digital display.
  - k. Status: Airflow, fans, system, unit operation, and operating mode.

1. Alarm digital display.
- D. Operating Controls: Factory-installed microprocessor controller.
  1. Factory-installed operator panel with backlit display, capable of being remotely mounted, allows menu-driven display for navigation and control of unit.
  2. Integral clock.
  3. Personal computer interface.
  4. Integral local area network for direct connection to BACnet.
  5. Factory programmed.
  6. Unit-Mounted Sensors:
    - a. Airflow switch.
    - b. Compressor-discharge temperature.
    - c. Evaporator-air temperature.
    - d. Pool-water-out temperature.
    - e. Pool-water-in temperature.
    - f. Relative humidity.
    - g. Return-air temperature.
    - h. Supply-air temperature.
  7. Integral diagnostics.
  8. Nonvolatile memory.
  9. IP or SI display.
  10. Provide the following status and alarm functions:
    - a. System: On-off.
    - b. Power failure.
    - c. Fan: Off, overload.
    - d. Compressor: On, turned off, overload, high pressure, low pressure, overheat, oil failure, and pumpdown.
    - e. Evaporator damper closed.
    - f. Pool: Low water flow, heating on.
    - g. Dehumidification: Call for, on.
    - h. Air Conditioning: Call for, on.
    - i. System outdoor-air (economizer) mode.
    - j. Auxiliary space heat on.
    - k. Alarms: Firestat, freezestat, and filters.
  11. Provide the following controls via operator panel:
    - a. Compressor auto-off.

- b. Fan auto-off.
  - c. Set-Point Adjustments: Relative humidity, temperatures, deadbands, and differentials.
  - d. Sensor calibration.
- 12. Monitor constant and variable motor loads.
  - 13. Monitor cooling load.
  - 14. Monitor economizer cycles.
  - 15. Monitor ventilation air volumes.

## 2.10 ACCESSORIES

- A. Smoke Detectors: Photoelectric detector located in return-air plenum, to de-energize unit.
  - 1. Operating Voltage: 24-V dc, nominal.
  - 2. Self-Restoring: Detectors do not require resetting or readjusting after actuation to restore them to normal operation.
  - 3. Plug-in Arrangement: Detector and associated electronic components mounted in module with tamper-resistant connection to fixed base with twist-locking plug. Terminals in fixed base accept building wiring.
  - 4. Integral Visual-Indicating Light: Digital-display type indicating detector operation.
  - 5. Sensitivity: Can be tested and adjusted in-place after installation.
  - 6. Integral Addressable Module: Arranged to communicate detector status (normal, alarm, or trouble) to the fire-alarm control panel.
  - 7. Sensor: Digital display or infrared light source with matching silicon-cell receiver.
  - 8. Detector Sensitivity: Between 2.5 and 3.5 percent/foot of smoke obscuration when tested according to UL 268A.
  - 9. Integral Thermal Detector: Fixed-temperature type with 135 deg F setting.
- B. Electrical Convenience Outlet: 115-V ac fused, duplex, straight-blade receptacles, separately fused and located inside casing of dehumidification unit or in roof-curb perimeter.

## 2.11 ROOF CURBS

- A. Roof curbs with vibration isolators and wind restraints are specified in Division 23.
- B. Curb Height: 24 inches.
- C. Wind Restraints: Metal brackets compatible with the curb and casing, painted to match dehumidification unit; used to anchor unit to the curb and designed for loads at Project site. Comply with requirements in Division 23 for wind-load requirements.

## 2.12 SOURCE QUALITY CONTROL

- A. Verification of Performance: Factory test and rate dehumidification units according to ARI 910.

- B. Sound-Power-Level Ratings: Factory test and rate dehumidification units according to ARI 575.

### **PART 3 - EXECUTION**

#### **3.1 EXAMINATION**

- A. Examine areas and conditions, with Installer present, for compliance with requirements for installation tolerances and other conditions affecting performance of the Work.
- B. Examine roughing-in for water piping systems to verify actual locations of piping connections before equipment installation.
- C. Examine walls, floors, and roofs for suitable conditions where dehumidification units will be installed.
- D. Proceed with installation only after unsatisfactory conditions have been corrected.

#### **3.2 INSTALLATION**

- A. Unit Support: Install dehumidification units level on structural curbs. Coordinate wall penetrations and flashing with wall construction.

#### **3.3 CONNECTIONS**

- A. Where piping is installed adjacent to dehumidification units, allow space for service and maintenance of dehumidification units.
- B. Connect condensate drain pans using minimum NPS 1-1/4 copper tubing. Construct deep trap at connection to drain pan, and install cleanout at changes in direction.
- C. Refrigerant Piping (for remote condensers only): Comply with requirements in Division 23. Connect to supply and return coil tapplings with shutoff valve and union or flange at each connection.
- D. Hot-Water Piping: Comply with requirements in Division 23. Connect to supply coil tapplings with shutoff valve, return coil tapplings with balancing valve, and union or flange at each connection.
- E. Duct installation requirements are specified in Division 23. Drawings indicate the general arrangement of ducts. The following are specific connection requirements:
  - 1. Install ducts to termination in roof-mounted frames. Where indicated, terminate return-air duct through roof structure and insulate the space between roof and bottom of dehumidification unit.

#### **3.4 FIELD QUALITY CONTROL**

- A. Manufacturer's Field Service: Engage a factory-authorized service representative to inspect, test, and adjust components, assemblies, and equipment installations, including connections.
- B. Tests and Inspections:
  - 1. Leak Test: After installation, fill water coils with water, and test coils and connections for leaks. Repair leaks and retest until no leaks exist.

2. Charge refrigerant coils with refrigerant and test for leaks. Repair leaks and retest until no leaks exist.
  3. Test and adjust controls and safeties. Replace damaged and malfunctioning controls and equipment.
- C. Dehumidification unit will be considered defective if it does not pass tests and inspections.
- D. Prepare test and inspection reports.

### 3.5 STARTUP SERVICE

- A. Engage a factory-authorized service representative to perform startup service.
1. Complete installation and startup checks according to manufacturer's written instructions.
- B. Perform the following final checks before startup:
1. Verify that shipping, blocking, and bracing are removed.
  2. Verify that unit is secure on mountings and supporting devices and that connections to piping, ducts, and electrical systems are complete. Verify that proper thermal-overload protection is installed in motors, starters, and disconnect switches.
  3. Perform cleaning and adjusting specified in this Section.
  4. Disconnect fan drive from motor, verify proper motor rotation direction, and verify free fan wheel rotation and smooth bearing operations. Reconnect fan drive system, align belts, and install belt guards.
  5. Check lubrication of bearings, pulleys, belts, and other moving parts.
  6. Set outside- and return-air mixing dampers to minimum outside-air setting.
  7. Install clean filters.
  8. Verify that manual and automatic volume control and fire and smoke dampers in connected duct systems are in fully open position.
- C. Starting procedures for dehumidification units include the following:
1. Energize motor; verify proper operation of motor, drive system, and fan wheel. Adjust fan to indicated rpm. Replace malfunctioning motors, bearings, and fan wheels.
  2. Measure and record motor's electrical values for voltage and amperage.
  3. Manually operate dampers from fully closed to fully open position and record fan performance.
- D. Comply with requirements in Division 23 for testing, adjusting, and balancing of dehumidification unit.
- E. Startup Report: Report findings during startup. Identify startup steps, corrective measures taken, and final results.

### 3.6 ADJUSTING

- A. Adjust damper linkages for proper damper operation.
- B. Adjust initial temperature and humidity set points.

**3.7 CLEANING**

- A. Clean dehumidification units internally, on completion of installation, according to manufacturer's written instructions. Clean fan interiors to remove foreign material and construction dirt and dust. Vacuum clean fan wheels, cabinets, and coils' entering-air face.
- B. After completing system installation, testing, and startup service of dehumidification units, clean filter housings and install new filters.

**3.8 DEMONSTRATION**

- A. Engage a factory-authorized service representative to train Owner's maintenance personnel to adjust, operate, and maintain dehumidification units.

**END OF SECTION**

### PART 1 - GENERAL

#### 1.1 RELATED DOCUMENTS

- A. Certain requirements common to all the mechanical and electrical trades (Fire Suppression, Plumbing, HVAC, Electrical, and Tele/Data) are specified in Division 20. To avoid repetition, they are not repeated in each relevant Division and Section. However, these requirements are applicable to the work of this Section and are hereby incorporated by reference.
  - 1. For example, prior to requesting an occupancy permit, the MEP documentation listed in Part 3 of Division 20 (in paragraph "MEP and Fire Protection Completion Requirements", subparagraph "Occupancy Permit" must be submitted and approved so the Engineer can certify that the MEP systems and life safety provisions are completed.
- B. Drawings and general provisions of the Contract, including General and Supplementary Conditions and Division 01 Specification Sections, apply to this Section.

#### 1.2 SUMMARY

- A. Section Includes:
  - 1. Electrical equipment coordination and installation.
  - 2. Sleeves for raceways and cables.
  - 3. Sleeve seals.
  - 4. Grout.
  - 5. Common electrical installation requirements.

#### 1.3 DEFINITIONS

- A. Emergency Systems: Loads defined by NFPA 70, Article 700 "Emergency Systems". Those systems intended to supply egress lighting.
- B. Legally Required Standby Systems: Loads defined by NFPA 70, Article 701 "Legally Required Standby Systems". Those systems classified as legally required intended to supply loads such as smoke exhaust systems.
- C. Optional Standby Systems: Loads defined by NFPA 70, Article 702 "Optional Standby Systems". Those systems intended to supply loads such as laboratory equipment.
- D. Feeder: All circuit conductors between the service equipment, the source of a separately derived system, or other power supply source and the final branch-circuit overcurrent. Feeders may be identified in the "Legend of Feeder Sizes" identified on the drawings. All feeders are required to be in conduit. MC cable is not permitted unless specifically approved by the Engineer via an RFI or substitution request form. Submittal reviews of product does not permit use of MC cable for feeders.
- E. Branch Circuit: The circuit conductors between the final overcurrent device protecting the circuit and the outlet(s) device. Branch circuits may be identified in the "Branch Circuit Schedule" on the drawings.

- F. EPDM: Ethylene-propylene-diene terpolymer rubber.

#### 1.4 SUBMITTALS

- A. Product Data: For sleeve seals.

#### 1.5 COORDINATION

- A. Coordinate arrangement, mounting, and support of electrical equipment:
  - 1. To allow maximum possible headroom unless specific mounting heights that reduce headroom are indicated.
  - 2. To provide for ease of disconnecting the equipment with minimum interference to other installations.
  - 3. To allow right of way for piping and conduit installed at required slope.
  - 4. So connecting raceways, cables, wireways, cable trays, and busways will be clear of obstructions and of the working and access space of other equipment.
- B. Coordinate installation of required supporting devices and set sleeves in cast-in-place concrete, masonry walls, and other structural components as they are constructed.
- C. Coordinate location of access panels and doors for electrical items that are behind finished surfaces or otherwise concealed. Access doors and panels are specified in Division 08.
- D. Coordinate sleeve selection and application with selection and application of firestopping specified in Division 07.

#### 1.6 MATERIALS AND WORKMANSHIP

- A. Work shall be neat and rectilinear. Install material and equipment in accordance with manufacturers written instructions. Installation shall operate safely and without noise, vibration or corrosion. Work shall be properly and effectively protected, and raceway openings shall be temporarily closed to prevent obstruction and damage before completion.
- B. Except as specified otherwise, material and equipment shall be new, factory tested and delivered ready for field installation. Provide supplies, accessories and connections necessary for complete and operational installation. Provide components required or recommended by OSHA and applicable NFPA documents. Equipment damaged during installation shall be repaired to new condition or replaced with new material. The contractor shall be responsible for all costs associated with testing, replacing to repair, including but not limited to, all replacement or repair costs, preparations prior to testing, all testing costs, extended warranties, re-commissioning of the equipment, etc. with no additional cost to the contract.
- C. The contractor shall take steps necessary to ensure that all materials and equipment can be delivered and installed in sections sufficiently small to fit within openings in the building and that the weight and size of all equipment pieces so not exceed the capacity of the hoisting and/or elevator system.
- D. Owner will not be responsible for material and equipment before testing, commissioning, and acceptance.

## 1.7 EQUIPMENT LOCATION

- A. Location of all wall outlets shall be verified with the Architect prior to roughing in. Refer to details and elevations on the architectural drawings. Mounting heights indicated on the architectural drawings shall take precedence over information indicated on the electrical drawings.
- B. If discrepancies regarding the locations of outlet boxes exist between the electrical drawings and any other drawings associated with the project, notify the Architect. Any reasonable change in location of outlets shall not involve additional expense to Owner. The term “reasonable” shall be interpreted as moving outlet 10’-0” in any direction from the location indicated on the Electrical drawings. Refer to specifications 230000 for additional information.

## 1.8 EMERGENCY SYSTEMS

- A. To comply with the Building Code, “Emergency Systems” shall be separated from other loads in a dedicated room within a 2-hour fire rated enclosure. Generally emergency power will be distributed from the emergency system transfer switch to distribution equipment located in 2-hour fire rated emergency electrical rooms/closets located at strategic points in the building.
- B. The electrical contractor shall identify the 2-hour fire rated rooms/closets with the General Contractor for coordination purposes. All equipment, conduit, piping, ductwork etc, alien to the emergency system shall not be located within these rooms, closets or shafts.
- C. All feeders located outside the 2 hour fire rated rooms/closets shall be installed in a 2-hour fire rated enclosure or the feeder shall be 2-hour mineral insulated (MI) cable.

## 1.9 CABLE TERMINATION TEMPERATURE RATINGS

- A. All equipment terminations connecting to wire and cable, rated 600V or less shall be rated for 75 deg. C for conductors 1 AWG and smaller and/or where conductor ampacities are 100 A or less.

## PART 2 - PRODUCTS

### 2.1 SLEEVES FOR RACEWAYS AND CABLES

- A. Steel Pipe Sleeves: ASTM A 53/A 53M, Type E, Grade B, Schedule 40, galvanized steel, plain ends.
- B. Sleeves for Rectangular Openings: Galvanized sheet steel.
  - 1. Minimum Metal Thickness:
    - a. For sleeve cross-section rectangle perimeter less than 50 inches and no side more than 16 inches, thickness shall be 0.052 inch.
    - b. For sleeve cross-section rectangle perimeter equal to, or more than, 50 inches and 1 or more sides equal to, or more than, 16 inches, thickness shall be 0.138 inch.

### 2.2 SLEEVE SEALS

- A. Description: Modular sealing device, designed for field assembly, to fill annular space between sleeve and raceway or cable.

1. Manufacturers: Subject to compliance with requirements, available manufacturers offering products that may be incorporated into the Work include, but are not limited to, the following:
  - a. Advance Products & Systems, Inc.
  - b. Calpico, Inc.
  - c. Metraflex Co.
  - d. Pipeline Seal and Insulator, Inc.
  - e. or approved equal.
2. Sealing Elements: EPDM interlocking links shaped to fit surface of cable or conduit. Include type and number required for material and size of raceway or cable.
3. Pressure Plates: Plastic. Include two for each sealing element.
4. Connecting Bolts and Nuts: Carbon steel with corrosion-resistant coating of length required to secure pressure plates to sealing elements. Include one for each sealing element.

### 2.3 GROUT

- A. Nonmetallic, Shrinkage-Resistant Grout: ASTM C 1107, factory-packaged, nonmetallic aggregate grout, noncorrosive, nonstaining, mixed with water to consistency suitable for application and a 30-minute working time.

### 2.4 CORDS AND CAPS

- A. Attachment Plug Configuration: Match receptacle configuration at outlet with plug provided for equipment.
- B. Cord Construction: Oil-resistant thermoset insulated Type SO multiconductor flexible cord with identified equipment grounding conductor, suitable for extra hard usage in damp locations.
- C. Cord Size: Suitable for connected load of equipment and rating of branch circuit overcurrent protection.

### 2.5 ACCESS AND ACCESS PANELS

- A. This Section supplements requirements of Division 08.
- B. Description: Interior construction access panels,
- C. Available Manufacturers:
  1. Milcor.
  2. Knapp.
  3. Nystorm.
  4. Inland Steel.
  5. Or approved equal.
- D. Coordinate selection with other Sections supplying similar access panels.
- E. Access panels shall have same fire rating classification as surface penetrated.

## PART 3 - EXECUTION

### 3.1 COMMON REQUIREMENTS FOR ELECTRICAL INSTALLATION

- A. Comply with NECA 1.
- B. Avoid interference with structure and with work of other trades, preserving adequate headroom and clearing doors and passageways, to satisfaction of Architect and in accordance with code requirements. Installation shall permit clearance for access to equipment for repair, servicing and replacement.
- C. Install equipment so as to properly distribute equipment loads on building structural members provided for equipment support under other Sections. Roof-mounted equipment shall be installed and supported on structural steel provided under other Sections.
- D. Provide suspended platforms, strap hangers, brackets, shelves, stands or legs as necessary for floor, wall or ceiling mounting of equipment as required.
- E. Provide steel supports and hardware for proper installation of hangers, anchors, guides, etc.
- F. Provide cuts, weights, and other pertinent data required for proper coordination of equipment support provisions and installation.
- G. Structural steel and hardware shall conform to Standard Specifications of ASTM; use of steel and hardware shall conform to requirements of Section Five of Code of Standard Practice for Steel Buildings and Bridges.
- H. Verify site conditions and dimensions of equipment to ensure access for proper installation of equipment without disassembly which may void warrantee. Report in writing to Architect, prior to purchase or shipment of equipment involved, on conditions which may prevent proper installation.
- I. The Electrical Contractor shall not allow any equipment, ductwork, or piping foreign to the electrical installation to be installed or pass through any room in which electrical systems or equipment is located, such as electrical room, electric closets telephone or data closets. The Electrical Contractor shall notify the Construction Manager of such violations and request removal of such equipment, ductwork, or piping.
- J. Coordinate location of motor control centers, panelboards, and transformers installed in mechanical rooms with the HVAC, Plumbing and Fire Protection subcontractors. No piping, ductwork or other mechanical equipment shall be allowed to pass through the area of the electrical equipment equal to the width and depth of the electrical equipment extending from floor to structural ceiling above. A hung or gypsum board ceiling is not considered structure.
- K. Give right of way to piping systems installed at a required slope and/or specific mounting height or elevation.
- L. Measure indicated mounting heights to bottom of unit for suspended items and to center of unit for wall-mounting items.
- M. Headroom Maintenance: If mounting heights or other location criteria are not indicated, arrange and install components and equipment to provide maximum possible headroom consistent with these requirements.
- N. Equipment: Install to facilitate service, maintenance, and repair or replacement of components of both electrical equipment and other nearby installations. Connect in such a way as to facilitate future disconnecting with minimum interference with other items in the vicinity.

- O. Right of Way: Give to piping systems installed at a required slope.

### 3.2 SLEEVE INSTALLATION FOR ELECTRICAL PENETRATIONS

- A. Electrical penetrations occur when raceways, cables, wireways, cable trays, or busways penetrate concrete slabs, concrete or masonry walls, or fire-rated floor and wall assemblies.
- B. Concrete Slabs and Walls: Install sleeves for penetrations unless core-drilled holes or formed openings are used. Install sleeves during erection of slabs and walls.
- C. Use pipe sleeves unless penetration arrangement requires rectangular sleeved opening.
- D. Fire-Rated Assemblies: Install sleeves for penetrations of fire-rated floor and wall assemblies unless openings compatible with firestop system used are fabricated during construction of floor or wall.
- E. Cut sleeves to length for mounting flush with both surfaces of walls.
- F. Extend sleeves installed in floors 2 inches above finished floor level.
- G. Size pipe sleeves to provide 1/4-inch annular clear space between sleeve and raceway or cable, unless indicated otherwise.
- H. Seal space outside of sleeves with grout for penetrations of concrete and masonry
  - 1. Promptly pack grout solidly between sleeve and wall so no voids remain. Tool exposed surfaces smooth; protect grout while curing.
- I. Interior Penetrations of Non-Fire-Rated Walls and Floors: Seal annular space between sleeve and raceway or cable, using joint sealant appropriate for size, depth, and location of joint. Comply with requirements in Division 07.
- J. Fire-Rated-Assembly Penetrations: Maintain indicated fire rating of walls, partitions, ceilings, and floors at raceway and cable penetrations. Install sleeves and seal raceway and cable penetration sleeves with firestop materials. Comply with requirements in Division 07.
- K. Roof-Penetration Sleeves: Seal penetration of individual raceways and cables with flexible boot-type flashing units applied in coordination with roofing work.
- L. Aboveground, Exterior-Wall Penetrations: Seal penetrations using steel pipe sleeves and mechanical sleeve seals. Select sleeve size to allow for 1-inch annular clear space between pipe and sleeve for installing mechanical sleeve seals.
- M. Underground, Exterior-Wall Penetrations: Install cast-iron pipe sleeves. Size sleeves to allow for 1-inch annular clear space between raceway or cable and sleeve for installing mechanical sleeve seals.

### 3.3 SLEEVE-SEAL INSTALLATION

- A. Install to seal exterior wall penetrations.
- B. Use type and number of sealing elements recommended by manufacturer for raceway or cable material and size. Position raceway or cable in center of sleeve. Assemble mechanical sleeve seals and install in annular space between raceway or cable and sleeve. Tighten bolts against pressure plates that cause sealing elements to expand and make watertight seal.

3.4 FIRESTOPPING

- A. Apply firestopping to penetrations of fire-rated floor and wall assemblies for electrical installations to restore original fire-resistance rating of assembly. Firestopping materials and installation requirements are specified in Division 07.

3.5 HVAC, PLUMBING AND FIRE PROTECTION CONNECTIONS

A. General

- 1. Provide all power wiring including all circuitry carrying electrical energy from panelboard or other source through starters and disconnects to motors or to packaged control panels. Packaged control panels may include disconnects and starters and overcurrent protection. Provide all wiring between packaged control panels and motors.
- 2. HVAC, Plumbing and Fire Protection equipment is defined as products provided under other divisions that require power 120 volts and higher.
- 3. Unless otherwise specified, all electrical control devices such as aquastats, float and pressure switches, electro pneumatic switches, solenoid valves and damper motors requiring mechanical connections shall be furnished and installed and wired by the Contractor supplying the devices.
- 4. Provide conduit and power wiring for connection to alarm panels, remote alarms, etc. Refer to HVAC, Plumbing and Fire Protection drawings for location and quantity of panels/alarms to be connected. Provide connections from local 120-volt panel via 20 ampere circuit breaker.
- 5. All control wiring shall be provided by others, unless noted otherwise in the specification or drawings.

B. Coordination

- 1. Review equipment submittals prior to installation and electrical rough-in. Verify location, size, and type of connections. Coordinate details of equipment connections with supplier and installer.

C. Examination

- 1. Examine the areas and conditions under which the equipment is to be installed.
- 2. Verify that equipment is ready for electrical connection, wiring, and energization.

D. Installation

- 1. Use wire and cable with insulation suitable for temperatures encountered in heat-producing equipment.
- 2. Make conduit connections to vibrating equipment using flexible conduit. Use liquid tight flexible conduit in damp or wet locations.
- 3. Install pre-finished cord set where connection with attachment plug is indicated or specified, or use attachment plug with suitable strain-relief clamps.
- 4. Provide suitable strain-relief clamps for cord connections to outlet boxes and equipment connection boxes for vibrating equipment.

5. Make wiring connections in control panel or in wiring compartment of pre-wired equipment in accordance with manufacturer's instructions. Provide interconnecting wiring where indicated.
6. Install disconnect switches, controllers, control stations, and control devices such as limit switches and temperature switches as indicated. Connect with conduit and wiring as indicated.
7. Each motor terminal box shall be connected with a minimum 12 inches, maximum 24 inches piece of flexible conduit to a fixed junction box. A green wire run through the flexible conduit shall interconnect the motor frame and the branch circuit ground wire. Use liquid tight flexible metal conduit for connection. Conduit must be installed perpendicular to direction of equipment vibration to allow conduit to freely flex.
8. Check for proper rotation of each motor.

E. Building Management Panels

1. Provide conduit and power wiring (120 volt) to all Building Management System Panels, Direct Digital Control panels, Utility Monitoring System (UMS) panels, etc. Provide connection from local 120 volt panel via 20 ampere circuit breaker. Provide one branch circuit for every panel, unless directed otherwise.

3.6 ACCESS PANELS

- A. Provide access panels in accordance with this Section and requirements of Division 08.
- B. Access panels are generally not shown on the drawings, but shall be provided to allow access to system components.
- C. Provide proper access to materials and equipment that require inspection, replacement, repair or service, and coordinate their delivery with the installing Trade. If proper access cannot be provided, confer with Architect as to best method of approach for minimizing effect of reduced access which may result.
- D. Coordinate and prepare a location, size, and function schedule of access panels required to fully service equipment and deliver to a representative of the installing Trade. Furnish and install distinctively colored buttons (color as selected by Architect) in finished ceiling to identify all access panels.
- E. Provide access panels to all items requiring maintenance including at fire dampers, volume dampers, controls, shut-off valves, control valves, check valves, or other items that require access and are concealed in floor, wall, furred space or above ceiling.
- F. Ceilings consisting of lay-in or removable splined tiles do not require access panels and dampers, splitters, or test hole openings above ceiling shall have location marked with thumb tack on finished ceiling panel. Location shall be noted on record drawings.
- G. Access panels shall have same fire rating classification as surface penetrated.
- H. Panels within 8" of the surface being penetrated shall be the sized for the greater of 12"x12" or size required to allow removal of the component being maintained; panels further than 8" from the surface being penetrated and access at all equipment requiring service (including disconnects) shall be a minimum of 24"x24". Access doors to fire dampers shall be a minimum of 18"x16" if fire damper is within ordinary person's arms reach of the access panel or 24"x24" if beyond arms reach as required by NFPA 90A-2002.

### 3.7 CONNECTIONS TO OWNER AND ARCHITECT EQUIPMENT

#### A. General

1. Provide all power wiring including all circuitry carrying electrical energy from panelboard or other source to owner and architectural equipment for complete and operational equipment.
2. Owner and Architectural equipment is defined as products provided under other divisions that operate at voltages 110 and above. Equipment may include but not be limited to the following:
  - a. Coffee machines
  - b. Vending machines
  - c. Microwaves
  - d. Refrigerators
  - e. Dishwashers
  - f. Copy machines
  - g. Projector screens
  - h. Motorized doors
  - i. Electric hand dryers
  - j. Scoreboards
3. All control wiring shall be provided by others, unless noted otherwise in the specification or drawings.

#### B. Coordination

1. Coordinate location of equipment with Architect and Owner.
2. Review equipment submittals prior to installation and electrical rough-in. Verify location, size, and type of connections. Coordinate details of equipment connections with supplier and installer.
3. Obtain wiring diagrams and installation methods from equipment manufacturers.

#### C. Examination

1. Examine the areas and conditions under which the equipment is to be installed.
2. Verify that equipment is ready for electrical connection, wiring, and energization.

#### D. Installation

1. Make conduit connections to vibrating equipment using flexible conduit. Use liquid tight flexible conduit in damp or wet locations.
2. Install pre-finished cord set where connection with attachment plug is indicated or specified, or use attachment plug with suitable strain-relief clamps.
3. Provide suitable strain-relief clamps for cord connections to outlet boxes and equipment connection boxes for vibrating equipment or for cord drops from ceilings.

4. Make wiring connections in control panel or in wiring compartment of pre-wired equipment in accordance with manufacturer's instructions. Provide interconnecting wiring where indicated.
5. Each motor terminal box shall be connected with a minimum 12", maximum 24" piece of flexible conduit to a fixed junction box. A green wire run through the flexible conduit shall interconnect the motor frame and the branch circuit ground wire. Use liquid tight flexible metal conduit for connection. Conduit must be installed perpendicular to direction of equipment vibration to allow conduit to freely flex.
6. Check for proper rotation of each motor.

### 3.8 ELECTRICAL INSTALLATION FOR ELEVATORS

#### A. General

1. Electrical Contractor shall provide electrical power and auxiliary services to elevators generally as described and as amended by the elevator contract shop drawings and specifications. Prior to installation, Electrical Contractor shall coordinate work with Elevator Contractor.
2. All traveling cables, control stations, control station wiring and final control connections at the controller shall be furnished and installed under Division 11 Elevator Work.

#### B. Coordination

1. Review equipment submittals prior to installation and electrical rough-in. Verify location, size, and type of connections. Coordinate details of equipment connections with supplier and installer.
2. Coordinate entire installation with Division 11 Contractor prior to rough-in.

#### C. Examination

1. Verify that equipment is ready for electrical connection, wiring, and energization.

#### D. Installation

1. Make wiring connections in control panel or in wiring compartment of pre-wired equipment in accordance with manufacturer's instructions. Provide interconnecting wiring where indicated.
2. Provide all power wiring from source through disconnect to elevator controller to motor.

#### E. Provide the following auxiliary services to the elevator pit for each elevator. Locate and identify all services as directed by elevator shop drawings or Elevator Contractor.

1. Elevator pit shall be provided with vapor-tight lighting fixture with polycarbonate lens switched from the entrance of elevator pit served by a dedicated branch circuit. Do not wire light fixture on GFI circuit.
2. Provide 120 volt, 20 ampere dedicated GFI receptacle in the elevator pit served by a dedicated branch circuit.
3. Where provided, connect to sump pump in elevator pit with dedicated branch circuit.

#### F. Provide the following auxiliary services for each elevator. Locate and identify all services as directed by elevator shop drawings or Elevator Contractor.

1. Cab lighting: Provide manual switch labeled "cab lights" adjacent to power disconnect. Extend 120 volt circuit from source through lockable switch to controller. Provide one lockable switch and 120-volt circuit per unit.
2. Cab telephone: Junction box with 1" conduit to local telephone backboard.
3. Cab security: Junction box with 1" conduit to local security backboard.
4. Controller: Provide separate 120 volt, single phase, 20 ampere circuit to lockable thermal overload switch.
5. Intercom System: Provide 120 volt, 20-ampere branch circuit.

### 3.9 CLEANING

- A. Cleaning shall be performed on a day-to-day basis and a final cleaning prior to commissioning.
- B. Equipment
  1. All electrical equipment shall be cleaned inside and out prior to initial energizing.
  2. Cleaning shall consist of vacuuming busses, windings, enclosures (inside and out), etc. After vacuuming is complete, the equipment shall be wiped down.
  3. If equipment is wet or contains moisture, it shall be thoroughly dried out and inspected by the manufacturer's representative before energizing.
- C. Raceways
  1. All raceways shall be blown out and dried prior to installation of conductors.
  2. Raceways installed in or below the slab shall have a mandrel pulled through to clear any dirt and debris.
- D. Pull, Junction, Work and Floor Boxes
  1. All boxes shall be cleaned of debris such as plaster and concrete residue prior to installation of conductors.
  2. Vacuum all dirt and debris from floor boxes prior to installing inserts.
- E. Electrical Rooms
  1. Upon completion of cleaning equipment, raceways and boxes, but before energizing equipment, the entire room shall be swept clean with all garbage removed from the area.
  2. When the room is clean and equipment energized, the area shall remain clean and the doors to the room shall remain closed until completion of project.
  3. If the room or equipment is subjected to dust or moisture after energizing the equipment shall be de-energized and re-cleaned as outlined above.
- F. Final Cleaning
  1. All light fixtures, devices, device plates, etc., shall be cleaned and left in new condition to the satisfaction of the Architect, prior to final occupancy.
  2. All rubbish, discarded materials and unused materials shall be removed from site.

END OF SECTION

H:\Y0586.00\DOC\SPEC\2025\_02-20\_IFB\260500\_COMMON WORK RESULTS.DOC

## SECTION 260519 - LOW-VOLTAGE ELECTRICAL POWER CONDUCTORS AND CABLES

### PART 1 - GENERAL

#### 1.1 RELATED DOCUMENTS

- A. Certain requirements common to all the mechanical and electrical trades (Fire Suppression, Plumbing, HVAC, Electrical, and Tele/Data) are specified in Division 20. To avoid repetition, they are not repeated in each relevant Division and Section. However, these requirements are applicable to the work of this Section and are hereby incorporated by reference.
- B. Drawings and general provisions of the Contract, including General and Supplementary Conditions and Division 01 Specification Sections, apply to this Section.

#### 1.2 SUMMARY

- A. This Section includes the following:
  - 1. Conductors
  - 2. Multi-conductor cable
  - 3. Connectors and splices
  - 4. Cable supports

#### 1.3 DEFINITIONS

- A. EPDM: Ethylene-propylene-diene terpolymer rubber.
- B. Feeder: All circuit conductors between the service equipment, the source of a separately derived system, or other power supply source and the final branch-circuit overcurrent device.
- C. Branch Circuit: The circuit conductors between the final overcurrent device protecting the circuit and the outlet(s).

#### 1.4 SUBMITTALS

- A. Product Data: For each type of product indicated.
- B. Field quality-control test reports.

#### 1.5 QUALITY ASSURANCE

- A. Electrical Components, Devices, and Accessories: Listed and labeled as defined in NFPA 70, Article 100, by a testing agency acceptable to authorities having jurisdiction, and marked for intended use.
- B. Comply with NFPA 70.

#### 1.6 COORDINATION

- A. Set sleeves in cast-in-place concrete, masonry walls, and other structural components as they are constructed.

## PART 2 - PRODUCTS

### 2.1 CONDUCTORS

- A. Manufacturers: Subject to compliance with requirements, provide products by one of the following:
  - 1. American Insulated Wire Corp.; a Leviton Company.
  - 2. General Cable Corporation.
  - 3. Senator Wire & Cable Company.
  - 4. Southwire Company.
  - 5. or Approved Equal
- B. Copper Conductors: Comply with NEMA WC 70 and ASTM B-496. Copper conductors shall be soft drawn annealed copper, having a conductivity of not less than 98 percent of that of pure copper.
  - 1. Conductor Insulation:
    - a. Comply with NEMA WC 70 for Types THHN-THWN
    - b. All copper conductor insulation shall be Type “THHN” or “THHN/THWN”, except as specified hereinafter in subparagraph c, below.
    - c. All conductors within lighting fixtures shall be temperature rated as required by National Electrical Code, latest edition. Branch circuit conductors within 3 inches of fluorescent ballast shall be Type “THHW” or “XHHW”.

### 2.2 MULTI-CONDUCTOR CABLE

- A. Multiconductor Cable: Comply with NEMA WC 70 for metal-clad cable, Type MC.
- B. Multiconductor cables run in parallel shall include full size grounding conductor in accordance with NFPA 70 Article 250.122
- C. MC Cable
  - 1. Available Manufacturers: The design is based on AFC Cable Systems, Inc. to establish standards of quality for materials and performance. The naming of a specific manufacturer or catalog number does not waive any requirements or performance of individual components described in the specifications.
  - 2. Acceptable alternate manufacturers are
    - a. Southwire Company
    - b. Allflex
    - c. Alliance
    - d. or approved equal.
  - 3. General
    - a. Cable shall be multi-conductor Metal Clad (UL-Type MC) Power cable that meets or exceeds the requirements of UL Standard 83, UL Standard 1063, UL Standard

1569 for Type MC, Federal Specification A-A59544, IEEE 1202 (70,000 Btu/hr) Vertical Cable Tray Flame Test, and the National Electrical Code.

- b. Cable assemblies shall be prefabricated at the factory and shipped to the job site on cable reels.

4. Material

- a. Conductors shall be minimum No. 12 AWG, soft drawn copper with 90°C, THHN, 600 V rated insulation. Where the length of MC cable exceeds 65 feet for 120 volt circuits and 145 feet for 277 volt circuits provide No. 10 AWG conductor with same properties as listed above. For branch circuits longer than 100 feet for 120 volt and 230 feet for 277 volt refer to the Branch Circuit Schedule on the drawings for the conductor size.
- b. Each length of MC cable shall have a dedicated neutral conductor for each phase conductor. Each length shall include a full size equipment grounding conductor. Where isolated ground receptacles are indicated on plans provide an isolated ground conductor (green with yellow strip) with each length of cable.
- c. Cable shall be UL Classified 1, 2, and 3 hour Through Penetration Firestop Systems: W-J-3037, W-L-3110, W-L-3113, W-L-3117, W-L-3120, W-L-3121, W-L-3160, C-AJ-3115, C-AJ-3140, C-AJ-3142, C-AJ-3145, C-AJ-3173, C-AJ-3202, C-AJ-4065, C-AJ-4066, F-C-3038.
- d. Sheath shall be continuous welded, corrugated aluminum sheath.

D. Mineral Insulated (MI) Cable

1. Available Manufacturers:

- a. The design is based on Tyco Thermal Controls/Pyrotenax to establish standards of quality for materials and performance. The naming of a specific manufacturer or catalog number does not waive any requirements or performance of individual components described in the specification.
- b. Alternate Manufacturers:
  - 1) Nvent
  - 2) MI Cable Co.
  - 3) or approved equal.

2. Materials

- a. MI cables and components shall not contribute to flame or smoke spread and shall not generate toxic, hazardous or flammable products when subjected to the UL 2196 fire test. Cables shall maintain complete circuit integrity when subjected to a 100 psi, 2-1/2 inch hose stream at the end of the UL 2196 fire test without the loss of any phase, neutral, equipment grounding conductor while under full load.
- b. Manufacturer's MI cable compressive strength testing shall yield 80,000 psi minimum to 120,000 psi before circuit failure while under full load.
- c. MI Cable and components shall be as follows:
  - 1) Conductors: Copper
  - 2) Insulation Voltage Rating: 600 volts

- 3) Cable Temperature Rating: 75 deg C application, 90 deg C maximum
- 4) Termination Temp. Rating: 75 deg C application, 105 deg C maximum
- 5) Insulation Material: Inorganic magnesium oxide refractory mineral.
- 6) Metal-sheath Material: Seamless soft-drawn copper.
- 7) Fire Rating: 2-hour fire rating, completed cable assembly
- 8) Overjacket: None, except PVC where directly buried.
- 9) Cable Sheath Marking: Conductor size, voltage, and UL fire resistive classification number.
- 10) Cable Termination:
  - a) Conductors No. 10 AWG and smaller – Tyco Thermal Controls / Pyrotenax Model Pyro-Pak Installation Sheet 545.
  - b) Conductors No. 8 AWG and larger – Tyco Thermal Controls / Pyrotenax Model Quick-Term Installation Sheet 638.
- 11) Cable Splice: Tyco Thermal Controls / Pyrotenax Model Installation Sheet 550
- 12) Supporting Hardware: As approved by MI cable manufacturer.

## 2.3 CONNECTORS AND SPLICES

- A. Manufacturers: Subject to compliance with requirements, provide products by one of the following:
  1. AFC Cable Systems, Inc.
  2. Hubbell Power Systems, Inc.
  3. O-Z/Gedney; EGS Electrical Group LLC.
  4. 3M; Electrical Products Division.
  5. Tyco Electronics Corp.
  6. Or approved equal.
- B. Description: Factory-fabricated connectors and splices of size, ampacity rating, material, type, and class for application and service indicated.
- C. Copper: All No. 6 AWG and larger copper conductors shall be connected with bolt-on compression connectors by Thomas & Betts (or approved equal) sized as required by codes and specifically intended to connect copper wire and cable to panelboards, substations, disconnect switches, and other equipment. Install with hydraulic crimping tool as required by manufacturer's recommendations, to ensure permanent high conductivity connection.
  1. Terminations: Thomas & Betts Series 54200 (or approved equal) two hole connectors shall be used. Exceptions are as follows:
    - a. Where equipment or device cannot be provided by the manufacturer to accept two hole connectors, T&B Series 54100 (or approved equal) single hole connectors with anti-rotation lug or restraint shall be used.

- b. Where equipment or devices cannot be provided by the manufacturer to accept either two-hole or single hole compression connectors, set screw type connectors may be submitted. For a set screw connector to be considered by the Engineer, the manufacturer shall provide deviation with his/her equipment submittals that his/her equipment will not accommodate the required compression connectors. See Division 20 for deviation requirements.
- 2. Copper to Copper Splices, if allowed, shall be with T&B Series 54500 (or approved equal) compression connectors.
- 3. Tapping of Copper Conductors shall be with T&B Series 54700 (or approved equal) compression taps.
- 4. All No. 8 AWG and smaller solid conductors shall be spliced with pre-insulated spring connectors. Connectors shall be Skotch-lok, Buchanan B-Cap or approved equal.
- 5. For NEC Class 1, 2 or 3 wiring, No. 10 AWG and smaller stranded conductors and terminated with AMP, Inc. "PIDG", UL listed premium grade insulated compression fork connectors or approved equal and shall be spliced in a junction box with AMP, Inc. "Plastic-Grip" UL listed, standard grade insulated butt splices or approved equal. All motor branch circuit conductors terminating at the motor termination box shall be spliced with compression type connectors.

## 2.4 CABLE SUPPORTS

- A. Available Manufacturers:
  - 1. The design is based on O.Z./Gedney to establish standards of quality for materials and performance. The naming of a specific manufacturer or catalog number does not waive any requirements or performance of individual components described in the specification.
  - 2. Acceptable alternate manufacturers are Cross Hinds, Kellem or the Engineer's approved equal.
- B. Cable Supports for Vertical Conduit: Factory-fabricated assembly consisting of threaded body and insulating wedging plug for non-armored electrical cables in riser conduits. Provide plugs with number and size of conductor gripping holes as required to suit individual risers. Construct body of malleable-iron casting with hot-dip galvanized finish.
- C. Provide split wedge cable supports with clamps for cable without metallic sheath. Provide basket weave or approved equal cable supports approved by cable manufacturer for cable with metallic sheath.

## PART 3 - EXECUTION

### 3.1 CONDUCTOR MATERIAL APPLICATIONS

- A. Feeders: Stranded Copper.
- B. Branch Circuits: Copper. Solid for No. 10 AWG and smaller; stranded for No. 8 AWG and larger.
- C. VFD to motor Wiring
  - 1. Ampacity of input wiring to VFDs shall be at least 125 percent of the VFD input rating.

2. Wiring from variable frequency drive output to the motor terminals, shall be in grounded metallic conduit.

### 3.2 CONDUCTOR INSULATION AND MULTI-CONDUCTOR CABLE APPLICATIONS AND WIRING METHODS

- A. Service Entrance: Type XHHW, single conductors in raceway.
- B. Exposed Feeders: Type THHN-THWN, single conductors in raceway.
- C. Feeders Concealed in Ceilings, Walls, Partitions, and Crawlspace: Type THHN-THWN, single conductors in raceway.
- D. Feeders Concealed in Concrete, below Slabs-on-Grade, and Underground: Type XHHW, single conductors in raceway.
- E. Exposed Branch Circuits, Including in Crawlspace: Type THHN-THWN, single conductors in raceway.
- F. Branch Circuits Concealed in Ceilings, Walls, and Partitions: Type THHN-THWN, single conductors in raceway or Metal-clad cable, Type MC.
- G. Branch Circuits Concealed in Concrete, below Slabs-on-Grade, and Underground: Type THHN-THWN, single conductors in raceway
- H. Emergency feeders when installed outside of electrical rooms: MI Cable
- I. Class 1 Control Circuits: Type THHN-THWN, in raceway.
- J. Class 2 Control Circuits: Type THHN-THWN, in raceway.

### 3.3 INSTALLATION OF CONDUCTORS

- A. Conceal cables in finished walls, ceilings, and floors, unless otherwise indicated.
- B. Use manufacturer-approved pulling compound or lubricant where necessary; compound used must not deteriorate conductor or insulation. Do not exceed manufacturer's recommended maximum pulling tensions and sidewall pressure values.
- C. Use pulling means, including fish tape, cable, rope, and basket-weave wire/cable grips that will not damage cables or raceway.
- D. Install exposed cables parallel and perpendicular to surfaces of exposed structural members, and follow surface contours where possible.
- E. Support cables according to Division 26.
- F. Identify and color-code conductors and cables according to Division 26.
- G. Provide cable supports and boxes for vertical feeders as required by NEC.
- H. Wire from point of service connection to receptacles, lighting fixtures, devices, equipment, outlets for future extension, and other electrical apparatus as shown on Drawings. Provide slack wire for connections. Tape ends of wires and provide blank covers for outlet boxes designated for future use. Mark future conductors as such with panel and circuit designation.
- I. Conductors No. 10 and smaller in branch circuit panelboards, signal cabinets, signal control boards, switchboards and motor control centers shall be bundled. Conductors larger than No. 10 in switchboards, motor control centers and pull boxes shall be cabled in individual circuits.

- J. Two or more conduits installed instead of single conduit shall contain duplicate conductors, including neutrals and ground conductors where required; total capacity of duplicate conductors shall be at least equal to capacity of conductors replaced.
- K. Follow homerun circuit numbers shown on Drawings to connect circuits to panelboards. Where homerun circuit numbers are not shown on Drawings, divide similar types of connected loads among phase buses so that currents are approximately equal in normal usage. Connect each branch circuit homerun with two or more circuits to circuit breaker or switch in three-wire or four-wire branch circuit panelboard so that no two circuits are fed from same bus. Where panelboard cabinets are recessed, provide conduits with sufficient capacity for future conductors for spare branch circuit protective devices and spaces in panelboard; stub up concealed to junction box. Provide extensions above ceiling.
- L. Where conductors have been oversized for voltage drop provide reducers on feeders and branch circuits to accommodate wire size at terminations.
- M. Conductors entering panels, junction boxes, equipment cabinets, etc. shall be neatly formed, laced and supported around the equipment or devices. Adhesive glues or tapes shall not be used to support conductors.

### 3.4 MULTI-CONDUCTOR CABLE APPLICATIONS AND WIRING METHODS:

- A. Uses Permitted: administration areas of building only.
  - 1. Branch circuit conductors in EMT shall be provided to first devices. MC cable shall be permitted from first device to subsequent devices in the circuit where run concealed within a wall or partition
  - 2. Branch Circuits Concealed in Ceilings, Walls, and Partitions: Metal-clad cable, Type MC.
- B. Uses not permitted
  - 1. Pool and gymnasium areas
  - 2. Branch circuit from panelboard to first device.
  - 3. Feeders.
  - 4. In open spaces such as finished areas.
  - 5. Underground or embedded within concrete.
  - 6. Where subject to physical damage.
  - 7. Theater dimmer circuits.
  - 8. Life safety and critical systems in healthcare facilities.
  - 9. Where exposed at “floating” or hung ceilings.
- C. MC Cable Management:
  - 1. Other than Electric Rooms and Electric Closets:
    - a. At a minimum provide independent Unistrut support for MC cables
      - 1) Supports shall be installed such that MC cable length is free of sags.
    - b. Where more than eight MC cables are bundled together, provide cable tray for MC cable management.

- c. Contractor shall develop cable management plans for review with Owner, Architect, and Engineer indicating:
  - 1) Locations of rigid raceway
  - 2) Locations of MC cable including:
    - a) Locations of cable tray for MC cable management
    - b) Indicate locations where field conditions cannot accommodate cable tray.
    - c) Where cable tray is not required or cannot be installed due to field conditions, indicate method of support such as Unistrut, hanger support etc.
- d. Metal clad cable shall be secured using mechanical fasteners. Tie wraps shall not be used to secure cables unless installed in cable tray.

### 3.5 CONNECTIONS

- A. Tighten electrical connectors and terminals according to manufacturer's published torque-tightening values. If manufacturer's torque values are not indicated, use those specified in UL 486A and UL 486B.
- B. Make splices and taps that are compatible with conductor material and that possess equivalent or better mechanical strength and insulation ratings than unspliced conductors.
- C. Wiring at Outlets: Install conductor at each outlet, with at least 6 inches of slack.
- D. No modifications to any connector or fitting shall be permitted.
- E. The approved connector manufacturer's recommended installation tool and procedures shall be used.
- F. Water chilling unit motor terminations shall be made with compression connectors, which accommodate the conductor size indicated on the Drawings and have a hole size to fit the water chilling unit motor connection stud. Subcontractor shall coordinate the compression connector with the water chilling unit manufacturer's termination requirements. Field modification to the compression lug or the motor stud will not be permitted.
- G. All bolt and screw connections shall be torqued in accordance with the manufacturer's recommendations. Subcontractor shall include a copy of the manufacturer's recommendations with all applicable submittals.
- H. Where conductors are oversized for voltage drop, provide cable reducing adapters for cable terminations. Cable reducers shall be manufactured by Greaves or equal.
- I. All exterior wiring connections, and those made at or below grade shall be waterproof with UL listed waterproof connectors.

### 3.6 FIELD QUALITY CONTROL

- A. Perform tests and inspections and prepare test reports.
- B. Tests and Inspections:
  - 1. After installing conductors and cables and before electrical circuitry has been energized, test service entrance and feeder conductors.

2. Perform each visual and mechanical inspection and electrical test stated in NETA Acceptance Testing Specification. Certify compliance with test parameters.
3. Infrared Scanning: After Substantial Completion, but not more than 60 days after Final Acceptance, perform an infrared scan of each splice in cables and conductors No. 3 AWG and larger. Remove box and equipment covers so splices are accessible to portable scanner.
  - a. Follow-up Infrared Scanning: Perform an additional follow-up infrared scan of each splice 11 months after date of Substantial Completion.
  - b. Instrument: Use an infrared scanning device designed to measure temperature or to detect significant deviations from normal values. Provide calibration record for device.
  - c. Record of Infrared Scanning: Prepare a certified report that identifies splices checked and that describes scanning results. Include notation of deficiencies detected, remedial action taken, and observations after remedial action.
- C. Test Reports: Prepare a written report to record the following:
  1. Test procedures used.
  2. Test results that comply with requirements.
  3. Test results that do not comply with requirements and corrective action taken to achieve compliance with requirements.
- D. Remove and replace malfunctioning units and retest as specified above.

END OF SECTION

H:\Y0586.00\DOC\SPEC\2025\_02-20\_IFB\260519\_LOW VOLTAGE CONDUCTORS AND CABLES.DOC

## SECTION 260526 - GROUNDING AND BONDING FOR ELECTRICAL SYSTEMS

### PART 1 - GENERAL

#### 1.1 RELATED DOCUMENTS

- A. Certain requirements common to all the mechanical and electrical trades (Fire Suppression, Plumbing, HVAC, Electrical, and Tele/Data) are specified in Division 20. To avoid repetition, they are not repeated in each relevant Division and Section. However, these requirements are applicable to the work of this Section and are hereby incorporated by reference.
- B. Drawings and general provisions of the Contract, including General and Supplementary Conditions and Division 01 Specification Sections, apply to this Section.

#### 1.2 SUMMARY

- A. This Section includes methods and materials for grounding systems and equipment, plus the following special applications:
  - 1. Conductors
  - 2. Connectors
  - 3. Grounding electrodes
- B. Equipment grounding system shall be designed so metallic structures, enclosures, raceways, cable tray, junction boxes, outlet boxes, cabinets, machine frames, portable equipment and other conductive items in close proximity with electrical circuits operate continuously and ground potential and provide low impedance path for possible ground fault currents.

#### 1.3 REFERENCES

- A. Publications listed below (including amendments, addenda, revisions, supplements and errata) form part of this specification to the extent referenced. Publications are referenced in the text by the basic designations only.
  - 1. NFPA 70      National Electrical Code
  - 2. NFPA 780     Standard for the Installation of Lightning Protection Systems
  - 3. UL 96        UL Standard for Safety for Lightning Protection Systems
  - 4. UL 467       Grounding and Bonding Equipment
  - 5. UL 486A      Wire Connectors and Soldering Lugs for Use with Copper Conductors
  - 6. IEEE/ANSI 142 Latest Edition Recommended Practice for Grounding of Industrial and Commercial Power Systems
  - 7. ASTM B3      Solid Conductors
  - 8. ASTM B8      Assembly of Stranded Conductors
  - 9. ASTM B33     Tinned Conductors
  - 10. NEMA GR1    Ground Rods and Ground Rod Couplings

#### 1.4 SUBMITTALS

- A. Product Data: For each type of product indicated.
- B. Other Informational Submittals: Plans showing dimensioned as-built locations of grounding features specified in Part 3 "Field Quality Control" Article, including the following:
  - 1. Ground rods.
  - 2. Ground rings.
  - 3. Concrete encased electrodes.
  - 4. Grounding arrangements and connections for separately derived systems.
- C. Field quality-control test reports that include the following.
  - 1. Test procedures used.
  - 2. Test results that comply with the requirements.
  - 3. If applicable, results of failed tests and corrective action taken to achieve test results that comply with the requirements.
- D. Operation and Maintenance Data: For grounding to include the following in emergency, operation, and maintenance manuals:
  - 1. Instructions for periodic testing and inspection of grounding features at ground rings and grounding connections for separately derived systems based on NETA MTS.
    - a. Tests shall be to determine if ground resistance or impedance values remain within specified maximums, and instructions shall recommend corrective action if they do not.
    - b. Include recommended testing intervals.

#### 1.5 QUALITY ASSURANCE

- A. Electrical Components, Devices, and Accessories: Listed and labeled as defined in NFPA 70, Article 100, by a testing agency acceptable to authorities having jurisdiction, and marked for intended use.
- B. Comply with UL 467 for grounding and bonding materials and equipment.

### PART 2 - PRODUCTS

#### 2.1 CONDUCTORS

- A. Insulated Feeder and Branch Circuit Equipment Ground Conductors: Copper stranded conforming to ASTM B8 and B33 wire or cable insulated for 600 V sized as shown on drawings, specifications or as required by NFPA 70, whichever is larger. Insulation class other than 600V shall only be provided where otherwise required by applicable Code or authorities having jurisdiction.
- B. Bare Copper Grounding Electrode Conductors: Bare, stranded cable of size shown on drawings, specifications or as required by NFPA 70, whichever is larger.
  - 1. Stranded Conductors: ASTM B 8.

2. Solid Conductors: ASTM B 3.
- C. Grounding Bus: Provide ground bus where specified and required.
  1. Grounding Bus Material: Rectangular bars of bare copper, (1/4 by 2 inches in cross section, minimum 24 inch length unless otherwise indicated; with insulated standoffs and stainless steel fasteners.
  2. Ground Bus shall be UL 467 listed.
  3. Field modification or cut bus shall not be acceptable.

## 2.2 CONNECTORS

- A. Listed and labeled by a nationally recognized testing laboratory acceptable to authorities having jurisdiction for applications in which used, and for specific types, sizes, and combinations of conductors and other items connected.
- B. Mechanical Connectors: Provide mechanical connectors of the two bolt type, listed and labeled by a nationally recognized testing laboratory acceptable to authorities having jurisdiction for applications in which used, and for specific types, sizes, and combinations of conductors and other items connected.
  1. Pipe Connectors: Clamp type, sized for pipe.
  2. Materials: The mechanical connector bodies shall be manufactured from high strength, high conductivity cast copper alloy material. Bolts, nuts, washers and lockwashers shall be made of Silicon Bronze and supplied as a part of the connector body and shall be of the two bolted pressure type. Split bolt connector types shall NOT be accepted.
  3. The connectors shall meet or exceed UL 467 and be clearly marked with the catalog number, conductor size and manufacturer.
- C. Compression Connectors: Provide compression connectors that meet or exceed the performance requirements of IEEE 837, latest revision. Compression connectors shall be listed and labeled by a nationally recognized testing laboratory acceptable to authorities having jurisdiction for applications in which used, and for specific types, sizes, and combinations of conductors and other items connected.
  1. Materials: The compression connectors shall be manufactured from pure wrought copper. The conductivity of this material shall be no less than 99% by IACS standards.
    - a. The installation of the connectors shall be made with a compression tool and die system as recommended by the manufacturer of the connectors.
    - b. The connectors shall be clearly marked with the manufacturer, catalog number, conductor size and the required compressions tool settings.
    - c. Each connector shall be factory filled with an oxide-inhibiting compound.
- D. Welded Connectors: Provide exothermic connections for copper to copper and copper to steel connections to ground rods, ground buses, ground wires, steel beams, rebar, etc.
  1. The supplier of the equipment shall provide with no additional charge and information or supervision required for the proper installation of the equipment and training of operating personnel

2. Materials: Conductors spliced with an exothermic welded connection shall be considered as a continuous conductor, as stated in the notes accompanying NEC articles 250.50, 250.64 and IEEE Standard 80 (latest edition).
  - a. Procedures outlined in the Manufacturer's installation instruction shall be followed. Molds shall not be modified during installation in field applications.
  - b. Weld metal shall be a mixture of copper oxide and aluminum. Only one weld metal mixture shall be required for each grounding connection.
  - c. Grounding connections shall be tested and certified in accordance with IEEE 837, UL 486A and UL 467.
3. All exothermic Connections shall:
  - a. Prove to carry more current than the conductor.
  - b. Not deteriorate during the life of the connection.
  - c. Will not loosen or corrode during the life of the connection.
  - d. Resist repeated fault currents without failure.
  - e. Be of high visually discerned quality.
  - f. Eliminate electrolytic penetration of conductors (strands).

## 2.3 GROUNDING ELECTRODES

- A. Ground Rods: Ground Rods shall be Copper-clad steel; 3/4 inch by 10 feet in diameter unless otherwise specified with a tensile strength not less than 75,000 psi. Copper shall be applied electrolytically forming a metallurgical bond between the steel core and the copper
  1. Provide ground rods where shown or required to obtain the ground resistance specified in Part 3.

## PART 3 - EXECUTION

### 3.1 GENERAL

- A. Install Products in accordance with manufacturer's instructions.
- B. Mechanical connections shall be accessible for inspection and checking. No insulation shall be installed over mechanical ground connections.
- C. Ground connection surfaces shall be cleaned prior to connections.
- D. Attach grounds permanently before building service is energized.
- E. Provide bonding to meet Regulatory Requirements.
- F. Bond together reinforcing steel and metal accessories in pool structures.
- G. Examine raceway, equipment or area to receive grounding to provide adequate sizes, placement and materials for a complete installation.
- H. Tighten screws and bolts for grounding and bonding connectors and terminals according to manufacturer's published torque-tightening values. If manufacturer's torque values are not indicated, use those specified in UL 486A.

- I. Determine numbers and sizes of screw terminals for equipment grounding bars in panelboards and other electrical equipment. Provide screw terminals for active circuits, spares and spaces.
- J. Provide equipment ground conductor in same raceway with associated phase conductors.

### 3.2 APPLICATIONS

- A. Conductors: Install solid conductor for No. 8 AWG and smaller, and stranded conductors for No. 6 AWG and larger, unless otherwise indicated.
- B. Provide green insulated grounding conductor in nonmetallic conduits or ducts unless specified otherwise.
- C. Transformers: Step down transformers secondary's shall be grounded to the building steel, if available, or the main building service ground, or ground riser where available.
- D. Feeders: Bond all conduits carrying individual grounding or grounding electrode conductors with grounding bushing to ground bus in panel with a copper grounding conductor sized per NEC 250.102 (D). Where a panel such as a distribution panel has multiple feeders, a common ground conductor is permitted to be run from ground bushing to ground bushing and then to ground bus in panel.
- E. Underground Grounding Conductors: Install barecopper conductor, No. 2/0 AWG minimum.
  - 1. Bury at least 24 inches below grade.
  - 2. Duct-Bank Grounding Conductor: Bury 12 inches above duct bank when indicated as part of duct-bank installation.
- F. Grounding Bus: Install in electrical and telephone equipment rooms, in rooms housing service equipment, and elsewhere as indicated.
  - 1. Install bus on insulated spacers 1 inch, minimum, from wall 6 inches above finished floor, unless otherwise indicated.
  - 2. Where indicated on both sides of doorways, route bus up to top of door frame, across top of doorway, down to specified height above floor, and connect to horizontal bus.
- G. Conductor Terminations and Connections:
  - 1. Pipe and Equipment Grounding Conductor Terminations: Bolted connectors.
  - 2. Underground Connections: Welded connectors, except at test wells and as otherwise indicated.
  - 3. Connections to Ground Rods at Test Wells: Bolted connectors.
  - 4. Connections to Structural Steel: Welded connectors.

### 3.3 GROUNDING UNDERGROUND DISTRIBUTION SYSTEM COMPONENTS

- A. Comply with IEEE C2 grounding requirements.
- B. Grounding Handholes: Install a driven ground rod through handhole floor, close to wall, and set rod depth so 4 inches will extend above finished floor. If necessary, install ground rod before manhole is placed and provide No. 1/0 AWG bare, tinned-copper conductor from ground rod into manhole through a waterproof sleeve in manhole wall. Protect ground rods passing through concrete floor with a double wrapping of pressure-sensitive insulating tape or heat-

shrunk insulating sleeve from 2 inches above to 6 inches below concrete. Seal floor opening with waterproof, non-shrink grout.

- C. Pad-Mounted equipment including Transformers, Generators and Switches: Install two ground rods and ground ring around the pad. Ground pad-mounted equipment and noncurrent-carrying metal items by connecting them to underground cable and grounding electrodes. Conductor shall be not less than No. 4/0 AWG for loop around pad and for taps to equipment ground pad. Bury conductors 24 inches below grade and 12 inches from the foundation. Below grade connections shall be made with Exothermic weld.
  - 1. Bond pad mounted equipment ground system to building grounding electrode system.

### 3.4 EQUIPMENT GROUNDING

- A. Install insulated equipment grounding conductors with all feeders and branch circuits. Terminate each end on suitable lug, bus, enclosure or bushing, per NEC. Provide a ground wire from each device to the respective enclosure.
- B. Install equipment ground conductor in common conduit with related phase or neutral conductors, or both. Parallel feeders installed in more than one raceway shall have individual full size green insulated equipment ground conductors.
- C. Install insulated equipment grounding conductors with the following items, in addition to those required by NFPA 70:
  - 1. Feeders and branch circuits.
  - 2. Lighting circuits.
  - 3. Receptacle circuits.
  - 4. Single-phase motor and appliance branch circuits.
  - 5. Three-phase motor and appliance branch circuits.
  - 6. Flexible raceway runs.
  - 7. Armored and metal-clad cable runs.
- D. Air-Duct Equipment Circuits: Install insulated equipment grounding conductor to duct-mounted electrical devices operating at 120 V and more, including air cleaners, heaters, dampers, humidifiers, and other duct electrical equipment. Bond conductor to each unit and to air duct and connected metallic piping.
- E. Water Heater, Heat-Tracing, and Antifrost Heating Cables: Install a separate insulated equipment grounding conductor to each electric water heater and heat-tracing cable. Bond conductor to heater units, piping, connected equipment, and components.

### 3.5 INSTALLATION

- A. Grounding Conductors: Route along shortest and straightest paths possible, unless otherwise indicated or required by Code. Avoid obstructing access or placing conductors where they may be subjected to strain, impact, or damage.
- B. Common Ground Bonding with Lightning Protection System: Comply with NFPA 780 and UL 96 when interconnecting with lightning protection system. Bond electrical power system ground directly to lightning protection system grounding conductor at closest point to electrical

service grounding electrode. Use bonding conductor sized same as system grounding electrode conductor, and install in conduit.

- C. Ground Rods: Drive rods until tops are 2 inches below finished floor or final grade, unless otherwise indicated.
  - 1. Interconnect ground rods with grounding electrode conductor below grade and as otherwise indicated. Make connections without exposing steel or damaging coating, if any.
- D. Bonding Straps and Jumpers: Install in locations accessible for inspection and maintenance, except where routed through short lengths of conduit.
  - 1. Bonding to Structure: Bond straps directly to basic structure, taking care not to penetrate any adjacent parts.
  - 2. Bonding to Equipment Mounted on Vibration Isolation Hangers and Supports: Install so vibration is not transmitted to rigidly mounted equipment.
  - 3. Use exothermic-welded connectors for outdoor locations, but if a disconnect-type connection is required, use a bolted clamp.
- E. Grounding and Bonding for Piping:
  - 1. Metal Water Service Pipe: Install insulated copper grounding conductors, in conduit, from building's main service equipment, or grounding bus, to main metal water service entrances to building. Connect grounding conductors to main metal water service pipes, using a bolted clamp connector or by bolting a lug-type connector to a pipe flange, using one of the lug bolts of the flange. Where a dielectric main water fitting is installed, connect grounding conductor on street side of fitting. Bond metal grounding conductor conduit or sleeve to conductor at each end.
  - 2. Water Meter Piping: Use braided-type bonding jumpers to electrically bypass water meters. Connect to pipe with a bolted connector.
  - 3. Bond each aboveground portion of gas piping system downstream from equipment shutoff valve.
- F. Grounding for Steel Building Structure: Install a driven ground rod at base of each corner column and at intermediate exterior columns at distances not more than 60 feet apart.
- G. Ground Ring: Install a supplementary grounding electrode consisting of ground rods and wire around the perimeter of the building and connecting to steel columns. When ground rods are not shown on the drawings provide a ground rod at every other column with a maximum spacing of 40'.
  - 1. Install tinned-copper conductor not less than No. 4/0 AWG for ground ring and for taps to building steel.
  - 2. Bury ground ring not less than 24 inches from building foundation.
  - 3. The perimeter ground wire shall be bonded to each ground rod with an exothermic connection. Provide a No. 4/0 AWG copper ground wire connections from the grounding loop to columns via exothermic connections.
  - 4. Drive ground rods until tops are 24 inches below final grade unless installed in ground test well.
  - 5. Ground rods shall be driven to achieve resistance required by this Section. Provide additional rods as required to achieve specified resistance. Where geological conditions

dictate, ground wire mesh may be provided or additional rods shall be driven in compacted earth areas as require to meet resistance requirement.

6. Connections to ground loop system shall be made with Exothermic weld.
  7. Verify that final backfill and compaction has been completed before driving ground rod electrodes.
- H. Concrete-Encased Grounding Electrode (Ufer Ground): Fabricate according to NFPA 70, using a minimum of 20 feet of bare copper conductor not smaller than No. 4 AWG.
1. If concrete foundation is less than 20 feet long, coil excess conductor within base of foundation.
  2. Bond grounding conductor to reinforcing steel in at least four locations and to anchor bolts. Extend grounding conductor below grade and connect to building grounding grid or to grounding electrode external to concrete.

### 3.6 FIELD QUALITY CONTROL

- A. Perform the following tests and inspections and prepare test reports:
1. Visual inspection of all systems, raceway and equipment grounds shall be made to determine the adequacy and integrity of the grounding. All ground testing results shall be properly recorded, witnessed, and reported to the Contractor.
  2. After installing grounding system but before permanent electrical circuits have been energized, test for compliance with requirements.
  3. Test completed grounding system at each location where a maximum ground-resistance level is specified, at service disconnect enclosure grounding terminal, and at individual ground rods. Make tests at ground rods before any conductors are connected.
    - a. Measure ground resistance not less than two full days after last trace of precipitation and without soil being moistened by any means other than natural drainage or seepage and without chemical treatment or other artificial means of reducing natural ground resistance.
    - b. Perform tests by fall-of-potential method according to IEEE 81.
      - 1) Measure ground resistance without the soil being moistened by any means other than natural precipitation or natural drainage or seepage and without chemical treatment or other artificial means of reducing natural ground resistance.
      - 2) Ground tests shall be performed using a low resistance, Null balance type, ground testing ohmmeter, with test lead resistance compensated for. Measure the resistance of the ground under test and remote earth or a reference ground as specified. The test instrument shall be the type which compensates for potential and current rod resistances.
      - 3) Test completed grounding system at the service disconnect enclosure grounding terminal and at ground test wells. Perform tests, by the fall-of-potential method according to IEEE 81.
      - 4) Testing record shall include drawings locating each ground rod and ground rod assembly and other grounding electrodes, identify each by letter in alphabetical order, and key to the record of tests and observations. Include

the number of rods driven and their depth at each location and include observations of weather and other phenomena that may affect test results. Describe measures taken to improve test results.

4. Where ground test results indicate the need for additional grounding conductors or rods that are not indicated on drawings or specified, design changes will be initiated to obtain the acceptable values. The Subcontractor is responsible for the proper installation of the grounding shown on drawings or specified and for the correction of improper installations as determined by inspections and tests.
  5. Prepare dimensioned drawings locating each ground rod and ground rod assembly, and other grounding electrodes. Identify each by letter in alphabetical order, and key to the record of tests and observations. Include the number of rods driven and their depth at each location, and include observations of weather and other phenomena that may affect test results. Describe measures taken to improve test results.
- B. Grounding system resistance shall be 10 ohms or less.
- C. Excessive Ground Resistance: If resistance to ground exceeds specified values, notify Architect promptly and include recommendations to reduce ground resistance.

END OF SECTION

## SECTION 260529 - HANGERS AND SUPPORTS FOR ELECTRICAL SYSTEMS

### PART 1 - GENERAL

#### 1.1 RELATED DOCUMENTS

- A. Certain requirements common to all the mechanical and electrical trades (Fire Suppression, Plumbing, HVAC, Electrical, and Tele/Data) are specified in Division 20. To avoid repetition, they are not repeated in each relevant Division and Section. However, these requirements are applicable to the work of this Section and are hereby incorporated by reference.
- B. Drawings and general provisions of the Contract, including General and Supplementary Conditions and Division 01 Specification Sections, apply to this Section.

#### 1.2 SUMMARY

- A. This Section includes the following:
  - 1. Hangers and supports for electrical equipment and systems.
  - 2. Construction requirements for concrete bases.

#### 1.3 DEFINITIONS

- A. EMT: Electrical metallic tubing.
- B. RMC: Rigid metal conduit.

#### 1.4 PERFORMANCE REQUIREMENTS

- A. Delegated Design: Design supports for multiple raceways, including comprehensive engineering analysis by a qualified professional engineer, using performance requirements and design criteria indicated.
- B. Design supports for multiple raceways capable of supporting combined weight of supported systems and its contents.
- C. Design equipment supports capable of supporting combined operating weight of supported equipment and connected systems and components.
- D. Rated Strength: Adequate in tension, shear, and pullout force to resist maximum loads calculated or imposed for this Project, with a minimum structural safety factor of five times the applied force.

#### 1.5 SUBMITTALS

- A. Product Data: For the following:
  - 1. Steel slotted support systems.
- B. Shop Drawings: Signed and sealed by a qualified professional engineer. Show fabrication and installation details and include calculations for the following:
  - 1. Trapeze hangers. Include Product Data for components.

- 2. Steel slotted channel systems. Include Product Data for components.
- 3. Equipment supports.
- C. Welding certificates.

#### 1.6 QUALITY ASSURANCE

- A. Welding: Qualify procedures and personnel according to AWS D1.1/D1.1M, "Structural Welding Code - Steel."
- B. Comply with NFPA 70.

#### 1.7 COORDINATION

- A. Coordinate size and location of concrete bases. Cast anchor-bolt inserts into bases. Concrete, reinforcement, and formwork requirements are specified in Division 03.
- B. Coordinate installation of roof curbs, equipment supports, and roof penetrations. These items are specified in Division 07.

### PART 2 - PRODUCTS

#### 2.1 SUPPORT, ANCHORAGE, AND ATTACHMENT COMPONENTS

- A. Steel Slotted Support Systems: Comply with MFMA-4, factory-fabricated components for field assembly.
  - 1. Manufacturers: Subject to compliance with requirements, provide products by one of the following:
    - a. Allied Tube & Conduit.
    - b. Cooper B-Line, Inc.; a division of Cooper Industries.
    - c. ERICO International Corporation.
    - d. GS Metals Corp.
    - e. Thomas & Betts Corporation.
    - f. Unistrut; Tyco International, Ltd.
    - g. Wesanco, Inc.
    - h. Or approved equal.
  - 2. Metallic Coatings: Hot-dip galvanized after fabrication and applied according to MFMA-4.
  - 3. Painted Coatings: Manufacturer's standard painted coating applied according to MFMA-4.
  - 4. Channel Dimensions: Selected for applicable load criteria.
- B. Raceway and Cable Supports: As described in NECA 1 and NECA 101.
- C. Conduit and Cable Support Devices: Steel hangers, clamps, and associated fittings, designed for types and sizes of raceway or cable to be supported.

- D. Support for Conductors in Vertical Conduit: Factory-fabricated assembly consisting of threaded body and insulating wedging plug or plugs for non-armored electrical conductors or cables in riser conduits. Plugs shall have number, size, and shape of conductor gripping pieces as required to suit individual conductors or cables supported. Body shall be malleable iron.
- E. Structural Steel for Fabricated Supports and Restraints: ASTM A 36/A 36M, steel plates, shapes, and bars; black and galvanized.
- F. Mounting, Anchoring, and Attachment Components: Items for fastening electrical items or their supports to building surfaces include the following:
  - 1. Powder-Actuated Fasteners: Threaded-steel stud, for use in hardened portland cement concrete, steel, or wood, with tension, shear, and pullout capacities appropriate for supported loads and building materials where used.
    - a. Manufacturers: Subject to compliance with requirements, provide products by one of the following:
      - 1) Hilti Inc.
      - 2) ITW Ramset/Red Head; a division of Illinois Tool Works, Inc.
      - 3) MKT Fastening, LLC.
      - 4) Simpson Strong-Tie Co., Inc.; Masterset Fastening Systems Unit.
      - 5) Or approved equal.
  - 2. Mechanical-Expansion Anchors: Insert-wedge-type, zinc-coated steel, for use in hardened portland cement concrete with tension, shear, and pullout capacities appropriate for supported loads and building materials in which used.
    - a. Manufacturers: Subject to compliance with requirements, provide products by one of the following:
      - 1) Cooper B-Line, Inc.; a division of Cooper Industries.
      - 2) Empire Tool and Manufacturing Co., Inc.
      - 3) Hilti Inc.
      - 4) ITW Ramset/Red Head; a division of Illinois Tool Works, Inc.
      - 5) MKT Fastening, LLC.
      - 6) Or Approved Equal
  - 3. Concrete Inserts: Steel or malleable-iron, slotted support system units similar to MSS Type 18; complying with MFMA-4 or MSS SP-58.
  - 4. Clamps for Attachment to Steel Structural Elements: MSS SP-58, type suitable for attached structural element.
  - 5. Through Bolts: Structural type, hex head, and high strength. Comply with ASTM A 325.
  - 6. Toggle Bolts: All-steel springhead type.
  - 7. Hanger Rods: Threaded steel.

## 2.2 FABRICATED METAL EQUIPMENT SUPPORT ASSEMBLIES

- A. Description: Welded or bolted, structural-steel shapes, shop or field fabricated to fit dimensions of supported equipment.
- B. Materials: Comply with requirements in Division 05 for steel shapes and plates.

## PART 3 - EXECUTION

### 3.1 APPLICATION

- A. Comply with NECA 1 and NECA 101 for application of hangers and supports for electrical equipment and systems except if requirements in this Section are stricter.
- B. Maximum Support Spacing and Minimum Hanger Rod Size for Raceway: Space supports for EMT and RMC as required by NFPA 70. Minimum rod size shall be 1/4 inch in diameter.
- C. Multiple Raceways or Cables: Install trapeze-type supports fabricated with steel slotted support system, sized so capacity can be increased by at least 25 percent in future without exceeding specified design load limits.
  - 1. Secure raceways and cables to these supports with two-bolt conduit clamps.

### 3.2 SUPPORT INSTALLATION

- A. Comply with NECA 1 and NECA 101 for installation requirements except as specified in this Article.
- B. Raceway Support Methods: In addition to methods described in NECA 1, EMT and RMC may be supported by openings through structure members, as permitted in NFPA 70.
- C. Strength of Support Assemblies: Where not indicated, select sizes of components so strength will be adequate to carry present and future static loads within specified loading limits. Minimum static design load used for strength determination shall be weight of supported components plus 200 lb.
- D. Mounting and Anchorage of Surface-Mounted Equipment and Components: Anchor and fasten electrical items and their supports to building structural elements by the following methods unless otherwise indicated by code:
  - 1. To Wood: Fasten with lag screws or through bolts.
  - 2. To New Concrete: Bolt to concrete inserts.
  - 3. To Masonry: Approved toggle-type bolts on hollow masonry units and expansion anchor fasteners on solid masonry units.
  - 4. To Existing Concrete: Expansion anchor fasteners.
  - 5. Instead of expansion anchors, powder-actuated driven threaded studs provided with lock washers and nuts may be used in existing standard-weight concrete 4 inches thick or greater. Do not use for anchorage to lightweight-aggregate concrete or for slabs less than 4 inches thick.
  - 6. To Steel: Beam clamps (MSS Type 19, 21, 23, 25, or 27) complying with MSS SP-69.
  - 7. To Light Steel: Sheet metal screws.

8. Items Mounted on Hollow Walls and Nonstructural Building Surfaces: Mount cabinets, panelboards, disconnect switches, control enclosures, pull and junction boxes, transformers, and other devices on slotted-channel racks attached to substrate.
- E. Drill holes for expansion anchors in concrete at locations and to depths that avoid reinforcing bars.

### 3.3 INSTALLATION OF FABRICATED METAL SUPPORTS

- A. Comply with installation requirements in Division 05 for site-fabricated metal supports.
- B. Cut, fit, and place miscellaneous metal supports accurately in location, alignment, and elevation to support and anchor electrical materials and equipment.
- C. Field Welding: Comply with AWS D1.1/D1.1M.

### 3.4 CONCRETE BASES

- A. Construct concrete bases of dimensions indicated but not less than 4 inches larger in both directions than supported unit, and so anchors will be a minimum of 10 bolt diameters from edge of the base.
- B. Use 3000-psi, 28-day compressive-strength concrete. Concrete materials, reinforcement, and placement requirements are specified in Division 03.
- C. Anchor equipment to concrete base.
  1. Place and secure anchorage devices. Use supported equipment manufacturer's setting drawings, templates, diagrams, instructions, and directions furnished with items to be embedded.
  2. Install anchor bolts to elevations required for proper attachment to supported equipment.
  3. Install anchor bolts according to anchor-bolt manufacturer's written instructions.

### 3.5 PAINTING

- A. Touchup: Clean field welds and abraded areas of shop paint. Paint exposed areas immediately after erecting hangers and supports. Use same materials as used for shop painting. Comply with SSPC-PA 1 requirements for touching up field-painted surfaces.
  1. Apply paint by brush or spray to provide minimum dry film thickness of 2.0 mils.
- B. Touchup: Comply with requirements in Division 09 for cleaning and touchup painting of field welds, bolted connections, and abraded areas of shop paint on miscellaneous metal.
- C. Galvanized Surfaces: Clean welds, bolted connections, and abraded areas and apply galvanizing-repair paint to comply with ASTM A 780.

END OF SECTION

H:\Y0586.00\DOC\SPEC\2025\_02-20\_IFB\260529\_HANGERS AND SUPPORTS FOR ELECTRICAL SYSTEMS.DOC

## **SECTION 260533 - RACEWAY AND BOXES FOR ELECTRICAL SYSTEMS**

### **PART 1 - GENERAL**

#### **1.1 RELATED DOCUMENTS**

- A. Certain requirements common to all the mechanical and electrical trades (Fire Suppression, Plumbing, HVAC, Electrical, and Tele/Data) are specified in Division 20. To avoid repetition, they are not repeated in each relevant Division and Section. However, these requirements are applicable to the work of this Section and are hereby incorporated by reference.
- B. Drawings and general provisions of the Contract, including General and Supplementary Conditions and Division 01 Specification Sections, apply to this Section.

#### **1.2 SUMMARY**

- A. This Section includes:
  - 1. Metal conduit and tubing
  - 2. Metal wireways
  - 3. Surface raceways
  - 4. Boxes, enclosures, and cabinets

#### **1.3 DEFINITIONS**

- A. EMT: Electrical metallic tubing.
- B. RGS: Rigid Steel Conduit.
- C. EPDM: Ethylene-propylene-diene terpolymer rubber.
- D. FMC: Flexible metal conduit.
- E. LFMC: Liquid tight flexible metal conduit.

#### **1.4 SUBMITTALS**

- A. Product Data: For surface raceways, wireways and fittings, floor boxes, hinged-cover enclosures, and cabinets.
- B. Shop Drawings: For the following raceway components. Include plans, elevations, sections, details, and attachments to other work.
- C. Coordination Drawings: Conduit routing plans, drawn to scale, on which the following items are shown and coordinated with each other, based on input from installers of the items involved:
  - 1. Structural members in the paths of conduit groups with common supports.
  - 2. HVAC and plumbing items and architectural features in the paths of conduit groups with common supports.
- D. Source quality-control test reports.

1.5 QUALITY ASSURANCE

- A. Electrical Components, Devices, and Accessories: Listed and labeled as defined in NFPA 70, Article 100, by a testing agency acceptable to authorities having jurisdiction, and marked for intended use.
- B. Comply with NFPA 70.

PART 2 - PRODUCTS

2.1 METAL CONDUIT AND TUBING

- A. Available Manufacturers: Subject to compliance with requirements, manufacturers offering products that may be incorporated into the Work include, but are not limited to, the following:
  - 1. Allied Tube & Conduit; a Tyco International Ltd. Co.
  - 2. Wheatland Tube Company.
  - 3. O-Z Gedney; a unit of General Signal.
  - 4. AFC Cable Systems, Inc.
  - 5. Greenfield.
  - 6. Anamet Electrical, Inc.; Anaconda Metal Hose.
  - 7. Electri-Flex Co.
  - 8. Permacote.
  - 9. Robroy.
  - 10. Or approved equal
- B. Rigid Steel Conduit: ANSI C80.1; zinc-coated steel.
- C. EMT: ANSI C80.3; zinc-coated steel.
- D. FMC: Spiral wrapped zinc-coated steel with insulated throats.
- E. LFMC: Highly flexible, hot-dipped galvanized steel conduit with PVC jacket with insulated throats.
- F. Fittings for Conduit (Including all Types and Flexible and Liquid tight), EMT, and Cable: NEMA FB 1; listed for type and size raceway with which used, and for application and environment in which installed.
  - 1. RSC: Threaded steel insulated bushings and throats. Locknuts shall be steel/zinc plated.
  - 2. EMT: Steel, set-screw type with insulated bushings and throats.
- G. Combination Expansion/Deflection Fittings
  - 1. Fittings shall be threaded, hot dipped galvanized malleable iron or steel with internal bonding jumper.
  - 2. Fittings shall include bonding jumper, insulated bushing and short nipple.
- H. Sealing Fittings

1. Threaded sealing fittings for rigid steel conduits shall be zinc- or cadmium- coated, cast or malleable iron; sealing fittings for aluminum conduit shall be threaded cast aluminum. Fittings that prevent passage of water vapor shall be continuous drain.
2. Sealing fittings shall be filled with a UL listed sealing compound.

**I. Cable Terminators**

1. Provide cable terminator assemblies by O-Z/Gedney or equal.
2. Assemblies shall have bakelite discs, neoprene rings and sealing compound within a fitting for attachment to raceway.

- J. Joint Compound for Rigid Steel Conduit:** Listed for use in cable connector assemblies, and compounded for use to lubricate and protect threaded raceway joints from corrosion and enhance their conductivity.

**2.2 METAL WIREWAYS**

- A. Available Manufacturers:** Subject to compliance with requirements, manufacturers offering products that may be incorporated into the Work include, but are not limited to, the following:
1. Cooper B-Line, Inc.
  2. Hoffman.
  3. Square D; Schneider Electric.
  4. Or approved equal
- B. Description:** Sheet metal sized and shaped as indicated, NEMA 250, Type 1, unless otherwise indicated.
- C. Fittings and Accessories:** Include couplings, offsets, elbows, expansion joints, adapters, hold-down straps, end caps, and other fittings to match and mate with wireways as required for complete system.
- D. Wireway Covers:** Hinged type.
- E. Finish:** Manufacturer's standard enamel finish.

**2.3 BOXES, ENCLOSURES, AND CABINETS**

- A. Manufacturers:** Subject to compliance with requirements, provide products by one of the following:
1. Cooper Crouse-Hinds; Div. of Cooper Industries, Inc.
  2. EGS/Appleton Electric.
  3. Erickson Electrical Equipment Company.
  4. Hoffman.
  5. Hubbell Incorporated; Killark Electric Manufacturing Co. Division.
  6. O-Z/Gedney; a unit of General Signal.
  7. RACO; a Hubbell Company.

8. Robroy Industries, Inc.; Enclosure Division.
  9. Scott Fetzer Co.; Adalet Division.
  10. Spring City Electrical Manufacturing Company.
  11. Thomas & Betts Corporation.
  12. Walker Systems, Inc.; Wiremold Company (The).
  13. Woodhead, Daniel Company; Woodhead Industries, Inc. Subsidiary.
  14. Or approved equal.
- B. Sheet Metal Outlet and Device Boxes: NEMA OS 1.
- C. Cast-Metal Outlet and Device Boxes: NEMA FB 1, ferrous alloy, Type FD, with gasketed cover.
- D. Nonmetallic Outlet and Device Boxes: NEMA OS 2.
- E. Small Sheet Metal Pull and Junction Boxes: NEMA OS 1.
- F. Cast-Metal Access, Pull, and Junction Boxes: NEMA FB 1, galvanized, cast iron with gasketed cover.
- G. Hinged-Cover Enclosures: NEMA 250, Type 1, with continuous-hinge cover with flush latch, unless otherwise indicated.
1. Metal Enclosures: Steel, finished inside and out with manufacturer's standard enamel.
- H. Cabinets:
1. NEMA 250, Type 1, galvanized-steel box with removable interior panel and removable front, finished inside and out with manufacturer's standard enamel.
  2. Hinged door in front cover with flush latch and concealed hinge.
  3. Key latch to match panelboards.
  4. Metal barriers to separate wiring of different systems and voltage.
  5. Accessory feet where required for freestanding equipment.

## **PART 3 - EXECUTION**

### **3.1 RACEWAY APPLICATION**

- A. Outdoors: Apply raceway products as specified below, unless otherwise indicated:
1. Exposed Conduit: Rigid steel conduit
  2. Concealed Conduit, Aboveground: Rigid steel conduit.
  3. Connection to Vibrating Equipment (Including Transformers and Hydraulic, Pneumatic, Electric Solenoid, or Motor-Driven Equipment): LFMC.
  4. Device boxes, Aboveground: Cast metal.
  5. Boxes and Enclosures, Aboveground: NEMA 250, Type 3R.
- B. Comply with the following indoor applications, unless otherwise indicated:

1. Exposed, Not Subject to Physical Damage within Mechanical, Electrical and unfinished areas defined by architect: EMT.
  2. Exposed and Subject to Severe Physical Damage: Rigid steel conduit with cast metal device boxes. Includes raceways in the following locations:
    - a. Loading dock.
    - b. Corridors used for traffic of mechanized carts, forklifts, and pallet-handling units.
    - c. Mechanical and Electrical rooms, below 10'-0" AFF.
    - d. Natatorium
  3. Underground Below Slab on Grade Conduit: RNC, Type EPC-40-PVC, direct buried.
  4. Underground Below Slab on Grade, under areas of structural loading: RNC, Type EPC-80-PVC, if approved by local authorities.
  5. Concealed in Ceilings and Interior Walls and Partitions: EMT.
  6. Connection to Vibrating Equipment (Including Transformers and Hydraulic, Pneumatic, Electric Solenoid, or Motor-Driven Equipment): FMC, except use LFMC in damp or wet locations.
  7. Damp or Wet Locations: Rigid steel conduit with cast metal device boxes.
  8. Raceways for Concealed General Purpose Distribution of Optical Fiber or Communications Cable: EMT.
  9. Boxes and Enclosures: NEMA 250, Type 1, except use NEMA 250, Type 4, stainless steel in damp or wet locations.
- C. Raceways Installed Within Slabs (where approved by Project Structural Engineer)
1. Feeders, branch circuits and low voltage system: RNC, Type EPC-40-PVC.
  2. Penetrations from concrete slabs and elbows shall be made with galvanized RSC and RSC fittings only.
- D. Raceway Fittings: Compatible with raceways and suitable for use and location.
1. Rigid and Intermediate Steel Conduit: Use threaded rigid steel conduit fittings, unless otherwise indicated.
- 3.2 RACEWAY INSTALLATION
- A. Comply with NECA 1 for installation requirements applicable to products specified in Part 2 except where requirements on Drawings or in this Article are stricter.
- B. General
1. Check raceway sizes to determine that green equipment ground conductor fits in same raceway with phase and neutral conductors to meet NEC percentage of fill requirements. Increase duct, conduit, tubing and raceway sizes shown or specified as required to accommodate conductors.
  2. Install raceway systems complete before drawing in conductors. Blow through and swab after plaster is finished and dry, and before conductors are installed. Wire shall not be pulled into raceway until building roof and walls are weather-tight.

3. Install connectors and couplings as recommended by manufacturers. Compression fittings shall not be used with rigid steel conduit. Set screw fittings shall not be used with rigid conduit. Set-screw connectors for EMT shall be tightened to embed screws in conduit.
  4. Install pull wires in empty raceways. Use polypropylene or monofilament plastic line with not less than 200 lb. Tensile strength. Provide at least 12" of slack at each end of pull wire with labels.
  5. Galvanized rigid steel conduit and intermediate metal conduit installed in corrosive environments shall have all field cut threads coated with an approved, electrically conductive, corrosion resistant compound so that the current carrying ability of the conduit is not compromised.
  6. Protect stub-ups from damage where conduits rise through floor slabs. Arrange so curved portions of bends are not visible above the finished slab.
  7. Penetrate waterproof walls of structural slabs and foundation walls only where approved by Construction Manager. Submit proposed penetration points, size openings and penetration methods to Construction Manager for approval.
  8. All conduit penetrations through exterior foundation walls shall be sealed. Provide sealing assemblies between conduit and sleeve. Provide cable terminators in conduit for cable seal. Provide appropriate sleeve through wall for conduit required. Assembly shall be tightened to seal out water.
  9. Raceways shall be installed in such a way as to not block exit and equipment service space. Raceway on or adjacent to equipment shall be located to allow free access to all removable panels and equipment service.
  10. Minimum Raceway Size: 3/4-inch trade size.
  11. Keep raceways at least 6 inches away from parallel runs of flues and steam or hot-water pipes. Install horizontal raceway runs above water and steam piping.
  12. Complete raceway installation before starting conductor installation.
- C. Support raceways as specified in Division 26.
- D. Raceways Installed Underground Below Slab on Grade
1. Raceways shall be located on undisturbed earth. Where the earth has been disturbed or is of poor quality excavate a trench to proper subgrade elevation. Place bedding material and compact trench bottom.
  2. Stagger conduit couplings so that couplings on adjacent conduits do not lie in same transverse plane. Provide conduit spacers every five feet.
  3. Elbows transitioning from underground to exposed shall be galvanized RSC. Provide appropriate transition fittings.
  4. Connections between conduits of different types shall be made in approved manner, using adapters and other materials and methods recommended by conduit manufacturers.
  5. Arrange stub-ups so curved portions of bends are not visible above the finished slab.
- E. Install no more than the equivalent of four 90-degree bends in any conduit run except for communications conduits, for which two 90-degree bends are allowed.

- F. Conceal conduit and EMT within finished walls, ceilings, and floors, unless otherwise indicated.
- G. Raceways Installed Within Slabs
  - 1. If approved by the Project Structural Engineer, feeders, branch circuits and low voltage system conduits may be installed within concrete slabs. Penetrations from concrete slabs and elbows shall be made with galvanized RSC and RSC fittings only.
  - 2. Raceways shall not be installed within the floor slabs unless specifically allowed by the Project Structural Engineer. Refer to Division 3 for additional information.
  - 3. When raceways are allowed in slabs the following shall apply:
    - a. Installation shall conform to ACI (American Concrete Institute) 318, Paragraph 6.3, "Conduits and Pipes Embedded in Concrete".
    - b. Raceways with outside diameters larger than 1/3 slab thickness shall be run concealed in hung ceilings in finished areas, exposed in unfinished Mechanical/Electrical and storage areas, or below slabs on grade.
    - c. Maximum outside diameters of raceways in concrete shall be 1/3 slab thickness. No more than two 3/4" raceways shall cross in floor slab at a single point. Submit raceway crossing locations for approval before pouring slabs and relocate at no expense to Owner as directed by Construction Manager. Lateral spacing of parallel raceways shall be at least 6" on centers. Do not run raceway in slab less than 3" thick without express approval and direction of Construction Manager. Raceway in reinforced slabs shall be located above bottom steel reinforcing, below top reinforcing and inside beam stirrup, wall reinforcement and column ties.
    - d. Run conduit larger than 1-inch trade size, parallel or at right angles to main reinforcement. Where at right angles to reinforcement, place conduit close to slab support.
    - e. Arrange raceways to cross building expansion joints at right angles with expansion fittings.
    - f. Stagger conduit couplings so that couplings on adjacent conduits do not lie in same transverse plane.
    - g. All raceways penetrating the slab shall be galvanized steel.
    - h. Arrange stub-ups so curved portions of bends are not visible above the finished slab.
    - i. Connections between conduits of different types shall be made in approved manner, using adapters and other materials and methods recommended by conduit manufacturers.
    - j. After concrete has set, nonmetallic conduits shall be cleared with mandrel of same size as conduit.

- H. Threaded Conduit Joints, Exposed to Wet, Damp, Corrosive, or Outdoor Conditions: Apply listed compound to threads of raceway and fittings before making up joints. Follow compound manufacturer's written instructions.
- I. Install pull wires in empty raceways. Use polypropylene or monofilament plastic line with not less than 200-lb tensile strength. Leave at least 12 inches of slack at each end of pull wire.
- J. Terminations
  - 1. Raceway shall enter and be secured to cabinet, junction box, pull box or outlet box with locknut outside and bushing inside, or with liquid-tight, threaded, self-locking, cold-weld wedge adapter.
  - 2. Provide additional locknut for rigid conduit and wrench- tighten locknut for EMT or flexible conduit where circuit voltage exceeds 250 V. Locknuts and bushings or self-locking adapters will not be required where conduits are screwed into tapped connections.
  - 3. Vertical conduit runs that terminate in bottoms of wall boxes or cabinets shall be protected from entrance of foreign material before installation of conductors.
  - 4. Raceway Terminations at Locations Subject to Moisture or Vibration: Use insulating bushings to protect conductors, including conductors smaller than No. 4 AWG.
  - 5. Provide insulated bushings on raceways entering all panels, switchboards, motor controllers, VFDs, etc. and all boxes 12" x 12" and larger to protect conductors.
- K. Raceways for Optical Fiber and Communications Cable:
  - 1. 3/4-Inch Trade Size and Smaller: Install raceways in maximum lengths of 50 feet.
  - 2. 1-Inch Trade Size and Larger: Install raceways in maximum lengths of 75 feet.
  - 3. Install with a maximum of two 90-degree bends or equivalent for each length of raceway unless Drawings show stricter requirements. Separate lengths with pull or junction boxes or terminations at distribution frames or cabinets where necessary to comply with these requirements.
- L. Install raceway sealing fittings at suitable, approved, and accessible locations and fill them with listed sealing compound. For concealed raceways, install each fitting in a flush steel box with a blank cover plate having a finish similar to that of adjacent plates or surfaces. Install raceway sealing fittings at the following points:
  - 1. Where conduits pass from warm to cold locations, such as boundaries of refrigerated spaces.
  - 2. In garages and other areas in which flammable gases or vapors may be present to prevent transmission of gases or vapors through conduits.
  - 3. Where otherwise required by NFPA 70.
- M. Expansion/Deflection Fittings
  - 1. Raceway buried or secured rigidly on opposite sides of building expansion joints and long runs of exposed raceway subject to stress due to thermal expansion shall have expansion/deflection fittings. Fittings shall safely deflect and expand to twice distance of structural movement.

2. Provide separate external copper bonding jumper secured with grounding straps on each end of fitting, when integral ground is not provided.
  3. Raceways buried in concrete shall cross building expansion joints at right angles; provide expansion fittings as required by manufacturer's instructions. Provide insulated bushings at ends of raceways.
  4. Coordinate location of expansion/deflection fittings with the structural and architectural drawings.
- N. Expansion-Joint Fittings for RNC: Install in each run of aboveground conduit that is located where environmental temperature change may exceed 30 deg F, and that has straight-run length that exceeds 25 feet.
1. Install expansion-joint fittings for each of the following locations, and provide type and quantity of fittings that accommodate temperature change listed for location:
    - a. Outdoor Locations Not Exposed to Direct Sunlight: 125 deg F temperature change.
    - b. Outdoor Locations Exposed to Direct Sunlight: 155 deg F temperature change.
    - c. Indoor Spaces: Connected with the Outdoors without Physical Separation: 125 deg F temperature change.
  2. Install fitting(s) that provide expansion and contraction for at least 0.00041 inch per foot of length of straight run per deg F of temperature change.
  3. Install each expansion-joint fitting with position, mounting, and piston setting selected according to manufacturer's written instructions for conditions at specific location at the time of installation.
- O. Flexible Conduit Connections: Use maximum of 72 inches of flexible conduit for recessed and semi-recessed lighting fixtures, equipment subject to vibration, noise transmission, or movement; and for transformers and motors.
1. Use LFMC in damp or wet locations.
- P. Recessed Boxes in Masonry Walls: Saw-cut opening for box in center of cell of masonry block, and install box flush with surface of wall.
- Q. Box installation:
1. Determine from the drawings and by actual field conditions, the exact location of each outlet. The outlet locations shall be modified from those shown to accommodate changes in door swings or to clear other interferences that may arise from job construction details, as well as modifications to center them within the room spaces. These modifications shall be made with no change in contract price and shall be a matter of job coordination that gets reflected on the as-built drawings.
  2. Check these conditions throughout the entire job and notify the Architect/Engineer or discrepancies, as they may occur, to verify the modifications, if any, before proceeding with the installation.
  3. Install boxes where indicated, in accordance with manufacturer's written instructions, guidelines and the applicable requirements of the NEC, local codes, the National

Electrical Contractors Association's "Standard of Installation" and in accordance with recognized industry practices to ensure that products serve the intended function.

4. Coordinate location of boxes with millwork, counters, benches and back-splashes denoted on the Architectural and Electrical Drawings.
5. Coordinate box installation with electrical raceway and cable work, as necessary for proper interface.
6. Coordinate cutting of masonry walls and drywalls to achieve neat openings for boxes.
7. Provide all necessary hardware to secure boxes in place.
8. Sheet metal pull boxes shall be supported adequately to maintain shape. Larger boxes shall have structural steel bracing welded into rigid assembly formed adequately to maintain alignment in shipment and installation. Secure covers with corrosion-resistant screws or bolts.
9. Provide clamps, grids and other appurtenances to secure cables within pull boxes. No cable shall be unsupported for more than 30 inches.
10. Provide cable troughs of special shapes, design and construction required to install, support and enclose feeder cable throughout indicated routing. Troughs shall be as specified above for junction and pull boxes, with reinforcing, insulating supports and clamping for cable installation. Cables shall be continuous throughout troughs, and shall be racked in distributed phase groupings arranged with phase cables surrounding neutral conductors.
11. Location
  - a. Do not install boxes back to back in same wall.
  - b. For boxes mounted in exterior walls install insulation behind the box to prevent condensation in box.
  - c. Mount boxes flush with wall in all areas unless noted otherwise on the drawings. Boxes in mechanical rooms may be surface mounted where flush mounting is not possible due to construction.
  - d. Where boxes are positioned back to back on opposite sides of walls or partitions, and are less than 24 inches apart in wall cavities of fire rated partitions, provide firestop products suitable for the installation. Boxes shall not be installed on opposite side of walls or partitions of staggered stud construction unless a Wall Opening Protective Material is installed with the box in accordance with classification requirements for the protective materials.
  - e. Junction and pull box covers shall be readily accessible. Do not install junction or pull boxes above suspended ceilings except where ceiling is removable or where access panel is provided.
  - f. No pull box shall be within 2 feet of another.

- g. Pull boxes connected to concealed conduits shall be mounted with covers flush with finished wall or ceiling. No aluminum pull box shall be embedded in concrete.
  - h. Location of boxes shall be verified with Architect prior to rough-in. Refer to architectural details and elevations.
- 12. Application
  - a. Provide weatherproof outlets for interior and exterior locations exposed to weather or moisture.
  - b. Junction or pull boxes exposed to rain or in wet locations shall be weatherproof.
- 13. Painting
  - a. Exposed conduit, junction boxes and equipment back boxes shall be painted to be as inconspicuous as possible. The Design Professional shall approve the paint color selected. The Electrical Contractor shall prepare color samples for inspection by the Design Professional prior to painting.

### 3.3 FIRESTOPPING

- A. Apply firestopping to electrical penetrations of fire-rated floor and wall assemblies to restore original fire-resistance rating of assembly. Firestopping materials and installation requirements are specified in Division 07.

### 3.4 PROTECTION

- A. Provide final protection and maintain conditions that ensure coatings, finishes, and cabinets are without damage or deterioration at time of Substantial Completion.
  - 1. Repair damage to galvanized finishes with zinc-rich paint recommended by manufacturer.

END OF SECTION

H:\Y0586.00\DOC\SPEC\2025\_02-20\_IFB\260533\_RACEWAY AND BOXES.DOC

## SECTION 260543 - UNDERGROUND DUCTS AND RACEWAYS FOR ELECTRICAL SYSTEMS

### PART 1 - GENERAL

#### 1.1 RELATED DOCUMENTS

- A. Certain requirements common to all the mechanical and electrical trades (Fire Suppression, Plumbing, HVAC, Electrical, and Tele/Data) are specified in Division 20. To avoid repetition, they are not repeated in each relevant Division and Section. However, these requirements are applicable to the work of this Section and are hereby incorporated by reference.
- B. Drawings and general provisions of the Contract, including General and Supplementary Conditions and Division 01 Specification Sections, apply to this Section.

#### 1.2 SUMMARY

- A. This Section includes the following:
  - 1. Conduit, ducts, and duct accessories for direct-buried and concrete-encased duct banks, and in single duct runs.
  - 2. Handholes and boxes.

#### 1.3 DEFINITION

- A. RNC: Rigid nonmetallic conduit.
- B. RSC: Rigid Steel Conduit.

#### 1.4 SUBMITTALS

- A. Product Data: For the following:
  - 1. Duct-bank materials, including separators and miscellaneous components.
  - 2. Ducts and conduits and their accessories, including elbows, end bells, bends, fittings, and solvent cement.
  - 3. Accessories for handholes and boxes.
  - 4. Warning tape.
- B. Shop Drawings for Factory-Fabricated Handholes and Boxes Other Than Precast Concrete: Include dimensioned plans, sections, and elevations, and fabrication and installation details, including the following:
  - 1. Duct entry provisions, including locations and duct sizes.
  - 2. Frame and cover design.
  - 3. Grounding details.
  - 4. Dimensioned locations of cable rack inserts, and pulling-in and lifting irons.
  - 5. Joint details.

- C. Duct-Bank Coordination Drawings: Show duct profiles and coordination with other utilities and underground structures.
  - 1. Include plans and sections, drawn to scale, and show bends and locations of expansion fittings.
  - 2. Drawings shall be signed and sealed by a qualified professional engineer.
- D. Product Certificates: For concrete and steel used in precast concrete handholes, as required by ASTM C 858.
- E. Qualification Data: For professional engineer.
- F. Source quality-control test reports.
- G. Field quality-control test reports.

#### 1.5 QUALITY ASSURANCE

- A. Comply with ANSI C2.
- B. Comply with NFPA 70.

#### 1.6 DELIVERY, STORAGE, AND HANDLING

- A. Deliver ducts to Project site with ends capped. Store nonmetallic ducts with supports to prevent bending, warping, and deforming.
- B. Lift and support precast concrete units only at designated lifting or supporting points.

#### 1.7 PROJECT CONDITIONS

- A. Interruption of Existing Electrical Service: Do not interrupt electrical service to facilities occupied by Owner or others unless permitted under the following conditions and then only after arranging to provide temporary electrical service according to requirements indicated:
  - 1. Notify Owner no fewer than 14 days in advance of proposed interruption of electrical service.
  - 2. Do not proceed with interruption of electrical service without Owner's written permission.

#### 1.8 COORDINATION

- A. Coordinate layout and installation of ducts, manholes, handholes, and boxes with final arrangement of other utilities, site grading, and surface features as determined in the field.
- B. Coordinate elevations of ducts and duct-bank entrances into handholes and boxes with final locations and profiles of ducts and duct banks as determined by coordination with other utilities, underground obstructions, and surface features. Revise locations and elevations from those indicated as required to suit field conditions and to ensure that duct runs drain to manholes and handholes, and as approved by Architect.

## PART 2 - PRODUCTS

### 2.1 CONDUIT

- A. Rigid Steel Conduit: Galvanized. Comply with ANSI C80.1.
- B. RNC: NEMA TC 2, Type EPC-40-PVC and Type EPC-80-PVC, UL 651, with matching fittings by same manufacturer as the conduit, complying with NEMA TC 3 and UL 514B.

### 2.2 NONMETALLIC DUCTS AND DUCT ACCESSORIES

- A. Manufacturers: Subject to compliance with requirements, provide products by one of the following:
  - 1. ARNCO Corp.
  - 2. Beck Manufacturing.
  - 3. Cantex, Inc.
  - 4. CertainTeed Corp.; Pipe & Plastics Group.
  - 5. Condux International, Inc.
  - 6. ElecSys, Inc.
  - 7. Electri-Flex Company.
  - 8. IPEX Inc.
  - 9. Lamson & Sessions; Carlon Electrical Products.
  - 10. Manhattan/CDT; a division of Cable Design Technologies.
  - 11. Spiraduct/AFC Cable Systems, Inc.
  - 12. Or approved equal
- B. Underground Plastic Utilities Duct: NEMA TC 6 & 8, Type EB-20-PVC, ASTM F 512, UL 651A, with matching fittings by the same manufacturer as the duct, complying with NEMA TC 9.
- C. Underground Plastic Utilities Duct: NEMA TC 6 & 8, Type DB-60-PVC and Type DB-120-PVC, ASTM F 512, with matching fittings by the same manufacturer as the duct, complying with NEMA TC 9.
- D. Duct Accessories:
  - 1. Duct Separators: Factory-fabricated rigid PVC interlocking spacers, sized for type and sizes of ducts with which used, and selected to provide minimum duct spacings indicated while supporting ducts during concreting or backfilling.
  - 2. Warning Tape: Underground-line warning tape specified in Division 26.

### 2.3 PRECAST CONCRETE HANDHOLES AND BOXES

- A. Manufacturers: Subject to compliance with requirements, provide products by one of the following:
  - 1. Carder Concrete Products.

2. Christy Concrete Products.
  3. Elmhurst-Chicago Stone Co.
  4. Oldcastle Precast Group.
  5. Riverton Concrete Products; a division of Cretex Companies, Inc.
  6. Utility Concrete Products, LLC.
  7. Utility Vault Co.
  8. Wausau Tile, Inc.
  9. Or approved equal
- B. Comply with ASTM C 858 for design and manufacturing processes.
- C. Description: Factory-fabricated, reinforced-concrete, monolithically poured walls and bottom unless open-bottom enclosures are indicated. Frame and cover shall form top of enclosure and shall have load rating consistent with that of handhole or box.
1. Frame and Cover: Weatherproof cast-iron frame, with cast-iron cover with recessed cover hook eyes and tamper-resistant, captive, cover-securing bolts.
  2. Cover Finish: Nonskid finish shall have a minimum coefficient of friction of 0.50.
  3. Cover Legend: Molded lettering, "ELECTRIC."
  4. Configuration: Units shall be designed for flush burial and have open bottom, unless otherwise indicated.
  5. Extensions and Slabs: Designed to mate with bottom of enclosure. Same material as enclosure.
    - a. Extension shall provide increased depth of 12 inches.
    - b. Slab: Same dimensions as bottom of enclosure, and arranged to provide closure.
  6. Windows: Precast openings in walls, arranged to match dimensions and elevations of approaching ducts and duct banks plus an additional 12 inches vertically and horizontally to accommodate alignment variations.
    - a. Windows shall be located no less than 6 inches from interior surfaces of walls, floors, or frames and covers of handholes, but close enough to corners to facilitate racking of cables on walls.
    - b. Window opening shall have cast-in-place, welded wire fabric reinforcement for field cutting and bending to tie in to concrete envelopes of duct banks.
    - c. Window openings shall be framed with at least two additional No. 4 steel reinforcing bars in concrete around each opening.
  7. Duct Entrances in Handhole Walls: Cast end-bell or duct-terminating fitting in wall for each entering duct.
    - a. Type and size shall match fittings to duct or conduit to be terminated.
    - b. Fittings shall align with elevations of approaching ducts and be located near interior corners of handholes to facilitate racking of cable.
  8. Handholes 12 inches wide by 24 inches long and larger shall have inserts for cable racks and pulling-in irons installed before concrete is poured.

## **PART 3 - EXECUTION**

### **3.1 UNDERGROUND DUCT APPLICATION**

- A. Ducts for Electrical Feeders 600 V and Less: RNC, NEMA Type EPC-40-PVC, in concrete-encased duct bank, unless otherwise indicated.
- B. Ducts for Electrical Branch Circuits: RNC, NEMA Type EPC-80-PVC, in direct-buried duct bank, unless otherwise indicated.
- C. Underground Ducts Crossing Driveways or Roadways: RNC, NEMA Type EPC-40-PVC, encased in reinforced concrete.

### **3.2 UNDERGROUND ENCLOSURE APPLICATION**

- A. Handholes and Boxes for 600 V and Less:
  - 1. Precast concrete. AASHTO HB 17, H-10 structural load rating.

### **3.3 EARTHWORK**

- A. Excavation and Backfill: Comply with Division 31, but do not use heavy-duty, hydraulic-operated, compaction equipment.
- B. Restore surface features at areas disturbed by excavation and reestablish original grades, unless otherwise indicated. Replace removed sod immediately after backfilling is completed.
- C. Restore areas disturbed by trenching, storing of dirt, cable laying, and other work. Restore vegetation and include necessary topsoiling, fertilizing, liming, seeding, sodding, sprigging, and mulching. Comply with Division 32.
- D. Cut and patch existing pavement in the path of underground ducts and utility structures according to Division 01.

### **3.4 DUCT INSTALLATION**

- A. Slope: Pitch ducts a minimum slope of 1:300 down toward manholes and handholes and away from buildings and equipment. Slope ducts from a high point in runs between two manholes to drain in both directions.
- B. Curves and Bends: Use 5-degree angle couplings for small changes in direction. Use manufactured long sweep bends with a minimum radius of 48 inches, both horizontally and vertically, at other locations, unless otherwise indicated.
- C. Joints: Use solvent-cemented joints in ducts and fittings and make watertight according to manufacturer's written instructions. Stagger couplings so those of adjacent ducts do not lie in same plane.
- D. Duct Entrances to Manholes and Concrete and Polymer Concrete Handholes: Use end bells, spaced approximately 10 inches o.c. for 5-inch ducts, and vary proportionately for other duct sizes.
  - 1. Begin change from regular spacing to end-bell spacing 10 feet from the end bell without reducing duct line slope and without forming a trap in the line.

2. Direct-Buried Duct Banks: Install an expansion and deflection fitting in each conduit in the area of disturbed earth adjacent to manhole or handhole.
3. Grout end bells into structure walls from both sides to provide watertight entrances.
- E. Building Wall Penetrations: Make a transition from underground duct to rigid steel conduit at least 10 feet outside the building wall without reducing duct line slope away from the building, and without forming a trap in the line. Use fittings manufactured for duct-to-conduit transition. Install conduit penetrations of building walls as specified in Division 26.
- F. Sealing: Provide temporary closure at terminations of ducts that have cables pulled. Seal spare ducts at terminations. Use sealing compound and plugs to withstand at least 15-psig hydrostatic pressure.
- G. Pulling Cord: Install 100-lbf- test nylon cord in ducts, including spares.
- H. Concrete-Encased Ducts: Support ducts on duct separators.
  1. Separator Installation: Space separators close enough to prevent sagging and deforming of ducts, with not less than 4 spacers per 20 feet of duct. Secure separators to earth and to ducts to prevent floating during concreting. Stagger separators approximately 6 inches between tiers. Tie entire assembly together using fabric straps; do not use tie wires or reinforcing steel that may form conductive or magnetic loops around ducts or duct groups.
  2. Concreting Sequence: Pour each run of envelope between manholes or other terminations in one continuous operation.
    - a. Start at one end and finish at the other, allowing for expansion and contraction of ducts as their temperature changes during and after the pour. Use expansion fittings installed according to manufacturer's written recommendations, or use other specific measures to prevent expansion-contraction damage.
    - b. If more than one pour is necessary, terminate each pour in a vertical plane and install 3/4-inch reinforcing rod dowels extending 18 inches into concrete on both sides of joint near corners of envelope.
  3. Pouring Concrete: Spade concrete carefully during pours to prevent voids under and between conduits and at exterior surface of envelope. Do not allow a heavy mass of concrete to fall directly onto ducts. Use a plank to direct concrete down sides of bank assembly to trench bottom. Allow concrete to flow to center of bank and rise up in middle, uniformly filling all open spaces. Do not use power-driven agitating equipment unless specifically designed for duct-bank application.
  4. Reinforcement: Reinforce concrete-encased duct banks where they cross disturbed earth and where indicated. Arrange reinforcing rods and ties without forming conductive or magnetic loops around ducts or duct groups.
  5. Forms: Use walls of trench to form side walls of duct bank where soil is self-supporting and concrete envelope can be poured without soil inclusions; otherwise, use forms.
  6. Depth: Install top of duct bank at least 24 inches below finished grade in areas not subject to deliberate traffic, and at least 30 inches below finished grade in deliberate traffic paths for vehicles, unless otherwise indicated.
  7. Stub-Ups: Use manufactured rigid steel conduit elbows for stub-ups at equipment and at building entrances through the floor.

- a. Couple steel conduits to ducts with adapters designed for this purpose, and encase coupling with 3 inches of concrete.
  - b. Stub-Ups to Equipment: For equipment mounted on outdoor concrete bases, extend steel conduit horizontally a minimum of 60 inches from edge of base. Install insulated grounding bushings on terminations at equipment.
8. Warning Tape: Bury warning tape approximately 12 inches above all concrete-encased ducts and duct banks. Align tape parallel to and within 3 inches of the centerline of duct bank. Provide an additional warning tape for each 12-inch increment of duct-bank width over a nominal 18 inches. Space additional tapes 12 inches apart, horizontally.

I. Direct-Buried Duct Banks:

1. Support ducts on duct separators coordinated with duct size, duct spacing, and outdoor temperature.
2. Space separators close enough to prevent sagging and deforming of ducts, with not less than 4 spacers per 20 feet of duct. Secure separators to earth and to ducts to prevent displacement during backfill and yet permit linear duct movement due to expansion and contraction as temperature changes. Stagger spacers approximately 6 inches between tiers.
3. Excavate trench bottom to provide firm and uniform support for duct bank. Prepare trench bottoms as specified in Division 31 for pipes less than 6 inches in nominal diameter.
4. Install backfill as specified in Division 31.
5. After installing first tier of ducts, backfill and compact. Start at tie-in point and work toward end of duct run, leaving ducts at end of run free to move with expansion and contraction as temperature changes during this process. Repeat procedure after placing each tier. After placing last tier, hand-place backfill to 4 inches over ducts and hand tamp. Firmly tamp backfill around ducts to provide maximum supporting strength. Use hand tamper only. After placing controlled backfill over final tier, make final duct connections at end of run and complete backfilling with normal compaction as specified in Division 31.
6. Set elevation of bottom of duct bank below the frost line.
7. Install manufactured rigid steel conduit elbows for stub-ups at equipment and at building entrances through the floor.
  - a. Couple steel conduits to ducts with adapters designed for this purpose, and encase coupling with 3 inches of concrete.
  - b. For equipment mounted on outdoor concrete bases, extend steel conduit horizontally a minimum of 60 inches from edge of equipment pad or foundation. Install insulated grounding bushings on terminations at equipment.

3.5 INSTALLATION OF CONCRETE HANDHOLES AND BOXES

A. Precast Concrete Handhole Installation:

1. Comply with ASTM C 891, unless otherwise indicated.
2. Install units level and plumb and with orientation and depth coordinated with connecting ducts to minimize bends and deflections required for proper entrances.

3. Unless otherwise indicated, support units on a level bed of crushed stone or gravel, graded from 1-inch sieve to No. 4 sieve and compacted to same density as adjacent undisturbed earth.

**B. Elevations:**

1. Handhole Covers: In paved areas and trafficways, set surface flush with finished grade. Set covers of other handholes 1 inch above finished grade.
2. Where indicated, cast handhole cover frame integrally with handhole structure.

**3.6 GROUNDING**

- A. Ground underground ducts according to Division 26.**

**3.7 FIELD QUALITY CONTROL**

- A. Perform the following tests and inspections and prepare test reports:**

1. Demonstrate capability and compliance with requirements on completion of installation of underground ducts.
2. Pull aluminum or wood test mandrel through duct to prove joint integrity and test for out-of-round duct. Provide mandrel equal to 80 percent fill of duct. If obstructions are indicated, remove obstructions and retest.

- B. Correct deficiencies and retest as specified above to demonstrate compliance.**

**3.8 CLEANING**

- A. Pull leather-washer-type duct cleaner, with graduated washer sizes, through full length of ducts. Follow with rubber duct swab for final cleaning and to assist in spreading lubricant throughout ducts.**

**END OF SECTION**

H:\Y0586.00\DOC\SPEC\2025\_02-20\_IFB\260543\_UNDERGROUND DUCTS AND RACEWAYS.DOC

## SECTION 260548 - VIBRATION CONTROLS FOR ELECTRICAL SYSTEMS

### PART 1 - GENERAL

#### 1.1 RELATED DOCUMENTS

- A. Certain requirements common to all the mechanical and electrical trades (Fire Suppression, Plumbing, HVAC, Electrical, and Tele/Data) are specified in Division 20. To avoid repetition, they are not repeated in each relevant Division and Section. However, these requirements are applicable to the work of this Section and are hereby incorporated by reference.
- B. Drawings and general provisions of the Contract, including General and Supplementary Conditions and Division 01 Specification Sections, apply to this Section.

#### 1.2 SUMMARY

- A. This Section includes the following:
  - 1. Isolation pads.
  - 2. Spring isolators.
  - 3. Restrained spring isolators.
  - 4. Channel support systems.
  - 5. Restraint cables.
  - 6. Hanger rod stiffeners.
  - 7. Anchorage bushings and washers.

#### 1.3 DEFINITIONS

- A. The IBC: International Building Code.
- B. ICC-ES: ICC-Evaluation Service.

#### 1.4 PERFORMANCE REQUIREMENTS

- A. Seismic-Restraint Loading:
  - 1. Site Design Category: B.

#### 1.5 SUBMITTALS

- A. Product Data: For the following:
  - 1. Include rated load, rated deflection, and overload capacity for each vibration isolation device.
- B. Delegated-Design Submittal: For vibration isolation details indicated to comply with performance requirements and design criteria, including analysis data signed and sealed by the qualified professional engineer responsible for their preparation.

1. Design Calculations: Calculate static and dynamic loading due to equipment weight and operation to select vibration isolators.
    - a. Coordinate design calculations with wind-load calculations required for equipment mounted outdoors. Comply with requirements in other Division 26 Sections for equipment mounted outdoors.
  2. Indicate materials and dimensions and identify hardware, including attachment and anchorage devices.
  3. Field-fabricated supports.
  - C. Coordination Drawings: Show coordination of seismic bracing for electrical components with other systems and equipment in the vicinity, including other supports and seismic restraints.
  - D. Welding certificates.
  - E. Qualification Data: For professional engineer.
  - F. Field quality-control test reports.
- 1.6 QUALITY ASSURANCE
- A. Welding: Qualify procedures and personnel according to AWS D1.1/D1.1M, "Structural Welding Code - Steel."
  - B. Comply with NFPA 70.

## **PART 2 - PRODUCTS**

### **2.1 VIBRATION ISOLATORS**

- A. Manufacturers: Subject to compliance with requirements, provide products by one of the following:
  1. Ace Mountings Co., Inc.
  2. Amber/Booth Company, Inc.
  3. California Dynamics Corporation.
  4. Isolation Technology, Inc.
  5. Kinetics Noise Control.
  6. Mason Industries.
  7. Vibration Eliminator Co., Inc.
  8. Vibration Isolation.
  9. Vibration Mountings & Controls, Inc.
  10. Or approved equal.
- B. Pads: Arrange in single or multiple layers of sufficient stiffness for uniform loading over pad area, molded with a nonslip pattern and galvanized-steel baseplates, and factory cut to sizes that match requirements of supported equipment.
  1. Resilient Material: Oil- and water-resistant neoprene.

- C. Restrained Spring Isolators: Freestanding, steel, open-spring isolators with seismic or limit-stop restraint.
  - 1. Housing: Steel with resilient vertical-limit stops to prevent spring extension due to weight being removed; factory-drilled baseplate bonded to 1/4-inch- thick, neoprene or rubber isolator pad attached to baseplate underside; and adjustable equipment mounting and leveling bolt that acts as blocking during installation.
  - 2. Restraint: Seismic or limit-stop as required for equipment and authorities having jurisdiction.
  - 3. Outside Spring Diameter: Not less than 80 percent of the compressed height of the spring at rated load.
  - 4. Minimum Additional Travel: 50 percent of the required deflection at rated load.
  - 5. Lateral Stiffness: More than 80 percent of rated vertical stiffness.
  - 6. Overload Capacity: Support 200 percent of rated load, fully compressed, without deformation or failure.

## 2.2 FACTORY FINISHES

- A. Finish: Manufacturer's standard prime-coat finish ready for field painting.

## PART 3 - EXECUTION

### 3.1 EXAMINATION

- A. Examine areas and equipment to receive vibration isolation devices for compliance with requirements for installation tolerances and other conditions affecting performance.
- B. Examine roughing-in of reinforcement and cast-in-place anchors to verify actual locations before installation.
- C. Proceed with installation only after unsatisfactory conditions have been corrected.

### 3.2 APPLICATIONS

- A. Multiple Raceways or Cables: Secure raceways and cables to trapeze member with clamps approved for application by an agency acceptable to authorities having jurisdiction.

### 3.3 ADJUSTING

- A. Adjust isolators after isolated equipment is at operating weight.
- B. Adjust limit stops on restrained spring isolators to mount equipment at normal operating height. After equipment installation is complete, adjust limit stops so they are out of contact during normal operation.
- C. Adjust active height of spring isolators.
- D. Adjust restraints to permit free movement of equipment within normal mode of operation.

3.4 ELECTRICAL VIBRATION-CONTROL SCHEDULE

- A. Supported or Suspended Equipment: dry type transformers.
  - 1. Equipment Location: see plans.
  - 2. Pads:
    - a. Material: Neoprene.

END OF SECTION

H:\Y0586.00\DOC\SPEC\2025\_02-20\_IFB\260548\_VIBRATION AND SEISMIC CONTROLS FOR ELECTRICAL SYSTEMS.DOC

## SECTION 260553 - IDENTIFICATION FOR ELECTRICAL SYSTEMS

### PART 1 - GENERAL

#### 1.1 RELATED DOCUMENTS

- A. Certain requirements common to all the mechanical and electrical trades (Fire Suppression, Plumbing, HVAC, Electrical, and Tele/Data) are specified in Division 20. To avoid repetition, they are not repeated in each relevant Division and Section. However, these requirements are applicable to the work of this Section and are hereby incorporated by reference.
- B. Drawings and general provisions of the Contract, including General and Supplementary Conditions and Division 01 Specification Sections, apply to this Section.

#### 1.2 SUMMARY

- A. Section Includes:
  - 1. Power raceway identification materials
  - 2. Power and control cable identification materials
  - 3. Conductor identification materials
  - 4. Underground line warning tape
  - 5. Warning labels and signs
  - 6. Instruction signs
  - 7. Equipment identification labels
  - 8. Cable ties
  - 9. Miscellaneous identification products

#### 1.3 SUBMITTALS

- A. Product Data: For each electrical identification product indicated.

#### 1.4 QUALITY ASSURANCE

- A. Comply with ANSI A13.1 **and IEEE C2.**
- B. Comply with NFPA 70.
- C. Comply with 29 CFR 1910.144 and 29 CFR 1910.145.
- D. Comply with ANSI Z535.4 for safety signs and labels.
- E. Adhesive-attached labeling materials, including label stocks, laminating adhesives, and inks used by label printers, shall comply with UL 969.

#### 1.5 COORDINATION

- A. Coordinate identification names, abbreviations, colors, and other features with requirements in other Sections requiring identification applications, Drawings, Shop Drawings, manufacturer's

wiring diagrams, and the Operation and Maintenance Manual; and with those required by codes, standards, and 29 CFR 1910.145. Use consistent designations throughout Project.

- B. Coordinate installation of identifying devices with completion of covering and painting of surfaces where devices are to be applied.
- C. Coordinate installation of identifying devices with location of access panels and doors.
- D. Install identifying devices before installing acoustical ceilings and similar concealment.

## **PART 2 - PRODUCTS**

### **2.1 POWER RACEWAY IDENTIFICATION MATERIALS**

- A. Colors for Feeder Raceways Carrying Circuits at 600 V or Less:
  - 1. Black letters on an orange field.
  - 2. Legend: Indicate voltage.
- B. Self-Adhesive Vinyl Labels for Feeder Raceways Carrying Circuits at 600 V or Less: Preprinted, flexible label laminated with a clear, weather- and chemical-resistant coating and matching wraparound adhesive tape for securing ends of legend label.

### **2.2 POWER AND CONTROL CABLE IDENTIFICATION MATERIALS**

- A. Comply with ANSI A13.1 for minimum size of letters for legend and for minimum length of color field for each raceway and cable size.
- B. Self-Adhesive Vinyl Labels: Preprinted, flexible label laminated with a clear, weather- and chemical-resistant coating and matching wraparound adhesive tape for securing ends of legend label.

### **2.3 CONDUCTOR IDENTIFICATION MATERIALS**

- A. Color-Coding Conductor Tape: Colored, self-adhesive vinyl tape not less than 3 mils thick by 1 to 2 inches wide.

### **2.4 UNDERGROUND-LINE WARNING TAPE**

- A. Tape:
  - 1. Recommended by manufacturer for the method of installation and suitable to identify and locate underground electrical and communications utility lines.
  - 2. Printing on tape shall be permanent and shall not be damaged by burial operations.
  - 3. Tape material and ink shall be chemically inert, and not subject to degrading when exposed to acids, alkalis, and other destructive substances commonly found in soils.
- B. Color and Printing:
  - 1. Comply with ANSI Z535.1 through ANSI Z535.5.
  - 2. Inscriptions for Red-Colored Tapes: ELECTRIC LINE, HIGH VOLTAGE,.
  - 3. Inscriptions for Orange-Colored Tapes: TELEPHONE CABLE, CATV CABLE, COMMUNICATIONS CABLE, OPTICAL FIBER CABLE,.

## 2.5 WARNING LABELS AND SIGNS

- A. Comply with NFPA 70 and 29 CFR 1910.145.
- B. Self-Adhesive Warning Labels: Factory-printed, multicolor, pressure-sensitive adhesive labels, configured for display on front cover, door, or other access to equipment unless otherwise indicated.
- C. Warning label and sign shall include, but are not limited to, the following legends:
  - 1. Multiple Power Source Warning: "DANGER - ELECTRICAL SHOCK HAZARD - EQUIPMENT HAS MULTIPLE POWER SOURCES."
- D. Arc Flash Warning Label
  - 1. Provide arc flash and electrocution hazard warning labels for switchgear, transformers, panelboards, motor starters, motor control centers, disconnect switches, and other locations as required by the NEC.
  - 2. Warning labels shall comply with ANSI Z535.4 and the NEC. Labels shall be printed on self-adhesive polyester with pressure sensitive adhesive back and covered with a clear polyester film. Outdoor labels shall be suitable for high UV environment.

## 2.6 EQUIPMENT IDENTIFICATION LABELS

- A. Engraved, Laminated Acrylic or Melamine Label: Punched or drilled for screw mounting. White letters on a dark-gray background. Minimum letter height shall be 3/8 inch.

## 2.7 CABLE TIES

- A. General-Purpose Cable Ties: Fungus inert, self extinguishing, one piece, self locking, Type 6/6 nylon.
  - 1. Minimum Width: 3/16 inch.
  - 2. Tensile Strength at 73 deg F, According to ASTM D 638: 12,000 psi.
  - 3. Temperature Range: Minus 40 to plus 185 deg F.
  - 4. Color: Black except where used for color-coding.

## 2.8 MISCELLANEOUS IDENTIFICATION PRODUCTS

- A. Fasteners for Labels and Signs: Self-tapping, stainless-steel screws or stainless-steel machine screws with nuts and flat and lock washers.

# PART 3 - EXECUTION

## 3.1 INSTALLATION

- A. Verify identity of each item before installing identification products.
- B. Location: Install identification materials and devices at locations for most convenient viewing without interference with operation and maintenance of equipment.
- C. Apply identification devices to surfaces that require finish after completing finish work.

- D. Self-Adhesive Identification Products: Clean surfaces before application, using materials and methods recommended by manufacturer of identification device.
- E. Attach signs and plastic labels that are not self-adhesive type with mechanical fasteners appropriate to the location and substrate.
- F. Cable Ties: For attaching tags. Use general-purpose type.
- G. Underground-Line Warning Tape: During backfilling of trenches install continuous underground-line warning tape directly above line at 6 to 8 inches below finished grade. Use multiple tapes where width of multiple lines installed in a common trench or concrete envelope exceeds 16 inches overall.

### 3.2 IDENTIFICATION SCHEDULE

- A. Accessible Raceways and Cables within Buildings: Identify the covers of each junction and pull box of the following systems with self-adhesive vinyl labels with the wiring system legend and system voltage. System legends shall be as follows:
  - 1. Emergency Power.
- B. Power-Circuit Conductor Identification, 600 V or Less: For conductors in vaults, pull and junction boxes, manholes, and handholes, use color-coding conductor tape to identify the phase.
  - 1. Color-Coding for Phase and Voltage Level Identification, 600 V or Less: Use colors listed below for ungrounded service feeder and branch-circuit conductors.
    - a. Color shall be factory applied or field applied color coding conductor tape for sizes larger than No. 8 AWG.
    - b. Colors for 208/120-V Circuits:
      - 1) Phase A: Black.
      - 2) Phase B: Red.
      - 3) Phase C: Blue.
    - c. Colors for 480/277-V Circuits:
      - 1) Phase A: Brown.
      - 2) Phase B: Orange.
      - 3) Phase C: Yellow.
    - d. Field-Applied, Color-Coding Conductor Tape: Apply in half-lapped turns for a minimum distance of 6 inches from terminal points and in boxes where splices or taps are made. Apply last two turns of tape with no tension to prevent possible unwinding. Locate bands to avoid obscuring factory cable markings.
- C. Install instructional sign including the color-code for grounded and ungrounded conductors using adhesive-film-type labels.
- D. Conductors to Be Extended in the Future: Attach write-on tags or marker tape to conductors and list source.
- E. Auxiliary Electrical Systems Conductor Identification: Identify field-installed alarm, control, and signal connections.

1. Identify conductors, cables, and terminals in enclosures and at junctions, terminals, and pull points. Identify by system and circuit designation.
  2. Use system of marker tape designations that is uniform and consistent with system used by manufacturer for factory-installed connections.
  3. Coordinate identification with Project Drawings, manufacturer's wiring diagrams, and the Operation and Maintenance Manual.
- F. Locations of Underground Lines: Identify with underground-line warning tape for power, lighting, communication, and control wiring and optical fiber cable.
1. Limit use of underground-line warning tape to direct-buried cables.
  2. Install underground-line warning tape for both direct-buried cables and cables in raceway.
- G. Panelboard Circuit Identification:
1. For each panel provide typewritten directory of circuits that identifies the circuiting as well as breaker size. The directory shall be a full 8.5 inches x 11 inches sheet behind a plastic pocket that is secured to the panelboard.
  2. Panel directories shall identify the panel name, their source of power and voltage.
  3. Each circuit directory shall include load name and load location.
  4. In addition to the hard copy panel directory, the electrical contractor shall provide the electronic version in its native (word or excel) format as well as PDF format as part of the as-built documentation.
- H. Equipment Identification Labels: On each unit of equipment, install unique designation label that is consistent with wiring diagrams, schedules, and the Operation and Maintenance Manual. Apply labels to disconnect switches and protection equipment, central or master units, control panels, control stations, terminal cabinets, and racks of each system. Systems include power, lighting, control, communication, signal, monitoring, and alarm systems unless equipment is provided with its own identification.
1. Labeling Instructions:
    - a. Indoor Equipment: Engraved, laminated acrylic or melamine label. Unless otherwise indicated, provide a single line of text with 1/2-inch- high letters on 1-1/2-inch- high label; where two lines of text are required, use labels 2 inches high.
    - b. Outdoor Equipment: Engraved, laminated acrylic or melamine label.
    - c. Elevated Components: Increase sizes of labels and letters to those appropriate for viewing from the floor.
    - d. Unless provided with self-adhesive means of attachment, fasten labels with appropriate mechanical fasteners that do not change the NEMA or NRTL rating of the enclosure.
  2. Equipment to Be Labeled:
    - a. Panelboards: Typewritten directory of circuits in the location provided by panelboard manufacturer. Panelboard identification shall be engraved, laminated acrylic or melamine label.
    - b. Enclosures and electrical cabinets.

- c. Access doors and panels for concealed electrical items.
- d. Switchboards.
- e. Transformers: Label that includes tag designation shown on Drawings for the transformer, feeder, and panelboards or equipment supplied by the secondary.
- f. Emergency system boxes and enclosures.
- g. Enclosed switches.
- h. Enclosed circuit breakers.
- i. Enclosed controllers.
- j. Variable-speed controllers.
- k. Power transfer equipment.

SYSTEMS.DOC

## SECTION 260573 - OVERCURRENT PROTECTIVE DEVICE COORDINATION STUDY

### PART 1 - GENERAL

#### 1.1 RELATED DOCUMENTS

- A. Certain requirements common to all the mechanical and electrical trades (Fire Suppression, Plumbing, HVAC, Electrical, and Tele/Data) are specified in Division 20. To avoid repetition, they are not repeated in each relevant Division and Section. However, these requirements are applicable to the work of this Section and are hereby incorporated by reference.
- B. Drawings and general provisions of the Contract, including General and Supplementary Conditions and Division 01 Specification Sections, apply to this Section.

#### 1.2 SUMMARY

- A. This Section includes:
  - 1. Computer software developers
  - 2. Computer software program requirements
- B. Computer-based, fault-current, overcurrent protective device coordination and arc flash hazard studies. Protective devices shall be set based on results of the protective device coordination and arc flash hazard study.
- C. The studies shall be submitted to the Design Engineer prior to receiving final approval of the distribution equipment shop drawings and/or prior to release of equipment for manufacture. If formal completion of the studies may cause delay in equipment manufacture, approval from the Engineer may be obtained for a preliminary submittal of sufficient study data to ensure that the selection of device ratings and characteristics will be satisfactory.
- D. The studies shall include all portions of the electrical distribution system (i.e., panels, motors 10 HP and larger, VFDs, disconnects 100A and larger, etc.) from the power source or sources down to and including the smallest adjustable trip circuit breaker in the distribution system. Normal system operating connections and those which result in maximum fault conditions, such as paralleled service, shall be adequately covered in the study.
- E. Overcurrent protective devices in distribution equipment associated with Article 700, 701, and 708 of NFPA 70 are required to be selectively coordinated. The coordination study must include confirmation that equipment provided serving those systems are selectively coordinated in accordance with NFPA 70.
  - 1. Coordination of series-rated devices is permitted where indicated on Drawings.

#### 1.3 SUBMITTALS

- A. Product Data: For computer software program to be used for studies.
- B. Product Certificates: For coordination-study and fault-current-study computer software programs, certifying compliance with IEEE 399.
- C. Qualification Data: For coordination-study specialist.

- D. Other Action Submittals: The following submittals shall be made after the approval process for system protective devices has been completed. Submittals shall be in digital form.
  - 1. Coordination-study input data, including completed computer program input data sheets.
  - 2. Study and Equipment Evaluation Reports.
  - 3. Coordination-Study Report.
  - 4. Short Circuit Report.
  - 5. Arc Flash Analysis Report
- E. Studies shall include the following outline:
  - 1. Table of Contents
  - 2. Executive Summary
  - 3. Calculation methods and tabulations.
  - 4. System input Data
  - 5. One-line diagrams and impedance diagrams.
  - 6. Results of the study.
  - 7. Conclusions and recommendations.
  - 8. Arc flash hazard

#### 1.4 QUALITY ASSURANCE

- A. Studies shall use computer programs that are distributed nationally and are in wide use. Software algorithms shall comply with requirements of standards and guides specified in this Section. Manual calculations are not acceptable.
- B. Coordination-Study Specialist Qualifications: An entity experienced in the application of computer software used for studies, having performed successful studies of similar magnitude on electrical distribution systems using similar devices.
  - 1. Professional engineer, licensed in the state where Project is located, shall be responsible for the study. All elements of the study shall be performed under the direct supervision and control of engineer.
- C. Comply with IEEE 242 for short-circuit currents and coordination time intervals.
- D. Comply with IEEE 399 for general study procedures.
- E. As recommended in ANSI/NFPA 70B, Recommended Practice for Electrical Equipment Maintenance, short circuit studies and overcurrent protective device coordination studies should be performed when the facility electrical system is designed and these studies should be updated whenever a major modification or renovation takes place.
- F. In addition, the protection of electrical systems against damage due to short circuit faults is required in NFPA 70, National Electric Code Sections 110.9 "Interrupting Rating" and 110.10 "Circuit Impedance and Other Characteristics." Proper coordination of protective devices improves system reliability and prevents major blackouts by isolating short circuit faults with the protective device immediately on the source side of the fault. NFPA 70 and various IEEE standards contain requirements and suggested practices to coordinate electrical systems.

## PART 2 - PRODUCTS

### 2.1 COMPUTER SOFTWARE DEVELOPERS

- A. Basis-of-Design Product: Subject to compliance with requirements, utilize software from SKM Systems Analysis, Inc. or a comparable product by one of the following:
  - 1. CGI CYME.
  - 2. EDSA Micro Corporation.
  - 3. ESA Inc.
  - 4. Operation Technology, Inc.
  - 5. SKM Systems Analysis, Inc.
  - 6. Or approved equal.

### 2.2 COMPUTER SOFTWARE PROGRAM REQUIREMENTS

- A. Comply with IEEE 399.
- B. Analytical features of fault-current-study computer software program shall include "mandatory," "very desirable," and "desirable" features as listed in IEEE 399.
- C. Computer software program shall be capable of plotting and diagramming time-current-characteristic curves as part of its output. Computer software program shall report device settings and ratings of all overcurrent protective devices and shall demonstrate selective coordination by computer-generated, time-current coordination plots.
  - 1. Optional Features:
    - a. Calculating arcing fault is a requirement.
    - b. Simultaneous faults.
    - c. Explicit negative sequence.
    - d. Mutual coupling in zero sequence.

## PART 3 - EXECUTION

### 3.1 EXAMINATION

- A. Examine Project overcurrent protective device submittals for compliance with electrical distribution system coordination requirements and other conditions affecting performance. Devices to be coordinated are indicated on Drawings.
  - 1. Proceed with coordination study only after relevant equipment submittals have been assembled. Overcurrent protective devices that have not been submitted and approved prior to coordination study may not be used in study.

### 3.2 POWER SYSTEM DATA

- A. Gather and tabulate the following input data to support coordination study:

1. Product Data for overcurrent protective devices specified in other Division 26 Sections and involved in overcurrent protective device coordination studies. Use equipment designation tags that are consistent with electrical distribution system diagrams, overcurrent protective device submittals, input and output data, and recommended device settings.
2. The power system study analysis shall include equipment and system information for the system branch affected by the scope of work.
3. Impedance of utility service entrance.
4. Inverter contribution
5. Electrical Distribution System Diagram: In hard-copy and electronic-copy formats, showing the following:
  - a. Circuit-breaker and fuse-current ratings and types.
  - b. Relays and associated power and current transformer ratings and ratios.
  - c. Transformer kilovolt amperes, primary and secondary voltages, connection type, impedance, and X/R ratios.
  - d. Generator kilovolt amperes, size, voltage, and source impedance.
  - e. Cables: Indicate conduit material, sizes of conductors, conductor material, insulation, and length.
  - f. Busway ampacity and impedance.
  - g. Motor horsepower and code letter designation according to NEMA MG 1.
    - 1) Individually model motors 10 hp and greater.
    - 2) Where model motors less than 10 hp are fed from common distribution equipment, the motor horsepowers shall be combined into a single load.
6. Data sheets to supplement electrical distribution system diagram, cross-referenced with tag numbers on diagram, showing the following:
  - a. Special load considerations, including starting inrush currents and frequent starting and stopping.
  - b. Transformer characteristics, including primary protective device, magnetic inrush current, and overload capability.
  - c. Motor full-load current, locked rotor current, service factor, starting time, type of start, and thermal-damage curve.
  - d. Generator thermal-damage curve.
  - e. Ratings, types, and settings of utility company's overcurrent protective devices.
  - f. Special overcurrent protective device settings or types stipulated by utility company.
  - g. Time-current-characteristic curves of devices indicated to be coordinated.
  - h. Manufacturer, frame size, interrupting rating in amperes rms symmetrical, ampere or current sensor rating, long-time adjustment range, short-time adjustment range, and instantaneous adjustment range for circuit breakers.

- i. Manufacturer and type, ampere-tap adjustment range, time-delay adjustment range, instantaneous attachment adjustment range, and current transformer ratio for overcurrent relays.
- j. Panelboards, switchboards, motor-control center ampacity, and interrupting rating in amperes rms symmetrical.

### 3.3 FAULT-CURRENT STUDY

- A. Calculate the maximum available short-circuit current in amperes rms symmetrical at circuit-breaker positions of the electrical power distribution system. The calculation shall be for a current immediately after initiation and for a three-phase bolted short circuit at each of the following:
  - 1. Switchgear and switchboard bus.
  - 2. Medium-voltage controller.
  - 3. Motor-control center.
  - 4. Distribution panelboard.
  - 5. Branch circuit panelboard.
  - 6. ATS
  - 7. Existing to remain switchboard, panelboards, ATS
- B. There are two levels of fault current to be studied as follows:
  - 1. Level 1: Maximum fault current based on infinite bus and limited by the transformer impedance
    - a. In the case of maximum fault current, the study shall be run using the nominal transformer impedance of 5.75%. Another study shall be run when the actual impedance is known upon delivery of the building transformer.
  - 2. Level 2: Minimum fault current based on the actual available fault current.
- C. Study electrical distribution system from normal and alternate power sources throughout electrical distribution system for Project. Include studies of system-switching configurations and alternate operations that could result in maximum fault conditions.
- D. Calculate momentary and interrupting duties on the basis of maximum available fault current.
- E. Include fault contribution of all motors 10 hp and above in the study. Variable frequency drives shall be included in the study.
- F. Calculations to verify interrupting ratings of overcurrent protective devices shall comply with IEEE 241 and IEEE 242.
  - 1. Transformers:
    - a. ANSI C57.12.22.
    - b. IEEE C57.96.
  - 2. Low-Voltage Circuit Breakers: IEEE 1015 and IEEE C37.20.1.
  - 3. Low-Voltage Fuses: IEEE C37.46.
- G. Study Report:

1. Show calculated X/R ratios and equipment interrupting rating (1/2-cycle) fault currents on electrical distribution system diagram.
- H. Equipment Evaluation Report:
  1. For 600-V overcurrent protective devices, ensure that interrupting ratings are equal to or higher than calculated 1/2-cycle symmetrical fault current.
  2. For devices and equipment rated for asymmetrical fault current, apply multiplication factors listed in the standards to 1/2-cycle symmetrical fault current.
  3. Verify adequacy of phase conductors at maximum three-phase bolted fault currents; verify adequacy of equipment grounding conductors and grounding electrode conductors at maximum ground-fault currents. Ensure that short-circuit withstand ratings are equal to or higher than calculated 1/2-cycle symmetrical fault current.
- I. Note that Contract Documents indicate general requirements for equipment, etc., but additional specific characteristics of equipment furnished shall be determined in accordance with results of short circuit study.
  1. Equipment design discrepancies and proposed corrective modifications, if required, shall be submitted with short circuit study with variations clearly noted on subsequent shop drawings.

### 3.4 COORDINATION STUDY

- A. Perform coordination study using approved computer software program. Prepare a written report using results of fault-current study. Comply with IEEE 399.
  1. Calculate the maximum and minimum 1/2-cycle short-circuit currents.
  2. Calculate the maximum and minimum interrupting duty (5 cycles to 2 seconds) short-circuit currents.
  3. Calculate the maximum and minimum ground-fault currents.
- B. Comply with IEEE 242 recommendations for fault currents and time intervals.
- C. Provide a ground fault current study for the system, including the associated zero sequence impedance data. Include all adjustable settings for ground fault protective devices. Include manufacturing tolerance and damage bands in plotted fuse characteristics.
- D. The studies shall include all portions of the electrical distribution system from the power source or sources down to and including the smallest adjustable trip circuit breaker in the distribution system. TCC curves shall be provided for each section of the distribution system that contains an adjustable setting.
- E. Transformer Primary Overcurrent Protective Devices:
  1. Device shall not operate in response to the following:
    - a. Inrush current when first energized.
    - b. Self-cooled, full-load current or forced-air-cooled, full-load current, whichever is specified for that transformer.
    - c. Permissible transformer overloads according to IEEE C57.96 if required by unusual loading or emergency conditions.

2. Device settings shall protect transformers according to IEEE C57.12.00, for fault currents.
  - F. Motors served by voltages more than 600 V shall be protected according to IEEE 620.
  - G. Conductor Protection: Protect cables against damage from fault currents according to ICEA P-32-382, ICEA P-45-482, and conductor melting curves in IEEE 242. Demonstrate that equipment withstands the maximum short-circuit current for a time equivalent to the tripping time of the primary relay protection or total clearing time of the fuse. To determine temperatures that damage insulation, use curves from cable manufacturers or from listed standards indicating conductor size and short-circuit current.
  - H. Coordination-Study Report: Prepare a written report indicating the following results of coordination study:
    1. Tabular Format of Settings Selected for Overcurrent Protective Devices:
      - a. Device tag.
      - b. Relay-current transformer ratios; and tap, time-dial, and instantaneous-pickup values.
      - c. Circuit-breaker sensor rating; and long-time, short-time, and instantaneous settings.
      - d. Fuse-current rating and type.
      - e. Ground-fault relay-pickup and time-delay settings.
    2. Coordination Curves: Prepared to determine settings of overcurrent protective devices to achieve selective coordination. Graphically illustrate that adequate time separation exists between devices installed in series, including power utility company's upstream devices. Prepare separate sets of curves for the switching schemes and for emergency periods where the power source is local generation. Show the following information:
      - a. Device tag.
      - b. Voltage and current ratio for curves.
      - c. Three-phase and single-phase damage points for each transformer.
      - d. No damage, melting, and clearing curves for fuses.
      - e. Cable damage curves.
      - f. Transformer inrush points.
      - g. Maximum fault-current cutoff point.
      - h. Motor starting curves.
  - I. Completed data sheets for setting of overcurrent protective devices.
- 3.5 ARC FLASH STUDY
- A. Provide an electrical arc flash hazard analysis on the Facility to determine incident energy, arc flash protection boundaries, and required personal protection equipment (PPE) for all electrical equipment in the facility. The calculations shall comply with NFPA-70E 2004, and IEEE-1584-2002. Labels shall be provided for equipment modified as a result of the scope of work for this project.

1. Equipment shall include but not be limited to individually mounted disconnects, individually mounted circuit breakers, panelboards, HVAC equipment control panels operating at 240V or above, variable frequency drives, switchboards, switchgear, inverter units, automatic transfer switches, power distribution units, etc.
  2. Equipment with multiple vertical sections such as switchboards, switchgear, multi-tab panels, etc. shall be provided with an arc flash label for each vertical section.
  3. For equipment having multiple access points (front, rear, side) a label shall be provided at each side of access.
- B. The purpose of this study is to provide a comprehensive software model of the Facility electrical distribution system, which will document facility compliance with NFPA 70E mandates as described below. This model will serve as an integral part of an ongoing safety program by providing integral work permits and arc flash calculations in compliance with NFPA-70E Article 130.1(A)(2) for each electrical equipment in the facility. The goal of this study shall be limit to arc flash incident energy to 8 calories per square centimeter or less at all locations. The study may require multiple iterations to achieve this goal by modifying settings and/or by suggesting different protective equipment. If required, the study report shall summarize and compare different scenarios where the arch flash goal maybe achieved. Consider the loss of coordination (only if not life safety) and equipment with different ratings or settings as possible ways to mitigate higher levels of incident energy.
- C. The analysis and procedures shall comply with the following standards and recommended practices for power system studies.
1. NFPA-70E, 2012 Standard for Electrical Safety in the Workplace
  2. IEEE-1584-2002
  3. IEEE-242 “Buff Book” Protection and Coordination of Industrial Power Systems
  4. IEEE-399 “Brown Book” Power System Analysis
  5. IEEE-141 “Red Book” Electric Power Distribution for Industrial Plants
- D. Method
1. A detailed arc flash study shall be performed to determine potential arc flash incident energies, arc flash boundaries, shock hazard boundaries and proper personal protective equipment (PPE) for all energized electrical system equipment tasks for the electrical system studied. The calculations shall comply with NFPA-70E 2004, and IEEE-1584. Bolted short circuit calculations used in the above standards shall comply with ANSI C37.010, C37.13, C37.5, IEEE-141, and IEEE-399. The purpose of this study is to determine arc flash hazards in conformance with NFPA-70E, and to provide a comprehensive software model of the electrical distribution system, which provides integral work permits and arc flash calculations in compliance with NFPA 70E Article 130.1(A)(2) for all equipment in the facility. The software program used in this study shall comply with the above standards. No substitutions in calculation methods will be allowed.
  2. The arc flash study shall determine the following results. The results shall be provided in spreadsheet format for each mode and electrical system location to provide easy viewing and comparison. Worst-case arc flash energy levels shall be flagged and the spreadsheet comparison table shall be capable of providing its output directly to high quality vinyl label printers. The calculations shall, as a minimum, include a comparison of both 100%

and 85% arcing currents for low voltage equipment for each electrical system configuration or operating mode, indicating worst-case arc flash hazards. The spreadsheet results shall include:

- a. Equipment name and voltage.
  - b. Upstream equipment device name and ANSI function, i.e. 51/50, etc.
  - c. Equipment type, i.e. switchgear, MCC, Panel, VFD, etc.
  - d. Equipment arc gap.
  - e. Bolted and estimated arcing fault current at the fault point (equipment) in symmetrical amperes. The estimated arcing current should be based on the arcing current equations used.
  - f. Trip time, opening time, and total clearing time (total Arc time) of the protective device.
  - g. Worst-case arc flash boundary for each bus/equipment in the model.
  - h. Worst-case arc flash hazard incident energy in cal/cm<sup>2</sup> for each bus/equipment in the model.
  - i. Worst-case personal protective equipment (PPE) for each bus/equipment in the model.
  - j. Working distances for up to five different distances showing items worst-case arc flash boundary, worst-case arc flash hazard incident energy, and worst-case personal protective equipment (PPE) for each distance.
  - k. Indicate “Danger/Hazardous” areas where incident energy is greater than 40 cal/cm<sup>2</sup> and provide recommendations to reduced arc flash energy levels for these areas.
3. Flag results where 85% arcing current provided worst-case results.
  4. Each mode of operation shall include a detailed write-up indicating areas where incident energy calculations and PPE requirements are higher than calculated in the normal operating mode.
  5. The overcurrent protection trip delay time used in the arc flash evaluation study shall be the clearing time of the circuit breaker or 2 seconds, whichever is greater as recommended by IEEE 1584 (section B1).
- E. Provide a detailed arc flash analysis report including as a minimum:
1. Introduction.
  2. Methodology.
  3. Information Sources.
  4. Key Assumptions.
  5. Arc Flash Energy and other consideration for various System Modes of Operation (maintenance mode, bus-tie, co-gen on/off, etc.).
  6. Arc Energy at 100% and reduced currents.
  7. IEEE 1584-2002 Considerations.

8. Overcurrent Protective Device Changes, Replacements or Setting Changes implemented in study to reduce arc flash hazard exposure.
  9. Explanation of Data in Arc Flash Hazard Report Tables.
  10. NFPA 70E Information.
  11. Shock Hazards with covers removed.
  12. Shock Hazard Approach Boundaries.
  13. Limited Approach Boundary.
  14. Restricted Approach Boundary.
  15. Prohibited Approach Boundary.
  16. Arc Flash Hazard Boundaries.
  17. Results of Arc flash Hazard Analysis for high voltage, medium voltage and low voltage systems, including:
    - a. Working distances.
    - b. Energy Levels.
    - c. PPE Requirements.
    - d. Recommendations to reduce arc flash hazard energy and exposure. For equipment listed in category 3, category 4 and dangerous, verify if the breaker instantaneous setting can be reduced without compromising coordination. If after adjusting instantaneous settings, for equipment in the category 3, category 4 and dangerous provide a brief narrative explaining why the category is so high
    - e. Arc Flash Hazard Report.
    - f. Electronic Copy in Adobe Acrobat format (6.0 or later)
- F. Provide and install print labels for all equipment in the system from the project study file. Assume three labels per equipment/bus using 4 inch x 6 inch labels or one 6 inch x 8 inch label per equipment bus. The labels shall be UV resistant vinyl labels (white with orange warning strip and black letters) conforming to ANSI-Z535. The labels shall be printable directly from the power system software utilized for the study. Labels shall include available fault current.
1. Transfer switches shall be provided with a label for each source.
  2. Distribution equipment served from a generator shall be provided with a label for each source.
  3. All controllers (i.e., starters, variable frequency drives, etc.) shall be provided with a label.
    - a. Self adhesive arc flash labels containing study result information. One label shall be provided for each piece of electrical distribution equipment including switchgear, switchboards, distribution panelboards, branch circuit panelboards, and disconnects. Label information shall include the following, at a minimum.
    - b. Name of Equipment
    - c. "Warning" or "Danger" reference as appropriate
    - d. Equipment Voltage Rating (Volts)

- e. Limited Approach Boundary Distance (Inches)
  - f. Restricted Approach Boundary Distance (Inches)
  - g. Prohibited Approach Boundary Distance (Inches)
  - h. Flash Hazard Boundary (inches)
  - i. Arc Flash Hazard Category
  - j. Incident Energy ( $\text{cal}/\text{cm}^2$ )
  - k. Description of PPE for head, eye, body, hand/arm, and foot protection
  - l. Date of study
4. Refer to sample label below:

 <b>WARNING</b>		
208 VAC      Arc Flash and Shock Hazard		
42 inches	Limited Approach (Qualified Persons Only)	
Avoid Contact	Restricted Approach (PPE Required)	
Avoid Contact	Prohibited Approach (PPE Required)	
61 inches	Flash Hazard Boundary (PPE Required)	
<b>Category 2</b>	<b>PPE Required</b>	<b>7.3 <math>\text{cal}/\text{cm}^2</math></b>
Eye and Head:	Hardhat + Safety Glasses or Goggles + Ear Canal Inserts	
Body:	Cotton Underwear + FR Shirt & Pants	
Hand and Arm:	Leather Gloves	
Foot:	Leather work shoes	
NORMAL 04/02/10		Bus: 198 AP-GA Prot: DP-41-SE-3 <b>AVAILABLE FAULT CURRENT: 1.40 kA</b>

5. For equipment with arc reduction provide a second blue label that notes the arc reduction levels when using the arc flash reduction feature

### 3.6 ADJUSTMENTS, SETTINGS AND MODIFICATIONS

- A. Provide necessary field settings, adjustments, minor modifications, for conformance with the study, without any additional cost to owner. Examples of minor modifications would be trip sizes within the same frame, the time curve characteristics of inductions relays, CT ranges, etc.
- B. Proposed corrective modifications will be taken under advisement and the Construction Manager will be given further instructions.

## SECTION 260800 - COMMISSIONING OF ELECTRICAL

### PART 1 - GENERAL

#### 1.1 RELATED DOCUMENTS

- A. Certain requirements common to all the mechanical and electrical trades (Fire Suppression, Plumbing, HVAC, Electrical, and Tele/Data) are specified in Division 20. To avoid repetition, they are not repeated in each relevant Division and Section. However, these requirements are applicable to the work of this Section and are hereby incorporated by reference.
