## SECTION 00 0000 – TABLE OF CONTENTS

### DIVISION 01 - GENERAL REQUIREMENTS

00 0000	Technical Specifications Table of Contents
01 1000	Summary
01 1100	General Requirements
01 2100	Allowances
01 2200	Unit Prices
01 2300	Alternates
01 2500	Substitution Procedures
01 2600	Contract Modification Procedures
01 2900	Payment Procedures
01 3100	Project Management and Coordination
01 3200	Construction Progress Documentation
01 3300	Submittal Procedures
01 4000	Quality Requirements
01 4010	Roof System Quality Control
01 4200	References
01 5001	Temporary Facilities and Controls
01 6000	Product Requirements
01 7300	Execution Requirements
01 7419	Construction Waste Management and Disposal
01 7700	Closeout Procedures
01 7823	Operation and Maintenance Data
01 7830	Warranties
01 7839	Project Record Documents
01 7900	Demonstration and Training

### DIVISION 02 - EXISTING CONDITIONS

02 4110	Selective Demolition and alteration Work
02 4119	Site Demolition

### DIVISION 03 - CONCRETE

03 3100	Concrete Formwork
03 3200	Concrete Reinforcement
03 3000	Cast-in-Place Concrete
035416	Cement Leveling Compound

### DIVISION 04 - MASONRY

04 2000	Unit Masonry
---------	--------------

## DIVISION 05 – METALS

05 1200	Structural Steel
05 3000	Metal Decking
05 4000	Cold Formed Metal Framing
05 5000	Metal Fabrications
05 5100	Steel Pan Stairs
05 5200	Ornamental handrails and railings

## DIVISION 06 – WOODS, PLASTICS, AND COMPOSITES

06 1000	Rough Carpentry
06 1600	Sheathing
06 4020	Interior Architectural Woodwork
06 8200	Fiber-reinforced Plastic Panels

## DIVISION 07 - THERMAL AND MOISTURE PROTECTION

07 1326	Sheet Membrane Waterproofing
07 1616	Capillary Waterproofing
07 2100	Thermal Insulation
07 2726	Fluid-Applied Membrane Air Barriers
07 4100	Standing Seam Metal Roof Panels
07 4213	Metal Wall and Soffit Panels
07 4800	Rainscreen attachment system
07 5400	PVC Thermoplastic Single-ply Roofing
07 6200	Sheet metal Flashing and Trim
07 7116	Manufactured Counter flashing system
07 7200	Roof Accessories
07 8100	Spray Resistive Material
07 8413	Penetration Firestopping
07 8443	Joint Firestopping
07 9200	Joint Sealants
07 9500	Expansion Control

## DIVISION 08 – OPENINGS

08 0671	Door Hardware Schedule
08 1103	Fire-Protective Framing and Glazing Systems
08 1113	Hollow Metal Doors and Frames
08 1217	Interior Aluminum frames
08 1416	Flush Wood Doors
08 1700	Integrated Door Opening Assemblies
08 3110	Access Doors and Frames
08 4113	Aluminum Entrances and Storefronts
08 4413	Glazed Aluminum Curtain Walls
08 4523	Insulated Translucent Fiberglass Panel Wall System

08 5113	Aluminum Windows
08 7100	Door Hardware
08 8000	Glazing
08 8300	Athletic Mirrors
08 9000	Louvers

#### DIVISION 09 – FINISHES

09 2216	Non-Structural Metal Framing
09 2900	Gypsum board
09 3100	Tiling
09 5000	Suspended Wood Grille Ceiling
09 5113	Acoustical Tile Ceilings
09 5446	Felt Ceiling System
09 6263	Stainless Steel Wall Base
096516	Sheet vinyl flooring
09 6519	Resilient Tile Flooring
09 6560	Synthetic Sports Flooring
09 6566	Resilient Athletic Flooring
09 6616	Precast terrazzo treads and risers
09 6813	Tile Carpeting
09 7200	Wallcoverings
09 9000	Painting and Coating
09 9600	High Performance Coatings

#### DIVISION 10 – SPECIALTIES

10 1100	Visual Display Surfaces
10 1400	Signage
10 1410	Records Board
10 2113	Color-thru Phenolic Toilet Compartments
10 2124	Cubical Track System and curtains
10 2800	Toilet Accessories
10 2813	Electric Hand Dryers
10 4400	Fire Protection Specialties
10 5100	Solid Phenolic Lockers

#### DIVISION 11 – EQUIPMENT

11 4500	Appliances and Equipment
11 6600	Athletic Equipment

#### DIVISION 12 – FURNISHINGS

12 2400	Window Shades
12 7600	Telescoping Gym Seats

## DIVISION 13 – SPECIAL CONSTRUCTION

131100	Swimming Pool
131103	Swimming Pool Tile
131106	Swimming Pool Timing System
131250	Continuous Elevated Angle-Frame Bleachers

## DIVISION 14 – CONVEYING EQUIPMENT

14 2100	Traction elevators
---------	--------------------

## DIVISION 20 - GENERAL

200000	Common Mechanical/Electrical Requirements
--------	---

## DIVISION 21 - FIRE SUPPRESSION

210500	Common Work Results For Fire Suppression
210553	Identification For Fire Suppression Piping And Equipment
211300	Water Based Fire Suppression Systems

## DIVISION 22 - PLUMBING

220500	Common Work Results For Plumbing
220513	Common Motor Requirements For Plumbing Equipment
220514	Common Control Panel Requirements
220516	Expansion Fittings And Loops For Plumbing Piping
220517	Sleeves And Sleeve Seals For Plumbing Piping
220518	Escutcheons For Plumbing Piping
220519	Meters And Gauges For Plumbing Piping
220529	Hangers And Supports For Plumbing Piping And Equipment
220548	Vibration And Seismic Controls For Plumbing
220553	Identification For Plumbing Piping And Equipment
220716	Plumbing Equipment Insulation
220719	Plumbing Piping Insulation
220800	Commissioning Of Plumbing
221110	Common Plumbing Piping
221115	Plumbing Natural Gas Piping
221119	Water Piping Specialties
221319	Sanitary Waste Piping Specialties
221423	Storm Drainage Piping Specialties
223400	Fuel-Fired, Water Heaters
224200	Commercial Plumbing Fixtures
224500	Emergency Plumbing Fixtures
224700	Water Coolers

## DIVISION 23 - HEATING, VENTILATING, AND AIR CONDITIONING (HVAC)

230130.51	Hvac Air-Distribution System Cleaning-Existing Systems
230500	Common Work Results For Hvac
230513	Common Motor Requirements For Hvac Equipment
230529	Hangers And Supports For Hvac Piping And Equipment
230533	Heat Tracing For Hvac Piping
230548	Vibration And Seismic Controls For Hvac
230553	Identification For Hvac Piping And Equipment
230593	Testing, Adjusting, And Balancing For Hvac
230700	Hvac Insulation
230800	Commissioning Of Hvac
230900	Direct Digital Control (DDC) System For Hvac
232100	Hydronic Piping Distribution Systems
232300	Refrigerant Piping
232500	Hvac Water Treatment
233113	Air Distribution Systems-Metal Ducts
233400	Hvac Fans And Ventilators
233600	Air Terminal Units
235216	Condensing Boilers
237413	Packaged, Outdoor, Central-Station Air-Handling Units
238126	Split-System Air-Conditioners
238216	Air Coils
238239.13	Cabinet Unit Heaters
238239.19	Wall And Ceiling Unit Heaters
238323	Radiant-heating Electric Panels
238416	Mechanical Dehumidification Units

## DIVISION 26 - ELECTRICAL

260500	Common Work Results For Electrical
260519	Low-Voltage Electrical Power Conductors And Cables
260526	Grounding And Bonding For Electrical Systems
260529	Hangers And Supports For Electrical Systems
260533	Raceway And Boxes For Electrical Systems
260543	Underground Ducts And Raceways For Electrical Systems
260548	Vibration And Seismic Controls For Electrical Systems
260553	Identification For Electrical Systems
260573	Overcurrent Protective Device Coordination Study
260800	Commissioning Of Electrical
260943	Network Lighting Controls
262200	Low-Voltage Transformers
262413	Switchboards
262416	Panelboards
262726	Wiring Devices
262813	Fuses
262816	Enclosed Switches And Circuit Breakers
262913	Enclosed Controllers

262923	Variable-Frequency Controllers
263213	Engine Generators
263600	Transfer Switches
264113	Lightning Protection For Structures
265100	Interior Lighting
26 5615	Site Lighting

#### DIVISION 27 - COMMUNICATIONS SYSTEMS

270000	General Requirements For Telecommunications
270500	Common Work Elements For Communications
271100	Network Communications Systems
274100	Audiovisual Systems
275223	Nurse Call-Code Blue Systems

#### DIVISION 28 - ELECTRONIC SAFETY AND SECURITY

280500	Common Work Elements For Electronica Safety And Security
281300	Access Control
282300	Video Surveillance
283105	Fire Alarm Cables And Pathways
283111	Digital, Addressable Fire Alarm System
283133	Two Way Radio Pes Communications Enhancement Systems

#### DIVISION 31 – EARTHWORK

310913	Monitoring Of Adjacent Structures
311000	Site Preparation
311500	Project Survey And Layout
312000	Earthwork
312100	Aggregate Materials
312200	Soil Erosion And Sedimentation Control
312333	Excavation, Backfill, And Compaction For Utilities
313200	Soil Stabilization
315000	Temporary Excavation Support And Protection

#### DIVISION 32 - EXTERIOR IMPROVEMENTS

321216	Asphaltic Concrete Pavement
321218	Base Course
321314	Portland Cement Concrete Paving
321315	Curbs And Sidewalks
321373	Concrete Pavement Joint Sealants
321723	Pavement Markings
323113	Chain Link Fences And Gates
323201	Cast-In-Place Wall
323300	Site Furnishings
329100	Planting
329113	Planting Soil Mixing

DIVISION 33 – SITE UTILITIES

330510	Other Utilities
331000	Protection of Existing Utilities
332200	Water Distribution Systems
332334	Excavation, Backfill, And Compaction For Pavement
334100	Storm Drainage
334200	Sanitary Sewer Systems
334300	Sewer Manholes, Frames, And Covers

END OF 00 0000 - TABLE OF CONTENTS

## SECTION 011000 - SUMMARY

### PART 1 - GENERAL

#### 1.1 SUMMARY

A. Section Includes:

1. Work covered by Contract Documents.
2. Owner-furnished/Contractor-installed (OFICI) products.
3. Contractor's use of site and premises.
4. Coordination with occupants.
5. Work restrictions.
6. Specification and Drawing conventions.
7. Temporary generator and switch

B. Related Requirements:

1. Section 015000 "Temporary Facilities and Controls" for limitations and procedures governing temporary use of Owner's facilities.

#### 1.2 WORK COVERED BY CONTRACT DOCUMENTS

A. The Work of Project is defined by the Contract Documents and consists of the following:

1. The project includes but is not limited to the following:

The project is a new addition to the existing William Paterson Recreation Center. The project consists of a the building envelope, vertical circulation, public lobby spaces, structure, major building systems, toilet cores, a natatorium, a gymnasium, classrooms and office space. The façade is composed of a metal panel system with aluminum framed storefront and curtainwall windows systems and brick cladding. The exterior walls are largely a cold formed metal framing system with a few exterior walls composed with concrete masonry units.

B. Type of Contract:

1. Project will be constructed under a single prime contract.

#### 1.3 OWNER-FURNISHED/CONTRACTOR-INSTALLED (OFICI) PRODUCTS

A. Owner's Responsibilities: Owner will furnish products indicated and perform the following, as applicable:

1. Provide to Contractor Owner-reviewed Product Data, Shop Drawings, and Samples.

2. Provide for delivery of Owner-furnished products to Project site.
3. Upon delivery, inspect, with Contractor present, delivered items.
  - a. If Owner-furnished products are damaged, defective, or missing, arrange for replacement.
4. Obtain manufacturer's inspections, service, and warranties.
5. Inform Contractor of earliest available delivery date for Owner-furnished products.

**B. Contractor's Responsibilities: The Work includes the following, as applicable:**

1. Designate delivery dates of Owner-furnished products in Contractor's construction schedule, utilizing Owner-furnished earliest available delivery dates.
2. Review Owner-reviewed Product Data, Shop Drawings, and Samples, noting discrepancies and other issues in providing for Owner-furnished products in the Work.
3. Receive, unload, handle, store, protect, and install Owner-furnished products.
4. Make building services connections for Owner-furnished products.
5. Protect Owner-furnished products from damage during storage, handling, and installation and prior to Substantial Completion.
6. Repair or replace Owner-furnished products damaged following receipt.

**1.4 CONTRACTOR'S USE OF SITE AND PREMISES**

- A. **Restricted Use of Site:** Contractor shall have limited use of Project site for construction operations as indicated on Drawings by the Contract limits and as indicated by requirements of this Section.
- B. **Limits on Use of Site:** Limit use of Project site to Work in areas indicated for each phase of construction. Do not disturb portions of Project site beyond areas in which the Work is indicated for each phase of work.
  1. **Driveways, Walkways, and Entrances:** Keep driveways, loading areas, and entrances serving premises clear and available to Owner, Owner's employees, and emergency vehicles at all times. Do not use these areas for parking or for storage of materials.
- C. **Condition of Existing Grounds:** Maintain portions of existing grounds, landscaping, and hardscaping affected by construction operations throughout construction period. Repair damage caused by construction operations.

**1.5 COORDINATION WITH OCCUPANTS**

- A. **Partial Owner Occupancy:** Owner will occupy the premises during entire construction period, with the exception of areas under construction. Cooperate with Owner during construction operations to minimize conflicts and facilitate Owner usage. Perform the Work so as not to interfere with Owner's operations. Maintain existing exits unless otherwise indicated.
- B. **Owner Limited Occupancy of Completed Areas of Construction:** Owner reserves the right to occupy and to place and install equipment in completed portions of the Work, prior to Substantial Completion of the Work, provided such occupancy does not interfere with

completion of the Work. Such placement of equipment and limited occupancy shall not constitute acceptance of the total Work.

## **1.6 WORK RESTRICTIONS**

- A. Comply with restrictions on construction operations.
  - 1. Comply with limitations on use of public streets, work on public streets, rights of way, and other requirements of authorities having jurisdiction.
- B. On-Site Work Hours: Limit work in the existing building to normal business working hours of 8a.m. to 5 p.m., Monday through Friday, unless otherwise indicated.
- C. Existing Utility Interruptions: Do not interrupt utilities serving facilities occupied by Owner or others unless permitted under the following conditions and then only after providing temporary utility services according to requirements indicated.
  - 1. Notify Architect, Construction Manager, and Owner not less than seven days in advance of proposed utility interruptions for existing recreation center.
  - 2. Obtain Architect's, Construction Manager's, or Owner's written permission before proceeding with utility interruptions.
- D. Noise, Vibration, Dust, and Odors: Coordinate operations that may result in high levels of noise and vibration, dust, odors, or other disruption to Owner occupancy with Owner.
  - 1. Notify Architect, Construction Manager, or Owner not less than two days in advance of proposed disruptive operations.
- E. Smoking and Controlled Substance Restrictions: Use of tobacco products, alcoholic beverages, and other controlled substances on Project site is not permitted.
- F. Employee Identification: Provide identification tags for Contractor personnel working on Project site. Require personnel to use identification tags at all times.
- G. Employee Screening: Comply with Owner's requirements for drug and background screening of Contractor personnel working on Project site.
  - 1. Maintain list of approved screened personnel with Owner's representative.

## **1.7 SPECIFICATION AND DRAWING CONVENTIONS**

- A. Specification Content: The Specifications use certain conventions for the style of language and the intended meaning of certain terms, words, and phrases when used in particular situations. These conventions are as follows:
  - 1. Imperative mood and streamlined language are generally used in the Specifications. The words "shall," "shall be," or "shall comply with," depending on the context, are implied where a colon (:) is used within a sentence or phrase.

2. Text Color: Text used in the Specifications, including units of measure, manufacturer and product names, and other text may appear in multiple colors or underlined as part of a hyperlink; no emphasis is implied by text with these characteristics.
  3. Hypertext: Text used in the Specifications may contain hyperlinks. Hyperlinks may allow for access to linked information that is not residing in the Specifications. Unless otherwise indicated, linked information is not part of the Contract Documents.
  4. Specification requirements are to be performed by Contractor unless specifically stated otherwise.
- B. Division 00 Contracting Requirements: General provisions of the Contract, including General and Supplementary Conditions, apply to all Sections of the Specifications.
- C. Division 01 General Requirements: Requirements of Sections in Division 01 apply to the Work of all Sections in the Specifications.

PART 2 - PRODUCTS (Not Used)

PART 3 - EXECUTION (Not Used)

END OF SECTION 011000

## SECTION 011100 -GENERAL REQUIREMENTS

### PART 1 - GENERAL

#### 1.01 SCOPE OF WORK

- A. Work Items: The project is comprised of the proposed construction of the William Paterson Recreation and Health Science Center Expansion, which includes the utility improvements, stormwater facilities and associated appurtenances. Removal of an existing underground piping and sanitary mains are associated with the proposed construction of the utility yard. These improvements are described herein and on the project drawings. The work generally includes, but is not limited to, the following:
1. Site Demolition
  2. Site Preparation
  3. Earthwork Activities
  4. Construction of the building, foundation, foundation drains, curb and sidewalks, roadway improvements, stormwater management and conveyance systems, utility improvements and associated appurtenances, landscaping and lighting.
  5. Associated work items as described in the project documents and all construction methods and procedures necessary for the performance of the work.

#### 1.02 CONTRACTOR TO ACCEPT SITE CONDITIONS

- A. The Contractor shall accept the site as is. The Contractor shall make, and shall be deemed to have made, a thorough site inspection in order to field check existing site conditions, correlate conditions with the project drawings and resolve any possible construction conflicts with the Engineer prior to start and also during course of the work. Any observable conditions that differ from the existing conditions shown on the drawings that are not brought to the attention of the Engineer prior to the start of work shall not be considered grounds for a change order.
- B. The work to be performed is as shown on the Contract Plans. Attempts have been made to note all specific items on these plans. Incidental items not included shall be constructed in accordance with standard engineering or architectural requirements. It shall be the Contractor's responsibility to repair or replace any existing facilities (utilities, fences, streets, sidewalks, etc.) damaged by him during the work. Such repairs or replacement shall be done at the Contractor's own cost.

#### 1.03 INDEMNIFICATION

- A. The Contractor shall indemnify and save harmless the Owner, and its respective agents, officers, employees and Engineer (herein collectively called the "indemnities") from and against any and all liability, loss, damages, interest, judgments and liens growing out of, and any and all costs and expenses (including, but not limited to, counsel fees and disbursements) arising out of, or incurred in connection with, any and all claims, demands, suits, actions, or proceedings which may be made or brought against any of the indemnities for or in relation to any violation of this Contract, the laws, statutes, ordinances, rules, regulations, executive orders and agreements herein provided here or any injuries, including death at any time resulting therefrom, sustained by any person or persons, or on account of any damage to property, arising out of or in consequence of the performance of or the failure to perform the contract, whether or not such injuries to persons or damage to property are due or claimed to be due to any negligence of the Contractor or its employees, agents, subcontractors or material men, the indemnities or any other person.

#### 1.04 WARRANTIES

- A. The Contractor shall correct defective work at the Contractor's expense which appears within one year's time from acceptance of work. Failure of Contractor to correct such defects within a reasonable time after being notified to do so shall permit the Owner to cause such defects to be corrected and charge the Contractor the cost of corrections.
- B. The Contractor shall submit to the Engineer all material warranties supplied by manufacturers.

#### 1.05 GENERAL QUALITY ASSURANCE

- A. References and Standards: The Contractor shall comply with all rules, regulations, laws and ordinances of all Authorities having jurisdiction. All labor, materials, equipment, and services necessary to make the work comply with such requirements shall be provided without additional cost. All Standards shall be the latest edition and revisions.
- B. The Contractor shall deliver material to the site, in the approved Manufacturer's original and unopened containers and packaging, bearing labels as to type of material, brand name and manufacturer's name. Delivered materials shall be identical to approved samples. Certifications for materials shall be included with the shipment.
- C. The Contractor shall store material under cover (if appropriate) in a clean, dry, above-ground location in accordance with the manufacturers recommendations and remove materials which are damaged or otherwise not suitable for installation from the job site and replace with acceptable materials.

#### 1.06 SECURITY

- A. Protect work, existing premises and Owner's operations from theft, vandalism, and unauthorized entry.
- B. Initiate and maintain security program throughout construction period until Owner acceptance precludes the need for Contractor security.

- C. Restrict entrance of persons and vehicles into project site and existing facilities. Allow entrance only to authorized persons with proper identification. Maintain log of workers and visitors, make available to Owner on request.

**1.07 SAFETY PROVISIONS:**

- A. Site safety is entirely the responsibility of the Contractor. The Contractor is hereby made aware that the Engineer does not have the authority to stop the work on the grounds of unsafe work practices.

**1.08 SUBMITTALS:**

- A. The Contractor shall submit to the Engineer sufficient documentation from the manufacturers that all material and products used by the Contractor meet the required specifications. Such documentation shall be submitted no less than 72 hours prior to the delivery of the material.

This documentation shall include shop drawings, vendor drawings, manufacturer's specifications and catalog cuts. The shop drawings shall include plans, elevations, sections and details of the work showing in detail the methods of installations and all data and assumptions considered in the design.

- B. The Engineer will review and approve appropriate documentation for general compliance to the specifications prior to delivery. The Engineer's review will be made on a timely basis.
- C. The approval of the Engineer or failure to review shall not be constructed as permitting any departure from Contract requirements, or as relieving the Contractor of responsibility for any errors, including details, dimensions or materials. If submittals show variations from Contract requirements, the Engineer may approve such variations, subject to a proper adjustment in the Contract. If the Contractor fails to describe such variations, he shall not be relieved of the responsibility for executing work in accordance with the Contract documents even though such submittals identifying other variations have been approved.
- D. All submittals required by specifications shall be submitted, unless otherwise stated herein, as follows:
  - 1. Specifications –copies of material specifications will be submitted to the Engineer.
  - 2. Shop Drawings –copies will be submitted to the Engineer for review. Engineer will return submittals to the Contractor.
- E. The work shall not begin until all required submittals for each segment of work have been submitted and stamped “REVIEWED” or “EXCEPTIONS AS NOTED” and the noted exceptions are fully complied with.

**1.09 PROJECT COORDINATION**

- A. Cooperate with the Owner and Engineer in allocation of mobilization areas of site; for field offices and sheds, for access, traffic, and parking facilities.
- B. Comply with Owner and Engineer's procedures for intra-project communications; submittals, reports and records, schedules, coordination drawings, and recommendations; and resolution of ambiguities and conflicts.
- C. Comply with instructions of the Owner for use of temporary utilities and construction facilities.
- D. Coordinate field engineering and layout work under instructions of the Engineer.
- E. Submit preliminary progress schedule to the Owner and coordinate with project construction schedule. After review, revise and resubmit schedule to comply with revised project schedule; during progress of work revise and resubmit as directed.
- F. Provide information required by Engineer for preparation of coordination drawings.
- G. Notify Owner and Engineer when work is considered ready for substantial completion. Accompany Engineer on preliminary inspection to determine items to be listed for completion or correction in Contractor's Notice of Substantial Completion and punchlist.

#### 1.10 PROGRESS SCHEDULE

- A. Prepare project schedule using the critical path method. Use a sequence of listings corresponding to the Table of Contents of this Project Manual or the chronological order of the start of each item of work.
- B. Progress schedule to have a minimum 11 x 17 inches sheet size.
- C. Progress schedule shall indicate the following:
  - 1. Show complete sequence of construction by activity, with dates for beginning and completion of each element of construction.
  - 2. Identify each item by specification section number.
  - 3. Identify work of separate stages and other logically grouped activities.
  - 4. Provide sub-schedule to define critical portions of the entire schedule.
  - 5. Show accumulated percentage of completion of each item, and total percentage of work completed, as of the first day of each month.
- D. Provide separate schedule of submittal dates for shop drawings, produce data, and samples. Indicate decision dates for selection of finishes.
- E. Revisions to schedule shall reflect the following:

1. Identify activities modified since previous submittal, major changes in scope, and other identifiable changes.
  2. Provide narrative report to define problem areas, anticipated delays, and impact on schedule. Report corrective action taken, or proposed, and its effect including the effect of changes on schedules of separate contractors.
- F. Distribute copies of reviewed schedules to project site file, subcontractors, suppliers, and other concerned parties.
- G. Instruct recipients to promptly report, in writing, problems anticipated by projections indicated in schedules.

#### **1.11 PERMIT APPLICATIONS AND COMPLIANCE**

- A. The Contractor should determine what outstanding permits may be his responsibility, and shall clarify same with the Engineer.
- B. The Contractor shall carefully plan and coordinate his work so as to comply with all criteria, conditions and the intent of all project permits.
- C. Should any field condition or construction task cause the project to become in violation, or risk becoming in violation, of any project permit, same shall be immediately reported by the Contractor to the Engineer.

#### **1.12 ENVIRONMENTAL PROTECTION**

- A. It is the Contractor's responsibility to assure himself that all applicable Federal, State and local laws, concerning pollution and environmental protection are being complied with by his personnel and subcontractors.
- B. When Contractor is in, or it is anticipated that any part of the work may become in non-compliance with applicable Federal, State, and local laws or regulations, Engineer will notify the Owner who may issue an order stopping all or part of the work until satisfactory corrective actions have been taken, or may order supplemental actions to be taken to stay in, or come into, compliance. No part of the time lost due to any such stop order shall be made subject of a claim for extensions of time, or for extra compensation or damages by the Contractor.
- C. In particular, the Contractor shall not allow the discharge of concrete, mortar, grout, gasoline, diesel, or the washing from vessels containing these materials, or other construction materials, into public areas or the sewage systems.
- D. Contractor shall provide and maintain all facilities necessary for pollution control under this Contract as long as construction operations continue.

#### **1.13 CONTRACTOR'S REPRESENTATIVES**

- A. The Contractor shall provide and maintain a capable and experienced field person to oversee all contract operations. The Contractor shall submit references for his proposed

representative to, and obtain approval from, the Owner and Engineer prior to the start of construction. A representative shall be on-site or available via cell phone during all operating hours of the project.

- B. As appropriate, the Contractor or his subcontractors shall provide qualified supervisory personnel for specialist aspects of the work, such as for concrete, landscaping, utility installation and site furnishings.

#### **1.14 JOB OFFICE**

- A. The Contractor shall provide and maintain a suitable job office for the use of his supervising personnel at the location shown on the plans.

The offices shall be equipped with telephones listed in the Contractor's name and other appropriate facilities. The cost for maintaining the office facilities and the trailer shall be paid for by the Contractor for the duration of the project.

- B. The Contractor shall provide and maintain in a neat and sanitary condition such temporary sanitary conveniences and accommodations for the use of his employees as may be necessary to comply with the requirements and regulations of the Department of Health and other governing agencies having legal jurisdiction.
- C. The Contractor shall provide all security necessary and be entirely responsible for protection of equipment and materials supplied and used in conjunction with his work.
- D. The office shall be maintained throughout the course of construction and shall be removed upon final acceptance of the Contract work.

#### **1.15 SITE ACCESS**

- A. The construction site is an integral part of an operating college facility and extreme care and protection of the staff and public is critical. Phased construction plans shall be maintained regularly to ensure compliance with public access and safety issues.
- B. All points of construction access shall receive a crushed stone wheel-cleaning blanket, in accordance with soil erosion and sediment control requirements.
- C. On-site and off-site roadways which are soiled by construction traffic shall be immediately swept clean of spoil/debris.

#### **1.16 EXISTING UTILITIES AND STRUCTURES**

- A. **Verify Locations:** Locations of existing underground utilities and structures as shown on the Plans are approximate and may not necessarily be complete. These locations shall be verified by the Contractor.
- B. **Avoid Damage:** The Contractor shall exercise care to avoid damage to all existing structures, poles, utilities, pipes, etc. which are scheduled to remain. In locations where the excavation is carried beneath or adjacent to such facilities, the Contractor shall adequately support such structures, utilities or pipes as necessary to maintain them in

operation and in their original position. The Contractor shall be responsible for any damage caused to any utilities by this work, without any additional cost to the Owner.

#### **1.17 MAINTENANCE OF RECORD DOCUMENTS AND SAMPLES**

- A. Contractor shall maintain at the site one record copy which will be kept available for review by the Engineer and Owner of:
  - 1. Design Drawings
  - 2. Technical Specifications
  - 3. Addenda and Modifications to Drawings and Specifications
  - 4. Progress Schedule and Critical Path Diagram
  - 5. Change Orders and other modifications to the Contract
  - 6. Engineer Field Orders
  - 7. Inspection Certificates
  - 8. Manufacturer's Certificates
  - 9. Daily Work Activity Reports, including:
    - a. Field Test Records
    - b. Photographs
    - c. Records of all Site Work
    - d. Laboratory Test Records
    - e. Daily Inspection Records
    - f. Reports on all Safety and Accident incidents
    - g. Manifest Documents, Truck-Load Tickets, and Shipping Papers
    - h. Log of Control and Survey Work
    - i. Other items that may be required by Engineer
- B. The Contractor shall also maintain on-site copy of other documents: manufacturer's certifications, inspection certifications, field test records required by individual Specification Sections.
- C. Record Documents and samples are to be stored in Field Office apart from documents used for construction. Files, racks, and secure storage area to be provided for Record Documents and samples.
- D. Record Documents are to be kept in clean, dry, and legible conditions, and are not to be used for construction purposes.

#### **1.18 TEMPORARY ELECTRIC POWER**

- A. Contractor shall extend electrical service to the building at locations approved by the Owner. Temporary electrical service shall be independent of the existing permanent service. Initial temporary service shall be three (3) phase or single phase depending upon closest availability to the project. Temporary light and power installations, wiring, and miscellaneous electrical hardware must meet the National Electric Code. The Contractor shall provide the necessary distributing facilities and meter, and shall pay the cost of running temporary services from the nearest utility company power service. All costs shall be included in his bid.

- B. The Contractor shall pay for cost of all electric energy used on distribution lines installed until the project is accepted by the Owner. The Contractor shall provide and pay for all maintenance, servicing, operation and supervision of the service and distribution facilities. He shall also connect, maintain, and service any electrical equipment installed which may be necessary for maintaining heat whenever heat is required in the job office whether from the temporary or permanent system.
- C. Contractor shall provide temporary light and power to all trades during normal working hours of such trades. Where overtime work necessitates standby electricians or other trades, such Contractor shall be responsible for making appropriate arrangements, financial and otherwise, for such service at no cost to the Owner.
- D. The Contractor shall observe the requirements of the Federal Occupational Safety and Health Act of 1970 with regard to temporary light and power.
- E. In the alternative, the Contractor may use portable generator(s) to provide temporary power, with Town's approval.

#### **1.19 AS-BUILT DOCUMENTS**

- A. The Contractor shall provide and maintain, at his own expense, one set of prints of the Contract Drawings on the Site. The Contractor shall maintain an up-to-date record on these prints showing all changes, additions, or omissions made during construction without regard to how they were initiated. On these prints, the Contractor shall show any demolished, relocated and/or installed utilities or related facilities as the work progresses. Such recording of the installation shall include final and actual sizes as well as location and elevation thereof by figures and off-set distances in feet and inches to permanent surface improvements such as buildings, retaining walls or curbs. Upon completion of the work, the information on these drawings shall be incorporated into a set of As-Built Drawings prepared by the Contractor. The number, titles, and scales of these As-Built Drawings shall equal the Contract Drawings. These As-Built Drawings shall be accurate reductions of the existing conditions in the scale indicated in the Contract Drawings and shall be signed and sealed by a New Jersey Licensed Land Surveyor. The Contractor shall furnish six sets of signed and sealed As-Built drawings and AutoCAD files on CD to the Owner and Engineer upon completion of the project.
- B. With respect to underground utilities, including storm drains, these As-Built Drawings shall show the precise locations, actual sizes, materials, inverts, and recorded lengths of these utilities and related facilities as demolished, relocated, and/or installed. Locations shall be referenced by offsets in feet and inches to permanent surface improvements such as buildings, retaining walls, curbs, light fixtures, and hydrants.
- C. With respect to construction of buildings or other structures, these as-built drawings shall show finished elevations in feet and inches, exterior and interior dimensions in feet and inches, dimensional relationships to other structures, and structural mechanical, electrical, and other building systems.
- D. With respect to other construction work, including, but not limited to, earthwork fine grading, asphalt paving, sidewalk and curb construction, fencing, wall construction, landscaping, general demolition and other civil works, these As-Built Drawings shall

show final locations, elevations, and materials. Elevations shall be indicated by means of a topographic survey including contours at one foot intervals and spot elevations at maximum fifty foot intervals. In steeply sloping areas, spot elevations shall be provided at closer intervals.

- E. Such information shall have been recorded concurrently with construction progress. The required information shall be recorded prior to proceeding with work which would prevent collection of the required information.
- F. The Contractor shall include the following on the six sets of final hard copies of the As-Built Drawings:
  - Company names, address, and telephone number, project title, contract number and drawing date.
  - The words "As-Built".
  - The statement, "I hereby certify that this As-Built Drawing is correct, complete, and accurate."
  - Contractor's signature.
  - Surveyors seal and signature
- G. The Contractor shall submit As-Built Drawings and AutoCAD compact disk to the Engineer within one (1) month of the issuance of the Certificate of Substantial Completion for verification by the Owner. Acceptance of the As-Built Drawings is subject to verification.

#### **1.20 PROJECT CLOSEOUT**

- A. Notify Engineer when work is considered ready for substantial completion. Accompany Engineer on preliminary inspection to determine items to be listed for completion or correction in Contractor's Notice of Substantial Completion and punchlist.
- B. Comply with Engineer's instructions to correct items of work listed in punchlist and executed Certificates of Substantial Completion.
- C. Notify Engineer when work is considered finally complete. Accompany Engineer on preliminary final inspection.
- D. Comply with Engineer's instructions for completion of items of work determined by Engineer's final inspection.
- E. Remove all temporary facilities, temporary erosion and sediment controls, and all construction waste, for legal disposal in an off-site location.
- E. Provide appropriate protection for any interim facilities to remain.
- F. Leave site in a tidy, orderly condition.

**PART 2 MATERIALS**

**2.01 GENERAL**

- A. Use materials appropriate to the work, and meeting with the Engineer's approval.

**PART 3 EXECUTION**

**3.01 GENERAL**

- A. Execute general measures as appropriate, and meeting with the Engineer's approval.

**END OF SECTION 011100**

\\langan.com\data\PAR\data2\101053201\Project Data\Specifications\FOR BID\011100 General Requirements.docx

## **SECTION 012100 - ALLOWANCES**

### **PART 1 - GENERAL**

#### **1.1 RELATED DOCUMENTS**

- A. Drawings and general provisions of the Contract, including General and Supplementary Conditions and other Division 01 Specification Sections, apply to this Section.

#### **1.2 SUMMARY**

- A. Section includes administrative and procedural requirements governing allowances.
- B. Types of allowances include the following:
  - 1. Quantity allowances.
- C. Related Requirements:
  - 1. Section 012200 "Unit Prices" for procedures for using unit prices, including adjustment of quantity allowances when applicable.
  - 2. Section 012600 "Contract Modification Procedures" for procedures for submitting and handling Change Orders.

#### **1.3 DEFINITIONS**

- A. Allowance: A quantity of work or dollar amount included in the Contract, established in lieu of additional requirements, used to defer selection of actual materials and equipment to a later date when direction will be provided to Contractor. If necessary, additional requirements will be issued by Change Order.

#### **1.4 SELECTION AND PURCHASE**

- A. At the earliest practical date after award of the Contract, advise Architect of the date when final selection, or purchase and delivery, of each product or system described by an allowance must be completed by the Owner to avoid delaying the Work.
- B. At Architect's request, obtain proposals for each allowance for use in making final selections. Include recommendations that are relevant to performing the Work.
- C. Purchase products and systems selected by Architect from the designated supplier.

### 1.5 ACTION SUBMITTALS

- A. Submit proposals for purchase of products or systems included in allowances in the form specified for Change Orders.

### 1.6 INFORMATIONAL SUBMITTALS

- A. Submit surveys and volumes of in-place rock quantities invoices or delivery slips to show actual quantities of materials delivered to the site for use in fulfillment of each allowance.
- B. Submit time sheets and other documentation to show labor time and cost for installation of allowance items that include installation as part of the allowance.
- C. Coordinate and process submittals for allowance items in same manner as for other portions of the Work.

### 1.7 QUANTITY ALLOWANCES

- A. Allowance shall include cost to Contractor of specific products and materials ordered by Owner or selected by Architect under allowance and shall include **taxes**, freight, and delivery to Project site.
- B. Unless otherwise indicated, Contractor's costs for receiving and handling at Project site, labor, installation, overhead and profit, and similar costs related to products and materials ordered by Owner or selected by Architect under allowance shall be included as part of the Contract Sum and not part of the allowance.
- C. Unused Materials: Return unused materials purchased under an allowance to manufacturer or supplier for credit to Owner, after installation has been completed and accepted.
  - 1. If requested by Architect, retain and prepare unused material for storage by Owner. Deliver unused material to Owner's storage space as directed.

### 1.8 ADJUSTMENT OF ALLOWANCES

- A. Allowance Adjustment: To adjust allowance amounts, prepare a Change Order proposal based on the difference between purchase amount and the allowance, multiplied by final measurement of work-in-place where applicable. If applicable, include reasonable allowances for cutting losses, tolerances, mixing wastes, normal product imperfections, required maintenance materials, and similar margins.
  - 1. If requested, prepare explanation and documentation to substantiate distribution of overhead costs and other markups.
  - 2. Submit substantiation of a change in scope of Work, if any, claimed in Change Orders related to unit-cost allowances.
  - 3. Owner reserves the right to establish the quantity of work-in-place by independent quantity survey, measure, or count.

- B. Submit claims for increased costs due to a change in the scope or nature of the allowance described in the Contract Documents, whether for the purchase order amount or Contractor's handling, labor, installation, overhead, and profit.
  - 1. Do not include Contractor's or subcontractor's indirect expense in the Change Order cost amount unless it is clearly shown that the nature or extent of Work has changed from what could have been foreseen from information in the Contract Documents.
  - 2. No change to Contractor's indirect expense is permitted for selection of higher- or lower-priced materials or systems of the same scope and nature as originally indicated.

**PART 2 - PRODUCTS (Not Used)**

**PART 3 - EXECUTION**

**3.1 EXAMINATION**

- A. Examine products covered by an allowance promptly on delivery for damage or defects. Return damaged or defective products to manufacturer for replacement.

**3.2 PREPARATION**

- A. Coordinate materials and their installation for each allowance with related materials and installations to ensure that each allowance item is completely integrated and interfaced with related work.

**3.3 SCHEDULE OF ALLOWANCES**

- A. Allowance No. 1: Quantity Allowance: Include 1000 cu. yd. of mass rock removal and replacement with satisfactory soil material, as specified in Section 312000 "Earth Moving."
  - 1. Coordinate quantity allowance adjustment with unit-price requirements in Section 012200 "Unit Prices."
  - 2. The allowance above shall be included in the base bid.

**END OF SECTION 012100**

## SECTION 012200 – UNIT PRICES

### PART 1 – GENERAL

#### 1.1 SUMMARY

- A. This Section specifies administrative and procedural requirements for unit prices.
- B. A unit price is an amount proposed by Bidders and stated on the Bid form as a price per unit of measurement for materials or services that will be added to or deducted from the Contract Sum by Change Order in the event the estimated quantities of Work required by the Contract Documents are increased or decreased.
- C. Unit prices include all necessary material, delivery and handling costs, installation costs, overhead, supervision, profit, insurance and applicable taxes.
- D. Refer to specification Section 012100 - Allowances, for quantity allowances associated with below listed Unit Prices. Unit price is to include all make-up amounts and yield final contract change amount when multiplied by the final quantity delta. The final quantity delta is determined by subtracting the actual quantity (agreed upon amount) from the quantity allowance amount listed in section 012100.
- E. A "Unit Price Schedule" is included at the end of this Section. Specification Sections referenced in the Schedule contain requirements for materials and methods described under each unit price.
- F. The Owner reserves the right to reject the Contractor's measurement of work-in-place that involves use of established unit prices, and to have this Work measured by an independent surveyor acceptable to the Contractor at the Owner's expense.

#### 1.2 UNIT PRICE SCHEDULE

##### **Unit Price #1: Rock Removal**

\$ / Cubic Yard (in place volume)

The unit price provided shall include all of the following: costs for pre construction surveys, insurance; all costs for monitoring air and ground vibration; all costs of complying with Federal, State and local laws; all costs of using methods other than blasting to remove rock, protecting all structures; all costs of settling all damage claims due to rock excavation; the cost of hauling and disposing of the excavated rock; the cost for line drilling as required to protect existing foundations, utilities and other areas where rock is not required to be removed; the cost of all labor, material and equipment necessary and incidental to the excavation and disposal of rock.

*Unit of Measurement:* A cubic yard of rock excavation shall be as measured in its pre-removal, in-situ volume that has to be excavated to meet the grades and lines as shown, specified or required. Rock payment volume shall be based upon a 8-foot grid survey of the project area, performed by the Contractor using a NJ-licensed Surveyor, of the exposed ledge or bedrock prior to removal, but only after all attempts for mechanical removal of all fractures and loose rock has occurred. Mechanical removal attempts shall be made with large excavator of comparable scale to CAT 349F and equipment with rock teeth. The Contractor shall submit the signed and sealed (and AutoCAD) survey to the Engineer for review with quantified volume of rock to be removed to meet design grade. The survey shall include an overlay of the project building and utilities. A copy of the project site CAD files will be furnished to the Contractor and their Surveyor for their use. The Contractor and the Engineer shall agree on the rock surface prior to line drilling, jack-hammering or removal method has begun.

The top surface of the rock survey shall determine the top limit of the rock excavation volume for payment. The sides of the rock excavation pay limit shall be measured vertically from the edge of footings or perimeter of mass excavations or sides of trenches at a distance of 1.5 feet away from the edge of pipe, conduit or buried utility, whichever is applicable. The bottom of the rock excavation shall vary and shall be as shown, specified or required in order to place a minimum of 6" of crushed stone or sand bedding where shown, specified, required or ordered by the Engineer. Rock that is removed beyond the pay limits described herein, for any reason other than as ordered by the Engineer, shall not be paid by the Owner but shall be included in the contractors bid. Rock excavation volumes cannot overlap or be counted more than once.

END OF SECTION

## SECTION 01 2300 ALTERNATES

### PART 1 - GENERAL

#### 1.1 SUMMARY

- A. Section includes administrative and procedural requirements for alternates.

#### 1.2 DEFINITIONS

- A. Alternate: An amount proposed by bidders and stated on the Bid Form for certain work defined in the bidding requirements that may be added to or deducted from the base bid amount if the Owner decides to accept a corresponding change either in the amount of construction to be completed or in the products, materials, equipment, systems, or installation methods described in the Contract Documents.
  - 1. Alternates described in this Section are part of the Work only if enumerated in the Agreement.
  - 2. The cost or credit for each alternate is the net addition to or deduction from the Contract Sum to incorporate alternates into the Work. No other adjustments are made to the Contract Sum.
  - 3. Alternates shall be selected in non-sequential order as follows:
    - a. Award order #1: Add Alternate #1
    - b. Award order #2: Add Alternate #4
    - c. Award order #3: Add Alternate #2
    - d. Award order #4: Add Alternate #3

#### 1.3 PROCEDURES

- A. Coordination: Revise or adjust affected adjacent work as necessary to completely integrate work of the alternate into Project.
  - 1. Include as part of each alternate, miscellaneous devices, accessory objects, and similar items incidental to or required for a complete installation whether or not indicated as part of alternate.
- B. Execute accepted alternates under the same conditions as other work of the Contract.
- C. Schedule: A schedule of alternates is included at the end of this Section. Specification Sections referenced in schedule contain requirements for materials necessary to achieve the work described under each alternate.

### PART 2 - PRODUCTS (Not Used)

**PART 3 - EXECUTION**

**2.1 SCHEDULE OF ALTERNATES**

1. ADD Alternate #1 (award order #1): Renovations to area of Existing Building
  - a. Base Bid: Existing weight room to remain
  - b. Alternate: Construct corridor, trainer's room, new ref locker rooms and storage rooms as show in the documents.
2. ADD Alternate #2 (award order #3): Warm Water Spa
  - a. Base Bid: No warm water spa, provide showers and heating lamps as shown in documents behind diving boards. Provide underground piping in drawings as noted in AQ drawings for warm water spa.
  - b. Alternate: Provide and install warm water spa and equipment as noted in the drawings, omit showers and heating lamps behind diving boards as noted in the drawings.
3. ADD Alternate #3 (award order #4): Lighting protection
  - a. Base bid: no lighting protection provided
  - b. Alternate: provide lighting protection system
4. ADD Alternate #4 (award order #2) Gymnasium Bleachers and (4) additional backboards.
  - a. Base bid: omit gymnasium bleachers and provide only 2 backboards as shown on drawings
  - b. Alternate: provide and install bleachers within new gymnasium and installed (4) additional backboards for a total of 6 within the gymnasium.

END OF SECTION 01 2300

## **SECTION 012500 - SUBSTITUTION PROCEDURES**

### **PART 1 - GENERAL**

#### **1.1 SUMMARY**

- A. Section includes administrative and procedural requirements for substitutions.
- B. Related Requirements:
  - 1. Refer to Section 016000 "Product Requirements" for requirements for submitting comparable product submittals for products by listed manufacturers as substitutes and for evaluation of equivalency.

#### **1.2 DEFINITIONS**

- A. Substitutions: Changes in products, materials, equipment, and methods of construction from those required by the Contract Documents and proposed by Contractor.
  - 1. Substitutions for Cause: Changes proposed by Contractor that are required due to changed Project conditions, such as unavailability of product, regulatory changes, or unavailability of required warranty terms.
  - 2. Substitutions for Convenience: Changes proposed by Contractor or Owner that are not required in order to meet other Project requirements but may offer advantage to Contractor or Owner.
  - 3. Substitution with comparable product submitted as equal: refer to section 016000 "Product requirements" and requirements herein.

#### **1.3 ACTION SUBMITTALS**

- A. Substitution Requests: Submit one digital copy of each request for consideration. Identify product or fabrication or installation method to be replaced. Include Specification Section number and title and Drawing numbers and titles.
  - 1. Substitution Request Form: Use form acceptable to Architect or CSI form 13.1A
  - 2. Documentation: Show compliance with requirements of section 016000 product requirements for comparable and evaluation of equivalency and the following, as applicable:
    - a. Statement indicating why specified product or fabrication or installation method cannot be provided, if applicable.
    - b. Coordination of information, including a list of changes or revisions needed to other parts of the Work and to construction performed by Owner and separate contractors that will be necessary to accommodate proposed substitution.

- c. Detailed comparison of significant qualities of proposed substitutions with those of the Work specified. Include annotated copy of applicable Specification Section. Significant qualities may include attributes, such as performance, weight, size, durability, visual effect, sustainable design characteristics, warranties, and specific features and requirements indicated. Indicate deviations, if any, from the Work specified.
  - d. Product Data, including drawings and descriptions of products and fabrication and installation procedures.
  - e. Samples, where applicable or requested.
  - f. Certificates and qualification data, where applicable or requested.
  - g. List of similar installations for completed projects, with project names and addresses as well as names and addresses of architects and owners.
  - h. Material test reports from a qualified testing agency, indicating and interpreting test results for compliance with requirements indicated.
  - i. Detailed comparison of Contractor's construction schedule using proposed substitutions with products specified for the Work, including effect on the overall Contract Time. If specified product or method of construction cannot be provided within the Contract Time, include letter from manufacturer, on manufacturer's letterhead, stating date of receipt of purchase order, lack of availability, or delays in delivery.
  - j. Cost information, including a proposal of change, if any, in the Contract Sum.
  - k. Contractor's certification that proposed substitution complies with requirements in the Contract Documents, except as indicated in substitution request, is compatible with related materials and is appropriate for applications indicated.
  - l. Contractor's waiver of rights to additional payment or time that may subsequently become necessary because of failure of proposed substitution to produce indicated results.
- 3. Architect's Action: If necessary, Architect will request additional information or documentation for evaluation within seven days of receipt of a request for substitution. Architect will notify Contractor of acceptance or rejection of proposed substitution within **15** days of receipt of request, or seven days of receipt of additional information or documentation, whichever is later.
  - a. Forms of Acceptance: Change Order, Construction Change Directive, or Architect's Supplemental Instructions for minor changes in the Work.
  - b. Submittal of comparable product may also be approved as detailed in submittal procedures
  - c. Use product specified or submit different product for evaluation of equivalency if request is rejected.

#### 1.4 QUALITY ASSURANCE

- A. Compatibility of Substitutions: Investigate and document compatibility of proposed substitution with related products and materials. Engage a qualified testing agency to perform compatibility tests recommended by manufacturers.

## 1.5 PROCEDURES

- A. Coordination: Revise or adjust affected work as necessary to integrate work of the approved substitutions.

## 1.6 SUBSTITUTIONS

- A. Substitutions for Cause: Submit requests for substitution immediately on discovery of need for change, but not later than **15** days prior to time required for preparation and review of related submittals.

- 1. Conditions: Architect will consider Contractor's request for substitution when the following conditions are satisfied. If the following conditions are not satisfied, Architect will return requests without action, except to record noncompliance with these requirements:

- a. Requested substitution is consistent with the Contract Documents and will produce indicated results.
    - b. Substitution request is fully documented and properly submitted.
    - c. Requested substitution will not adversely affect Contractor's construction schedule.
    - d. Requested substitution has received necessary approvals of authorities having jurisdiction.
    - e. Requested substitution is compatible with other portions of the Work.
    - f. Requested substitution has been coordinated with other portions of the Work.
    - g. Requested substitution provides specified warranty.
    - h. If requested substitution involves more than one contractor, requested substitution has been coordinated with other portions of the Work, is uniform and consistent, is compatible with other products, and is acceptable to all contractors involved.

- B. Substitutions for Convenience: Architect will consider requests for substitution if received within 60 days after the Notice to Proceed. Requests received after that time may be considered or rejected at discretion of Architect.

- 1. Conditions: Architect will consider Contractor's request for substitution when the following conditions are satisfied. If the following conditions are not satisfied, Architect will return requests without action, except to record noncompliance with these requirements:

- a. Requested substitution offers Owner a substantial advantage in cost, time, energy conservation, or other considerations, after deducting additional responsibilities Owner must assume. Owner's additional responsibilities may include compensation to Architect for redesign and evaluation services, increased cost of other construction by Owner, and similar considerations.
    - b. Requested substitution does not require extensive revisions to the Contract Documents.
    - c. Requested substitution is consistent with the Contract Documents and will produce indicated results.
    - d. Substitution request is fully documented and properly submitted.
    - e. Requested substitution will not adversely affect Contractor's construction schedule.

- f. Requested substitution has received necessary approvals of authorities having jurisdiction.
  - g. Requested substitution is compatible with other portions of the Work.
  - h. Requested substitution has been coordinated with other portions of the Work.
  - i. Requested substitution provides specified warranty.
  - j. If requested substitution involves more than one contractor, requested substitution has been coordinated with other portions of the Work, is uniform and consistent, is compatible with other products, and is acceptable to all contractors involved.
- 2. Substitution with comparable product submitted as equal: refer to section 016000 "Product requirements" and requirements herein.

PART 2 - PRODUCTS (Not Used)

PART 3 - EXECUTION (Not Used)

END OF SECTION 012500

## SECTION 012600 - CONTRACT MODIFICATION PROCEDURES

### PART 1 - GENERAL

#### 1.1 SUMMARY

- A. Section includes administrative and procedural requirements for handling and processing Contract modifications.

#### 1.2 MINOR CHANGES IN THE WORK

- A. Architect will issue supplemental instructions authorizing minor changes in the Work, not involving adjustment to the Contract Sum or the Contract Time, on web-based Project management software.
  - 1. Work Change Proposal Requests issued by Architect are not instructions either to stop work in progress or to execute the proposed change.

#### 1.3 PROPOSAL REQUESTS

- A. Owner-Initiated Proposal Requests: Architect will issue a detailed description of proposed changes in the Work that may require adjustment to the Contract Sum or the Contract Time. If necessary, the description will include supplemental or revised Drawings and Specifications.
  - 1. Work Change Proposal Requests issued by Architect are not instructions either to stop work in progress or to execute the proposed change.
  - 2. Within 20 days, after receipt of Proposal Request, submit a quotation estimating cost adjustments to the Contract Sum and the Contract Time necessary to execute the change.
    - a. Include a list of quantities of products required or eliminated and unit costs, with total amount of purchases and credits to be made. If requested, furnish survey data to substantiate quantities.
    - b. Indicate applicable taxes, delivery charges, equipment rental, and amounts of trade discounts.
    - c. Include costs of labor and supervision directly attributable to the change.
    - d. Include an updated Contractor's construction schedule that indicates the effect of the change, including, but not limited to, changes in activity duration, start and finish times, and activity relationship. Use available total float before requesting an extension of the Contract Time.
- B. Contractor-Initiated Proposals: If latent or changed conditions require modifications to the Contract, Contractor may initiate a claim by submitting a request for a change to Architect.
  - 1. Include a statement outlining reasons for the change and the effect of the change on the Work. Provide a complete description of the proposed change. Indicate the effect of the proposed change on the Contract Sum and the Contract Time.

2. Include a list of quantities of products required or eliminated and unit costs, with total amount of purchases and credits to be made. If requested, furnish survey data to substantiate quantities.
3. Indicate applicable taxes, delivery charges, equipment rental, and amounts of trade discounts.
4. Include costs of labor and supervision directly attributable to the change.
5. Include an updated Contractor's construction schedule that indicates the effect of the change, including, but not limited to, changes in activity duration, start and finish times, and activity relationship. Use available total float before requesting an extension of the Contract Time.
6. Comply with requirements in Section 01 2500 "Substitution Procedures" if the proposed change requires substitution of one product or system for product or system specified.

#### 1.4 CHANGE ORDER PROCEDURES

- A. On Owner's approval of a Work Change Proposal Request, Architect will issue a Change Order for signatures of Owner and Contractor on form provided as part of web-based Project management software or AIA document in accordance with NJAC 5:30-11.3, NJSA 40A:11-13g, and NJSA 40A:11-23.1a, as applicable. .

#### 1.5 CONSTRUCTION CHANGE DIRECTIVE

- A. Construction Change Directive: Architect may issue a Construction Change Directive on form provided as part of web-based Project management software. Construction Change Directive instructs Contractor to proceed with a change in the Work, for subsequent inclusion in a Change Order.
  1. Construction Change Directive contains a complete description of change in the Work. It also designates method to be followed to determine change in the Contract Sum or the Contract Time.
- B. Documentation: Maintain detailed records on a time and material basis of work required by the Construction Change Directive.
  1. After completion of change, submit an itemized account and supporting data necessary to substantiate cost and time adjustments to the Contract.

#### 1.6 WORK CHANGE DIRECTIVE

- A. Work Change Directive: Architect may issue a Work Change Directive on form provided as part of web-based Project management software. Work Change Directive instructs Contractor to proceed with a change in the Work, for subsequent inclusion in a Change Order.
  1. Work Change Directive contains a complete description of change in the Work. It also designates method to be followed to determine change in the Contract Sum or the Contract Time.

- B. Documentation: Maintain detailed records on a time and material basis of work required by the Work Change Directive.
  - 1. After completion of change, submit an itemized account and supporting data necessary to substantiate cost and time adjustments to the Contract.

PART 2 - PRODUCTS (Not Used)

PART 3 - EXECUTION (Not Used)

END OF SECTION 012600

## SECTION 012900 - PAYMENT PROCEDURES

### PART 1 - GENERAL

#### 1.1 SUMMARY

- A. Section includes administrative and procedural requirements necessary to prepare and process Applications for Payment.

#### 1.2 SCHEDULE OF VALUES

- A. Coordination: Coordinate preparation of the schedule of values with preparation of Contractor's construction schedule.
  - 1. Coordinate line items in the schedule of values with items required to be indicated as separate activities in Contractor's construction schedule.
  - 2. Submit the schedule of values to Architect at earliest possible date, but no later than seven days before the date scheduled for submittal of initial Applications for Payment.
- B. Format and Content: Use Project Manual table of contents as a guide to establish line items for the schedules of values. Provide at least one line item for each Specification Section.
  - 1. Schedule of Values shall be separated per phase and with line items provided separately.
  - 2. Arrange schedule of values consistent with format of AIA Document G703.
  - 3. Provide a breakdown of the Contract Sum in enough detail to facilitate continued evaluation of Applications for Payment and progress reports. Provide multiple line items for principal subcontract amounts in excess of five percent of the Contract Sum.
  - 4. Provide a separate line item in the schedule of values for each part of the Work where Applications for Payment may include materials or equipment purchased or fabricated and stored, but not yet installed.
    - a. Differentiate between items stored on-site and items stored off-site.
  - 5. Allowances: Provide a separate line item in the schedule of values for each allowance. Show line-item value of unit-cost allowances, as a product of the unit cost, multiplied by measured quantity. Use information indicated in the Contract Documents to determine quantities.
  - 6. Overhead Costs: Include total cost and proportionate share of general overhead and profit for each line item.
  - 7. Closeout Costs. Include separate line items under Contractor and principal subcontracts for Project closeout requirements in an amount totaling **five** percent of the Contract Sum and subcontract amount.

8. Schedule of Values Revisions: Revise the schedule of values when Change Orders or Construction Change Directives result in a change in the Contract Sum. Include at least one separate line item for each Change Order and Construction Change Directive.

### 1.3 APPLICATIONS FOR PAYMENT

- A. Each Application for Payment following the initial Application for Payment shall be consistent with previous applications and payments as certified by Architect and paid for by Owner.
- B. Payment Application Times: Submit Application for Payment to Architect by the last day of the month. The period covered by each Application for Payment is one month, ending on the last day of the month.
  1. Submit draft copy of Application for Payment (a “pencil copy”) seven days prior to due date for review by Architect.
- C. Application for Payment Forms: Use AIA Document G702 and AIA Document G703 as form for Applications for Payment.
- D. Application Preparation: Complete every entry on form. Notarize and execute by a person authorized to sign legal documents on behalf of Contractor. Architect will return incomplete applications without action.
  1. Entries shall match data on the schedule of values and Contractor's construction schedule. Use updated schedules if revisions were made.
  2. Include amounts for work completed following previous Application for Payment, whether or not payment has been received. Include only amounts for work completed at time of Application for Payment.
  3. Include amounts of Change Orders and Construction Change Directives issued before last day of construction period covered by application.
- E. Transmittal: Submit a digitally scanned signed and notarized original copy of each Application for Payment to Architect. One copy shall include waivers of lien and similar attachments if required.
  1. Transmit each copy with a transmittal form listing attachments and recording appropriate information about application.
- F. Initial Application for Payment: Administrative actions and submittals that must precede or coincide with submittal of first Application for Payment include the following:
  1. List of subcontractors.
  2. Schedule of values.
  3. Contractor's construction schedule (preliminary if not final).
  4. Products list (preliminary if not final).
  5. Sustainable design action plans, including preliminary project materials cost data.
  6. Schedule of unit prices.
  7. Submittal schedule (preliminary if not final).
  8. List of Contractor's staff assignments.

9. List of Contractor's principal consultants.
  10. Copies of building permits.
  11. Copies of authorizations and licenses from authorities having jurisdiction for performance of the Work.
  12. Initial progress report.
  13. Report of preconstruction conference.
- G. Application for Payment at Substantial Completion: After Architect issues the Certificate of Substantial Completion, submit an Application for Payment showing 100 percent completion for portion of the Work claimed as substantially complete.
1. Include documentation supporting claim that the Work is substantially complete and a statement showing an accounting of changes to the Contract Sum.
  2. This application shall reflect Certificate(s) of Substantial Completion issued previously for Owner occupancy of designated portions of the Work.
- H. Final Payment Application: After completing Project closeout requirements, submit final Application for Payment with releases and supporting documentation not previously submitted and accepted, including, but not limited, to the following:
1. Evidence of completion of Project closeout requirements.
  2. Insurance certificates for products and completed operations where required and proof that taxes, fees, and similar obligations were paid.
  3. Updated final statement, accounting for final changes to the Contract Sum.
  4. AIA Document G706.
  5. AIA Document G706A.
  6. AIA Document G707.
  7. Evidence that claims have been settled.
  8. Final meter readings for utilities, a measured record of stored fuel, and similar data as of date of Substantial Completion or when Owner took possession of and assumed responsibility for corresponding elements of the Work.
  9. Final liquidated damages settlement statement.

## PART 2 - PRODUCTS (Not Used)

## PART 3 - EXECUTION

- 3.1 All applications for payments, payments, and payment related disputes will be in accordance with the prompt payment act NJSA 2A:30A-1 et seq.

END OF SECTION 012900

## SECTION 013100 - PROJECT MANAGEMENT AND COORDINATION

### PART 1 - GENERAL

#### 1.1 SUMMARY

- A. Section includes administrative provisions for coordinating construction operations on Project including, but not limited to, the following:
  - 1. General coordination procedures.
  - 2. Coordination drawings.
  - 3. RFIs.
  - 4. Digital project management procedures.
  - 5. Project meetings.
- B. Related Requirements:
  - 1. Section 017300 "Execution" for procedures for coordinating general installation and field-engineering services, including establishment of benchmarks and control points.

#### 1.2 INFORMATIONAL SUBMITTALS

- A. Subcontract List: Prepare a written summary identifying individuals or firms proposed for each portion of the Work, including those who are to furnish products or equipment fabricated to a special design. Include the following information in tabular form:
  - 1. Name, address, telephone number, and email address of entity performing subcontract or supplying products.
  - 2. Number and title of related Specification Section(s) covered by subcontract.
  - 3. Drawing number and detail references, as appropriate, covered by subcontract.

#### 1.3 GENERAL COORDINATION PROCEDURES

- A. Coordination: Coordinate construction operations included in different Sections of the Specifications to ensure efficient and orderly installation of each part of the Work. Coordinate construction operations included in different Sections that depend on each other for proper installation, connection, and operation.
  - 1. Schedule construction operations in sequence required to obtain the best results where installation of one part of the Work depends on installation of other components, before or after its own installation.
  - 2. Coordinate installation of different components to ensure maximum performance and accessibility for required maintenance, service, and repair.
  - 3. Make adequate provisions to accommodate items scheduled for later installation.

- B. Administrative Procedures: Coordinate scheduling and timing of required administrative procedures with other construction activities to avoid conflicts and to ensure orderly progress of the Work. Such administrative activities include, but are not limited to, the following:
1. Preparation of Contractor's construction schedule.
  2. Preparation of the schedule of values.
  3. Installation and removal of temporary facilities and controls.
  4. Delivery and processing of submittals.
  5. Progress meetings.
  6. Preinstallation conferences.
  7. Project closeout activities.
  8. Startup and adjustment of systems.

#### 1.4 COORDINATION DRAWINGS

- A. Coordination Drawings, General: Prepare coordination drawings according to requirements in individual Sections, and additionally where installation is not completely indicated on Shop Drawings, where limited space availability necessitates coordination, or if coordination is required to facilitate integration of products and materials fabricated or installed by more than one entity.
1. Content: Project-specific information, drawn accurately to a scale large enough to indicate and resolve conflicts. Do not base coordination drawings on standard printed data. Include the following information, as applicable:
    - a. Indicate functional and spatial relationships of components of architectural, structural, civil, mechanical, and electrical systems.
    - b. Indicate dimensions shown on Drawings. Specifically note dimensions that appear to be in conflict with submitted equipment and minimum clearance requirements. Provide alternative sketches to Architect indicating proposed resolution of such conflicts. Minor dimension changes and difficult installations will not be considered changes to the Contract.
- B. Coordination Drawing Organization: Organize coordination drawings as follows:
1. Floor Plans and Reflected Ceiling Plans: Show architectural and structural elements, and mechanical, plumbing, fire-protection, fire-alarm, and electrical Work. Show locations of visible ceiling-mounted devices relative to acoustical ceiling grid. Supplement plan drawings with section drawings where required to adequately represent the Work.
  2. Plenum Space: Indicate subframing for support of ceiling and wall systems, mechanical and electrical equipment, and related Work. Locate components within plenums to accommodate layout of light fixtures and other components indicated on Drawings. Indicate areas of conflict between light fixtures and other components.
  3. Mechanical Rooms: Provide coordination drawings for mechanical rooms showing plans and elevations of mechanical, plumbing, fire-protection, fire-alarm, and electrical equipment.
  4. Structural Penetrations: Indicate penetrations and openings required for all disciplines.
  5. Slab Edge and Embedded Items: Indicate slab edge locations and sizes and locations of embedded items for metal fabrications, sleeves, anchor bolts, bearing plates, angles, door

- floor closers, slab depressions for floor finishes, curbs and housekeeping pads, and similar items.
6. Review: Architect will review coordination drawings to confirm that, in general, the Work is being coordinated, but not for the details of the coordination, which are Contractor's responsibility. If Architect determines that coordination drawings are not being prepared in sufficient scope or detail, or are otherwise deficient, Architect will so inform Contractor, who shall make suitable modifications and resubmit.
  7. Architect will furnish Contractor one set of digital data files of Drawings for use in preparing coordination digital data files.
    - a. Architect makes no representations as to the accuracy or completeness of digital data files as they relate to Drawings.
    - b. Digital Data Software Program: Drawings are available in AutoCAD release 2017 format.
    - c. Contractor shall execute a data licensing agreement in the form of Agreement form acceptable to Owner and Architect.

#### 1.5 REQUEST FOR INFORMATION (RFI)

- A. General: Immediately on discovery of the need for additional information, clarification, or interpretation of the Contract Documents, Contractor shall prepare and submit an RFI in the form specified.
  1. Architect will return without response those RFIs submitted to Architect by other entities controlled by Contractor.
  2. Coordinate and submit RFIs in a prompt manner so as to avoid delays in Contractor's work or work of subcontractors.
- B. Content of the RFI: Include a detailed, legible description of item needing information or interpretation and the following:
  1. Owner name.
  2. Owner's Project number.
  3. Name of Architect.
  4. Architect's Project number.
  5. Date.
  6. Name of Contractor.
  7. RFI number, numbered sequentially.
  8. RFI subject.
  9. Specification Section number and title and related paragraphs, as appropriate.
  10. Drawing number and detail references, as appropriate.
  11. Field dimensions and conditions, as appropriate.
  12. Contractor's suggested resolution. If Contractor's suggested resolution impacts the Contract Time or the Contract Sum, Contractor shall state impact in the RFI.
  13. Contractor's signature.
  14. Attachments: Include sketches, descriptions, measurements, photos, Product Data, Shop Drawings, coordination drawings, and other information necessary to fully describe items needing interpretation.

- C. RFI Forms: Software-generated form with substantially the same content as indicated above, acceptable to Architect.
- D. Architect's Action: Architect will review each RFI, determine action required, and respond. Allow seven days for Architect's response for each RFI. RFIs received by Architect after 1:00 p.m. will be considered as received the following working day.
  - 1. The following Contractor-generated RFIs will be returned without action:
    - a. Requests for approval of submittals.
    - b. Requests for approval of substitutions.
    - c. Requests for approval of Contractor's means and methods.
    - d. Requests for coordination information already indicated in the Contract Documents.
    - e. Requests for adjustments in the Contract Time or the Contract Sum.
    - f. Requests for interpretation of Architect's actions on submittals.
    - g. Incomplete RFIs or inaccurately prepared RFIs.
  - 2. Architect's action may include a request for additional information, in which case Architect's time for response will date from time of receipt by Architect of additional information.
  - 3. Architect's action on RFIs that may result in a change to the Contract Time or the Contract Sum may be eligible for Contractor to submit Change Proposal according to Section 012600 "Contract Modification Procedures."
    - a. If Contractor believes the RFI response warrants change in the Contract Time or the Contract Sum, notify Architect in writing within five days of receipt of the RFI response.
- E. RFI Log: Prepare, maintain, and submit a tabular log of RFIs organized by the RFI number. Use software log that is part of web-based Project management software.
  - 1. Project name.
  - 2. Name and address of Contractor.
  - 3. Name and address of Architect.
  - 4. RFI number including RFIs that were returned without action or withdrawn.
  - 5. RFI description.
  - 6. Date the RFI was submitted.
  - 7. Date Architect's response was received.
- F. On receipt of Architect's action, update the RFI log and immediately distribute the RFI response to affected parties. Review response and notify Architect within three days if Contractor disagrees with response.

#### 1.6 DIGITAL PROJECT MANAGEMENT PROCEDURES

- A. Use of Architect's Digital Data Files: Digital data files of Architect's CAD drawings will be provided by Architect for Contractor's use during construction.

1. Digital data files may be used by Contractor in preparing coordination drawings, Shop Drawings, and Project record Drawings.
  2. Architect makes no representations as to the accuracy or completeness of digital data files as they relate to Contract Drawings.
  3. Digital Drawing Software Program: Contract Drawings are available in AutoCAD version 2017.
  4. Contractor shall execute a data licensing agreement in the form of Agreement form acceptable to Owner and Architect.
  5. The following digital data files will be furnished for each appropriate discipline:
    - a. Floor plans.
    - b. Reflected ceiling plans.
- B. Web-Based Project Management Software Package: Provide, administer, and use web-based Project management software package for purposes of hosting and managing Project communication and documentation until Final Completion.
1. Web-based Project management software includes, at a minimum, the following features:
    - a. Compilation of Project data, including Contractor, subcontractors, Architect, architect's consultants, Owner, and other entities involved in Project. Include names of individuals and contact information.
    - b. Access control for each entity for each workflow process, to determine entity's digital rights to create, modify, view, and print documents.
    - c. Document workflow planning, allowing customization of workflow between project entities.
    - d. Creation, logging, tracking, and notification for Project communications required in other Specification Sections, including, but not limited to, RFIs, submittals, Minor Changes in the Work, Construction Change Directives, and Change Orders.
    - e. Track status of each Project communication in real time, and log time and date when responses are provided.
    - f. Procedures for handling PDFs or similar file formats, allowing markups by each entity. Provide security features to lock markups against changes once submitted.
    - g. Processing and tracking of payment applications.
    - h. Processing and tracking of contract modifications.
    - i. Creating and distributing meeting minutes.
    - j. Document management for Drawings, Specifications, and coordination drawings, including revision control.
    - k. Management of construction progress photographs.
    - l. Mobile device compatibility, including smartphones and tablets.
  2. Provide web-based Project management software user licenses for use of Owner, Architect, and Architect's consultants.
  3. At completion of Project, provide digital archive in format that is readable by common desktop software applications in format acceptable to Architect. Provide data in locked format to prevent further changes.
- C. PDF Document Preparation: Where PDFs are required to be submitted to Architect, prepare as follows:

1. Assemble complete submittal package into a single indexed file incorporating submittal requirements of a single Specification Section and transmittal form with links enabling navigation to each item.
2. Name file with submittal number or other unique identifier, including revision identifier.
3. Certifications: Where digitally submitted certificates and certifications are required, provide a digital signature with digital certificate on where indicated.

#### 1.7 PROJECT MEETINGS

- A. General: Schedule and conduct meetings and conferences at Project site unless otherwise indicated.
- B. Preconstruction Conference: Architect will schedule and conduct a preconstruction conference before starting construction, at a time convenient to Owner and Architect, but no later than 15 days after execution of the Agreement.
  1. Attendees: Authorized representatives of Owner, Architect, and their consultants; Contractor and its superintendent; major subcontractors; suppliers; and other concerned parties shall attend the conference. Participants at the conference shall be familiar with Project and authorized to conclude matters relating to the Work.
  2. Agenda: Discuss items of significance that could affect progress, including the following:
    - a. Responsibilities and personnel assignments.
    - b. Tentative construction schedule.
    - c. Phasing.
    - d. Critical work sequencing and long lead items.
    - e. Designation of key personnel and their duties.
    - f. Lines of communications.
    - g. Use of web-based Project software.
    - h. Procedures for processing field decisions and Change Orders.
    - i. Procedures for RFIs.
    - j. Procedures for testing and inspecting.
    - k. Procedures for processing Applications for Payment.
    - l. Distribution of the Contract Documents.
    - m. Submittal procedures.
    - n. Preparation of Record Documents.
    - o. Use of the premises.
    - p. Work restrictions.
    - q. Working hours.
    - r. Owner's occupancy requirements.
    - s. Responsibility for temporary facilities and controls.
    - t. Procedures for moisture and mold control.
    - u. Procedures for disruptions and shutdowns.
    - v. Construction waste management and recycling.
    - w. Parking availability.
    - x. Office, work, and storage areas.
    - y. Equipment deliveries and priorities.
    - z. First aid.
    - aa. Security.

- bb. Progress cleaning.
  - 3. Minutes: The Architect will be responsible for compiling meeting minutes. Owner to be provided 5 days for review, comment and approval prior to distribution.
  - 4. Attendees: Authorized representatives of Owner, Architect, and their consultants; Contractor and its superintendent and sustainable design coordinator; major subcontractors; suppliers; and other concerned parties shall attend the conference. Participants at the conference shall be familiar with Project and authorized to conclude matters relating to the Work.
- C. Preinstallation Conferences: Conduct a preinstallation conference at Project site before each construction activity when required by other sections and when required for coordination with other construction.
- 1. Attendees: Installer and representatives of manufacturers and fabricators involved in or affected by the installation and its coordination or integration with other materials and installations that have preceded or will follow, shall attend the meeting. Advise Architect of scheduled meeting dates.
  - 2. Agenda: Review progress of other construction activities and preparations for the particular activity under consideration, including requirements for the following:
    - a. Contract Documents.
    - b. Options.
    - c. Related RFIs.
    - d. Related Change Orders.
    - e. Purchases.
    - f. Deliveries.
    - g. Submittals.
    - h. Review of mockups.
    - i. Possible conflicts.
    - j. Compatibility requirements.
    - k. Time schedules.
    - l. Weather limitations.
    - m. Manufacturer's written instructions.
    - n. Warranty requirements.
    - o. Compatibility of materials.
    - p. Acceptability of substrates.
    - q. Temporary facilities and controls.
    - r. Space and access limitations.
    - s. Regulations of authorities having jurisdiction.
    - t. Testing and inspecting requirements.
    - u. Installation procedures.
    - v. Coordination with other work.
    - w. Required performance results.
    - x. Protection of adjacent work.
    - y. Protection of construction and personnel.

3. Record significant conference discussions, agreements, and disagreements, including required corrective measures and actions.
4. Reporting: Distribute minutes of the meeting to each party present and to other parties requiring information.
5. Do not proceed with installation if the conference cannot be successfully concluded. Initiate whatever actions are necessary to resolve impediments to performance of the Work and reconvene the conference at earliest feasible date.
6. Agenda: Review and correct or approve minutes of previous progress meeting. Review other items of significance that could affect progress. Include topics for discussion as appropriate to status of Project.
  - a. Contractor's Construction Schedule: Review progress since the last meeting. Determine whether each activity is on time, ahead of schedule, or behind schedule, in relation to Contractor's construction schedule. Determine how construction behind schedule will be expedited; secure commitments from parties involved to do so. Discuss whether schedule revisions are required to ensure that current and subsequent activities will be completed within the Contract Time.
    - 1) Review schedule for next period.
  - b. Review present and future needs of each entity present, including the following:
    - 1) Interface requirements.
    - 2) Sequence of operations.
    - 3) Status of submittals.
    - 4) Deliveries.
    - 5) Off-site fabrication.
    - 6) Access.
    - 7) Site use.
    - 8) Temporary facilities and controls.
    - 9) Progress cleaning.
    - 10) Quality and work standards.
    - 11) Status of correction of deficient items.
    - 12) Field observations.
    - 13) Status of RFIs.
    - 14) Status of Proposal Requests.
    - 15) Pending changes.
    - 16) Status of Change Orders.
    - 17) Pending claims and disputes.
    - 18) Documentation of information for payment requests.
7. Minutes: Entity responsible for conducting the meeting will record and distribute the meeting minutes to each party present and to parties requiring information.
  - a. Schedule Updating: Revise Contractor's construction schedule after each progress meeting where revisions to the schedule have been made or recognized. Issue revised schedule concurrently with the report of each meeting.

END OF SECTION 013100

## **SECTION 013200 - CONSTRUCTION PROGRESS DOCUMENTATION**

### **PART 1 - GENERAL**

#### **1.1 SUMMARY**

- A. Section includes administrative and procedural requirements for documenting the progress of construction during performance of the Work, including the following:
  - 1. Contractor's Construction Schedule.
  - 2. Construction schedule updating reports.
  - 3. Daily construction reports.
  - 4. Site condition reports.

#### **1.2 DEFINITIONS**

- A. Activity: A discrete part of a project that can be identified for planning, scheduling, monitoring, and controlling the construction Project. Activities included in a construction schedule consume time and resources.
  - 1. Critical Activity: An activity on the critical path that must start and finish on the planned early start and finish times.
  - 2. Predecessor Activity: An activity that precedes another activity in the network.
  - 3. Successor Activity: An activity that follows another activity in the network.
- B. CPM: Critical path method, which is a method of planning and scheduling a construction project where activities are arranged based on activity relationships. Network calculations determine when activities can be performed and the critical path of Project.
- C. Critical Path: The longest connected chain of interdependent activities through the network schedule that establishes the minimum overall Project duration and contains no float.
- D. Event: The starting or ending point of an activity.
- E. Float: The measure of leeway in starting and completing an activity.
  - 1. Float time is not for the exclusive use or benefit of either Owner or Contractor, but is a jointly owned, expiring Project resource available to both parties as needed to meet schedule milestones and Contract completion date.
  - 2. Free float is the amount of time an activity can be delayed without adversely affecting the early start of the successor activity.
  - 3. Total float is the measure of leeway in starting or completing an activity without adversely affecting the planned Project completion date.

### 1.3 INFORMATIONAL SUBMITTALS

- A. Format for Submittals: Submit required submittals in the following format:
  - 1. Working electronic copy of schedule file.
  - 2. PDF file.
- B. Startup Network Diagram: Of size required to display entire network for entire construction period. Show logic ties for activities.
- C. Contractor's Construction Schedule: Initial schedule, of size required to display entire schedule for entire construction period.
- D. CPM Reports: Concurrent with CPM schedule, submit each of the following reports. Format for each activity in reports shall contain activity number, activity description, original duration, remaining duration, early start date, early finish date, late start date, late finish date, and total float in calendar days.
  - 1. Activity Report: List of activities sorted by activity number and then early start date, or actual start date if known.
  - 2. Logic Report: List of preceding and succeeding activities for each activity, sorted in ascending order by activity number and then by early start date, or actual start date if known.
  - 3. Total Float Report: List of activities sorted in ascending order of total float.
- E. Construction Schedule Updating Reports: Submit with Applications for Payment.
- F. Daily Construction Reports: Submit at monthly intervals.
- G. Site Condition Reports: Submit at time of discovery of differing conditions.

### 1.4 COORDINATION

- A. Coordinate Contractor's Construction Schedule with the schedule of values, schedule, progress reports, payment requests, and other required schedules and reports.
  - 1. Secure time commitments for performing critical elements of the Work from entities involved.
  - 2. Coordinate each construction activity in the network with other activities and schedule them in proper sequence.

### 1.5 CONTRACTOR'S CONSTRUCTION SCHEDULE

- A. Computer Scheduling Software: Prepare schedules using current version of a program that has been developed specifically to manage construction schedules.
- B. Time Frame: Extend schedule from date established for the Notice to Proceed to date of Substantial Completion.

1. Contract completion date shall not be changed by submission of a schedule that shows an early completion date, unless specifically authorized by Change Order.
- C. Activities: Treat each floor or separate area as a separate numbered activity for each main element of the Work. Comply with the following:
1. Activity Duration: Define activities so no activity is longer than 20 days, unless specifically allowed by Architect.
  2. Procurement Activities: Include procurement process activities for the following long lead items and major items, requiring a cycle of more than 60 days, as separate activities in schedule. Procurement cycle activities include, but are not limited to, submittals, approvals, purchasing, fabrication, and delivery.
  3. Submittal Review Time: Include review and resubmittal times indicated in Section 013300 "Submittal Procedures" in schedule. Coordinate submittal review times in Contractor's Construction Schedule with submittal schedule.
  4. Startup and Testing Time: Include no fewer than 15 days for startup and testing.
  5. Commissioning Time: Include no fewer than 15 days for commissioning.
  6. Substantial Completion: Indicate completion in advance of date established for Substantial Completion, and allow time for Architect's administrative procedures necessary for certification of Substantial Completion.
  7. Punch List and Final Completion: Include not more than 30 days for completion of punch list items and final completion.
- D. Constraints: Include constraints and work restrictions indicated in the Contract Documents and as follows in schedule, and show how the sequence of the Work is affected.
1. Phasing: Arrange list of activities on schedule by phase.
  2. Owner-Furnished Products: Include a separate activity for each product. Include delivery date indicated in Section 011000 "Summary." Delivery dates indicated stipulate the earliest possible delivery date.
  3. Work Restrictions: Show the effect of the following items on the schedule:
    - a. Coordination with existing construction.
    - b. Limitations of continued occupancies.
    - c. Uninterruptible services.
    - d. Partial occupancy before Substantial Completion.
    - e. Use-of-premises restrictions.
    - f. Provisions for future construction.
    - g. Seasonal variations.
    - h. Environmental control.
- E. Milestones: Include milestones indicated in the Contract Documents in schedule, including, but not limited to, the Notice to Proceed, Substantial Completion, and final completion, and the following interim milestones:
1. Roof installation
  2. Building Enclosure

3. Substantial Completion
  4. Final Completion
- F. Upcoming Work Summary: Prepare summary report indicating activities scheduled to occur or commence prior to submittal of next schedule update. Summarize the following issues:
1. Unresolved issues.
  2. Unanswered Requests for Information.
  3. Rejected or unreturned submittals.
  4. Notations on returned submittals.
  5. Pending modifications affecting the Work and the Contract Time.
- G. Contractor's Construction Schedule Updating: At monthly intervals, update schedule to reflect actual construction progress and activities. Issue schedule one week before each regularly scheduled progress meeting.
1. Revise schedule immediately after each meeting or other activity where revisions have been recognized or made. Issue updated schedule concurrently with the report of each such meeting.
  2. Include a report with updated schedule that indicates every change, including, but not limited to, changes in logic, durations, actual starts and finishes, and activity durations.
  3. As the Work progresses, indicate final completion percentage for each activity.
- H. Recovery Schedule: When periodic update indicates the Work is 14 or more calendar days behind the current approved schedule, submit a separate recovery schedule indicating means by which Contractor intends to regain compliance with the schedule. Indicate changes to working hours, working days, crew sizes, equipment required to achieve compliance, and date by which recovery will be accomplished.
- I. Distribution: Distribute copies of approved schedule to Architect Owner, separate contractors, testing and inspecting agencies, and other parties identified by Contractor with a need-to-know schedule responsibility.
1. Post copies in Project meeting rooms and temporary field offices.
  2. When revisions are made, distribute updated schedules to the same parties and post in the same locations. Delete parties from distribution when they have completed their assigned portion of the Work and are no longer involved in performance of construction activities.
- 1.6 GANTT-CHART SCHEDULE REQUIREMENTS
- A. Gantt-Chart Schedule: Submit a comprehensive, fully developed, horizontal, Gantt-chart-type, Contractor's Construction Schedule within 30 days of date established for commencement of the Work.
- B. Preparation: Indicate each significant construction activity separately. Identify first workday of each week with a continuous vertical line.

1. For construction activities that require three months or longer to complete, indicate an estimated completion percentage in 10 percent increments within time bar.

## 1.7 REPORTS

- A. Daily Construction Reports: Prepare a daily construction report recording the following information concerning events at Project site:
  1. List of subcontractors at Project site.
  2. List of separate contractors at Project site.
  3. Actual count of personnel at Project site.
  4. Equipment at Project site.
  5. Material deliveries.
  6. High and low temperatures and general weather conditions, including presence of rain or snow.
  7. Testing and inspection.
  8. Accidents.
  9. Meetings and significant decisions.
  10. Stoppages, delays, shortages, and losses.
  11. Meter readings and similar recordings.
  12. Emergency procedures.
  13. Orders and requests of authorities having jurisdiction.
  14. Change Orders received and implemented.
  15. **Construction** Change Directives received and implemented.
  16. Services connected and disconnected.
  17. Equipment or system tests and startups.
  18. Partial completions and occupancies.
  19. Substantial Completions authorized.
- B. Site Condition Reports: Immediately on discovery of a difference between site conditions and the Contract Documents, prepare and submit a detailed report. Submit with a Request for Information. Include a detailed description of the differing conditions, together with recommendations for changing the Contract Documents.

PART 2 - PRODUCTS (Not Used)

PART 3 - EXECUTION (Not Used)

END OF SECTION 013200

## **SECTION 013300 - SUBMITTAL PROCEDURES**

### **PART 1 - GENERAL**

#### **1.1 SUMMARY**

**A. Section Includes:**

1. Submittal schedule requirements.
2. Administrative and procedural requirements for submittals.

#### **1.2 DEFINITIONS**

- A. Action Submittals:** Written and graphic information and physical samples that require Architect's responsive action. Action submittals are those submittals indicated in individual Specification Sections as "action submittals."
- B. Informational Submittals:** Written and graphic information and physical samples that do not require Architect's responsive action. Submittals may be rejected for not complying with requirements. Informational submittals are those submittals indicated in individual Specification Sections as "informational submittals."

#### **1.3 SUBMITTAL SCHEDULE**

- A. Submittal Schedule:** Submit, as an action submittal, a list of submittals, arranged in chronological order by dates required by construction schedule. Include time required for review, ordering, manufacturing, fabrication, and delivery when establishing dates. Include additional time required for making corrections or revisions to submittals noted by Architect and additional time for handling and reviewing submittals required by those corrections.

#### **1.4 SUBMITTAL FORMATS**

**A. Submittal Information:** Include the following information in each submittal:

1. Project name.
2. Date.
3. Name of Architect.
4. Name of Contractor.
5. Name of firm or entity that prepared submittal.
6. Names of subcontractor, manufacturer, and supplier.
7. Unique submittal number, including revision identifier. Include Specification Section number with sequential alphanumeric identifier; and alphanumeric suffix for resubmittals.
8. Category and type of submittal.
9. Submittal purpose and description.

10. Number and title of Specification Section, with paragraph number and generic name for each of multiple items.
  11. Drawing number and detail references, as appropriate.
  12. Indication of full or partial submittal.
  13. Location(s) where product is to be installed, as appropriate.
  14. Other necessary identification.
  15. Remarks.
  16. Signature of transmitter.
- B. Options: Identify options requiring selection by Architect.
- C. Deviations and Additional Information: On each submittal, clearly indicate deviations from requirements in the Contract Documents, including minor variations and limitations; include relevant additional information and revisions, other than those requested by Architect on previous submittals. Indicate by highlighting on each submittal or noting on attached separate sheet.
- D. Electronic Submittals: Prepare submittals as PDF package, incorporating complete information into each PDF file. Name PDF file with submittal number.
- E. Submittals for Utilizing Web-Based Project Management Software: Prepare submittals as PDF files, or other format indicated by Project management software.

## 1.5 SUBMITTAL PROCEDURES

- A. Prepare and submit submittals required by individual Specification Sections. Types of submittals are indicated in individual Specification Sections.
1. Email: Prepare submittals as PDF package, and transmit to Architect by sending via email. Include PDF transmittal form. Include information in email subject line as requested by Architect.
  2. Web-Based Project Management Software: Prepare submittals in PDF form, and upload to web-based Project management software website. Enter required data in web-based software site to fully identify submittal.
- B. Coordination: Coordinate preparation and processing of submittals with performance of construction activities.
1. Coordinate each submittal with fabrication, purchasing, testing, delivery, other submittals, and related activities that require sequential activity.
  2. Submit all submittal items required for each Specification Section concurrently unless partial submittals for portions of the Work are indicated on approved submittal schedule.
  3. Submit action submittals and informational submittals required by the same Specification Section as separate packages under separate transmittals.
- C. Processing Time: Allow time for submittal review, including time for resubmittals, as follows. Time for review shall commence on Architect's receipt of submittal. No extension of the Contract Time will be authorized because of failure to transmit submittals enough in advance of the Work to permit processing, including resubmittals.

1. Initial Review: Allow 15 days for initial review of each submittal. Allow additional time if coordination with subsequent submittals is required. Architect will advise Contractor when a submittal being processed must be delayed for coordination.
  2. Resubmittal Review: Allow 15 days for review of each resubmittal.
- D. Resubmittals: Make resubmittals in same form and number of copies as initial submittal.
- E. Distribution: Furnish copies of final submittals to manufacturers, subcontractors, suppliers, fabricators, installers, authorities having jurisdiction, and others as necessary for performance of construction activities. Show distribution on transmittal forms.
- F. Use for Construction: Retain complete copies of submittals on Project site. Use only final action submittals that are marked with approval notation from Architect's action stamp.

## 1.6 SUBMITTAL REQUIREMENTS

- A. Product Data: Collect information into a single submittal for each element of construction and type of product or equipment.
1. If information must be specially prepared for submittal because standard published data are unsuitable for use, submit as Shop Drawings, not as Product Data.
  2. Mark each copy of each submittal to show which products and options are applicable.
  3. Include the following information, as applicable:
    - a. Manufacturer's catalog cuts.
    - b. Manufacturer's product specifications.
    - c. Standard color charts.
    - d. Statement of compliance with specified referenced standards.
    - e. Testing by recognized testing agency.
    - f. Application of testing agency labels and seals.
    - g. Notation of coordination requirements.
    - h. Availability and delivery time information.
  4. For equipment, include the following in addition to the above, as applicable:
    - a. Wiring diagrams that show factory-installed wiring.
    - b. Printed performance curves.
    - c. Operational range diagrams.
    - d. Clearances required to other construction, if not indicated on accompanying Shop Drawings.
  5. Submit Product Data before Shop Drawings, and before or concurrent with Samples.
- B. Shop Drawings: Prepare Project-specific information, drawn accurately to scale. Do not base Shop Drawings on reproductions of the Contract Documents or standard printed data.
1. Preparation: Fully illustrate requirements in the Contract Documents. Include the following information, as applicable:

- a. Identification of products.
  - b. Schedules.
  - c. Compliance with specified standards.
  - d. Notation of coordination requirements.
  - e. Notation of dimensions established by field measurement.
  - f. Relationship and attachment to adjoining construction clearly indicated.
  - g. Seal and signature of professional engineer if specified.
- C. Samples: Submit Samples for review of kind, color, pattern, and texture for a check of these characteristics with other materials.
  1. Transmit Samples that contain multiple, related components such as accessories together in one submittal package.
  2. Identification: Permanently attach label on unexposed side of Samples that includes the following:
    - a. Project name and submittal number.
    - b. Generic description of Sample.
    - c. Product name and name of manufacturer.
    - d. Sample source.
    - e. Number and title of applicable Specification Section.
    - f. Specification paragraph number and generic name of each item.
  3. Email Transmittal: Provide PDF transmittal. Include digital image file illustrating Sample characteristics, and identification information for record.
  4. Web-Based Project Management Software: Prepare submittals in PDF form, and upload to web-based Project software website. Enter required data in web-based software site to fully identify submittal.
  5. Paper Transmittal: Include paper transmittal including complete submittal information indicated.
  6. Disposition: Maintain sets of approved Samples at Project site, available for quality-control comparisons throughout the course of construction activity. Sample sets may be used to determine final acceptance of construction associated with each set.
    - a. Samples that may be incorporated into the Work are indicated in individual Specification Sections. Such Samples must be in an undamaged condition at time of use.
    - b. Samples not incorporated into the Work, or otherwise designated as Owner's property, are the property of Contractor.
  7. Samples for Initial Selection: Submit manufacturer's color charts consisting of units or sections of units showing the full range of colors, textures, and patterns available.
    - a. Number of Samples: Submit **one** full set(s) of available choices where color, pattern, texture, or similar characteristics are required to be selected from manufacturer's product line. Architect will return submittal with options selected.
  8. Samples for Verification: Submit full-size units or Samples of size indicated, prepared from same material to be used for the Work, cured and finished in manner specified, and physically identical with material or product proposed for use, and that show full range of

color and texture variations expected. Samples include, but are not limited to, the following: partial sections of manufactured or fabricated components; small cuts or containers of materials; complete units of repetitively used materials; swatches showing color, texture, and pattern; color range sets; and components used for independent testing and inspection.

- a. Number of Samples: Submit three sets of Samples. Architect will retain two Sample sets; remainder will be returned.
  - 1) Submit a single Sample where assembly details, workmanship, fabrication techniques, connections, operation, and other similar characteristics are to be demonstrated.
  - 2) If variation in color, pattern, texture, or other characteristic is inherent in material or product represented by a Sample, submit at least three sets of paired units that show approximate limits of variations.
- D. Product Schedule: As required in individual Specification Sections, prepare a written summary indicating types of products required for the Work and their intended location. Include the following information in tabular form:
- E. Qualification Data: Prepare written information that demonstrates capabilities and experience of firm or person. Include lists of completed projects with project names and addresses, contact information of architects and owners, and other information specified.
- F. Design Data: Prepare and submit written and graphic information indicating compliance with indicated performance and design criteria in individual Specification Sections. Include list of assumptions and summary of loads. Include load diagrams if applicable. Provide name and version of software, if any, used for calculations. Number each page of submittal.
- G. Certificates:
  1. Certificates and Certifications Submittals: Submit a statement that includes signature of entity responsible for preparing certification. Certificates and certifications shall be signed by an officer or other individual authorized to sign documents on behalf of that entity. Provide a notarized signature where indicated.
  2. Installer Certificates: Submit written statements on manufacturer's letterhead certifying that Installer complies with requirements in the Contract Documents and, where required, is authorized by manufacturer for this specific Project.
  3. Manufacturer Certificates: Submit written statements on manufacturer's letterhead certifying that manufacturer complies with requirements in the Contract Documents. Include evidence of manufacturing experience where required.
  4. Material Certificates: Submit written statements on manufacturer's letterhead certifying that material complies with requirements in the Contract Documents.
  5. Product Certificates: Submit written statements on manufacturer's letterhead certifying that product complies with requirements in the Contract Documents.
  6. Welding Certificates: Prepare written certification that welding procedures and personnel comply with requirements in the Contract Documents. Submit record of Welding Procedure Specification and Procedure Qualification Record on AWS forms. Include names of firms and personnel certified.

H. Test and Research Reports:

1. Compatibility Test Reports: Submit reports written by a qualified testing agency, on testing agency's standard form, indicating and interpreting results of compatibility tests performed before installation of product. Include written recommendations for substrate preparation and primers required.
2. Field Test Reports: Submit written reports indicating and interpreting results of field tests performed either during installation of product or after product is installed in its final location, for compliance with requirements in the Contract Documents.
3. Material Test Reports: Submit reports written by a qualified testing agency, on testing agency's standard form, indicating and interpreting test results of material for compliance with requirements in the Contract Documents.
4. Preconstruction Test Reports: Submit reports written by a qualified testing agency, on testing agency's standard form, indicating and interpreting results of tests performed before installation of product, for compliance with performance requirements in the Contract Documents.
5. Product Test Reports: Submit written reports indicating that current product produced by manufacturer complies with requirements in the Contract Documents. Base reports on evaluation of tests performed by manufacturer and witnessed by a qualified testing agency, or on comprehensive tests performed by a qualified testing agency.
6. Research Reports: Submit written evidence, from a model code organization acceptable to authorities having jurisdiction, that product complies with building code in effect for Project. Include the following information:
  - a. Name of evaluation organization.
  - b. Date of evaluation.
  - c. Time period when report is in effect.
  - d. Product and manufacturers' names.
  - e. Description of product.
  - f. Test procedures and results.
  - g. Limitations of use.

1.7 DELEGATED-DESIGN SERVICES

- A. Performance and Design Criteria: Where professional design services or certifications by a design professional are specifically required of Contractor by the Contract Documents, provide products and systems complying with specific performance and design criteria indicated.
  1. If criteria indicated are insufficient to perform services or certification required, submit a written request for additional information to Architect.
- B. Delegated-Design Services Certification: In addition to Shop Drawings, Product Data, and other required submittals, submit digitally signed PDF files of certificate, signed and sealed by the responsible design professional, for each product and system specifically assigned to Contractor to be designed or certified by a design professional.
  1. Indicate that products and systems comply with performance and design criteria in the Contract Documents. Include list of codes, loads, and other factors used in performing these services.

**1.8 CONTRACTOR'S REVIEW**

- A. Action Submittals and Informational Submittals: Review each submittal and check for coordination with other Work of the Contract and for compliance with the Contract Documents. Note corrections and field dimensions. Mark with approval stamp before submitting to Architect.
- B. Contractor's Approval: Indicate Contractor's approval for each submittal with a uniform approval stamp. Include name of reviewer, date of Contractor's approval, and statement certifying that submittal has been reviewed, checked, and approved for compliance with the Contract Documents.
  - 1. Architect will not review submittals received from Contractor that do not have Contractor's review and approval.

**1.9 ARCHITECT'S REVIEW**

- A. Action Submittals: Architect will review each submittal, indicate corrections or revisions required.
  - 1. PDF Submittals: Architect will indicate, via markup on each submittal, the appropriate action.
  - 2. Submittals by Web-Based Project Management Software: Architect will indicate, on Project management software website, the appropriate action.
- B. Informational Submittals: Architect will review each submittal and will not return it, or will return it if it does not comply with requirements. Architect will forward each submittal to appropriate party.
- C. Partial submittals prepared for a portion of the Work will be reviewed when use of partial submittals has received prior approval from Architect.
- D. Incomplete submittals are unacceptable, will be considered nonresponsive, and will be returned for resubmittal without review.
- E. Architect will discard submittals received from sources other than Contractor.
- F. Submittals not required by the Contract Documents will be returned by Architect without action.

**PART 2 - PRODUCTS (Not Used)**

**PART 3 - EXECUTION (Not Used)**

**END OF SECTION 013300**

## SECTION 014000 - QUALITY REQUIREMENTS

### PART 1 - GENERAL

#### 1.1 SUMMARY

- A. Section includes administrative and procedural requirements for quality assurance and quality control.
- B. Testing and inspection services are required to verify compliance with requirements specified or indicated. These services do not relieve Contractor of responsibility for compliance with the Contract Document requirements.
  - 1. Specified tests, inspections, and related actions do not limit Contractor's other quality-assurance and quality-control procedures that facilitate compliance with the Contract Document requirements.
  - 2. Requirements for Contractor to provide quality-assurance and quality-control services required by Architect, Owner, or authorities having jurisdiction are not limited by provisions of this Section.

#### 1.2 DEFINITIONS

- A. Experienced: When used with an entity or individual, "experienced" unless otherwise further described means having successfully completed a minimum of **five** previous projects similar in nature, size, and extent to this Project; being familiar with special requirements indicated; and having complied with requirements of authorities having jurisdiction.
- B. Field Quality-Control Tests and Inspections: Tests and inspections that are performed on-site for installation of the Work and for completed Work.
- C. Installer/Applicator/Erector: Contractor or another entity engaged by Contractor as an employee, Subcontractor, or Sub-subcontractor, to perform a particular construction operation, including installation, erection, application, assembly, and similar operations.
  - 1. Use of trade-specific terminology in referring to a Work result does not require that certain construction activities specified apply exclusively to specific trade(s).
- D. Mockups: Physical assemblies of portions of the Work constructed to establish the standard by which the Work will be judged. Mockups are not Samples.
  - 1. Mockups are used for one or more of the following:
    - a. Verify selections made under Sample submittals.
    - b. Demonstrate aesthetic effects.
    - c. Demonstrate the qualities of products and workmanship.
    - d. Demonstrate successful installation of interfaces between components and systems.

- e. Perform preconstruction testing to determine system performance.
- 2. Product Mockups: Mockups that may include multiple products, materials, or systems specified in a single Section.
- 3. In-Place Mockups: Mockups constructed on-site in their actual final location as part of permanent construction.
- E. Preconstruction Testing: Tests and inspections performed specifically for Project before products and materials are incorporated into the Work, to verify performance or compliance with specified criteria. Unless otherwise indicated, copies of reports of tests or inspections performed for other than the Project do not meet this definition.
- F. Product Tests: Tests and inspections that are performed by a nationally recognized testing laboratory (NRTL) according to 29 CFR 1910.7, by a testing agency accredited according to NIST's National Voluntary Laboratory Accreditation Program (NVLAP), or by a testing agency qualified to conduct product testing and acceptable to authorities having jurisdiction, to establish product performance and compliance with specified requirements.
- G. Source Quality-Control Tests and Inspections: Tests and inspections that are performed at the source; for example, plant, mill, factory, or shop.
- H. Testing Agency: An entity engaged to perform specific tests, inspections, or both. The term "testing laboratory" has the same meaning as the term "testing agency."
- I. Quality-Assurance Services: Activities, actions, and procedures performed before and during execution of the Work to guard against defects and deficiencies and substantiate that proposed construction will comply with requirements.
- J. Quality-Control Services: Tests, inspections, procedures, and related actions during and after execution of the Work to evaluate that actual products incorporated into the Work and completed construction comply with requirements. Contractor's quality-control services do not include contract administration activities performed by Architect.

### 1.3 DELEGATED DESIGN SERVICES

- A. Performance and Design Criteria: Where professional design services or certifications by a design professional are specifically required of Contractor by the Contract Documents, provide products and systems complying with specific performance and design criteria indicated.
  - 1. If criteria indicated are not sufficient to perform services or certification required, submit a written request for additional information to Architect.
- B. Delegated Design Services Statement: Submit a statement, signed and sealed by the responsible design professional, for each product and system specifically assigned to Contractor to be designed or certified by a design professional, indicating that the products and systems are in compliance with performance and design criteria indicated. Include list of codes, loads, and other factors used in performing these services.

#### 1.4 CONFLICTING REQUIREMENTS

- A. Conflicting Standards and Other Requirements: If compliance with two or more standards or requirements is specified and the standards or requirements establish different or conflicting requirements for minimum quantities or quality levels, inform the Architect regarding the conflict and obtain clarification prior to proceeding with the Work. Refer conflicting requirements that are different, but apparently equal, to Architect for clarification before proceeding.
- B. Minimum Quantity or Quality Levels: The quantity or quality level shown or specified is the minimum provided or performed. The actual installation may comply exactly with the minimum quantity or quality specified, or it may exceed the minimum within reasonable limits. To comply with these requirements, indicated numeric values are minimum or maximum, as appropriate, for the context of requirements. Refer uncertainties to Architect for a decision before proceeding.

#### 1.5 INFORMATIONAL SUBMITTALS

- A. Contractor's Statement of Responsibility: When required by authorities having jurisdiction, submit copy of written statement of responsibility submitted to authorities having jurisdiction before starting work on the following systems:
  - 1. Seismic-force-resisting system, designated seismic system, or component listed in the Statement of Special Inspections.
  - 2. Main wind-force-resisting system or a wind-resisting component listed in the Statement of Special Inspections.
- B. Testing Agency Qualifications: For testing agencies specified in "Quality Assurance" Article to demonstrate their capabilities and experience. Include proof of qualifications in the form of a recent report on the inspection of the testing agency by a recognized authority.
- C. Permits, Licenses, and Certificates: For Owner's record, submit copies of permits, licenses, certifications, inspection reports, releases, jurisdictional settlements, notices, receipts for fee payments, judgments, correspondence, records, and similar documents established for compliance with standards and regulations bearing on performance of the Work.

#### 1.6 REPORTS AND DOCUMENTS

- A. Test and Inspection Reports: Prepare and submit certified written reports specified in other Sections. Include the following:
  - 1. Date of issue.
  - 2. Project title and number.
  - 3. Name, address, telephone number, and email address of testing agency.
  - 4. Dates and locations of samples and tests or inspections.
  - 5. Names of individuals making tests and inspections.
  - 6. Description of the Work and test and inspection method.
  - 7. Identification of product and Specification Section.

8. Complete test or inspection data.
  9. Test and inspection results and an interpretation of test results.
  10. Record of temperature and weather conditions at time of sample taking and testing and inspection.
  11. Comments or professional opinion on whether tested or inspected Work complies with the Contract Document requirements.
  12. Name and signature of laboratory inspector.
  13. Recommendations on retesting and reinspecting.
- B. Manufacturer's Technical Representative's Field Reports: Prepare written information documenting manufacturer's technical representative's tests and inspections specified in other Sections. Include the following:
1. Statement on condition of substrates and their acceptability for installation of product.
  2. Statement that products at Project site comply with requirements.
  3. Summary of installation procedures being followed, whether they comply with requirements and, if not, what corrective action was taken.
  4. Results of operational and other tests and a statement of whether observed performance complies with requirements.
  5. Other required items indicated in individual Specification Sections.
- C. Factory-Authorized Service Representative's Reports: Prepare written information documenting manufacturer's factory-authorized service representative's tests and inspections specified in other Sections. Include the following:
1. Statement that equipment complies with requirements.
  2. Results of operational and other tests and a statement of whether observed performance complies with requirements.
  3. Other required items indicated in individual Specification Sections.

## 1.7 QUALITY ASSURANCE

- A. Qualifications paragraphs in this article establish the minimum qualification levels required; individual Specification Sections specify additional requirements.
- B. Manufacturer Qualifications: A firm experienced in manufacturing products or systems similar to those indicated for this Project and with a record of successful in-service performance, as well as sufficient production capacity to produce required units. As applicable, procure products from manufacturers able to meet qualification requirements, warranty requirements, and technical or factory-authorized service representative requirements.
- C. Fabricator Qualifications: A firm experienced in producing products similar to those indicated for this Project and with a record of successful in-service performance, as well as sufficient production capacity to produce required units.
- D. Installer Qualifications: A firm or individual experienced in installing, erecting, applying, or assembling work similar in material, design, and extent to that indicated for this Project, whose work has resulted in construction with a record of successful in-service performance.

- E. Professional Engineer Qualifications: A professional engineer who is legally qualified to practice in jurisdiction where Project is located and who is experienced in providing engineering services of the kind indicated. Engineering services are defined as those performed for installations of the system, assembly, or product that are similar in material, design, and extent to those indicated for this Project.
- F. Specialists: Certain Specification Sections require that specific construction activities be performed by entities who are recognized experts in those operations. Specialists will satisfy qualification requirements indicated and engage in the activities indicated.
  - 1. Requirements of authorities having jurisdiction supersede requirements for specialists.
- G. Testing and Inspecting Agency Qualifications: An NRTL, an NVLAP, or an independent agency with the experience and capability to conduct testing and inspection indicated, as documented according to ASTM E329; and with additional qualifications specified in individual Sections; and, where required by authorities having jurisdiction, that is acceptable to authorities.
- H. Manufacturer's Technical Representative Qualifications: An authorized representative of manufacturer who is trained and approved by manufacturer to observe and inspect installation of manufacturer's products that are similar in material, design, and extent to those indicated for this Project.
- I. Factory-Authorized Service Representative Qualifications: An authorized representative of manufacturer who is trained and approved by manufacturer to inspect, demonstrate, repair, and perform service on installations of manufacturer's products that are similar in material, design, and extent to those indicated for this Project.
- J. Preconstruction Testing: Where testing agency is indicated to perform preconstruction testing for compliance with specified requirements for performance and test methods, comply with the following:
  - 1. Contractor responsibilities include the following:
    - a. Provide test specimens representative of proposed products and construction.
    - b. Submit specimens in a timely manner with sufficient time for testing and analyzing results to prevent delaying the Work.
    - c. When testing is complete, remove test specimens and test assemblies, mockups; do not reuse products on Project.
  - 2. Testing Agency Responsibilities: Submit a certified written report of each test, inspection, and similar quality-assurance service to Architect and Commissioning Authority, with copy to Contractor. Interpret tests and inspections and state in each report whether tested and inspected work complies with or deviates from the Contract Documents.
- K. Mockups: Before installing portions of the Work requiring mockups, build mockups for each form of construction and finish required to comply with the following requirements, using materials indicated for the completed Work:

1. Build mockups of size indicated.
2. Build mockups in location indicated or, if not indicated, as directed by Architect.
3. Notify Architect seven days in advance of dates and times when mockups will be constructed.
4. Employ supervisory personnel who will oversee mockup construction. Employ workers that will be employed to perform same tasks during the construction at Project.
5. Demonstrate the proposed range of aesthetic effects and workmanship.
6. Obtain Architect's approval of mockups before starting corresponding work, fabrication, or construction.
  - a. Allow seven days for initial review and each re-review of each mockup.
7. Promptly correct unsatisfactory conditions noted by Architect's preliminary review, to the satisfaction of the Architect, before completion of final mockup.
8. Approval of mockups by the Architect does not constitute approval of deviations from the Contract Documents contained in mockups unless Architect specifically approves such deviations in writing.
9. Maintain mockups during construction in an undisturbed condition as a standard for judging the completed Work..
10. Demolish and remove mockups when directed unless otherwise indicated.

## 1.8 QUALITY CONTROL

- A. Owner Responsibilities: Where quality-control services are indicated as Owner's responsibility, Owner will engage a qualified testing agency to perform these services.
  1. Owner will furnish Contractor with names, addresses, and telephone numbers of testing agencies engaged and a description of types of testing and inspection they are engaged to perform.
  2. Costs for retesting and reinspecting construction that replaces or is necessitated by Work that failed to comply with the Contract Documents will be charged to Contractor, and the Contract Sum will be adjusted by Change Order.
- B. Contractor Responsibilities: Tests and inspections not explicitly assigned to Owner are Contractor's responsibility. Perform additional quality-control activities, whether specified or not, to verify and document that the Work complies with requirements.
  1. Notify testing agencies at least 24 hours in advance of time when Work that requires testing or inspection will be performed.
  2. Where quality-control services are indicated as Contractor's responsibility, submit a certified written report, in duplicate, of each quality-control service.
  3. Testing and inspection requested by Contractor and not required by the Contract Documents are Contractor's responsibility.
  4. Submit additional copies of each written report directly to authorities having jurisdiction, when they so direct.
- C. Retesting/Reinspecting: Regardless of whether original tests or inspections were Contractor's responsibility, provide quality-control services, including retesting and reinspecting, for construction that replaced Work that failed to comply with the Contract Documents.

- D. Manufacturer's Field Services: Where indicated, engage a factory-authorized service representative to inspect field-assembled components and equipment installation, including service connections. Report results in writing as specified in Section 013300 "Submittal Procedures."
- E. Manufacturer's Technical Services: Where indicated, engage a manufacturer's technical representative to observe and inspect the Work. Manufacturer's technical representative's services include participation in preinstallation conferences, examination of substrates and conditions, verification of materials, observation of Installer activities, inspection of completed portions of the Work, and submittal of written reports.
- F. Contractor's Associated Requirements and Services: Cooperate with agencies and representatives performing required tests, inspections, and similar quality-control services, and provide reasonable auxiliary services as requested. Notify agency sufficiently in advance of operations to permit assignment of personnel. Provide the following:
  - 1. Access to the Work.
  - 2. Incidental labor and facilities necessary to facilitate tests and inspections.
  - 3. Adequate quantities of representative samples of materials that require testing and inspection. Assist agency in obtaining samples.
  - 4. Facilities for storage and field curing of test samples.
  - 5. Preliminary design mix proposed for use for material mixes that require control by testing agency.
  - 6. Security and protection for samples and for testing and inspection equipment at Project site.
- G. Coordination: Coordinate sequence of activities to accommodate required quality-assurance and quality-control services with a minimum of delay and to avoid necessity of removing and replacing construction to accommodate testing and inspection.
  - 1. Schedule times for tests, inspections, obtaining samples, and similar activities.

## 1.9 SPECIAL TESTS AND INSPECTIONS

- A. Special Tests and Inspections: Owner will engage a qualified testing agency to conduct special tests and inspections required by authorities having jurisdiction as the responsibility of Owner, as indicated in the Statement of Special Inspections attached to this Section, and as follows:
  - 1. Verifying that manufacturer maintains detailed fabrication and quality-control procedures and reviewing the completeness and adequacy of those procedures to perform the Work.
  - 2. Notifying Architect Commissioning Authority, and Contractor promptly of irregularities and deficiencies observed in the Work during performance of its services.
  - 3. Submitting a certified written report of each test, inspection, and similar quality-control service to Architect and Commissioning Authority with copy to Contractor and to authorities having jurisdiction.
  - 4. Submitting a final report of special tests and inspections at Substantial Completion, which includes a list of unresolved deficiencies.

5. Interpreting tests and inspections and stating in each report whether tested and inspected work complies with or deviates from the Contract Documents.
6. Retesting and reinspecting corrected Work.

PART 2 - PRODUCTS (Not Used)

PART 3 - EXECUTION

3.1 TEST AND INSPECTION LOG

- A. Test and Inspection Log: Prepare a record of tests and inspections. Include the following:
  1. Date test or inspection was conducted.
  2. Description of the Work tested or inspected.
  3. Date test or inspection results were transmitted to Architect.
  4. Identification of testing agency or special inspector conducting test or inspection.
- B. Maintain log at Project site. Post changes and revisions as they occur. Provide access to test and inspection log for Architect's, Commissioning Authority's, and authorities' having jurisdiction reference during normal working hours.
  1. Submit log at Project closeout as part of Project Record Documents.

3.2 REPAIR AND PROTECTION

- A. General: On completion of testing, inspection, sample taking, and similar services, repair damaged construction and restore substrates and finishes.
  1. Provide materials and comply with installation requirements specified in other Specification Sections or matching existing substrates and finishes. Restore patched areas and extend restoration into adjoining areas with durable seams that are as invisible as possible. Comply with the Contract Document requirements for cutting and patching in Section 017300 "Execution."
- B. Protect construction exposed by or for quality-control service activities.
- C. Repair and protection are Contractor's responsibility, regardless of the assignment of responsibility for quality-control services.

END OF SECTION 014000

## SECTION 014001 ROOF SYSTEM QUALITY CONTROL

### PART 1 - GENERAL

#### 1.1 RELATED DOCUMENTS

- A. Drawings and general provisions of the Contract, including General Conditions, Special Conditions and other Division 1 Specification Sections, apply to this Section.

#### 1.2 SUMMARY

- A. Quality-control services include inspections, tests, and related actions, including reports performed by Contractor, by independent agencies, and by governing authorities. They do not include contract enforcement activities performed by the Architect, or Owner.
- B. Quality-control services are required to verify compliance with requirements specified or indicated, or to verify that portions of the work are functioning as intended.
- C. Quality-control services specified in this section do not limit the Contractor's responsibility to provide quality-control services specified in other sections or portions of the Contract Documents. Specified quality-control services do not limit the Contractor's quality control procedures that facilitate compliance with Contract Document requirements.
- D. This Section includes administrative and procedural requirements for quality-control services not specified in other sections, including the following:
  - 1. Infrared Roof Moisture Survey
  - 2. Alternative Roof Moisture Survey
  - 3. Roof Drain Testing

#### 1.3 INFRARED ROOF MOISTURE SURVEY

- A. Not sooner than three (3) months and not longer than six (6) months after completion of the roof system, the Contractor shall have an infrared roof moisture survey performed, by an independent testing firm, on all roof areas in the scope of this Contract.
- B. Qualifications of testing firm:
  - 1. The survey shall be performed by a firm specializing in infrared thermography services for a period of at least ten (10) consecutive years.
  - 2. The survey shall be performed by an NDT test technician certified to at least Level 2 in the Thermal/Infrared test method, in accordance with American Society for Non-destructive Testing Recommended Practice SNT-TC-1A, and having at least five (5) years experience in providing infrared inspection services on commercial roofing systems.
  - 3. The Owner has the right to reject any testing firm which does not meet, or does not provide satisfactory evidence of meeting, the above requirements.

- 1) In the event the Owner rejects the Contractor's testing firm, it shall be the responsibility of the Contractor to provide another firm acceptable to the Owner, at no additional cost to the Owner.

C. Survey format:

1. The roof moisture survey shall be ground-based, walk-over type, performed and reported in accordance with ASTM C-1153; "Standard Practice for the Location of Wet Insulation in Roofing Systems Using Infrared Imaging", with the following additional requirements:
  - a. The entire survey shall be recorded on a digital format CD/DVD with audio descriptions of roof area designations and observations. A copy of the CD/DVD shall be submitted with each required copy of the report.
  - b. The report shall include thermograms of all moisture suspect anomalies, with corresponding daylight photographs of the same areas, taken from the same perspective.

D. Submittals:

1. At least thirty (30) days prior to the anticipated performance of the survey, the Contractor shall provide written certification that the proposed testing firm meets the requirements specified in 1.3.B above.
  - a. Certification shall be accompanied by documentation from the testing firm indicating the firm's experience and qualifications, including a list of projects and references for similar testing performed over the last ten (10) years.
  - b. Certification shall be accompanied by documentation of the technician's qualifications, including training, certification and list of similar testing projects performed over the last five (5) years.

- E. Retesting: The Contractor is responsible for retesting where results of inspections, tests, reports or other quality-control services prove unsatisfactory and indicate noncompliance with Contract Document requirements.

- F. Final payment to the Contractor will not be made until the roof moisture survey is complete, including submission of acceptable documentation, and all necessary corrective work is performed to the satisfaction of, and at no additional cost to, the Owner. The Owner will retain the value of any incomplete work and retainage for roofing until final payment. Said retainage shall not limit the costs associated with the roof moisture survey or the extent of corrective work that may be required to remedy any and all subsurface moisture.

#### 1.4 ALTERNATIVE ROOF MOISTURE SURVEY

- A. If it is the Owner's opinion that an infrared roof moisture survey may not be appropriate or effective in detecting suspected subsurface moisture, the Owner may request a supplemental or alternative method of moisture survey.
- B. The Owner will compensate the Contractor for all moisture survey costs in excess of the infrared roof moisture survey cost. Any subsurface moisture encountered by the supplemental or alternative moisture survey shall be corrected at no cost to the Owner.

**1.5 ROOF DRAIN TESTING**

- A. Post-Construction Testing: When all work reaches substantial completion, the Contractor shall water-flow test all roof drains, in the presence of the Owner or Owner's representative if one has been hired, to determine if any full or partial drain clogs exist in the drainage system.
  - 1. Report the results of testing to the Owner in writing prior to preparation of the final punch-list.
  - 2. Any drains, piping or other components, whether exposed, concealed, below grade, etc., found to be clogged shall be cleared, repaired or replaced as required to restore full drainage capacity. All work shall be performed by the Contractor at no additional cost to the Owner, including patching, repair or replacement of any materials, finishes, landscaping, etc., disturbed in gaining access to drainage components.

**PART 2 - PRODUCTS (Not Applicable)**

**PART 3 - EXECUTION**

**3.1 INFRARED ROOF MOISTURE SURVEY**

- A. Notify the Architect and Owner at least seventy-two (72) hours before the anticipated performance of the infrared roof moisture survey.
- B. Confirm that environmental conditions are appropriate for proper performance of the survey and notify the Architect and Owner no later than 1:00pm on the day of the survey to confirm that the survey will or will not proceed as scheduled.
  - 1. If the survey cannot proceed as anticipated, due to environmental conditions, re-schedule and repeat the above notification requirements as necessary.

**3.2 ROOF DRAIN TESTING**

- A. Notify the Architect and Owner at least twenty-four (24) hours before the anticipated testing.
- B. Provide 3/4" diameter (min.) hose in sufficient length as required to utilize water source designated by the Owner.
- C. Run water at full volume, for a period not less than twenty (20) minutes, into each drain.
- D. Report any leaking drainage components observed during testing to the Owner.
- E. Re-test after any corrective work and repeat all procedures as necessary until achieving full drainage capacity.

**3.3 REPAIR AND PROTECTION**

- A. General: Upon completion of inspection, testing, sample taking and similar services, repair damaged construction and restore substrates and finishes.

- B. Protect construction exposed by or for quality-control service activities, and protect repaired construction.
- C. Repair and protection is Contractor's responsibility, regardless of the assignment of responsibility for inspection, testing, or similar services.

END OF SECTION 014010

## SECTION 014200 - REFERENCES

### PART 1 - GENERAL

#### 1.1 DEFINITIONS

- A. General: Basic Contract definitions are included in the Conditions of the Contract.
- B. "Approved": When used to convey Architect's action on Contractor's submittals, applications, and requests, "approved" is limited to Architect's duties and responsibilities as stated in the Conditions of the Contract.
- C. "Directed": A command or instruction by Architect. Other terms including "requested," "authorized," "selected," "required," and "permitted" have the same meaning as "directed."
- D. "Indicated": Requirements expressed by graphic representations or in written form on Drawings, in Specifications, and in other Contract Documents. Other terms including "shown," "noted," "scheduled," and "specified" have the same meaning as "indicated."
- E. "Regulations": Laws, ordinances, statutes, and lawful orders issued by authorities having jurisdiction, and rules, conventions, and agreements within the construction industry that control performance of the Work.
- F. "Furnish": Supply and deliver to Project site, ready for unloading, unpacking, assembly, installation, and similar operations.
- G. "Install": Unload, temporarily store, unpack, assemble, erect, place, anchor, apply, work to dimension, finish, cure, protect, clean, and similar operations at Project site.
- H. "Provide": Furnish and install, complete and ready for the intended use.
- I. "Project Site": Space available for performing construction activities. The extent of Project site is shown on Drawings and may or may not be identical with the description of the land on which Project is to be built.

#### 1.2 INDUSTRY STANDARDS

- A. Applicability of Standards: Unless the Contract Documents include more stringent requirements, applicable construction industry standards have the same force and effect as if bound or copied directly into the Contract Documents to the extent referenced. Such standards are made a part of the Contract Documents by reference.
- B. Publication Dates: Comply with standards in effect as of date of the Contract Documents unless otherwise indicated.
  - 1. For standards referenced by applicable building codes, comply with dates of standards as listed in building codes.

- C. Copies of Standards: Each entity engaged in construction on the Project should be familiar with industry standards applicable to its construction activity. Copies of applicable standards are not bound with the Contract Documents.
  - 1. Where copies of standards are needed to perform a required construction activity, obtain copies directly from the publication source.

### 1.3 ABBREVIATIONS AND ACRONYMS

- A. Industry Organizations: Where abbreviations and acronyms are used in Specifications or other Contract Documents, they shall mean the recognized name of the entities indicated in Gale's "Encyclopedia of Associations: National Organizations of the U.S." or in Columbia Books' "National Trade & Professional Associations of the United States."
- B. Industry Organizations: Where abbreviations and acronyms are used in Specifications or other Contract Documents, they shall mean the recognized name of the entities in the following list. Abbreviations and acronyms not included in this list shall mean the recognized name of the entities indicated in Gale's "Encyclopedia of Associations: National Organizations of the U.S." or in Columbia Books' "National Trade & Professional Associations of the United States." The information in this list is subject to change and is believed to be accurate as of the date of the Contract Documents.

C. Code Agencies: Where abbreviations and acronyms are used in Specifications or other Contract Documents, they shall mean the recognized name of the entities in the following list. This information is believed to be accurate as of the date of the Contract Documents.

1. IAPMO - International Association of Plumbing and Mechanical Officials; [www.iapmo.org](http://www.iapmo.org).
2. ICC - International Code Council; [www.iccsafe.org](http://www.iccsafe.org).
3. ICC-ES - ICC Evaluation Service, LLC; [www.icc-es.org](http://www.icc-es.org).
4. COE - Army Corps of Engineers; [www.usace.army.mil](http://www.usace.army.mil).
5. CPSC - Consumer Product Safety Commission; [www.cpsc.gov](http://www.cpsc.gov).
6. DOC - Department of Commerce; National Institute of Standards and Technology; [www.nist.gov](http://www.nist.gov).
7. DOD - Department of Defense; [www.quicksearch.dla.mil](http://www.quicksearch.dla.mil).
8. DOE - Department of Energy; [www.energy.gov](http://www.energy.gov).
9. EPA - Environmental Protection Agency; [www.epa.gov](http://www.epa.gov).
10. FAA - Federal Aviation Administration; [www.faa.gov](http://www.faa.gov).
11. FG - Federal Government Publications; [www.gpo.gov/fdsys](http://www.gpo.gov/fdsys).
12. GSA - General Services Administration; [www.gsa.gov](http://www.gsa.gov).
13. HUD - Department of Housing and Urban Development; [www.hud.gov](http://www.hud.gov).
14. LBL - Lawrence Berkeley National Laboratory; Environmental Energy Technologies Division; [www.eetd.lbl.gov](http://www.eetd.lbl.gov).
15. OSHA - Occupational Safety & Health Administration; [www.osha.gov](http://www.osha.gov).
16. SD - Department of State; [www.state.gov](http://www.state.gov).
17. TRB - Transportation Research Board; National Cooperative Highway Research Program; The National Academies; [www.trb.org](http://www.trb.org).
18. USDA - Department of Agriculture; Agriculture Research Service; U.S. Salinity Laboratory; [www.ars.usda.gov](http://www.ars.usda.gov).
19. USDA - Department of Agriculture; Rural Utilities Service; [www.usda.gov](http://www.usda.gov).
20. USDOJ - Department of Justice; Office of Justice Programs; National Institute of Justice; [www.ojp.usdoj.gov](http://www.ojp.usdoj.gov).
21. USP - U.S. Pharmacopeial Convention; [www.usp.org](http://www.usp.org).
22. USPS - United States Postal Service; [www.usps.com](http://www.usps.com).

- D. Standards and Regulations: Where abbreviations and acronyms are used in Specifications or other Contract Documents, they shall mean the recognized name of the standards and regulations in the following list. This information is subject to change and is believed to be accurate as of the date of the Contract Documents.
1. CFR - Code of Federal Regulations; Available from Government Printing Office; [www.govinfo.gov](http://www.govinfo.gov).
  2. DOD - Department of Defense; Military Specifications and Standards; Available from DLA Document Services; [www.quicksearch.dla.mil](http://www.quicksearch.dla.mil).
  3. DSCC - Defense Supply Center Columbus; (See FS).
  4. FED-STD - Federal Standard; (See FS).
  5. FS - Federal Specification; Available from DLA Document Services; [www.quicksearch.dla.mil](http://www.quicksearch.dla.mil).
    - a. Available from Defense Standardization Program; [www.dsp.dla.mil](http://www.dsp.dla.mil).
    - b. Available from General Services Administration; [www.gsa.gov](http://www.gsa.gov).
    - c. Available from National Institute of Building Sciences/Whole Building Design Guide; [www.wbdg.org](http://www.wbdg.org).
  6. MILSPEC - Military Specification and Standards; (See DOD).
  7. USAB - United States Access Board; [www.access-board.gov](http://www.access-board.gov).
  8. USATBCB - U.S. Architectural & Transportation Barriers Compliance Board; (See USAB).

PART 2 - PRODUCTS (Not Used)

PART 3 - EXECUTION (Not Used)

END OF SECTION 014200

## SECTION 015001 - TEMPORARY FACILITIES AND CONTROLS

### PART 1 - GENERAL

#### 1.1 SUMMARY

- A. Section includes requirements for temporary utilities, support facilities, and security and protection facilities.
- B. Related Requirements:
  - 1. Section 011000 "Summary" for work restrictions and limitations on utility interruptions.

#### 1.2 USE CHARGES

- A. Installation, removal, and use charges for temporary facilities shall be included in the Contract Sum unless otherwise indicated. Allow other entities engaged in the Project to use temporary services and facilities without cost, including, but not limited to, Owner's construction forces, Architect, occupants of Project, testing agencies, and authorities having jurisdiction.
- B. Water and Sewer Service from Existing System: Water from Owner's existing water system is available for use. Provide connections and extensions of services as required for construction operations.

#### 1.3 INFORMATIONAL SUBMITTALS

- A. Site Utilization Plan: Show temporary facilities, temporary utility lines and connections, staging areas, construction site entrances, vehicle circulation, and parking areas for construction personnel.
- B. Project Identification and Temporary Signs: Show fabrication and installation details, including plans, elevations, details, layouts, typestyles, graphic elements, and message content.
- C. Fire-Safety Program: Show compliance with requirements of NFPA 241 and authorities having jurisdiction. Indicate Contractor personnel responsible for management of fire-prevention program.
- D. Moisture- and Mold-Protection Plan: Describe procedures and controls for protecting materials and construction from water absorption and damage and mold. Describe delivery, handling, storage, installation, and protection provisions for materials subject to water absorption or water damage.
  - 1. Indicate procedures for discarding water-damaged materials, protocols for mitigating water intrusion into completed Work, and requirements for replacing water-damaged Work.

2. Indicate sequencing of work that requires water, such as sprayed fire-resistive materials, plastering, and terrazzo grinding, and describe plans for dealing with water from these operations. Show procedures for verifying that wet construction has dried sufficiently to permit installation of finish materials.
  3. Indicate methods to be used to avoid trapping water in finished work.
- E. Dust- and HVAC-Control Plan: Submit coordination drawing and narrative that indicates the dust- and HVAC-control measures proposed for use, proposed locations, and proposed time frame for their operation. Include the following:
1. Locations of dust-control partitions at each phase of work.
  2. HVAC system isolation schematic drawing.
  3. Location of proposed air-filtration system discharge.
  4. Waste-handling procedures.
  5. Other dust-control measures.
- F. Noise and Vibration Control Plan: Identify construction activities that may impact the occupancy and use of existing spaces within the building or adjacent existing buildings, whether occupied by others, or occupied by the Owner. Include the following:
1. Methods used to meet the goals and requirements of the Owner.
  2. Concrete cutting method(s) to be used.
  3. Location of construction devices on the site.
  4. Show compliance with the use and maintenance of quieted construction devices for the duration of the Project.
  5. Indicate activities that may disturb building occupants and that are planned to be performed during non-standard working hours as coordinated with the Owner.
  6. Indicate locations of sensitive areas or other areas requiring special attention as identified by Owner. Indicate means for complying with Owner's requirements

#### 1.4 QUALITY ASSURANCE

- A. Electric Service: Comply with NECA, NEMA, and UL standards and regulations for temporary electric service. Install service to comply with NFPA 70.
- B. Tests and Inspections: Arrange for authorities having jurisdiction to test and inspect each temporary utility before use. Obtain required certifications and permits.

#### 1.5 PROJECT CONDITIONS

- A. Temporary Use of Permanent Facilities: Engage Installer of each permanent service to assume responsibility for operation, maintenance, and protection of each permanent service during its use as a construction facility before Owner's acceptance, regardless of previously assigned responsibilities.

## PART 2 - PRODUCTS

### 2.1 TEMPORARY FACILITIES

#### A. MATERIALS

1. Polyethylene Sheet: Reinforced, fire-resistive sheet, 10-mil (0.25-mm) minimum thickness, with flame-spread rating of 15 or less in accordance with ASTM E84 and passing NFPA 701 Test Method 2.
2. Dust-Control Adhesive-Surface Walk-Off Mats: Provide mats, minimum 36 by 60 inches (914 by 1524 mm).
3. Insulation: Unfaced mineral-fiber blanket, manufactured from glass, slag wool, or rock wool; with maximum flame-spread and smoke-developed indexes of 25 and 50, respectively.

#### B. Field Offices: Prefabricated or mobile units with serviceable finishes, temperature controls, and foundations adequate for normal loading

#### C. Contractor Field Office: Of sufficient size to accommodate needs of Owner, Architect, and construction personnel office activities and to accommodate Project meetings specified in other Division 01 Sections. Keep office clean and orderly. Furnish and equip offices as follows:

1. Furniture required for Project-site documents including file cabinets, plan tables, plan racks, and bookcases.
2. Conference room of sufficient size to accommodate meetings of **10** individuals. Provide electrical power service and 120-V ac duplex receptacles, with no fewer than one receptacle on each wall. Furnish room with conference table, chairs, and 4-foot square tack and marker boards.
3. Drinking water and private toilet.
4. Heating and cooling equipment necessary to maintain a uniform indoor temperature of 68 to 72 deg F (20 to 22 deg C).
5. Lighting fixtures capable of maintaining average illumination of 20 fc (215 lx) at desk height.

#### D. Construction Management Field Office: separate from contractor field office and of sufficient size, minimum 40ft length to accommodate needs of construction manager personnel office activities and to accommodate Project meetings specified in other Division 01 Sections. Keep office clean and orderly. Furnish and equip offices as follows:

1. Furniture required for Project-site documents including file cabinets, plan tables, plan racks, and bookcases.
2. (2) private offices each of sufficient size to accommodate one occupant each. Furnish each office with a desk, desk chair, file cabinet, with electrical power service and 120-vac duplex receptacles on no fewer than 2.
3. Conference room of sufficient size to accommodate meetings of **10** individuals. Provide electrical power service and 120-V ac duplex receptacles, with no fewer than one receptacle on each wall. Furnish room with conference table, chairs, and 4-foot square tack and marker boards.
4. Drinking water and private toilet.

5. Heating and cooling equipment necessary to maintain a uniform indoor temperature of 68 to 72 deg F (20 to 22 deg C).
6. Lighting fixtures capable of maintaining average illumination of 20 fc (215 lx) at desk height.
7. Provide mobile wireless data connection for use of construction manager personnel such as Verizon Fios 400Mbps service (or equal).

## 2.2 EQUIPMENT

- A. Fire Extinguishers: Portable, UL rated; with class and extinguishing agent as required by locations and classes of fire exposures.
- B. HVAC Equipment: Unless Owner authorizes use of permanent HVAC system, provide vented, self-contained, liquid-propane-gas or fuel-oil heaters with individual space thermostatic control.
  1. Use of gasoline-burning space heaters, open-flame heaters, or salamander-type heating units is prohibited.
  2. Heating, Cooling, and Dehumidifying Units: Listed and labeled for type of fuel being consumed, by a qualified testing agency acceptable to authorities having jurisdiction, and marked for intended location and application.
    - a. Use of gasoline-burning space heaters, open-flame heaters, or salamander-type heating units is prohibited.
  3. Permanent HVAC System: If Owner authorizes use of permanent HVAC system for temporary use during construction, provide filter with MERV of 8 at each return-air grille in system and remove at end of each month and at the end of construction and clean HVAC system as required in Section 01 7700 "Closeout Procedures."
- C. Air-Filtration Units: Primary and secondary HEPA-filter-equipped portable units with four-stage filtration. Provide single switch for emergency shutoff. Configure to run continuously.

## 2.3 RODENT CONTROL

- A. Institute an effective program of rodent control for the entire site within the construction limits. Cooperate with local authorities and provide the regular services of an experienced exterminator who shall visit the site at least once a month for the entire construction period. Provide marked metal containers for all edible rubbish and enforce their use by all employees. Containers shall be emptied and the contents removed from the site as often as required to maintain an adequate rodent control program. If the program of rodent control used is not effective, take whatever steps are necessary to rid the project of rodents, and such action shall not be the basis of a claim for additional compensation or damages.

## 2.4 TEMPORARY CONSTRUCTION OPENINGS

- A. A. Provide openings in slabs, walls, and partitions where required for moving in large pieces of equipment of all types, ductwork, piping or other assemblies. Close and/or restore all openings and finish them after the equipment is in place. Structural modification, if required, shall be subject to review by the Architect.

## 2.5 TEMPORARY FENCE

- A. Provide and maintain an 8 foot high temporary chain-link fence to enclose the area at the job site and separate staging area and to guard and close effectively the designated area. Provide gates at locations where required for access to the enclosed area. Gates shall be cross-braced, hung on heavy strap hinges, and shall have hasps and padlocks. Submit shop drawings of fence and gates for review of Architect and Owner. Contractor shall ensure that fence is padlocked each night and keep gate closed during daytime activities. Contractor is responsible for keeping pedestrian traffic and vehicles out of worksite
  - 1. Fencing to be provided with full height privacy screen or slats restricting all views
  - 2. Privacy screening if used shall have pre-cut holes for wind. Any torn or ripped panels shall be replaced immediately at contractor expense.
  - 3. Fencing posts shall be driven along full length of Hooper Ave and Indian trail.
  - 4. Remove the fence and all posts upon completion of the work or at such time before final completion as directed by the Owner.

## 2.6 FIRE PROTECTION

- A. Provide and maintain adequate fire protection, ready for instant use, distributed around the project.
- B. Make arrangements for periodical inspection by local fire protection authorities and insurance underwriters inspections. Cooperate with said authorities and promptly carry out their recommendations.
- C. Open fire will not be permitted within the building enclosure or on the project site.

## 2.7 TEMPORARY HEAT AND VENTILATION

- A. Provide and pay for temporary heat including all fuel and equipment rentals as required during construction to protect the work from freezing or frost damage, and as necessary to ensure suitable working conditions for the construction operations of all trades. In areas of the building where work is being conducted, the temperature shall be maintained as specified in the various sections of the Specifications, but not less than 45 degrees Fahrenheit. Under no circumstances shall the temperature be allowed to reach a level that will cause damage to any portion of the work which may be subject to damage by low temperatures.
- B. Until the building, or any major portion thereof, is enclosed, temporary heating shall be by smokeless portable unit heaters of type listed by Underwriter's Laboratories, Factory Mutual, and the Fire Marshall. Pay for fuel, maintenance, and attendants required in connection with the portable unit heaters. Interior or exterior surfaces damaged by the use of these space heaters shall be replaced by new materials or be refinished.
- C. The building shall be considered enclosed when it has reached the stage when exterior walls have been erected, the roof substantially completed, exterior openings closed up
- D. either by the permanently glazed windows and doors, or by adequate temporary closing, and the building is ready for interior masonry and plastering operations.

- E. After the building, or any major portion thereof, has been enclosed, the permanent heating system as specified below may be used for temporary heat.
- F. When the permanent heating system, or a suitable portion thereof, is in operating condition, the system may be used for temporary heating, provided that the Contractor assumes full responsibility for the entire heating system, and pays all costs for fuel, operation, maintenance, and restoration of the system.
- G. Provide adequate ventilation and dehumidification as required to keep the temperature of the building within 10 degrees Fahrenheit of the ambient outdoor temperature when such ambient temperature exceeds 70 degrees Fahrenheit, interior humidity below dew point during any period of time, and to prevent accumulation of excess moisture or to prevent excess thermal movement in the building.
- H. When the permanent air circulation system, or a suitable portion thereof, is in operating condition, it may be used without refrigeration or chilling, provided that the Contractor assumes full responsibility for the system which he is using, and pays costs for power, operation, maintenance, and restoration of the system. Provide temporary filters to adequately filter air being distributed through the duct work to the supply outlets; disposable filters shall be placed in front of all exhaust registers to keep construction dirt out of exhaust duct work. The Contractor shall thoroughly clean the interior of the air handling units and duct work prior to acceptance of the work.
- I. Upon conclusion of the temporary heating period, remove all temporary piping, temporary heating units, or other equipment and pay all costs in connection with repairing any damage caused by the installation or removal of temporary heating equipment. Thoroughly clean and recondition those parts of permanent heating and air circulation systems used for temporary service.

## **2.8 TEMPORARY LIGHT AND POWER**

- A. Make all arrangements with and pay for the local electric company for temporary electrical service to the construction site and construction trailers and staging area; provide all equipment necessary for temporary power and lighting; and pay all charges for this equipment, the installation thereof, and for current used. The electrical service shall be of 120v and 240v for single phase loads up to 30 amps for all construction tools and equipment without overloading the temporary facilities and shall be made available for power, lighting, and construction operations of all trades.
- B. In addition to the electrical service, provide power distribution as required throughout structure. The terminations of power distribution shall be at convenient locations in the building. Terminations shall be provided for each voltage supply complete with circuit breakers, disconnect switches, and other electrical devices as required to protect the power supply system.
- C. Provide double duplex outlets at not more than 200' o.c. both directions throughout this building.
- D. A temporary lighting system shall be furnished, installed, and maintained as required to satisfy minimum requirements of safety and security. The temporary lighting system shall afford

general illumination in all building areas and shall supply not less than 150 watt lamps on 30' centers both directions of floor area for illumination in the areas of the building where work is being performed.

- E. All temporary equipment and wiring for power and lighting shall be in accordance with the applicable provisions of the governing codes. All temporary wiring shall be maintained in a safe manner and used so as not to constitute a hazard to persons or property.
- F. When the permanent electrical power and lighting systems are in operating condition, they may be used for temporary power and lighting for construction purposes, provided that the Contractor assumes full responsibility for the entire power and lighting system, and pays costs for power, operations, maintenance, and restoration of the system.

## **2.9 TEMPORARY ACCESS TO SITE**

- A. Construct and maintain in good usable condition all required temporary access to site, and, when no longer required, remove all temporary construction and restore the site.
- B. Where streets now in use are within or adjacent to the work, keep the passageways of such streets open to vehicular and pedestrian traffic to building fronting thereon. Maintain constant access for police, fire and ambulance service.
- C. Mud carried off the site and into public roads shall be removed immediately by the Contractor.
- D. Provide dust-control treatment that is nonpolluting and non-tracking. Reapply treatment as required to minimize dust.
- E. Access to the site for delivery of construction material or equipment shall be made only from locations designated by the Architect.

## **2.10 TEMPORARY STAIRS, LADDERS, RAMPS, SIDEWALK BRIDGING AND RUNWAYS**

- A. Provide and maintain all equipment such as temporary stairs, ladders, ramps, runways, and chutes as required for the proper execution of the work.
- B. All such apparatus, equipment, and construction shall meet all requirements of the Labor Law and other state or local laws applicable thereto.
- C. As soon as permanent stairs are erected, provide temporary protective treads, handrails, and shaft protection.
- D. Provide wood plank overhead decking, protective plywood enclosure walls, handrails, barricades, warning signs, lights, safe and well drained walkways, and similar provisions for protection and safe passage.
- E. Extend back wall beyond the structure to complete enclosure fence.
- F. Paint and maintain in a manner approved by Owner and Architect.

- G. For safety barriers, sidewalk bridges, and similar uses, provide minimum 5/8" thick exterior plywood.

## 2.11 TEMPORARY TOILETS

- A. Provide and maintain in a sanitary condition enclosed weathertight toilets for the use of all construction personnel at a location within the contract limits. Upon completion of the work, toilets shall be removed. Installation shall be in accordance with all applicable codes and regulations of authorities having jurisdiction. The number of toilet rooms required shall be in accordance with the ANSI Standard Safety Code for Building Construction or other local authorities.

## 2.12 WATER AND SNOW CONTROL

- A. A. From the commencement of the construction to the completion of the work, keep all parts of the site and the project free from accumulation of water, and supply, maintain, and operate all necessary pumping and bailing equipment.
- B. Remove snow and ice as necessary for the protection and prosecution of the work, and protect the work against weather damage.
- C. The Contractor shall take over responsibility for site drainage upon entering the premises and shall maintain such drainage until completion of the work so as not to adversely affect the adjacent areas.

## 2.13 ENVIRONMENTAL CONTROLS

- A. The Contractor shall comply with all applicable Federal, State and local laws, regulations, ordinances, codes and standards concerning environment control. Particular attention shall be given, without limitations, to:
  - 1. Minimization of dust, containment of chemical vapors, control of engine exhaust gases, and control of smoke from temporary heaters.
  - 2. Reduction of water pollution by control of sanitary facilities, proper storage of fuels and other potential contaminants, and prevention of siltation from land erosion.
  - 3. Minimization of noise levels.
  - 4. Proper and legal disposal, off site unless otherwise provided, of waste and spoil resulting from construction activities.
- B. Dewatering Facilities and Drains: Comply with requirements of authorities having jurisdiction. Maintain Project site, excavations, and construction free of water. Dispose of rainwater in a lawful manner that will not result in flooding Project or adjoining properties or endanger permanent Work or temporary facilities.
  - 1. Remove snow and ice as required to minimize accumulations.
- C. Traffic Control Devices and Work in Right of Ways:
  - 1. Contractor shall make all arrangements, gain all permits and pay for all costs associated with road closures, lane closures, and traffic control measures required by the township,

county, state, and other Authorities have jurisdiction over any public right of way impacted by the work. Refer also to stage and phasing plan of the contract documents.

### **PART 3 - EXECUTION**

#### **3.1 TEMPORARY FACILITIES, GENERAL**

- A. Conservation: Coordinate construction and use of temporary facilities with consideration given to conservation of energy, water, and materials. Coordinate use of temporary utilities to minimize waste.
  - 1. Salvage materials and equipment involved in performance of, but not actually incorporated into, the Work. See other Sections for disposition of salvaged materials that are designated as Owner's property.

#### **3.2 INSTALLATION, GENERAL**

- A. Locate facilities where they will serve Project adequately and result in minimum interference with performance of the Work. Relocate and modify facilities as required by progress of the Work.
- B. Provide each facility ready for use when needed to avoid delay. Do not remove until facilities are no longer needed or are replaced by authorized use of completed permanent facilities.

#### **3.3 TEMPORARY UTILITY INSTALLATION**

- A. General: Install temporary service or connect to existing service.
  - 1. Arrange with utility company, Owner, and existing users for time when service can be interrupted, if necessary, to make connections for temporary services.
- B. Sewers and Drainage: Provide temporary utilities to remove effluent lawfully.
  - 1. Connect temporary sewers to municipal system as directed by authorities having jurisdiction.
- C. Water Service: Install water service and distribution piping in sizes and pressures adequate for construction.
- D. Sanitary Facilities: Provide temporary toilets, wash facilities, safety shower and eyewash facilities, and drinking water for use of construction personnel. Comply with requirements of authorities having jurisdiction for type, number, location, operation, and maintenance of fixtures and facilities.
- E. Temporary Heating and Cooling: Provide temporary heating and cooling including all fuel required by construction activities for curing or drying of completed installations or for

protecting installed construction from adverse effects of low temperatures or high humidity. Select equipment that will not have a harmful effect on completed installations or elements being installed.

- F. Electric Power Service: Provide electric power service and distribution system of sufficient size, capacity, and power characteristics required for construction operations.
  - 1. Install electric power service overhead unless otherwise indicated.
- G. Lighting: Provide temporary lighting with local switching that provides adequate illumination for construction operations, observations, inspections, and traffic conditions.
  - 1. Install and operate temporary lighting that fulfills security and protection requirements without operating entire system.
- H. Telephone Service: Provide temporary telephone service in common-use facilities for use by all construction personnel. Install WiFi cell phone access equipment.
- I. Electronic Communication Service: Provide secure WiFi wireless connection to internet with provisions for access by Architect and Owner.

### 3.4 SUPPORT FACILITIES INSTALLATION

- A. Comply with the following:
  - 1. Provide construction for temporary field offices, shops, and sheds located within construction area or within 30 feet of building lines that is noncombustible according to ASTM E136. Comply with NFPA 241.
- B. Temporary Roads and Paved Areas: Construct and maintain temporary roads and paved areas adequate for construction operations.
  - 1. Provide dust-control treatment that is nonpolluting and nontracking. Reapply treatment as required to minimize dust.
- C. Traffic Controls: Comply with requirements of authorities having jurisdiction.
  - 1. Protect existing site improvements to remain including curbs, pavement, and utilities.
  - 2. Maintain access for fire-fighting equipment and access to fire hydrants.
- D. Parking: Provide temporary onsite parking areas for construction personnel.
- E. Storage and Staging: Provide temporary onsite area for storage and staging needs.
- F. Dewatering Facilities and Drains: Comply with requirements of authorities having jurisdiction. Maintain Project site, excavations, and construction free of water.
  - 1. Dispose of rainwater in a lawful manner that will not result in flooding Project or adjoining properties or endanger permanent Work or temporary facilities.
  - 2. Remove snow and ice as required to minimize accumulations.

- G. Project Signs: Provide Project signs as indicated. Unauthorized signs are not permitted.
  - 1. Identification Signs: Provide Project identification signs as indicated on Drawings.
  - 2. Temporary Signs: Provide other signs as indicated and as required to inform public and individuals seeking entrance to Project.
    - a. Provide temporary, directional signs for construction personnel and visitors.
  - 3. Maintain and touch up signs so they are legible at all times.
- H. Waste Disposal Facilities: Comply with requirements specified in Section 01 7419 "Construction Waste Management and Disposal."
- I. Waste Disposal Facilities: Provide waste-collection containers in sizes adequate to handle waste from construction operations. Comply with requirements of authorities having jurisdiction. Comply with progress cleaning requirements in Section 017300 "Execution."
- J. Lifts and Hoists: Provide facilities necessary for hoisting materials and personnel.
  - 1. Truck cranes and similar devices used for hoisting materials are considered "tools and equipment" and not temporary facilities.

### 3.5 SECURITY AND PROTECTION FACILITIES INSTALLATION

- A. Protection of Existing Facilities: Protect existing vegetation, equipment, structures, utilities, and other improvements at Project site and on adjacent properties, except those indicated to be removed or altered. Repair damage to existing facilities.
  - 1. Where access to adjacent properties is required in order to affect protection of existing facilities, obtain written permission from adjacent property owner to access property for that purpose.
- B. Environmental Protection: Provide protection, operate temporary facilities, and conduct construction as required to comply with environmental regulations and that minimize possible air, waterway, and subsoil contamination or pollution or other undesirable effects.
- C. Temporary Erosion and Sedimentation Control: Comply with requirements of EPA Construction General Permit or authorities having jurisdiction, whichever is more stringent and requirements specified in Section 31 1000 "Site Clearing."
- D. Temporary Erosion and Sedimentation Control: Provide measures to prevent soil erosion and discharge of soil-bearing water runoff and airborne dust to undisturbed areas and to adjacent properties and walkways, according to erosion- and sedimentation-control Drawings.
  - 1. Verify that flows of water redirected from construction areas or generated by construction activity do not enter or cross tree- or plant-protection zones.
  - 2. Inspect, repair, and maintain erosion- and sedimentation-control measures during construction until permanent vegetation has been established.
  - 3. Clean, repair, and restore adjoining properties and roads affected by erosion and sedimentation from Project site during the course of Project.

4. Remove erosion and sedimentation controls and restore and stabilize areas disturbed during removal.
  - E. Stormwater Control: Comply with requirements of authorities having jurisdiction. Provide barriers in and around excavations and subgrade construction to prevent flooding by runoff of stormwater from heavy rains.
  - F. Tree and Plant Protection: Install temporary fencing located as indicated or outside the drip line of trees to protect vegetation from damage from construction operations. Protect tree root systems from damage, flooding, and erosion.
  - G. Pest Control: Engage pest-control service to recommend practices to minimize attraction and harboring of rodents, roaches, and other pests and to perform extermination and control procedures at regular intervals so Project will be free of pests and their residues at Substantial Completion. Perform control operations lawfully, using materials approved by authorities having jurisdiction.
  - H. Site Enclosure Fence: Before construction operations begin, furnish and install site enclosure fence in a manner that will prevent people from easily entering site except by entrance gates.
    1. Extent of Fence: As required to enclose entire Project site or portion determined sufficient to accommodate construction operations.
  - I. Security Enclosure and Lockup: Install temporary enclosure around partially completed areas of construction. Provide lockable entrances to prevent unauthorized entrance, vandalism, theft, and similar violations of security. Lock entrances at end of each workday.
  - J. Barricades, Warning Signs, and Lights: Comply with requirements of authorities having jurisdiction for erecting structurally adequate barricades, including warning signs and lighting.
  - K. Temporary Egress: Provide temporary egress from existing occupied facilities as indicated and as required by authorities having jurisdiction. Provide signage directing occupants to temporary egress.
  - L. Temporary Enclosures: Provide temporary enclosures for protection of construction, in progress and completed, from exposure, foul weather, other construction operations, and similar activities. Provide temporary weathertight enclosure for building exterior.
    1. Where heating or cooling is needed and permanent enclosure is incomplete, insulate temporary enclosures.
- 3.6 MOISTURE AND MOLD CONTROL
- A. Moisture and Mold Protection: Protect stored materials and installed Work in accordance with Moisture and Mold Protection Plan.
  - B. Exposed Construction Period: Before installation of weather barriers, when materials are subject to wetting and exposure and to airborne mold spores, protect as follows:
    1. Protect porous materials from water damage.

2. Protect stored and installed material from flowing or standing water.
  3. Keep porous and organic materials from coming into prolonged contact with concrete.
  4. Remove standing water from decks.
  5. Keep deck openings covered or dammed.
- C. Partially Enclosed Construction Period: After installation of weather barriers but before full enclosure and conditioning of building, when installed materials are still subject to infiltration of moisture and ambient mold spores, protect as follows:
1. Do not load or install drywall or other porous materials or components, or items with high organic content, into partially enclosed building.
  2. Keep interior spaces reasonably clean and protected from water damage.
  3. Periodically collect and remove waste containing cellulose or other organic matter.
  4. Discard or replace water-damaged material.
  5. Do not install material that is wet.
  6. Discard and replace stored or installed material that begins to grow mold.
  7. Perform work in a sequence that allows wet materials adequate time to dry before enclosing the material in gypsum board or other interior finishes.
- D. Controlled Construction Period: After completing and sealing of the building enclosure but prior to the full operation of permanent HVAC systems, maintain as follows:
1. Control moisture and humidity inside building by maintaining effective dry-in conditions.
  2. Use temporary or permanent HVAC system to control humidity within ranges specified for installed and stored materials.
  3. Comply with manufacturer's written instructions for temperature, relative humidity, and exposure to water limits.

### 3.7 OPERATION, TERMINATION, AND REMOVAL

- A. Supervision: Enforce strict discipline in use of temporary facilities. To minimize waste and abuse, limit availability of temporary facilities to essential and intended uses.
- B. Maintenance: Maintain facilities in good operating condition until removal.
1. Maintain operation of temporary enclosures, heating, cooling, humidity control, ventilation, and similar facilities on a 24-hour basis where required to achieve indicated results and to avoid possibility of damage.
- C. Temporary Facility Changeover: Do not change over from using temporary security and protection facilities to permanent facilities until Substantial Completion.
- D. Termination and Removal: Remove each temporary facility when need for its service has ended, when it has been replaced by authorized use of a permanent facility, or no later than Substantial Completion. Complete or, if necessary, restore permanent construction that may have been delayed because of interference with temporary facility. Repair damaged Work, clean exposed surfaces, and replace construction that cannot be satisfactorily repaired.

1. Materials and facilities that constitute temporary facilities are property of Contractor. Owner reserves right to take possession of Project identification signs.
2. At Substantial Completion, repair, renovate, and clean permanent facilities used during construction period. Comply with final cleaning requirements specified in Section 017700 "Closeout Procedures."

END OF SECTION 015000

## SECTION 016000 - PRODUCT REQUIREMENTS

### PART 1 - GENERAL

#### 1.1 SUMMARY

- A. Section includes administrative and procedural requirements for selection of products for use in Project; product delivery, storage, and handling; manufacturers' standard warranties on products; special warranties; and equivalent (comparable) products.
- B. Related Requirements:
  - 1. Section 012500 "Substitution Procedures" for requests for substitutions.

#### 1.2 DEFINITIONS

- A. Products: Items obtained for incorporating into the Work, whether purchased for Project or taken from previously purchased stock. The term "product" includes the terms "material," "equipment," "system," and terms of similar intent.
  - 1. Named Products: Items identified by manufacturer's product name, including make or model number or other designation shown or listed in manufacturer's published product literature that is current as of date of the Contract Documents.
  - 2. New Products: Items that have not previously been incorporated into another project or facility. Salvaged items or items reused from other projects are not considered new products. Items that are manufactured or fabricated to include recycled content materials are considered new products, unless indicated otherwise.
  - 3. Equivalent Product: Product by named manufacturer that is demonstrated and approved through the equivalent product submittal process described in Part 2 "Equivalent Products" Article submitted by contractor as an "equal", to have the indicated qualities related to type, function, dimension, in-service performance, physical properties, appearance, and other characteristics that equal or exceed those of specified product.
- B. Basis-of-Design Product Specification: A specification in which a single manufacturer's product is named and accompanied by the words "basis-of-design product," including make or model number or other designation. Published attributes and characteristics of basis-of-design product establish salient characteristics of products.
  - 1. Evaluation of Equivalent Products: In addition to the basis-of-design product description, product attributes and characteristics may be listed to establish the significant qualities related to type, function, in-service performance and physical properties, weight, dimension, durability, visual characteristics, and other special features and requirements for purposes of evaluating equivalent products of additional manufacturers named in the specification. Manufacturer's published attributes and characteristics of basis-of-design product also establish salient characteristics of products for purposes of evaluating equivalent products.

- C. Subject to Compliance with Requirements: Where the phrase "Subject to compliance with requirements" introduces a product selection procedure in an individual Specification Section, provide products qualified under the specified product procedure. In the event that a named product or product by a named manufacturer does not meet the other requirements of the specifications, select another named product or product from another named manufacturer that does meet the requirements of the specifications; submit a equivalent product request or substitution request, if applicable.
- D. Equivalent (comparable) Product Request Submittal: An action submittal requesting consideration of a equivalent product, including the following information:
  - 1. Identification of basis-of-design product or fabrication or installation method to be replaced, including Specification Section number and title and Drawing numbers and titles.
  - 2. Data indicating compliance with the requirements specified in Part 2 "Equivalent Products" Article.
- E. Basis-of-Design Product Specification Submittal: An action submittal complying with requirements in Section 013300 "Submittal Procedures."
- F. Substitution: Refer to Section 012500 "Substitution Procedures" for definition and limitations on substitutions.

### 1.3 QUALITY ASSURANCE

- A. Compatibility of Options: If Contractor is given option of selecting between two or more products for use on Project, select product compatible with products previously selected, even if previously selected products were also options.

### 1.4 PRODUCT DELIVERY, STORAGE, AND HANDLING

- A. Deliver, store, and handle products, using means and methods that will prevent damage, deterioration, and loss, including theft and vandalism. Comply with manufacturer's written instructions.

### 1.5 PRODUCT WARRANTIES

- A. Warranties specified in other Sections shall be in addition to, and run concurrent with, other warranties required by the Contract Documents. Manufacturer's disclaimers and limitations on product warranties do not relieve Contractor of obligations under requirements of the Contract Documents.
  - 1. Manufacturer's Warranty: Written standard warranty form furnished by individual manufacturer for a particular product and issued in the name of the Owner or endorsed by manufacturer to Owner.

2. Special Warranty: Written warranty required by the Contract Documents to provide specific rights for Owner and issued in the name of the Owner or endorsed by manufacturer to Owner.
- B. Special Warranties: Prepare a written document that contains appropriate terms and identification, ready for execution.
1. Manufacturer's Standard Form: Modified to include Project-specific information and properly executed.
  2. Specified Form: When specified forms are included in the Project Manual, prepare a written document, using indicated form properly executed.
  3. See other Sections for specific content requirements and particular requirements for submitting special warranties.

## **PART 2 - PRODUCTS**

### **2.1 PRODUCT SELECTION PROCEDURES**

- A. General Product Requirements: Provide products that comply with the Contract Documents, are undamaged and, unless otherwise indicated, are new at time of installation.
1. Provide products complete with accessories, trim, finish, fasteners, and other items needed for a complete installation and indicated use and effect.
  2. Standard Products: If available, and unless custom products or nonstandard options are specified, provide standard products of types that have been produced and used successfully in similar situations on other projects.
  3. Owner reserves the right to limit selection to products with warranties meeting requirements of the Contract Documents.
  4. Where products are accompanied by the term "as selected," Architect will make selection.
  5. Descriptive, performance, and reference standard requirements in the Specifications establish salient characteristics of products.
- B. Product Selection Procedures:
1. Non-Limited List of Products: Where Specifications include a list of names of both available manufacturers and products, provide one of the products listed or an unnamed product that complies with requirements.
    - a. Non-limited list of products is indicated by the phrase "Subject to compliance with requirements, available products that may be incorporated in the Work include, but are not limited to, the following."
    - b. Provision of an unnamed product is not considered a substitution, if the product complies with requirements.
  2. Non-Limited List of Manufacturers: Where Specifications include a list of available manufacturers, provide a product by one of the manufacturers listed or a product by an unnamed manufacturer that complies with requirements.

- a. Non-limited list of manufacturers is indicated by the phrase "Subject to compliance with requirements, available manufacturers whose products may be incorporated in the Work include, but are not limited to, the following."
    - b. Provision of products of an unnamed manufacturer is not considered a substitution, if the product complies with requirements..
  3. Basis-of-Design Product: Where Specifications name a product, or refer to a product indicated on Drawings, provide the specified or indicated product or a equivalent product for evaluation. Equivalent products may be by a named or unnamed manufacturer. Drawings and Specifications may additionally indicate sizes, profiles, dimensions, and other characteristics that are based on the product named. Comply with requirements in "Equivalent Products" Article for consideration of an equivalent and equivalent product by a different manufacturer or an unnamed product by one of the named manufacturers.
  - C. Visual Matching Specification: Where Specifications require the phrase "match Architect's sample," provide a product that complies with requirements and matches Architect's sample. Architect's decision will be final on whether a proposed product matches.
    1. If no product available within specified category matches and complies with other specified requirements, comply with requirements in Section 012500 "Substitution Procedures" for proposal of product.
  - D. Visual Selection Specification: Where Specifications include the phrase "as selected by Architect from manufacturer's full range" or a similar phrase, select a product that complies with requirements. Architect will select color, gloss, pattern, density, or texture from manufacturer's product line that includes both standard and premium items.
  - E. Sustainable Product Selection: Where Specifications require product to meet sustainable product characteristics, select products complying with indicated requirements. Comply with requirements in Division 01 sustainability requirements Section and individual Specification Sections.
- ## 2.2 EQUIVALENT (COMPARABLE) PRODUCTS
- A. Conditions for Consideration of equivalent Products: Architect will consider Contractor's request for equivalent product when the following conditions are satisfied. If the following conditions are not satisfied, Architect may return requests without action, except to record noncompliance with the following requirements. Contractor may submit additional evidence of equivalency for product or shall submit named or specified product:
    1. Evidence that proposed product does not require revisions to the Contract Documents, is consistent with the Contract Documents, will produce the indicated results, and is compatible with other portions of the Work.
    2. Detailed comparison of significant qualities of proposed product with those of the named basis-of-design product. Significant product qualities include attributes, such as type, function, in-service performance and physical properties, weight, dimension, durability, visual characteristics, and other specific features and requirements.
    3. Evidence that proposed product provides specified warranty.

4. List of similar installations for completed projects, with project names and addresses and names and addresses of architects and owners, if requested.
  5. Samples, if requested.
  6. By submission of equivalent product contractor acknowledges familiarity and suitability of the product for its application and responsibility for coordination with adjacent work or trades to install and integrate equivalent product into the work whether difference are identified when submitted or not.
- B. Architect's Action on equivalent (comparable) Products Submittal: If necessary, Architect will request additional information or documentation for evaluation, as specified in Section 013300 "Submittal Procedures."
1. Form of Approval of Submittal: As specified in Section 013300 "Submittal Procedures."
  2. Use product specified if Architect does not issue a decision on use of a equivalent product request within time allocated.
- C. Submittal Requirements, Two-Step Process: Approval by the Architect of Contractor's request for use of equivalent product is not intended to satisfy other submittal requirements. Comply with specified submittal requirements.
- D. Submittal Requirements, Single-Step Process: When acceptable to Architect, incorporate specified submittal requirements of individual Specification Section in combined submittal for equivalent products. Approval by the Architect of Contractor's request for use of equivalent product and of individual submittal requirements will also satisfy other submittal requirements.

**PART 3 - EXECUTION (Not Used)**

**END OF SECTION 016000**

## SECTION 017300 - EXECUTION

### PART 1 - GENERAL

#### 1.1 SUMMARY

- A. Section includes general administrative and procedural requirements governing execution of the Work, including, but not limited to, the following:
  - 1. Construction layout.
  - 2. Field engineering and surveying.
  - 3. Installation of the Work.
  - 4. Cutting and patching.
  - 5. Coordination of Owner's portion of the Work.
  - 6. Coordination of Owner-installed products.
  - 7. Progress cleaning.
  - 8. Starting and adjusting.
  - 9. Protection of installed construction.
  - 10. Correction of the Work.
- B. Related Requirements:
  - 1. Section 011000 "Summary" for coordination of Owner-furnished products and limits on use of Project site.
  - 2. Section 017700 "Closeout Procedures" for submitting final property survey with Project Record Documents, recording of Owner-accepted deviations from indicated lines and levels, replacing defective work, and final cleaning.

#### 1.2 DEFINITIONS

- A. Cutting: Removal of in-place construction necessary to permit installation or performance of subsequent work.
- B. Patching: Fitting and repair work required to restore construction to original conditions after installation of subsequent work.

#### 1.3 INFORMATIONAL SUBMITTALS

- A. Certified Surveys: Submit two original hardcopies signed by land surveyor and digital PDF to Architect and Owner.
- B. Certificates: Submit certificate signed by land surveyor, certifying that location and elevation of improvements comply with requirements.

## 1.4 QUALITY ASSURANCE

- A. Land Surveyor Qualifications: A professional land surveyor who is legally qualified to practice in jurisdiction where Project is located and who is experienced in providing land-surveying services of the kind indicated.
- B. Cutting and Patching: Comply with requirements for and limitations on cutting and patching of construction elements.
  - 1. Structural Elements: When cutting and patching structural elements, or when encountering the need for cutting and patching of elements whose structural function is not known, notify Architect of locations and details of cutting and await directions from Architect before proceeding. Shore, brace, and support structural elements during cutting and patching. Do not cut and patch structural elements in a manner that could change their load-carrying capacity or increase deflection.
  - 2. Operational Elements: Do not cut and patch operating elements and related components in a manner that results in reducing their capacity to perform as intended or that results in increased maintenance or decreased operational life or safety.
  - 3. Other Construction Elements: Do not cut and patch other construction elements or components in a manner that could change their load-carrying capacity, that results in reducing their capacity to perform as intended, or that results in increased maintenance or decreased operational life or safety.
  - 4. Visual Elements: Do not cut and patch construction in a manner that results in visual evidence of cutting and patching. Do not cut and patch exposed construction in a manner that would, in Architect's opinion, reduce the building's aesthetic qualities. Remove and replace construction that has been cut and patched in a visually unsatisfactory manner.
- C. Manufacturer's Installation Instructions: Obtain and maintain on-site manufacturer's written recommendations and instructions for installation of specified products and equipment.

## PART 2 - PRODUCTS

### 2.1 MATERIALS

- A. Comply with requirements specified in other Sections.
- B. In-Place Materials: Use materials for patching identical to in-place materials. For exposed surfaces, use materials that visually match in-place adjacent surfaces to the fullest extent possible.
  - 1. If identical materials are unavailable or cannot be used, use materials that, when installed, will provide a match acceptable to Architect for the visual and functional performance of in-place materials. Use materials that are not considered hazardous.
- C. Cleaning Agents: Use cleaning materials and agents recommended by manufacturer or fabricator of the surface to be cleaned. Do not use cleaning agents that are potentially hazardous to health or property or that might damage finished surfaces.

1. Use cleaning products that comply with Green Seal's GS-37, or if GS-37 is not applicable, use products that comply with the California Code of Regulations maximum allowable VOC levels.

## **PART 3 - EXECUTION**

### **3.1 EXAMINATION**

- A. Existing Conditions: The existence and location of underground and other utilities and construction indicated as existing are not guaranteed. Before beginning sitework, investigate and verify the existence and location of underground utilities, and other construction affecting the Work.
  1. Before construction, verify the location and invert elevation at points of connection of sanitary sewer, storm sewer, gas service piping, and water-service piping; underground electrical services; and other utilities.
  2. Furnish location data for work related to Project that must be performed by public utilities serving Project site.
- B. Examination and Acceptance of Conditions: Before proceeding with each component of the Work, examine substrates, areas, and conditions, with Installer or Applicator present where indicated, for compliance with requirements for installation tolerances and other conditions affecting performance. Record observations.
  1. Examine roughing-in for mechanical and electrical systems to verify actual locations of connections before equipment and fixture installation.
  2. Examine walls, floors, and roofs for suitable conditions where products and systems are to be installed.
  3. Verify compatibility with and suitability of substrates, including compatibility with existing finishes or primers.
- C. Written Report: Where a written report listing conditions detrimental to performance of the Work is required by other Sections, include the following:
  1. Description of the Work, including Specification Section number and paragraph, and Drawing sheet number and detail, where applicable.
  2. List of detrimental conditions, including substrates.
  3. List of unacceptable installation tolerances.
  4. Recommended corrections.
- D. Proceed with installation only after unsatisfactory conditions have been corrected. Proceeding with the Work indicates acceptance of surfaces and conditions.

### **3.2 PREPARATION**

- A. Existing Utility Information: Furnish information to local utility that is necessary to adjust, move, or relocate existing utility structures, utility poles, lines, services, or other utility

appurtenances located in or affected by construction. Coordinate with authorities having jurisdiction.

- B. Field Measurements: Take field measurements as required to fit the Work properly. Recheck measurements before installing each product. Where portions of the Work are indicated to fit to other construction, verify dimensions of other construction by field measurements before fabrication. Coordinate fabrication schedule with construction progress to avoid delaying the Work.
- C. Space Requirements: Verify space requirements and dimensions of items shown diagrammatically on Drawings.
- D. Review of Contract Documents and Field Conditions: Immediately on discovery of the need for clarification of the Contract Documents, submit a request for information to Architect in accordance with requirements in Section 013100 "Project Management and Coordination."

### 3.3 CONSTRUCTION LAYOUT

- A. Verification: Before proceeding to lay out the Work, verify layout information shown on Drawings, in relation to the property survey and existing benchmarks and existing conditions. If discrepancies are discovered, notify Architect promptly.
- B. Engage a land surveyor experienced in laying out the Work, using the following accepted surveying practices:
  - 1. Establish benchmarks and control points to set lines and levels at each story of construction and elsewhere as needed to locate each element of Project.
  - 2. Establish limits on use of Project site.
  - 3. Establish dimensions within tolerances indicated. Do not scale Drawings to obtain required dimensions.
  - 4. Inform installers of lines and levels to which they must comply.
  - 5. Check the location, level and plumb, of every major element as the Work progresses.
  - 6. Notify Architect when deviations from required lines and levels exceed allowable tolerances.
  - 7. Close site surveys with an error of closure equal to or less than the standard established by authorities having jurisdiction.
- C. Site Improvements: Locate and lay out site improvements, including pavements, grading, fill and topsoil placement, utility slopes, and rim and invert elevations.
- D. Building Lines and Levels: Locate and lay out control lines and levels for structures, building foundations, column grids, and floor levels, including those required for mechanical and electrical work. Transfer survey markings and elevations for use with control lines and levels. Level foundations and piers from two or more locations.
- E. Record Log: Maintain a log of layout control work. Record deviations from required lines and levels. Include beginning and ending dates and times of surveys, weather conditions, name and duty of each survey party member, and types of instruments and tapes used. Make the log available for reference by Architect.

### 3.4 FIELD ENGINEERING

- A. Reference Points: Locate existing permanent benchmarks, control points, and similar reference points before beginning the Work. Preserve and protect permanent benchmarks and control points during construction operations.
  - 1. Do not change or relocate existing benchmarks or control points without prior written approval of Architect. Report lost or destroyed permanent benchmarks or control points promptly. Report the need to relocate permanent benchmarks or control points to Architect before proceeding.
  - 2. Replace lost or destroyed permanent benchmarks and control points promptly. Base replacements on the original survey control points.
- B. Benchmarks: Establish and maintain a minimum of two permanent benchmarks on Project site, referenced to data established by survey control points. Comply with authorities having jurisdiction for type and size of benchmark.
  - 1. Record benchmark locations, with horizontal and vertical data, on Project Record Documents.
  - 2. Where the actual location or elevation of layout points cannot be marked, provide temporary reference points sufficient to locate the Work.
  - 3. Remove temporary reference points when no longer needed. Restore marked construction to its original condition.
- C. Certified Survey: On completion of foundation walls, major site improvements, and other work requiring field-engineering services, prepare a certified survey showing dimensions, locations, angles, and elevations of construction and sitework.
- D. Final Property Survey: Engage a land surveyor to prepare a final property survey showing significant features (real property) for Project. Include on the survey a certification, signed by land surveyor, that principal metes, bounds, lines, and levels of Project are accurately positioned as shown on the survey.
  - 1. Show boundary lines, monuments, streets, site improvements and utilities, existing improvements and significant vegetation, adjoining properties, acreage, grade contours, and the distance and bearing from a site corner to a legal point.

### 3.5 INSTALLATION

- A. Locate the Work and components of the Work accurately, in correct alignment and elevation, as indicated.
  - 1. Make vertical work plumb, and make horizontal work level.
  - 2. Where space is limited, install components to maximize space available for maintenance and ease of removal for replacement.
  - 3. Conceal pipes, ducts, and wiring in finished areas unless otherwise indicated.
  - 4. Maintain minimum headroom clearance of 96 inches (2440 mm) in occupied spaces and [90 inches (2300 mm)] in unoccupied spaces, unless otherwise indicated on Drawings.

- B. Comply with manufacturer's written instructions and recommendations for installing products in applications indicated.
- C. Install products at the time and under conditions that will ensure satisfactory results as judged by Architect. Maintain conditions required for product performance until Substantial Completion.
- D. Conduct construction operations, so no part of the Work is subjected to damaging operations or loading in excess of that expected during normal conditions of occupancy of type expected for Project.
- E. Sequence the Work and allow adequate clearances to accommodate movement of construction items on-site and placement in permanent locations.
- F. Tools and Equipment: Select tools or equipment that minimize production of excessive noise levels.
- G. Templates: Obtain and distribute to the parties involved templates for Work specified to be factory prepared and field installed. Check Shop Drawings of other portions of the Work to confirm that adequate provisions are made for locating and installing products to comply with indicated requirements.
- H. Attachment: Provide blocking and attachment plates and anchors and fasteners of adequate size and number to securely anchor each component in place, accurately located and aligned with other portions of the Work. Where size and type of attachments are not indicated, verify size and type required for load conditions with manufacturer.
  - 1. Mounting Heights: Where mounting heights are not indicated, mount components at heights directed by Architect.
  - 2. Allow for building movement, including thermal expansion and contraction.
  - 3. Coordinate installation of anchorages. Furnish setting drawings, templates, and directions for installing anchorages, including sleeves, concrete inserts, anchor bolts, and items with integral anchors, that are to be embedded in concrete or masonry. Deliver such items to Project site in time for installation.
- I. Joints: Make joints of uniform width. Where joint locations in exposed Work are not indicated, arrange joints for the best visual effect, as judged by Architect. Fit exposed connections together to form hairline joints.

### **3.6 CUTTING AND PATCHING**

- A. General: Employ skilled workers to perform cutting and patching. Proceed with cutting and patching at the earliest feasible time, and complete without delay.
  - 1. Cut in-place construction to provide for installation of other components or performance of other construction, and subsequently patch as required to restore surfaces to their original condition.

- B. Existing Warranties: Remove, replace, patch, and repair materials and surfaces cut or damaged during installation or cutting and patching operations, by methods and with materials so as not to void existing warranties.
- C. Temporary Support: Provide temporary support of Work to be cut.
- D. Protection: Protect in-place construction during cutting and patching to prevent damage. Provide protection from adverse weather conditions for portions of Project that might be exposed during cutting and patching operations.
- E. Adjacent Occupied Areas: Where interference with use of adjoining areas or interruption of free passage to adjoining areas is unavoidable, coordinate cutting and patching in accordance with requirements in Section 011000 "Summary."
- F. Existing Utility Services and Mechanical/Electrical Systems: Where existing services/systems are required to be removed, relocated, or abandoned, bypass such services/systems before cutting to prevent interruption to occupied areas.
- G. Cutting: Cut in-place construction by sawing, drilling, breaking, chipping, grinding, and similar operations, including excavation, using methods least likely to damage elements retained or adjoining construction. If possible, review proposed procedures with original Installer; comply with original Installer's written recommendations.
  - 1. In general, use hand or small power tools designed for sawing and grinding, not hammering and chopping. Cut holes and slots neatly to minimum size required, and with minimum disturbance of adjacent surfaces. Temporarily cover openings when not in use.
  - 2. Finished Surfaces: Cut or drill from the exposed or finished side into concealed surfaces.
  - 3. Concrete and Masonry: Cut using a cutting machine, such as an abrasive saw or a diamond-core drill.
  - 4. Excavating and Backfilling: Comply with requirements in applicable Sections where required by cutting and patching operations.
- H. Patching: Patch construction by filling, repairing, refinishing, closing up, and similar operations following performance of other Work. Patch with durable seams that are as invisible as practicable, as judged by Architect. Provide materials and comply with installation requirements specified in other Sections, where applicable.
  - 1. Inspection: Where feasible, test and inspect patched areas after completion to demonstrate physical integrity of installation.
  - 2. Exposed Finishes: Restore exposed finishes of patched areas and extend finish restoration into retained adjoining construction in a manner that will eliminate evidence of patching and refinishing.
    - a. Clean piping, conduit, and similar features before applying paint or other finishing materials.
    - b. Restore damaged pipe covering to its original condition.
  - 3. Floors and Walls: Where walls or partitions that are removed extend one finished area into another, patch and repair floor and wall surfaces in the new space. Provide an even surface of uniform finish, color, texture, and appearance. Remove in-place floor and wall

coverings and replace with new materials, if necessary, to achieve uniform color and appearance.

- a. Where patching occurs in a painted surface, prepare substrate and apply primer and intermediate paint coats appropriate for substrate over the patch, and apply final paint coat over entire unbroken surface containing the patch, corner to corner of wall and edge to edge of ceiling. Provide additional coats until patch blends with adjacent surfaces.
4. Exterior Building Enclosure: Patch components in a manner that restores enclosure to a weathertight condition and ensures thermal and moisture integrity of building enclosure.
- I. Cleaning: Clean areas and spaces where cutting and patching are performed. Remove paint, mortar, oils, putty, and similar materials from adjacent finished surfaces.

### 3.7 COORDINATION OF OWNER'S PORTION OF THE WORK

- A. Site Access: Provide access to Project site for Owner's construction personnel.
  1. Provide temporary facilities required for Owner-furnished, Contractor-installed products.
  2. Refer to Section 01 1000 "Summary" for other requirements for Owner-furnished, Contractor-installed products
- B. Coordination: Coordinate construction and operations of the Work with work performed by Owner's construction personnel.
  1. Construction Schedule: Inform Owner of Contractor's preferred construction schedule for Owner's portion of the Work. Adjust construction schedule based on a mutually agreeable timetable. Notify Owner if changes to schedule are required due to differences in actual construction progress.

### 3.8 PROGRESS CLEANING

- A. Clean Project site and work areas daily, including common areas. Enforce requirements strictly. Dispose of materials lawfully.
  1. Comply with requirements in NFPA 241 for removal of combustible waste materials and debris.
  2. Do not hold waste materials more than seven days during normal weather or three days if the temperature is expected to rise above 80 deg F (27 deg C).
  3. Containerize hazardous and unsanitary waste materials separately from other waste. Mark containers appropriately and dispose of legally, according to regulations.
    - a. Use containers intended for holding waste materials of type to be stored.
- B. Site: Maintain Project site free of waste materials and debris.
- C. Work Areas: Clean areas where Work is in progress to the level of cleanliness necessary for proper execution of the Work.

1. Remove liquid spills promptly.
  2. Where dust would impair proper execution of the Work, broom-clean or vacuum the entire work area, as appropriate.
- D. Installed Work: Keep installed work clean. Clean installed surfaces according to written instructions of manufacturer or fabricator of product installed, using only cleaning materials specifically recommended. If specific cleaning materials are not recommended, use cleaning materials that are not hazardous to health or property and that will not damage exposed surfaces.
- E. Concealed Spaces: Remove debris from concealed spaces before enclosing the space.
- F. Exposed Surfaces: Clean exposed surfaces and protect as necessary to ensure freedom from damage and deterioration at time of Substantial Completion.
- G. Waste Disposal: Do not bury or burn waste materials on-site. Do not wash waste materials down sewers or into waterways. Comply with waste disposal requirements in Section 015000 "Temporary Facilities and Controls" and Section 01 7419 "Construction Waste Management and Disposal."
- H. During handling and installation, clean and protect construction in progress and adjoining materials already in place. Apply protective covering where required to ensure protection from damage or deterioration at Substantial Completion.
- I. Clean and provide maintenance on completed construction as frequently as necessary through the remainder of the construction period. Adjust and lubricate operable components to ensure operability without damaging effects.

Limiting Exposures: Supervise construction operations to ensure that no part of the construction, completed or in progress, is subject to harmful, dangerous, damaging, or otherwise deleterious exposure during the construction period.

### 3.9 STARTING AND ADJUSTING

- A. Coordinate startup and adjusting of equipment and operating components with requirements in Section 01 9113 "General Commissioning Requirements."
- B. Start equipment and operating components to confirm proper operation. Remove malfunctioning units, replace with new units, and retest.
- C. Adjust equipment for proper operation. Adjust operating components for proper operation without binding.
- D. Test each piece of equipment to verify proper operation. Test and adjust controls and safeties. Replace damaged and malfunctioning controls and equipment.
- E. Manufacturer's Field Service: Comply with qualification requirements in Section 01 4000 "Quality Requirements."

**3.10 PROTECTION OF INSTALLED CONSTRUCTION**

- A. Provide final protection and maintain conditions that ensure installed Work is without damage or deterioration at time of Substantial Completion.
- B. Protection of Existing Items: Provide protection and ensure that existing items to remain undisturbed by construction are maintained in condition that existed at commencement of the Work.
- C. Comply with manufacturer's written instructions for temperature and relative humidity.

**3.11 CORRECTION OF THE WORK**

- A. Repair or remove and replace damaged, defective, or nonconforming Work. Restore damaged substrates and finishes.
  - 1. Repairing includes replacing defective parts, refinishing damaged surfaces, touching up with matching materials, and properly adjusting operating equipment.
- B. Repair Work previously completed and subsequently damaged during construction period. Repair to like-new condition.
- C. Restore permanent facilities used during construction to their specified condition.
- D. Remove and replace damaged surfaces that are exposed to view if surfaces cannot be repaired without visible evidence of repair.
- E. Repair components that do not operate properly. Remove and replace operating components that cannot be repaired.
- F. Remove and replace chipped, scratched, and broken glass or reflective surfaces.

END OF SECTION 017300

## SECTION 017419 - CONSTRUCTION WASTE MANAGEMENT AND DISPOSAL

### PART 1 - GENERAL

#### 1.1 SUMMARY

- A. Section includes administrative and procedural requirements for the following:
  - 1. Salvaging nonhazardous demolition and construction waste.
  - 2. Recycling nonhazardous demolition and construction waste.
  - 3. Disposing of nonhazardous demolition and construction waste.
- B. Related Requirements:
  - 1. Section 042000 "Unit Masonry" for disposal requirements for masonry waste.

#### 1.2 DEFINITIONS

- A. Construction Waste: Building, structure, and site improvement materials and other solid waste resulting from construction, remodeling, renovation, or repair operations. Construction waste includes packaging.
- B. Demolition Waste: Building, structure, and site improvement materials resulting from demolition operations.
- C. Disposal: Removal of demolition or construction waste and subsequent salvage, sale, recycling, or deposit in landfill, incinerator acceptable to authorities having jurisdiction, or designated spoil areas on Owner's property.
- D. Recycle: Recovery of demolition or construction waste for subsequent processing in preparation for reuse.
- E. Salvage: Recovery of demolition or construction waste and subsequent sale or reuse in another facility.
- F. Salvage and Reuse: Recovery of demolition or construction waste and subsequent incorporation into the Work.

#### 1.3 ACTION SUBMITTALS

- A. Waste Management Plan: Submit plan within 30 days of date established for commencement of the Work.

#### 1.4 INFORMATIONAL SUBMITTALS

- A. Waste Reduction Progress Reports: Concurrent with each Application for Payment, submit report. Include the following information:
  - 1. Material category.
  - 2. Generation point of waste.
  - 3. Total quantity of waste in tons.
  - 4. Quantity of waste salvaged, both estimated and actual in tons.
  - 5. Quantity of waste recycled, both estimated and actual in tons.
  - 6. Total quantity of waste recovered (salvaged plus recycled) in tons.
  - 7. Total quantity of waste recovered (salvaged plus recycled) as a percentage of total waste.
- B. Waste Reduction Calculations: Before request for Substantial Completion, submit calculated end-of-Project rates for salvage, recycling, and disposal as a percentage of total waste generated by the Work.
- C. Records of Donations: Indicate receipt and acceptance of salvageable waste donated to individuals and organizations. Indicate whether organization is tax exempt.
- D. Records of Sales: Indicate receipt and acceptance of salvageable waste sold to individuals and organizations. Indicate whether organization is tax exempt.
- E. Recycling and Processing Facility Records: Indicate receipt and acceptance of recyclable waste by recycling and processing facilities licensed to accept them. Include manifests, weight tickets, receipts, and invoices.
- F. Landfill and Incinerator Disposal Records: Indicate receipt and acceptance of waste by landfills and incinerator facilities licensed to accept them. Include manifests, weight tickets, receipts, and invoices.

#### 1.5 QUALITY ASSURANCE

- A. Waste Management Coordinator Qualifications: Experienced firm, or individual employed and assigned by General Contractor, with a record of successful waste management coordination of projects with similar requirements.
- B. If including refrigerant recovery in this Section, retain first "Refrigerant Recovery Technician Qualifications" Paragraph below and delete second paragraph. Refrigerant Recovery Technician Qualifications: Universal certified by EPA-approved certification program.
- C. Refrigerant Recovery Technician Qualifications: Comply with requirements in Section 02 4116 "Structure Demolition."
- D. Waste Management Conference(s): Conduct conference(s) at Project site to comply with requirements in Section 013100 "Project Management and Coordination."

## 1.6 WASTE MANAGEMENT PLAN

- A. General: Develop a waste management plan according to requirements in this Section. Plan shall consist of waste identification, waste reduction work plan, and cost/revenue analysis. Distinguish between demolition and construction waste. Indicate quantities by weight or volume, but use same units of measure throughout waste management plan.
- B. Waste Identification: Indicate anticipated types and quantities of demolition, site-clearing, and construction waste generated by the Work. Include estimated quantities and assumptions for estimates.
- C. Waste Reduction Work Plan: List each type of waste and whether it will be salvaged, recycled, or disposed of in landfill or incinerator. Include points of waste generation, total quantity of each type of waste, quantity for each means of recovery, and handling and transportation procedures.
  - 1. Salvaged Materials for Reuse: For materials that will be salvaged and reused in this Project, describe methods for preparing salvaged materials before incorporation into the Work.
  - 2. Salvaged Materials for Sale: For materials that will be sold to individuals and organizations, include list of their names, addresses, and telephone numbers.
  - 3. Salvaged Materials for Donation: For materials that will be donated to individuals and organizations, include list of their names, addresses, and telephone numbers.
  - 4. Recycled Materials: Include list of local receivers and processors and type of recycled materials each will accept. Include names, addresses, and telephone numbers.
  - 5. Disposed Materials: Indicate how and where materials will be disposed of. Include name, address, and telephone number of each landfill and incinerator facility.
  - 6. Handling and Transportation Procedures: Include method that will be used for separating recyclable waste including sizes of containers, container labeling, and designated location where materials separation will be performed.

## PART 2 - PRODUCTS

### 2.1 PERFORMANCE REQUIREMENTS

- A. General: Achieve end-of-Project rates for salvage/recycling of 50 percent by weight of total nonhazardous solid waste generated by the Work. Facilitate recycling and salvage of materials.

## PART 3 - EXECUTION

### 3.1 PLAN IMPLEMENTATION

- A. General: Implement approved waste management plan. Provide handling, containers, storage, signage, transportation, and other items as required to implement waste management plan during the entire duration of the Contract.

- B. Waste Management Coordinator: Engage a waste management coordinator to be responsible for implementing, monitoring, and reporting status of waste management work plan.
- C. Training: Train workers, subcontractors, and suppliers on proper waste management procedures, as appropriate for the Work.
  - 1. Distribute waste management plan to everyone concerned within **three** days of submittal return.
  - 2. Distribute waste management plan to entities when they first begin work on-site. Review plan procedures and locations established for salvage, recycling, and disposal.
- D. Site Access and Temporary Controls: Conduct waste management operations to ensure minimum interference with roads, streets, walks, walkways, and other adjacent occupied and used facilities.
  - 1. Designate and label specific areas on Project site necessary for separating materials that are to be salvaged and recycled.
  - 2. Comply with Section 01 5000 "Temporary Facilities and Controls" for controlling dust and dirt, environmental protection, and noise control.

### 3.2 SALVAGING DEMOLITION WASTE

- A. Comply with requirements in Section 02 4116 "Structure Demolition" for salvaging demolition waste.
- B. Salvaged Items for Reuse in the Work:
  - 1. Clean salvaged items.
  - 2. Pack or crate items after cleaning. Identify contents of containers with label indicating elements, date of removal, quantity, and location where removed.
  - 3. Store items in a secure area until installation.
  - 4. Protect items from damage during transport and storage.
  - 5. Install salvaged items to comply with installation requirements for new materials and equipment. Provide connections, supports, and miscellaneous materials necessary to make items functional for use indicated.
- C. Salvaged Items for Sale: Not permitted on Project site.
- D. Salvaged Items for Owner's Use:
  - 1. Clean salvaged items.
  - 2. Pack or crate items after cleaning. Identify contents of containers with label indicating elements, date of removal, quantity, and location where removed.
  - 3. Store items in a secure area until delivery to Owner.
  - 4. Transport items to Owner's storage area designated by Owner.
  - 5. Protect items from damage during transport and storage.

### 3.3 RECYCLING DEMOLITION AND CONSTRUCTION WASTE, GENERAL

- A. General: Recycle paper and beverage containers used by on-site workers.
- B. Recycling Incentives: Revenues, savings, rebates, tax credits, and other incentives received for recycling waste materials shall accrue to Owner.
- C. Preparation of Waste: Prepare and maintain recyclable waste materials according to recycling or reuse facility requirements. Maintain materials free of dirt, adhesives, solvents, petroleum contamination, and other substances deleterious to the recycling process.
- D. Procedures: Separate recyclable waste from other waste materials, trash, and debris. Separate recyclable waste by type at Project site to the maximum extent practical according to approved construction waste management plan.
  - 1. Provide appropriately marked containers or bins for controlling recyclable waste until removed from Project site. Include list of acceptable and unacceptable materials at each container and bin.
    - a. Inspect containers and bins for contamination and remove contaminated materials if found.
  - 2. Stockpile processed materials on-site without intermixing with other materials. Place, grade, and shape stockpiles to drain surface water. Cover to prevent windblown dust.
  - 3. Stockpile materials away from construction area. Do not store within drip line of remaining trees.
  - 4. Store components off the ground and protect from the weather.
  - 5. Remove recyclable waste from Owner's property and transport to recycling receiver or processor as often as required to prevent overfilling bins.

### 3.4 RECYCLING DEMOLITION WASTE

- A. Asphalt Paving: Grind asphalt to maximum 4-inch (100-mm).
- B. Asphalt Paving: Break up and transport paving to asphalt-recycling facility.
- C. Concrete: Remove reinforcement and other metals from concrete and sort with other metals.
  - 1. Pulverize concrete to maximum 4-inch (100-mm) size.
- D. Masonry: Remove metal reinforcement, anchors, and ties from masonry and sort with other metals.
  - 1. Pulverize masonry to maximum 4-inch (100-mm) size.
  - 2. Clean and stack undamaged, whole masonry units on wood pallets.
- E. Wood Materials: Sort and stack members according to size, type, and length. Separate lumber, engineered wood products, panel products, and treated wood materials.
- F. Metals: Separate metals by type.

1. Structural Steel: Stack members according to size, type of member, and length.
  2. Remove and dispose of bolts, nuts, washers, and other rough hardware.
- G. Asphalt Shingle Roofing: Separate organic and glass-fiber asphalt shingles and felts. Remove and dispose of nails, staples, and accessories.
- H. Gypsum Board: Stack large clean pieces on wood pallets or in container and store in a dry location. Remove edge trim and sort with other metals. Remove and dispose of fasteners.
- I. Acoustical Ceiling Panels and Tile: Stack large clean pieces on wood pallets and store in a dry location.
- J. Metal Suspension System: Separate metal members, including trim and other metals from acoustical panels and tile, and sort with other metals.
- K. Carpet Tile: Remove debris, trash, and adhesive.
1. Stack tile on pallet and store clean, dry carpet in a closed container or trailer provided by carpet reclamation agency or carpet recycler.
- L. Piping: Reduce piping to straight lengths and store by material and size. Separate supports, hangers, valves, sprinklers, and other components by material and size.
- M. Conduit: Reduce conduit to straight lengths and store by material and size.
- N. Lamps: Separate lamps by type and store according to requirements in 40 CFR 273.

### 3.5 RECYCLING CONSTRUCTION WASTE

- A. Packaging:
1. Cardboard and Boxes: Break down packaging into flat sheets. Bundle and store in a dry location.
  2. Polystyrene Packaging: Separate and bag materials.
  3. Pallets: As much as possible, require deliveries using pallets to remove pallets from Project site. For pallets that remain on-site, break down pallets into component wood pieces and comply with requirements for recycling wood.
  4. Crates: Break down crates into component wood pieces and comply with requirements for recycling wood.
- B. Wood Materials:
1. Clean Cut-Offs of Lumber: Grind or chip into small pieces.
  2. Clean Sawdust: Bag sawdust that does not contain painted or treated wood.
- C. Gypsum Board: Stack large clean pieces on wood pallets or in container and store in a dry location.
1. Clean Gypsum Board: Grind scraps of clean gypsum board using small mobile chipper or hammer mill. Screen out paper after grinding.

- D. Paint: Seal containers and store by type.

### 3.6 DISPOSAL OF WASTE

- A. General: Except for items or materials to be salvaged or recycled, remove waste materials from Project site and legally dispose of them in a landfill or incinerator acceptable to authorities having jurisdiction.
  - 1. Except as otherwise specified, do not allow waste materials that are to be disposed of accumulate on-site.
  - 2. Remove and transport debris in a manner that will prevent spillage on adjacent surfaces and areas.
- B. Burning: Do not burn waste materials.

END OF SECTION 017419

## SECTION 017700 - CLOSEOUT PROCEDURES

### PART 1 - GENERAL

#### 1.1 SUMMARY

- A. Section includes administrative and procedural requirements for Contract closeout, including, but not limited to, the following:
  - 1. Substantial Completion procedures.
  - 2. Final completion procedures.
  - 3. Warranties.
  - 4. Final cleaning.
- B. Related Requirements:
  - 1. Section 017823 "Operation and Maintenance Data" for additional operation and maintenance manual requirements.
  - 2. Section 017839 "Project Record Documents" for submitting Record Drawings, Record Specifications, and Record Product Data.
  - 3. Section 017900 "Demonstration and Training" for requirements to train the Owner's maintenance personnel to adjust, operate, and maintain products, equipment, and systems.

#### 1.2 ACTION SUBMITTALS

- A. Product Data: For each type of cleaning agent.
- B. Contractor's List of Incomplete Items: Initial submittal at Substantial Completion.
- C. Certified List of Incomplete Items: Final submittal at Final Completion.

#### 1.3 CLOSEOUT SUBMITTALS

- A. Certificates of Release: From authorities having jurisdiction.
- B. Certificate of Insurance: For continuing coverage.
- C. Field Report: For pest-control inspection.

#### 1.4 SUBSTANTIAL COMPLETION PROCEDURES

- A. Contractor's List of Incomplete Items: Prepare and submit a list of items to be completed and corrected (Contractor's "punch list"), indicating the value of each item on the list and reasons why the Work is incomplete.

- B. Submittals Prior to Substantial Completion: Complete the following a minimum of 10 days prior to requesting inspection for determining date of Substantial Completion. List items below that are incomplete at time of request.
1. Certificates of Release: Obtain and submit releases from authorities having jurisdiction, permitting Owner unrestricted use of the Work and access to services and utilities. Include occupancy permits, operating certificates, and similar releases.
  2. Submit closeout submittals specified in other Division 01 Sections, including Project Record Documents, operation and maintenance manuals, damage or settlement surveys, property surveys, and similar final record information.
  3. Submit closeout submittals specified in individual Sections, including specific warranties, workmanship bonds, maintenance service agreements, final certifications, and similar documents.
  4. Submit maintenance material submittals specified in individual Sections, including tools, spare parts, extra materials, and similar items, and deliver to location designated by Architect. Label with manufacturer's name and model number.
  5. Submit testing, adjusting, and balancing records.
- C. Procedures Prior to Substantial Completion: Complete the following a minimum of 10 days prior to requesting inspection for determining date of Substantial Completion. List items below that are incomplete at time of request.
1. Advise Owner of pending insurance changeover requirements.
  2. Make final changeover of permanent locks and deliver keys to Owner. Advise Owner's personnel of changeover in security provisions.
  3. Complete startup and testing of systems and equipment.
  4. Perform preventive maintenance on equipment used prior to Substantial Completion.
  5. Instruct Owner's personnel in operation, adjustment, and maintenance of products, equipment, and systems. Submit demonstration and training video recordings specified in Section 017900 "Demonstration and Training."
  6. Advise Owner of changeover in utility services.
  7. Participate with Owner in conducting inspection and walkthrough with local emergency responders.
  8. Terminate and remove temporary facilities from Project site, along with mockups, construction tools, and similar elements.
  9. Complete final cleaning requirements.
  10. Touch up paint and otherwise repair and restore marred exposed finishes to eliminate visual defects.
- D. Inspection: Submit a written request for inspection to determine Substantial Completion a minimum of 10 days prior to date the Work will be completed and ready for final inspection and tests. On receipt of request, Architect will either proceed with inspection or notify Contractor of unfulfilled requirements. Architect will prepare the Certificate of Substantial Completion after inspection or will notify Contractor of items, either on Contractor's list or additional items identified by Architect, that must be completed or corrected before certificate will be issued.

## 1.5 FINAL COMPLETION PROCEDURES

- A. Submittals Prior to Final Completion: Before requesting final inspection for determining Final Completion, complete the following:
  - 1. Submit a final Application for Payment in accordance with Section 01 2900 "Payment Procedures."
  - 2. Certified List of Incomplete Items: Submit certified copy of Architect's Substantial Completion inspection list of items to be completed or corrected (punch list), endorsed and dated by Architect. Certified copy of the list shall state that each item has been completed or otherwise resolved for acceptance.
  - 3. Certificate of Insurance: Submit evidence of final, continuing insurance coverage complying with insurance requirements.
  - 4. Submit pest-control final inspection report.
- B. Inspection: Submit a written request for final inspection to determine acceptance a minimum of 10 days prior to date the Work will be completed and ready for final inspection and tests. On receipt of request, Architect will either proceed with inspection or notify Contractor of unfulfilled requirements. Architect will prepare a final Certificate for Payment after inspection or will notify Contractor of construction that must be completed or corrected before certificate will be issued.

## 1.6 LIST OF INCOMPLETE ITEMS

- A. Organization of List: Include name and identification of each space and area affected by construction operations for incomplete items and items needing correction including, if necessary, areas disturbed by Contractor that are outside the limits of construction.
  - 1. Organize list of spaces in sequential order, listed by room or space number.
  - 2. Organize items applying to each space by major element, including categories for ceilings, individual walls, floors, equipment, and building systems.
  - 3. Include the following information at the top of each page:
    - a. Project name.
    - b. Date.
    - c. Name of Architect.
    - d. Name of Contractor.
    - e. Page number.
  - 4. Submit list of incomplete items in the following format:
    - a. MS Excel Electronic File: Architect, through Construction Manager if hired by owner, will return annotated file.

## 1.7 SUBMITTAL OF PROJECT WARRANTIES

- A. Time of Submittal: Submit written warranties on request of Architect for designated portions of the Work where warranties are indicated to commence on dates other than date of Substantial

Completion, or when delay in submittal of warranties might limit Owner's rights under warranty.

- B. Organize warranty documents into an orderly sequence based on the table of contents of Project Manual.
- C. Warranty Electronic File: Provide warranties and bonds in PDF format. Assemble complete warranty and bond submittal package into a single electronic PDF file with bookmarks enabling navigation to each item. Provide bookmarked table of contents at beginning of document.
  - 1. Submit on digital media acceptable to Architect.
- D. Warranties in Paper Form:
  - 1. Bind warranties and bonds in heavy-duty, three-ring, vinyl-covered, loose-leaf binders, thickness as necessary to accommodate contents, and sized to receive 8-1/2-by-11-inch (215-by-280-mm) paper.
- E. Provide additional copies of each warranty to include in operation and maintenance manuals.

## **PART 2 - PRODUCTS**

### **2.1 MATERIALS**

- A. Cleaning Agents: Use cleaning materials and agents recommended by manufacturer or fabricator of the surface to be cleaned. Do not use cleaning agents that are potentially hazardous to health or property or that might damage finished surfaces.
  - 1. Use cleaning products that comply with Green Seal's GS-37, or if GS-37 is not applicable, use products that comply with the California Code of Regulations maximum allowable VOC levels.

## **PART 3 - EXECUTION**

### **3.1 FINAL CLEANING**

- A. Perform final cleaning. Conduct cleaning and waste-removal operations to comply with local laws and ordinances and Federal and local environmental and antipollution regulations.
- B. Cleaning: Employ experienced workers or professional cleaners for final cleaning. Clean each surface or unit to condition expected in an average commercial building cleaning and maintenance program. Comply with manufacturer's written instructions.
  - 1. Complete the following cleaning operations before requesting inspection for certification of Substantial Completion for entire Project or for a designated portion of Project:
    - a. Clean Project site of rubbish, waste material, litter, and other foreign substances.

- b. Clean exposed exterior and interior hard-surfaced finishes to a dirt-free condition, free of stains, films, and similar foreign substances. Avoid disturbing natural weathering of exterior surfaces. Restore reflective surfaces to their original condition.
  - c. Remove debris and surface dust from limited-access spaces, including roofs, plenums, shafts, trenches, equipment vaults, manholes, attics, and similar spaces.
  - d. Clean flooring, removing debris, dirt, and staining; clean according to manufacturer's recommendations.
  - e. Vacuum and mop concrete.
  - f. Vacuum carpet and similar soft surfaces, removing debris and excess nap; clean according to manufacturer's recommendations if visible soil or stains remain.
  - g. Clean transparent materials, including mirrors and glass in doors and windows. Remove glazing compounds and other noticeable, vision-obscuring materials. Polish mirrors and glass, taking care not to scratch surfaces.
  - h. Remove labels that are not permanent.
  - i. Wipe surfaces of mechanical and electrical equipment and similar equipment. Remove excess lubrication, paint and mortar droppings, and other foreign substances.
  - j. Clean plumbing fixtures to a sanitary condition, free of stains, including stains resulting from water exposure.
  - k. Replace disposable air filters and clean permanent air filters. Clean exposed surfaces of diffusers, registers, and grills.
  - l. Clean ducts, blowers, and coils if units were operated without filters during construction or that display contamination with particulate matter on inspection.
  - m. Clean luminaires, lamps, globes, and reflectors to function with full efficiency.
  - n. Clean strainers.
  - o. Leave Project clean and ready for occupancy.
- C. Pest Control: Comply with pest control requirements in Section 015000 "Temporary Facilities and Controls." Prepare written report.

### 3.2 REPAIR OF THE WORK

- A. Complete repair and restoration operations required by Section 017300 "Execution" before requesting inspection for determination of Substantial Completion.

END OF SECTION 017700

## **SECTION 017823 - OPERATION AND MAINTENANCE DATA**

### **PART 1 - GENERAL**

#### **1.1 SUMMARY**

- A. Section includes administrative and procedural requirements for preparing operation and maintenance manuals, including the following:
  - 1. Operation and maintenance documentation directory manuals.
  - 2. Emergency manuals.
  - 3. Systems and equipment operation manuals.
  - 4. Systems and equipment maintenance manuals.
  - 5. Product maintenance manuals.

#### **1.2 CLOSEOUT SUBMITTALS**

- A. Submit operation and maintenance manuals indicated. Provide content for each manual as specified in individual Specification Sections, and as reviewed and approved at the time of Section submittals. Submit reviewed manual content formatted and organized as required by this Section.
  - 1. Architect will comment on whether content of operation and maintenance submittals is acceptable.
  - 2. Where applicable, clarify and update reviewed manual content to correspond to revisions and field conditions.
- B. Format: Submit operation and maintenance manuals in the following format:
  - 1. Submit on digital media acceptable to Architect. Enable reviewer comments on draft submittals.
- C. Final Manual Submittal: Submit each manual in final form prior to requesting inspection for Substantial Completion and at least 15 days before commencing demonstration and training. Architect will return copy with comments.
  - 1. Correct or revise each manual to comply with Architect's comments. Submit copies of each corrected manual within 15 days of receipt of Architect's comments and prior to commencing demonstration and training.
- D. Comply with Section 01 7700 "Closeout Procedures" for schedule for submitting operation and maintenance documentation.

### 1.3 FORMAT OF OPERATION AND MAINTENANCE MANUALS

- A. Manuals, Electronic Files: Submit manuals in the form of a multiple file composite electronic PDF file for each manual type required.
  - 1. Electronic Files: Use electronic files prepared by manufacturer where available. Where scanning of paper documents is required, configure scanned file for minimum readable file size.
  - 2. File Names and Bookmarks: Bookmark individual documents based on file names. Name document files to correspond to system, subsystem, and equipment names used in manual directory and table of contents. Group documents for each system and subsystem into individual composite bookmarked files, then create composite manual, so that resulting bookmarks reflect the system, subsystem, and equipment names in a readily navigated file tree. Configure electronic manual to display bookmark panel on opening file.

### 1.4 REQUIREMENTS FOR EMERGENCY, OPERATION, AND MAINTENANCE MANUALS

- A. Organization of Manuals: Unless otherwise indicated, organize each manual into a separate section for each system and subsystem, and a separate section for each piece of equipment not part of a system. Each manual shall contain the following materials, in the order listed:
  - 1. Title page.
  - 2. Table of contents.
  - 3. Manual contents.
- B. Title Page: Include the following information:
  - 1. Subject matter included in manual.
  - 2. Name and address of Project.
  - 3. Name and address of Owner.
  - 4. Date of submittal.
  - 5. Name and contact information for Contractor.
  - 6. Name and contact information for Construction Manager.
  - 7. Name and contact information for Architect.
  - 8. Name and contact information for Commissioning Authority.
  - 9. Names and contact information for major consultants to the Architect that designed the systems contained in the manuals.
  - 10. Cross-reference to related systems in other operation and maintenance manuals.
- C. Table of Contents: List each product included in manual, identified by product name, indexed to the content of the volume, and cross-referenced to Specification Section number in Project Manual.
- D. Manual Contents: Organize into sets of manageable size. Arrange contents alphabetically by system, subsystem, and equipment. If possible, assemble instructions for subsystems, equipment, and components of one system into a single binder.
- E. Identification: In the documentation directory and in each operation and maintenance manual, identify each system, subsystem, and piece of equipment with same designation used in the

Contract Documents. If no designation exists, assign a designation according to ASHRAE Guideline 4, "Preparation of Operating and Maintenance Documentation for Building Systems."

## **1.5 EMERGENCY MANUALS**

- A. Emergency Manual: Assemble a complete set of emergency information indicating procedures for use by emergency personnel and by Owner's operating personnel for types of emergencies indicated.
- B. Content: Organize manual into a separate section for each of the following:
  - 1. Type of emergency.
  - 2. Emergency instructions.
  - 3. Emergency procedures.
- C. Type of Emergency: Where applicable for each type of emergency indicated below, include instructions and procedures for each system, subsystem, piece of equipment, and component:
  - 1. Fire.
  - 2. Flood.
  - 3. Gas leak.
  - 4. Water leak.
  - 5. Power failure.
  - 6. Water outage.
  - 7. System, subsystem, or equipment failure.
  - 8. Chemical release or spill.
- D. Emergency Instructions: Describe and explain warnings, trouble indications, error messages, and similar codes and signals. Include responsibilities of Owner's operating personnel for notification of Installer, supplier, and manufacturer to maintain warranties.
- E. Emergency Procedures: Include the following, as applicable:
  - 1. Instructions on stopping.
  - 2. Shutdown instructions for each type of emergency.
  - 3. Operating instructions for conditions outside normal operating limits.
  - 4. Required sequences for electric or electronic systems.
  - 5. Special operating instructions and procedures.

## **1.6 SYSTEMS AND EQUIPMENT OPERATION MANUALS**

- A. Systems and Equipment Operation Manual: Assemble a complete set of data indicating operation of each system, subsystem, and piece of equipment not part of a system. Include information required for daily operation and management, operating standards, and routine and special operating procedures.

- B. Content: In addition to requirements in this Section, include operation data required in individual Specification Sections and the following information:
1. System, subsystem, and equipment descriptions. Use designations for systems and equipment indicated on Contract Documents.
  2. Performance and design criteria if Contractor has delegated design responsibility.
  3. Operating standards.
  4. Operating procedures.
  5. Operating logs.
  6. Wiring diagrams.
  7. Control diagrams.
  8. Piped system diagrams.
  9. Precautions against improper use.
  10. License requirements including inspection and renewal dates.
- C. Descriptions: Include the following:
1. Product name and model number. Use designations for products indicated on Contract Documents.
  2. Manufacturer's name.
  3. Equipment identification with serial number of each component.
  4. Equipment function.
  5. Operating characteristics.
  6. Limiting conditions.
  7. Performance curves.
  8. Engineering data and tests.
  9. Complete nomenclature and number of replacement parts.
- D. Operating Procedures: Include the following, as applicable:
1. Startup procedures.
  2. Equipment or system break-in procedures.
  3. Routine and normal operating instructions.
  4. Regulation and control procedures.
  5. Instructions on stopping.
  6. Normal shutdown instructions.
  7. Seasonal and weekend operating instructions.
  8. Required sequences for electric or electronic systems.
  9. Special operating instructions and procedures.
- E. Systems and Equipment Controls: Describe the sequence of operation, and diagram controls as installed.
- F. Piped Systems: Diagram piping as installed, and identify color coding where required for identification.

## 1.7 SYSTEMS AND EQUIPMENT MAINTENANCE MANUALS

- A. Systems and Equipment Maintenance Manuals: Assemble a complete set of data indicating maintenance of each system, subsystem, and piece of equipment not part of a system. Include manufacturers' maintenance documentation, preventive maintenance procedures and frequency, repair procedures, wiring and systems diagrams, lists of spare parts, and warranty information.
- B. Content: For each system, subsystem, and piece of equipment not part of a system, include source information, manufacturers' maintenance documentation, maintenance procedures, maintenance and service schedules, spare parts list and source information, maintenance service contracts, and warranties and bonds, as described below.
- C. Manufacturers' Maintenance Documentation: Include the following information for each component part or piece of equipment:
  - 1. Standard maintenance instructions and bulletins; include only sheets pertinent to product or component installed. Mark each sheet to identify each product or component incorporated into the Work. If data include more than one item in a tabular format, identify each item using appropriate references from the Contract Documents. Identify data applicable to the Work and delete references to information not applicable.
    - a. Prepare supplementary text if manufacturers' standard printed data are not available and where the information is necessary for proper operation and maintenance of equipment or systems.
  - 2. Drawings, diagrams, and instructions required for maintenance, including disassembly and component removal, replacement, and assembly.
  - 3. Identification and nomenclature of parts and components.
  - 4. List of items recommended to be stocked as spare parts.
- D. Maintenance Procedures: Include the following information and items that detail essential maintenance procedures:
  - 1. Test and inspection instructions.
  - 2. Troubleshooting guide.
  - 3. Precautions against improper maintenance.
  - 4. Disassembly; component removal, repair, and replacement; and reassembly instructions.
  - 5. Aligning, adjusting, and checking instructions.
  - 6. Demonstration and training video recording, if available.
- E. Maintenance and Service Schedules: Include service and lubrication requirements, list of required lubricants for equipment, and separate schedules for preventive and routine maintenance and service with standard time allotment.
- F. Spare Parts List and Source Information: Include lists of replacement and repair parts, with parts identified and cross-referenced to manufacturers' maintenance documentation and local sources of maintenance materials and related services.
- G. Warranties and Bonds: Include copies of warranties and bonds and lists of circumstances and conditions that would affect validity of warranties or bonds.

1. Include procedures to follow and required notifications for warranty claims.

- H. Drawings: Prepare drawings supplementing manufacturers' printed data to illustrate the relationship of component parts of equipment and systems and to illustrate control sequence and flow diagrams. Coordinate these drawings with information contained in record Drawings to ensure correct illustration of completed installation.

## 1.8 PRODUCT MAINTENANCE MANUALS

- A. Product Maintenance Manual: Assemble a complete set of maintenance data indicating care and maintenance of each product, material, and finish incorporated into the Work.
- B. Content: Organize manual into a separate section for each product, material, and finish. Include source information, product information, maintenance procedures, repair materials and sources, and warranties and bonds, as described below.
- C. Product Information: Include the following, as applicable:
  1. Product name and model number.
  2. Manufacturer's name.
  3. Color, pattern, and texture.
  4. Material and chemical composition.
  5. Reordering information for specially manufactured products.
- D. Maintenance Procedures: Include manufacturer's written recommendations and the following:
  1. Inspection procedures.
  2. Types of cleaning agents to be used and methods of cleaning.
  3. List of cleaning agents and methods of cleaning detrimental to product.
  4. Schedule for routine cleaning and maintenance.
  5. Repair instructions.
- E. Repair Materials and Sources: Include lists of materials and local sources of materials and related services.
- F. Warranties and Bonds: Include copies of warranties and bonds and lists of circumstances and conditions that would affect validity of warranties or bonds.
  1. Include procedures to follow and required notifications for warranty claims.

## PART 2 - PRODUCTS (Not Used)

## PART 3 - EXECUTION (Not Used)

END OF SECTION 017823

## SECTION 017830 - WARRANTIES

### PART 1 - GENERAL

#### 1.01 Guarantees and Warranties

- A. Warranties specified in other Sections shall be in addition to, and run concurrent with, other warranties required by the Contract Documents. Manufacturer's disclaimers and limitations on product warranties do not relieve the Contractor of obligations under requirements of the Contract Documents.
- B. Special Warranties: Prepare a written document that contains appropriate terms and identification, ready for execution. Submit a draft for approval before final execution.
  - 1. Manufacturer's Standard Form: Modified to include Project-specific information and properly executed.
  - 2. Refer to other Divisions for specific content requirements and particular requirements for submitting special warranties.
- C. Submittal Time: Comply with requirements in Division 1 Section "Closeout Procedures."
- D. Period for all guarantees and warranties shall commence at date of substantial completion for each phase of work. Multiple guarantees and warranties are required and shall be provided for each of the three phases as defined on drawing C-04.
- E. Refer to the Instructions to Bidders and the General Conditions for terms of the Contractor's warranty of workmanship and materials. The project Maintenance Bond is to hold good for one (1) years, which is the minimum general standard warranty for the Work, unless a period of greater warranty is specifically set forth within the individual technical specification sections.
- F. Submittal Time: Submit written warranties on request of Owner for designated portions of the Work where commencement of warranties other than date of Substantial Completion is indicated.
- G. Partial Occupancy: Submit properly executed warranties within 15 days of completion of designated portions of the Work that are completed and occupied or used by Owner during construction period by separate agreement with Contractor.
- H. Organize warranty documents for each phase into an orderly sequence based on the table of contents of the Project Manual.
  - 1. Bind warranties and bonds in heavy-duty, 3-ring, vinyl-covered, loose-leaf binders, thickness as necessary to accommodate contents, and sized to receive 8-1/2 by 11-inch paper.
  - 2. Provide heavy paper dividers with plastic-covered tabs for each separate warranty. Mark tab to identify the product or installation. Provide a typed description of the product or installation, including the name of the product and the name, address, and telephone number of Installer.
  - 3. Identify each binder on the front and spine with the typed title, "Warranties," Project Name, and name of Contractor.
- I. Provide additional copies of each warranty to include in operation and maintenance manuals.
- J. Special Warranty: Manufacturer's standard form in which manufacturer agrees to replace

components of units that fail in materials or workmanship within specified warranty period.

1. Warranty Period for Compressors: Manufacturer's standard, but not less than seven (7) years from the date of Substantial Completion.
2. Warranty Period for Gas Furnace Heat Exchangers: Manufacturer's standard, but not less than ten (10) years from the date of Substantial Completion.
3. Warranty Period for Control Boards: Manufacturer's standard, but not less than three (3) years from the date of Substantial Completion.

1.02 GENERAL CONSTRUCTION

- A. Refer to the Technical Specifications for the warranties pertaining to each division.

1.03 STANDARD MANUFACTURER WARRANTIES/GUARANTEES

- A. Unless otherwise noted in specifications, contractor shall provide standard of the industry and acceptable warranties/guarantees provided by all manufacturers of products used on this project. Warranties/guarantees shall commence at date of substantial completion for each phase as determined by the Architect and Construction Manager. Review each Technical Section for other warranty requirements.

END OF SECTION 017830

## SECTION 017839 - PROJECT RECORD DOCUMENTS

### PART 1 - GENERAL

#### 1.1 SUMMARY

- A. Section includes administrative and procedural requirements for Project Record Documents, including the following:
  - 1. Record Drawings.
  - 2. Record specifications.
  - 3. Record Product Data.
- B. Related Requirements:
  - 1. Section 017823 "Operation and Maintenance Data" for operation and maintenance manual requirements.

#### 1.2 CLOSEOUT SUBMITTALS

- A. Record Drawings: Comply with the following:
  - 1. Number of Copies: Submit **one** set of marked-up record prints.
  - 2. Number of Copies: Submit copies of Record Drawings as follows:
    - a. Initial Submittal:
      - 1) Submit PDF electronic files of scanned record prints and one set of file prints.
      - 2) Submit Record Digital Data Files and one set of plots.
      - 3) Architect will indicate whether general scope of changes, additional information recorded, and quality of drafting are acceptable.
    - b. Final Submittal:
      - 1) Submit PDF electronic files of scanned Record Prints.
- B. Record Specifications: Submit annotated PDF electronic files of Project's Specifications, including addenda and Contract modifications.

#### 1.3 RECORD DRAWINGS

- A. Record Prints: Maintain one set of marked-up paper copies of the Contract Drawings and Shop Drawings, incorporating new and revised drawings as modifications are issued.
  - 1. Preparation: Mark record prints to show the actual installation, where installation varies from that shown originally. Require individual or entity who obtained record data,

whether individual or entity is Installer, subcontractor, or similar entity, to provide information for preparation of corresponding marked-up record prints.

- a. Give particular attention to information on concealed elements that would be difficult to identify or measure and record later.
  - b. Accurately record information in an acceptable drawing technique.
  - c. Record data as soon as possible after obtaining it.
  - d. Record and check the markup before enclosing concealed installations.
  - e. Cross-reference record prints to corresponding photographic documentation.
2. Content: Types of items requiring marking include, but are not limited to, the following:
    - a. Dimensional changes to Drawings.
    - b. Revisions to details shown on Drawings.
    - c. Depths of foundations.
    - d. Locations and depths of underground utilities.
    - e. Revisions to routing of piping and conduits.
    - f. Revisions to electrical circuitry.
    - g. Actual equipment locations.
    - h. Duct size and routing.
    - i. Locations of concealed internal utilities.
  3. Mark the Contract Drawings and Shop Drawings completely and accurately. Use personnel proficient at recording graphic information in production of marked-up record prints.
  4. Mark record prints with erasable, red-colored pencil. Use other colors to distinguish between changes for different categories of the Work at same location.
  5. Mark important additional information that was either shown schematically or omitted from original Drawings.
  6. Note Construction Change Directive numbers, alternate numbers, Change Order numbers, and similar identification, where applicable.
- B. Record Digital Data Files: Immediately before inspection for Certificate of Substantial Completion, review marked-up record prints with Architect. When authorized, prepare a full set of corrected digital data files of the Contract Drawings, as follows:
1. Format: Same digital data software program, version, and operating system as for the original Contract Drawings.
  2. Format: DWG, Version 2017.
  3. Format: Annotated PDF electronic file.
  4. Incorporate changes and additional information previously marked on record prints. Delete, redraw, and add details and notations where applicable.
  5. Refer instances of uncertainty to Architect for resolution.
  6. Architect will furnish Contractor with one set of digital data files of the Contract Drawings for use in recording information.
- C. Format: Identify and date each Record Drawing; include the designation "PROJECT RECORD DRAWING" in a prominent location.

1. Record Prints: Organize record prints into manageable sets. Bind each set with durable paper cover sheets. Include identification on cover sheets.
2. Format: Annotated PDF electronic file.
3. Record Digital Data Files: Organize digital data information into separate electronic files that correspond to each sheet of the Contract Drawings. Name each file with the sheet identification. Include identification in each digital data file.
4. Identification: As follows:
  - a. Project name.
  - b. Date.
  - c. Designation "PROJECT RECORD DRAWINGS."
  - d. Name of Architect.
  - e. Name of Contractor.

#### 1.4 RECORD SPECIFICATIONS

- A. Preparation: Mark Specifications to indicate the actual product installation, where installation varies from that indicated in Specifications, addenda, and Contract modifications.
  1. Give particular attention to information on concealed products and installations that cannot be readily identified and recorded later.
  2. Mark copy with the proprietary name and model number of products, materials, and equipment furnished, including substitutions and product options selected.
  3. Record the name of manufacturer, supplier, Installer, and other information necessary to provide a record of selections made.
  4. For each principal product, indicate whether Record Product Data has been submitted in operation and maintenance manuals instead of submitted as Record Product Data.
  5. Note related Change Orders and Record Drawings where applicable.
- B. Format: Submit record specifications as annotated PDF electronic file.

#### 1.5 RECORD PRODUCT DATA

- A. Recording: Maintain one copy of each submittal during the construction period for Project Record Document purposes. Post changes and revisions to Project Record Documents as they occur; do not wait until end of Project.
- B. Preparation: Mark Product Data to indicate the actual product installation where installation varies substantially from that indicated in Product Data submittal.
  1. Give particular attention to information on concealed products and installations that cannot be readily identified and recorded later.
  2. Include significant changes in the product delivered to Project site and changes in manufacturer's written instructions for installation.
  3. Note related Change Orders and Record Drawings where applicable.
- C. Format: Submit Record Product Data as annotated PDF electronic file.

1. Include Record Product Data directory organized by Specification Section number and title, electronically linked to each item of Record Product Data.

**1.6 MAINTENANCE OF RECORD DOCUMENTS**

- A. Maintenance of Record Documents: Store Record Documents in the field office apart from the Contract Documents used for construction. Do not use Project Record Documents for construction purposes. Maintain Record Documents in good order and in a clean, dry, legible condition, protected from deterioration and loss. Provide access to Project Record Documents for Architect's reference during normal working hours.
- B. Retention of record shall be performed in accordance with NJAC 17:44-2.2
  1. The contractor shall maintain all documentation related to products, transactions or services under this contract for a period of five years from the date of final payment. Such records shall be made available to the New Jersey Office of the State Comptroller upon request."

PART 2 - PRODUCTS (Not Used)

PART 3 - EXECUTION (Not Used)

END OF SECTION 017839

## SECTION 017900 - DEMONSTRATION AND TRAINING

### PART 1 - GENERAL

#### 1.1 SUMMARY

- A. Section includes administrative and procedural requirements for instructing Owner's personnel, including the following:
  - 1. Instruction in operation and maintenance of systems, subsystems, and equipment.
  - 2. Demonstration and training video recordings.

#### 1.2 INFORMATIONAL SUBMITTALS

- A. Instruction Program: Submit outline of instructional program for demonstration and training, including a list of training modules and a schedule of proposed dates, times, length of instruction time, and instructors' names for each training module. Include learning objective and outline for each training module.
  - 1. Indicate proposed training modules using manufacturer-produced demonstration and training video recordings for systems, equipment, and products in lieu of video recording of live instructional module.

#### 1.3 CLOSEOUT SUBMITTALS

- A. Demonstration and Training Video Recordings: Submit two copies within seven days of end of each training module.
  - 1. At completion of training, submit complete training manual(s) for Owner's use prepared in same PDF file format required for operation and maintenance manuals specified in Section 01 7823 "Operation and Maintenance Data."

#### 1.4 QUALITY ASSURANCE

- A. Facilitator Qualifications: A firm or individual experienced in training or educating maintenance personnel in a training program similar in content and extent to that indicated for this Project, and whose work has resulted in training or education with a record of successful learning performance.
- B. Instructor Qualifications: A factory-authorized service representative, complying with requirements in Section 014000 "Quality Requirements," experienced in operation and maintenance procedures and training.
- C. Preinstruction Conference: Conduct conference at Project site to comply with requirements in Section 013100 "Project Management and Coordination."

## 1.5 COORDINATION

- A. Coordinate instruction schedule with Owner's operations. Adjust schedule as required to minimize disrupting Owner's operations and to ensure availability of Owner's personnel.
- B. Coordinate instructors, including providing notification of dates, times, length of instruction time, and course content.
- C. Coordinate content of training modules with content of approved emergency, operation, and maintenance manuals. Do not submit instruction program until operation and maintenance data have been reviewed and approved by Architect.

## 1.6 INSTRUCTION PROGRAM

- A. Program Structure: Develop an instruction program that includes individual training modules for each system and for equipment not part of a system, as required by individual Specification Sections.
- B. Training Modules: Develop a learning objective and teaching outline for each module. Include a description of specific skills and knowledge that participant is expected to master. For each module, include instruction for the following as applicable to the system, equipment, or component:
  - 1. Basis of System Design, Operational Requirements, and Criteria: Include the following:
    - a. System, subsystem, and equipment descriptions.
    - b. Performance and design criteria if Contractor is delegated design responsibility.
    - c. Operating standards.
    - d. Regulatory requirements.
    - e. Equipment function.
    - f. Operating characteristics.
    - g. Limiting conditions.
    - h. Performance curves.
  - 2. Documentation: Review the following items in detail:
    - a. Emergency manuals.
    - b. Systems and equipment operation manuals.
    - c. Systems and equipment maintenance manuals.
    - d. Product maintenance manuals.
    - e. Project Record Documents.
    - f. Identification systems.
    - g. Warranties and bonds.
    - h. Maintenance service agreements and similar continuing commitments.
  - 3. Emergencies: Include the following, as applicable:
    - a. Instructions on meaning of warnings, trouble indications, and error messages.
    - b. Instructions on stopping.

- c. Shutdown instructions for each type of emergency.
  - d. Operating instructions for conditions outside of normal operating limits.
  - e. Sequences for electric or electronic systems.
  - f. Special operating instructions and procedures.
- 4. Operations: Include the following, as applicable:
  - a. Startup procedures.
  - b. Equipment or system break-in procedures.
  - c. Routine and normal operating instructions.
  - d. Regulation and control procedures.
  - e. Control sequences.
  - f. Safety procedures.
  - g. Instructions on stopping.
  - h. Normal shutdown instructions.
  - i. Operating procedures for emergencies.
  - j. Operating procedures for system, subsystem, or equipment failure.
  - k. Seasonal and weekend operating instructions.
  - l. Required sequences for electric or electronic systems.
  - m. Special operating instructions and procedures.
- 5. Adjustments: Include the following:
  - a. Alignments.
  - b. Checking adjustments.
  - c. Noise and vibration adjustments.
  - d. Economy and efficiency adjustments.
- 6. Troubleshooting: Include the following:
  - a. Diagnostic instructions.
  - b. Test and inspection procedures.
- 7. Maintenance: Include the following:
  - a. Inspection procedures.
  - b. Types of cleaning agents to be used and methods of cleaning.
  - c. List of cleaning agents and methods of cleaning detrimental to product.
  - d. Procedures for routine cleaning.
  - e. Procedures for preventive maintenance.
  - f. Procedures for routine maintenance.
  - g. Instruction on use of special tools.
- 8. Repairs: Include the following:
  - a. Diagnosis instructions.
  - b. Repair instructions.
  - c. Disassembly; component removal, repair, and replacement; and reassembly instructions.
  - d. Instructions for identifying parts and components.

- e. Review of spare parts needed for operation and maintenance.

## 1.7 PREPARATION

- A. Assemble educational materials necessary for instruction, including documentation and training module. Assemble training modules into a training manual organized in coordination with requirements in Section 017823 "Operation and Maintenance Data."
- B. Set up instructional equipment at instruction location.

## 1.8 INSTRUCTION

- A. Facilitator: Engage a qualified facilitator to prepare instruction program and training modules, to coordinate instructors, and to coordinate between Contractor and Owner for number of participants, instruction times, and location.
- B. Engage qualified instructors to instruct Owner's personnel to adjust, operate, and maintain systems, subsystems, and equipment not part of a system.
- C. Scheduling: Provide instruction at mutually agreed-on times. For equipment that requires seasonal operation, provide similar instruction at start of each season.
  - 1. Schedule training with Owner with at least seven days' advance notice.
- D. Training Location and Reference Material: Conduct training on-site in the completed and fully operational facility using the actual equipment in-place. Conduct training using final operation and maintenance data submittals.
- E. Evaluation: At conclusion of each training module, assess and document each participant's mastery of module by use of an oral performance-based test.
- F. Cleanup: Collect used and leftover educational materials and remove from Project site. Remove instructional equipment. Restore systems and equipment to condition existing before initial training use.

## PART 2 - PRODUCTS

## PART 3 - EXECUTION

END OF SECTION 017900

## SECTION 024110 SELECTIVE DEMOLITION AND ALTERATION WORK

### PART 1 GENERAL

#### 1.1 GENERAL REQUIREMENTS

- A. Work of this Section, as shown or specified, shall be in accordance with the requirements of the Contract Documents.

#### 1.2 SECTION INCLUDES

- A. The Work of this Section includes all labor, materials, equipment and services necessary to complete the selective demolition and alteration work as shown on the drawings and/or specified herein, including but not limited to the following:
  - 1. Selective demolition and removal of portions of the existing building to remain as indicated and as required to accommodate the indicated construction.
  - 2. Patching and repairs, as indicated or required.
  - 3. Disconnecting, capping, abandonment and removal of utilities, as indicated or required.
  - 4. Temporary protections, weather tight enclosures, and similar protections for utilities, structures, persons, etc.
  - 5. Relocation of pipes, conduits, ducts, and other mechanical and electrical work (including equipment
  - 6. Alterations, selective demolition and removals of exterior façade, where noted.
  - 7. Protection of existing building and spaces to remain.
  - 8. Shoring of the structure as required for structural integrity and personal safety.
  - 9. Protection of existing curbs and sidewalks.
  - 10. Temporary coverage passageways.

#### 1.3 QUALITY ASSURANCE

- A. The Contractor shall comply with the requirements of all applicable Federal, State and local safety and health regulations regarding the demolition of structures including ANSI/NFPD 241-Building Construction and Demolition Operations.
- B. The Contractor shall be responsible for any damage to any adjacent structures or buildings to remain.
- C. Qualifications: Qualifications of Contractor for work of this Section shall not be less than ten (10) years of field experience in work of this nature.

- D. Professional Engineering: The Contractor shall retain the services of a Professional Engineer licensed in the State of New Jersey, who shall design and supervise installation of all underpinning and shoring.

1.4 RELATED SECTIONS

- A. Alteration and removal requirements for mechanical and electrical work - Mechanical and Electrical Sections.

1.5 SUBMITTALS

- A. Schedule of Demolition Operations: Submit demolition procedures and operational sequence for Architect's review prior to start of work. Submit a written request to Architect well in advance of executing any cutting or alteration which affects:
  - 1. The work of tying in or connecting to operational systems of the building, including electrical, mechanical and security systems.
  - 2. The work of the Owner or any separate Contractor.
  - 3. The structural value or integrity of any element of the project or of adjacent structures.
  - 4. The integrity or effectiveness of weather-exposed and moisture-resistant elements or systems.
  - 5. The efficiency, operational life, maintenance, or safety of operational elements or systems.
- B. Notice of Differing Conditions: Submit a written notification if, during the work of demolition and cutting, conditions are discovered which significantly vary from those shown on the drawings. Do not commence work until approval of Architect.
- C. Shop Drawings: Submit the following prior to starting work:
  - 1. Submit for Architect's information shop drawings indicating location and typical construction details of temporary dustproof and weatherproof partitions.
  - 2. Submit drawings of temporary structural shoring, bracing, framing or support, for the information of the Architect. Such drawings will be reviewed by the Structural Engineer for the effects of such temporary members on the structural elements to remain. These drawings shall include the reason for such temporary members, the location, the direction and magnitude of design reaction forces on existing structure, and details showing how these reaction forces will be applied to the existing structure.
    - a. Shop drawings shall be submitted with the Seal of the Professional Engineer engaged by Contractor; Professional Engineer must be licensed in the State of New Jersey.
    - b. The Architect will receive acknowledgment for concepts shown. Such acknowledgments shall be of the concept only and not of actual capacities or

structural design and shall not in any way diminish or limit the Contractor's responsibility for the quality and performance of the work and for protecting existing structures and facilities.

1.6 SPECIAL PRECAUTION

- A. Hazardous materials may be encountered during demolition operations including asbestos; comply with applicable regulations, laws, and ordinances concerning removal, handling, and protection against exposure or environmental pollution.

1.7 JOB CONDITIONS

A. Condition of Structure

- 1. The Contractor for the work of this Section shall be held to have visited the site, examined the premises, determined for himself the existing conditions, character of equipment and facilities needed for the performance of the work, and all matters which may in any way affect the work before submitting a bid.
  - a. Information regarding existing construction or conditions is based on available record drawings which may or may not truly reflect existing conditions. Such information is included on the assumption that it may be of interest to the Contractor, but the Architect, Owner and their consultants do not assume responsibility for its accuracy or completeness.
  - b. Notify the Architect if, during the course of demolition, conditions are discovered which significantly vary from those shown on the drawings. Do not proceed until authorized by Architect.
- 2. The Contractor shall accept the condition of the site and structures as found. The Architect and Owner assume no responsibility for condition of site or structures nor the continuation of the condition existing at time of bidding or thereafter.

- B. Areas of building to be demolished or altered will be vacated and discontinued in use prior to the start of the work.

- 1. Surrounding areas of the building shall remain operational by the Owner.

C. Partial Removal

- 1. Items of savable value to the Contractor may be removed from the structure as the work progresses. Salvaged items must be transported from the site as they are removed.
  - 2. Storage or sale of removed items on the site will not be permitted.

- D. Explosives: The use of explosives will not be permitted.

E. Traffic

1. Conduct demolition operations and the removal of debris to ensure minimum interference with roads, streets, walks and other adjacent occupied or used facilities.
2. Do not close or obstruct streets, walks or other occupied or used facilities without permission from authorities having jurisdiction. Provide alternate routes around closed or obstructed traffic ways if required by governing regulations.

F. Utilities

1. Refer to Division 22 and 26 of the specifications for special requirements concerning utilities and services.
2. Maintain any existing utilities required to remain; keep in service and protect against damage during demolition operations.
3. Do not interrupt existing utilities serving occupied or used facilities, except when authorized in writing by authorities having jurisdiction. Provide temporary services during interruptions to existing utilities, as acceptable to the governing authorities.
4. Disconnect and seal any abandoned utilities before starting demolition operations. Coordinate all work with local utility companies having jurisdiction.

1.8 SCHEDULING

- A. Before commencing any alteration or demolition work, submit for review by the Architect, and approval of the Owner, a schedule showing the commencement, the order, and the completion dates for the various parts of this work.
- B. Before starting any work relating to existing utilities (electrical, sewer, water, heat, gas, fire lines, etc.) that will temporarily discontinue or disrupt service to the structures to remain, notify the Architect and the Owner 7 days in advance and obtain the Owner's approval in writing before proceeding with this phase of the work.

PART 2 PRODUCTS

Refer to Part 3 - Execution, for Product Requirements

PART 3 EXECUTION

3.1 PROTECTION

- A. Take full precautions to protect workmen, passersby or any other persons from falling debris and other hazards of demolition operations.
- B. Execute demolition work to insure protection of existing portions of building to remain against damages which might occur from falling debris or other cause. Do not interfere

with use of adjacent occupied buildings and areas. Maintain free, safe passage to and from occupied adjacent buildings.

- C. **Materials Placement:** Do not load structure with weight that will endanger, overload or cause excessive deflection of the existing structure, or that will damage finished surfaces adjacent to and/or supported by the existing structure, except portions being removed.
- D. **Construction Operations:** Do not employ any construction operation, equipment or vehicles that will endanger, overload or cause excessive deflection of the existing structure, or that will damage finished surfaces adjacent to and/or supported by the existing structure, except portions being removed.
- E. Take precautions to guard against movement, settlement, damage, or collapse of any part of building, sidewalks, adjacent property or street passages; be liable for any such movement, settlement or collapse. If such damage does accidentally occur, Contractor shall repair promptly at no cost to Owner.
- F. Provide the necessary safeguards to prevent accidents, to avoid all necessary hazards and protect the public, the work and property at all times, including Saturdays, Sundays, and holidays.
- G. Be responsible for any and all damages which may arise or occur to any party whatsoever by reason of the neglect in providing proper lights, guards, barriers, or any other safeguards to prevent damage to property, life and limb.
- H. Make such explorations and probes as are necessary to ascertain any required protective measures before proceeding with demolition and removal. Give particular attention to shoring and bracing requirements so as to prevent any damage to existing construction.
  - 1. Provide interior and exterior shoring, bracing, or support to prevent movement or settlement or collapse of structures to be demolished and adjacent facilities to remain. The Contractor's Professional Engineer shall advise on bracing, shoring, underpinning, or other structural requirements. The Contractor shall bear all responsibility for prevention of movement or other structural fault.
  - 2. The Contractor shall restore, by repair or otherwise, the portions of structure or their contents altered by the Contractor in furtherance of his underpinning and support operations. Restoration shall be completed to the conditions which existed prior to the start of the work. Any damage caused by inadequate support shall also be restored by the Contractor at no cost to the Owner.
- I. Provide, erect and maintain catch platforms, lights, barriers, weather protection, warning signs, and other items as required for proper protection of the workmen engaged in demolition and alteration operations, occupants of the building, public and adjacent property. Any damage caused by the Contractor's operations shall be promptly repaired by the Contractor at no cost to the Owner.

- J. Provide and maintain temporary protection of the existing structure designated to remain where demolition, removal, and new work are being done, connections made, materials handled, or equipment moved.
- K. Take necessary precautions to prevent dust and dirt from rising. Protect unaltered portions of the existing building affected by the operations under this Section by dustproof partitions and other adequate means.
- L. Provide adequate fire protection in accordance with local Fire Department requirements.
- M. Do not close or obstruct walkways, passageways, or stairways. Do not store or place materials in passageways, stairs, or other means of egress. Conduct operations with minimum traffic interference.
- N. Be responsible for any damage to the existing structure or contents by reason of the insufficiency of protection provided.
- O. Erect temporary covered passageways at street level as required by authorities having jurisdiction.
- P. Promptly repair damages caused to adjacent facilities by demolition operations at no cost to the Owner.
- Q. Provide and maintain weather protection at exterior openings so as to fully protect the interior premises against damage from the elements until such openings are closed by new construction.

### 3.2 INSPECTION

- A. Verify that areas of demolition work are protected and temporary dustproof partitions have been installed.
- B. Verify that construction to be removed is not load bearing or has been properly braced, framed or supported.
- C. Inspect existing conditions of the project, including elements subject to damage or to movement during demolition and cutting.
- D. After uncovering work, inspect the conditions affecting the installation or performance of the work.
  - 1. Report differing or questionable conditions to the Architect in writing; do not proceed with the work until the Architect has provided further instructions.

### 3.3 PREPARATION

- A. Provide adequate temporary support as necessary to assure the structural value or integrity of the affected portion of the work
- B. Provide devices and methods to protect other portions of the project from damage.

C. Pollution Controls

1. Use water sprinkling, temporary enclosures, and other suitable methods to limit the amount of dust and dirt rising and scattering in the air to the lowest practical level. Comply with governing regulations pertaining to environmental protection.
  - a. Do not use water when it may create hazardous or objectionable conditions such as ice, flooding, and pollution.
2. Clean adjacent structures and improvements of dust, dirt and debris caused by demolition operations. Return adjacent areas to condition existing prior to the start of the work.
3. Provide drainage for temporary water use.

3.4 DEMOLITION AND CUTTING

- A. Selectively demolish existing construction in conformance with the drawings and these specifications.
1. Execute cutting and demolition by methods which will prevent damage to other work and will provide proper surface to receive installation of work by others and patching of finish surfaces.
  2. Do all cutting or removal so as to leave neat, true, plumb and square edges, at edges to remain. Use carborundum or diamond saw equipment for cutting masonry, concrete and stone work, where edges or surfaces are to remain.
  3. Do not cut or remove construction which might weaken or impair the structural integrity or strength of the structural framing or support systems which are to remain.
  4. Demolish and remove materials as shown on the drawings without damage to the remaining parts of the structure or mechanical/electrical/utility systems.
  5. Remove materials so as to not impose excessive loads in supporting walls, floors or framing and so as not to damage remaining undemolished portions of the structure.
  6. Where portions of structures are to be removed, remaining portions shall be protected from damage and prepared to fit new construction. Damage to portions of structures to remain shall be repaired.
  7. Reinforcing steel in existing structures shall be left in place, cleaned and aligned to provide tie with new work.
  8. Existing waterproofing systems and flashings shall be carefully exposed and protected to maintain workable conditions of fitting new work with existing construction.
  9. Proceed with demolition in a systematic manner.

10. Demolish concrete and masonry in small sections.
11. Remove structural framing members and lower to ground by means of hoists, derricks, or other suitable methods.

**B. Shoring**

1. Design, provide, erect and maintain necessary temporary shoring, bracing, framing, or support where load bearing structural or supporting members are removed or weakened by cuts or openings or are subject to damage from demolition operations, and otherwise as required for safety or to protect finish surfaces from damage.
2. Construction and adequacy of the shoring shall be the entire responsibility of the Contractor. Any damage caused by the inadequacy of the shoring or other support shall be the responsibility of the Contractor to remedy at no additional expense to the Owner.
3. Shoring and bracing shall remain until new structural framing and/or supports are installed. Coordinate operations fully with other trades.
4. Be ready at any time to promptly provide, add to, or strengthen temporary shoring, bracing, or support for existing work, in case existing construction begins to show signs of structural stress.

**3.5 WORKMANSHIP STANDARDS FOR ALTERATION AND REMOVAL WORK**

- A. Cut, remove, alter, temporarily remove and replace, or relocate existing work as required for performance of the work. Perform such work required with due care, including shoring and bracing.
- B. Coordinate patching involving the various trades whether or not specifically mentioned in the respective specification Sections.
- C. Materials or items demolished and not designated to become the property of the Owner or to be reinstalled shall become the property of the Contractor and shall be removed from the Owner's property.
- D. Execute the work in a careful and orderly manner, with the least possible disturbance to the public and to the occupants of the adjacent buildings.
- E. In general, demolish masonry in small sections. Where necessary to prevent collapse of any construction, install temporary shores, struts, or bracing.
- F. Materials to be removed by existing elevators shall be put in enclosed containers.
- G. Where existing equipment and/or fixtures are indicated to be reused, repair such equipment and/or fixtures and refinish to put in perfect working order. Refinish as directed.

- H. Cut out embedded anchorage and attachment items as required to properly provide for patching and repair of the respective finishes.
- I. Confine cutting of existing roof areas designated to remain to the limits required for the proper installation of the new work. Cut and fold back existing roofing. Cut and remove insulation and related items. Provide temporary weathertight protection as required until new roofing and flashings are installed. Consult the Owner to ascertain if existing guarantee bonds are in force and execute the work so as not to invalidate such bonds.
- J. Where utilities are removed, relocated or abandoned, cap, valve, plug, or by-pass to make complete and working installation.
- K. Restore existing pipe and duct coverings damaged by work under this Contract to original undamaged condition.
- L. Immediately restore to service and repair any damage caused by Contractor's workmen to existing pipe and conduits, wires, cables, etc., of utility services or of fire protection systems and communications systems which are not scheduled for discontinuance or abandonment.
- M. Upon completion of contract, deliver work complete. Damage that may be caused by Contractor or Contractor's workmen to existing structures designated to remain, grounds, and utilities shall be repaired by Contractor and left in as good condition as existed prior to damaging.
- N. Restore finish work of floors, walls, and ceilings remaining in place but damaged or defaced because of demolition or alteration work to condition equal that which existed at beginning of work under this Contract.
- O. Where alteration or removals expose damaged or unfinished surfaces or materials, refinish such surfaces or materials, or remove them and provide new or salvaged materials to make continuous surfaces uniform.
- P. Perform new work and restore and refinish existing work in conformance with applicable requirements of the specifications, except as follows:
  - 1. Materials for use in repair of existing surfaces, but not otherwise specified, shall conform to the highest standards of the trade involved, and be in accordance with approved industry standards, and shall be as required to match existing surfaces.
  - 2. Workmanship for repair of existing materials shall, unless otherwise specified, be equal to similar workmanship existing in or adjacent to the space where the work is being done.
  - 3. Installation of salvaged items where no similar items exist shall be done in accordance with the highest standards of the trade involved and in accordance with approved shop drawings.

- Q. Materials or items designated to become the property of the Owner shall be as shown on the drawings. Remove such items with care and store them in a location at the site to be designated by the Owner.
- R. Materials or items designated to be reinstalled shall be as shown on the drawings. Remove such items with care under the supervision of the trade responsible for reinstallation; protect and store until required. Replace materials or items damaged in their removal with similar new material.
- S. The existing building shall not be used as a workshop, nor shall the furnishings or equipment in any room be used as work benches. Should any damage occur during the progress of the work to any furniture, fixtures, equipment, or appurtenances therein, such damage shall be repaired, replaced or made good by the Contractor without extra cost to the Owner.
- T. Where removing existing floor finish and base, remove all adhesive and leave floors and walls smooth and flush, ready to receive new finish.
- U. Finish new and adjacent existing surfaces as specified for new work. Clean existing surfaces of dirt, grease and loose paint before refinishing.

### 3.6 DISPOSAL OF DEMOLISHED MATERIALS

- A. General
  - 1. Remove from the site debris, rubbish and other materials resulting from work of this Section.
  - 2. Burning of removed materials from demolished structures will not be permitted on the site.
- B. Removal: Transport materials removed from demolished structures and legally dispose of off site. Pay any and all fees associated with disposal work. Leave the site in an orderly condition to the approval of the Architect.

### 3.7 CLEANING UP

- A. Remove debris as the work progresses. Maintain existing premises in a neat and clean condition.

END OF SECTION

**SECTION 024119 -SITE DEMOLITION**

**PART 1 GENERAL**

**1.01 SECTION INCLUDES**

- A. Demolition of designated site structures, retaining walls and foundations and removal of materials from site.
- B. Demolition and removal of pavements, curbs and gutters, drainage structures, utilities, signage or landscaping.
- C. Disconnecting and capping or removal of identified utilities.
- D. Filling voids in subgrade created as a result of removals or demolition.
- E. Hazardous material compliance.

**1.02 RELATED SECTIONS**

- A. Section 331000 – Protection of Existing Utilities
- B. Section 311000 – Site Preparation
- C. Section 312000 – Earthwork
- D. Section 312100 - Aggregate Materials
- E. Construction Drawings

**1.03 REGULATORY REQUIREMENTS**

- A. Conform to applicable State and local codes for demolition of structures, safety of adjacent structures, dust control, and runoff control.
- B. Obtain required permits and licenses from appropriate authorities. Pay associated fees including disposal charges.
- C. Notify affected utility companies before starting work and comply with their requirements.
- D. Do not close or obstruct public or private roadways, sidewalks, or fire hydrants without appropriate permits or written authorization.
- E. Conform to applicable regulatory procedures when hazardous or contaminated materials are discovered.
- F. Test soils around buried tanks for contamination.

**1.04 PROJECT RECORD DOCUMENTS**

Accurately record actual locations of capped utilities and subsurface obstructions that will remain after demolition.

**1.05 PROJECT CONDITIONS**

- A. Structures to be demolished will be discontinued in use and vacated prior to start of work.
- B. Owner assumes no responsibility for condition of structures to be demolished.
- C. Conditions, existing at time of inspection for bidding purposes will be maintained by Owner as reasonably practical. Variations within structures may occur by Owner's removal and salvage operations prior to start of demolition work.
- D. Unless otherwise indicated in Contract Documents or specified by the Owner, items of salvageable value to Contractor shall be removed from site and structures. Storage or sale of removed items on site will not be permitted and shall not interfere with other work specified in Contract Documents.
- E. Explosives shall not be brought to site or used without written consent of authorities having jurisdiction. Such written consent will not relieve Contractor of total responsibility for injury to persons or for damage to property due to blasting operations. Performance of required blasting shall comply with governing regulations.
- F. Maintain safe and adequate access to existing adjacent structures on the site that shall remain occupied during the demolition operations.

**PART 2 PRODUCTS**

**2.01 FILL MATERIALS**

Aggregate materials as specified in Section 312100.

**PART 3 EXECUTION**

**3.01 PREPARATION**

- A. Provide, erect, and maintain erosion control devices, temporary barriers, and security devices at locations indicated on Construction Drawings.
- B. Protect existing landscaping materials, appurtenances, and structures (adjacent or in proximity to the Work), which are not to be demolished. Repair damage caused by demolition operations at no cost to Owner.
- C. Prevent movement or settlement of adjacent structures. Provide bracing and shoring as needed.

- D. Mark location of utilities. Protect and maintain in safe and operable condition utilities that are to remain. Prevent interruption of existing utility service to occupied or used facilities, except when authorized in writing by authorities having jurisdiction. Provide temporary services during interruptions to existing utilities as acceptable to governing authorities and Owner.
- E. Notify adjacent owners of work that may affect their property, potential noise, utility outages or disruptions. Contractor to coordinate with Owner.

### **3.02 DEMOLITION REQUIREMENTS**

- A. Conduct demolition to minimize interference with adjacent structures or pavements.
- B. Cease operations immediately if adjacent structures appear to be in danger. Notify authority-having jurisdiction. Do not resume operations until directed by authority.
- C. Conduct operations with minimum of interference to public or private access. Maintain ingress and egress at all times.
- D. Obtain written permission from adjacent property owners when demolition equipment will traverse, infringe upon, or limit access to their property.
- E. Sprinkle work with water to minimize dust. Provide hoses and water connections for this purpose.
- F. Comply with governing regulations pertaining to environmental protection.
- G. Clean adjacent structures and improvements of dust, dirt, and debris caused by demolition operations. Return adjacent areas to condition existing prior to start of work.

### **3.03 DEMOLITION**

- A. Selectively demolish buildings and remove from site using methods as required to complete work within limitations of governing regulations. Small structures may be removed intact when acceptable to Owner and authorities having jurisdiction.
- B. Locate demolition equipment and remove materials so as to prevent excessive loading to supporting walls, floors, or framing.
- C. Demolish concrete and masonry in small sections. Break up concrete slabs-on-grade that are within 2-feet or more below proposed subgrade to permit moisture drainage. Contractor shall remove slabs-on-grade and below grade construction in accordance with the contract document plans.

### **3.04 FILLING BASEMENTS AND VOIDS**

- A. Completely fill below grade areas and voids resulting from demolition or removal of structures, underground fuel storage tanks, wells, cisterns, etc., using approved select fill or crushed concrete materials from on site building demolition operations consisting of stone, gravel, and sand free from debris, trash, frozen materials, roots, and other organic matter.

- B. Ensure that areas to be filled are free of standing water, frost, frozen or unsuitable material, trash, and debris prior to fill placement.
- C. Place and compact fill materials in accordance with Section 312000 unless subsequent excavation for new work is required.
- D. Grade surface to match adjacent grades and to provide flow of surface drainage after fill placement and compaction.

**3.05 DISPOSAL OF DEMOLISHED MATERIALS**

- A. Remove site debris, rubbish, and other materials resulting from demolition operations and dispose of in accordance with State, County and Local regulations. Leave areas of work in clean condition.
- B. No burning of any material, debris, or trash on-site or off-site will be allowed.
- C. Transport materials removed from demolished structures with appropriate vehicles and dispose off-site to disposal facilities that are approved for disposal of such material by governing authorities and appropriate property owners.

**END OF SECTION 024119**

\\langan.com\data\PAR\data2\101053201\Project Data\Specifications\FOR BID\024119 Site Demolition.docx

## SECTION 031000 - CONCRETE FORMWORK

### PART 1 - GENERAL

#### 1.1 DESCRIPTION OF WORK

- A. Provide forms wherever necessary to confine concrete and shape it to required dimensions. Provide special formwork or formliners for concrete with smooth or special finishes.

#### 1.2 PRODUCTS INSTALLED BUT NOT FURNISHED UNDER THIS SECTION

- A. Miscellaneous metal fabrications (concrete, inserts) - Section 055000

#### 1.3 RELATED SECTIONS

- A. Concrete Reinforcement - Section 032000
- B. Cast-in-Place Concrete Section 033000

#### 1.4 REFERENCES

- A. References and industry standards listed in this Section are applicable to the Work. Unless more restrictive criteria or differing requirements are explicitly stated in the Specifications, or mandated by governing codes or regulations, the recommendations, suggestions, and requirements described in the referenced standards shall be deemed mandatory and applicable to the Work.

- 1. American Concrete Institute (ACI) standards, latest editions per International Building Code 2021, New Jersey Edition.

ACI 301	Specifications for Structural Concrete for Buildings.
ACI 347	Guide to Formwork for Concrete.

- 2. American Association of State Highway and Transportation Officials

T318 Water Content of Freshly Mixed Concrete Using Microwave Oven Testing

#### 1.5 DESIGN REQUIREMENTS

- A. The design and engineering of the formwork, as well as its construction, is the responsibility of the Contractor.
- B. Design formwork in accordance with ACI 347 and in accordance with the International Building Code 2021, New Jersey Edition.

## 1.6 SUBMITTALS

- A. Product Data: Submit manufacturers' information for the following:
  - 1. Overlaid plyform formwork or formliners
  - 2. Ties, each type and where to be used
  - 3. Form-release agent. Form-release agent to be submitted for review only.
- B. Samples
  - 1. Submit 12" x 12" samples of the following items:
    - a. Overlaid plyform formwork or formliners
- C. Shop Drawings
  - 1. Prepare and submit formwork shop drawings and calculations prepared and sealed by a Professional Engineer licensed in the State of New Jersey for review.
- D. Quality Control Submittals
  - 1. Contractor Qualifications
    - a. Provide proof of Formwork Installer qualifications specified under "Quality Assurance".

## 1.7 QUALITY ASSURANCE

- A. Qualifications
  - 1. Company specializing in performing the Work of this Section shall have three years minimum experience.
- B. Regulatory Requirements
  - 1. Building Code: Work of this Section shall conform to all requirements of the 2021 IBC NJ Edition and all applicable regulations of governmental authorities having jurisdiction including safety, health, noise, and anti-pollution regulations. Where more severe requirements than those contained in the Building Code are given in this Section and ACI 347, the requirements of this Section and ACI 347 shall govern.

## 1.8 DELIVERY, STORAGE, AND HANDLING

- A. Protection
  - 1. Protect formwork materials before, during and after installation.
  - 2. Protect installed work and materials of other trades.
- B. Replacement

1. Repair or replace damaged formwork as approved by the Owner.
2. Repair overlaid plyform formwork as per manufacturer's instructions. Replace pieces when number of manufacturer recommended reuses is up or when finish deteriorates.

## **PART 2 -PRODUCTS**

### **2.1 MANUFACTURERS**

#### **A. Overlaid Plyform Formwork**

1. Simpson Timber Company, or approved equal.
2. Dayton Richmond Concrete Accessories, or approved equal.

#### **B. Form Liners**

1. Greenstreak, or approved equal.
2. Architectural Polymers, or approved equal.
3. Fitzgerald Formliners, or approved equal.

### **2.2 MATERIALS**

#### **A. Rough Formwork**

1. Shall be Commercial Douglas Fir, DFPA: 5/8" thick minimum or modular metal units.

#### **B. Overlaid Plyform Formwork**

1. Plywood with thermosetting phenolic resin or urethane coating bonded to it to provide a flat matte finish. Shall be equal to B-Matte Formguard by Simpson Timber Company.

#### **C. Smooth Form Finish Formliner**

1. Shall be equal to #340 Smooth Face by Greenstreak.
2. Nails and staples used to attach formliner to formwork are to be Type 304 stainless steel.

#### **D. Release Agent**

1. VOC compliant material such as those of the Cresset Chemical Company for coating forms.

#### **E. Form Ties**

1. Form ties for exposed concrete shall be adjustable.
2. Form ties for exposed concrete and concrete to receive membranes shall be a break-off type and leave no metal closer than 1 1/2" to the surface.
3. Form ties for concrete stated in 2 above shall be free of devices which leave holes or depressions larger than 7/8" back of exposed surface.
4. Wire ties not permitted.

## **PART 3 - EXECUTION**

### **3.1 PREPARATION OF FORMWORK SURFACES**

- A. Clean all surfaces of forms and embedded items of any accumulated mortar or grout from previous concreting and other foreign material before concrete is placed in them. Repair or replace any formwork as required.
- B. Before placing either reinforcing steel or concrete, cover the surfaces of the rough or overlaid plyform formwork (when used) with an approved form release agent that will effectively prevent absorption of moisture, prevent bond with the concrete, and which will not stain the concrete surfaces. Material shall be carefully applied at the amount recommended by the release agent manufacturer to obtain the desired finish. Do not apply oil or release agents on formwork for concrete to receive coatings such as membrane waterproofing, plaster, or additional concrete (such as at construction joints). Follow manufacturer's recommendations for alternatives. For the overlaid plyform formwork, release agent should be a chemically reactive agent compatible with the factory treatment. Do not allow excess form coating material to stand in puddles in the forms nor allow coating to come in contact with hardened concrete against which fresh concrete is to be placed.

### **3.2 CONSTRUCTION AND DETAILS**

- A. Adequately support and substantially brace formwork to hold lines and shape.
- B. Formwork shall be tight jointed to prevent leakage of mortar from the concrete.
- C. Place chamfer strips in the corners of forms to produce beveled edges (chamfers) on permanently exposed surfaces (such as exposed columns). Do not provide beveled edge for interior corners of such surfaces and where members are flush with partitions or walls, unless required by Drawings or specified elsewhere.
- D. Set slab-forms with camber of 1/4" per 10 feet of span to maintain tolerances. For two way slabs the lesser span dimension shall govern.
- E. Provide positive means of adjustment (wedges or jacks) for shores and struts to take up all settlement during concrete placing operations. Fasten wedges used for final adjustment of forms prior to concrete placement in position after final check. Securely brace forms against lateral deflection.
- F. Provide mud sills where shores rest on compressible materials.
- G. Provide temporary openings to permit cleaning and inspection. Provide ample time for proper inspection before placement of concrete.
- H. Provide "Rough Form Finish" for surfaces not exposed to view. Use plywood or metal forms coated with a release agent.
- I. Form holes for pipes, pipe sleeves, electric outlets, electric conduits, etc. as required. Construct woodforms for wall forms to facilitate loosening, if necessary, to counteract swelling of forms.

- J. Provide runways for moving equipment with struts or legs, which shall be supported directly on the formwork or structural member without resting on the reinforcing steel.
- K. Provide for rebates, reglets, grooves keys, pockets, ground nailers, projections and other built-in work prior to placement of concrete. Install reglets as per manufacturer's instructions.
- L. Install dovetail slots, concrete inserts, and other metal fabrications. Secure to inside forms and space as specified in Section 055000 or as shown on Drawings.
- M. At construction joints, contact surface of the form sheathing for flush surfaces exposed to view shall overlap the hardened concrete in the previous placement by not more than 1". The forms shall be held against the hardened concrete to prevent offsets or loss of mortar at the construction joint and to maintain a true surface.
- N. Form accessories to be partially or wholly embedded in the concrete, such as ties and hangers, shall be of a commercially manufactured type. Use of non-fabricated wire is not permitted. Construct form ties so that the ends or end fasteners can be removed without causing appreciable spalling at the faces of the concrete. After the ends or end fasteners of the form ties have been removed, terminate the embedded portion of the ties not less than 2 diameters or twice the minimum dimension of the tie from the formed faces of concrete to be permanently exposed to view, except that in no case shall this distance be less than 3/4". When the formed face of the concrete is not to be permanently exposed to view, form ties may be cut off flush with the formed surfaces.
- O. Carefully check all forms before placement of concrete. Give special care to suspended first floor slabs resting on compressible material to prevent settlement.
- P. Notify the Engineer of Record if openings are required but not shown on the Drawings, who will issue instructions accordingly.

### 3.3 REMOVAL OF FORMS AND SHORING

- A. Remove forms in such a manner as to assure the complete safety of the structure. In no case remove forms or shoring supporting the weight of concrete in beams, slabs or structural members until the members have reached the minimum compressive strength specified on the Drawings or as permitted by the Engineer of Record.
- B. Formwork for columns, walls, sides of beams, and other parts not supporting the weight of the concrete may be removed as soon as the concrete has hardened sufficiently to resist damage from removal operations and as required by C below. For normal temperature conditions, this shall be a minimum of 12 hours. For cold weather conditions, this shall be increased to 24 hours. Concrete shall remain protected at all times.
- C. When repair of surface defects or finishing is required at an early age, remove forms as soon as the concrete has hardened sufficiently to resist damage from removal operations.
- D. Remove top forms on sloping surfaces of concrete as soon as the concrete has attained sufficient stiffness to prevent sagging. Perform any needed repairs or treatment required on such sloping surfaces at once and follow it with the specified curing.

- E. Loosen wood forms for wall openings as soon as this can be accomplished without damage to the concrete.
- F. Proper safe shoring, number of shores, adequacy, size and location of these shores and forms shall be in accordance with acceptable good construction practice and it is the sole responsibility of the Contractor to provide safe conditions at all times during stripping.

### 3.4 TOLERANCES

- A. Construct formwork so that concrete surfaces will conform to the tolerance limits listed in ACI 117.
- B. Establish and maintain in an undisturbed condition and until final completion and acceptance of the project sufficient control points and bench marks to be used for reference purposes to check tolerances.
- C. Regardless of the tolerances listed, do not extend any portion of the concrete work beyond the lot or street line.

### 3.5 INSPECTION

- A. Under the requirements of the 2021 IBC NJ Edition, formwork, including shores, reshores, braces, and other supports shall be inspected by an engineer for controlled inspection engaged by the Owner. The engineer shall make inspections prior to placement of steel to verify correct sizes of members formed subsequently, periodically after placement, and during placement of concrete to detect incipient problems. The engineer will also inspect the forms for conformance with form design drawings when such drawings are required. The engineer is to maintain and submit a record of all inspections to the Owner.
- B. Under the requirements of the 2021 IBC NJ Edition, the Owner will assign a Special Inspector to inspect formwork for size of members and to verify in-situ concrete strengths prior to removal of formwork and shores from beams and slabs.
- C. During and after concrete placement, check elevations, camber, and vertical alignment of formwork systems using tell-tale devices.
- D. Keep a record of all inspections, the name of the persons making them, and the name of the foreman in charge of formwork at the site. Submit to the Owner's representative on the site a copy of the inspection records prior to each concrete placement.

END OF SECTION 031000

## SECTION 032000 - CONCRETE REINFORCEMENT

### PART 1 - GENERAL

#### 1.1 DESCRIPTION OF WORK

- A. Provide and install all reinforcement and associated items required for cast-in-place in accordance with the Contract Documents. The Contract Documents are as defined in the "AGREEMENT". The "GENERAL CONDITIONS" shall apply to all work under the Contract.

#### 1.2 RELATED SECTIONS

- A. General Requirements - Division 1
- B. Concrete Formwork - Section 031000
- C. Cast-in-Place Concrete - Section 033000

#### 1.3 REFERENCES

- A. References and industry standards listed in this Section are applicable to the Work. Unless more restrictive criteria or differing requirements are explicitly stated in the Specifications, or mandated by governing codes or regulations, the recommendations, suggestions, and requirements described in the referenced standards shall be deemed mandatory and applicable to the Work.

- 1. American Society of Testing and Materials (ASTM) standards, latest editions.

- A82 Standard Specification for Steel Wire, Plain, for Concrete Reinforcement.
- A184 Standard Specification for Fabricated Deformed Steel Bar Mats for Concrete Reinforcement.
- A185 Standard Specification for Steel Welded Wire Reinforcement, Plain, for Concrete.
- A496 Standard Specification for Steel Wire, Deformed, for Concrete Reinforcement.
- A497 Standard Specification for Steel Welded Wire Reinforcement, Deformed, for Concrete.
- A615 Standard Specifications for Deformed and Plain Billet-Steel Bars for Concrete Reinforcement.
- A706 Standard Specifications for Low-Alloy Steel Deformed and Plain Bars for Concrete reinforcement
- A775 Standard Specification for Epoxy-Coated Reinforcing Steel Bars.
- A884 Standard Specifications for Epoxy-coated Wires and Welded Wire Reinforcement.

- 2. American Concrete Institute (ACI) standards, latest editions.

- ACI 301 "Specification for Structural Concrete for Buildings."
- ACI 315 "Details and Detailing of Concrete Reinforcement."
- ACI 318 "Building Code Requirements for Structural Concrete."

3. "Placing Reinforcing Bars - CRSI-WCRSI Recommended Practices", latest edition. Concrete Reinforcing Steel Institute.
4. "Structural Welding Code - Reinforcing Steel" D1.4 - American Welding Society (AWS).
5. "Near-White Blast Cleaning" SSPC-SP10 - Steel Structures Painting Council (SSPC).

#### 1.4 DESIGN REQUIREMENTS

- A. In lieu of placing reinforcement bars, the contractor has the option of using welded wire reinforcement (WWR).
  1. WWR must be demonstrated to the satisfaction of the engineer of record that they are of equivalent strength to the reinforcing bars that are being substituted.
  2. As per ACI 318, yield strength greater than 60,000 psi may be used (for WWR) provided the yield strength is measured at a strain of 0.0035 in./in. in accordance with ACI code requirements.

#### 1.5 SUBMITTALS

- A. Product Data: Submit manufacturers' information for the following:
  1. Steel reinforcing bars
  2. Steel welded wire fabric
  3. Steel welded wire reinforcement.
  4. Supports
  5. Mechanical connectors
- B. Shop Drawings
  1. Immediately after award of Contract, prepare shop drawings showing all fabrication dimensions and locations for placing of the reinforcing steel and accessories. Shop Drawings are to be prepared by a rebar detailer.
  2. Follow detailing recommendations of ACI 315.
  3. Submit drawings gradually and not all at the same time so that sufficient time is allowed for checking and approval. Improperly prepared and incomplete shop drawings will be disapproved without review.
  4. Shop drawings will be checked for size of material and spacing by the Engineer of Record, which shall not render the Engineer responsible for any errors in construction dimensions, quantities, bends, etc. that have been made in preparation of the shop drawings. The Contractor shall assume full responsibility for the correctness of quantities, dimensions and fit.
  5. Do not order or deliver reinforcement to job site prior to approval of drawings.
  6. Indicate location of epoxy-coated bars on the drawings.
- C. Quality Control Submittals
  1. Certificates
    - a. Submit certificate stating that reinforcement meets or exceeds the specified requirements.

- b. Submit certification that properly identifies the number of each batch of epoxy coating material used on the project, material, quantity represented, date of manufacture, name and address of manufacturer and a statement that the supplied epoxy-coated reinforcing bars meet the requirements of this specification and the requirements of ASTM A775 including Annex A1.
- 2. Contractor Qualifications
  - a. Provide proof of Installer and Detailer qualifications specified under “Quality Assurance”.

## 1.6 QUALITY ASSURANCE

### A. Qualifications

- 1. Rebar Installer: Company specializing in performing the Work of this Section shall have three years minimum experience on successful projects of similar size.
- 2. Rebar Detailer: Company shall be specialized in the detailing of reinforcing bar shop drawings with a minimum of three years experience.

### B. Regulatory Requirements

#### 1. Building Code

- a. Work of this section shall conform to all requirements of the 2021 IBC NJ Edition, "Identification of metal-reinforcement", deliveries will be rejected unless:
  - 1) All reinforcing bars are identifiable as to point of origin, grade of steel and size.
  - 2) All bundles or rolls of cold drawn steel wire reinforcement are securely tagged to identify the manufacturer, the grade of steel and the size.
- b. Where more severe requirements than those contained in the 2021 IBC NJ Edition are given in this Section and ACI 318, the requirements of this Section and ACI 318 shall govern.

#### 2. Industry Standards

- a. Details of Concrete reinforcement not covered herein shall be in accordance with "Building Code Requirements for Reinforced Concrete" (ACI 318) and "Details and Detailing of Concrete Reinforcement" (ACI 315), latest editions and the Concrete Reinforcing Steel Institute Manual on "Placing Reinforcing Bars" (CRSI).

## 1.7 DELIVERY, STORAGE, AND HANDLING

- A. Store in location to prevent rusting, etc.
- B. Protect reinforcement before, during, and after installation.
- C. Insure proper identification after bundles are broken.
- D. Epoxy-Coated Reinforcing Bars

1. Equipment for handling epoxy-coated bars shall have protected contact areas. Lift Bundles of coated bars at multiple pick-up points to minimize bar-to-bar abrasion from sags in the bundles.
  2. Do not drop or drag coated bars or bundles of coated bars. Store coated bars on protective cribbing.
  3. Fading of the color of the coating shall not be cause for rejection of epoxy-coated reinforcing bars. Coating damage due to handling, shipment, and placing need not be repaired in cases where the damaged areas is 0.1 in<sup>2</sup> or smaller. Repair damaged areas larger than 0.1 in<sup>2</sup> in accordance with Article 2.02. The maximum amount of damage, including repaired and un-repaired areas, shall not exceed 2% of the surface area of each bar. Bars with greater than 2% damaged areas will be rejected.
- E. WWR is shipped in two forms; rolls or sheets. If the rolls or sheets must be lifted by crane at the job site, the contractor may request the manufacturer to install lifting eyes. At all times during off loading of materials, caution must be exercised and all safety regulations and practices must be observed.

## **PART 2 - PRODUCTS**

### **2.1 MATERIALS**

#### **A. Non-coated Reinforcing Bars**

1. All non-coated reinforcing bars, except those to be welded, shall be of deformed type of new billet steel conforming to current requirements of ASTM A615. No rail or re-rolled steel will be permitted. Reinforcement to be welded shall conform to the requirements of ASTM A706.
2. Grade or yield strength of reinforcing bars are indicated on Drawings.

#### **B. Welded Steel Wire Fabric (WWF)**

1. Wire Fabric shall conform to the requirements of ASTM A185.
2. Required net area, placement details, and other requirements are indicated on Drawings.
3. Epoxy coating of Welded Wire Fabric shall be in accordance with ASTM A884.

#### **C. Welded Wire Reinforcement (WWR)**

1. Welded Wire Reinforcement shall conform to ASTM A497 and shall be made of wire conforming to ASTM A496.
2. Epoxy coating of Welded Wire Reinforcement shall be in accordance with ASTM A884.

#### **D. Epoxy-Coated Reinforcing Bars**

1. All steel reinforcing bars to be coated shall be of deformed type of new steel conforming to current requirements of ASTM A615. Bars shall be free of contaminants such as oil, grease or paint. No rail or re-rolled steel will be permitted. Reinforcement to be welded shall conform to the requirements of ASTM A706.
2. Grade or yield strength of reinforcing bars is indicated on Drawings.
3. Bars shall be epoxy-coated in accordance with ASTM A775.

4. The coating material shall be of organic composition meeting the requirements listed in ASTM A775 Annex A1 entitled "Requirements for Organic Coating." Resistance to chemicals, applied voltage, chloride permeability, flexibility, bond strength, abrasion resistance, impact, and hardness shall be tested in accordance with Annex A1.

**E. Supports for Reinforcement**

**1. Non-coated Reinforcement**

- a. Supports for reinforcement supported by formwork or deck shall consist of metal bolsters and chairs of adequate strength, size, and number. Provide CRSI Class C supports (plastic tipped) for formed concrete surfaces and Class A (bright basic) for metal deck.
- b. Supports for reinforcement of slabs supported by ground shall consist of above supports with sand plates or horizontal runners. Support for reinforcement of footings/ pile caps shall consist of the above supports or precast concrete block, 4" square, having a compressive strength equal to that of the concrete being placed.

**2. Epoxy-coated Reinforcement**

- a. Epoxy-coated reinforcing bars supported from formwork shall rest on coated wire bar supports, or on bar supports made of dielectric material or other acceptable materials. Wire bar supports shall be coated with dielectric material for a minimum distance of 2" from the point of contact with the epoxy-coated reinforcing bars.
- b. Reinforcing bars used as support bars shall be epoxy-coated. In walls having epoxy-coated reinforcing bars, spreader bars, where specified on the Drawings or shop drawings, shall be epoxy-coated. Proprietary combination bar clips and spreaders used in walls with epoxy-coated reinforcing bars shall be made of corrosion-resistant material.

**F. Tie Wire**

1. Tie wire for fastening epoxy-coated reinforcing bars shall be nylon-epoxy, plastic-coated, or other material acceptable to the Owner.

**2.2 FABRICATION**

**A. General**

1. Fabricate reinforcing bars in accordance with fabricating allowances given in ACI 315.

**B. Epoxy-Coated Bars**

**1. Surface Preparation**

- a. Clean the surface of the steel reinforcing bars to be coated by abrasive blast cleaning to near-white metal in accordance with SSPC-SP10.

**2. Application of Coating (In Shop)**

- a. Apply the coating to the cleaned surface as soon as possible after cleaning and before oxidation of the surface discernible to the unaided eye occurs. However, in no case delay application of the coating more than 8 hours after cleaning.
  - b. The coating shall be applied by the Electrostatic Spray Method and fully cured in accordance with the recommendations of the manufacturer of the coating material.
  - c. Coat ends of bars in accordance with the manufacturer's standards.
3. Thickness of Coating Material
  - a. The film thickness of the coating after curing shall be 5 to 12 mils inclusive. Take a minimum of 15 measurements approximately evenly spaced along each side of the test bar. At least 90% of these measurements shall be within the specified limits.
  - b. Test the thickness of the film coating in accordance with ASTM G12.
4. Coating Repair: Repair coating damage due to fabrication or handling in cases where damaged area is 0.1 in<sup>2</sup> or greater. Repair all damaged areas larger than 0.1 in<sup>2</sup> with patching material. The maximum amount of damage shall not exceed 24% of the surface area of each bar. Patch in accordance with the patching material manufacturer's recommendations. Repair ends of bars cut in the field with the patching material.
5. Bending of Epoxy-Coated Reinforcement: Bend all epoxy-coated reinforcement cold unless otherwise approved by the Owner. When epoxy coated reinforcement bars are field or shop bent, repair coating damage in accordance with paragraph B.4 above. Rollers of bending apparatus shall have neoprene collars.

## 2.3 SOURCE QUALITY CONTROL

- A. The Owner shall have the right to inspect the material at all times while work on the Contract is being performed. Epoxy-coated reinforcing bars that do not meet the requirements of this Specification will be rejected. Replace all rejected bars at no cost to the Owner.

## PART 3 - EXECUTION

### 3.1 PLACEMENT

#### A. General

1. Place reinforcement in accordance with CRSI "Placing Reinforcement Bars."
2. Unless otherwise permitted, welding of crossing bars (tack welding) for assembly of reinforcement is prohibited.
3. Avoid cutting or puncturing vapor barrier during placement.

#### B. Supports

1. Support and fasten together all reinforcement to prevent displacement by construction loads or placing of concrete.
2. Provide supports specified in Article 2.01.

3. Provide Continuous High Chair Upper (CHCU) or Continuous Support (CS) for welded wire fabric in the metal deck and place every four feet (4') parallel to the supporting beams.
4. Lifting of bars, welded wire fabric, and welded wire reinforcement into position during placement of concrete is not permitted.
5. Where the concrete surface will be exposed to the weather in the finished structure, the portions of all accessories within 1/2" of the concrete surface shall be non-corrosive or protected against corrosion.
6. The following guidelines for WWR support spacing can be used for supported concrete slabs whether formed or placed on composite metal decks.

<u>Wire Size</u>	<u>Wire Spacing</u>	<u>Support Spacing</u>
W or D9 and larger	12" and greater	4-6 ft.
W or D5 to W or D8	12" and greater	3-4 ft.
W or D9 and larger	Less than 12"	3-4 ft.
W or D4 to W or D8	Less than 12"	2-3 ft.
Less than W or D4	Less than 12"	2-3 ft. or less.

C. Cover

1. Provide minimum protective cover given in Chapter 7 of ACI 318 if not indicated on Drawings.

D. Splices

1. All splices not shown on the Project Drawings shall be shown on the shop drawings and approved by the Engineer of Record.
2. Welded splices - Provide where indicated on Drawings. All welding shall conform to AWS D1.4. At these locations, only reinforcement conforming to ASTM A706 shall be used.
  - a. Provide suitable ventilation when welding epoxy-coated reinforcing bars.
  - b. After completion of welding on epoxy-coated reinforcing bars, repair coating damage in accordance with Article 2.02. All welds, and all steel splice members when used to splice bars, shall be coated with the same material used for repair of coating damage.
3. Mechanical Connectors
  - a. Provide where indicated on Drawings. Install in accordance with splice device manufacturer's recommendations.
  - b. After installing mechanical connectors on epoxy-coated reinforcing bars, coating damage shall be repaired in accordance with Article 2.02. All parts of mechanical connectors used on coated bars, including steel splice sleeves, bolts, and nuts shall be coated with the same material used for repair of coating damage.

E. Embedment Lengths

1. All embedment lengths not shown on the Project Drawings shall be shown on the shop drawings and approved by the Engineer of Record.

3.2 FIELD CUTTING

- A. When epoxy-coated reinforcing bars are cut in the field, coat the ends of the bars with the same material used for repair of coating damage.

### 3.3 TOLERANCES

- A. Place reinforcing bars in accordance with the tolerances given in paragraph 5.6.2 of ACI 301.
- B. Move bars as necessary to avoid interference with other reinforcement, conduits, or imbedded items. If bars are moved more than one bar diameter, or enough to exceed the above tolerances, the resulting arrangements are subject to approval by the Engineer of Record.

### 3.4 FIELD QUALITY CONTROL

- A. Under the requirements of the 2021 IBC NJ Edition, the Owner will designate an Engineer for Controlled Inspection to inspect the size and placement of reinforcement. A record will be made of all inspection of reinforcement at the bending bench and in place.
- B. Do not proceed with the completion of wall forms until all reinforcement has been approved and recorded by the Engineer for Controlled Inspection.
- C. Do not proceed with concreting until all reinforcing in place has been approved and recorded.
- D. Promptly correct all reinforcement displaced during pouring of concrete.
- E. Damaged reinforcement shall not be used.

### 3.5 CLEANING

- A. Steel reinforcement shall be free of all rust, scale, oil, paint, grease, loose mill scale, and all other foreign matter that will prevent bonding of concrete and steel just prior to pouring of concrete.

END OF SECTION 032000

## SECTION 033000 - CAST-IN-PLACE CONCRETE

### PART 1 - GENERAL

#### 1.1 DESCRIPTION OF WORK

- A. Furnish material, equipment, labor, services required to provide for cast-in-place concrete. Work includes but is not limited to structural, sitework, slabs, concrete fire protection, equipment pads, and installation of miscellaneous inserts, waterstops, vapor barriers, toppings, expansion joints and other items listed herein. Allow ample time and facility for the Work of other Divisions to be installed.

#### 1.2 PRODUCTS INSTALLED BUT NOT FURNISHED UNDER THIS SECTION

- A. Anchor bolts and other anchors cast into concrete - Section 051200
- B. Wedge inserts and other miscellaneous items cast into concrete - Section 055000
- C. Joint fillers - Section 079200
- D. Sleeve for pipe and conduit, other items Cast into concrete - Divisions 22, 23, & 26

#### 1.3 RELATED SECTIONS

- A. Concrete Reinforcement - Section 032000
- B. Sheet Membrane Waterproofing, Board Insulation, & Drainage Panel - Division 7

#### 1.4 REFERENCES

- A. References and industry standards listed in this Section are applicable to the Work. Unless more restrictive criteria or differing requirements are explicitly stated in the Specifications, or mandated by governing codes or regulations, the recommendations, suggestions, and requirements described in the referenced standards shall be deemed mandatory and applicable to the Work.

- 1. American Society of Testing and Materials (ASTM) standards, latest editions.

- C31 Standard Practice for Making and Curing Concrete Test Specimens in the Field.
- C33 Standard Specifications for Concrete Aggregates.
- C39 Standard Test Method for Compressive Strength of Cylindrical Concrete Specimens.
- C42 Standard Test Method for Obtaining and Testing Drilled Cores and Sawed Beams of Concrete.
- C78 Standard Test Method for Flexural Strength of Concrete (Using Simple Beam with Three-point Loading)
- C94 Standard Specification for Ready-Mixed Concrete.

- C127 Standard Test Method for Density, Relative Density (Specific Gravity) and Absorption of Course Aggregate.
  - C131 Standard Test Method for Resistance to Degradation of Small-Size Coarse Aggregate by Abrasion and Impact in the Los Angeles Machine.
  - C138 Standard Test Method for Density (Unit Weight), Yield, and Air Content (Gravimetric) of Concrete.
  - C143 Standard Test Method for Slump of Hydraulic Cement Concrete.
  - C150 Standard Specification for Portland Cement.
  - C172 Standard Method of Sampling Freshly Mixed Concrete.
  - C173 Standard Test Method for Air Content of Freshly Mixed Concrete by the Volumetric Method.
  - C192 Standard Practice for Making and Curing Concrete Test Specimens in the Laboratory.
  - C231 Standard Test Method for Air Content of Freshly Mixed Concrete by the Pressure Method.
  - C260 Standard Specifications for Air-Entraining Admixtures for Concrete.
  - C309 Standard Specification for Liquid Membrane-Forming Compounds for Curing Concrete.
  - C330 Standard Specification for Lightweight Aggregates for Structural Concrete.
  - C387 Standard Specification for Packaged, Dry, Combined Materials for Mortar and Concrete.
  - C494 Standard Specification for Chemical Admixture for Concrete.
  - C496 Standard Test Method for Splitting Tensile Strength of Cylindrical Concrete Specimens.
  - C567 Standard Test Method for Density of Structural Lightweight Concrete.
  - C685 Standard Specification for Concrete Made by Volumetric Batching and Continuous Mixing.
  - C882 Standard Test Method for Bond Strength of Epoxy-Resin Systems used with Concrete by Slant Shear
  - C1315 Standard Specification for Liquid-Forming Compounds Having Special properties for Curing and Sealing Concrete

T318 Water Content of Freshly Mixed Concrete Using Microwave Oven Testing

1.5 DEFINITIONS

A. Exposed to view

1. Situated so that it can be seen from eye level from a public location. A public location is that which is accessible to persons not responsible for operation or maintenance of the building.

B. Lightweight concrete

1. Concrete intentionally made to have low density by use of lightweight aggregate conforming to ASTM C330 and required to have an air-dry unit weight less than 115 lb/ft<sup>3</sup>.

C. Normal weight concrete

1. Concrete for which density is not a controlling attribute, made with aggregates of the types covered by ASTM C33 and usually having unit weights in the range of 135 to 160 lb/ft<sup>3</sup>.

D. Reveal: Projection of coarse aggregate from matrix or mortar after completion of exposure operations.

1.6 DESIGN REQUIREMENTS

A. Performance Characteristics:

1. Interior slabs on grade: Normal weight concrete with a minimum compressive strength of 4000 psi, non-air entrained, and a maximum water to cement ratio of 0.45.
2. Foundations, footings, foundation walls, piers, and buttresses: Normal weight concrete with a minimum compressive strength of 4000 psi, air entrained, and a maximum water to cement ratio of 0.40.
3. Exterior slabs on grade (pavements, stairs, areaways, ramps, etc), exposed to the elements: Normal weight concrete with a minimum compressive strength of 4000 psi, air entrained, and a maximum water to cement ratio of 0.40.

4. Exterior framed slabs exposed to the elements: Normal weight concrete with a minimum compressive strength of 4000 psi, air entrained, and a maximum water to cement ratio of 0.40.
5. Concrete for retaining walls: Normal weight concrete with a minimum compressive strength of 4500 psi, air entrained, and a maximum water to cement ratio of 0.40.
6. Interior slabs of superstructure: Normal weight concrete with a minimum compressive strength of 4000 psi, air-entrained, and a maximum water to cement ratio of 0.45.
7. Concrete curbs on roof: Normal weight concrete with a minimum compressive strength of 4000 psi, air-entrained and a maximum water to cement ratio of 0.40.
8. Concrete parapet: Normal weight concrete with a minimum compressive strength of 4000 psi, air-entrained and a maximum water to cement ratio of 0.40.

## 1.7 SUBMITTALS

### A. Product Data: Submit manufacturers' information for the following:

1. Admixtures
2. Curing compounds
3. Hardener
4. Bonding Agent
5. Waterstop

### B. Quality Control Submittals

1. Design Data: Submit design mixes for concrete, including list of admixtures to be used, to the Testing Agency, the Special Inspector, and the Engineer of Record. Design mix for lightweight concrete shall include both the dry and saturated (SSD) weights of the aggregate.
2. Test Reports: Strength Test Report (28 day) for preliminary trial mix (with all admixtures).
3. Certificates
  - a. Approval for the admixtures and cement used.
  - b. Admixture manufacturer's certificate stating that the chloride content of the admixture will not exceed 0.05% by weight.
  - c. Concrete laboratory license number and certification of meeting ASTM E329 standards.
  - d. Concrete producer's certificate stating the plant and trucks are NJDOT approved.
  - e. Concrete producer's certificate must be presented at site before concrete is placed in accordance with the 2021 IBC NJ Edition.
4. Manufactures' Instructions
  - a. Waterstop manufacturer's instructions for proper installation of waterstop, including manner in which splices are to be made.
5. Contractor Qualifications
  - a. Provide proof of Installer and Producer qualifications specified under "Quality Assurance".

C. Survey

1. Submit signed and sealed copies of surveys conducted by a Licensed Land Surveyor showing elevations of all finished slab surfaces taken on a 15-foot grid pattern. Indicate discrepancies between contract elevation and actual.

D. Mock-up

1. Provide mock-up as indicated under Quality Assurance.

1.8 QUALITY ASSURANCE

A. Qualifications

1. Concrete Installer: Company specializing in performing the Work of this Section shall have three years minimum experience on successful projects of similar size.
2. Concrete Producer: Company specializing in the production of concrete shall be certified by the National Ready Mixed Concrete Association (NRMCA) and shall have certification by either a New Jersey Agency or the NJ Department of Transportation. The plant shall use NJDOT approved trucks and drivers shall be certified by the NRMCA.
3. Concrete Laboratory: Concrete laboratory providing design mixes shall be New Jersey licensed and shall meet the requirements of ASTM E329.

B. Regulatory Requirements

1. Building Code: Work of this Section shall conform to all requirements of the 2021 IBC NJ Edition and all applicable regulations of governmental authorities having jurisdiction including safety, health, noise, and anti-pollution regulations. Where more severe requirements than those contained in the Building Code are given in this Section, the requirements of this Section shall govern.
2. Industry Standards: The ACI Standards listed under references apply to Work of this Section. Where more severe requirements than those contained in the Standards are given in this Section or the Building Code, requirements of this Section or the Building Code shall govern. The Contractor shall keep a copy of ACI SP-15 - "Field Reference Manual" at the site.
3. Recommendations or suggestions in the codes and references listed in this Article and under "References" shall be deemed to be mandatory unless they are in violation of the Building Code.

C. Certifications

1. Cement and aggregate shall be acquired from the same source for all work. If a change in suppliers is required, a new mix submittal must be produced with the new material and submitted for approval.

D. Coordination

1. Coordinate this work with the work of other Divisions so that items to be installed are done so correctly and in proper sequence.

E. Mock-up

1. Provide mock-up of texture for exterior pavements, etc. All mock up to be verified by RU PM.

F. Pre-Concrete Conference

1. At least 35 days prior to the start of the concrete construction schedule, conduct a meeting to review the proposed mix designs and to discuss the required methods and procedures to achieve the required concrete quality. The contractor shall send a pre-concrete conference agenda to all attendees 20 days prior to the scheduled date of the conference. Require representatives of each entity directly concerned with cast-in-place concrete to attend, including the following:
  - a. Contractor's superintendent.
  - b. Independent testing agency responsible for concrete design mixtures.
  - c. Ready-mix concrete manufacturer.
  - d. Concrete subcontractor.
  - e. Special Inspector.
  - f. Structural Engineer of Record.
2. Review special inspection and testing and inspecting agency procedures for field quality control, concrete finishes and finishing, cold- and hot-weather concreting procedures, curing procedures, construction contraction and isolation joints, and joint-filler strips, semi-rigid joint fillers, forms and form removal limitations, vapor-retarder installation, anchor rod and anchorage device installation tolerances, steel reinforcement installation, floor and slab flatness and levelness measurement, concrete repair procedures, and concrete protection.

1.9 DELIVERY, STORAGE, AND HANDLING

- A. Protect material from the elements and from other damage on the site.
- B. Replace and pay for material and work damaged to the satisfaction of the Owner.

1.10 ENVIRONMENTAL REQUIREMENTS

- A. Adequately protect concrete placed during rain, sleet, or snow, or when the mean daily temperature falls below 40°F or rises above 90°F as provided in Article 3.05.

PART 2 - PRODUCTS

2.1 MANUFACTURERS

- A. Lightweight Aggregate
  1. Northeast Solite Corporation, or approved equal.

2. Norlite Corporation, or approved equal.

**B. Admixtures**

1. Euclid Chemical Company, or approved equal.
2. Master Builders, or approved equal.
3. Sika Chemical Corporation, or approved equal.
4. Anti Hydro Company, or approved equal.
5. Chem Masters, or approved equal.
6. W.R. Grace & Co., or approved equal.
7. St. Lawrence Cement Company, or approved equal.

**C. Curing Compounds**

1. Euclid Chemical Company, or approved equal.
2. Master Builders, or approved equal.
3. Sika Corporation; SikaFilm, or approved equal.

**D. Bonding Agent**

1. Sto Concrete Restoration Division, or approved equal.
2. Sika Corp, or approved equal.
3. Euclid Chemical Company, or approved equal.

**E. Densifier/Sealer**

1. Euclid Chemical Company, or approved equal.
2. Curecrete Chemical Company, Inc., or approved equal.

**F. Fireproofing Accessories**

1. Equipment Distribution Corporation, or approved equal.

**G. Waterstops**

1. Sika Corp, or approved equal.
2. W.R. Meadows, or approved equal.
3. BoMetals Inc., or approved equal.
4. ConSeal, or approved equal.

**2.2 MATERIALS**

**A. Cement: Shall conform to ASTM C150 and shall be of the non air-entrained types:**

1. Unless otherwise specified or approved by the Engineer of Record, cement shall be Type I or II.
2. Type II shall be used for exterior pavements.
3. Cement shall not contain ingredients that would result in more than two percent air being entrained in the concrete.

**B. Admixtures**

1. General

- a. The final soluble chloride content in concrete, percent by weight of cement, due to the addition of admixtures and other ingredients shall not exceed 0.05 at 28 days. All admixtures shall be non-corrosive.
- b. The amount of cement required by the Building Code may be reduced by 40% as per the code with the use of slag cement that has been reviewed and approved by the Architect and Engineer.
- c. Color Pigment: Add color pigment to concrete mixture according to manufacturer's written instructions and to result in hardened concrete color consistent with approved mockup.

2. Air-entraining admixture: Shall conform to ASTM C260.
3. Water-reducing admixture: Shall conform to ASTM C494, Type A or D, and contain no more chloride ions than found in drinking water.
4. High range, water-reducing admixture (super- plasticizer): Shall conform to ASTM C494, Type F or G, and contain no more chloride ions than found in drinking water.
5. Water reducing, accelerating admixture: Shall conform to ASTM, Type C or E, and contain no more chloride ions than found in drinking water.
6. Water reducing, retarding admixture: Shall conform to ASTM C494, Type D, and contain no more chloride ions than found in drinking water.
7. Slag cement: ASTM C989, Grade 100 or 120. Shall be GranCem slag cement as manufactured by the St. Lawrence Cement Company.
8. Color Pigment: ASTM C 979, synthetic mineral-oxide pigments or colored water-reducing admixtures; color stable, nonfading, and resistant to lime and other alkalis.
  - a. Basis-of-Design Product: Subject to compliance with requirements provide "CHROMIX P Admixture" manufactured by L.M. Scofield Company, or approved equal by one of the following available manufacturers offering products that may be incorporated into the Work include, but are not limited to:
    - 1) ChemMasters, or approved equal.
    - 2) Dayton Superior Corporation, or approved equal.
    - 3) Lambert Corporation, or approved equal.
  - b. Color: Chromix No. C-34 Dark Gray.

C. Aggregates

1. Fine and coarse aggregates shall be regarded as separate ingredients. Each size of coarse aggregate, as well as the combination of sizes when two or more are used, shall conform to the appropriate grading requirements of the applicable ASTM specifications. Maximum size of coarse aggregate shall conform to paragraph 3.3.2 of ACI 318.
  - a. Aggregates for normal weight concrete shall conform to ASTM C33 and be of Size No.67 and/or No.8.
  - b. Aggregates for lightweight concrete shall conform to ASTM C330 and be of sizes 3/4" to No.4, 1/2" to No.4, and/or 3/8" to No.8.

D. Curing Compounds

1. Non-strippable
    - a. Clear Curing and Sealing Compound (A.I.M. Regulations - VOC Compliant, 350 g/l): Liquid type membrane-forming curing compound, clear styrene acrylate type, complying with ASTM C1315, Type I, Class A, 25% solids content minimum. Moisture loss shall be not more than 0.40 Kg/m<sup>2</sup> when applied at 300 sq. ft./gal. Manufacturer's certification is required.
    - b. Curing Compounds shall be "Super Diamond Clear VOX" by The Euclid Chemical Company, "Masterkure 100W" by Master Builders, or approved equal.
  2. Strippable
    - a. Clear Curing Compound: Liquid type membrane-forming curing compound, complying with ASTM C309.
    - b. Curing Compounds shall be "Kurez DR Vox, Kurez W Vox by The Euclid Chemical Company, "Masterkure N-Seal VOC" by Master Builders, or approved equal.
- E. Bonding Agent
1. Epoxy/acrylic resin that will not form a vapor barrier with the concrete with the following properties:
    - a. Bond strength of 1800 psi in 2 hours when tested in accordance with ASTM C882.
    - b. Flexural strength of 2000 psi in 28 days when tested in accordance with ASTM C78.
    - c. Tensile strength of 600 psi in 28 days when tested in accordance with ASTM C496.
  2. Bonding agent shall be "CR246 Sto Bonding and Anti-corrosion Agent" by Sto Concrete Restoration Division, Armatec 110 by Sika Corp, Corr-bond by Euclid Chemical Company, or approved equal.
- F. Densifier/Sealer
1. The densifier/sealer compound shall be a silicate-based sealer that penetrates concrete surfaces, increases abrasion resistance and provides a "low-sheen" surface that is easy to clean. The compound shall contain a minimum solids content of 20%, of which 50% is silicate.
  2. Densifier/Sealer shall be "Euco Diamond Hard" by The Euclid Chemical Co., "Ashford Formula" by Curecrete Chemical Co., or approved equal.
    - a. VOC Content: Curing and sealing compounds shall have a VOC content of 200 g/L or less when calculated according to 40 CFR 59, Subpart D (EPA Method 24).
- G. Below Grade Waterstops & Vertical Drainage Panels
1. Provide PVC waterstops to all below grade basement retaining wall stem to footing joints. Install in accordance with the Manufacturer's Installation Instructions and as shown on the Construction Documents.
    - a. Greenstreak PVC Waterstop by SIKA
    - b. Sealtight PVC Waterstop by W.R. Meadows
    - c. PVC Waterstop by BoMetals, Inc.

- d. Or approved equal.
- 2. Provide Controlled Expansion Hydrophilic waterstops to all below grade basement retaining wall stem to ground slab. Install in accordance with the Manufacturer's Installation Instructions and as shown on the Construction Documents.
  - a. Swellstop Hydrophilic Waterstop by SIKA
  - b. ConSeal CS-231 Hydrophilic Waterstop by ConSeal
  - c. Hydro-Flex Waterstop by BoMetals, Inc.
  - d. Or approved equal.
- 3. Provide Drainage Panel to all below grade basement retaining wall stems. Install in accordance with the Manufacturer's Installation Instructions and as shown on the Construction Documents.
  - a. CCW MiraDRAIN 6000 by Carlisle
  - b. Or approved equal.

#### H. FORM-FACING MATERIALS

- 1. Form-Facing Panels for Exposed-Aggregate Finishes: Exterior-grade plywood panels, nonabsorptive, that will provide continuous, true, and smooth architectural concrete surfaces, high-density overlay, Class 1, or better, complying with DOC PS 1.
- 2. Form Joint Sealant: Elastomeric sealant complying with ASTM C 920, Type M or Type S, Grade NS, that adheres to form joint substrates.
- 3. Sealer: Penetrating, clear, polyurethane wood form sealer formulated to reduce absorption of bleed water and prevent migration of set-retarding chemicals from wood.
- 4. Exposed Aggregate Walls: Furnish internally disconnecting ties that will leave no metal closer than 1 ½ inches (38 mm)

#### I. LIQUID FLOOR TREATMENTS

- 1. Penetrating Liquid Floor Treatment: Clear, chemically reactive, waterborne solution of inorganic silicate or silicate materials and proprietary components; odorless; that penetrates, hardens, and densifies concrete surfaces.
  - a. Products: Subject to compliance with requirements, provide one of the following available products that may be incorporated into the Work include, but are not limited to, the following:
    - 1) Conspec by Dayton Superior; Intraseal, or approved equal.
    - 2) Euclid Chemical Company, an RPM company; Euco Diamond Hard, or approved equal.
    - 3) Meadows, W. R., Inc.; LIQUI-HARD, or approved equal.

### 2.3 MIXES

#### A. General

1. Concrete for all parts of the Work shall be of the specified quality capable of being placed without excessive segregation and, when hardened, of developing all characteristics required by the Specifications and Drawings.

**B. Strength**

1. Strength requirements given in Part 1 of this Specification are based on 28-day compressive strength (56 days for concrete containing 40% alternate cementitious material - slag), unless high early strength is specified, in which case required strengths are based on 7-day compressive strength (28-day for concrete containing 40% alternate cementitious material - slag).

**C. Method of Proportioning**

1. Proportion, batch, and mix concrete in accordance with ASTM C 94/C 94M and furnish batch ticket information.
2. Mix designs are specific to material used, concrete producer, and method of placement. Each mix design must be reviewed by the Engineer of Record and accepted prior to placement.

**D. Normal Weight Concrete**

1. Unless otherwise specified, proportion and produce normal weight concrete to have a maximum slump of 4" or less. A tolerance of up to 1" above the indicated maximum shall be allowed for individual batches provided the average for all batches or the most recent 10 batches tested, whichever is fewer, does not exceed the maximum limit. The slump shall be determined by ASTM C143. Concrete containing High Range Water Reducer shall have a slump not exceeding 9", unless otherwise approved by the Engineer of Record. The concrete shall arrive at the job site at a slump of 2" to 3", be verified, and the HRWR admixture added to increase the slump to the approved level.
2. Where Normal weight concrete is indicated to be air-entrained, provide the following air content for the grading size of coarse aggregate as follows:
  - a. No.8.....7½%
  - b. No.67.....6%
3. Tolerance on air content as delivered shall be +1.5%.

**E. Structural Lightweight Concrete:** Lightweight concrete, including concrete used as roof fill and other locations indicated to receive fill, shall conform to the following requirements:

1. Coarse aggregate shall be 100% lightweight aggregate, expanded clay, shale, or slate produced by the rotary kiln method, conforming to the requirements of ASTM C330. Provide 3/8" maximum size coarse aggregate for beam and/or column encasement.
2. The concrete shall not exceed an air dry unit weight of 115 lb/ft<sup>3</sup> as measured in accordance with ASTM C567. The wet unit weight of the fresh concrete shall be within +3 lbs of the wet unit weight which is to be determined and established from the preliminary tests or prequalified mixes.
3. Unless otherwise specified, proportion and produce lightweight concrete to have a slump of 3" or less. A tolerance of up to 1" above the indicated maximum shall be allowed for individual batches provided the average for all batches or the most recent 10 batches tested,

whichever is fewer, does not exceed the maximum limit. The slump shall be determined by ASTM C143. Concrete containing High Range Water Reducer shall have a slump not exceeding 9", unless otherwise approved by the Engineer of Record. The concrete shall arrive at the job site at a slump of 3" to 4", be verified, and the HRWR admixture added to increase the slump to the approved level.

4. Provide the following air content for the grading size of coarse aggregate as follows:
  - a. 3/8" ... 4 1/2 - 7 1/2 %
  - b. 3/4" ... 4 - 6 %
5. Tolerance on air content as delivered shall be +1.5%.
6. Mix design shall include the dry and saturated (SSD) weights of the lightweight aggregate. The saturated weight shall take into account the internal and surface moisture content that will be in the aggregate at the time of mixing.
7. Mix design shall be based on the recommendations of the lightweight aggregate producer.

## 2.4 SOURCE QUALITY CONTROL

### A. Tests

1. The Owner's Testing Laboratory will review and/or check test proposed materials for compliance with the Specifications prior to construction.
2. The Testing Laboratory will perform field tests as work progresses as listed in "Field Quality Control".

### B. Inspection

#### 1. Testing Laboratory

- a. The Owner will engage a Licensed Concrete Testing Laboratory to inspect batching of the concrete, at the Owner's discretion, and perform all field tests. The Laboratory will perform the following services:
  - 1) Review and/or check-test the Contractor's proposed materials for compliance with the Specifications.
  - 2) Review and/or check-test the Contractor's proposed mix design.
  - 3) Secure production samples of materials at plants or stock-piles during the course of the Work and test for compliance with the Specifications.
  - 4) Perform tests during construction as required by the International Building Code 2021, New Jersey Edition & applicable ACI codes. The Laboratory will obtain samples at the mixer and when directed by the Engineer at the point of placement by the following methods:
    - a) Secure composite samples in accordance with ASTM C172. Each sample shall be obtained from a different batch of concrete on a random basis, avoiding any selection of the test batch other than by a number selected at random before commencement of concrete placement.
    - b) Mold and cure specimens from each sample in accordance with ASTM C31 and perform strength tests.

- b. The Owner may assign a qualified concrete technician to be stationed at the batch plant depending on the size of the project or evidence of poor concrete breaks. At least one qualified concrete technician will be stationed at the site to obtain the test specimens.
  - c. The Laboratory will be responsible to and under the supervision of the Special Inspector.
- 2. Special Inspector
  - a. The Owner will assign, under the requirements of Section BC 1704.2.1 a Special Inspector who will supervise the testing of the materials and the inspection of concrete construction. The Special Inspector is responsible any required filing with the Building Department, as well as maintaining a log book of the concrete work.
  - b. The Special Inspector will check that all required tests are made and the results submitted and shall have the right to order the Contractor to make such changes of the mix of concrete as required to produce concrete of the necessary strength. The Special Inspector will also report to the Building Department Superintendent any deviation from the requirements of the Building Code, as indicated by records of inspection and reports of tests.
- 3. Notification
  - a. Notify the Owner in writing at least forty-eight hours in advance of each concrete placement. The Owner will notify the Testing Laboratory immediately to order out the necessary concrete technicians to cover the work.
  - b. Once the concrete technicians are ordered out and a cancellation follows, the Contractor will be charged Six Hundred Dollars for each technician so ordered to appear, unless a cancellation order is issued to the Laboratory by 3 PM the day before the concrete placement.
  - c. During the placement of the concrete, notify the Owner immediately of any delay at the concrete plant or at the job site. Where the Owner decides to provide a technician at the plant, do not mix concrete or add admixtures unless the Technician is present. Do not add admixtures to be added at the site unless the Technician is present.
- 4. Contractors Responsibility for Quality Control
  - a. The Contractor will receive a copy of all reports prepared by the Laboratory and/or Special Inspector. Copies of the daily concrete reports prepared by the Special Inspector will be available for reference.
  - b. The Contractor will therefore be afforded an opportunity to review all reports and mix data and submit to the Special Inspector any recommendations in changing the mixes provided they conform to the Code and Specifications. Any testing required because of changes in materials or proportions of the mix requested by the Contractor, as well as any extra testing of concrete or materials occasioned by the failure to meet Specification requirements shall be at the Contractor's expense. The Contractor, at any time, can arrange to have independent tests made at own expense by an approved laboratory and submit the reports and recommendations to the Special Inspector and Engineer of Record.
  - c. The tests and inspections, as provided in the Code, do not in any way relieve the Contractor of responsibility to construct the Work in accordance with the Drawings and Specifications and to use safe, standard methods of construction at all times,

safeguarding the public, workmen, and structure. The Contractor shall be solely responsible for the physical control of the materials and concrete mixes, and shall see that such mix designs, tests, and controls are in accordance with the Code and Specifications.

- d. It shall be the Contractor's complete responsibility to adjust, alter, and/or correct any controls necessary in materials and/or concrete operation based upon tests and inspections made by the Owner or the Contractor's independent tests. If, during the course of the concrete operations, a lower water content or more cement is needed per cubic yard above that used in the approved design mix, provide same at no additional cost to the Owner.
- e. If the Contractor requests any deviation from the Specifications and Drawings, or makes or causes to be made any change of construction from Drawings and Specifications, and such request requires the time and investigation of the Engineer of Record, pay all costs incurred by the Owner relating to such time and investigation.

### **PART 3 -EXECUTION**

#### **3.1 EXAMINATION**

- A. Prior to placement of concrete, verify that the concrete cover over the reinforcement is that specified on Drawings.
- B. Verify that anchor bolts, reinforcement, and all other embedded items are provided and held securely, positioned accurately, and will not be a detriment to concrete placement.
- C. Examine all adjoining work on which this Work is in anyway dependent for proper installation and workmanship. Report to the Owner any condition that prevents the performance of this Work.

#### **3.2 PROTECTION**

- A. Protect concrete members on grade and the subgrade from freezing before and after installation. Provide blankets and other items necessary.
- B. Protect adjacent finish materials and previously poured concrete against spatter during concrete placement.
- C. Protect hardener and concrete coating flooring systems from damage and wear during the remainder of construction period. Use protective methods and materials, including temporary covering, recommended in writing by hardener/sealer and concrete coating flooring systems manufacturers.
- D. Provide and maintain barricades and safeguards around openings, etc. to protect workmen from injury and to comply with all Building Code, OSHA, and other authorities having jurisdiction regulations.

#### **3.3 PREPARATION**

- A. Remove ice, excess water, trash, and rubbish from forms.
- B. Remove hardened concrete from inner surfaces of conveying equipment and all formwork, reinforcement, and dowels.
- C. Prepare previously placed concrete to be in contact with new concrete in the manner described under "Construction Joints".
- D. Prepare existing concrete to be in contact with new concrete by roughening and cleaning the surface and applying a bonding agent. Surface must be free of laitance. Concrete must be placed after agent cures and within 20 hours of applying bonding agent. If time elapses, apply a new application in accordance with the directions of the manufacturer.
- E. In case a conflict arises between concrete as poured and other Work that requires cutting into concrete beams, columns, walls, or slabs, submit requests to the Engineer of Record, who will issue instructions accordingly. Cutting of concrete is otherwise prohibited.
- F. Do not place concrete on frozen ground.

### 3.4 JOINTS AND EMBEDDED ITEMS

#### A. Construction Joints

- 1. Make joints not shown on Drawings at locations that will least impair the strength of the structure. Such location is subject to the approval of the Engineer of Record.
- 2. Continue reinforcement across joints. Provide longitudinal keys at least 1½" deep in walls and provide other keys as required. Drawings indicate keys or roughened surface at interface of walls and footings.
- 3. Thoroughly clean concrete surface of oil, grease, and other contaminants and remove all laitance prior to placement of adjoining concrete. Roughen surface of the concrete in an approved manner that will expose the aggregate uniformly to a 1/4" amplitude and will not leave laitance, loosened particles of aggregate, or damaged concrete at the surface. Dampen surface immediately prior to placement.
- 4. Properly install all embedded items where required.
- 5. Install waterstops.

#### B. Expansion Joints

- 1. Do not extend reinforcement or other embedded metal items bonded to concrete continuously through expansion joint. Provide smooth dowels greased on one end at the joints with end cap or insert into pvc sleeve of length greater than the dowel length by .75" minimum.
- 2. Provide joint filler of type specified in Section 079200 at the expansion joint of the sizes indicated on the Drawings or specified herein.

#### C. Other embedded items

- 1. Place all fence sleeves and shoes, pipe sleeves, inserts, anchors, anchor bolts, and other embedded items required for the Work of other Divisions or for their support prior to concreting. Install Link-seal Watertight Sleeves by Thunderline Corp. through foundation

walls and other locations where watertight construction is required and where indicated on Drawings as per manufacturer's instructions. Coordinate with other trades, all Drawings, and manufacturer for sizes, location, and quantity.

2. Provide ample notice and opportunity for items of other Division to be introduced and/or furnished for installation before concrete is placed. Coordinate the Work of the other Divisions so all items are placed in their proper location.
3. Set metal pipe sleeves, sockets, shoes, etc. into concrete to receive fence posts or any other items, all as indicated on details.

D. Placement of Embedded Items

- E. Position expansion joint material, waterstops, and other embedded items accurately and support against displacement. Fill voids in sleeves, anchor slots, and inserts temporarily with readily removable material to prevent the entry of concrete into the voids.

### 3.5 MIXING AND PLACING CONCRETE

A. General

1. Notify Owner at least 48 hours in advance of each concrete placement. Do not place concrete without approval of the Special Inspector.
2. Do not allow rainwater to increase mixing water nor damage surface finish.
3. When placing concrete in cold weather (air temperature below 40°F), concrete shall contain either an accelerating admixture or use Type III cement.

B. Mixing

1. Batch, mix, and transport ready-mixed concrete in accordance with ASTM C 94/C 94M and furnish batch ticket information. Truck mixers and agitators shall meet the requirements of the Truck Mixers Manufacturer's Bureau or shall comply with Section 8.1.2 of ASTM C94 and shall be NJDOT approved. All trucks shall have working revolution counters and site gages. Batch all other concretes in accordance with subsection 4.3.1 of ACI 301 only if permitted by the Engineer of Record and Special Inspector.
2. Batch ready-mixed concrete only in plants that are NRMCA certified and NJDOT approved. Only plants that are NJDOT approved with current certification meeting the requirements for certification of the NRMCA for automatic batching and automatic recording will be permitted. Concrete shall be batched by the use of automation.
3. Unless otherwise approved by the Engineer of Record, concrete shall be deposited within 1½ hours or 300 revolutions of the mixing drum, whichever comes first, after introduction of water to the cement or cement to the aggregate. When the ambient temperature rises above 90°F, the time shall be decreased to 1 hour.
4. Batch lightweight concrete using the saturated weight of aggregate, which shall take into account the internal and surface moisture content.
5. Tempering and control of mixing water
  - a. Mix concrete only in quantities for immediate use. Concrete that has started to set shall not be rettempered, but shall be discarded. Water shall not be added at the site.
  - b. For concrete containing HRWR (Superplasticizer), if loss of slump occurs, HRWR may be redosed at the site as long as a "flash set" has not occurred. Redosage

procedures must be discussed and approved by the Engineer and the admixture manufacturer at the Pre-Concrete Conference.

6. Weather Conditions

a. Cold weather (Air Temperatures below 40°F)

- 1) Concrete shall have either an accelerating admixture or use Type III cement.
- 2) The temperature of concrete delivered at the site shall conform to the temperature limitations given in Section 5 of ACI 301.
- 3) If water or aggregate is heated above 100°F, combine the water with the aggregate in the mixer before cement is added. Cement shall not be mixed with water or with mixtures of water and aggregate having a temperature greater than 100°F.
- 4) Detailed requirements are given in ACI 306R.

b. Hot Weather (Air Temperatures above 90°F)

- 1) Cool the ingredients before mixing, or substitute flake ice or well-crushed ice of a size that will melt completely during mixing for all or part of the mixing water if, due to high temperature, low slump, flash set, or cold joints are encountered.
- 2) Detailed requirements are given in ACI 305.

7. Admixtures - General

- a. Add all admixtures prior to mixing unless otherwise specified or directed.
- b. Air-entraining admixtures and other chemical admixtures shall be charged into the mixer as solutions and shall be measured by means of an approved mechanical dispensing device. The liquid shall be considered a part of the mixing water. Admixtures that cannot be added in solution may be weighed or may be measured by volume if so recommended by the manufacturer. The accuracy of measurement of any admixture shall be within +3 percent.
- c. If two or more admixtures are used in the concrete, add them separately to avoid possible interaction that might interfere with the efficiency of either admixture or adversely affect the concrete. Do not charge admixtures into the mixer in such a manner that they will come in direct contact with the cement.
- d. Use of accelerating admixtures or Type III cement shall not relax cold weather placement requirements.
- e. Use of retarding admixtures in hot weather must be approved by the Special Inspector. Use of such admixtures will not relax hot weather placement requirements.

C. Placing

1. General: Place concrete in accordance with ACI 304R and ACI 318.
2. Conveying
  - a. Handle concrete from the mixer to place of final deposit as rapidly as practicable by methods that will prevent separation or loss of ingredients and in a manner that will assure that the required quality of concrete is obtained.

- b. Conveying equipment shall be approved and shall be of a size and design such that detectable setting of concrete shall not occur before adjacent concrete is placed. Conveying equipment shall be cleaned at the end of each operation or workday. Conveying equipment and operations shall conform to the following additional requirements:
  - 1) Truck mixers, agitators, and non-agitating units and their manner of operation shall conform to the applicable requirements of ASTM C94.
  - 2) Belt conveyors shall be horizontal or at a slope which will not cause excessive segregation or loss of ingredients. Concrete shall be protected against undue drying or rise in temperature. An approved arrangement shall be used at the discharge end to prevent apparent segregation. Mortar shall not be allowed to adhere to the return length of the belt. Long runs shall be discharged into a hopper or through a baffle.
  - 3) Chutes shall be metal or metal-lined and shall have a slope not exceeding 1 vertical to 2 horizontal and not less than 1 vertical to 3 horizontal. Chutes more than 20' long and chutes not meeting the slope requirements may be used provided they discharge into a hopper before distribution.
  - 4) Pumping or pneumatic conveying equipment shall be of suitable kind with adequate pumping capacity. Pneumatic placement shall be controlled so that segregation is not apparent in the discharged concrete. The loss of slump in pumping or pneumatic conveying equipment shall not exceed 2". Pumping is permitted only if a pump mix is approved. Concrete shall not be conveyed through pipe made of aluminum or aluminum alloy.
- 3. Depositing: Detailed recommendations are given in ACI 304R.
  - a. General
    - 1) Deposit concrete continuously, or in layers of such thickness that no concrete will be deposited on concrete that has hardened sufficiently to cause the formation of seams or planes of weakness within the section. If a section cannot be placed continuously, locate construction joints at points as provided for in the Drawings, shop drawings, or as approved.
    - 2) Carry out placement at such a rate that the concrete that is being integrated with fresh concrete is still plastic. Do not deposit concrete that has partially hardened or has been contaminated by foreign material.
    - 3) Place concrete in a manner that uniformly distributes the material over the metal deck in order to avoid overloading the deck joints.
    - 4) Remove temporary spreaders in forms when the concrete placing has reached an elevation rendering their service unnecessary. They may remain embedded in the concrete only if made of metal or concrete and if prior approval has been obtained.
    - 5) Placing of concrete in supported elements shall not be started until the concrete previously placed in columns and walls is no longer plastic.
  - b. Segregation: Deposit concrete as nearly as practicable in its final position to avoid segregation due to rehandling or flowing. Do not subject concrete to any procedure that will cause segregation. The maximum drop height shall be five feet. Provide drop tubes for placement in forms and other locations where drop height exceeds the indicated maximum.

- c. Consolidation
  - 1) Consolidation of concrete and the use and type of concrete shall be in accordance with ACI 309R.
  - 2) Where a surface mortar is to be the basis of the finish, the coarse aggregate shall be worked back from the forms with a suitable tool so as to bring a full surface of mortar against the form, without the formation of excessive surface voids.
  - 3) Consolidate all concrete by vibration so that the concrete is thoroughly worked around the reinforcement, around embedded items and into corners of forms, eliminating all air or stone pocket or weakness. Internal vibrators shall be the largest size and most powerful that can be used in the Work, as described in Table 5.1.5 of ACI 309R, with a minimum frequency of 7000 revolutions per minute and shall be operated by competent workmen. Overvibrating and use of vibrators to transport concrete within forms is not permitted. Insert and withdraw vibrators at many points, from 18" to 30" apart. At each insertion, the duration shall be sufficient to consolidate the concrete but not sufficient to cause segregation, generally from 5 to 15 sec duration, and shall reach the bottom of the pour. Keep a spare vibrator on the job site during all concrete placing operations.
- 4. Cold Weather Concrete Placement and Protection: Detailed requirements are given in ACI 306.
  - a. When the mean daily temperature of the atmosphere is less than 40°F during concreting, or within 72 hours there after (or the air temperature is not greater than 50°F for more than one-half of any 24-hr period for a period of 3 consecutive days), follow the procedures outlined in ACI 306R to protect the concrete. Provide a cold weather concreting plan as well as list of equipment and material (e.g. thermometers, blankets) to be used to the Special Inspector. Temperature of the plastic concrete shall be no lower than 55°F. Heat all forms, reinforcing steel, and surfaces to receive concrete above the freezing point and keep them completely free of frost, snow, and ice. Protection shall consist of insulating boards, blankets, or heated enclosures. Underside of slabs shall be heated during placement and protection period. Initial protection period shall be as indicated in tables 5.1 and 5.3 of ACI 306R. Maximum temperature drop of concrete surface after protection is removed shall follow table 5.5 of ACI 306R.
- 5. Hot Weather Placement and Protection: When the mean daily temperature of the atmosphere is over 90°F during concreting, follow the procedures outlined in ACI 305R to protect the concrete.
  - a. All concrete, at the time it is actually deposited in the forms, shall have a temperature not lower than 50°F but never above 90°F.
  - b. Cover reinforcement with water-soaked burlap to cool steel so its temperature will not exceed the ambient air temperature immediately before concrete placement.
  - c. Dry surfaces that are to receive concrete should be wet down before commencing placement of concrete and the temperature of such surfaces should not exceed the temperature of the concrete being placed.

6. For elevated slabs, anticipate deflection of the structure and shoring during concrete placement and during removal of shoring and provide additional concrete as required to achieve the levelness specified.

### 3.6 FINISHING OF FORMED SURFACES AND REPAIR OF SURFACE DEFECTS

#### A. General

1. Remove forms as soon as practicable. Refer to Section 031000.
2. Repair surface defects, including tie holes and cracks, immediately after form removal. Patches shall be of quality to match the specified finish.
3. Remove oil, grease, compounds, and other contaminants from surfaces and areas to be repaired, those surfaces in contact with sprayed fireproofing, and those receiving coatings (ie. plaster, waterproofing, paint, and membranes of any kind).
4. Provide finishes specified below immediately after form removal.
5. Provide curing and protection.

#### B. Repair of Surface Defects

1. Remove all honeycombed and other defective concrete down to sound concrete. If chipping is necessary, the edges shall be perpendicular to the surface or slightly undercut. Undercut all cracks a minimum of 1" x 1". No featheredges will be permitted. Dampen the area to be patched and an area at least 6" wide surrounding it to prevent absorption of water from the patching mortar. A bonding grout shall be prepared using a mix of approximately 1 part cement to 1 part fine sand passing a No. 30 mesh sieve, mixed to the consistency of thick cream, and then well brushed into the surface.
2. The patching mortar shall be made of the same materials and of approximately the same proportions as used for the concrete, except that the coarse aggregate shall be omitted and the mortar shall consist of not more than 1 part cement to 2½ parts sand by damp loose volume. Substitute white Portland cement for a part of the gray portland cement on exposed concrete in order to produce a color matching the color of the surrounding concrete, as determined by a trial patch. If the material color cannot be matched properly, the Contractor shall use a specialty repair mortar of the Engineer of Record's choice at the Engineer's discretion. The quantity of mixing water shall be no more than necessary for handling and placing. Mix the patching mortar in advance and allowed to stand with frequent manipulation with a trowel, without addition of water, until it has reached the stiffest consistency that will permit placing.
3. After surface water has evaporated from the area to be patched, brush the bond coat well into the surface. When the bond coat begins to lose the water sheen, apply the premixed patching mortar. The mortar shall be thoroughly consolidated into place and struck off so as to leave the patch slightly higher than the surrounding surface. To permit initial shrinkage, leave it undisturbed for at least 1 hr before final finishing. Keep the patched area damp for 7 days. Do not use metal tools for finishing a patch in a formed wall that will be exposed.
4. Epoxy Bonding Adhesive: ASTM C 881/C 881M, two-component epoxy resin, capable of humid curing and bonding to damp surfaces, of class suitable for application temperature and of grade to suit requirements.
  - a. Types I and II, non-load bearing, for bonding hardened or freshly mixed concrete to hardened concrete

**C. Tie Holes and Other Repairs**

1. Remove ties, nails, and other form accessories below the concrete surface when the surface is exposed to view, the elements, or for surfaces to receive waterproofing or dampproofing. For surfaces not exposed to view or the above-mentioned conditions, remove metal to the surface. Refer to Section 031000.
2. Undercut surfaces of holes. After cleaning and thoroughly dampening the holes, fill them solid with the patching mortar. The mortar shall match the color of the existing concrete for concrete exposed to view as specified in paragraph B.2 above.

**D. Formed Finishes**

**1. Rough Form Finish**

- a. Provide for concrete not exposed to view unless otherwise indicated under "Finishing" below.
- b. Formwork material given in Section 031000.
- c. Repair surface as indicated in B. and C. above.
- d. Chip or rub off fins exceeding 1/4" in height.

**2. Smooth Form Finish**

- a. Provide for concrete exposed to view, concrete receiving sheet membrane waterproofing, or as indicated under "Finishing" below. Areas exposed to view shall have a CS 3 or better finish as developed by the Cresset Chemical Company.
- b. Formwork material is given in Section 031000.
- c. Repair surfaces as indicated in B. and C. above.
- d. Chip or rub off fins completely and grind smooth.
- e. Provide smooth rubbed finish unless otherwise indicated below.

**E. Finishing**

**1. Smooth Rubbed Finish**

- a. Provide for smooth form finish except for those items listed in 2 below.
- b. Produce on newly hardened concrete no later than the day following form removal.
- c. Wet the surfaces and rub with a No. 16 carborundum brick or other equal abrasive to obtain a smooth, even surface of uniform appearance without applying any cement or other coating.
- d. Obtain the final finish by thoroughly rubbing with a No. 30 carborundum brick. The surface shall be wet for a period of 3 days. The Owner shall be the sole judge of whether the finish is proper.

**2. Ceiling Surfaces, Beams and Columns**

**a. Non-painted Concrete**

- 1) Work Required: Provide smooth form finish without rubbing.

- b. Acoustical Tile Ceiling: When the Drawings indicate that the tile is to be applied directly to the underside of concrete slabs, provide the non-painted concrete finish. However, exposed beam haunches and exposed columns shall be "CRP".
- c. Hung Ceiling: Where hung ceilings are indicated on Drawings or specified, provide a rough form finish.
- d. Columns: Exposed concrete surfaces of columns shall be non-painted concrete finish or "CRP" as determined by the required ceiling finish of the room in which columns are located.

3. Liquid Floor Treatments

- a. Penetrating Liquid Floor Treatment: Prepare, apply, and finish penetrating liquid floor treatment according to manufacturer's written instructions.
  - 1) Remove curing compounds, sealers, oil, dirt, laitance, and other contaminants and complete surface repairs.
  - 2) Do not apply to concrete that is less than seven days' old.
  - 3) Apply liquid until surface is saturated, scrubbing into surface until a gel forms; rewet; and repeat brooming or scrubbing. Rinse with water; remove excess material until surface is dry. Apply a second coat in a similar manner if surface is rough or porous.
- b. Sealing Coat: Uniformly apply a continuous sealing coat of curing and sealing compound to hardened concrete by power spray or roller according to manufacturer's written instructions.
- c. Concrete floors which are to be exposed within the finished building, and which are not scheduled to receive an applied finish, shall be sealed. Membrane-forming curing and sealing compounds shall not be used where slabs are to receive liquid floor hardener or other coatings or finish materials, as incompatibility issues can lead to failures of the finish system or materials. Wet curing is required where resilient flooring is to be applied directly to the concrete slab. Curing compounds, when approved by EOR and architect, must be completely removed from the surface of the concrete prior to installation of resilient flooring.

F. Acceptance of Concrete Finish

- 1. If the finish produced is not acceptable to the Owner, the Contractor shall be responsible for all costs incurred to produce an acceptable finish by whatever means determined by the Owner.

3.7 SLABS

A. Placement

- 1. Mixing and placing shall be carefully coordinated with finishing. Do not place concrete on the subgrade or forms more rapidly than it can be spread, straightedged, and darbied or bull floated. Provide leveling, floating, troweling, etc. at the correct time interval after pouring to prevent dusting and a non-durable surface as specified in ACI 302.1R. These operations must be performed before bleeding water has an opportunity to collect on the surface.

2. To obtain good surfaces and avoid cold joints, the size of finishing crews shall be planned with due regard for the effects of concrete temperature and atmospheric conditions on the rate of hardening of the concrete.
3. Provide extra concrete as required to make up for any deflections in the metal deck and steel beams in order to provide a level surface using a laser. The beam, girder, and deck deflections may total up to 1½”.

B. Leveling and Finishing

1. General

- a. Carefully provide slab depressions as required for the finishes indicated on the Drawings.
- b. Unless otherwise indicated on the Drawings or specified herein, make all slabs even and uniform in appearance and, where no slope is required, level within plus or minus 3/16” in ten feet. All float-finished slabs shall achieve a tolerance of 5/16” in 10 feet and all trowel-finished surfaces shall achieve a tolerance of 3/16” in 10 feet. For small areas such as stairs, and for areas that will be finished with wood flooring, tolerance shall be 1/8” in ten feet. Tolerance is measured by placing a freestanding 10-foot straight edge anywhere on the slab and allowing it to rest upon two high spots within 72 hours after slab concrete placement. The gap between the straight edge and floor shall not exceed the above-specified tolerance.
- c. Where floor drains or floor slopes are indicated, slope slabs uniformly to provide even fall for drainage.
- d. Floors shall achieve flatness and levelness using the “F” number system, according to ACI 302.1R and tested according to ASTM E1155.
- e. Protect finishes from contamination from time of placing until time of acceptance, placement of topping, etc.
- f. Remove defects of sufficient magnitude to show through floor coverings or that do not meet tolerances by grinding.

2. Finishes

- a. Surfaces which receive bonded applied cementitious applications such as full-set vitreous ceramic tile, concrete fills and toppings, cementitious membrane waterproofing: Strike off and level to the proper elevation. After the topping has stiffened sufficiently to permit the operation, float the surface to a uniform sandy texture. The surface shall then be broomed to a texture as approved by the Architect.
- b. Finish surfaces to the following tolerances, according to ASTM E 1155 (ASTM E 1155M), for a randomly trafficked floor surface:
  - 1) Specified overall values of flatness, F(F) 35; and of levelness, F(L) 25; with minimum local values of flatness, F(F) 24; and of levelness, F(L) 17; for slabs-on-grade.
- c. Surfaces to receive floor coverings, such as resilient flooring, thin-set terrazzo and vitreous ceramic tile, carpeting, wood floors, or surfaces that are exposed or painted finishes such as at auditorium floors and stairs, unless specified otherwise: Steel trowel surface to a smooth dense finish, free of trowel marks, grooves, depressions and ripples with a tolerance no greater than 3/16” in ten feet (1/8” at wood floors). Exposed or painted slabs are to have a “hard trowel” finish (a second steel hand

troweling). Apply densifier/sealer to slabs exposed or painted, except for those specified below to have no finish. Apply two coats in accordance with the manufacturer's instructions at the proper time.

- d. Surfaces intended to receive roofing, water-proofing membranes: Level and wood float surface. Leave surface free from depressions, bulges, rough spots, and other defects.
- e. Surfaces with no finishes: Areaways, pipe and duct, and crawl spaces; Level and wood float surface level or toward drains if required.
- f. Pavements: Finish surface to a true smooth plane and texture with a toothed roller or float with a wood float. Score concrete pavement in squares of approximately 5'-0" and/or as shown on Drawings. Each rectangular slab shall have all edges neatly rounded with proper tools and be bounded on all sides by a troweled border about 1" in width.
- g. Ramps, Driveways, Exterior Concrete Steps: Level and float surface. Follow with a broom finish perpendicular to direction of traffic.

C. Slabs on Grade

1. General

- a. Aggregate base and crushed stone base material and preparation is part of Work of Section 310000.
- b. Where pavements to remain are damaged or destroyed as a result of the Work, patch, repair, or replace as required. Color to match existing.
- c. Subgrade and/or aggregate base/crushed stone base shall be free of frost before concrete placing begins.
- d. Control Joints:
  - 1) Primary Method: Soff-Cut System method, by Soff-Cut International, Corona, CA (800)776-3328. Finisher must have documented successful experience in the use of this method prior to this project. Install cuts within 2 hours after final finish at each saw cut location. Use 1/8 inch thick blade, cutting 1 1/4 inch into slab.
  - 2) Optional Method (Where Soff-Cut System Method Equipment is Not Available): Properly time cutting with the set of the concrete. Saw-cut control joints within 12 hours after finishing. Start cutting as soon as the concrete has hardened sufficiently to prevent aggregates being dislodged by the saw. Complete cutting before shrinkage stresses become sufficient to produce cracking. Use 1/4" thick blade, cutting 1/4 slab depth.

2. Pavements, Areaways

- a. Provide 4" thick concrete slab unless otherwise indicated.
- b. Provide 6x6-W2.9xW2.9 WWF placed 2" from top surface.

3. Driveways

- a. Provide 7" thick concrete slab.
- b. Provide 4x4-W4xW4 WWF placed 2" from top surface.

4. Expansion joints

- a. Provide expansion joints for all exterior concrete pavements, driveways, etc. specified under this Section or as shown on Drawings. Expansion joints shall occur at intervals not to exceed 20' in each direction or as indicated on Drawings.
- b. Provide continuous expansion joints at the following locations: Driveways and other concrete pavements abutting area walls, buildings, retaining or any other walls, check pieces, steps, curbs. Also provide at the perimeter of interior slabs on grade (except for framed slabs) and as indicated on contract drawings.
- c. Expansion joint shall be 1/2" wide, full depth, and flush except where sealer is to be provided at exterior pavements, driveways, and where indicated on Drawings. In this case joint shall be full depth minus 1/4" to allow for the poured joint sealer.

D. Structural Lightweight Concrete Fill

1. Structural lightweight concrete fill is required at the following location:
  - a. As a gradient fill on the roof slab to obtain the required slope.
  - b. As a gradient fill to receive setting beds where structural slab is more than 2" below finished floor level.
  - c. Other areas as indicated on Drawings.
2. Prepare concrete surface to receive fill by cleaning laitance, grease, oil, dust, etc. by mechanical or other acceptable means.
3. Immediately prior to placement of fill, dampen surface (without leaving standing water) and scrub in bonding grout composed of a mix of approximately 1 part cement to 1 part fine sand passing a No. 30 mesh sieve, mixed to the consistency of thick cream or the bonding agent. Do not allow bonding grout to set or dry before fill is placed.
4. Provide finish as specified in paragraph B of this Article.

3.8 MISCELLANEOUS CONCRETE WORK

- A. Provide trap-pits, curbs, walls, retaining walls, ramps and other miscellaneous concrete items.

3.9 PATCHING AND BONDING TO EXISTING CONCRETE

- A. Provide bonding agent whenever new concrete is to be poured against existing concrete, whenever the time between concrete pours is longer than that allowed for proper bond, and wherever bonding agent is indicated on the Drawings to be applied.
- B. Remove loose concrete from surface to be bonded with new concrete and clean. Remove rust from reinforcement and structural steel by power chipping and power driven brushes.
- C. Apply bonding agent in accordance with manufacturer's specifications. Pour concrete as soon as bonding agent has cured and within 20 hours after application. If the 20-hour period has elapsed, then the bonding agent must be reapplied.

3.10 CURING AND PROTECTION

- A. General

1. Begin curing concrete immediately after placement and finishing. Protect all freshly deposited concrete from premature drying and excessively hot or cold temperatures and maintain it with minimal moisture loss at a relatively constant temperature for the period of time necessary for the hydration of the cement and proper hardening of the concrete. Detailed procedures are given in ACI 308 and the International Building Code 2021, New Jersey Edition.
2. Cure floor surfaces in accordance with ACI 308.
3. Do not apply curing compounds to surfaces receiving waterproofing, adhesives, membranes or additional concrete unless approved by adhesive or material manufacturer or compound is removed in an approved manner. As an alternate, provide wet curing. Coordinate curing requirements with all related specifications.

**B. Procedure**

1. Concrete surfaces not in contact with forms:
  - a. Ponding or continuous non-manual sprinkling.
  - b. Absorptive mat or fabric, sand, or other covering kept continuously wet.
  - c. Curing compounds conforming to ASTM C1315 or strippable curing compound conforming to ASTM C309.
2. Concrete surfaces in contact with forms:
  - a. Minimize moisture loss from forms exposed to heating by the sun by keeping forms wet until they are removed.
  - b. After form removal, cure with one of the methods listed in 1 above.
3. Continue curing until a total of 7 days has elapsed during which the temperature of the air in contact with concrete has remained above 50°F. Prevent rapid drying during and at the end of the curing period.
4. Remove all curing compounds with cleaners recommended by curing compound manufacturer.

**C. Cold Weather Curing**

1. Concrete must be protected from water loss. This shall be accomplished by the application as soon as possible without harm to the concrete surfaces of either (a) exhaust steam, or vapor-resistant paper or polyethylene film, or (b) curing compounds. In all other respects, curing shall conform to applicable provisions of this Section. Concrete temperature shall be maintained between 50°F and 70°F. Comply with ACI 306.1-90 for cold-weather protection.

**D. Hot Weather Curing**

1. During the period June 1 to October 1 or when hot weather conditions require it, maintain continuous water curing for a minimum period of twenty-four hours. Provide for windbreaks, shading, and other necessary provisions.
2. After 24 hours, curing shall be by one of the methods specified under B above. In all other respects, curing shall conform to applicable provisions of this Specification. Upon termination of the specified moist curing, every effort should be made to reduce the rate of

drying by avoiding air circulation. Comply with ACI 301-10 for hot-weather protection during curing.

- E. Cure concrete according to ACI 308.1, by one or a combination of the following methods:
1. Moisture Curing: Keep surfaces continuously moist for not less than seven days with the following materials:
    - a. Water.
    - b. Continuous water-fog spray.
    - c. Absorptive cover, water saturated, and kept continuously wet. Cover concrete surfaces and edges with 12-inch (300-mm) lap over adjacent absorptive covers.
  2. Moisture-Retaining-Cover Curing: Cover concrete surfaces with moisture-retaining cover for curing concrete, placed in widest practicable width, with sides and ends lapped at least 12 inches (300 mm), and sealed by waterproof tape or adhesive. Cure for not less than seven days. Immediately repair any holes or tears during curing period using cover material and waterproof tape.
    - a. Moisture cure or use moisture-retaining covers to cure concrete surfaces to receive floor coverings.
    - b. Moisture cure or use moisture-retaining covers to cure concrete surfaces to receive penetrating liquid floor treatments.
    - c. Cure concrete surfaces to receive floor coverings with either a moisture-retaining cover or a curing compound that the manufacturer certifies will not interfere with bonding of floor covering used on Project.
  3. Curing Compound: Apply uniformly in continuous operation by power spray or roller according to manufacturer's written instructions. Recoat areas subjected to heavy rainfall within three hours after initial application. Maintain continuity of coating and repair damage during curing period.
    - a. Removal: After curing period has elapsed, remove curing compound without damaging concrete surfaces by method recommended by curing compound manufacturer unless manufacturer certifies curing compound will not interfere with bonding of floor covering used on Project.
  4. Curing and Sealing Compound: Apply uniformly to floors and slabs indicated in a continuous operation by power spray or roller according to manufacturer's written instructions. Recoat areas subjected to heavy rainfall within three hours after initial application. Repeat process 24 hours later and apply a second coat. Maintain continuity of coating and repair damage during curing period.
- F. Where curing is delayed by low temperature and fly ash content, provide additional heating as required to cure concrete as required to achieve the scheduled completion date for the work.
- G. Protection from mechanical injury: Protect concrete from mechanical disturbances during curing period as described under "Protection and Cleaning".

### 3.11 ARCHITECTURAL CONCRETE FINISH

1. Finish Preparation: Remove fins and other projections exceeding specified limits on formed-surface irregularities. Repair and patch tie holes and defects.
2. Abrasive-Blast Finish: Perform abrasive blasting after compressive strength of concrete exceeds 2000 psi (13.8 MPa). Coordinate with formwork removal to ensure that surfaces to be abrasive blasted are treated at same age for uniform results.
  - a. Surface Continuity: Perform abrasive-blast finishing in as continuous an operation as possible, maintaining continuity of finish on each surface or area of Work. Maintain required patterns or variances in depths of blast to match design reference sample or mockup.
  - b. Abrasive Blasting: Abrasive blast corners and edges of patterns carefully, using backup boards, to maintain uniform corner or edge line. Determine type of nozzle, nozzle pressure, and blasting techniques required to match design reference sample or mockup.

### 3.12 FIELD QUALITY CONTROL

- A. Tests to be performed by the Owner's Testing Laboratory during construction are as follows:
  1. Compliance of materials to Specifications tested from production samples.
  2. Determination of the slump of the concrete for each sample taken and whenever consistency of the concrete appears to vary using ASTM C143. The Special Inspector will reject any concrete that does not meet the slump requirements.
  3. Determination of water content of freshly mixed normal weight concrete utilizing the procedure of AASHTO T318. Concrete that does not meet the maximum water to cement ratio or the proportions given in the approved design mix will be immediately rejected regardless of slump.
  4. Strength tests on the specimens in accordance with ASTM C39:
    - a. The frequency of conducting strength tests of concrete, with additional cylinders taken for an additional strength test and one cylinder for a 7-day break. Strength tests shall be performed for each 50 cubic yards, or portions thereof, of concrete placed in any one day's concreting. Specimens will be stored at the site in the insulated curing box provided by the Contractor. Each group of specimens is considered one strength test. One cylinder will be broken at 7 days for information.
      - 1) Portland cement concrete: A strength test shall be performed at 28 days for acceptance. The remaining cylinders for the additional strength test will be tested only if the 28-day breaks are low or durability of the concrete is in question.
      - 2) Portland cement concrete with 40% alternate cementitious material: A strength test will be performed at 28 days to determine if the strength has been made and/or if the strengths are sufficient to continue work, even if not at the required design compressive strength. Depending on temperature, concrete strength can be attained at 28 days even though the strength is considered a 56-day strength. If the first cylinder tested indicates the strength has not been met, the remaining cylinders of the test will be broken at a later date. One set of strength test will be done at 56 days.

- b. If one specimen in a test manifests evidence of improper sampling, molding, or testing, it shall be discarded and the average strength of the remaining cylinders shall be considered the test result. Should all specimens in a test show any of the above defects, the entire test shall be discarded.
5. Determination of air content and unit weight of normal weight concrete sample for each strength test in accordance with ASTM C173 or C231 and ASTM C138.
6. Determination of air content and unit weight of lightweight concrete sample for each strength test in accordance with ASTM C173 or C231 and ASTM C567.
7. Determination of temperature of concrete sample for each strength test.

B. Inspection

1. Refer to "Source Quality Control" for responsibility and procedure.
2. The Contractor shall cooperate in the making of all tests by the Laboratory Technician by:
  - a. Providing a well-constructed shanty, to be approved by the Owner, located adjoining the Owner's inspector's office. This shanty shall have an area of not less than 50 sq ft, be well lighted, and provided with a table for mixing concrete, shelves for storage of the Laboratory's equipment, molds, etc., one chair, hinged door with suitable lock.
  - b. Providing an insulated curing box of sufficient size and strength to contain all specimens made in any four consecutive working days. The Contractor shall furnish an outlet to provide the necessary temperature in the storage box, pending delivery to the Laboratory of the test cylinders.
  - c. Providing a buggy for transporting the concrete taken from the mixer (and/or point of placement) to the shanty for testing and the preparation of specimens.
  - d. Protecting the property of the Laboratory to be stored in the shanty and keeping test specimens free from vibration and other disturbances.
  - e. Providing a microwave of the size specified in AASHTO T318 and a portable generator.

C. Evaluation and Acceptance of Concrete

1. Strength tests on structural concrete will be evaluated according to ASTM C39/C39M.
2. When the average strength of the test cylinders, according to ASTM C39/C39M, falls consistently below the specified strength ( $f'_c$ ), the Owner shall have the right to order the Contractor to change the proportions or the water content of the concrete to secure the required strength for the remaining portion of the structure, all at the Contractor's expense. It is the Contractor's complete responsibility to modify the concrete mix design, material controls, and/or concrete operations where necessary to obtain the compressive strength required by the design and Specification.
3. When the average strength of test cylinders for any portion of the structure is less than that required by the design or Specification, or where there is other evidence that the quality of the concrete is below Specification requirements, the adequacy of the concrete will be checked according to the requirements of ACI 318, Section 5.6.5 either by structural analysis or by core or load tests or by any combination of these procedures. The Engineer of Record will determine which procedures to use.
4. Exterior concrete exposed to the elements with low strength test results or other evidence of poor durability will be rejected.
5. Low Strength Tests of Concrete or evidence of poor durability - Results

- a. Pay for additional costs of labor and materials required at the job for all damages resulting from load tests and the taking of cores. Remove and replace concrete work that is not of adequate strength or durability and cannot be made to work by remedial methods acceptable to the Owner at own cost. The Contractor shall be held responsible for all delays and damages to the work of other Divisions that occur as a result of non-conformance.
- b. Pay for all expenses borne by the Owner resulting from low strength test procedures or evidence of poor durability (such as high slump) specified above.

D. Contractor's Surveys

1. Provide surveys of finished concrete elevations for all building slabs. Provide elevations taken on a 15-foot grid pattern. Indicate discrepancies between contract elevation and actual. Interpolate sloped areas such as roof slabs. Do not proceed with finish work until slabs are repaired.

3.13 PROTECTION AND CLEANING

A. General

1. During the curing period, and thereafter as conditions may require, protect the concrete from damaging mechanical disturbances, particularly excessive load stresses, heavy shock, and excess vibration. Protect all finished concrete surfaces from damage caused by construction equipment, materials or methods, and by rain or running water. Self-supporting structures shall not be loaded in such a way as to overstress the concrete.

B. Floors

1. Floors that have received their final finish shall be closed to all traffic for at least 48 hours following the completion of troweling. Avoid damage to the floor and repair, clean, and prep floor for finishes.

3.14 ACCEPTANCE OF CONCRETE WORK

A. General

1. Completed concrete work that meets all applicable requirements will be accepted without qualification.
2. Completed concrete work which fails to meet one or more requirements but which has been repaired to bring it into compliance will be accepted without qualification.
3. Completed concrete work which fails to meet one or more requirements and which cannot be brought into compliance may be accepted or rejected as provided in these Specifications or in the Contract Documents. In this event, modifications may be required to assure that remaining work complies with the requirements.
4. Concrete work judged inadequate by structural analysis, core test, results of load test or deemed unacceptable due to appearance or durability concerns shall be repaired, reinforced with additional construction if so directed by the Engineer of Record, or be replaced if so directed by the Engineer at the Contractor's expense.

5. Pay all costs incurred by the Owner in providing additional testing and/or analysis required by this Section.
6. The Owner will pay all costs of additional testing and analysis made at its own request that is not required by this Section or that shows concrete is in compliance with the Contract Documents.

**B. Dimensional Tolerances**

1. Formed surfaces resulting in concrete outlines smaller than permitted by the tolerances of Section 031000 shall be considered potentially deficient in strength and subject to the provisions of paragraph D below.
2. Formed surfaces resulting in concrete outlines larger than permitted by the tolerances of Section 031000 may be rejected and the excess material subject to removal. If removal of the excess material is permitted, it shall be accomplished in such a manner as to maintain the strength of the section and to meet all other applicable requirements of function and appearance.
3. Concrete members cast in the wrong location may be rejected if the strength, appearance, or function of the structure is adversely affected or if misplaced items interfere with other construction.
4. Inaccurately formed concrete surfaces exceeding the limits on Section 031000 and which are exposed to view may be rejected and shall be repaired or removed and replaced if required.
5. Slab tolerance from theoretical elevation is 1/2" plus or minus in accordance with ACI 117. Finished slabs exceeding the tolerances, including specified levelness tolerances, may be repaired provided that the strength or appearance is not adversely affected. High spots may be removed with a terrazzo grinder, low spots filled with a structural repair mortars, or other remedial measures performed as permitted. Provide self-leveling cement based materials for large expanses of deficient areas. All materials shall be approved by the Engineer of record and installed by the Contractor at its cost.
6. Measure floor and slab flatness and levelness according to ASTM E 1155 (ASTM E 1155M) within 48 hours of finishing.
7. For tolerances not specifically indicated in the Contract Document, follow requirements of ACI 117.

**C. Appearance**

1. Concrete exposed to view with defects that adversely affect the appearance of the specified finish may be repaired only by approved methods.
2. Concrete not exposed to view is not subject to rejection for defective appearance.

**D. Strength of Structure**

1. The strength of the structure in place will be considered potentially deficient if it fails to comply with any requirements that control the strength of the structure, including but not necessarily limited to the following conditions:
  - a. Low concrete strength as described under "Field Quality Control".
  - b. Reinforcing steel size, quantity, strength, position, or arrangement at variance with the requirements of Section 032000 or the Contract Documents.
  - c. Concrete that differs from the required dimensions or location in such a manner as to reduce the strength.

- d. Curing less than that specified.
  - e. Inadequate protection of concrete from extremes of temperature during early stages of hardening and strength development.
  - f. Mechanical injury as defined under "Protection and Cleaning", construction fires, accidents, or premature removal of formwork likely to result in deficient strength.
- 2. Structural analysis and/or additional testing may be required when the strength of the structure is considered potentially deficient.
  - 3. Core tests may be required when the strength of the concrete in place is considered potentially deficient.
  - 4. If core tests are inconclusive or impractical to obtain or if structural analysis does not confirm the safety of the structure, load tests may be required and their results evaluated in accordance with Chapter 20 of ACI 318.

END OF SECTION 033000

**SECTION 035416 CEMENT LEVELING COMPOUND**

**PART 1 GENERAL**

**1.1 DESCRIPTION**

- A. Work of this Section, as shown or specified, shall be in accordance with the requirements of the Contract Documents.

**1.2 SECTION INCLUDES**

- A. Work of this Section includes all labor, materials, equipment, and services necessary to complete the cement leveling compound as shown on the drawings and/or specified herein, including, but not necessarily limited to, the following:
  - 1. Self-leveling cement compound applied over precast concrete substrates, thickness shall be 1/8" minimum.

**1.3 RELATED SECTIONS**

- A. Cast-in-Place Concrete - Section 033000.

**1.4 QUALITY ASSURANCE**

- A. Applicator: Company specializing in performing the work of this Section with a minimum of 3 years' experience and approved by the manufacturer of the product used.

**1.5 SUBMITTALS**

- A. Submit catalog information and product data for material to be used.
- B. Submit approval letter as required by Article 3.1, para. B. herein.

**1.6 PRODUCT HANDLING**

- A. Protection: Use all means necessary to protect the materials of this Section before, during and after installation and to protect the installed work and materials of all other trades.
- B. Replacements: In the event of damage, immediately make all repairs and replacements necessary.

**1.7 MOCK-UP**

- A. Construct a mock-up of underlayment material, 8 feet long by 8 feet wide.
- B. Locate where directed by the Architect.
- C. Approved mock-up may remain as part of the Work.

**1.8 JOB REQUIREMENTS**

- A. Do not install underlayment until floor penetrations and peripheral work are complete.

- B. Maintain minimum ambient temperatures of 50 degrees F. 24 hours before, during, and 72 hours after installation of underlayment.
- C. During the curing process, ventilate spaces to remove excess moisture and until underlayment is dry, allow a minimum of seven (7) days.

## **PART 2 PRODUCTS**

### **2.1 MANUFACTURER**

- A. Subject to the requirements specified herein, provide one of the following products:
  - 1. "Supercap SC500" by Laticrete.
  - 2. "Sikalevel 325" by Sika.
  - 3. "Level Set 200" by ProSpec.
  - 4. "Super Flo-Top" made by Euclid Chemical Co.
  - 5. "K-15" made by Ardex.
  - 6. "Ultraplan 1 Plus" by the Mapei Corp. (rapid setting).
  - 7. "Novoplan 2" by the Mapei Corp. (standard setting).
  - 8. "Level Quick R/S" or "E/S" by Custom Building Products.
  - 9. Or approved equal

### **2.2 MATERIALS**

- A. Underlayment: One of the above listed products.
- B. Water: Potable and not detrimental to underlayment mix materials.
- C. Primer: Manufacturer's recommended type.
- D. Joint and Crack Filler: Latex based.

### **2.3 MIXING**

- A. Site mix materials in accordance with manufacturer's instructions.
- B. Mix to achieve following characteristics:
  - 1. Density: 115 lb./cu. ft. minimum dry density.
  - 2. Compressive Strength: 4,000 psi minimum in accordance with ASTM C 109.
  - 3. Fire Hazard Classification: Flame/Smoke rating of 0/0 in accordance with ASTM E 286.
- C. Mix to self-leveling consistency.

### **PART 3 EXECUTION**

#### **3.1 INSPECTION**

- A. Examine the areas and conditions where cement leveling compounds are to be installed and correct any conditions detrimental to the proper and timely completion of the work. Do not proceed with the work until unsatisfactory conditions are corrected to permit proper installation of the work.
- B. Manufacturer's representative must inspect surfaces to receive cement leveling compound and approve those surfaces in writing to the Architect prior to start of application.

#### **3.2 PREPARATION**

- A. Vacuum clean surfaces; remove any material (curing compounds, film, dirt) that would be detrimental to bond of cement leveling compound.
- B. Prime substrate in accordance with manufacturer's instructions. Allow to dry.
- C. Close floor openings.

#### **3.3 APPLICATION**

- A. Install underlayment in accordance with manufacturer's instructions.
- B. Place to minimum 1/8" thickness.
- C. Transition to existing floor; use stiff mix to slope to align with existing adjacent floor.

#### **3.4 CURING**

- A. Air cure in accordance with manufacturer's instructions.

#### **3.5 APPLICATION TOLERANCE**

- A. Top Surface: Level to 1/8 inch in 10 ft.

#### **3.6 PROTECTION OF FINISHED WORK**

- A. Do not permit traffic over unprotected floor underlayment surfaces and until underlayment is completely dry.

**END OF SECTION**

## **SECTION 04 2000 - UNIT MASONRY**

### **PART 1 - GENERAL**

#### **1.1 SUMMARY**

**A. Section Includes:**

1. Concrete masonry units.
2. Clay Brick.
3. Thin Clar Brick – locations indicate only.
4. Mortar and grout materials.
5. Masonry joint Reinforcement.
6. Ties and anchors.
7. Embedded flashing.
8. Accessories.

**B. Products Installed but not Furnished under This Section:**

1. 1. Steel lintels in unit masonry.

**C. Steel reinforcing bar, grout and accessories: Refer to Structural sections and drawings.**

#### **1.2 PREINSTALLATION MEETINGS**

**A. Preinstallation Conference: Conduct conference at Project site.**

#### **1.3 ACTION SUBMITTALS**

**A. Product Data: For each type of product.**

**B. Shop Drawings: For reinforcing steel: Indicate bending, lap lengths, and placement of unit masonry reinforcing bars. Comply with ACI 315R. Indicate elevations of reinforced walls.**

**C. Samples:**

1. Full-size unit For each type and color of exposed masonry unit
2. Pigmented and colored-aggregate mortar. Make Samples using same sand and mortar ingredients to be used on Project.
3. Cavity drainage material.
4. Weep holes/ vents.
5. Accessories embedded in masonry.

#### **1.4 INFORMATIONAL SUBMITTALS**

**A. Material Certificates: For each type and size of product and for masonry units, include data on material properties, material test reports substantiating compliance with requirements.**

1. Masonry units.
    - a. Include data on material properties.
    - b. For brick, include size-variation data verifying that actual range of sizes falls within specified tolerances.
    - c. For exposed brick, include test report for efflorescence per ASTM C 67.
    - d. For masonry units used in structural masonry, include data and calculations establishing average net-area compressive strength of units.
  2. Preblended, dry mortar mixes. Include description of type and proportions of ingredients.
  3. Grout mixes. Include description of type and proportions of ingredients.
  4. Reinforcing bars.
  5. Joint reinforcement.
  6. Anchors, ties, and metal accessories.
- B. Mix Designs: For each type of mortar and grout. Include description of type and proportions of ingredients.
1. Include test reports for mortar mixes required to comply with property specification. Test in accordance with ASTM C109/C109M for compressive strength, ASTM C1506 for water retention, and ASTM C91/C91M for air content.
  2. Include test reports, in accordance with ASTM C1019, for grout mixes required to comply with compressive strength requirement.
- C. Cold-Weather and Hot-Weather Procedures: Detailed description of methods, materials, and equipment to be used to comply with requirements.

## 1.5 QUALITY ASSURANCE

- A. Sample Panel Mockups: Build sample panels to verify selections made under Sample submittals and to demonstrate aesthetic effects.
1. Build sample panels for each type of exposed unit masonry construction in sizes approximately 60 inches long by 48 inches high by full thickness.
  2. Include and install minimum 1 masonry expansion joint with sealant
  3. Clean mockup faces after installation

## 1.6 DELIVERY, STORAGE, AND HANDLING

- A. Store masonry units on elevated platforms in a dry location. If units are not stored in an enclosed location, cover tops and sides of stacks with waterproof sheeting, securely tied. If units become wet, do not install until they are dry.
- B. Store cementitious materials on elevated platforms, under cover, and in a dry location. Do not use cementitious materials that have become damp.
- C. Store aggregates where grading and other required characteristics can be maintained and contamination avoided.

- D. Deliver preblended, dry mortar mix in moisture-resistant containers. Store preblended, dry mortar mix in delivery containers on elevated platforms in a dry location or in covered weatherproof dispensing silos.
- E. Store masonry accessories, including metal items, to prevent corrosion and accumulation of dirt and oil.

## 1.7 FIELD CONDITIONS

- A. Protection of Masonry: During construction, cover tops of walls, projections, and sills with waterproof sheeting at end of each day's work. Cover partially completed masonry when construction is not in progress.
  - 1. Extend cover a minimum of 24 inches down both sides of walls, and hold cover securely in place.
  - 2. Where one wythe of multiwythe masonry walls is completed in advance of other wythes, secure cover a minimum of 24 inches down face next to unconstructed wythe, and hold cover in place.
  - 3. Do not apply uniform floor or roof loads for at least 12 hours and concentrated loads for at least three days after building masonry walls or columns.
  - 4. Stain Prevention: Prevent grout, mortar, and soil from staining the face of masonry to be left exposed or painted. Immediately remove grout, mortar, and soil that meets masonry.
  - 5. Protect base of walls from rain-splashed mud and from mortar splatter by spreading coverings on ground and over wall surface.
  - 6. Protect sills, ledges, and projections from mortar droppings.
  - 7. Protect surfaces of window and door frames, as well as similar products with painted and integral finishes, from mortar droppings.
  - 8. Turn scaffold boards near the wall on edge at the end of each day to prevent rain from splashing mortar and dirt onto completed masonry.
- B. Cold-Weather Requirements: Do not use frozen materials or materials mixed or coated with ice or frost. Do not build on frozen substrates. Remove and replace unit masonry damaged by frost or by freezing conditions. Comply with cold-weather construction requirements contained in TMS 602.
- C. Hot-Weather Requirements: Comply with hot-weather construction requirements contained in TMS 602.

## PART 2 - PRODUCTS

### 2.1 2.1 MANUFACTURERS

- A. Source Limitations for Masonry Units: Obtain exposed masonry units of a uniform texture and color, or a uniform blend within the ranges accepted for these characteristics, from single source from single manufacturer for each product required.

- B. Source Limitations for Mortar Materials: Obtain mortar ingredients of a uniform quality, including color for exposed masonry, from single manufacturer for each cementitious component and from single source or producer for each aggregate.

## 2.2 UNIT MASONRY, GENERAL

- A. Masonry Standard: Comply with TMS 602, except as modified by requirements in the Contract Documents.
- B. Defective Units: Referenced masonry unit standards may allow a certain percentage of units to contain chips, cracks, or other defects exceeding limits stated. Do not use units where such defects are exposed in the completed Work
- C. Fire-Resistance Ratings: Comply with requirements for fire-resistance-rated assembly designs indicated.
  - 1. Where fire-resistance-rated construction is indicated, units shall be listed and labeled by a qualified testing agency acceptable to authorities having jurisdiction.

## 2.3 CONCRETE MASONRY UNITS

- A. Shapes: Provide shapes indicated and as follows, with exposed surfaces matching exposed faces of adjacent units unless otherwise indicated.
  - 1. Provide special shapes for lintels, corners, jambs, sashes, movement joints, headers, bonding, and other special conditions.
  - 2. Provide square-edged units for outside corners unless otherwise indicated.
- B. CMUs: ASTM C90, lightweight unless otherwise indicated.
  - 1. Size (Width): Manufactured to dimensions 3/8 inch less than nominal dimensions.
  - 2. Exposed Faces: Provide color and texture matching the range represented by Architect's sample.

## 2.4 LINTELS

- A. Masonry Lintels: Prefabricated or built-in-place masonry lintels made from bond beam CMUs matching adjacent CMUs in color, texture, and density classification, with reinforcing bars placed as indicated and filled with coarse grout. Cure precast lintels before handling and installing. Temporarily support built-in-place lintels until cured.
- B. Offset Angle Supports: galvanized Steel angle anchored to structure through thermal isolation plate with thermal bushings and washers, allowing continuous insulation behind shelf angle supporting veneer. Refer to structural drawings for bolt and anchor spacing and sizes
  - 1. Structural thermal isolation Plates specified in section 055000 metal fabrications
- C. Galv. Steel Lintels: refer to section 055000 metal fabrications. Loose lintels to be primed and painted

## 2.5 BRICK

- A. General: Provide shapes indicated and as follows, with exposed surfaces matching finish and color of exposed faces of adjacent units:
1. For ends of sills and caps, below grade brick, and for similar applications that would otherwise expose unfinished brick surfaces, provide units without cores or frogs and with exposed surfaces finished.
  2. Provide special shapes for applications where stretcher units cannot accommodate special conditions, including those at corners, movement joints, bond beams, sashes, and lintels.
  3. Provide special shapes for applications requiring brick of size, form, color, and texture on exposed surfaces that cannot be produced by sawing.
  4. Provide special shapes for applications where shapes produced by sawing would result in sawed surfaces being exposed to view.
- B. Clay Face Brick: Facing brick complying with ASTM C216 Grade SW, Type FBX
1. As Manufactured by and subject to compliance for BRICK-1 at locations designated on the drawings
    - a. BRICK-1 as designated on the drawings
      - 1) Taylor Clay Inc ,
        - a) color: Cobalt, River Birch texture
      - 2) Or approved equal
    - b. BRICK-2 as designated on the drawings
      - 1) Taylor Clay Inc ,
        - a) color: Cobalt, Wirecut texture
      - 2) Or approved equal
    - c. BRICK-3 as designated on the drawings
      - 1) Glen-Gerry Inc ,
        - a) color: pumpkin glazed
      - 2) Or approved equal
  2. Unit compressive strength: Minimum average compressive strength not less than 15,600psi
  3. Initial Rate of Absorption: Less than 30 g/30 sq. in. per minute when tested in accordance with ASTM C67/C67M.
  4. Efflorescence: Provide brick that has been tested in accordance with ASTM C67/C67M and is rated "not effloresced."
  5. Size (Actual Dimensions): MODLAR BRICK, 2-1/4 inches high by 7-5/8 inches long, by 3-5/8" wide.
  6. Texture: as indicated on drawings to match architects sample
- C. Thin Clay Brick: Acceptable only at locations indicated on plans at site retaining wall. Complying with ASTM C 1088, exterior grade, Type TBX, tested in accordance with ASTM C67
1. Color and texture to match facing brick in type designated on drawings.
  2. Thickness: 3/4" & provide corner units at all corners.

## 2.6 MORTAR AND GROUT MATERIALS

- A. Portland Cement: ASTM C150/C150M, Type I or II, except Type III may be used for cold-weather construction. Provide natural color or white cement as required to produce mortar color indicated.
  - 1. Alkali content will not be more than 0.1 percent when tested in accordance with ASTM C114.
- B. Hydrated Lime: ASTM C207, Type S.
- C. Portland Cement-Lime Mix: Packaged blend of portland cement and hydrated lime containing no other ingredients.
- D. Colored Cement Products: Packaged blend made from portland cement and hydrated lime cement and mortar pigments, all complying with specified requirements, and containing no other ingredients.
- E. Preblended Dry Mortar Mix: Packaged blend made from portland cement and hydrated lime , masonry cement, sand, mortar pigments, water repellents, and admixtures and complying with ASTM C1714/C1714M.
- F. Aggregate for Mortar: ASTM C144.
  - 1. For mortar that is exposed to view, use washed aggregate consisting of natural sand or crushed stone.
  - 2. For joints less than 1/4 inch thick, use aggregate graded with 100 percent passing the No. 16 sieve.
  - 3. White-Mortar Aggregates: Natural white sand or crushed white stone.
- G. Aggregate for Grout: ASTM C404.
- H. Cold-Weather Admixture: Nonchloride, noncorrosive, accelerating admixture complying with [ASTM C494/C494M, Type C, and recommended by manufacturer for use in masonry mortar of composition indicated. Not acceptable for use in thin brick.
  - 1. BASF Corporation; Construction Systems.
  - 2. Euclid Chemical Company (The); an RPM company.
  - 3. Grace Construction Products; W.R. Grace & Co. -- Conn.
  - 4. Or approved equal.
- I. Water: Potable.
- J. Mortar for thin brick:
  - 1. Mortar shall conform to ASTM C 270 standard specification for mortar for unit masonry under guidelines provided in BIA technical notes #8 series.
    - a. Type S
  - 2. Cold weather additives (including accelerators) shall not ne used in thin brick mortar mix.

## 2.7 CMU MASONRY REINFORCEMENT

- A. Uncoated-Steel Reinforcing Bars: ASTM A615/A615M or ASTM A996/A996M, Grade 60 .
- B. CMU Masonry-Joint Reinforcement, General: ASTM A951/A951M.
  - 1. Interior Walls: Hot-dip galvanized carbon steel.
  - 2. Exterior Walls: Hot-dip galvanized carbon steel.
  - 3. Wire Size for Side Rods: 0.148-inch diameter.
  - 4. Wire Size for Cross Rods: 0.148 diameter.
  - 5. Spacing of Cross Rods, Tabs, and Cross Ties: Not more than 16 inches o.c.
  - 6. Provide in lengths of not less than 10 ft., with prefabricated corner and tee units.
- C. Reinforcing Bar Positioners: Wire units designed to fit into mortar bed joints spanning masonry unit cells and to hold reinforcing bars in center of cells. Units are formed from 0.148-inch steel wire, hot-dip galvanized after fabrication. Provide units designed for number of bars indicated.
  - 1. Manufacturers: Subject to compliance with requirements, manufacturers offering products that may be incorporated into the Work include the following:
    - a. Dur-O-Wal; a Hohmann & Barnard company.
    - b. Heckmann Building Products, Inc.
    - c. Hohmann & Barnard, Inc.
    - d. Wire-Bond.
    - e. Or approved equal.
- D. CMU Masonry-Joint Reinforcement for Single-Wythe Masonry: Ladder type with single pair of side rods.
  - 1. Manufacturers: Subject to compliance with requirements, manufacturers offering products that may be incorporated into the Work include the following:
    - a. Dur-O-Wal; a Hohmann & Barnard company.
    - b. Heckmann Building Products, Inc.
    - c. Hohmann & Barnard, Inc.
    - d. Wire-Bond.
    - e. Or approved equal.

## 2.8 TIES AND ANCHORS

- A. General: Ties and anchors shall extend at least 1-1/2 inches into veneer but with at least a 5/8-inch cover on outside face.
- B. Materials: Provide ties and anchors specified in this article that are made from materials that comply with the following unless otherwise indicated:
  - 1. Hot-Dip Galvanized, Carbon-Steel Wire: ASTM A1064/A1064M, with ASTM A153/A153M, Class B-2 coating.
  - 2. Stainless Steel Wire: ASTM A580/A580M, Type 304.
  - 3. Steel Sheet, Galvanized after Fabrication: ASTM A1008/A1008M, Commercial Steel, with ASTM A153/A153M, Class B coating.
  - 4. Stainless Steel Sheet: ASTM A240/A240M or ASTM A666, Type 304.

- C. Adjustable Anchors for Connecting to Structural Steel Framing: Provide anchors that allow vertical or horizontal adjustment but resist tension and compression forces perpendicular to plane of wall.
1. Anchor Section for Welding to Steel Frame: Crimped 1/4-inch- diameter, hot-dip galvanized steel wire.
  2. Tie Section: Triangular-shaped wire tie made from 0.187-inch- diameter, hot-dip galvanized steel wire where anchoring CMU masonry
- D. Adjustable Masonry-Veneer Anchors:
1. General: Provide anchors that allow vertical adjustment but resist a 100 lbf load in both tension and compression perpendicular to plane of wall without deforming or developing play in excess of 1/16 inch.
  2. Fabricate wire ties from 0.187-inch- diameter, Stainless-steel wire
  3. Continuous wire reinforcement to be provided at stacked bond masonry veneer, made from 0.148-inch diameter, stainless steel wire
  4. Screw attached Masonry-Veneer Anchors for use at metal studs:
    - a. Dual diameter single-Barrel stainless steel Screw with single or double Pintle Wingnut:
      - 1) Self-drilling, single-barrel screw with thermally resistant wingnut head designed to receive pintle wire tie.
      - 2) Screw has a smooth barrel the same thickness as insulation with factory-installed gasketed washer to seal at face of insulation and additional gasket to seal at weather barrier installed direct to sheathing.
      - 3) Screw to have a coating to reduce thermal conductivity.
    - b. Where stack bond masonry: Provide with seismic tie, clip, and continuous stainless steel wire reinforcement in veneer.
    - c. Basis-of-Design, Product: Subject to compliance with requirements, provide the following:
      - 1) Hohmann & Barnard, Inc.; Thermal 2-seal tie
      - 2) Or approved equal
  5. Screw attached Masonry-Veneer Anchors for use at CMU:
    - a. Dual diameter single-Barrel stainless steel Screw with single or double Pintle Wingnut:
      - 1) single-barrel screw with thermally resistant wingnut head designed to receive pintle wire tie.
      - 2) Screw has a smooth barrel the same thickness as insulation with factory-installed gasketed washer to seal at face of insulation and additional gasket to seal at weather barrier installed direct to sheathing.
      - 3) Screw to have a coating to reduce thermal conductivity.
      - 4) Pre-drill hole in concrete/CMU construction in accordance with manufacturer requirements.
    - b. Where stack bond masonry: Provide with seismic tie, clip, and continuous stainless steel wire reinforcement in veneer.
    - c. Basis-of-Design, Product: Subject to compliance with requirements, provide the following:

- 1) Hohmann & Barnard, Inc.; Thermal Concrete 2-seal tie
  - 2) Or approved equal
6. Stainless Steel Drill Screws for Steel Studs: ASTM C954 except manufactured with hex washer head and neoprene or EPDM washer, No. 10 diameter by length required to penetrate steel stud flange with not less than three exposed threads; either made from Type 410 stainless steel or made with a carbon-steel drill point and 300 Series stainless steel shank.

## 2.9 THROUGH-WALL FLASHING

### A. Stainless Steel Flashing Materials

1. Stainless Steel Flashing: ASTM A 240, Type 304, stainless steel, with 2D finish, dead soft temper, fully annealed, as manufactured by International Nickel Co., Republic Steel Corp., United States Steel, or Washington Steel Corp. Thickness of stainless steel shall be as listed below.
  - a. Concealed Flashings: 0.012" thick, thirty (30) gauge (U.S. Standard).
  - b. Exposed Flashings: 0.015" thick, twenty-eight (28) gauge (U.S. Standard).
  - c. Edge Strips: 0.025" thick, twenty-four (24) gauge (U.S. Standard).
2. Through-wall flashing shall have sawtooth ribs at three (3) inch intervals, as manufactured by Keystone Flashing Co., or approved equal.
3. Solder: Composed of sixty (60) percent block tin and forty (40) percent pig lead, except that solder at seams exposed to public view shall be eighty (80) percent tin and twenty (20) percent lead.
4. Flux: An acid type flux manufactured specifically for soldering stainless steel, as approved.

### A. Thru-wall Flashing Accessories:

1. AISI, Types 302 and 304 stainless steel.
2. Termination Bars for Flexible Flashing: Stainless steel bars 1/8 inch by 1 inch, apply continuous sealant at top edge.
3. EndDams: Stainless steel not less than 24ga. with minimum 4" flanges
4. Inside and outside corners: Stainless steel not less than 24ga. with minimum 4" flanges at wall face

## 2.10 ACCESSORIES

- A. Compressible Filler: Premolded filler strips complying with ASTM D1056, Grade 2A1; compressible up to 35 percent; of width and thickness indicated; formulated from neoprene
- B. Preformed Control-Joint Gaskets: Made from styrene-butadiene-rubber compound, complying with ASTM D2000, Designation M2AA-805 or PVC, complying with ASTM D2287, Type PVC-65406 and designed to fit standard sash block and to maintain lateral stability in masonry wall; size and configuration as indicated.

- C. Bond-Breaker Strips: Asphalt-saturated felt complying with ASTM D226/D226M, Type I (No. 15 asphalt felt).
- D. Weep/Cavity Vents: Use the following:
  - 1. Cellular Plastic Weep/Vent: One-piece, rectangular vent with honeycomb to restrict insect and debris. Full height and width of head joint and depth 1/8 inch less than depth of outer wythe, in color selected from manufacturer's standard. Tubes or open rectangles will not be accepted
    - a. Products: Subject to compliance with requirements, provide the following:
      - 1) QV Quadro Vent as supplied by Hohmann & Barnard.
      - 2) CellVent by Mortar Net Solutions
      - 3) Or approved equal.
- E. Cavity Drainage Material: Free-draining mesh, made from polymer strands that will not degrade within the wall cavity.
  - 1. Mortar Deflector: Strips, full depth of cavity and 10 inches high, with dovetail-shaped notches that prevent clogging with mortar droppings.
    - a. Products: Subject to compliance with requirements, provide the following:
      - 1) Mortar Net, as supplied by Mortar Net Solutions.
      - 2) Mortar Trap by Hohmann & Barnard
      - 3) Or approved equal.
- F. Proprietary Acidic Masonry Cleaner: Cleaner recommended in writing by Brick Manufacturer for removing mortar/grout stains, efflorescence, and other new construction stains from new masonry without discoloring or damaging masonry surfaces. Use product expressly approved for intended use by cleaner manufacturer and manufacturer of masonry units being cleaned.

## 2.11 MORTAR AND GROUT MIXES

- A. General: Do not use admixtures, including pigments, air-entraining agents, accelerators, retarders, water-repellent agents, antifreeze compounds, or other admixtures unless otherwise indicated.
  - 1. Do not use calcium chloride in mortar or grout.
  - 2. Use portland cement-lime mortar unless otherwise indicated.
  - 3. Add cold-weather admixture (if used) at same rate for all mortar that will be exposed to view, regardless of weather conditions, to ensure that mortar color is consistent.
- B. Preblended, Dry Mortar Mix: Furnish dry mortar ingredients in form of a preblended mix. Measure quantities by weight to ensure accurate proportions, and thoroughly blend ingredients before delivering to Project site.
- C. Mortar for Unit Masonry: Comply with ASTM C270, Property Specification. Provide the following types of mortar for applications stated unless another type is indicated or needed to provide required compressive strength of masonry.
  - 1. For masonry below grade or in contact with earth, use Type M.
  - 2. For reinforced masonry, use Type S.

3. For exterior, above-grade, load-bearing, nonload-bearing walls, and parapet walls; for interior load-bearing walls; for interior nonload-bearing partitions; and for other applications where another type is not indicated, Type S as recommended by brick manufacturer due to low-absorption properties of brick.
  4. For interior nonload-bearing partitions, Type N.
- D. Pigmented Mortar: Use colored cement product or select and proportion pigments with other ingredients to produce color required. Do not add pigments to colored cement products.
1. Pigments shall not exceed 10 percent of portland cement by weight.
  2. Mix to match Architect's sample.
  3. Application: Use pigmented mortar for exposed mortar joints at brick, see drawings for basis of design color to match
- E. Grout for Unit Masonry: Comply with ASTM C476.
1. Use grout of type indicated or, if not otherwise indicated, of type (fine or coarse) that will comply with TMS 602 for dimensions of grout spaces and pour height.
  2. Proportion grout in accordance with ASTM C476, Table 1 or paragraph 4.2.1.2 for specified 28-day compressive strength indicated, but not less than 2500 psi
  3. Provide grout with a slump of 8 to 11 inches as measured in accordance with ASTM C143/C143M.

## PART 3 - EXECUTION

### 3.1 INSTALLATION, GENERAL

- A. Use full-size units without cutting if possible. If cutting is required to provide a continuous pattern or to fit adjoining construction, cut units with motor-driven saws; provide clean, sharp, unchipped edges. Allow units to dry before laying unless wetting of units is specified. Install cut units with cut surfaces and, where possible, cut edges concealed.
- B. Select and arrange units for exposed unit masonry to produce a uniform blend of colors and textures. Mix units from several pallets or cubes as they are placed.
- C. Wetting of Brick: Wet brick before laying if initial rate of absorption exceeds 30 g/30 sq. in. per minute when tested in accordance with ASTM C67/C67M. Allow units to absorb water so they are damp but not wet at time of laying.

### 3.2 TOLERANCES

- A. Dimensions and Locations of Elements:
  1. For dimensions in cross section or elevation, do not vary by more than plus 1/2 inch or minus 1/4 inch .
  2. For location of elements in plan, do not vary from that indicated by more than plus or minus 1/2 inch.

3. For location of elements in elevation, do not vary from that indicated by more than plus or minus 1/4 inch in a story height or 1/2 inch total.

B. Lines and Levels:

1. For bed joints and top surfaces of bearing walls, do not vary from level by more than 1/4 inch in 10 ft, or 1/2-inch maximum.
2. For conspicuous horizontal lines, such as lintels, sills, parapets, and reveals, do not vary from level by more than 1/8 inch in 10 ft., 1/4 inch in 20 ft., or 1/2-inch maximum.
3. For vertical lines and surfaces, do not vary from plumb by more than 1/4 inch in 10 ft., 3/8 inch in 20 ft., or 1/2-inch maximum.
4. For conspicuous vertical lines, such as external corners, door jambs, reveals, and expansion and control joints, do not vary from plumb by more than 1/8 inch in 10 ft., 1/4 inch in 20 ft, or 1/2-inch maximum.
5. For lines and surfaces, do not vary from straight by more than 1/4 inch in 10 ft., 3/8 inch in 20 ft., or 1/2-inch maximum.
6. For vertical alignment of exposed head joints, do not vary from plumb by more than 1/4 inch in 10 ft., or 1/2-inch maximum.

C. Joints:

1. For exposed bed joints and head joints of stacked bond, do not vary from a straight line by more than 1/16 inch (1.5 mm) from one masonry unit to the next.
2. For bed joints, do not vary from thickness indicated by more than plus or minus 1/8 inch, with a maximum thickness limited to 1/2 inch.
3. For head and collar joints, do not vary from thickness indicated by more than plus 1/2 inch or minus 1/4 inch).
4. For exposed head joints, do not vary from thickness indicated by more than plus or minus 1/8 inch. Do not vary from adjacent bed-joint and head-joint thicknesses by more than 1/8 inch.

### 3.3 LAYING MASONRY WALLS

- A. Lay out walls in advance for accurate spacing of surface bond patterns with uniform joint thicknesses and for accurate location of openings, movement-type joints, returns, and offsets. Avoid using less-than-half-size units, particularly at corners, jambs, and, where possible, at other locations.
- B. Bond Pattern for Exposed Masonry: Lay exposed masonry in bond indicated on drawings, lay CMU in running bond unless otherwise indicated. Do not use units with less-than-nominal 4-inch horizontal face dimensions at corners or jambs.
- C. Built-in Work: As construction progresses, build in items specified in this and other Sections. Fill in solidly with masonry around built-in items.
- D. Fill space between steel frames and masonry with mineral wool insulation.
- E. Fill cores in hollow CMUs with grout 24 inches under bearing plates, beams, lintels, posts, and similar items unless otherwise indicated. Refer to structural drawings

### 3.4 MORTAR BEDDING AND JOINTING

- A. Lay CMUs as follows:
1. Bed face shells in mortar and make head joints of depth equal to bed joints.
  2. Bed webs in mortar in all courses of piers, columns, and pilasters.
  3. Bed webs in mortar in grouted masonry, including starting course on footings.
  4. Fully bed entire units, including areas under cells, at starting course on footings where cells are not grouted.
  5. Fully bed units and fill cells with mortar at anchors and ties as needed to fully embed anchors and ties in mortar.
  6. Tool joints flush on side of units to receive fluid-applied weather barrier in accordance with weather barrier manufacturer requirements
  7. Tool exposed joints at interior side.
- B. Lay solid masonry units with completely filled bed and head joints; butter ends with sufficient mortar to fill head joints and shove into place. Do not deeply furrow bed joints or slush head joints.
- C. **At CMU face within wall cavity shall be prepared as follows:**
1. **Strike joints flush, fill all voids with mortar ready to receive fluid applied weather barrier**
  2. **according to air and water membrane manufacturer's written recommendations and free of contaminants such as grease oil and wax, free from projections, all joints struck, all voids filled with mortar. All surface irregularities shall be ground flush or made smooth with all gaps around penetrations filled with mortar and struck flush. Remove any mortar droppings from brick ties, shelf angles, brick shelves or other horizontal obstructions.**
- D. Tool exposed joints at interior side of CMU slightly concave when thumbprint hard, using a jointer larger than joint thickness unless otherwise indicated.

### 3.5 CAVITY WALLS

- A. Keep cavities clean of mortar droppings and other materials during construction. Bevel beds away from cavity, to minimize mortar protrusions into cavity. Do not attempt to trowel or remove mortar fins protruding into cavity.
- B. Installing Cavity Wall Insulation: Place small dabs of adhesive compatible with fluid-applied membrane weather barrier as needed until attached with masonry anchored designed for this purpose. Press units firmly against inside wythe of masonry or other construction as indicated.

### 3.6 ANCHORED MASONRY VENEERS

- A. Anchor masonry veneers to wall framing and concrete and masonry backup with masonry-veneer anchors to comply with the following requirements:

1. Fasten screw-attached anchors through sheathing to wall framing and to masonry backup with metal fasteners of type indicated.
2. Embed tie sections, and continuous wire in masonry joints.
3. Locate anchor sections to allow maximum vertical differential movement of ties up and down.
4. Space anchors as indicated, but not more than 16 inches (457 mm) o.c. vertically and horizontally. Install additional anchors within 12 inches (305 mm) of openings and at intervals, not exceeding 24 inches (610 mm), around perimeter.

### 3.7 MASONRY-JOINT REINFORCEMENT

- A. General: Install entire length of longitudinal side rods in mortar with a minimum cover of 5/8 inch on exterior side of walls, 1/2 inch elsewhere. Lap reinforcement a minimum of 8 inches.
  1. Space reinforcement not more than 16 inches o.c.
  2. Space reinforcement not more than 8 inches o.c. in foundation walls and parapet walls.
  3. Provide reinforcement not more than 8 inches above and below wall openings and extending 12 inches beyond openings in addition to continuous reinforcement.
- B. Interrupt joint reinforcement at control and expansion joints unless otherwise indicated.
- C. Provide continuity at wall intersections by using prefabricated T-shaped units.
- D. Provide continuity at corners by using prefabricated L-shaped units.

### 3.8 ANCHORING MASONRY TO STRUCTURAL STEEL AND CONCRETE

- A. Anchor masonry to structural steel and concrete, where masonry abuts or faces structural steel or concrete, to comply with the following:
  1. Provide an open space not less than 3/4 inch wide between masonry and structural steel or concrete unless otherwise indicated. Keep open space free of mortar and other rigid materials.
  2. Anchor masonry with anchors embedded in masonry joints and attached to structure.
  3. Space anchors as indicated, but not more than 24 inches o.c. vertically and 36 inches o.c. horizontally.

### 3.9 LINTELS

- A. Install steel lintels where indicated, to maintain cavity dimension.
  1. Refer to structural drawings where lintel is to be anchored to supporting steel through structural thermal isolation plate, washers and bushings.
- B. Provide concrete or masonry lintels where shown and where openings of more than 24 inches are shown without structural steel or other supporting lintels.
- C. Provide minimum bearing of 8 inches at each jamb unless otherwise indicated.

### 3.10 FLASHING, WEEP HOLES, AND CAVITY VENTS

- A. General: Install embedded flashing and weep holes in masonry at shelf angles, lintels, ledges, other obstructions to downward flow of water in wall, and where indicated. Install cavity vents at shelf angles, ledges, and other obstructions to upward flow of air in cavities, and where indicated.
- B. Install flashing as follows unless otherwise indicated:
  - 1. Prepare masonry surfaces so they are smooth and free from projections that could puncture flashing. Where flashing is within mortar joint, place through-wall flashing on sloping bed of mortar and cover with mortar. Before covering with mortar, seal penetrations in flashing with adhesive, sealant, or tape as recommended by flashing manufacturer.
  - 2. At multiwythe masonry walls, including cavity walls, extend flashing through outer wythe, turned up a minimum of 8 inches with termination bar installed at top edge.,
  - 3. At lintels and shelf angles, extend flashing 6 inches minimum past at each end. At heads and sills, extend flashing 6 inches minimum, and install with stainless steel end dams not less than 2 inches.
  - 4. Install metal drip edges with sawtooth sheet metal flashing by interlocking hemmed edges to form hooked seam. Seal seam with elastomeric sealant complying with requirements in Section 079200 "Joint Sealants" for application indicated.
  - 5. Install metal drip edges beneath flexible flashing at exterior face of wall. Stop flexible flashing 1/2 inch back from outside face of wall. Set metal drip flashing in bed of sealant to masonry and adhere flexible flashing to top of metal drip edge.
- C. Install weep holes in exterior wythes and veneers in head joints of first course of masonry immediately above embedded flashing.
  - 1. Use specified weep/cavity vent products to form weep holes.
  - 2. Space weep holes 16 inches o.c. unless otherwise indicated.
- D. Place cavity drainage material in airspace behind veneers to comply with configuration requirements for cavity drainage material in "Accessories" Article.
- E. Install cavity vents in head joints in exterior wythes at spacing indicated. Use specified weep/cavity vent products to form cavity vents.

### 3.11 REINFORCED UNIT MASONRY

- A. Temporary Formwork and Shores: Construct formwork and shores as needed to support reinforced masonry elements during construction.
  - 1. Construct formwork to provide shape, line, and dimensions of completed masonry as indicated. Make forms sufficiently tight to prevent leakage of mortar and grout. Brace, tie, and support forms to maintain position and shape during construction and curing of reinforced masonry.

2. Do not remove forms and shores until reinforced masonry members have hardened sufficiently to carry their own weight and that of other loads that may be placed on them during construction.

B. Placing Reinforcement: Comply with requirements in TMS 602.

C. Grouting: Do not place grout until entire height of masonry to be grouted has attained enough strength to resist grout pressure.

1. Comply with requirements in TMS 602 for cleanouts and for grout placement, including minimum grout space and maximum pour height.
2. Limit height of vertical grout pours to not more than 60 inches, 12.67 ft.

### 3.12 CLEANING

A. In-Progress Cleaning: Clean unit masonry as work progresses by dry brushing to remove mortar fins and smears before tooling joints.

B. Final Cleaning: After mortar is thoroughly set and cured, clean exposed masonry as follows:

1. Remove large mortar particles by hand with wooden paddles and nonmetallic scrape hoes or chisels.
2. Test cleaning methods on sample wall panel; leave one-half of panel uncleaned for comparison purposes. Obtain Architect's approval of sample cleaning before proceeding with cleaning of masonry.
3. Protect adjacent stone and nonmasonry surfaces from contact with cleaner by covering them with liquid strippable masking agent or polyethylene film and waterproof masking tape.
4. Wet wall surfaces with water before applying cleaners; remove cleaners promptly by rinsing surfaces thoroughly with clear water.
5. Clean brick by methods described in BIA Technical Notes 20.
6. Clean concrete masonry by applicable cleaning methods indicated in NCMA TEK 8-4A.
7. Clean masonry with a proprietary acidic masonry cleaner applied according to manufacturer's written instructions.

### 3.13 MASONRY WASTE DISPOSAL

A. Waste Disposal as Fill Material: Dispose of clean masonry waste, including excess or soil-contaminated sand, waste mortar, and broken masonry units, by crushing and mixing with fill material as fill is placed.

1. Do not dispose of masonry waste as fill within 18 inches of finished grade.

B. Masonry Waste Recycling: Return broken CMUs not used as fill to manufacturer for recycling.

C. Excess Masonry Waste: Remove excess clean masonry waste that cannot be used as fill, as described above or recycled, and other masonry waste, and legally dispose of off Owner's property.

END OF SECTION 04 2000

## SECTION 051200 - STRUCTURAL STEEL

### PART 1 - GENERAL

#### 1.1 RELATED DOCUMENTS

- A. Drawings and general provisions of the Contract, including General and Supplementary Conditions and Division 01 Specification Sections, apply to this Section.

#### 1.2 DESCRIPTION OF WORK

- A. Furnish and erect all structural steel as shown on Drawings. Provide shop painting and galvanizing as specified.

#### 1.3 PRODUCTS FURNISHED BUT NOT INSTALLED UNDER THIS SECTION

- A. Anchor Bolts for Structural Steel for Casting into Concrete - Section 033000

#### 1.4 PRODUCTS INSTALLED BUT NOT FURNISHED UNDER THIS SECTION

- A. Loose Bearing and Base Plates for Structural Steel - Section 055000

#### 1.5 RELATED SECTIONS

- A. Metal Deck – 053000
- B. Painting - 099000

#### 1.6 REFERENCES

- A. References and industry standards listed in this Section are applicable to the Work. Unless more restrictive criteria or differing requirements are explicitly stated in the Specifications, or mandated by governing codes or regulations, the recommendations, suggestions, and requirements described in the referenced standards shall be deemed mandatory and applicable to the Work.

- 1. American Society of Testing and Materials (ASTM) standards, latest editions.

- A6 Standard Specification for General Requirements for Rolled Steel Bars, Plates, Shapes, and Sheet Piling.
- A36 Standard Specification for Carbon Structural Steel.
- A108 Standard Specification for Steel Bars, Carbon, Cold-Finished, Standard Quality.

- A123 Standard Specification for Zinc (Hot-Dip Galvanized) Coatings on Iron and Steel Products.
  - A153 Standard Specification for Zinc Coating (Hot-Dip) on Iron and Steel Hardware.
  - A194 Standard Specification for Carbon and Alloy Steel Nuts for Bolts for High-Pressure and High-Temperature Service, or Both.
  - A307 Standard Specification for Carbon Steel Bolts and Studs, 60000 psi Tensile Strength.
  - A325 Standard Specification for Structural Bolts, Steel, Heat Treated, 120/105 ksi Minimum Tensile Strength.
  - A490 Standard Specification for Structural Bolts, Alloy Steel, Heat Treated, 150 ksi Minimum Tensile Strength.
  - A500 Standard Specification for Cold-Formed Welded and Seamless Carbon Steel Structural Tubing in Rounds and Shapes.
  - A501 Standard Specification for Hot-Formed Welded Seamless Carbon Steel Structural Tubing.
  - A563 Standard Specification for Carbon and Alloy Steel Nuts.
  - A780 Standard Practice for Repair of Damaged and Uncoated Areas of Hot-Dip Galvanized Coating.
  - A992 Standard Specification for Steel for Structural Shapes for Use in Building Framing
  - F436 Standard Specification for Hardened Steel Washers
  - F1554 Standard Specification for Anchor Bolts, Steel, 36, 55, and 105-ksi Yield Strength

## 1.7 DEFINITIONS

### A. Structural Steel

- 1. Structural Steel consists of the steel elements of the structural steel frame essential to support the design loads. These elements consist of material as shown on the structural

steel plan and listed in Article 2.1 of the AISC "Code of Standard Practice for Steel Buildings and Bridges."

B. Other Steel

1. Structural steel does not apply to those elements listed in Article 2.2 of the AISC "Code of Standard Practice for Steel Buildings and Bridges."

1.8 SUBMITTALS

A. Product Data: Submit manufacturers' specifications for the following products:

1. Primer paints, galvanizing repair paint
2. Stud shear connectors
3. Expansion/adhesive anchors
4. Hot-Dip Galvanizing

B. Shop Drawings

1. Failure to submit legible shop drawings will be cause for return without review.
2. All connections shall be designed by and all drawings shall be prepared under supervision of a Professional Engineer licensed in the State of New Jersey. Do not submit unchecked shop drawings. First submissions of all job standards, shop drawings of connections not shown on, or that are in deviation of, the job standards, and calculations shall have one set sealed and signed by the Engineer. After final approval of all shop drawings, submit a final set sealed and signed by the Professional Engineer.
3. Shear connections (framed beam, seated beam, single plate, etc.) shall be designed by the detailer's licensed engineer and detailed by the structural steel detailer, unless otherwise shown on Drawings. All wind and seismic connections (moment connections, bracing, etc.) are generally detailed on the Drawings. Based on the indicated loads (axial force, moment, etc.), the structural steel detailer's engineer shall design the connections. Those not detailed shall be detailed by the structural steel detailer.
4. Immediately after award of Contract and before preparing steel shop drawings, submit for review a set of job standards showing all necessary joint details with full particulars of connection pieces, shop and field welds, and holes for erection bolts and permanent bolts. These shall include any moment and shear connection designed by the Engineer of Record as well as those designed by the detailer. Appropriate marks for designating all types and sizes of joint details shall be included. Submit all calculations pertaining to the job standards. After approval of these job standards, the erection plans are to be submitted and shall be marked to indicate unmistakably the type and size of joint to be used for every beam connection. Do not order steel in advance of approval of the job standards and the erection plans with joint marks, except at own risk.
5. Prepare remainder of steel shop drawings after approval of job standards and erection plans. Drawings submitted prior to approval of job standards will be returned without review. Submit drawings gradually and not all at the same time so that sufficient time is allowed for checking and approval. No more than 100 drawings are to be submitted within a 14-day period to allow for checking and approval of package before submittal of next package.

6. Steel shop drawings shall include framing plans, bolted and welded work, and details such as camber and other pertinent data not shown on job standards. Detail openings and reinforcement due to other Work. Coordinate with Drawings of other Work.
7. Indicate welds by standard AWS symbols and show size, length, and type of each weld in accordance with AWS A2.0.
8. Identify columns using same identification system shown on Drawings.
9. Provide setting drawings, templates, and directions for installation of anchor bolts and other anchorages to be installed under other Sections.
10. Shop drawings will be checked for size of material and strength of connection by the Engineer of Record, which shall not render the Engineer of Record responsible for any errors in construction dimensions, etc. that have been made in preparation of shop drawings. The Contractor shall assume full responsibility for the correctness of dimensions and fit.
11. Submit calculations for design of connections on job standard and all other connections such as moment, brace, and trusses.
12. After shop drawings are 100% complete and approved and all field changes have been made, a CD rom of the as-built drawings are to be submitted to the Owner in an AutoCad format.

**C. Quality Control Submittals**

1. Certificates and Affidavits
  - a. Furnish notarized Building Department affidavit from steel manufacturer (Form SS24) certifying materials conform to Specification requirements and material was erected as designed.
  - b. Furnish bolt manufacturer's test reports, covering physical and chemical tests, for each lot of high strength bolts submitted.
  - c. Furnish steel manufacturer's certificate certifying welders employed on the Work have met AWS qualifications within the previous twelve months and are NJ licensed welders.
  - d. Furnish complete listing of ASTM's of materials listed in Part 2 of this Section and certification that materials supplied meet those listed.
  - e. For mechanical and adhesive anchors installed in concrete, submit ICC certification for use in cracked concrete.
2. Contractor Qualifications: Provide proof of Fabricator, Erector, Detailer/Engineer, and Hot-Dip galvanization qualifications specified under "Quality Assurance".
  - a. Provide proof of Hot-Dip galvanizer's qualifications specified under "Quality Assurance"; certification of qualifications meeting Military Standard by one of the following:
    - 1) A branch of the U.S. Dept. of Defense (DoD), or
    - 2) A company certified by U.S. Dept. of Defense; submit DoD certification for this company.

**D. Surveys**

1. Submit signed and sealed copies of surveys conducted by a Licensed Land Surveyor of items listed in Part 3 of this Section and the Drawings.

E. Test Reports

1. Submit test reports for hot-dip galvanizing and epoxy coating system as specified herein, paragraph titled "Galvanizing by the Hot-Dip Galvanization Process".

1.9 QUALITY ASSURANCE

A. Qualifications

1. Fabricator: Company specializing in the fabrication of steel products to be used in this Contract shall have a minimum of five years experience. The fabricator is to be AISC certified.
2. Erector: Company specializing in performing the Work of this Section shall have a minimum of three years experience and have done at least three projects with similar quantity of material.
3. Detailer: Company shall be specialized in the detailing and design of structural steel shop drawings with a minimum of three years experience. Connections shall be designed by and shop drawings prepared under direct supervision of a Professional Structural Engineer experienced in design of this Work and licensed by the State of New Jersey engaged.
4. Hot-Dip Galvanizing: The company or individual responsible for application of hot-dip galvanizing shall be certified as qualified to perform this process, meeting the requirements of Mil Std 2138 or Mil Std 1687. Certification shall be by a branch of the U.S. Dept. of Defense, or by a company that is certified by the Dept. of Defense in accordance with either one of these military standards.

B. Regulatory Requirements

1. Building Code: Work of this Section shall conform to all requirements of the International Building Code 2021, New Jersey Edition and all applicable regulations of governmental authorities having jurisdiction, including safety, health, noise, and anti-pollution regulations. Where more severe requirements than those contained in the Building Code are given in this Section, the requirements of this Section shall govern.
2. Industry Standards: Standards specified herein apply to Work of this Section. Where more severe requirements than those contained in the Standards are given in this Section or the Building Code, requirements of this Section or the Building Code shall govern.
  - a. "Code of Standard Practice for Steel Buildings and Bridges" – AISC 303-05.
  - b. AISC 335-89 or LRFD (2005) as modified by the International Building Code 2021, New Jersey Edition.
  - c. Seismic Provisions for Structural Steel Buildings AISC 341-05.
  - d. "Specifications for Structural Joints using ASTM A325 or A490 Bolts" approved by the Research Council on Riveted and Bolted Structural Joints of the Engineering Foundation (RCRBSJ) – AISC-2005.
  - e. "Structural Welding Code" - AWS.

3. Recommendations or suggestions in the codes and references listed in this Article and under "References" shall be deemed to be mandatory unless they are in violation of the Building Code.

C. Certifications

1. Qualify welding processes and welding operators in accordance with AWS "Standard Qualification Procedure".

1.10 DELIVERY, STORAGE, AND HANDLING

- A. Deliver materials to the site at such intervals as to insure uninterrupted progress of Work.
- B. Deliver anchor bolts and other anchorage devices, which are to be embedded in cast-in-place concrete or masonry, in ample time so as not to delay Work.
- C. Store materials to permit easy access for inspection and identification.
  1. Shop-primed steel. (Painted or galvanized): Primed steel stored in the field or shop shall be kept off ground (using pallets, platforms, or other supports) and so positioned as to minimize water-holding pockets, dust, and other contamination of the primer. Repair damage to primed surfaces due to improper storage in a manner approved by the Owner.
  2. Unpainted Steel: Steel stored in field or shop shall be kept off ground (using pallets, platforms or other supports), kept clean and in general protected against damage and corrosion.
- D. Do not store materials on erected structure in a manner that might cause distortion or damage to the members or supporting structures. Repair or replace damaged materials or structures as directed by the Owner.

1.11 FIELD MEASUREMENTS

- A. Take field measurements as required by Drawings. Where possible take field measurements of existing conditions prior to fabrication. Verify that field measurements are the same as those shown on Drawings and shop drawings. Report all deviations to the Owner in writing.

**PART 2 -PRODUCTS**

2.1 MANUFACTURERS

- A. Stud Shear Connectors
  1. KSM Products, Inc., or approved equal.
  2. Nelson Stud Welding Co., or approved equal.
- B. Paint

1. Tnemec Co., or approved equal.
2. Carboline, or approved equal.
3. Sherwin Williams, or approved equal.
4. ZRC, or approved equal.

C. Expansion/Screw/Adhesive Anchors, Fasteners

1. Hilti, Inc., or approved equal.
2. ITW Ramset/Redhead, Inc., or approved equal.
3. Simpson Strong-Tie Anchor System, or approved equal.
4. Powers Fasteners, or approved equal.

## 2.2 MATERIALS

A. Recycled Content of Steel Products: Provide products with an average recycled content of steel products so post-consumer recycled content plus one-half of pre-consumer recycled content is not less than the following:

1. W-Shapes: 60 percent.
2. Channels, Angles: 60 percent.
3. Plate and Bar: 25 percent.
4. Cold-Formed Hollow Structural Sections: 25 percent.
5. Steel Pipe: 25 percent.
6. All Other Steel Materials: 25 percent.

B. Structural Steel Shapes, Plates, and Bars

1. Structural steel W shapes shall have a minimum yield strength of 50 ksi conforming to the provisions of ASTM A992. For other shapes not available in ASTM A992, steel shall have a minimum yield strength of 36 ksi conforming to the provisions of ASTM A36.
2. Tube steel shall conform to the provisions of ASTM A500, Grade B, and pipe steel to the provisions of ASTM A501.

C. Headed Stud-Type Shear Connectors

1. Shall conform to the provisions of ASTM A108, Grade 1015 or 1020, and Articles 4.26 and 4.27 of AWS D1.1.

D. Bolts

1. Anchor Bolts (Anchor Rods): Shall conform to the provisions of ASTM F1554, Grade 36, unless different grade is specified elsewhere. Size and detailing indicated on Drawings.
2. Unfinished Bolts: Shall conform to the provision of ASTM A307.
3. High-Strength Bolts: Shall conform to the requirements of ASTM A325 unless otherwise indicated on Drawings.
4. Expansion/Screw/Adhesive Anchors: Provide types as indicated on Drawings. The anchor specified shall be considered the basis of design.

- a. As a minimum, all anchors exposed to weather or embedded in masonry are to be Type 316 stainless steel.
- b. Anchors installed in concrete shall have current ICC-ES listing for performance in cracked concrete as per International Building Code 2021, New Jersey Edition.
- c. Design and installation provisions shall be based on current ICC-ES ESR report and ACI 318 Appendix D.

**E. Hardware**

1. Nuts for anchor bolts and unfinished bolts shall conform to the requirements of ASTM A563.
2. Nuts for high-strength bolts shall conform to the provisions of ASTM A194 or ASTM A563 as specified in ASTM A325.
3. Washers shall conform to the provisions of ASTM F436.

**F. Filler Metal for Welding**

1. Welding electrode shall conform to E70XX classification of AWS A5.1, except as described below.
2. Welding electrode shall be compatible with existing steel where connections are made to steel of existing building. Electrode shall be E7018 unless determined otherwise. E7018 are low hydrogen electrodes that must be kept extremely dry.

**G. Structural Steel Primer Paint**

1. Provide type of primer indicated on steel under the following application conditions.
  - a. General application: Modified alkyd rust-inhibitive type containing no lead equal to Tnemec Co. No. 10 99 or Carboline Carbocoat 115-SG. Red oxide paint is not acceptable.
  - b. Cavity wall (including steel within the exterior block back-up or not separated from the cavity by a full block), exterior application, and as a primer after hot-dip galvanizing: Epoxy paint equal to Tnemec Co. Series FC27 Typoxy or Carboline Carboguard 888.
  - c. Touch-up primer for cavity wall and exterior application: High adhesion high-solids epoxy coating equal to Tnemec Co. Series 135 Chembuild or Carboline Carboguard.
  - d. For steel to receive 'Intumescent Fireproofing' per specification section 078123, provide and apply primer in conformance with that specification section.
  - e. For steel to receive 'Factory-Applied Metal Coatings' per specification section 050800, provide and apply primer in conformance with that specification section.

**H. Galvanizing by the Hot-dip Method**

1. Galvanize structural shapes in accordance with ASTM 123.
2. Galvanize hardware in accordance with ASTM A153.
3. Galvanizing repair paint for regalvanizing welds and damaged areas shall conform to ASTM A780 and comply with Military Specification MIL-P-21035, such as ZRC Cold Galvanizing Compound.

## 2.3 SHOP ASSEMBLY - FABRICATION

### A. General

1. Do not fabricate until shop drawings have been approved.
2. Fabricate and assemble steel in shop to greatest extent possible. Fabricate items and assemblies in accordance with AISC Specifications and the shop drawings.
3. Properly mark members for field assembly. Fabricate items in order to match delivery sequence that will expedite erection.
4. Mill column ends at base plates, cap plates, and splices to a common plane by means of an approved milling machine.

### B. Shop Connections

1. Weld or high-strength bolt shop connections as indicated on Drawings.
2. High-strength bolt connections are friction (slip-critical) connections. Install high-strength bolts in accordance with "Specification for Structural Joints using ASTM A325 or A490 Bolts" (RCRBSJ).
3. Welding: Comply with "Structural Welding Code" for procedures, appearance, and quality of welds and methods used in correcting welded work.
4. Holes for other Work
  - a. Provide holes and openings required for securing other Work to steel framing and for passage of other Work through framing members. Coordinate with Drawings of other Work.
  - b. Provide threaded nuts welded to framing, and other specialty items as indicated to receive other Work.
  - c. Cut, drill, flame cut, or punch holes perpendicular to metal surfaces. Method of cutting must not produce a roughness of over 1000 microinches. Surfaces exceeding these limits must be repaired by machine grinding.
  - d. Reinforce all openings with steel shapes as shown on shop drawings.

### C. Shear Stud Connectors (Non-Metal Deck Construction)

1. Weld shear studs to beams with automatically timed stud welding equipment at spacing shown on Drawings. Size, type, and length specified on Drawings.
2. Top flanges of beams must be free of paint, heavy rust, mill scale, dirt, ice and/or water, and any other material that will interfere with the welding operation.

## 2.4 SHOP PAINTING

### A. General: Apply one shop coat of primer paint on structural steel except as follows:

1. Structural steel that is encased in concrete.
2. Steelwork or portions of such to receive sprayed fireproofing. Steel that is exposed to the cavity and within the block back-up is to be painted, unless indicated to be galvanized.
3. Top flanges of structural steel members requiring stud shear connectors or supporting metal deck.
4. Contact surfaces of structural steel that are to be bolted or welded together.

5. Surfaces of structural steel within 2" of field welds.
6. Contact milled bearing surfaces.
7. Steel members, hardware, and miscellaneous pieces to be galvanized and not specified or indicated to be painted.

**B. Cleaning and Surface Preparation**

1. Clean all steel first in accordance with SSPC-SP1.
2. Clean steelwork not to be painted (except steel work to be galvanized) in accordance with SSPC SP2.
3. Clean steelwork to be painted within the same day as it will be applied and in accordance with the following methods, determined by location and exposure:
  - a. Interior steel not exposed to view: SSPC-SP2.
  - b. Interior steel exposed to view: SSPC-SP3.
  - c. Cavity wall and exterior steel exposed to weather: SSPC-SP6.

**C. Shop Coat**

1. Apply structural steel primer paint (general application) at a rate to provide dry film thickness of 2.0 to 3.5 mils. Apply primer paint (cavity wall and exterior application) at a rate to provide dry film thickness of 4.0 to 6.0 mils. Provide full coverage of joints, corners, edges, and exposed surfaces.
2. Apply to dry surfaces only, when surface temperatures are above dew-point, by brush, spray, or roller, thoroughly and evenly, in strict accord with manufacturer's instructions for every detail of handling.
3. Apply second coat of the approved primer, in a darker shade, to surfaces inaccessible to painting after assembly or erection.
4. Protect machined surfaces with an approved rust-inhibiting coating that is readily removable prior to erection.

**D. Concrete Contact Surfaces**

1. Paint steelwork at least two inches into the area in contact with concrete, where applicable.

**2.5 GALVANIZING**

**A. General: Galvanize the following members:**

1. All angles supporting exterior masonry or exposed to the weather, including shelf, arch, relieving angles.
2. All connections between the above angles and the supporting structural member, including WT's, hangers, clip angles, hardware, etc.
3. All exterior steel supporting mechanical equipment (dunnage steel) and any other steel members indicated on Drawings.

**B. Cleaning and Surface Preparation**

1. Hardware (bolts, nuts, etc.): Clean and leave free of mill scale before galvanizing.
2. Clean all steel first in accordance with SSPC-SP1 if needed.
3. Steel members: Clean in accordance with SSPC-SP8 before hot-dip galvanizing.
4. Steel members: Clean in accordance with SSPC-SP10 before hot-dip galvanizing. Surface shall have a 3-4 mil anchor pattern. Moisture cannot be present on steel and temperature cannot be less than 50F above the dew point. Thermal spray must be applied within 4 hours of blasting.

C. Shop Coat - Hot-dip Galvanizing – Provide for galvanized items not to have finish paint coat.

1. Galvanize hardware in accordance with ASTM A153.
2. Galvanize steel shapes in accordance with ASTM A123. Apply zinc (hot-dip) coating as per Thickness Grade specified in ASTM A123.

## 2.6 SOURCE QUALITY CONTROL

### A. Testing

#### 1. General

- a. Structural steel work is subject to all tests required by the Special Inspection requirements of the International Building Code 2021, New Jersey Edition.
- b. Cooperate with the Testing Laboratory in making all required tests.

#### 2. Tests: Owner will engage an independent testing and inspecting agency to perform shop tests and inspections and prepare test reports.

- a. Shop bolted connections: Tested in accordance with AISC specifications.
- b. Shop welding: The laboratory will perform the following functions:
  - 1) Certify welders.
  - 2) Visually inspect all welds, record type and locations of defects, and perform tests if necessary. Check all corrected work.
  - 3) Perform following non-destructive tests if necessary or as required by the Special Inspector. Tests used shall be at the Special Inspector's option:
    - a) Liquid Penetrant Inspection: ASTM E165.
    - b) Magnetic Particle Inspection: ASTM E709. Perform on roof pass and on finished weld.
    - c) Radiographic Inspection: ASTM E94 or E149. Minimum quality level 2 2T.
    - d) Ultrasonic Inspection: ASTM E164.

#### 3. Welding of Critical Joints

- a. All welded joints that are critical to the integrity of the structure, and require non-destructive testing to assure the adequacy of the critical weld, are indicated on the Drawings.

- b. To insure general weld quality of less critical groove and butt welds, a quality control program may be required to check the welds by non-destructive testing. The Drawings specify whether non-destructive testing is required and, if necessary, the method of inspection.

**B. Inspection**

**1. Testing Laboratory**

- a. The Owner will engage a Testing Laboratory or Special Inspection Agency to assist in the inspection of steel fabrication and conduct tests at the mill, shop, or foundry. The laboratory will assist in checking erection tolerances and provide shop and field testing required for all structural steel work, including metal deck and studs.
  - b. The Testing Laboratory will be responsible to and under the supervision of a Special Inspector.
- 2. Special Inspector: The Owner will assign a Special Inspector to supervise the Work listed above under "Testing Laboratory".
  - 3. Notification: Notify the Owner before beginning fabrication of the structural steel and supply laboratory with copies of agreements, approved drawings, approved prints of all shop details, etc., and all necessary information relating thereto. Do not ship material to job site until after inspection and approval by the Testing Laboratory.
  - 4. Discretionary Inspections: No mill, shop, foundry, or field inspection, such as is above provided for, shall be held to prohibit or preclude inspection of such materials during delivery and erection at the building by such other persons as the Owner shall direct.
  - 5. Reports: Shop and field reports, including shipments, will be submitted by the Testing Laboratory to the Owner as the work proceeds at the shop or job site. A final report will be submitted by the Testing Laboratory when work is completed at the shop, and again when work is completed in the field. The Special Inspector reserves right to reject material not in compliance with specified requirements at any time.
  - 6. Corrections: Correct deficiencies in work which inspections and tests have indicated to not be in compliance with requirements. Pay for additional tests, at own expense, necessary to reconfirm any non-compliance of original work and as necessary to show compliance of corrected work.
  - 7. Contractor's Responsibility: Inspection and acceptance or failure to inspect shall in no way relieve the Contractor or the mill and shops from their responsibility to furnish satisfactory material strictly in accordance with Drawings and Specifications.

**PART 3 -EXECUTION**

**3.1 EXAMINATION**

- A. Verify that field conditions are acceptable and that erection may proceed. Notify the Owner in writing of conditions that adversely affect the Work. Do not proceed with erection until conditions have been corrected. Beginning of installation means the erector accepts existing conditions.

### 3.2 ERECTION

#### A. General

1. Set structural steel accurately in locations and to elevations indicated and according to AISC 303 and AISC 360.
2. Maintain erection tolerances of structural steel within AISC's "Code of Standard Practice for Steel Buildings and Bridges."
3. All work shall be erected plumb, square, and true to lines and levels in strict accordance with the structural requirements of the building.
4. Provide all machinery, apparatus, and staging required for the erection of steelwork in a thoroughly safe and efficient manner. Install, maintain and remove, without injury to other Work, such temporary bracing, scaffolding, etc. as may be necessary or required. Care shall be taken that no part of the structure is overloaded during construction.
5. Arrange for deliveries of material to facilitate the rapid and continuous progress of operation, but the site or streets adjacent to same shall not be used for the storage of material unless absolutely necessary and then only with special permission of the Owner and other authorities having jurisdiction.
6. Employ a Licensed Professional Engineer and Land Surveyor to ensure accurate erection of the steel.
7. Do not alter or cut structural members without written approval of the Engineer of Record.

#### B. Temporary Shoring and Bracing

1. Provide temporary shoring and bracing members with connections of sufficient strength to bear erection loads and guy wires to maintain structure plumb and in true alignment until completion of erection. Remove temporary work when permanent members and bracing are in place and final connections are made.

#### C. Anchors Bolts

1. Furnish to the concrete and brick masons anchor bolts and other connectors required for securing structural steel to the foundation and other in-place concrete work, together with instructions, templates, etc. necessary for setting them. Anchor bolts are to be surveyed and any approved modifications made prior to placement of columns.
2. Tighten anchor bolts after support members have been positioned and plumbed. Cut off protruding edges of wedges or shims flush with edge of base or bearing plate prior to packing with grout.

#### D. Base and Bearing Plates

1. Clean concrete and masonry bearing surfaces of loose and bond-reducing materials.
2. Set loose and attached base plates and bearing plates for structural members on shims and other adjusting devices, such as leveling plates, within specified tolerances. Elevations of shims and leveling plates shall be surveyed and adjusted to correct elevation prior to placement of column or beam. Plates are to have grout holes.

#### E. Field Assembly

1. Erect structural frames accurately to lines and elevations indicated. Align and adjust members forming a part of a complete frame or structure before permanently fastening.
2. Clean bearing surfaces and other surfaces that will be in permanent contact before assembly.
3. Perform necessary adjustments to compensate for discrepancies in elevations and alignment.
4. Level and plumb individual members of the structure within specified tolerances. Do not tighten structure until surveys verify that structure is within allowable tolerances.
5. Establish required leveling and plumbing measurements on mean operating temperature of structure. Make allowances for difference between temperature at time of erection and mean temperature at which structure will be when completed and in service.
6. Splice members only where indicated and accepted on shop drawings.

**F. Connections**

1. Field connections shall be welded or bolted, except where welding is specifically called for on the Drawing.
  - a. Provide high-strength bolts for bolted connections except where unfinished bolts are indicated on the Drawings. High-strength bolt connections are friction (slip-critical) connections. Install high-strength bolts in accordance with "Specification for Structural Joints using ASTM A325 or A490 Bolts."
  - b. Provide unfinished bolts where indicated on Drawings. Lock nuts by upsetting bolt end or by similar method when unfinished bolts are not encased in concrete. Tighten all bolts and nuts fully.
  - c. Expansion/screw/adhesive anchors shall be installed in accordance with the manufacturer's installation instructions. Holes shall be cleaned completely using wire brush and compressed air following manufacturer's guidelines.
  - d. For ASTM A307 or A325 bolts, hardened washer shall be installed under the turned element. For ASTM A490 bolts, hardened washer shall be installed under the head and nut.
2. Holes
  - a. The size of boltholes shall be in accordance with AISC "Specification for the Design, Fabrication and Erection of Structural Steel for Buildings."
  - b. Ream holes that must be enlarged to admit bolts. Burning or use of drift pins is not permitted.

**G. Erection Holes**

1. Fill erection boltholes on exposed to view members with plug welds and grind smooth.

**H. Lintels and Relieving Angles**

1. Erect all exterior steel lintels and relieving angles connected (by hangers, clips, bolts or otherwise) to the structural steel work.
2. Loose lintels (interior and exterior) and lintels secured to concrete are part of the Work Section 055000.

**I. Flame Cutting**

1. Flame cutting in field of members to correct fabrication errors is to be avoided and to be done only upon approval of the Engineer of Record based on the method proposed. Roughness cannot exceed 1000 microinches. Repair of surfaces shall be by mechanical grinding.

**J. Field Touch-Up**

1. Painted Members: After erection, clean all damaged areas in shop coat, exposed surfaces of bolts, bolt heads, nuts and washers, abrasions, and all field welds and unpainted areas adjacent to field welds to the same standards as the shop coat and paint with primer paint to same thickness as the shop coat. Finish painting is specified in Section 099000.
2. Galvanized Members: After erection, clean and paint all damaged areas to the galvanizing, welds, and areas adjacent to welds with the galvanizing repair paint. For galvanized members to be painted, finish painting is specified in Section 099000 and shall be the final two coats of the epoxy paint system.

**3.3 TOLERANCES**

- A. Erection tolerances shall be in accordance with "Code of Standard Practice for Steel Buildings and Bridges", except as indicated in B below.
- B. The following overall maximum deviations (tolerances) from theoretical are permitted:
  - a. Column location @ base plate: 1/2"
  - b. Base Plate, bearing plate and column splice elevation: +1/8"
  - c. Column Plumbness: in or out 3/4" in column length, 1/4" for total building height
  - d. Beam or girder elevation: +1/2"
  - e. Beam camber: 1/8"
  - f. Lintel elevation: +1/16"
  - g. Lintel location: +1/4"

**3.4 FIELD QUALITY CONTROL**

- A. Cooperate with the Special Inspector and the Testing Laboratory performing Special Inspection testing.
- B. The Special Inspector will inspect erection of the structural framework and test field bolting and welding as listed in Part 2 of this Section. The Special Inspector will also check the welding of deck and metal studs described in Section 053000.
- C. The Contractor shall engage an engineer licensed in the state of New Jersey to check tolerances and inspect the erection.
- D. Contractor's Surveys
  1. Provide surveys of items listed below. Surveys are to indicate the actual location and elevation and the deviation from theoretical. Highlight those numbers that exceed

permissible tolerances. Surveys are to be submitted in a timely manner in order for corrections to be made prior to installation of the next item in sequence (e.g. anchor bolt and base plate survey prior to column installation), including placement of concrete. The following items are to be surveyed:

- a. Anchor bolt location
- b. Elevation of bottom of base plates (top of shims or leveling plate).
- c. Elevation of lowest column splice.
- d. Location (x,y, & radial) and plumbness of columns.
- e. Elevation of steel members taken at approximately 20 members from each floor for those members not cambered.
- f. Elevations of cambered members taken at each end and in center. The average of the two ends subtracted from the center will be the measured camber. Approximately 20 members will be selected by the Engineer of Record to be surveyed. Survey is to be done prior to and after placing concrete.
- g. Elevation and location of lintels prior to installation of masonry.

### 3.5 CLEANING

- A. Structural steel or portions of such to receive sprayed fireproofing shall be clean of dust, grease, oils, loose material, and any other matter which would impair the adhesion of the fireproofing material to the steel.

END OF SECTION 051200

## SECTION 053000 - METAL DECK

### PART 1 - GENERAL

#### 1.1 RELATED DOCUMENTS

- A. Drawings and general provisions of the Contract, including General and Supplementary Conditions and Division 01 Specification Sections, apply to this Section.

#### 1.2 DESCRIPTION OF WORK

- A. Furnish material, labor, equipment, services necessary to erect all metal deck, including connections, welding and accessories required for installation of Work. Field cut and fit deck as required and cut all openings.
- B. Place edge of deck at proper location to ensure proper placement of masonry. Set deck edge from a survey line based on the theoretical building line.

#### 1.3 RELATED SECTIONS

- A. Cast-in-Place Concrete- Section 033000
- B. Structural Steel - Section 051200

#### 1.4 REFERENCES

- A. References and industry standards listed in this Section are applicable to the Work. Unless more restrictive criteria or differing requirements are explicitly stated in the Specifications, or mandated by governing codes or regulations, the recommendations, suggestions, and requirements described in the referenced standards shall be deemed mandatory and applicable to the Work.

- 1. American Society Testing and Materials (ASTM) standards, latest editions.

A36	Standard Specification for Carbon Structural Steel.
A108	Standard Specification for Steel Bars, Carbon, Cold-finished, Standard Quality.
A653	Standard Specification for Steel Sheet, Zinc-Coated (Galvanized) or Zinc-Iron Alloy-Coated (Galvannealed) by the Hot-Dip Process.
A780	Standard Practice for Repair of Damaged and Uncoated Areas of Hot-Dip Galvanized Coating.
A992	Standard Specification for Steel for Structural Shapes for Use in Building Framing
B633	Standard Specification for Electrodeposited Coatings of Zinc on Iron and Steel

- B. "Specification for the Design, Fabrication and Erection of Structural Steel for Buildings", 9th edition including supplements. - American Institute of Steel Constructors (AISC 335).
- C. "Load and Resistance Factor Design Specification for Structural Steel Buildings" 13th edition, including supplements. - American Institute of Steel Constructors (AISC LRFD 2005).
- D. Seismic Provisions for Structural Steel Buildings (AISC 341-05).
- E. "North American Specification for the Design of Cold-Formed Steel Structural Members" - American Iron and Steel Institute (AISI).
- F. Safety Requirements for Powder-Actuated Fastening Systems (ANSI A10.3), American National Standard (ANSI).
- G. International Code Council Evaluation Service (ICC-ES):
  - 1. 2021 International Building Code NJ Edition
  - 2. Acceptance Criteria for Steel Deck Roof and Floor Systems (AC43)
  - 3. Steel Deck Diaphragms (ESR-2199)
- H. "Structural Welding Code - AWS D1.1" - American Welding Society (AWS).
- I. "Specifications for Mild Steel Covered Arc - Welding Electrodes - AWS A5.1" - AWS.
- J. "Diaphragm Design Manual for Floor Decks and Roof Decks" 3rd Edition - Steel Deck Institute (SDI).
- K. "Fire Resistance Directory" - Underwriters Laboratory (UL).

## 1.5 DESIGN REQUIREMENTS

- A. Metal deck unit sizes and gages are indicated on the Drawings.
- B. Units shall be of three-span length except where framing layout does not permit. Deck sheets shall be butted over supports.
- C. Provide shoring where required by the deck manufacturer as indicated on the approved shop drawings and where indicated on the Contract Documents.
- D. Use of integral and non-piercing hanger tabs to support ceiling systems is not permitted. Piercing hanger tabs with a safe working loading of 250 lbs or greater are permitted for ceilings weights below the hanger tab capacity. Integral hanger tabs are to be used for venting purposes only.
- E. Units included in a fire rated assembly must be classified in appropriate UL designs.
- F. Use fasteners or welds for decking attachment that provide adequate diaphragm shear strength, uplift resistance and stiffness for imposed load combinations.
- G. Performance Requirements: FM classified Class I-90 minimum for uplift resistance and UL fire

classified for roof deck.

## 1.6 SUBMITTALS

### A. Product Data

1. Submit manufacturer's specifications for
  - a. Shear stud connectors
  - b. Deck Fasteners, if used

### B. Shop Drawings

1. Prepare metal deck shop drawings immediately after award of Contract.
2. Shop drawings shall include, but not be limited to the following:
  - a. Type and gage of metal deck.
  - b. Metal deck layout and orientation, including clear indication where shoring is required.
  - c. Welding or fastener types, sizes and pattern.
  - d. Side and end details of metal deck.
  - e. Supplementary framing details.
  - f. Location of all openings and fittings.
  - g. Shop finish.
  - h. Size, location, and spacing of stud shear connectors, where required, for each beam.
  - i. Designation of welding electrode strength to be used.
3. Shop drawings reviewed by the Engineer of Record for general conformity with the Drawings shall not relieve the Contractor or the metal deck supplier of responsibility for correctness of fit, quantities of materials, and adequacy of attachment details of deck and accessories to the structural steel. Deck must have UL or OTCR approval as part of the fire rated assembly. Approval of shop drawings does not absolve the Contractor of this requirement.
4. Calculations in accordance with ICC-ES AC 43 or SDI Design Method verifying diaphragm shear strength and stiffness: Submit calculations for the load tables of the metal deck supplied. Calculations shall be signed and sealed by a Professional Engineer licensed in the State of New Jersey.

### C. Quality Control Submittals

1. Certificates
  - a. Submit notarized certificates from the manufacturers of the specified materials stating compliance with the applicable requirements set forth for all materials specified in this Section.
  - b. Submit certificate stating welders employed for installation of the metal deck have met AWS qualifications within the previous 12 months.

- c. Furnish proof that deck to be used is part of a UL, approved fire-rated assembly if other than deck shown on Drawings. Refer to Section 078100.
  - d. Submit certificate stating deck manufacturer is a member producer of SDI.
2. Manufacturers' Instructions: Furnish manufacturers' printed material, specifications and installation instructions for each type of decking, accessories, and studs.
3. Contractor Qualifications
  - a. Provide proof of Manufacturer, Erector, welder, and mechanical fastener technician qualifications specified under "Quality Assurance".

**D. Surveys**

1. Submit signed and sealed copies of surveys conducted by a Licensed Land Surveyor showing locations of edge of deck with respect to theoretical edge of deck and building survey line.

**1.7 QUALITY ASSURANCE**

**A. Qualifications**

1. Manufacturer: Company specializing in the manufacture of metal deck as used in this Contract shall have a minimum of five years of experience and is a member producer of SDI.
2. Erector: Company specializing in performing the Work of this Section shall have a minimum of three years of experience and have done at least three projects with similar quantity of material.
3. Welders: All steel roof deck welders shall be AWS certified for welding of sheet steel and must provide all appropriate welding certifications.
4. Mechanical Fastener Installer: Shall be certified or licensed by the fastener and tool system manufacturer on the project site in accordance with ANSI A10.3 requirements. Certification or licensing includes all training necessary for proper tool operation, fastener selection, maintenance and troubleshooting.

**B. Regulatory Requirements**

1. Building Code: Work of this Section shall conform to all requirements of the International Building Code 2021, New Jersey Edition and all applicable regulations of other governmental authorities. Where more severe requirements than those contained in the Building Code are given in this Section, the requirements of this Section shall govern.
2. Industry Standards: Standards specified herein shall apply to Work of this Section. Where more severe requirements than those contained in the standards are given in this section or the Building Code, requirements of this Section or the Building Code shall govern.
  - a. AISC 335-89 or LRFD (1999) as modified by the International Building Code 2021, New Jersey Edition.
  - b. Seismic Provisions for Structural Steel Buildings AISC 341-05.
  - c. "Rules for Design of Composite Construction with Metal Decks or Lightweight Concrete" - Department of Buildings.

d. Fire Resistance Directory - UL.

- 1) Composite metal deck shall have UL approval with respect to the following:
  - a) As a component part of a floor construction of specified fire resistance rating without need for sprayed fireproofing on underside of deck.
  - b) As a component part of a three-hour fire resistive floor construction with use of sprayed fireproofing on underside of deck.
- 2) Roof deck shall have UL approval as a component part of the specified fire resistive roof construction.
3. Recommendations or suggestions in the codes and references listed in this Article and under "References" shall be deemed to be mandatory unless they are in violation of the Building Code.

C. Certifications

1. Structural metal deck and stud shear connectors shall conform to the material acceptance, certification and inspection requirements of the International Building Code 2021, New Jersey Edition.
2. Qualify welding processes and welding operators in accordance with AWS "Standard Qualification Procedure".

1.8 DELIVERY, STORAGE, AND HANDLING

- A. Deliver deck to site undamaged. With each deck unit bearing the UL label and marking for specific system detailed.
- B. Store deck units off the ground with one end elevated to provide drainage. Protect units from the elements with a waterproof covering.

PART 2 - PRODUCTS

2.1 MANUFACTURERS

- A. Metal Deck and Accessories, or approved equal.
  1. H.H. Robertson Company, or approved equal.
  2. Canam Steel, or approved equal.
  3. Nucor (Vulcraft/Verco Group), or approved equal.
  4. Wheeling Corrugating Co., or approved equal.
  5. United Steel Deck, Inc., or approved equal.
  6. Epic Metals Corporation, or approved equal.

- B. Stud Shear Connectors
  - 1. KSM Products, Inc., or approved equal.
  - 2. Nelson Stud Welding Co., or approved equal.
  - 3. Hilti, Inc., or approved equal.

- C. Mechanical Fasteners
  - 1. Hilti, Inc., or approved equal.
  - 2. ITW Ramset, or approved equal.

- D. Sidelap Connectors
  - 1. Hilti, Inc., or approved equal.
  - 2. Elco Textron, or approved equal.

## 2.2 MATERIALS

- A. Steel for Composite Metal Deck
  - 1. Formed from galvanic steel sheets conforming to ASTM A653. Size of deck is to follow SDI requirements for thickness and tolerances.
  - 2. Minimum yield strength of 40,000 psi.
  - 3. Formed with integral locking lugs.
  - 4. Formed with deformations to provide bond with concrete.
  - 5. Deck to receive sprayed fireproofing shall be free of lubricants or oils that would impair the adhesion of the fireproofing material.
  - 6. Metal deck that is not exposed to view with architectural paint finish shall have integral hanger tabs providing an approximate 0.5% uniformly distributed open area. The hanger tabs are used for venting purposes only.
- B. Steel for Roof Deck
  - 1. Formed from galvanic steel sheets conforming to ASTM A653. Size of deck is to follow SDI requirements for thickness and tolerances.
  - 2. Minimum yield point of 40,000 psi.
  - 3. Deck to receive sprayed fireproofing shall be free of lubricants or oils that would impair the adhesion of the fireproofing material.
- C. Miscellaneous Steel Shapes
  - 1. Shall conform to the requirements of ASTM A36 or A992. Members to receive sprayed fireproofing shall be unprimed and free of lubricants or oils that would impair the adhesion of the fireproofing material.
- D. Shop Finish
  - 1. Metal deck: Steel sheet shall receive before being formed a coating of zinc conforming to ASTM A653 coating class G60 (both sides). Metal deck exposed to view shall be cleaned

and phosphatized prior to priming. Primer shall be applied in the shop (Zinc dust-zinc oxide primer - 2.5 Mils DFT).

2. Steel roof deck: Steel sheet shall receive before being formed a coating of zinc conforming to ASTM A653 coating class G90 (both sides). Roof deck exposed to view shall be cleaned and phosphatized prior to priming. Primer shall be applied in the shop (Zinc dust-zinc oxide primer - 2.5 Mils DFT).

E. Metal Deck Accessories (cants, pour stops, closure pieces, etc.)

1. Shall conform to the requirements of ASTM A653, coating class G90. Unless a thicker gage is required by design considerations, such as at cantilever edge conditions, minimum thickness shall be same gage as metal deck. Accessories to receive sprayed fireproofing shall be free of lubricants and oils that would impair the adhesion of the fireproofing material.

F. Headed Stud Type Shear Connector

1. Welded studs shall conform to the requirements of ASTM A108, Grade 1015 or 1020, and Articles 4.26 and 4.27 of AWS D1.1. Welded studs shown on the Drawing are the Basis of Design.
2. Mechanical Studs of equivalent strength to welded studs. Unless shown on the Contract Drawings, the size, number of and location on the beam shall be in accordance with the manufacturer's published data and supported by test data.
  - a. Mechanical shear connectors shall be Hilti X-HVB Shear Connectors installed with Hilti X-ENP-21 HVB powder-actuated fasteners.

G. Welds and Fasteners

1. Welds:
  - a. No welding (FM Global) permitted of side laps of roof deck 20ga or thinner.
  - b. Material: Welding electrodes shall conform to E70XX classification of AWS A5.1.
  - c. Weld Washers: Use on steel roof deck thinner than 22 gauge
2. Mechanical Fasteners:
  - a. Material: AISI 1070 modified
  - b. Hardness: Minimum Rockwell Hardness C 54.5
  - c. Design and Manufacture: Knurled shank with forged ballistic point. Manufacturing process shall ensure steel ductility and prevent development of hydrogen embrittlement.
  - d. Washers:
    - 1) For structural steel framing: Minimum 15 mm (0.591 in.) steel washers
    - 2) For steel bar joist framing: Minimum 12 mm (0.472 in.) steel washers
  - e. Corrosion Resistance:

- 1) For steel roof decks with waterproofing membrane: 5 micron zinc electroplated in accordance with ASTM B 633 SC1 Type III
- 2) For exposed steel roof decks: Minimum AISI 304 stainless steel sealing caps with bonded neoprene washer shall be installed over each fastener

f. Design Requirements:

- 1) ICC-ES AC43 or SDI method for diaphragm shear strength and stiffness
- 2) FM wind uplift resistance
- 3) UL fire classification

g. Approved Types

- 1) For use with structural steel framing supports with top flange thickness 1/4 in. or thicker:
  - a) Hilti X-ENP-19 L15 (1/4 in. or thicker)
  - b) ITW/Ramset SP
- 2) For use with steel bar joist supports with top chord or flange thickness 1/8 in. to 3/8 in.:
  - a) Hilti X-EDNK22 THQ12 (1/8 in. up to and including 1/4 in.)
  - b) Hilti X-EDN19 THQ12 (3/16 in. up to and including 3/8 in.)
  - c) ITW/Ramset 1500K and 1600WK

H. Sidelap Connectors

1. Acceptable types of sidelap connectors:

a. Top or side seam welds

- 1) 1-1/2 in. long fillet welds in accordance with AWS D1.3 procedures.

b. Mechanical sidelap connectors

- 1) Drive mechanical sidelap connectors completely through adjacent lapped roof deck sheets to achieve positive engagement of adjacent sheets with a minimum of three thread penetration.
- 2) Material: ASTM A 510 Grade 1022
- 3) Hardness: Minimum Vickers Surface Hardness of 450 HV0.3
- 4) Design and Manufacture: Hex washer head undercut with reverse serrations; self-piercing or stitch point at center
- 5) Corrosion Resistance:
  - a) For steel roof decks with waterproofing membrane: 5 micron zinc electroplated in accordance with ASTM B 633 SC1 Type III.
  - b) For exposed steel roof decks: AISI 410 or 304 stainless steel with bonded neoprene washer.

- 6) Design Requirements:
  - a) ICC-ES AC43 or SDI method for diaphragm shear strength and stiffness
  - b) FM wind uplift resistance

- 7) Approved Types
  - a) Hilti S-SLC01 M HWH Sidelap Connector
  - b) Hilti S-SLC02 M HWH Sidelap Connector
  - c) Hilti S-MD 10-16 x 3/4 HWH #3 Stainless Steel Screw
  - d) Elco Textron

c. Button punches

- 1) Standard or proprietary type button punches shall be deep and positively engage the male and female side edges of adjacent interlocking deck sheets in accordance with steel deck manufacturer recommendations
- 2) Approved Types
  - a) Wheeling Corrugating Gator Crimp
  - b) Verco Manufacturing Punchlok

I. Galvanizing Repair Paint

- 1. Shall conform to the requirements of ASTM A780 and comply with Military Specification MIL-P-21035.

J. Deck Fasteners (if used)

- 1. Deck fasteners of a type that will provide equal or greater uplift resistance than a 3/4" puddle weld.

## **PART 3 - EXECUTION**

### **3.1 EXAMINATION**

- A. Do not begin placement of metal deck until all surfaces and members are deemed acceptable to receive the deck. Do not proceed with Work until any unsatisfactory conditions have been corrected to the satisfaction of the deck installer.

### **3.2 ERECTION**

A. General

- 1. Care should be taken to avoid overloading the supporting structural elements when placing bundles of metal deck or other construction loads on floors and roof.

2. Do not use floor deck units for storage or working platforms until they are permanently secured.
3. Employ a Licensed Professional Engineer or Land Surveyor to ensure accurate erection of the deck and end closures.

**B. Metal Deck and Accessories Installation**

1. Lay units in strict accordance with manufacturer's instructions and requirements and as shown on Drawings.
2. Adjust units in place before permanent fastening and accurately align end to end. Rectify inaccuracies in alignment and level of bearing before units are finally placed.
3. Provide proper bearing at all supports. Metal deck must be placed to bear fully on surface of beam flanges.
4. Provide angle and channel supports for metal deck at locations where deck cannot be properly seated due to obstructions by structural connections and as shown on Drawings. Coordinate with mechanical trades to adjust supports at columns if required to permit items to pass adjacent to column.
5. Anchor deck to steel member by welding directly through the bottom of the rib at all structural supports by welds not less than 3/4" in diameter or by using powder driven fasteners of equivalent strength, spaced not more than 12" across the width of the unit. All welds shall be of uniform size and appearance and free of pinholes, porosity, undercutting or other defects. Welds shall be free of sharp points or edges. Mechanical fasteners shall be fully engaged and washer snug and holding deck without damage. Where two units abut, each unit shall be so fastened to the steel framing. Add additional welds or fasteners where found defective.
6. Fasten side laps of adjacent units between supports by crimping or mechanically fastening with sheet metal screws of size and spacing required by manufacturer or as indicated on the Drawings to provide diaphragm strength required by seismic design. In no case shall fasteners exceed two feet. Fasteners for exposed to view roof deck shall be the minimum length possible to ensure an aesthetic appearance.
7. Furnish, install, and weld in position all accessories, including pour stops, closures, cant strips, etc., where required.
  - a. Furnish sheet metal pour stops and closures for open ends of all cell raceways at columns, walls, and openings shown on Drawings. Pour stop gage is to be selected by manufacturer based on overhang. Revise gage if survey shows overhang exceeds that designed. Provide additional supports to strengthen pour stop at wedge inserts if required.
  - b. Provide sheet steel cover plate (or closure tape) as required to close panel end conditions where panels change direction or abut.
  - c. Furnish material for column closures to close openings between panels and structural columns.
  - d. Provide welding hole cover, with friction fastening, to close welding access holes when required.
  - e. Provide smooth form wood edge at locations where edge of deck will be exposed to view, such as at stairwells.

**C. Stud Shear Connector Welding**

1. Weld studs to steel beams through the steel deck with automatically-timed stud welding equipment.
2. Stud welding shall conform to the requirements of AWS D1.1 with respect to workmanship, quality control, and field inspection.
3. Manufacturer shall supply guidance and instruction in proper installation method
4. Additional requirements for stud welding with metal deck:
  - a. Top flanges of beams must be free of paint, heavy rust, millscale, dirt, ice and water, and any other material that will interfere with the welding operation.
  - b. Metal deck must be free of dirt, ice, water, and other foreign materials that will interfere with the welding operation.

**D. Cutting, Drilling, and Reinforcing of Openings**

1. Where predetermined openings (such as stairs, elevators, etc.) are framed by structural steel beams on all sides (shown on the Drawings), the metal deck shall be engineered by the manufacturer to fit these conditions.
2. Any opening which is not framed by structural steel beams on all sides, and which is required in steel decking, shall be cut by the respective trades requiring it.
3. Reinforcing of Openings in Steel Deck
  - a. Holes 6" or less in dimension need not be reinforced.
  - b. Holes greater than 6" but less than 30" in any dimension shall be reinforced by the General Contractor as shown on the Structural Contract Drawings.

**E. Field Touch Up**

1. Clean scarred and rusted areas in galvanizing after deck installation is completed and paint welds and the scarred and rusted areas with the galvanizing repair paint. Apply in accordance with the manufacturer's instructions.

**3.3 TOLERANCES**

- A. Edge of metal deck is to be within a tolerance of 1/4" of theoretical, set to a survey line, to ensure proper installation of masonry and installation of relieving angles.

**3.4 FIELD QUALITY CONTROL**

- A. Welding/fastening of metal deck and shear studs is subject to Special Inspection and Testing and is included as part of the Quality Control Work of Section 051200 and includes, but is not limited to.
1. Weld sizes and pattern.
  2. Mechanical fastener placement location and washer condition.
  3. Clamping of steel roof deck to supporting steel framing
- B. The Contractor shall engage an engineer licensed in the state of New Jersey to check tolerances and inspect the erection.

C. Contractors Surveys

1. Provide survey of locations of edge of deck with respect to theoretical edge of deck and building survey line. Indicate discrepancies between actual installation and Contract Documents. Surveys are to be submitted in a timely manner such that corrections can be made prior to placement of concrete. Do not proceed with placing concrete until the pour stop locations are corrected.

3.5 CLEANING

- A. Metal deck and accessories to receive sprayed fireproofing shall be clean of dust, grease, excessive oils, loose materials, and any other matter which would impair the adhesion of the fireproofing material to the deck and accessories.

END OF SECTION 053000

## **SECTION 05 4000 - COLD-FORMED METAL FRAMING**

### **PART 1 - GENERAL**

#### **1.1 RELATED DOCUMENTS**

- A. Drawings and general provisions of the Contract, including General and Supplementary Conditions and Division 01 Specification Sections, apply to this Section.

#### **1.2 SUMMARY**

- A. Section Includes:
  - 1. Exterior non-load-bearing wall framing
  - 2. Any location in plans identified as using cold-formed metal framing (CFMF)

#### **1.3 ACTION SUBMITTALS**

- A. Product Data: For each type of cold-formed steel framing product and accessory.
- B. Shop Drawings:
  - 1. Include layout, spacings, sizes, thicknesses, and types of cold-formed steel framing; fabrication; and fastening and anchorage details, including mechanical fasteners.
  - 2. Indicate reinforcing channels, opening framing, supplemental framing, strapping, bracing, bridging, splices, accessories, connection details, and attachment to adjoining work.
  - 3. Include signed and sealed calculations by a licensed New Jersey Professional Engineer.
- C. Delegated-Design Submittal: For cold-formed steel framing.
  - 1. Submit shop drawings and comprehensive engineering calculations which have been signed and sealed by a Professional Engineer, indicating that cold formed metal framing complies with performance requirements and support imposed loads.

#### **1.4 INFORMATIONAL SUBMITTALS**

- A. Welding certificates.
- B. Product Test Reports: For each listed product, for tests performed by manufacturer and witnessed by a qualified testing agency or a qualified testing agency.
  - 1. Steel sheet.
  - 2. Expansion anchors.
  - 3. Power-actuated anchors.
  - 4. Mechanical fasteners.
  - 5. Vertical deflection clips.
  - 6. Horizontal drift deflection clips
  - 7. Miscellaneous structural clips and accessories.
- C. Research Reports:
  - 1. For cold-formed steel framing.

2. Steel framing manufacturer to have a third-party evaluation report for its products that are reviewed to the local building code or its model code (IBC 2018 and AISI S100).

## 1.5 QUALITY ASSURANCE

- A. Manufacturer Qualifications: Member in good standing of the Steel Framing Industry Association (SFIA) or be a part of a similar organization that provides verifiable code compliance program.
  1. Products to be certified under an independent third-party inspection program administered by an agency accredited by IAS to ICC-ES AC98 IAS Accreditation Criteria for Inspection Agencies.
- B. Product Tests: Mill certificates or data from a qualified independent testing agency, or in-house testing with calibrated test equipment indicating steel sheet complies with requirements, including base-steel thickness, yield strength, tensile strength, total elongation, chemical requirements, and metallic-coating thickness.
- C. Welding Qualifications: Qualify procedures and personnel according to the following:
  1. AWS D1.1/D1.1M, "Structural Welding Code - Steel."
  2. AWS D1.3/D1.3M, "Structural Welding Code - Sheet Steel."
- D. Comply with the following AISI Specifications and standards:
  1. AISI S100, "North American Specification for the Design of Cold-Formed Steel Structural Members."

## 1.6 DELIVERY, STORAGE, AND HANDLING

- A. Protect cold-formed steel framing from corrosion, moisture staining, deformation, and other damage during delivery, storage, and handling as required in AISI S202, "Code of Standard Practice for Cold-Formed Steel Framing."

## PART 2 - PRODUCTS

### 2.1 MANUFACTURERS

- A. Manufacturers: Subject to compliance with requirements, provide products by one of the following.
  1. ClarkDietrich.
  2. MarinoWARE.
  3. Super Stud Building Products, Inc.
  4. United Metal Products, Inc.
  5. Craco Mfg., Inc.
  6. Or approved equal

### 2.2 PERFORMANCE REQUIREMENTS

- A. Delegated Design: Engage a qualified professional engineer, as defined in Division 1 Section "Quality Requirements" and "Submittal Procedures," to design cold-formed steel framing.
- B. Structural Performance: Provide cold-formed steel framing capable of withstanding design loads

within limits and under conditions indicated according to the 2021 new jersey edition of the IBC, ASCE 7-16.

1. Design Loads: See structural drawings.
    - a. risk category 2, exposure B, basic wind speed 121 mph.
  2. Deflection Limits: Design framing systems to withstand design loads without deflections greater than the following:
    - a. Exterior Non-Load-Bearing Framing where masonry veneer braced/attached: Horizontal deflection of  $L/600$  of the wall height
    - b. Exterior non-load bearing framing without masonry veneer: Horizontal deflection of  $L/360$  of the wall height
  3. Design framing systems to provide for movement of framing members located outside the insulated building envelope without damage or overstressing, sheathing failure, connection failure, undue strain on fasteners and anchors, or other detrimental effects when subject to a maximum ambient temperature change of 120 deg F.
  4. Design framing system to maintain clearances at openings, to allow for construction tolerances, and to accommodate live load deflection of primary building structure as follows:
    - a. Upward and downward movement of 1 inch.
  5. Design exterior non-load-bearing wall framing to accommodate horizontal deflection without regard for contribution of sheathing materials.
  6. Design soffit framing to accommodate a positive and negative pressure as determined by engineering analysis based on design loads but in no case shall be less than  $\pm 30$  psf.
- C. AISI Specifications and Standards: Unless more stringent requirements are indicated, comply with AISI S100 and AISI S240.

## 2.3 COLD-FORMED STEEL FRAMING MATERIALS

- A. Framing Members, General: Comply with AISI S240 for conditions indicated.
- B. Steel Sheet: ASTM A1003/A1003M, Structural Grade, Type H, metallic coated, of grade and coating designation as follows:
  1. Grade:
    - a. ST33H (33KSI) where studs are 0.0428 in (18 gauge) and lighter
    - b. ST50H (50KSI) where studs are 0.0538 in (16 gauge) and heavier.
  2. Coating: **CP 90: G90 , AZ50 , or GF45.**

## 2.4 EXTERIOR NON-LOAD-BEARING WALL FRAMING

- A. Steel Studs: Manufacturer's standard C-shaped steel studs, of web depths indicated, punched, with stiffened flanges, and as follows:
  1. Minimum Base-Steel Thickness: Determined by Contractor's Delegated Design Engineer but not less than 0.0428 in. (18 gauge).
  2. Flange Width: 1-5/8 inches minimum.
  3. Section Properties: Determined by Contractor's Delegated Design Engineer.

- B. Steel Track: Manufacturer's standard U-shaped steel track, of web depths indicated, unpunched, with unstiffened flanges. Material thickness to match studs.
- C. Vertical Deflection Clips: Manufacturer's standard bypass or head clips, capable of accommodating upward and downward vertical displacement of primary structure through positive mechanical attachment to stud web.
  - 1. Minimum Base-Steel Thickness: as required by engineering calculations but not less than thickness of the studs.
- D. Slotted Deflection Track: Manufacturer's single, deep-leg, U-shaped steel track; punched with vertical slots in both legs. Studs should be positively attached to deep-leg track using vertical slots while allowing free vertical movement. Legs designed to support horizontal and lateral loads and transfer them to the primary structure.
  - 1. Depth of legs as required to accommodate specified movement
- E. Single Deflection Track: Manufacturer's single, deep-leg, U-shaped steel track; unpunched, with unstiffened flanges, of web depth to contain studs while allowing free vertical movement, with flanges designed to support horizontal loads and transfer them to the primary structure and with length sufficient to allow specified movement, and as follows:
  - 1. Minimum Base-Steel Thickness: Determined by Contractor's Delegated Design Engineer.
  - 2. Flange Width: Determined by Contractor's Delegated Design Engineer.

## 2.5 FRAMING ACCESSORIES

- A. Fabricate steel-framing accessories from steel sheet, ASTM A 1003/A 1003M, Structural Grade, Type H, metallic coated, of same grade and coating weight used for framing members.
- B. Provide accessories of manufacturer's standard thickness and configuration, unless otherwise indicated, as follows:
  - 1. Supplementary framing.
  - 2. Bracing, bridging, and solid blocking.
  - 3. Web stiffeners.
  - 4. Anchor clips.
  - 5. End clips.
  - 6. Foundation clips.
  - 7. Stud kickers and knee braces.
  - 8. Hole reinforcing plates.
  - 9. Backer plates.

## 2.6 ANCHORS, CLIPS, AND FASTENERS

- A. Expansion Anchors: Fabricated from corrosion-resistant materials, with allowable load or strength design capacities calculated according to ICC-ES AC193 and ACI 318 greater than or equal to the design load, as determined by testing per ASTM E 488 conducted by a qualified testing agency.
- B. Power-Actuated Anchors: Fastener system of type suitable for application indicated, fabricated from corrosion-resistant materials, with allowable load capacities calculated according to ICC-ES AC70, greater than or equal to the design load, as determined by testing per ASTM E 1190 conducted by a

qualified testing agency.

- C. Mechanical Fasteners: ASTM C 1513, corrosion-resistant-coated, self-drilling, self-tapping, steel drill screws.

- 1. Head Type: Low-profile head beneath sheathing, manufacturer's standard elsewhere.

- D. Welding Electrodes: Comply with AWS standards.

## 2.7 MISCELLANEOUS MATERIALS

- A. Galvanizing Repair Paint: ASTM A 780.
- B. Shims: Load bearing, high-density multi-monomer plastic, and non-leaching; or of cold-formed steel of same grade and coating as framing members supported by shims.
- C. Sealer Gaskets: Closed-cell neoprene foam, 1/4 inch thick, selected from manufacturer's standard widths to match width of bottom track or rim track members.

## 2.8 FABRICATION

- A. Fabricate cold-formed steel framing and accessories plumb, square, and true to line, and with connections securely fastened, according to referenced AISI's specifications and standards, manufacturer's written instructions, and requirements in this Section.
  - 1. Fabricate framing assemblies using jigs or templates.
  - 2. Cut framing members by sawing or shearing; do not torch cut.
  - 3. Fasten cold-formed steel framing members by welding, screw fastening, clinch fastening, pneumatic pin fastening, or riveting as standard with fabricator. Wire tying of framing members is not permitted.
    - a. Comply with AWS D1.3/D1.3M requirements and procedures for welding, appearance and quality of welds, and methods used in correcting welding work.
    - b. Locate mechanical fasteners and install according to Shop Drawings, with screw penetrating joined members by no fewer than three exposed screw threads.
  - 4. Fasten other materials to cold-formed steel framing by welding, bolting, pneumatic pin fastening, or screw fastening, according to Shop Drawings.
- B. Reinforce, stiffen, and brace framing assemblies to withstand handling, delivery, and erection stresses. Lift fabricated assemblies to prevent damage or permanent distortion.
- C. Fabrication Tolerances: Fabricate assemblies level, plumb, and true to line to a maximum allowable tolerance variation of 1/8 inch in 10 feet and as follows:
  - 1. Spacing: Space individual framing members no more than plus or minus 1/8 inch from plan location. Cumulative error shall not exceed minimum fastening requirements of sheathing or other finishing materials.
  - 2. Squareness: Fabricate each cold-formed steel framing assembly to a maximum out-of-square tolerance of 1/8 inch.

## PART 3 - EXECUTION

### 3.1 EXAMINATION

- A. Examine supporting substrates and abutting structural framing for compliance with requirements for installation tolerances and other conditions affecting performance of the Work.
- B. Proceed with installation only after unsatisfactory conditions have been corrected.

### 3.2 PREPARATION

- A. Install sealer gaskets at the underside of wall bottom track or rim track and at the top of foundation wall or slab at stud or joist locations.

### 3.3 INSTALLATION, GENERAL

- A. Cold-formed steel framing may be shop or field fabricated for installation, or it may be field assembled.
- B. Install cold-formed steel framing according to ASTM C1007, AISI S240 and to manufacturer's written instructions unless more stringent requirements are indicated.
- C. Install shop- or field-fabricated, cold-formed framing and securely anchor to supporting structure.
  - 1. Screw, bolt, or weld wall panels at horizontal and vertical junctures to produce flush, even, true-to-line joints with maximum variation in plane and true position between fabricated panels not exceeding 1/16 inch.
- D. Install cold-formed steel framing and accessories plumb, square, and true to line, and with connections securely fastened.
  - 1. Cut framing members by sawing or shearing; do not torch cut.
  - 2. Fasten cold-formed steel framing members by welding, screw fastening, clinch fastening, or riveting. Wire tying of framing members is not permitted.
    - a. Comply with AWS D1.3/D1.3M requirements and procedures for welding, appearance and quality of welds, and methods used in correcting welding work.
    - b. Locate mechanical fasteners and install according to Shop Drawings, and complying with requirements for spacing, edge distances, and screw penetration.
- E. Install framing members in one-piece lengths unless splice connections are indicated for track or tension members.
- F. Install temporary bracing and supports to secure framing and support loads comparable in intensity to those for which structure was designed. Maintain braces and supports in place, undisturbed, until entire integrated supporting structure has been completed and permanent connections to framing are secured.
- G. Install insulation, specified in Division 7 Section "Building Insulation," in built-up exterior framing members, such as headers, sills, boxed joists, and multiple studs at openings, that are inaccessible on completion of framing work.

- H. Fasten hole reinforcing plate over web penetrations that exceed size of manufacturer's approved or standard punched openings.
- I. Erection Tolerances: Install cold-formed steel framing level, plumb, and true to line to a maximum allowable tolerance variation of 1/8 inch in 10 feet and as follows:
  - 1. Space individual framing members no more than plus or minus 1/8 inch from plan location. Cumulative error shall not exceed minimum fastening requirements of sheathing or other finishing materials.

### 3.4 EXTERIOR NON-LOAD-BEARING WALL INSTALLATION

- A. Install continuous tracks sized to match studs. Align tracks accurately and securely anchor to supporting structure as indicated.
- B. Fasten both flanges of studs to top and bottom track unless otherwise indicated. Space studs as follows:
  - 1. Stud Spacing: 16 inches, unless otherwise determined by the delegated design engineer.
- C. Set studs plumb, except as needed for diagonal bracing or required for non-plumb walls or warped surfaces and similar requirements.
- D. Isolate non-load-bearing steel framing from building structure to prevent transfer of vertical loads while providing lateral support.
- E. Install horizontal bridging in wall studs, spaced vertically in rows indicated on Shop Drawings but not more than 48 inches apart. Fasten at each stud intersection.
  - 1. Top Bridging for Single Deflection Track: Install row of horizontal bridging within 12 inches of single deflection track. Install a combination of bridging and stud or stud-track solid blocking of width and thickness matching studs, secured to stud webs or flanges.
    - a. Install solid blocking at 96-inch centers.
- F. Install miscellaneous framing and connections, including stud kickers, web stiffeners, clip angles, continuous angles, anchors, and fasteners, to provide a complete and stable wall- framing system.

### 3.5 FIELD QUALITY CONTROL

- A. Testing: Owner will engage a qualified independent testing and inspecting agency to perform field tests and inspections and prepare test reports.
- B. Field and shop welds will be subject to testing and inspecting.
- C. Testing agency will report test results promptly and in writing to Contractor and Architect.
- D. Remove and replace work where test results indicate that it does not comply with specified requirements.
- E. Additional testing and inspecting, at Contractor's expense, will be performed to determine

compliance of replaced or additional work with specified requirements.

**3.6 REPAIRS AND PROTECTION**

- A. Galvanizing Repairs: Prepare and repair damaged galvanized coatings on fabricated and installed cold-formed steel framing with galvanized repair paint according to ASTM A 780 and manufacturer's written instructions.
- B. Provide final protection and maintain conditions, in a manner acceptable to manufacturer and Installer that ensure that cold-formed steel framing is without damage or deterioration at time of Substantial Completion.

END OF SECTION 05 4000

## SECTION 05 5000 - METAL FABRICATIONS

### PART 1 - GENERAL

#### 1.1 SUMMARY

A. Section Includes:

1. Metal ladders including attachment brackets.
2. Steel bollards, galvanized
3. Galvanized steel lintels.
4. Thermal break plates with bushings and washers for use at steel lintels where indicated
5. Miscellaneous steel framing and supports.
6. Counter support brackets for built-in counters and benches.
7. Miscellaneous metal framing and supports not furnished as structural steel components.
8. Other metal items indicated on the drawings but not specified elsewhere, and those metal items not indicated but required to complete the work.

#### 1.2 SUBMITTALS

A. Product Data: For the following:

1. Nonslip aggregates and nonslip-aggregate surface finishes.
2. Fasteners.
3. Shop primers.
4. Shrinkage-resisting grout.

B. Shop Drawings: Show fabrication and installation details. Include plans, elevations, sections, and details of metal fabrications and their connections. Show anchorage and accessory items.

C. Engineering Data

1. Before any ladders or railings are fabricated, submit engineering data drawings to the Architect for review indicating how performance standards specified here shall be met. The Contractor is responsible for the structural design and supports for these systems and must show his proposed systems on these drawings.
2. These drawings must show all load conditions and design calculations relative to connections, fastening devices and anchorage, as well as size and gauge of members. Calculations and drawings must be prepared by a Structural Engineer licensed in the State of New Jersey and shall be signed and sealed by this Engineer.

D. Welding certificates.

E. Qualification Data: For professional engineer.

### 1.3 QUALITY ASSURANCE

- A. Welding: Qualify procedures and personnel according to the following:
  - 1. AWS D1.1, "Structural Welding Code--Steel."
  - 2. AWS D1.3, "Structural Welding Code--Sheet Steel."
- B. Metal Surfaces, General: Provide materials with smooth, flat surfaces, unless otherwise indicated. For metal fabrications exposed to view in the completed Work, provide materials without seam marks, roller marks, rolled trade names, or blemishes.

### 1.4 COORDINATION

- A. Coordinate selection of shop primers with topcoats to be applied over them. Comply with paint and coating manufacturers' written recommendations to ensure that shop primers and topcoats are compatible with one another.
- B. Coordinate installation of anchorages for metal fabrications. Furnish setting drawings, templates, and directions for installing anchorages, including sleeves, concrete inserts, anchor bolts, and items with integral anchors, that are to be embedded in concrete or masonry. Deliver such items to Project site in time for installation.
- C. Coordinate installation of metal fabrications, such as steel weld plates and angles for casting into concrete, that are specified in this Section but required for work of another Section. Deliver such items to Project site to not delay their installation.

## PART 2 - PRODUCTS

### 2.1 PERFORMANCE REQUIREMENTS

- A. Structural Performance of Galvanized Metal Ladders: Ladders shall withstand the effects of loads and stresses within limits and under conditions specified in ANSI A14.3.
- B. Thermal Movements: Allow for thermal movements from ambient and surface temperature changes acting on exterior metal fabrications by preventing buckling, opening of joints, overstressing of components, failure of connections, and other detrimental effects.
  - 1. Temperature Change: 120 deg F ambient; 180 deg F material surfaces.

### 2.2 METALS

- A. Metal Surfaces, General: Provide materials with smooth, flat surfaces unless otherwise indicated. For metal fabrications exposed to view in the completed Work, provide materials without seam marks, roller marks, rolled trade names, or blemishes.
- B. Steel Plates, Shapes, and Bars: ASTM A36/A36M.

- C. Stainless Steel Bars and Shapes: ASTM A276/A276M, Type 304 or Type 316L as indicated.
- D. Rolled-Stainless Steel Floor Plate: ASTM A793.
- E. Steel Tubing: ASTM A500/A500M, cold-formed steel tubing.
- F. Steel Pipe: ASTM A53/A53M, Standard Weight (Schedule 40) unless otherwise indicated.
  - 1. Provide Schedule 80 pipe for bollards.
  - 2. Where to be installed at exterior location and where indicated: Galvanized steel, ASTM A653/A653M, structural steel, Grade 33, with G90 coating; hot-dip galvanized after fabrication
- G. Cast Iron: Either gray iron, ASTM A48/A48M, or malleable iron, ASTM A47/A47M, unless otherwise indicated.
- H. Aluminum Extrusions: ASTM B221, Alloy 6063-T6.
- I. Aluminum-Alloy Rolled Tread Plate: ASTM B632/B632M, Alloy 6061-T6.
- J. Aluminum Castings: ASTM B26/B26M, Alloy 443.0-F.
- K. Bronze Extrusions: ASTM B455, Alloy UNS No. C38500 (extruded architectural bronze).
- L. Bronze Castings: ASTM B584, Alloy UNS No. C83600 (lead red brass) or UNS No. C84400 (lead semired brass).
- M. Nickel Silver Castings: ASTM B584, Alloy UNS No. C97600 (20 percent lead nickel bronze).

## 2.3 FASTENERS

- A. General: Unless otherwise indicated, provide Type 316 stainless steel fasteners for exterior use and zinc-plated fasteners with coating complying with ASTM B633 or ASTM F1941/F1941M, Class Fe/Zn 5, at exterior walls. Select fasteners for type, grade, and class required.
  - 1. Provide stainless steel fasteners for fastening aluminum, stainless steel, or nickel silver.
- B. Cast-in-Place Anchors in Concrete: Either threaded or wedge type unless otherwise indicated; galvanized ferrous castings, either ASTM A47/A47M malleable iron or ASTM A27/A27M cast steel. Provide bolts, washers, and shims as needed, all hot-dip galvanized per ASTM F2329/F2329M.

## 2.4 MISCELLANEOUS MATERIALS

- A. Shop Primers: Provide shop primers compatible with topcoats, Refer to Section 099000 Painting and Coatings and Section 099600 "High-Performance Coatings".
- B. Epoxy Zinc-Rich Primer: Complying with MPI#20 and compatible with topcoat, refer to section 099600 high-performance coating.

- C. Galvanizing Repair Paint: High-zinc-dust-content paint complying with SSPC-Paint 20 and compatible with paints specified to be used over it.
- D. Bituminous Paint (isolating coating): Cold-applied asphalt emulsion complying with ASTM D1187/D1187M.
- E. Shrinkage-Resistant Grout: Factory-packaged, nonmetallic, nonstaining, noncorrosive, nongaseous grout complying with ASTM C1107/C1107M. Provide grout specifically recommended by manufacturer for interior and exterior applications.
- F. Concrete: Comply with requirements in Section 033000 "Cast-in-Place Concrete" for normal-weight, air-entrained concrete with a minimum 28-day compressive strength of 4500 psi

## 2.5 FABRICATION, GENERAL

- A. Shop Assembly: Preassemble items in the shop to greatest extent possible. Disassemble units only as necessary for shipping and handling limitations. Use connections that maintain structural value of joined pieces. Clearly mark units for reassembly and coordinated installation.
- B. Cut, drill, and punch metals cleanly and accurately. Remove burrs and ease edges to a radius of approximately 1/32 inch unless otherwise indicated. Remove sharp or rough areas on exposed surfaces.
- C. Form bent-metal corners to smallest radius possible without causing grain separation or otherwise impairing work.
- D. Form exposed work with accurate angles and surfaces and straight edges.
- E. Weld corners and seams continuously to comply with the following:
  - 1. Use materials and methods that minimize distortion and develop strength and corrosion resistance of base metals.
  - 2. Obtain fusion without undercut or overlap.
  - 3. Remove welding flux immediately.
  - 4. At exposed connections, finish exposed welds and surfaces smooth and blended so no roughness shows after finishing and contour of welded surface matches that of adjacent surface.
- F. Form exposed connections with hairline joints, flush and smooth, using concealed fasteners or welds where possible. Where exposed fasteners are required, use Phillips flat-head (countersunk) fasteners unless otherwise indicated. Locate joints where least conspicuous.
- G. Fabricate seams and other connections that are exposed to weather in a manner to exclude water. Provide weep holes where water may accumulate.
- H. Where units are indicated to be cast into concrete or built into masonry, equip with integrally welded steel strap anchors, not less than 8 inches from ends and corners of units and 24 inches o.c.

## 2.6 MISCELLANEOUS FRAMING AND SUPPORTS

- A. Fabricate units from steel shapes, plates, and bars of welded construction unless otherwise indicated. Fabricate to sizes, shapes, and profiles indicated and as necessary to receive adjacent construction.

## 2.7 COUNTERTOP SUPPORT BRACKETS

- A. Description: For built-in counters, surface- mounted and inside- wall brackets made manufacturers standard aluminum, with holes for wall mounting and fastening to countertop.
  - 1. Model # and Size: As indicated on drawings to suit project application or approved equal.
  - 2. Weight Capacity: As indicated or required to suit project application
  - 3. Finish: Clear anodized.
  - 4. Mounting Hardware: #14 x 2 ½ inch Phillips flat-head screw with color-matched finish washer, unless otherwise required to suit project application
  - 5. Basis-of-Design, Product: Subject to compliance with requirement, provide 'EH-series' as supplied by Rakks or approved equal.

## 2.8 STRUCTURAL THERMAL ISOLATING MATERIALS

- A. Products: Subject to compliance with requirements, provide the following:
  - 1. Fabreeka-TIM.
  - 2. Armatherm
  - 3. Or approved equal
- B. Description:
  - 1. Provide Load-bearing, structural thermal break/insulation material to prevent thermal bridging between flanged, bolted, structural steel framing members at connections. And include thermal material washers and bushings
  - 2. Maintains structural integrity of connections while reducing energy loss.
- C. Material: Fiberglass-reinforced laminate composite.
- D. ICC Certified
- E. Thickness: 1" or as indicated by structural engineer.
- F. Ultimate Mechanical Properties, Nominal:
  - 1. Tensile Strength, ASTM D 638: 11,000 psi.
  - 2. Flexural Strength, ASTM D 790: 25,000 psi.
  - 3. Compressive Strength, ASTM D 695: 38,900 psi.
  - 4. Compressive Modulus, ASTM D 695:
    - a. 1/2-Inch (12.7 mm) Thickness: 291,194 psi .
    - b. 1-Inch (25.4 mm) Thickness: 519,531 psi
  - 5. Shear Strength, ASTM D 732: 15,000 psi.
  - 6. Operating Temperature Range: Minus 20 degrees F to 250 degrees F
    - a. Loss in Ultimate Strength at 250 degrees F: 30 percent.
- G. Thermal Properties, Nominal:

1. Thermal Conductivity, ASTM C 177: 1.8 BTU/hr/ft<sup>2</sup>/in/degree F
  2. Heat Flow Resistance, R-Value:
    - a. 1/2-Inch (12.7 mm) Thickness: 0.28.
    - b. 1-Inch (25.4 mm) Thickness: 0.56.
- H. Thermal Break Washers: Same material as structural thermal break plates, 1/4" minimum thickness or as recommended by manufacturers with outside and inside diameters determined by structural bolt.
1. Provide at each bolt where plates are noted to be used
- I. Thermal Break Bushings: As recommended by thermal break plate manufacturer, made of Elastomeric material length determined by thickness of steel end plate and having outside and inside diameters determined by structural bolt.
1. Provide at each bolt where plates are noted to be used.

## 2.9 METAL LADDERS

### A. General:

1. Comply with ANSI A14.3.

### B. Steel Ladders:

1. Space siderails 16 inches apart unless otherwise indicated.
2. Siderails: Continuous, 1/2-by-2-1/2-inch steel flat bars, with eased edges.
3. Rungs:
  - a. At interior locations: 3/4-inch- diameter, steel bars
  - b. At exterior locations: 1-inch- diameter, steel bars..
4. Fit rungs in centerline of siderails; plug-weld and grind smooth on outer rail faces.
5. Provide nonslip surfaces on top of each rung, either by coating rung with aluminum-oxide granules set in epoxy-resin adhesive or by using a type of manufactured rung filled with aluminum-oxide grout
6. Where crossover platform indicated, fabricate form galv. 1-1/2" deep Grip-strut flooring and 4" high toe-guards. Railings to return each side of cross-over and provide with mid-rail.
7. Provide attachment brackets of 1/2" thick galv. steel anchored to structure prior to installation of façade. Ladder to bolt to brackets with galv. steel bolts.
8. Galvanize and prime ladders, including brackets.
9. Prime ladders, including brackets and fasteners, with
  - a. Interior locations: Comply with 099000 Painting and Coatings
  - b. Exterior Locations: Comply with 099600 High performance coatings

## 2.10 LOOSE BEARING AND LEVELING PLATES

- A. Provide loose bearing and leveling plates for steel items bearing on masonry or concrete construction. Drill plates to receive anchor bolts and for grouting.
- B. Galvanize bearing and leveling plates.

- C. Prime plates with primer compatible with topcoats
  - 1. Where high-performance coating indicated, refer to section 099600 High-performance coatings
  - 2. Where noted to be painted, refer to section 099000 Painting and Coatings

## 2.11 STEEL BOLLARDS

- A. Provide Galvanized schedule 80 steel pipe filled with concrete in height indicated with cast-in-place concrete footing. Minimum 6" diameter and extending 48" above grade unless otherwise noted on the drawings.
- B. Prime and Paint with high-performance coating, refer to specification 099600 high-performance coating.

## 2.12 LOOSE STEEL LINTELS

- A. Fabricate loose steel lintels from steel angles and shapes of size indicated for openings and recesses in masonry walls and partitions at locations indicated. Fabricate in single lengths for each opening unless otherwise indicated. Weld adjoining members together to form a single unit where indicated.
- B. Galvanize and prime loose steel lintels located in exterior walls.
- C. Prime loose steel lintels located in exterior walls with primer compatible with topcoats, refer to section 099000 Painting and Coating

## 2.13 GENERAL FINISH REQUIREMENTS

- A. Finish metal fabrications after assembly.

## 2.14 STEEL AND IRON FINISHES

- A. Galvanizing: Hot-dip galvanize items as indicated to comply with ASTM A153/A153M for steel and iron hardware and with ASTM A123/A123M for other steel and iron products.
  - 1. Do not quench or apply post galvanizing treatments that might interfere with paint adhesion.
- B. Shop prime iron and steel items not indicated to be galvanized unless they are to be embedded in concrete, sprayed-on fireproofing, or masonry, or unless otherwise indicated.
  - 1. Shop prime with primers specified in Section 099000 painting and coatings indicated.
- C. Preparation for Shop Priming: Prepare surfaces to comply with requirements indicated below:
  - 1. Items Indicated to Receive Zinc-Rich Primer and non-galvanized exterior items: SSPC-SP 6/NACE No. 3, "Commercial Blast Cleaning."

2. Galvanized-Steel Items: SSPC-SP 16, "Brush-off Blast Cleaning of Coated and Uncoated Galvanized Steel, Stainless Steels, and Non-Ferrous Metals."
  3. Other Steel Items: SSPC-SP 3, "Power Tool Cleaning."
- D. Shop Priming: Apply shop primer to comply with SSPC-PA 1, "Paint Application Specification No. 1: Shop, Field, and Maintenance Painting of Steel," for shop painting.

## **PART 3 - EXECUTION**

### **3.1 INSTALLATION, GENERAL**

- A. Cutting, Fitting, and Placement: Perform cutting, drilling, and fitting required for installing metal fabrications. Set metal fabrications accurately in location, alignment, and elevation; with edges and surfaces level, plumb, true, and free of rack; and measured from established lines and levels.
- B. Fit exposed connections accurately together to form hairline joints. Weld connections that are not to be left as exposed joints but cannot be shop welded because of shipping size limitations. Do not weld, cut, or abrade surfaces of exterior units that have been hot-dip galvanized after fabrication and are for bolted or screwed field connections.
- C. Field Welding: Comply with the following requirements:
  1. Use materials and methods that minimize distortion and develop strength and corrosion resistance of base metals.
  2. Obtain fusion without undercut or overlap.
  3. Remove welding flux immediately.
  4. At exposed connections, finish exposed welds and surfaces smooth and blended so no roughness shows after finishing and contour of welded surface matches that of adjacent surface.
- D. Fastening to In-Place Construction: Provide anchorage devices and fasteners where metal fabrications are required to be fastened to in-place construction. Provide threaded fasteners for use with concrete and masonry inserts, toggle bolts, through bolts, lag screws, wood screws, and other connectors.
- E. Provide temporary bracing or anchors in formwork for items that are to be built into concrete, masonry, or similar construction.

### **3.2 INSTALLATION OF MISCELLANEOUS FRAMING AND SUPPORTS**

- A. Install framing and supports to comply with requirements of items being supported, including manufacturers' written instructions and requirements indicated on Shop Drawings.
- B. Anchor supports for overhead doors securely to, and rigidly brace from, building structure.
- C. Anchor shelf angles securely to existing construction with anchor bolts or welds as indicated on structural drawings

- D. Support steel girders on solid grouted masonry, concrete, or steel pipe columns. Secure girders with anchor bolts embedded in grouted masonry or concrete or with bolts through top plates of pipe columns.

### 3.3 INSTALLATION OF METAL BOLLARDS

- A. Fill metal-capped bollards solidly with concrete and allow concrete to cure seven days before installing.
- B. Anchor bollards in concrete, wrap embedded length with 2 turns of #30 roofing felt. Slope concrete around bollard away from pipe, Fill annular space around bollard with urethane sealant as required.
- C. Fill bollards solidly with concrete, mounding top surface to shed water.
- D. Unless otherwise detailed on the drawings, Bollard pipe to extend 42inches minimum below grade with 18inch diameter concrete footing of 4000psi concrete minimum.
- E. Prime and paint bollard and concrete top mount with high-performance coating, refer to specification 099600 high-performance coating.

### 3.4 INSTALLATION OF BEARING AND LEVELING PLATES

- A. Clean concrete and masonry bearing surfaces of bond-reducing materials, and roughen to improve bond to surfaces. Clean bottom surface of plates.
- B. Set bearing and leveling plates on wedges, shims, or leveling nuts. After bearing members have been positioned and plumbed, tighten anchor bolts. Do not remove wedges or shims but, if protruding, cut off flush with edge of bearing plate before packing with shrinkage-resistant grout. Pack grout solidly between bearing surfaces and plates to ensure that no voids remain.

### 3.5 REPAIRS

- A. Touchup Painting:
  - 1. Immediately after erection, clean field welds, bolted connections, and abraded areas. Paint uncoated and abraded areas with same material as used for shop painting to comply with SSPC-PA 1 for touching up shop-painted surfaces.
- B. Galvanized Surfaces: Clean field welds, bolted connections, and abraded areas and repair galvanizing to comply with ASTM A780/A780M.

END OF SECTION 05 5000

## **SECTION 055100 - STEEL PAN STAIRS**

### **PART 1 GENERAL**

#### **1.1 GENERAL REQUIREMENTS**

- A. Work of this Section, as shown or specified, shall be in accordance with the requirements of the Contract Documents.

#### **1.2 SECTION INCLUDES**

- A. Work of this Section includes all labor, materials, equipment and services necessary to complete the steel pan stairs as indicated on the drawings and specified herein, including but not limited to, the following:
  - 1. Steel pan stairs, including all clips, hangers, inserts, braces and other supports.

#### **1.3 RELATED SECTIONS**

- A. Ornamental Handrails and railings – Section 05 5200
- B. Miscellaneous metals - Section 055000.
- C. Finish painting - Section 099000 and Section 099600

#### **1.4 QUALITY ASSURANCE**

- A. Qualification of Welders: Use only certified welders and the shielded arc process for all welding performed in connection with the work of this Section. Protect adjacent surfaces when field welding to prevent damage or stain. Welders and welding operators must be qualified by tests as provided by AWS.
- B. Codes and Standards: In addition to complying with all pertinent codes and regulations, comply with:
  - 1. "Specifications for Design, Fabrication and Erection of Structural Steel for Buildings" of the American Institute of Steel Construction.
  - 2. "Code for Welding in Building Construction" of the American Welding Society.
  - 3. "Metal Stairs Manual" of the National Association of Architectural Metal Manufacturers.
- C. Conflicting Requirements: In the event of conflict between pertinent codes and regulations and the requirements of the referenced standards of these specifications, the provisions of the more stringent shall govern.
- D. Field Measurements: If construction process permits, take field measurements prior to preparation of shop drawings and fabrication, where possible. Do not delay job progress. Allow for trimming and fitting wherever taking field measurements before fabrication might delay work.
- E. Tolerances: Allow for construction tolerances as required.
- F. Coordination: Coordinate this work with the work of all other trades interfacing with metal pan stairs, such as structural openings, sprinklers and standpipes, and other trades as required.

## 1.5 DRAWING SUBMISSION

- A. General: It is the intent of the Working Drawings to display the layouts and general design parameters upon which the Shop Drawings shall be developed. Detail development and all connections shall be part of Shop Drawing Development.
- B. Shop Drawings
  - 1. Before any steel stairs are fabricated, submit shop drawings to the Architect for approval.
  - 2. Show all locations, markings, quantities, materials, sizes and shapes, and indicate all methods of connecting, anchoring, fastening, bracing, for the stair construction, support and attachment to the work of other trades.
- C. Delegated Design & Engineering Data
  - 1. Before any metal pan stairs or railings are fabricated, submit engineering data drawings to the Architect for review. The Contractor is responsible for the structural design and supports for the stair system and railings and must show his proposed system on these drawings.
  - 2. These drawings must show all load conditions and design calculations relative to connections, fastening devices and anchorage, as well as size and gauge of stair members. Calculations and drawings must be prepared by a Structural Engineer licensed in the State of New Jersey and shall be signed and sealed by this Engineer.

## 1.6 SAMPLES SUBMISSION

- A. Submit the following listed samples and other samples as may be requested by the Architect, to show the quality standards:
  - 1. Exposed weld.
  - 2. Exposed bolted connection.
- B. Samples shall be submitted cleaned and shop primed and shall represent standards to which all respective materials used in the Project shall meet.

## 1.7 PERFORMANCE STANDARDS

- A. Stairs and railings shall be constructed to conform to the following performance standards, unless greater required by Code:
  - 1. Stairs and platforms shall support a live load of one hundred (100) psf and a concentrated live load of three hundred (300) lbs. and shall have a live load deflection limited to 1/360 of the span. Loads shall not apply simultaneously.

## 1.8 PRODUCT HANDLING

- A. Protection: Use all means necessary to protect steel pan stair before, during and after installation and to protect the installed work and materials of all other trades.
- B. Replacements: In the event of damage, immediately make all repairs and replacements necessary to the approval of the Architect and at no additional cost to the Owner.

## **PART 2 PRODUCTS**

### **2.1 MATERIALS**

- A. Structural Steel: ASTM A 36.
- B. Steel Sheets: ASTM A 245, Grade C, minimum ten (10) gauge for platforms, twelve (12) gauge minimum for treads and risers.
- C. Stainless Steel
  - 1. Comply with the following standards for the forms and types of stainless steel for the required items of work.
    - a. Castings: ASTM A 743, Grade CF 8 or CF 20 for interior, Grade CF 8M or CF 3M for exterior.
    - b. Sheet, Strip, Flat Bar and Plate: ASTM A 666, Type 304 for interior, Type 316L for exterior.
    - c. Bars and Shapes: ASTM A 276, Type 304 for interior, Type 316L for exterior.
- D. Malleable Iron Castings: ASTM A 47, Grade 35018.
- E. Bolts and Nuts: ASTM A 307, Grade A bolts.
- F. Machine Screws: ASME B 18.6.3.
- G. Expansion Bolts: "Cinch" type, galvanized, of approved manufacture.
- H. Threaded End Hanger Rods: Minimum 3/4" diameter, ASTM A 36.
- I. Shop Paint: Shop prime all stairs and railings using Series 88 Azerox Primer made by Tnemec, ICI Devco "Rust Guard" quick dry alkyd shop coat No. 41403, or "Interlac 393" by International Protection Coatings or approved equal.
- J. Bituminous Paint: Cold applied asphalt emulsion complying with ASTM D1187.
- K. Concrete Fill and Reinforcing Materials
  - 1. Concrete Materials and Properties: Comply with requirements in Division 3 Section "Cast-in-Place Concrete" for normal-weight, ready-mixed concrete with a minimum 28-day compressive strength of 3000 psi.
  - 2. Nonslip-Aggregate Finish: Factory-packaged abrasive aggregate made from fused, aluminum-oxide grits or crushed emery; rustproof and nonglazing; unaffected by freezing, moisture, or cleaning materials.
  - 3. Welded Wire Fabric: ASTM A 185, 6 by 6 inches – W1.4 by W1.4, unless otherwise indicated.

### **2.2 FABRICATION**

- A. General
  - 1. Steel pan stair work shall be fabricated by an experienced manufacturer in accordance with approved shop drawings and best practices of the industry, using new and clean materials as specified, having structural properties sufficient to safely sustain or withstand strains and stresses to which material will be subjected.

2. Fabricate shop assemblies in largest practical sizes to minimize field work. All exposed surfaces shall be clean and free from all dirt, stains, grease marks, scratches, waves, dents, buckles, tool marks, rattles, and other objectionable defects which mar appearance or use of finished work.
3. Cutting: Cut materials by sawing, shearing, or blanking. Flame cutting will be permitted when ground back to clean edges. Cuts shall be made accurately, clean, sharp and free of burrs, without deforming adjacent metals.
4. Connections: Make connections with tight joints, capable of developing full strength of the members, flush. Locate joints where least conspicuous. Use concealed fasteners where possible. Weld or rivet shop connections; bolt, screw or weld field connections.
  - a. Welding: Welds shall be continuous, except where spot welding is specifically permitted. Welding shall conform to the Standard Code of the American Welding Society. Exposed welds are required to be ground flush.
  - b. Bolts and Screws: Make threaded connections tight with threads entirely concealed. Use lock nuts, or upset thread ends. Exposed bolts and screw head shall be flat and countersunk, unless otherwise indicated on drawings. Remove projecting ends of bolts and screws. Punch or drill holes; do not burn.

**B. Stairs and Platforms**

1. Provide stringers, risers, sub-treads and platforms matching profiles as shown. Form tread pan and riser in a continuous piece to receive the finished tread; tread shall be a minimum of twelve (12) gauge. Weld risers and treads to carrier angles which shall be welded to the structural steel stringers. Fasten countersunk bolts or stud welded clips through mesh for cement fill. Provide welded-on clips for the support of gypsum drywall soffits.
2. On intermediate platforms, provide metal bases formed of stringers. Miter and weld and grind smooth internal and external corners of metal bases. Form platform runs of minimum ten (10) gauge steel.
3. Countersink bolt heads and screws on finished surfaces or cut off flush with such surfaces.
4. Properly fit and securely fasten together all parts making exposed joints close fitting. Cut, drill, punch and tap as required for installation.
5. Make joints as strong and rigid as adjoining sections. Weld continuously along entire line of contact except where spot welding is indicated.
6. Separate dissimilar metals in or adjacent to work of this Section with a coat of bituminous paint on each surface prior to installation.
7. Closure and Filler Plates: Where indicated on drawings or as required, at least twelve (12) gauge sheet steel, securely fastened to top and bottom of stringer and adjacent wall, by welding or screws.
8. Struts, Hangers, Platform Headers and Subframing
  - a. Provide supports as detailed and required, including all struts, clip angles, angles or hangers which are required and necessary for support of stair construction.
  - b. Supports shall be of size suitable for the support load, as required. Struts, angles and hangers shall be supported by and directly connected to the structural framing. Struts and hangers, with their connections, shall be concealed.

- c. Provide other inserts, anchors and/or other subframing as may be required to complete the stair construction and properly support it on the structural framing.

## **2.3 SHOP PAINTING**

- A. Scope: All ferrous metal shall be cleaned and shop painted with one coat of specified ferrous metal primer.
- B. Cleaning: Conform to Steel Structures Painting Council Surface Preparation Specification SP 3 (latest edition) "Power Tool Cleaning" for cleaning of ferrous metals which are to receive shop prime coat.
- C. Application
  - 1. Apply shop prime coat immediately after cleaning metal. Apply paint in dry weather or under cover. Metal surfaces shall be free from frost or moisture when painted. Paint all metal surfaces including edges, joints, holes, corners, etc.
  - 2. Paint surfaces which will be concealed after shop assembly prior to such assembly. Apply paint in accordance with approved paint manufacturer's printed instructions, and the use of any thinners, adulterants or admixtures shall be only as stated in said instructions.
  - 3. Paint shall uniformly and completely cover the metal surfaces, 2.0 mils minimum dry film thickness. No work shall be shipped until the shop prime coat thereon has dried.
- D. Touch-Up: In the shop, after assembly and in the field, after installation of work of this Section, touch-up damaged or abraded portions of shop prime paint with specified ferrous metal primer.
- E. Apply one shop coat to fabricated metal items, except apply two (2) coats of paint to surfaces inaccessible after assembly or erection. Change color of second coat to distinguish it from the first.

## **PART 3 EXECUTION**

### **3.1 INSPECTION**

- A. Examine the areas and conditions where steel pan stairs are to be installed and correct any conditions detrimental to the proper and timely completion of the work. Do not proceed with the work until unsatisfactory conditions are corrected to permit proper installation of the work.

### **3.2 INSTALLATION**

- A. Work in the field shall comply with the same requirements as specified for shop work above.
- B. Except where otherwise shown or specified for a particular item of work or for built-in work, fasten metal work to solid masonry with expansion bolts. Fastenings to wood plugs in masonry will not be accepted. Drill holes to the exact diameter of the bolts using a rotary drill for concrete and a percussion drill for other masonry. Thread screws full length to the head of the screw.
- C. Provide connecting members needed for properly securing the work to masonry, drywall and structural framing, including bolts, machine screws, rods, hangers, inserts, sleeves, plates, anchors, expansion bolts, washers and other items as required. Furnish built-in items to drywall trades as required for proper anchorage.

- D. Leave work exposed to view, including stair soffits, clean, smooth and neatly finished. All exposed welds shall be dressed smooth.
- E. Include supplementary parts necessary to complete each item even though such work is not definitively shown or specified.
- F. Coordinate and schedule the work of this Section with the work of other trades. Furnish anchors, sockets, fastenings and other miscellaneous items to be embedded in concrete or masonry, or required for securing metal work to other construction so as not to delay job progress.
- G. Attach wall railings to the wall construction, using appropriate bolts and anchors to meet performance standards.
- H. Install work plumb and true to the exact lines and levels, in the correct location and in proper relation to adjoining work.
- I. Touch up marred and abraded shop paint of exposed surfaces after erection in the field.
- J. Posts shall be set plumb within 1/8" vertical tolerance. Longitudinal members shall be parallel with each other and with floor surface or slope of stair to a tolerance of 1/8" in ten (10) linear feet. Center lines of members within each run of railing shall lie in the same vertical plane. Field joints of connecting sections shall be hairline.

### 3.3 TOUCH-UP PAINTING

- A. Immediately after erection, clean field welds, bolted connections, and abraded areas of shop coat, and paint exposed areas with same material used for shop painting. Apply by brush or spray to provide a minimum dry film thickness of 2.0 mils.

END OF SECTION

## SECTION 05 5200 ORNAMENTAL HANDRAILS AND RAILINGS

### PART 1 GENERAL

#### 1.1 GENERAL REQUIREMENTS

- A. Work of this Section, as shown or specified, shall be in accordance with the requirements of the Contract Documents.

#### 1.2 SECTION INCLUDES

- A. Work of this Section includes all labor, materials, equipment and services necessary to complete the interior and exterior ornamental handrails and railings as shown on the drawings and/or specified herein.
  - 1. Painted steel guardrails and railings.
    - a. Exterior – hot dip galvanized and painted.
    - b. Interior – Primed and painted.

#### 1.3 RELATED SECTIONS

- A. Concrete work - Section 033000.
- B. Masonry construction- Section 042000.

#### 1.4 QUALITY ASSURANCE

- A. General: Work of this Section shall be fabricated and installed by an experienced fabricator or manufacturer who has been engaged in work of equivalent scope and fabrication standards for at least 5 years. Materials, methods of fabrication, fitting, assembly, bracing, supporting, fastening, operating devices and erection shall be in accordance with drawings, specifications, and approved shop drawings, and be of highest quality practices of the industry, using new and clean materials as specified, having structural properties sufficient to safely sustain or withstand stresses and strains to which materials and assembled work will be subjected. All work shall be accurately and neatly fabricated, assembled, and erected.
- B. Single-Source Responsibility: Obtain handrails and railing systems of each type and material from a single manufacturer.
- C. Engineer Qualifications: Professional engineer legally authorized to practice in the State of New Jersey and experienced in providing engineering services of the kind indicated for handrails and railing systems similar to this Project in material, design, and extent, and that have a record of successful in-service performance.

#### 1.5 SUBMITTALS

- A. Shop Drawings: Submit for all items of work, at full scale as far as practical, showing metal thicknesses, arrangement of components, of joining, of jointing, details of all field connections and anchorages, diagrams and details explaining provisions for thermal movement, fastening and sealing methods, and support methods, metal finishes and all other pertinent information.

1. Engineering design and calculations for handrails and railing assemblies - see Article 1.7 herein.
- B. Samples for Verification: For each type of exposed finish required, prepared on components indicated below and of same thickness and metal indicated for the work.
  1. 6" long sections of each different linear railing member, including handrails, top rails, posts, and balusters.
  2. Fittings and brackets.
  3. Perforated steel guard.
  4. Welded connections.
  5. Assembled samples of railings, made from full size components, including top rail, post and handrail. Show method of finishing members at intersections. Samples need not be full height.

#### 1.6 PRODUCT HANDLING

- A. Finished Materials: Protect finishes against soiling, staining or damage from scratches and abrasion. Maintain protection during construction until project completion or as otherwise directed by Architect.
  1. Provide wrappings, strippable coatings or other means approved by Architect.
  2. During construction, remove protection for visual observation of finish as directed by Architect and replace to maintain protection.

#### 1.7 PERFORMANCE STANDARDS

- A. Structural Performance of Handrails and Railing Systems: Engineer, fabricate, and install handrails and railing systems to withstand the structural loads indicated in the State of New Jersey Building Code, without exceeding the allowable design working stress of the materials involved, including anchors and connections. Apply each load to produce the maximum stress in each of the respective components of each metal fabrication. Provide stamped and sealed drawings by Professional Engineer licensed in the State of New Jersey.
- B. Structural Performance of Guard Rail Systems: Engineer, fabricate, and install railing guards at vehicular areas to withstand the following structural loads, as indicated in the State of New Jersey Building Code 2021 Edition without exceeding the allowable design working stress of the guard assembly materials, anchors and connections.
  1. Infill of Guards:
    - a. Concentrated load of 200 lbf applied horizontally on an area of 1 sq. ft.
    - b. Infill load and other loads need not be assumed to act concurrently.
- C. Thermal Movements: Allow for thermal movement resulting from the following maximum change (range) in ambient temperature in engineering, fabricating, and installing handrails and railing systems to prevent buckling, opening of joints, overstressing of components and connections, damage to adjoining construction, and other detrimental effects. Base engineering calculation on actual surface temperatures of materials due to both solar heat gain and nighttime sky heat loss.

1. Temperature Change (Range): 120 deg F ambient, 180 deg F material surfaces.
- D. Control of Corrosion: Prevent galvanic action and other forms of corrosion by insulating metals and other materials from direct contact with incompatible materials.

## PART 2 PRODUCTS

### 2.1 MATERIALS

- A. Provide materials which have been selected for their surface flatness, smoothness and freedom from surface blemishes where exposed to view in the finished unit. Surfaces exposed to view that exhibit pitting, seam marks, roller marks, "oil-canning," stains, discoloration's or other imperfections on the finished units will not be acceptable.
- B. Exposed Steel (cold rolled)
  1. Structural Shapes and Sheets: ASTM A 1008.
  2. Strip: ASTM A109
- C. Protection for Metals: Bituminous paint; cold applied asphalt mastic complying with SSPC - Part 12, but containing no asbestos fibers.
- D. Welding Electrodes and Filler Metal: Type and alloy of filler metal and electrodes as recommended by producer of the metal to be welded, and as required for color match, strength and compatibility in the fabricated items.
- E. Fasteners for Interconnecting Handrails and Railing Components: Furnish of basic metal and alloy, matching finished color and texture as the metal being fastened, unless otherwise indicated. Unless otherwise shown, provide Phillips flat-head screws for exposed fasteners.
- F. Fasteners for Anchoring Handrails and Railings to Other Construction: Select fasteners of type, grade, and class required to produce connections suitable for anchoring handrails and railings to other types of construction indicated and capable of withstanding design loads. Fasteners shall be fabricated from Type 304 or 316 stainless steel.
- G. Erosion-Resistant Anchoring Cement: Factory packaged, non-shrink, non-staining, hydraulic-controlled expansion cement formulation for mixing with water at project site to create pourable anchoring, patching, and grouting compound. Provide formulation that is resistant to erosion from water exposure without needing protection by a sealer or waterproof coating and that is recommended by manufacturer for exterior use.

### 2.2 FABRICATION

- A. General: Fabricate handrails and railing systems to comply with requirements indicated for design, dimensions, details, finish, and member sizes, including wall thickness of hollow members, post spacings, and anchorage, but not less than those required to support structural loads.
- B. Assemble handrails and railings in shop to the greatest extent possible to minimize field splicing and assembly. Disassemble units only as necessary for shipping and handling limitations. Clearly mark units for reassembly and coordinated installation. Use

connections that maintain structural value of joined pieces. . Clearly mark units for reassembly and coordinated installation.

- C. Form changes in direction of members as detailed or, if not detailed, by either of the following methods:
  - 1. By radius bends of radius indicated.
  - 2. By flush radius bends.
  - 3. By bending.
  - 4. By insertion of prefabricated flush elbow fittings.
- D. Welded Connections: Fabricate steel handrails and railing systems for connection of members by welding, except as otherwise indicated. Limit non-welded connections to connections that cannot be made in the factory due to size or handling limitations and similar considerations. For connections made during fabrication, weld corners and seams continuously to comply with the following:
  - 1. Use materials and methods that minimize distortion and develop strength and corrosion resistance of base metals.
  - 2. Obtain fusion without undercut or overlap.
  - 3. Remove welding flux immediately.
  - 4. At tee and cross intersections, cope ends of intersecting members to fit contour of pipe or tube to which end is joined, and weld all around.
  - 5. At exposed connections, finish exposed welds and surfaces smooth and blended so that no roughness shows after finishing and welded surface matches contours of adjoining surfaces.
- E. Brackets, Flanges, Fittings and Anchors: Provide manufacturer's standard wall brackets, flanges, miscellaneous fittings, and anchors to interconnect handrail and railing system members to other construction.
- F. Provide inserts and other anchorage devices to connect handrails and railing systems to concrete or masonry work. Fabricate anchorage devices capable of withstanding loads imposed by handrails and railing systems. Coordinate anchorage devices with supporting structure.
- G. Shear and punch metals cleanly and accurately. Remove burrs from exposed cut edges.
- H. Ease exposed edges to a radius of approximately 1/32", unless otherwise indicated. Form bent-metal corners to the smallest radius possible without causing grain separation or otherwise impairing work.
- I. Cut, reinforce, drill and tap components, as indicated, to receive finish hardware, screws, and similar items.
- J. Provide weepholes, or another means to evacuate entrapped water, in hollow sections of railing members that are exposed to exterior or to moisture from condensation or other sources.

- K. Fabricate joints that will be exposed to weather in a manner to exclude water.
- L. Provide wall returns at ends of wall-mounted handrails, unless otherwise indicated.
- M. Close exposed ends of pipe by welding 3/16 inch-thick steel plate in place or with prefabricated fittings, except where clearance of end of pipe and adjoining wall surface is 1/4 inch or less.
- N. Fillers: Provide steel sheet or plate fillers, of thickness and size indicated or required to support structural loads of handrails, where needed to transfer wall bracket loads through wall finishes to structural supports. Size fillers to suit wall finish thicknesses to produce adequate bearing to prevent bracket rotation and overstressing substrate.

### 2.3 PRIME PAINTING (INTERIOR RAILINGS)

- A. Scope: All ferrous metal (except galvanized steel) shall be cleaned and shop painted with one coat of specified ferrous metal primer. No shop prime paint required on galvanized steel or aluminum work.
- B. Cleaning: Conform to Steel Structures Painting Council Surface Preparation Specification SP 3 (latest edition) "Power Tool Cleaning" for cleaning of ferrous metals which are to receive shop prime coat.
  - 1. Steel to get high performance coating as noted in Section 099000 shall be cleaned as per SSPC SP.6 "Commercial Blast Cleaning."
- C. Application
  - 1. Apply shop prime coat immediately after cleaning metal. Apply paint in dry weather or under cover. Metal surfaces shall be free from frost or moisture when painted. Paint all metal surfaces including edges, joints, holes, corners, etc.
  - 2. Paint surfaces which will be concealed after shop assembly prior to such assembly. Apply paint in accordance with approved paint manufacturer's printed instructions, and the use of any thinners, adulterants or admixtures shall be only as stated in said instructions.
  - 3. Paint shall uniformly and completely cover the metal surfaces, 2.0 mils minimum dry film thickness. No work shall be shipped until the shop prime coat thereon has dried.
- D. Touch-Up: In the shop, after assembly and in the field, after installation of work of this Section, touch-up damaged or abraded portions of shop prime paint with specified ferrous metal primer.
- E. Apply one shop coat to fabricated metal items, except apply two (2) coats of paint to surfaces inaccessible after assembly or erection. Change color of second coat to distinguish it from the first.
- F. Shop Paint: Shop prime all non-galvanized miscellaneous metal items using Series 88 Azeron Primer made by Tnemec, ICI Devco "Rust Guard" quick dry alkyd shop coat No. 41403, or "Interlac 393" by International Protection Coatings, or approved equal.
  - 1. Finish Paint see drawings

## 2.4 GALVANIZING (EXTERIOR RAILINGS)

- A. Scope: All ferrous metal exposed to the weather, and all ferrous metals indicated on drawings or in specifications to be galvanized, shall be cleaned and then hot-dipped galvanized after fabrication as provided by Duncan Galvanizing or approved equal.
- B. Avoid fabrication techniques that could cause distortion or embrittlement of steel items to be hot-dip galvanized. Fabricator shall consult with hot-dip galvanizer regarding potential warpage problems or handling problems during the galvanizing process that may require adjustment of fabrication techniques or design before finalizing shop drawings and beginning of fabrication.
- C. Cleaning: Thoroughly clean metal surfaces of all mill scale, rust, dirt, grease, oil, moisture and other contaminants prior to galvanizing.
- D. Application: Hot-dip galvanizing shall conform to the following:
  - 1. ASTM A 143: Safeguarding Against Embrittlement of Hot-Dip Galvanized Structural Steel.
  - 2. ASTM A 123: Standard Specification for Zinc (Hot-Dip Galvanized) Coatings on Iron and Steel Products.
  - 3. ASTM A 153: Galvanized Coating on Iron and Steel Hardware - Table 1.
  - 4. ASTM A 384: Practice for Safeguarding Against Warpage and Distortion During Hot-Dip Galvanizing of Steel Assemblies.
  - 5. ASTM A 385: Practice for Providing High Quality Zinc Coatings.
  - 6. ASTM A 924: Galvanized Coating on Steel Sheets.
  - 7. Minimum weight of galvanized coating shall be two (2) oz. per square foot of surface.
- E. Fabricate joints which will be exposed to weather in a manner to exclude water or provide weep holes where water may accumulate.
- F. All galvanized materials must be inspected for compliance with these specifications and marked with a stamp indicating the name of the galvanizer, the weight of the coating, and the appropriate ASTM number.
- G. To minimize surface imperfection (e.g.: flux inclusions), material to be galvanized shall be dipped into a solution of Zinc Ammonium Chloride (pre-flux) immediately prior to galvanizing. The type of galvanizing process utilizing a flux blanket overlaying the molten zinc will not be permitted.
- H. After galvanizing all materials not exposed to view must be chromated by dipping material in a 0.2% chromic acid solution.
- I. Galvanized surfaces, where exposed to view, must have a smooth, level surface finish. Where this does not occur, piece shall be rejected and replaced to the acceptance of the Architect.
- J. Painted see drawings

## PART 3 EXECUTION

### 3.1 PREPARATION

- A. Coordinate setting drawings, diagrams, templates, instructions and directions for installing anchorages, such as sleeves, concrete inserts, anchor bolts, and miscellaneous items having integral anchors, that are to be embedded in concrete or masonry construction. Coordinate delivery of such items to Project site.

### 3.2 INSTALLATION - GENERAL

- A. Fit exposed connections accurately together to form tight, hairline joints.
- B. Cutting, Fitting, and Placement: Perform cutting, drilling and fitting required for installing handrails and railing systems. Set handrails and railing systems accurately in location, alignment, and elevation, measured from established lines and levels and free from rack.
  - 1. Do not weld, cut, or abrade surfaces of handrails and railing components that have been coated or finished after fabrication and are intended for field connection by mechanical or other means without further cutting or fitting.
  - 2. Set posts plumb within a tolerance of 1/4 inch in 12 feet.
  - 3. Align rails so that variations from level for horizontal members and from parallel with rake of steps and ramps for sloping members do not exceed 1/4 inch in 12 feet.
  - 4. Adjust handrails and railing systems prior to anchoring to ensure matching alignment at abutting joints. Space posts at interval indicated but not less than that required by design loadings.
  - 5. Fastening to In-Place Construction: Provide anchorage devices and fasteners where necessary for securing handrails and railing systems and for properly transferring loads to in-place construction.

### 3.3 RAILING CONNECTIONS

- A. Non-Welded Connections: Use mechanical joints for permanently connecting railing components in the field. Locate exposed fasteners in least conspicuous locations. Seal recessed holes of exposed locking screws with plastic filler, cement colored to match finish of handrails and railing systems.
  - 1. Welded Connections: Fully welded joints for permanently connecting steel railing components may be used where unavoidable. Cope or butt components to provide 100 percent contact, or use fittings designed for this purpose.
- B. Expansion Joints: Install expansion joints at locations indicated but not further apart than required to accommodate thermal movement. Provide slip-joint internal sleeve extending 2 inches beyond joint on either side; fasten internal sleeve securely to one side; locate joint within 6 inches of post.

### 3.4 ANCHORING POSTS

- A. Attach posts to wall with custom wall brackets as indicated on drawings. Secure wall brackets to building construction as follows:

1. Use type of bracket with predrilled hole for exposed bolt anchorage.
  2. For solid masonry anchorage, use drilled-in expansion shield and either concealed hanger bolt or exposed lag bolt, as applicable.
  3. For hollow masonry anchorage, use toggle bolts with square heads.
- B. Anchor posts in concrete by forming or core-drilling holes not less than 5 inches deep and 3/4 inch greater than outside diameter of post. Clean holes of all loose material, insert posts, and fill annular space between post and concrete with the following anchoring material, mixed and placed to comply with anchoring material manufacturer's directions.
1. Non-shrink, non-metallic grout, or, for interior applications only, anchoring cement.
  2. Leave anchorage joint exposed, wipe off surplus anchoring material, and leave 1/8 inch buildup, sloped away from post.

- C. Anchor posts to metal surfaces by direct welding unless otherwise indicated.

### 3.5 ANCHORING RAIL ENDS

- A. Anchor rail ends into concrete and masonry with round flanges connected to rail ends and anchored into wall construction with post installed anchors and bolts.

### 3.6 ATTACHING HANDRAILS TO WALLS

- A. Attach handrails to wall with wall brackets and end fittings. Provide bracket with 1-1/2 inch clearance from inside face of handrail to finished wall surface.
- B. Locate brackets as indicated or, if not indicated, at spacing required to support structural loads.
- C. Secure wall brackets and wall return fittings to building construction as follows:
1. Use type of bracket with predrilled hole for exposed bolt anchorage.
  2. For concrete and solid masonry anchorage, use drilled-in expansion shield and either concealed hanger bolt or exposed lag bolt, as applicable.
  3. For hollow masonry anchorage, use toggle bolts with square heads.
  4. For steel-framed gypsum board assemblies, fasten brackets directly to steel framing or concealed anchors using self-tapping screws of size and type required to support structural loads.

### 3.7 CLEANING, PROTECTION AND ADJUSTMENT

- A. Cleaning and Protection: Protect work from misuse or damage after installation has been completed. Work which is scratched, etched or damaged will not be accepted by Owner, and shall be replaced with acceptable work. Protect work shall against soiling, etching or other contamination. This work shall be done at no additional cost to Owner.
- B. Touchup Steel Finishes: Immediately after erection, clean bolted connections, and abraded areas of shop paint, and paint exposed areas with same material.

- C. Protect shop-applied steel finishes of handrails and railing systems from damage during construction period with temporary protective coverings approved by railing manufacturer. Remove protective coverings at time of Substantial Completion.
  - 1. Restore finishes damaged during installation and construction period so that no evidence remains of correction work. Return items that cannot be refinished in the field to the shop; make required alterations and refinish entire unit, or provide new units.

END OF SECTION

## SECTION 06 1000 - ROUGH CARPENTRY

### PART 1 - GENERAL

#### 1.1 SUMMARY

- A. Section Includes:
1. Rooftop equipment bases and support curbs.
  2. Wood blocking and nailers.
  3. Plywood backing panels.
  4. Exterior Wood posts

#### 1.2 ACTION SUBMITTALS

- A. Product Data:
1. For each type of process and factory-fabricated product.
  2. For preservative-treated wood products.

#### 1.3 INFORMATIONAL SUBMITTALS

- A. Material Certificates:
1. For dimension lumber specified to comply with minimum allowable unit stresses. Indicate species and grade selected for each use and design values approved by the ALSC Board of Review.
  2. For preservative-treated wood products. Indicate type of preservative used and net amount of preservative retained.
- B. Evaluation Reports: For the following, from ICC-ES:
1. Wood-preservative-treated wood.
  2. Fire-retardant-treated wood.
  3. Power-driven fasteners.
  4. Post-installed anchors.
  5. Metal framing anchors.

### PART 2 - PRODUCTS

#### 2.1 WOOD PRODUCTS, GENERAL

- A. Lumber: Comply with DOC PS 20 and applicable rules of grading agencies indicated. If no grading agency is indicated, comply with the applicable rules of any rules-writing agency

certified by the ALSC Board of Review. Grade lumber by an agency certified by the ALSC Board of Review to inspect and grade lumber under the rules indicated.

1. Factory mark each piece of lumber with grade stamp of grading agency.
2. Dress lumber, S4S, unless otherwise indicated.

**B. Maximum Moisture Content:**

1. Boards: 19 percent.
2. Dimension Lumber: 19 percent unless otherwise indicated.

**C. Dimension Lumber Items: Construction or No. 2 grade lumber or better.**

1. Species: Douglas fir or Southern yellow pine.

**D. For blocking not used for attachment of other construction, Utility, Stud, or No. 3 grade lumber of any species may be used if it is cut and selected to eliminate defects that will interfere with its attachment and purpose.**

## **2.2 PRESERVATIVE TREATMENT**

**A. Where pressure treated wood products are specified, the following shall apply: Preservative Treatment by Pressure Process: AWP A U1; Use Category UC2 for interior construction not in contact with ground, and Use Category UC4a for items in contact with ground and exterior construction.**

**1. Preservative Chemicals:**

- a. Locations other than within roofing assembly: Pressure-treated with chemicals acceptable to authorities having jurisdiction and containing no arsenic or chromium meeting criteria above.
- b. Locations within roofing assembly: shall use inorganic boron (SBX), decay-resistant Douglas fir, or other treatment recommended by roofing manufacturer and approved by architect.

**B. Kiln-dry lumber after treatment to a maximum moisture content of 19 percent. Do not use material that is warped or that does not comply with requirements for untreated material.**

**C. Mark lumber with treatment quality mark of an inspection agency approved by the ALSC Board of Review.**

**D. Application: Treat items as indicated on Drawings and at the following locations:**

1. Wood cants, nailers, curbs, equipment support bases, blocking, stripping, and similar members in connection with roofing and roof perimeter nailers. Preservative treatment type at these locations limited to salt-based methods SBX/DOT, decay-resistant Douglas Fir or other approved type recommended by roofing manufacturer and approved by architect.
2. Wood sills, sleepers, blocking, furring, stripping, and similar concealed members in contact with masonry or concrete.

3. Wood framing and furring attached directly to the interior of below-grade exterior masonry or concrete walls.
4. Wood floor plates that are installed over concrete slabs-on-grade.
5. Exterior wood posts in contact with the ground.

## 2.3 FIRE-RETARDANT-TREATMENT

- A. General: Where fire-retardant-treated materials are indicated, materials shall comply with requirements in this article, that are acceptable to authorities having jurisdiction, and with fire-test-response characteristics specified as determined by testing identical products per test method indicated by a qualified testing agency.
- B. Fire-Retardant-Treated Lumber and Plywood by Pressure Process: Products with a flame-spread index of 25 or less when tested according to ASTM E84, and with no evidence of significant progressive combustion when the test is extended an additional 20 minutes, and with the flame front not extending more than 10.5 feet beyond the centerline of the burners at any time during the test.
  1. Exterior Type: Treated materials shall comply with requirements specified above for fire-retardant-treated lumber and plywood by pressure process after being subjected to accelerated weathering according to ASTM D2898. Use for exterior locations and where indicated.
  2. Interior Type A: Treated materials shall have a moisture content of 28 percent or less when tested according to ASTM D3201/D3201M at 92 percent relative humidity. Use where exterior type is not indicated.
- C. Kiln-dry lumber after treatment to maximum moisture content of 19 percent.
- D. Identify fire-retardant-treated wood with appropriate classification marking of qualified testing agency.
- E. Application: Treat items indicated on Drawings, and the following:
  1. Concealed blocking.
  2. Plywood backing panels.

## 2.4 PLYWOOD BACKING PANELS

- A. Equipment Backing Panels: Plywood, DOC PS 1, Exposure 1, C-D Plugged, fire-retardant treated, in thickness indicated or, if not indicated, not less than 3/4-inch nominal thickness.

## 2.5 FASTENERS AND ANCHORS

- A. Provide size, type, material and finish complying with applicable Federal Specifications for nails, staples, screws, bolts, nuts, washers and anchoring devices. Provide metal hangers, anchors and connectors of the size and type recommended by the manufacturer for each use indicated, including recommended nails. Fasteners shall be of sufficient length to penetrate not less than 1-1/2 inches into wood substrate

1. Where rough carpentry is exposed to weather, in ground contact, pressure-preservative treated, or in area of high relative humidity, provide fasteners with hot-dip zinc coating complying with ASTM A153/A153M
  2. Provide galvanized steel connectors, minimum 16 gage, of type and size as recommended by manufacturer for uses indicated.
    - a. Connectors shall be G185 where used at exterior or in contact with pressure treated lumber and G60 interior locations unless otherwise indicated.
- B. Power-Driven Fasteners: Fastener systems with an evaluation report acceptable to authorities having jurisdiction, based on ICC-ES AC70.
- C. Post-Installed Anchors: Fastener systems with an evaluation report acceptable to authorities having jurisdiction, based on ICC-ES AC01, ICC-ES AC58, ICC-ES AC193, or ICC-ES AC308 as appropriate for the substrate.

### PART 3 - EXECUTION

#### 3.1 INSTALLATION

- A. Framing Standard: Comply with AF&PA's WCD 1, "Details for Conventional Wood Frame Construction," unless otherwise indicated.
- B. Set work to required levels and lines, with members plumb, true to line, cut, and fitted. Fit rough carpentry accurately to other construction. Locate furring, nailers, blocking, grounds, and similar supports to comply with requirements for attaching other construction.
- C. Install metal framing anchors to comply with manufacturer's written instructions. Install fasteners through each fastener hole.
- D. Where wood-preservative-treated lumber is installed adjacent to metal decking, install continuous flexible flashing separator between wood and metal decking.
- E. Do not splice structural members between supports unless otherwise indicated.
- F. Comply with AWWA M4 for applying field treatment to cut surfaces of preservative-treated lumber.
- G. Securely attach rough carpentry work to substrate by anchoring and fastening as indicated, complying with the following:
1. Table 2304.9.1, "Fastening Schedule," in ICC's International Building Code (IBC).
  2. ICC-ES evaluation report for fastener.
- H. Do not paint over or conceal stamps, registrations or markings identifying classification of treated lumber or panels.

3.2 PROTECTION

- A. Protect wood that has been treated with inorganic boron (SBX) from weather. If, despite protection, inorganic boron-treated wood becomes wet, apply EPA-registered borate treatment. Apply borate solution by spraying to comply with EPA-registered label.
- B. Protect miscellaneous rough carpentry from weather. If, despite protection, miscellaneous rough carpentry becomes wet, apply EPA-registered borate treatment. Apply borate solution by spraying to comply with EPA-registered label.

END OF SECTION 06 1000

## **SECTION 0 61600 - SHEATHING**

### **PART 1 - GENERAL**

#### **1.1 SUMMARY**

**A. Section Includes:**

1. Gypsum sheathing for exterior walls and parapets.

#### **1.2 ACTION SUBMITTALS**

- A. Product Data:** For each type of process and factory-fabricated product.

#### **1.3 INFORMATIONAL SUBMITTALS**

- A. Evaluation Reports:** For the following, from ICC-ES:

#### **1.4 QUALITY ASSURANCE**

- A. Source Limitations:** Obtain each gypsum sheathing product through one source from a single manufacturer.

#### **1.5 DELIVERY, STORAGE, AND HANDLING**

- A. Deliver materials in original packages, containers, or bundles, each bearing brand name and identification of manufacturer.**
- B. Store materials protected against damage from weather, direct sunlight, surface contamination, corrosion, construction traffic, or other causes. Neatly stack gypsum sheathing board flat on leveled supports off the ground, under cover, and fully protected from weather.**

#### **1.6 SEQUENCING AND SCHEDULING**

- A. Sequence installing sheathing with installing exterior cladding to comply with requirements indicated below:**
1. Do not leave glass-mat gypsum sheathing board exposed to weather for more than 180 days or maximum length of time recommended in writing by manufacturer.

## PART 2 - PRODUCTS

### 2.1 PERFORMANCE REQUIREMENTS

### 2.2 WALL SHEATHING

#### A. Glass-Mat Gypsum Sheathing: ASTM C1177/C1177M.

1. Available Products: Subject to compliance with requirements, products that may be incorporated into the Work include, but are not limited to, the following:
  - a. Georgia-Pacific Gypsum LLC; Dens-Glass Gold.
  - b. National Gypsum Company; Gold Bond, e<sup>2</sup>XP.
  - c. USG Corporation; Securock.
  - d. CertainTeed Corp.; GlasRoc.
  - e. Or approved equal
2. Type and Thickness: 5/8 inch thick.
3. Size: 48" minimum width, 96" minimum length
4. Fire-Resistance Ratings: As tested according to ASTM E119; testing by a qualified testing agency. Identify products with appropriate markings of applicable testing agency.
  - a. Fire-Resistance Ratings: Indicated by design designations from UL's "Fire Resistance Directory" or from the listings of another qualified testing agency.
5. Mold Resistance (ASTM D3273): 10, in a test as manufactured.
6. Microbial Resistance (ASTM D6329, UL Environmental GREENGUARD 3-week protocol): Will not support microbial growth.

### 2.3 FASTENERS

- #### A. General: Provide fasteners of size and type indicated that comply with requirements specified in this article for material and manufacture.
1. For sheathing, provide fasteners with organic-polymer or other corrosion-protective coating having a salt-spray resistance of more than 800 hours according to ASTM B117.
  2. For steel framing from 0.033 to 0.112 inch thick, attach sheathing to comply with ASTM C 954.

### 2.4 SHEATHING JOINT-AND-PENETRATION TREATMENT MATERIALS

- #### A. Refer to specification 072726 fluid applied membrane air barrier manufacturer.

## PART 3 - EXECUTION

### 3.1 INSTALLATION, GENERAL

- A. Do not use materials with defects that impair quality of sheathing or pieces that are too small to use with minimum number of joints or optimum joint arrangement. Arrange joints so that pieces do not span between fewer than three support members.
- B. Cut panels at penetrations, edges, and other obstructions of work; fit tightly against abutting construction unless otherwise indicated.
- C. Securely attach to substrate by fastening as indicated, complying with the following:
  - 1. ICC-ES evaluation report for fastener.
- D. Coordinate wall sheathing installation with flashing and joint-sealant installation so these materials are installed in sequence and manner that prevent exterior moisture from passing through completed assembly.
- E. Do not bridge building expansion joints; cut and space edges of panels to match spacing of structural support elements.

### 3.2 GYPSUM SHEATHING INSTALLATION

- A. Comply with GA-253 and with manufacturer's written instructions.
  - 1. Fasten gypsum sheathing to cold-formed metal framing with screws.
  - 2. Install panels with a 3/8-inch gap where non-load-bearing construction abuts structural elements.
  - 3. Install panels with a 1/4-inch gap where they abut masonry or similar materials that might retain moisture, to prevent wicking.
  - 4. Outside corners to be tight 90degrees

END OF SECTION 06 1600

## SECTION 06 4020 - INTERIOR ARCHITECTURAL WOODWORK

### PART 1 - GENERAL

#### 1.1 SUMMARY

- A. Work Included: The Work of this Section shall include:
  - 1. Plastic laminate-clad cabinets.
  - 2. Shop finishing of interior woodwork
  - 3. Closet & utility shelving
  - 4. Solid Surface countertops
- B. Products installed but not furnished, under this Section include the following:
  - 1. Countertop support brackets.

#### 1.2 DEFINITIONS

- A. Interior architectural woodwork includes wood furring, blocking, shims, and hanging strips for installing woodwork items unless concealed within other construction before woodwork installation.

#### 1.3 SUBMITTALS

- A. Product Data: For each type of product indicated.
  - 1. Include data for fire-retardant treatment from chemical treatment manufacturer and certification by treating plant that treated materials comply with requirements.
- B. Shop Drawings: Show location of each item, dimensioned plans and elevations, large-scale details, attachment devices, and other components.
  - 1. Show details full size.
  - 2. Show locations and sizes of furring, blocking, and hanging strips, including concealed blocking and reinforcement specified in other Sections.
  - 3. Show veneer leaves with dimensions, grain direction, exposed face, and identification numbers indicating the flitch and sequence within the flitch for each leaf.
  - 4. Show locations and sizes of cutouts and holes for plumbing fixtures faucets soap dispensers and other items installed in architectural woodwork.
  - 5. Apply AWI -certified compliance label to first page of shop drawings.
- C. Samples for Verification:
  - 1. Lumber and panel products with shop-applied opaque finish, 50 sq. in. for lumber and 8 by 10 inches for panels, for each finish system and color, with 1/2 of exposed surface finished.
  - 2. Lumber with or for transparent finish, 5 inches wide by 24 inches long, for each species and cut, finished on 1 side and 1 edge.
  - 3. Veneer leaves representative of and selected from flitches to be used for transparent-finished woodwork.
  - 4. Plastic laminates, 8 by 10 inches, for each type, color, pattern, and surface finish, with 1

- sample applied to core material.
- 5. Solid-surfacing materials, 6 inch square.
- 6. Exposed cabinet hardware and accessories, one unit for each type and finish.

- D. Product Certificates: For each type of product, signed by product manufacturer.
- E. Woodwork Quality Standard Compliance Certificates: AWI Quality Certification Program certificates.
  - 1. This project has not been registered with AWI as AWI Quality Certification Program but shall be by the contractor.
- F. Qualification Data: For Installer.

#### 1.4 QUALITY ASSURANCE

- A. Fabricator Qualifications: Shop that employs skilled workers who custom-fabricate products similar to those required for this Project and whose products have a record of successful in-service performance. Shop is a certified participant in AWI's Quality Certification Program.
- B. Installer Qualifications: Certified participant in AWI's Quality Certification Program.
- C. Source Limitations: Engage a qualified woodworking firm to assume undivided responsibility for production of interior architectural woodwork with sequence-matched wood veneers and wood doors with face veneers that are sequence matched with woodwork.
- D. Fire-Test-Response Characteristics: Where fire-retardant materials or products are indicated, provide materials and products with specified fire-test-response characteristics as determined by testing identical products per test method indicated by UL, ITS, or another testing and inspecting agency acceptable to authorities having jurisdiction. Identify with appropriate markings of applicable testing and inspecting agency in the form of separable paper label or, where required by authorities having jurisdiction, imprint on surfaces of materials that will be concealed from view after installation.
- E. Mockups: Build mockups to verify selections made under sample submittals and to demonstrate aesthetic effects and set quality standards for materials and execution.
  - 1. Laminate clad cabinets with hardware and other items as selected by the Architect.
  - 2. Approved mockups may become part of the completed Work if undisturbed at time of Substantial Completion.
- F. Pre-installation Conference: Conduct conference at Project site to comply with requirements in Division 01 Section "Project Management and Coordination."

#### 1.5 DELIVERY, STORAGE, AND HANDLING

- A. Do not deliver woodwork until painting and similar operations that could damage woodwork have been completed in installation areas. If woodwork must be stored in other than installation areas, store only in areas where environmental conditions comply with requirements specified in "Project Conditions" Article.

#### 1.6 PROJECT CONDITIONS

- A. Environmental Limitations: Do not deliver or install woodwork until building is enclosed, wet work is complete, and HVAC system is operating and maintaining temperature between 60 and

90 deg F and relative humidity between 25 and 55 percent during the remainder of the construction period.

- B. Field Measurements: Where woodwork is indicated to fit to other construction, verify dimensions of other construction by field measurements before fabrication, and indicate measurements on Shop Drawings. Coordinate fabrication schedule with construction progress to avoid delaying the Work.
  - 1. Locate concealed framing, blocking, and reinforcements that support woodwork by field measurements before being enclosed, and indicate measurements on Shop Drawings.
  - 2. Established Dimensions: Where field measurements cannot be made without delaying the Work, establish dimensions and proceed with fabricating woodwork without field measurements. Provide allowance for trimming at site, and coordinate construction to ensure that actual dimensions correspond to established dimensions.

## 1.7 COORDINATION

- A. Coordinate sizes and locations of framing, blocking, furring, reinforcements, and other related units of Work specified in other Sections to ensure that interior architectural woodwork can be supported and installed as indicated.

## PART 2 - PRODUCTS

- A. Use composite wood and agrifiber building products on the interior of the building only that contains no added urea-formaldehyde resins. Laminating adhesives used to fabricate on-site and shop-applied composite wood and agrifiber assemblies shall contain no added urea-formaldehyde resins.

## 2.2 INTERIOR ARCHITECTURAL WOODWORK, GENERAL

- A. Quality Standard: Unless otherwise indicated, comply with the "Architectural Woodwork Standards" for grades of interior architectural woodwork indicated for construction, finishes, installation, and other requirements.

## 2.3 MATERIALS

- A. Wood Products: Comply with the following:
  - 1. Medium-Density Fiberboard: ANSI A208.2, Grade MD and formaldehyde-free.
  - 2. Particleboard: Straw-based particleboard complying with requirements in ANSI A208.1, Grade M-2, except for density and formaldehyde-free.
  - 3. Softwood Plywood: DOC PS 1, Medium Density Overlay.
  - 4. Veneer-Faced Panel Products (Hardwood Plywood): HPVA HP-1.
  - 5. Countertop and Work surface substrate: DOC PS 1, Exterior or marine- grade plywood.
- B. High- Pressure Decorative Laminate: NEMA LD 3, grades as indicated or, if not indicated, as required by woodwork quality standard. (PLAM1 as listed on the finish schedule)
  - 1. Manufacturers: Subject to compliance with requirements, provide products as listed in the finish schedule or approved equal.

C. SOLID- SURFACING MATERIAL:

1. Solid Surface Material: Homogeneous-filled plastic resin complying with ICPA SS-1.
  - a. Integral Sink Bowls, where specified: Comply with CSA B45.5/IAPMO Z124
2. Manufacturers: Subject to compliance with requirements, provide products as listed in the finish schedule or approved equal.
3. General: Use only adhesives formulated for simulated stone or solid- surfacing material and that are recommended by the manufacturer for the application indicated.
  - a. Water- Cleanable Epoxy Adhesive: ANSI A118.3, with a VOC content of 65 g/L or less.

2.4 CABINET HARDWARE AND ACCESSORIES

- A. General: Provide cabinet hardware and accessory materials associated with architectural cabinets, except for items specified in Division 08 Section "Door Hardware."
- B. Hinges: Overlay quiet self- closing hinge wing base plate; as supplied by Grass or approved equal.
- C. Strike Plates: Nickel plated; #239.40.703 as supplied by Hafele or approved equal.
- D. Wire Pulls:
  1. Type 304 stainless steel; #3096 as supplied by Sugatsune America, Inc. or approved equal.
  2. Finish: No. 4 satin.
- E. Catches: #36752G as supplied by Richelieu; zinc finish or approved equal.
- F. Shelf Standards and Supports: #2552G96 with 2562G shelf clip as supplied by Richelieu or approved equal; zinc finish.
- G. Drawer Slides: BHMA A156.9, B05091 with soft-close feature.
  1. Full Extension soft-close Drawer Slides:
    - a. 100 lb. as supplied by Accuride or approved equal.
  2. Heavy Duty Grade 1HD-200): Side mounted; full-overtravel-extension type; zinc-plated steel ball-bearing slides.
  3. Box Drawer Slides: Grade 1HD-100]; for drawers, not more than 6 inches high and 24 inches wide.
  4. File Drawer Slides: Grade 1HD-200; for drawers, more than 6 inches high or 24 inch wide.
  5. Pencil Drawer Slides: Grade 1; for drawers, not more than 3 inches high and 24 inches wide.
  6. Keyboard Slides: Grade 1HD-100; for computer keyboard shelves.
  7. Trash Bin Slides: Grade 1HD-200]; for trash bins, not more than 20 inches high and 16 inches wide.
- H. Locks
  1. Door: BHMA A156.11, E07121.

2. Drawer: BHMA A156.11, E07041.
  3. Product: #3310-cylinder lock as supplied by Sugatsune America, Inc. or approved equal
  4. Coordinate keying with Owner.
- I. Grommets for Cable Passage through Countertops:
1. 2 1/4inch OD, solid brass grommet cap and liner with nickel satin finish.
    - a. Model 20692170 by Richlieu or approved equal
- J. Metal Backing Plates: Refer to Division 05 Section – “Metal Fabrications” for requirements.
- K. Exposed Hardware Finishes: For exposed hardware, provide finish that complies with BHMA A156.18 for BHMA finish number indicated.
1. Satin Stainless Steel: BHMA 630, unless otherwise indicated or not available for specific product.
  2. Satin Castings, Nickel Silver: ASTM B 584, Alloy UNS No. C97300 (12 percent leaded nickel silver).
  3. Satin Extruded Shapes, Nickel Silver: ASTM B 249/B 249M, Alloy UNS No. C79600.
- L. For concealed hardware, provide manufacturer's standard finish that complies with product class requirements in BHMA A156.9.
- M. Countertop Supports Brackets: Refer to Section 055000 – Metal Fabrications.

## 2.5 MISCELLANEOUS MATERIALS

- A. Furring, Blocking, Shims, and Hanging Strips: Softwood or hardwood lumber, kiln dried to less than 15 percent moisture content.
- B. Anchors: Select material, type, size, and finish required for each substrate for secure anchorage. Provide nonferrous-metal or hot-dip galvanized anchors and inserts on inside face of exterior walls and elsewhere as required for corrosion resistance. Provide toothed-steel or lead expansion sleeves for drilled-in-place anchors.
- C. VOC Limits for Installation Adhesives and Glues, and used in particleboard and MDF: Use installation adhesives that comply with the following limits for VOC content when calculated per 40 CFR 59, Subpart D (EPA Method 24):
1. Wood Glues: 30 g/L.
  2. Contact Adhesive: 250 g/L.
- D. Adhesive for Bonding Plastic Laminate: Unpigmented contact cement.
1. Adhesive for Bonding Edges: Hot-melt adhesive or adhesive specified above for faces.

## 2.6 FABRICATION, GENERAL

- A. Interior Woodwork Grade: Unless otherwise indicated, provide Custom-grade interior woodwork complying with referenced quality standard.
- B. Wood Moisture Content: Comply with requirements of referenced quality standard for wood moisture content in relation to ambient relative humidity during fabrication and in installation areas.

- C. Sand fire-retardant-treated wood lightly to remove raised grain on exposed surfaces before fabrication.
- D. Fabricate woodwork to dimensions, profiles, and details indicated. Ease edges to radius indicated for the following:
  - 1. Corners of Cabinets and Edges of Solid-Wood (Lumber) Members 3/4-Inch-thick or Less: 1/16 inch.
  - 2. Edges of Rails and Similar Members More Than 3/4-Inch-Thick: 1/8 inch.
  - 3. Corners of Cabinets and Edges of Solid-Wood (Lumber) Members and Rails: 1/16 inch.
- E. Complete fabrication, including assembly, finishing, and hardware application, to maximum extent possible before shipment to Project site. Disassemble components only as necessary for shipment and installation. Where necessary for fitting at site, provide ample allowance for scribing, trimming, and fitting.
  - 1. Notify Architect seven days in advance of the dates and times woodwork fabrication will be complete.
  - 2. Trial fit assemblies at fabrication shop that cannot be shipped completely assembled. Install dowels, screws, bolted connectors, and other fastening devices that can be removed after trial fitting. Verify that various parts fit as intended and check measurements of assemblies against field measurements indicated on Shop Drawings before disassembling for shipment.
- F. Shop-cut openings to maximum extent possible to receive hardware, appliances, plumbing fixtures, electrical work, and similar items. Locate openings accurately and use templates or roughing-in diagrams to produce accurately sized and shaped openings. Sand edges of cutouts to remove splinters and burrs.
  - 1. Seal edges of openings in countertop subbases and wood supports with a coat of varnish.

## 2.7 CLOSET AND UTILITY SHELVING

- A. Grade: Custom.
- B. Shelf Material: 3/4-inch solid lumber MDF or particleboard with solid-lumber edge and plastic laminate finish where indicated on drawings.
- C. Cleats: 3/4-inch solid lumber.
- D. Wood Species: Any closed-grain hardwood for opaque finishes. Match species indicated for other types of transparent-finished architectural woodwork located in same area of building unless otherwise indicated.
- E. Closet Rods: 1-5/16-inch- diameter, chrome-plated-steel tubes complying with BHMA A156.16, L03131.
- F. Rod Flanges: Chrome-plated steel.
- G. Wood Finish: As indicated on Drawings or in schedules.

## 2.8 PLASTIC- LAMINATE CLAD CABINETS

- A. AWI Grade: Custom.
- B. AWI Type of Cabinet Construction: Type A, Flush Overlay.
- C. Laminate Cladding for Exposed Surfaces: High-pressure decorative laminate complying with the following requirements:
  - 1. Horizontal Surfaces Other Than Tops: Grade HGS.
  - 2. Postformed Surfaces: Grade HGP.
  - 3. Vertical Surfaces: Grade VGS.
  - 4. Edges: Grade HGS.
- D. Materials for Semiexposed Surfaces:
  - 1. Surfaces Other Than Drawer Bodies: High-pressure decorative laminate, Grade VGS.
    - a. Edges of Plastic-Laminate Shelves: PVC tape, 0.018-inch minimum thickness, matching laminate in color, pattern, and finish.
    - b. For semiexposed backs of panels with exposed plastic-laminate surfaces, provide surface of high-pressure decorative laminate, Grade VGS.
  - 2. Drawer Sides and Backs: Solid-hardwood lumber.
  - 3. Drawer Bottoms: Hardwood plywood.
- E. Concealed Backs of Panels with Exposed Plastic Laminate Surfaces: High-pressure decorative laminate, Grade BKL.
- F. Colors, Patterns, and Finishes: Provide materials and products that result in colors and textures of exposed laminate surfaces complying with the following requirements:
  - 1. As indicated in drawings Finish Schedules or selected by the Architect.
- G. Provide dust panels of 1/4-inch plywood or tempered hardboard above compartments and drawers, unless located directly under tops.

## 2.9 SOLID SURFACE COUNTERTOPS

- A. Fabricate countertops according to solid surface material manufacturer's written instructions and to the AWI/AWMAC/WI's "Architectural Woodwork Standards."
  - 1. Grade: Custom
- B. Colors, Patterns, and Finishes: Provide materials and products that result in colors of solid-surfacing material complying with the following requirements:
  - 1. As indicated in drawings Finish Schedules or selected by the Architect.
- C. Configuration:
  - 1. Front: built-up edge as indicated on the drawings
  - 2. Backsplash: Radius edge with 3/8-inch radius.
  - 3. End Splash: Matching backsplash

- D. Countertops: 1/2-inch thick, solid surface material with front edge built up with same material.
- E. Backsplashes: 1/2-inch thick, solid surface material.
- F. Joints: Fabricate countertops without joints to extend possible
  - 1. Where joints required due to countertop length, fabricate in sections for joining in field, all joints to be clearly labeled on shop drawings.
- G. Cutouts and Holes:
  - 1. Undercounter Plumbing Fixtures: Make cutouts for fixtures in shop using template or pattern furnished by fixture manufacturer. Form cutouts to smooth, even curves. Finish exposed cut edges
- H. Adhesive: Product recommended by solid surface material manufacturer.

## 2.10 SHOP FINISHING

- A. Grade: Provide finishes of same grades as items to be finished.
- B. General: Drawings indicate items that are required to be shop finished. Finish such items at fabrication shop as specified in this Section. Refer to Division 9 painting Sections for finishing architectural woodwork not indicated to be shop finished.
- C. Preparation for Finishing: Comply with referenced quality standard for sanding, filling countersunk fasteners, sealing concealed surfaces, and similar preparations for finishing architectural woodwork, as applicable to each unit of work.
  - 1. Backpriming: Apply one coat of sealer or primer, compatible with finish coats, to concealed surfaces of woodwork. Apply two coats to back of paneling and to end-grain surfaces. Concealed surfaces of plastic-laminate-clad woodwork do not require backpriming when surfaced with plastic laminate, backing paper, or thermoset decorative panels.
- D. Transparent Finish: Comply with requirements indicated below for grade, finish system, staining, and sheen, with sheen measured on 60-degree gloss meter per ASTM D 523:
  - 1. Grade: Same as item to be finished.
  - 2. AWI Finish System: Conversion Varnish TR- 4; 35 percent sheen to match existing building sample.
  - 3. Staining: Matching Architect's samples.
  - 4. Wash Coat for Stained Finish: Apply a vinyl wash coat to woodwork made from closed-grain wood before staining and finishing.
  - 5. Open Finish for Open-Grain Woods: Do not apply filler to open-grain woods.
  - 6. Filled Finish for Open-Grain Woods: After staining (if any), apply paste wood filler to open-grain woods and wipe off excess. Tint filler to match stained wood.
    - a. Apply vinyl wash coat sealer after staining and before filling.
  - 7. Sheen: Rubbed semi-gloss finish matching the Architect's samples.
- E. Opaque Finish:
  - 1. Grade: Same as item to be finished.
  - 2. Finish: Provide one of the following as indicated or selected by the Architect:

- a. System - 4, water-based latex acrylic
  - b. System - 5, conversion varnish
  - c. System - 7, catalyzed vinyl
  - d. System - 12, water-based polyurethane.
3. Color: Match Architect's sample As selected by Architect from manufacturer's full range.
4. Sheen: Provide one of the following as indicated or selected by the Architect:
- a. Flat, 15-30
  - b. Satin, 31-45
  - c. Semigloss, 46-60
  - d. Gloss, 61-100
  - e. Gloss units measured on 60-degree gloss meter per ASTM D 523.

### **PART 3 - EXECUTION**

#### **3.1 PREPARATION**

- A. Before installation, condition woodwork to average prevailing humidity conditions in installation areas.
- B. Before installing architectural woodwork, examine shop-fabricated work for completion and complete work as required, including removal of packing and backpriming.

#### **3.2 INSTALLATION**

- A. Grade: Install woodwork to comply with requirements for the same grade specified in Part 2 for fabrication of type of woodwork involved.
- B. Assemble woodwork and complete fabrication at Project site to comply with requirements for fabrication in Part 2, to extent that it was not completed in the shop.
- C. Install woodwork level, plumb, true, and straight. Shim as required with concealed shims. Install level and plumb (including tops) to a tolerance of 1/8 inch in 96 inches.
- D. Scribe and cut woodwork to fit adjoining work, refinish cut surfaces, and repair damaged finish at cuts.
- E. Fire-Retardant-Treated Wood: Handle, store, and install fire-retardant-treated wood to comply with chemical treatment manufacturer's written instructions, including those for adhesives used to install woodwork.
- F. Anchor woodwork to anchors or blocking built in or directly attached to substrates. Secure with countersunk, concealed fasteners and blind nailing as required for complete installation. Use fine finishing nails or finishing screws for exposed fastening, countersunk and filled flush with woodwork.
- G. Standing and Running Trim: Install with minimum number of joints possible, using full-length pieces (from maximum length of lumber available) to greatest extent possible. Do not use pieces less than 60 inches long, except where shorter single-length pieces are necessary. Scarf running joints and stagger in adjacent and related members.
  - 1. Fill gaps, if any, between top of base and wall with plastic wood filler, sand smooth, and finish same as wood base if finished.

2. Install wall railings on indicated metal brackets securely fastened to wall framing.
  3. Install standing and running trim with no more variation from a straight line than 1/8 inch in 96 inches.
- H. Cabinets: Install without distortion so doors and drawers fit openings properly and are accurately aligned. Adjust hardware to center doors and drawers in openings and to provide unencumbered operation. Complete installation of hardware and accessory items as indicated.
1. Install cabinets with no more than 1/8 inch in 96-inch sag, bow, or other variation from a straight line.
  2. Fasten wall cabinets through back, near top and bottom, at ends and not more than 16 inches o.c. with No. 10 wafer-head screws sized for 1-inch penetration into wood framing, blocking, or hanging strips No. 10 wafer-head sheet metal screws through metal backing or metal framing behind wall finish.
- I. Countertops: Anchor securely by screwing through corner blocks of base cabinets or to support brackets from underside of countertop, in accordance with approved shop drawings. Or where quartz, secure to subtops with adhesive according to quartz agglomerate manufacturer's written instructions.
1. Align adjacent solid- surfacing-material countertops and form seams to comply with manufacturer's written recommendations using adhesive in color to match countertop. Carefully dress joints smooth, remove surface scratches, and clean entire surface.
  2. Install countertops with no more than 1/8 inch in 96-inch sag, bow, or other variation from a straight line.
  3. Secure backsplashes to tops with concealed metal brackets at 16 inches o.c. and to walls with adhesive.
  4. Calk space between backsplash and wall with sealant specified in Division 7 Section "Joint Sealants."
  5. Grommets: Drill and install in countertops at each device location, where indicated or as directed by Architect.
  6. Drill holes in countertops for plumbing fittings and soap dispensers in shop.
- J. Touch up finishing work specified in this Section after installation of woodwork. Fill nail holes with matching filler where exposed.
- K. Apply sealant to gaps at walls and between backsplash and endsplash to countertop.

### 3.3 ADJUSTING AND CLEANING

- A. Repair damaged and defective woodwork, where possible, to eliminate functional and visual defects; where not possible to repair, replace woodwork. Adjust joinery for uniform appearance.
- B. Clean, lubricate, and adjust hardware.
- C. Clean woodwork on exposed and semiexposed surfaces. Touch up shop-applied finishes to restore damaged or soiled areas.

END OF SECTION 06 4020

## **SECTION 06 8200 – FIBER- REINFORCED PLASTIC PANELS**

### **PART 1 - GENERAL**

#### **1.1 SUMMARY**

A. Work Included: The Work of this Section shall include but not be limited to the following:

1. Glass-fiber reinforced plastic (FRP) wall paneling and trim.
2. Installation accessories.

#### **1.2 ACTION SUBMITTALS**

- A. Product Data: For each type of product indicated.
- B. Color samples for initial selection: Provide a full set of manufacturer's available standard color chips for plastic panels.
- C. Samples for Verification:
1. 12-inch square of each type and of each color of panels.
  2. 12-inch-long sample of each type of trim and accessories.

#### **1.3 QUALITY ASSURANCE**

- A. Source Limitations: Obtain plastic paneling and trim accessories from single manufacturer.
- B. Surface-Burning Characteristics: As determined by testing identical products per ASTM E 84 by a qualified testing agency. Identify products with appropriate markings of applicable testing agency.
1. Class A
    - a. Flame-Spread Index: 25 or less.
    - b. Smoke Development of 450 or less

#### **1.4 PROJECT CONDITIONS**

- A. Environmental Limitations: Do not deliver or install plastic paneling until spaces are enclosed and weathertight and temporary HVAC system is operating and maintaining ambient temperature and humidity conditions at occupancy levels during the remainder of the construction period.

### **PART 2 - PRODUCTS**

#### **2.1 PLASTIC SHEET PANELING**

- A. Materials: Gelcoat-finished, glass-fiber reinforced plastic panels complying with ASTM D 5319.
- B. Nominal Thickness: Not less than 0.090 inch
- C. Surface Finish: as indicated on the drawings, see finish schedule, Class A
- D. Color: as indicated on the drawings, see finish schedule
- E. Attachment Method: Adhesive only, with trim and sealant in joints.

## 2.2 MANUFACTURERS

- A. Product: Subject to compliance with requirements, provide manufacturer's standard product,
  - 1. Marlite, Inc (basis of design);
  - 2. Crane Composites
  - 3. Nudo Products, Inc
  - 4. Panolam Industries International, Inc;
  - 5. Or approved equal.

## 2.3 ACCESSORIES

- A. Trim Accessories:
  - a. Where patterned FRP specified, designated as FRP 2 on the finish schedule:
    - i. Anodized Aluminum extrusions designed to retain and cover edges of panels, at top, bottom and corners of panels. Provide inside corners, outside corners, and caps as needed to conceal edges. Intermediate joints between panels shall be silicone- type adhesive only
  - b. In utility rooms, storage rooms and janitor closets:
    - i. Manufacturer's standard one-piece vinyl extrusions designed to retain and cover edges of panels, at top, bottom and corners of panels. Provide inside corners, outside corners, and caps as needed to conceal edges. Intermediate joints between panels shall be silicone- type adhesive only
      - 1. Color: To match the panels unless otherwise indicated.
- B. Exposed Fasteners: not acceptable
- C. Adhesive: As recommended by plastic paneling manufacturer.
- D. Sealant: Single-component, mildew-resistant, neutral-curing silicone sealant recommended by plastic paneling manufacturer and complying with requirements in Division 07 Section "Interior Joint Sealants."

## PART 3 - EXECUTION

### 3.1 EXAMINATION

- A. Examine substrates and conditions, with Installer present, for compliance with requirements for installation tolerances and other conditions affecting performance of the Work.

- B. Proceed with installation only after unsatisfactory conditions have been corrected.

### 3.2 PREPARATION

- A. Remove any material that might interfere with adhesive bond.
- B. Prepare substrate by sanding high spots and filling low spots as needed to provide flat, even surface for panel installation.
- C. Clean substrates of substances that could impair bond of adhesive, including oil, grease, dirt, and dust.
- D. Condition panels by unpacking and placing in installation space before installation according to manufacturer's written recommendations.
  - 1. Mark plumb lines on substrate at panel joint locations for accurate installation.

### 3.3 INSTALLATION

- A. Install plastic paneling per manufacturer's written instructions.
- B. Install panels in a full spread of adhesive.
- C. Install trim accessories with adhesive.
- D. Fill grooves in trim accessories with sealant before installing panels and bed inside corner trim in a bead of sealant.
- E. Maintain uniform space between panels and wall fixtures. Fill space with sealant.

### 3.4 CLEANING

- A. Remove excess sealant and smears as paneling is installed.
- B. Clean with panels with solution as recommended by manufacturer and wipe with clean dry cloth.

END OF SECTION 06 8200

## SECTION 071326 - SHEET MEMBRANE WATERPROOFING

### PART 1 GENERAL

#### 1.1 GENERAL REQUIREMENTS

- A. Work of this Section, as shown or specified, shall be in accordance with the requirements of the Contract Documents.

#### 1.2 SECTION INCLUDES

- A. Work of this Section includes all labor, materials, equipment, and services necessary to complete the sheet membrane waterproofing as shown on the drawings and/or specified herein, including, but not necessarily limited to, the following:
  - 1. Self-adhered waterproofing membrane.

#### 1.3 QUALITY ASSURANCE

- A. Preinstallation Conference: Approximately 2 weeks prior to scheduled commencement of waterproofing installation, meet at Project site with Waterproofing Installer; preparer of substrate to receive waterproofing; installers of other work in and around waterproofing that must precede, follow, or penetrate waterproofing (including Mechanical and Electrical Installers as applicable); Architect; Owner; and waterproofing manufacturer's representative to review materials, procedures, schedules, and other requirements and conditions related to installing waterproofing.
- B. Qualifications of Subcontractors
  - 1. Subcontractors: All work of this Section shall be performed by a subcontractor who is approved by the manufacturer of the waterproofing material.
  - 2. Qualifications of Subcontractors: Subcontractors shall submit evidence of being bona fide waterproofing subcontractors, for a period of not less than five (5) years, and that they are approved by the manufacturer of the waterproofing material for the installation of the manufacturer's material in accordance with the requirements of this Section.
    - a. Subcontractor shall submit a letter from manufacturer of waterproofing material stating that subcontractor is approved by the manufacturer for the application of the waterproofing systems specified and accepted for use on the Project.
    - b. Letter shall certify that the subcontractor has previously and satisfactorily applied the waterproofing systems specified herein on jobs of similar size and scope, under manufacturer's supervision.
    - c. Letter shall be on manufacturer's letterhead and shall be signed by an officer of the company, not by a local sales representative.

C. Manufacturer's Representative/Contractor's Certification

1. Representative of the waterproofing material manufacturer shall be required to provide field instructions and supervision for the installation of the waterproofing systems at the start of the work of this Section.
2. The manufacturer's representative shall be required to make sure that the workmen for waterproofing systems on the site of the Project are fully instructed and trained in the handling and application of all the materials and shall see that all the materials are correctly installed.
3. Upon completion of the Installation, submit to the Architect written certification that the representative of the manufacturer of the waterproofing material has supervised the work of this Section and that all materials were correctly installed.

1.4 SUBMITTALS

- A. Shop Drawings: Typical installation details, showing details at flashings, at terminations, at joints, at intersection of horizontal and vertical surfaces, and at penetrations in membrane system.
- B. Manufacturer's Literature: Submit manufacturer's technical, safety data sheets, and installation literature for all materials of this Section. Submit Independent Test data indicating that membrane meets properties specified herein.
- C. General Contractor's Certification: Submit per Article 1.3.

1.5 STORAGE OF MATERIALS

- A. All materials shall be stored in their original tightly sealed containers or unopened packages; shall be clearly labeled with the manufacturer's name, brand name and number, and batch number of the material with expiration date where appropriate.
- B. Materials shall be stored in a neat and safe manner so as not to exceed the allowable live load of the storage area.
- C. Material shall be stored out of the weather in a clean, dry area.
- D. Liquid materials, such as adhesives, thinners and primers, shall be stored in areas away from sparks, open flames and excessive heat.

1.6 JOB CONDITIONS

- A. No application of waterproofing shall commence or proceed during inclement weather, or the threat of imminent precipitation.
- B. All surfaces to receive the system shall be thoroughly dry and free of dew or frost.
- C. Materials shall be stored until time of mixing at temperatures above 60 deg. F. to maintain a consistency suitable for mixing. Do no work below 40 deg. F.

- D. Prior to and during application, all dirt and dust shall be removed from surfaces either by vacuuming, sweeping, blowing with compressed air, or similar methods.
- E. Surfaces not designated to receive the system shall be properly masked or otherwise protected against accidental spillage or application of the material to those areas.

#### 1.7 PROTECTION

- A. Against Loads: Protect work of this Section against concentrated loads and any other loads or equipment that would damage the materials or work.
- B. Against Damage: Protect vertically installed work of this section from damage by reinforcing and placement.
  - 1. Take and maintain necessary preventative measures to protect work of this Section from damage until Project is accepted.
  - 2. Rejection of Damaged Work: Damaged materials or work will be rejected. Rejected materials or work must be immediately removed and replaced with new materials.

#### 1.8 FIELD QUALITY CONTROL

- A. Inform Architect in writing on a daily basis of any of the following events. State specific location of each occurrence.
  - 1. Buckling to the Waterproofing and other deformations as a result of ground water events.
  - 2. Leakage through the finished waterproofing installation.
  - 3. Damage by other trades.
- B. Provide Manufacturer's Representative's report (prior to backfill) stating that the waterproofing has been inspected and is acceptable and eligible for manufacturer's warranty.

#### 1.9 WARRANTY - SELF ADHERED MEMBRANE

- A. Contractor hereby warrants that the waterproofing membrane will stay in place and remain leakproof for a period of 2 years.
- B. Waterproofing membrane manufacturer hereby warrants that the waterproofing membrane will remain in a watertight condition and will not leak as a result of faulty materials for a period of 5 years.

### PART 2 PRODUCTS

#### 2.1 SELF-ADHERED WATERPROOFING MEMBRANE

- A. Basis of Design Manufacturer: Henry Company
  - 1. Other manufacturers: Carlisle Coatings & waterproofing incorp, GCP applied technologies, or approved equal

- B. Primary Waterproofing Membrane: Provide "Henry Blueskin WP200" or approved equal SBS-modified bitumen, self-adhering type waterproofing, integrally laminated to a high-density, cross-laminated polyethylene film, and having the following physical properties:
  - 1. Thickness: 1.5 mm (60 mils) min.
  - 2. Flexibility: Pass @ -40 deg F to ASTM D 1970.
  - 3. Vapor Permeance: 0.05 perms (2.8 ng/Pa.s.m<sup>2</sup>) to ASTM E 96.
  - 4. Tensile Strength (Membrane): 325 psi to ASTM D 412.
  - 5. Tensile Strength (Film): 5000 psi to ASTM D 882.
  - 6. Elongation: 300% to ASTM D 412.
  - 7. Puncture Resistance: 50 lbs. min. to ASTM E 154.
- C. Accessories to Primary Waterproofing Membrane
  - 1. Aquatac Primer by Henry or approved equal .
  - 2. BES 925 Sealant by Henry or approved equal.
  - 3. Polybitume Polymer Modified Sealing Compound (Mastic) by Henry or approved equal.
- D. Adhesive: Blueskin LVC Adhesive or approved equal.

### PART 3 EXECUTION

#### 3.1 EXAMINATION

- A. Verify that surfaces and conditions are ready to accept the work of this Section. Commencement of the work or any parts thereof shall mean acceptance of the prepared substrate.

#### 3.2 PREPARATION

- A. All surfaces must be sound, dry, clean and free of oil, grease, dirt, excess mortar, frost or other contaminants. Fill spalled areas in substrate to provide an even plane.
- B. Concrete should be cured for a minimum of 7 days and must be dry before waterproofing membranes are applied.
- C. Use appropriate waterproofing membrane as recommended by manufacturer based on air and surface temperature at time of application.
- D. Coat penetrations, such as brackets, clips, braces, etc. that are set into the concrete with a 90 mil coating of liquid membrane to the height of the wearing course and around projections to ensure a complete seal prior to coating the entire area.

### 3.3 INSTALLATION - GENERAL

- A. General: Conform to recommendations and published specifications of the manufacturer, including environmental requirements and preparation requirements to receive waterproofing.

### 3.4 INSTALLATION - SELF-ADHERED MEMBRANE

- A. Primer: Apply primer for self-adhered membrane by roller or spray at rate recommended by manufacturer. Allow minimum 30-minute open time. Primed surfaces not covered by waterproofing membrane during the same working day must be re-primed.
- B. Joint and Crack Treatment
  - 1. All cracks in concrete 1/16" to 1/4" wide are to be pre-treated with a 6" wide strip of membrane centered over crack. Provide 3" end laps.
  - 2. Horizontal to vertical inside corner transition areas are to be pre-treated with an manufacturers recommended sealant fillet extending 3/4" vertically and horizontally from the corner. Apply a minimum 9" strip of membrane centered at the joint.
  - 3. All outside corners are to be pre-treated with a minimum 9" strip of membrane centered at the joint.
- C. Expansion Joints: Where required provide expansion joint treatment as per membrane manufacturer's standard details.
- D. Projections: Extend primary membrane tight to projection and seal with second layer of membrane extending 2-1/2" along projection and 2-1/2" onto primary membrane.
- E. Waterproofing Membrane Application
  - 1. Apply waterproofing membrane to prepared substrate in lengths of 8 feet or less. Provide 2-1/2" laps at both sides and ends. Position for alignment and remove protective film. Press firmly into place. Promptly roll all laps with a countertop roller to effect seal. If more than one length is required on a vertical surface, apply in a shingle fashion.
  - 2. Terminate membrane using manufacturer's recommended mastic and termination bar, reglet or counter flashing as indicated. Refer to manufacturer's standard details.
  - 3. All laps within 12" of a 90-degree change in plane are to be sealed with manufacturer's recommend mastic.

### 3.5 CLEANING AND PROTECTION

- A. Protect membrane from job site abuse as soon as possible following membrane application.

END OF SECTION

## SECTION 071616 - CAPILLARY WATERPROOFING

### PART 1 GENERAL

#### 1.1 GENERAL REQUIREMENTS

- A. Work of this Section, as shown or specified, shall be in accordance with the requirements of the Contract Documents.

#### 1.2 SECTION INCLUDES

- A. Work of this Section includes all labor, materials, equipment and services necessary to complete the capillary waterproofing as shown on the drawings and/or specified herein, including but not necessarily limited to the following:
  - 1. Capillary waterproofing system for interior surfaces of backwash basin, surge tank and elevator pit.

#### 1.3 RELATED SECTIONS

- A. Concrete - Section 033000.

#### 1.4 SUBMITTALS

- A. Shop Drawings: Submit shop drawings showing details at terminations, at joints, at intersection of horizontal and vertical surfaces, and at penetrations in waterproofing system.
- B. Product Data: Submit manufacturer's technical information and installation instructions for all materials of this Section.
- C. Contractor's Certification: Submit per Article 1.6.
- D. Subcontractor's Qualifications: Submit per Article 1.7.

#### 1.5 STORAGE OF MATERIALS

- A. All materials shall be stored in their original tightly sealed containers or unopened packages; shall be clearly labeled with the manufacturer's name, brand name and number, and batch number of the material where appropriate.
- B. Materials shall be stored in a neat and safe manner so as not to exceed the allowable live load of the storage area.
- C. Material shall be stored out of the weather in a clean, dry area.

#### 1.6 MANUFACTURER'S REPRESENTATIVE

- A. Contractor shall require representative of manufacturer of the waterproofing material to provide field instructions and supervision of the installation of the complete waterproofing system.

- B. Contractor shall require the manufacturer's representative to make sure that the subcontractor's workmen are fully instructed and trained in the handling and application of all the materials, and shall see that all the materials are correctly installed.
- C. Upon completion of the installation, the Contractor shall submit to the Architect a written certification that the representative of the manufacturer of the waterproofing material has supervised the work of this Section and that all materials are correctly installed.

#### 1.7 QUALIFICATIONS OF SUBCONTRACTORS

- A. Subcontractors: All work of this Section shall be performed by a subcontractor who is approved by the manufacturer of the waterproofing material.
- B. Qualifications of Subcontractors: Subcontractors, in order to obtain Architect's acceptance for doing work of this Section, shall submit evidence of being bona fide waterproofing subcontractors, and that they are approved by the manufacturers of the waterproofing material for the installation of their material in accordance with the requirements of this Section. Subcontractor shall submit letter from manufacturer of waterproofing material stating that the subcontractor is approved by the manufacturer for the application of the waterproofing system specified for the Project. Letter shall certify that the subcontractor has satisfactorily applied the waterproofing system specified herein under manufacturer's supervision. Letter shall be on manufacturer's letterhead and shall be signed by an officer of the company.

#### 1.8 WARRANTY

- A. The Contractor and manufacturer shall jointly warrant the waterproofing system executed under this Section to be watertight and free from defects in materials and workmanship for a period of ten (10) year from date of acceptance of this Contract, and that he, at his own expense, repair and/or replace all other work which may be damaged as a result of such defective work, and which becomes defective during the warranty period.

### PART 2 PRODUCTS

#### 2.1 MATERIALS

- A. Waterproofing materials shall be a cement bond compound, free from chloride and iron oxide, which waterproofs by crystalline growth through the capillary tracts and shrinkage cracks in the concrete substrate
  - 1. Basis of design: "Aqua-Fin IC" manufactured by Aqua-Fin inc.
  - 2. Other Manufacturers:
    - a. Xypex Chemical Corp.
    - b. Anti-Hydro Co.
    - c. or approved equal.

- B. Mixing Water: Potable.

### **PART 3 EXECUTION**

#### **3.1 INSPECTION**

- A. Examine the areas and conditions where capillary waterproofing is to be installed and correct any conditions detrimental to the proper and timely completion of the work. Do not proceed with the work until unsatisfactory conditions are corrected to permit proper installation of the work.

#### **3.2 INSTALLATION**

- A. Temperature Requirements: Surrounding temperatures shall be a minimum thirty-five (35) degrees F. for forty-eight (48) hours before, during and after installation.
- B. Preparation of Surfaces
  - 1. Surfaces to be waterproofed shall be clean and free of form scale, mold, laitance, oil, form release agents, curing compounds, hardeners, and any other materials likely to affect the bond penetration or performance of the waterproofing materials.
  - 2. Materials shall not be applied to frozen or frosted surfaces, nor during rain or snow.
  - 3. The presence of moisture in the concrete substrates is essential at the time of the waterproofing application. Should this not be the case, soak thoroughly all surfaces with water a day prior to the waterproofing, and remove all free laying water.
  - 4. All cracks in the concrete structure exceeding .01" in width and construction joints which have not been treated before with capillary waterproofing, shall be routed out to a minimum depth of 3/4".
  - 5. Areas that have become dirty and concrete pours which have resulted in an extremely smooth surface shall be acid etched or, at the Contractor's option, may be sand blasted. Surfaces to be acid etched shall be dampened with clean water. Etching shall be done with a fifteen (15) percent hydrochloric (muriatic) acid. One gallon of acid should cover about fifty (50) to seventy-nine (79) square feet. Allow the acid to stand at least three (3) minutes and when bubbling ceases, flush off with water immediately. Do not let the acid stay on the surface for a prolonged period. When completed, the surface shall have a finish similar to fine or medium sandpaper. Surfaces which retain a smoothness or dirty condition shall be re-etched until the desired effect is obtained.
  - 6. Fill Form: Tie holes with "Aqua-Fin Mortar" or approved equal of mortar consistency.
  - 7. Vertical Concrete Surfaces
    - a. Grind off all fins and other projections.

- b. Extremely smooth surfaces must be etched or sand blasted.
- c. Form ties with insets shall be removed. Chip back concrete approximately one (1) inch where form ties are without insets.
- d. Honeycombed Pockets and Faulty Construction Joints: Rout out all faulty materials back to sound concrete; clean and rinse thoroughly with water all surfaces to be treated; check by rubbing hand over the surfaces. Hand should not become wet.

**C. Mixing of Capillary Waterproofing Materials**

- 1. Slurry Consistency: The capillary waterproofing materials shall be delivered in powder consistency in original undamaged containers with manufacturer's labels and seals intact.
  - a. Separate container shall be used for measuring by volume the powdery capillary waterproofing and the water.
  - b. Measure two (2) parts of capillary waterproofing and 0.7 - 0.9 parts of water (depending on water or absorption of concrete).
- 2. Mortar Consistency for Seal Strips and Coves
  - a. Add water to capillary waterproofing and/or capillary waterproofing reinforcing proportion 1:2 and/or 1:3 and mix thoroughly until stiff consistency is reached.
  - b. Prepare only as much mortar as can be applied within ten (10) minutes.

**D. Installation of Capillary Waterproofing Materials**

- 1. Slurry Application
  - a. Concrete surfaces to be treated with capillary waterproofing shall be moist, not wet.
  - b. Capillary waterproofing slurry coatings shall be applied with a stiff masonry brush or stiff broom and worked into every irregularity of the concrete surfaces.
  - c. Prior to the specified final application of capillary waterproofing slurry coatings on the concrete surface, the following initial applications and repairs to the concrete structure have to be completed.
- 2. Construction Joints
  - a. Construction joints shall receive a slurry coating of capillary waterproofing 2.5 lbs. per square yard immediately prior to each concrete pour. In areas where inaccessibility is difficult, apply 2.5 lbs. per square yard of capillary waterproofing by dry sprinkle method immediately prior to the following pour or rout out to a minimum depth of 3/4".

- b. Apply slurry coating of capillary waterproofing 1.5 lbs. per square yard to routed out areas of cracks and construction joints and fill remaining depth with capillary waterproofing and capillary waterproofing reinforcing 1:6 in mortar consistency in two (2) laminating layers after each layer has reached its initial set (approximately 20-30 minutes).
  3. Installation of Capillary Waterproofing Coves (Junction Horizontal Surfaces and Walls)
    - a. Apply slurry coating of capillary waterproofing 1.5 - 2.0 lbs. per square yard, six (6) inches in width, and install a cove with capillary waterproofing and capillary waterproofing reinforcing 1:3 in mortar consistency.
  4. Honeycombed Pockets in Wall Areas
    - a. Rout out all faulty materials back to sound concrete. Apply slurry coating of capillary waterproofing 1.5 lbs. per square yard over routed out area and fill with sand and cement mortar 1:3. If necessary (owing to depth) apply layers of mortar not exceeding 5/8" in thickness after each layer has hardened and repeat capillary waterproofing slurry coating.
  5. Pit Walls - Interior Face
    - a. Moisture treat vertical concrete surfaces thoroughly one day prior to application. Construction joints and form tie holes shall be filled with capillary waterproofing and capillary waterproofing reinforcing 1:6 in mortar consistency.
    - b. Apply two (2) slurry coatings on entire surface, consisting of capillary waterproofing at rate of 1.25 to 1.4 lbs. per square yard per coating, to levels and on surfaces indicated. The second coating shall be applied while the first coating is green, normally within an hour or the application of first coating.
  6. Concrete Slabs - Pits
    - a. Apply capillary waterproofing at the rate of 2.5 lbs./sq. yd. in slurry consistency to concrete slab surfaces in one coat.
- E. Curing of Capillary Waterproofing Application
  1. Capillary waterproofing applications while setting shall be protected from rain, frost and from drying out. During extreme hot weather, light water fog spraying may be necessary during time of application.
  2. Moisture treat capillary waterproofing treated areas for minimum period of three (3) days starting the day following the completion of the capillary waterproofing application with fog water spray. Surfaces shall have moist and later wet appearance for the duration of the curing period.
  3. Treated surfaces shall not be exposed to aggressive water, chemicals or acids until the applications have reached full strength (normally after 14 days).

- F. Adjusting: Following application and completion of related work, as required, but well prior to completion of entire project, fill surge tank and backwash tank to capacity and allow to stand not less than 1 week. Fill structures at a uniform rate not greater than 6.5 feet (2 m) in 24 hours or slower for minimum a minimum of three days to fill any tank. Should leakage occur after this period due to initial loading forces or thermal stress (i.e. cold water contacting warmer concrete), drain tanks to perform repairs. Notify Owner and architect prior to draining tanks.
1. Stop leakage due to curing and shrinkage cracks in concrete, which can develop during this period by installing plugs, seal-strips and additional surface treatment at no additional cost to the Owner. Following all required repairs, re-test by refilling tank and allow to stand not less than 1 week. Follow this procedure until all leakage is eliminated.
- G. Preparation for coating: Surge tanks and Backwash tanks shall have all surfaces treated with Capillary/Crystalline Waterproofing which are to be coated or painted shall be left to cure for 4 weeks after adjusting procedures above. At the end of the curing period, the surfaces shall be saturated with water and neutralized with a 1:8 solution of muriatic acid. Rinse waterproofed areas thoroughly with clean water.

END OF SECTION

## **SECTION 07 2100 - THERMAL INSULATION**

### **PART 1 - GENERAL**

#### **1.1 SUMMARY**

**A. Section Includes:**

1. Extruded polystyrene foam-plastic board insulation.
2. Polyisocyanurate foam-plastic board insulation (class A).
3. Mineral-wool blanket insulation for installation in stud cavities
4. Rigid mineral wool board insulation for installation as continuous cavity insulation
5. Spray foam insulation for voids and closure at parapet

**B. Reference:**

1. See specification 092900 Gypsum board for Acoustical Batt (SAFB) insulation.

#### **1.2 ACTION SUBMITTALS**

- A. Product Data:** provide manufacturer data sheets showing compliance with performance requirements.
- B. Schedule:** Listing type, manufacturer, and R-value of insulation installed in each element of the building thermal envelope.
- C. Product test reports.**

#### **1.3 INFORMATIONAL SUBMITTALS**

- A. Installer's Certification:** Listing each type, manufacturer, and R-value of insulation installed in each element of the building thermal envelope.
1. Sign, date, and post the certification in a conspicuous location on Project site as agreed to by architect and owner.

### **PART 2 - PRODUCTS**

#### **2.1 EXTRUDED POLYSTYRENE FOAM-PLASTIC BOARD INSULATION (FOUNDATION INSULATION)**

- A. Extruded Polystyrene Board Insulation, Type IV: ASTM C578, Type IV, 25-psi minimum compressive strength; unfaced.**
1. Location: perimeter foundation insulation and locations indicated as XPS insulation
  2. Manufacturers:

- a. Owens Corning, product line: Foamular NGX
    - b. Kingspan, product line: Greenguard LG
    - c. Dupont, product line: Styrofoam
    - d. Or approved equal
  3. Zero ozone depleting blowing agent compliant with New Jersey law.
  4. Flame-Spread Index: Not more than 25 when tested in accordance with ASTM E84.
  5. Smoke-Developed Index: Not more than 450 when tested in accordance with ASTM E84.
  6. Labeling: Provide identification of mark indicating R-value of each piece of insulation 12 inches and wider in width.
  7. Water absorption: 1.0% by volume max
  8. Thermal resistance, R value = 5 per inch
  9. Thermal conductivity, K value = .2
- B. Extruded Polystyrene Board Insulation, Type VII: ASTM C578, Type VII, 60-psi minimum compressive strength.
1. Location used: under slab where noted on structural drawings and locations indicated as XPS insulation with high compressive strength.
  2. Manufacturers:
    - a. Owens Corning, product line: Foamular NGX
    - b. Kingspan, product line: Greenguard LG
    - c. Dupont, product line: Styrofoam
    - d. Or approved equal
  3. Zero ozone depleting blowing agent compliant with New Jersey law.
  4. Flame-Spread Index: Not more than 25 when tested in accordance with ASTM E84.
  5. Smoke-Developed Index: Not more than 450 when tested in accordance with ASTM E84.
  6. Labeling: Provide identification of mark indicating R-value of each piece of insulation 12 inches and wider in width.
  7. Water absorption: 0.3% by volume max
  8. Thermal resistance, R value = 5 per inch
  9. Thermal conductivity, K value = .2

## 2.2 POLYISOCYANURATE FOAM-PLASTIC BOARD INSULATION

- A. Polyisocyanurate Board Insulation, Foil Faced : ASTM C1289, foil faced, Type I, Class 1 or 2 meeting NFPA285 compliance as part of a complete system including weather resistive barrier
1. Location: Continuous insulation at exterior walls at locations indicated
  2. Manufacturers:
    - a. Hunter panels – Xci Foil(class A)
    - b. Atlas - Energyshield Pro2
    - c. Or approved equal
  3. Thickness: 1-1/2” or as indicated on the drawings
  4. Thermal resistance, R value = 9.5 minimum total for 1-1/2” thickness per ASTM C518 test method
  5. Compressive Strength: 25psi
  6. Labeling: Provide identification of mark indicating R-value of each piece of insulation 12 inches and wider in width.
  7. Faces: 1.25 mil thick white embossed aluminum facer one side, and a 1.25 mil thick plain embossed aluminum facer on the other side.

8. Water absorption: less than 1% by volume max
9. Fire-rating classification: Class A
10. Flame Spread: <75
11. Smoke development <450
12. UV resistance, Days: 180

## 2.3 RIGID MINERAL-WOOL BOARD INSULATION

- A. Provide Mineral-wool board insulation: ASTM C612, Typbe IVB, with a maximum flamespread index of 0 and smoke developed index of 0 per ASTM E84
  1. Location: Continuous insulation at exterior walls at locations indicated
  2. Basis of Design Manufacturers:
    - a. Roxul Inc; Comfortboard 110
  3. Other manufacturers:
    - a. John Mansville,
    - b. Thermafiber, Inc.; an Owens Corning company,
    - c. Or approved equal
  4. Flame-Spread Index: Not more than 0 when tested in accordance with ASTM E84.
  5. Smoke-Developed Index: Not more than 0 when tested in accordance with ASTM E84.  
Labeling: Provide identification of mark indicating R-value of each piece of insulation 12 inches and wider in width.
  6. Density: 11 lbs per cubic foot
  7. Thickness: 1 layer of 3-inch thickness providing an overall nominal R-value at 75degreeF equal to R-12 or as indicated on the drawings.
  8. Board Size: 48inches x 72 inches
- B. Insulation board attachment fasteners: Corrosion resistant steel screws, #10 minimum diameter x length appropriate for substrate. Use four (4) screws minimum per insulation board.

## 2.4 MINERAL-WOOL BLANKET INSULATION

- A. Mineral-Wool Blanket Insulation, Unfaced : ASTM C665, Type I (blankets without membrane facing); consisting of fibers; passing ASTM E136 for combustion characteristics.
  1. Location: stud cavities in exterior walls and where labeled.
  2. Manufacturers:
    - a. Roxul Inc; COMFORTBATT
    - b. John Mansville, TempControl
    - c. Thermafiber, Inc.; an Owens Corning company, Ultrabatt
    - d. Or approved equal
  3. Flame-Spread Index: Not more than 25 when tested in accordance with ASTM E84.
  4. Smoke-Developed Index: Not more than 50 when tested in accordance with ASTM E84.  
Labeling: Provide identification of mark indicating R-value of each piece of insulation 12 inches and wider in width.
  5. Thermal Resistance, R-value = 15, min or as indicated on drawings.
  6. Fungi Resistance = ASTM C1338, pass

## 2.5 SPRAY FOAM INSULATION FOR VOIDS AND CLOSURE AT PARAPET:

- A. Spray Polyurethane Foam Insulation: ASTM C1029, Type II, closed cell, with maximum flame-spread and smoke-developed indexes of 75 and 450, respectively, per ASTM E84.
  - 1. Manufacturers:
    - a. Icynene, ProSeal HFO
    - b. Thermoseal 2000
    - c. BASF Spraytite
    - d. Or approved equal
  - 2. Zero ozone depleting blowing agent compliant with New Jersey law.
  - 3. Minimum density = 2.0pcf

## 2.6 ACCESSORIES

- A. Insulation Anchors, Spindles, and Standoffs:
  - 1. Plate: Perforated galvanized carbon-steel sheet, 0.030 inch thick by 2 inches square or as recommended by manufacturer.
- B. Adhesive for Bonding Insulation: Product compatible with insulation and air and water barrier materials, and with demonstrated capability to bond insulation securely to substrates without damaging insulation and substrates.

## PART 3 - EXECUTION

### 3.1 INSTALLATION, GENERAL

- A. Comply with insulation manufacturer's written instructions applicable to products and applications.
- B. Install insulation that is undamaged, dry, and unsoiled and that has not been left exposed to ice, rain, or snow at any time.
- C. Install insulation with manufacturer's R-value label exposed after insulation is installed.
- D. Extend insulation to envelop entire area to be insulated. Fit tightly around obstructions and fill voids with insulation. Remove projections that interfere with placement.
- E. Provide sizes to fit applications and selected from manufacturer's standard thicknesses, widths, and lengths. Apply single layer of insulation units unless multiple layers are otherwise shown or required to make up total thickness or to achieve R-value.

### 3.2 INSTALLATION OF SLAB INSULATION

- A. On vertical slab edge and foundation surfaces, set insulation units using manufacturer's recommended adhesive according to manufacturer's written instructions.

- B. On horizontal surfaces, loosely lay insulation units according to manufacturer's written instructions. Stagger end joints and tightly abut insulation units.

### 3.3 INSTALLATION OF FOUNDATION WALL INSULATION

- A. Butt panels together for tight fit.
- B. Anchor Installation: Install board insulation on concrete substrates by adhesively attached, spindle-type insulation anchors.
- C. Adhesive Installation: Install with adhesive or press into tacky waterproofing or dampproofing according to manufacturer's written instructions.

### 3.4 INSTALLATION OF CAVITY-WALL INSULATION

- A. Foam-Plastic Board Insulation: Install pads of adhesive spaced approximately 24 inches (610 mm) o.c. both ways on inside face and as recommended by manufacturer.
  - 1. Fit courses of insulation between obstructions, with edges butted tightly in both directions, and with faces flush.
  - 2. Press units firmly against inside substrates.
  - 3. Supplement adhesive attachment of insulation by securing boards with wall ties designed for this purpose and specified in Section 042000 "Unit Masonry."

### 3.5 INSTALLATION OF INSULATION IN FRAMED CONSTRUCTION

- A. Blanket Insulation: Install in cavities formed by framing members according to the following requirements:
  - 1. Use insulation widths and lengths that fill the cavities formed by framing members. If more than one length is required to fill the cavities, provide lengths that will produce a snug fit between ends.
  - 2. Place insulation in cavities formed by framing members to produce a friction fit between edges of insulation and adjoining framing members.
  - 3. Maintain 3-inch clearance of insulation around recessed lighting fixtures not rated for or protected from contact with insulation.
  - 4. For metal-framed wall cavities where cavity heights exceed 96 inches, support unfaced blankets mechanically and support faced blankets by taping flanges of insulation to flanges of metal studs.
  - 5. Vapor-Retarder-Faced Blankets: Tape joints and ruptures in vapor-retarder facings, and seal each continuous area of insulation to ensure airtight installation.
    - a. Exterior Walls: Set units with facing placed toward interior of construction.
- B. Miscellaneous Voids and where indicated on drawings: Install insulation in miscellaneous voids and cavity spaces where required to prevent gaps in insulation using the following materials:
  - 1. Spray Polyurethane Insulation: Apply according to manufacturer's written instructions.

END OF SECTION 07 2100

## **SECTION 07 2726 - FLUID-APPLIED MEMBRANE AIR AND WATER RESISTIVE BARRIER (WRB)**

### **PART 1 - GENERAL**

#### **1.1 SUMMARY**

- A. Section Includes:
  - 1. Vapor-permeable, fluid-applied air and water resistive barriers. (abbreviated WRB)

#### **1.2 PREINSTALLATION MEETINGS**

- A. Preinstallation Conference: Conduct conference at Project site minimum two weeks prior to start of work under this section.

#### **1.3 ACTION SUBMITTALS**

- A. Product Data: For each type of product including accessories to be used as part of complete system.
- B. Shop Drawings: For air and water-barrier assembly.
  - 1. Include project specific details for substrate joints and cracks, counterflashing strips, penetrations, inside and outside corners, terminations, and tie-ins with adjoining construction.
- C. Proof that the air barrier is part of an NFPA 285 approved wall assembly intended to be installed by the General Contractor including insulation and cladding materials.
- D. Samples:
  - 1. Free film sample of product at representative cured thickness, minimum 2 inch by 3 inch size.
  - 2. Sample of sheet detail flashing and transition membrane, minimum 2 inch by 3 inch size.

#### **1.4 INFORMATIONAL SUBMITTALS**

- A. Product certificates.
- B. Product test reports.
- C. Field quality-control reports.

#### **1.5 QUALITY ASSURANCE**

- A. Installer Qualifications: An entity that employs installers and supervisors who are trained and approved by manufacturer.
- B. Single source responsibility: provide products and accessories from a single manufacturer

- C. Mockups: Build mockups to set quality standards for materials and execution.
  - 1. Build integrated mockups of exterior wall assembly 6ft x 6ft minimum at each substrate type, incorporating backup wall construction, external cladding, window, storefront, door frame and sill, insulation, ties and other penetrations, and flashing to demonstrate surface preparation, crack and joint treatment, application of air barriers, and sealing of gaps, terminations, and penetrations of air-barrier assembly.
    - a. Coordinate construction of mockups to permit inspection and testing of air barrier before external insulation and cladding are installed.
    - b. Include junction with roofing membrane, and building corner condition.
- D. DELIVERY, STORAGE AND HANDLING
  - 1. Deliver materials to Project site in original packages with seals unbroken, labeled with manufacturer's name, product, lot number and directions for storage.
  - 2. Store materials in their original undamaged packages in a clean, dry, protected location and within temperature range required by manufacturer.
  - 3. During cold weather, protect product in containers and spray equipment from freezing. Maintain product temperature within acceptable range for spray application, as required by air barrier manufacturer.
  - 4. Avoid spillage. Immediately notify Owner, Architect if spillage occurs and start clean up procedures. Clean spills and leave area as it was prior to spill.
- E. PROJECT CONDITIONS
  - 1. Do not apply product or accessories during rain or accumulating snowfall.
  - 2. Apply product and accessories within approved ambient and substrate temperature range stated in manufacturer's literature.
  - 3. Do not apply product or accessories over incompatible materials, refer to manufacturers list of approved substrates and common building materials.
  - 4. Observe safety and environmental measures indicated in manufacturer's SDS, and mandated by federal, state and local regulations.
- F. WARRANTY
  - 1. Provide the manufacturer's minimum five year material warranty

## PART 2 - PRODUCTS

### 2.1 PERFORMANCE REQUIREMENTS

- A. Air-Barrier Performance: Air-barrier assembly and seals with adjacent construction shall be capable of performing as a continuous air barrier and as a liquid-water drainage plane flashed to discharge to the exterior incidental condensation or water penetration. Air-barrier assemblies shall be capable of accommodating substrate movement and of sealing substrate expansion and control joints, construction material changes, penetrations, and transitions at perimeter conditions without deterioration and air leakage exceeding specified limits.

- B. Air and water-Barrier Assembly Air Leakage: Maximum 0.04 cfm/sq. ft. of surface area at 1.57 lbf/sq. ft. when tested according to ASTM E2357.

## 2.2 HIGH-BUILD AIR BARRIERS, VAPOR PERMEABLE

- A. High-Build, Vapor-Permeable Air and Water Resistive Barrier: synthetic polymer membrane with an installed dry film thickness, according to manufacturer's written instructions, of 35 mils or thicker over smooth, void-free substrates.
1. Basis of design Manufacturer and product:
    - a. Henry Company
      - 1) Air-bloc 17MR, for installation at 20 degrees F and above
  2. Other Manufacturers:
    - a. Carlisle Coatings & Waterproofing, Incorporated.
      - 1) Fire Resist Barritech VP, for installation at 40 degrees F and above
      - 2) Fire Resist Barritech VP LT, for installation at 15 degrees F and above
    - b. GCP applied Tehnologies
      - 1) PERM-A-BARRIER VPL, for installation at 40 degrees F and above
      - 2) PERM-A-BARRIER VPL LT, for installation at 20 degrees F and above
    - c. Or approved equal
  3. Physical and Performance Properties:
    - a. Air Permeance: Maximum 0.004 cfm/sq. ft. of surface area at 1.57-lbf/sq. ft. (0.02 L/s x sq. m of surface area at 75-Pa) pressure difference; ASTM E2178.
    - b. Vapor Permeance: Minimum 10 perms ASTM E96/E96M, Method B
    - c. Ultimate Elongation: Minimum 250 percent; ASTM D412, Die C.
    - d. Adhesion to Substrate: Minimum 16 lbf/sq. in. when tested according to ASTM D4541.
    - e. UV Resistance: Can be exposed to sunlight for 180 days according to manufacturer's written instructions.
    - f. Water Resistance: Product spray-applied to CMU and gypsum sheathing with joint shall resist a 55 cm (22 inch) column of water for 5 hours, no leaking or wet through. According to AATCC-127 - mod, static head generated with 5" diameter PVC pipe sealed to specimen
    - g. Fastener Sealability: No water leaking through nail penetration after 24 h. ASTM D 1970
    - h. Low-Temperature Crack Bridging: No cracking after 10 cycles at minus 15 deg FASTM C 1305, mod 40 mil membrane thickness
    - i. Long-Term Aging/ Flexibility: No cracking or tearing after aging ASTM C 1522, mod 40 mil membrane thickness or CGSB 71-GP-24M
    - j. Surface Burning Characteristics. Flame Spread Index: Not more than 25 Smoke Generation Index: not more than 450 according to ASTM E84
    - k. Upper operational temperature of membrane and accessories: 180 degrees
    - l. Minimum installation temperature: 25 degrees and lower

## 2.3 ACCESSORY MATERIALS

- A. Requirement: Provide primers, transition strips, termination strips, joint reinforcing fabric and strips, joint sealants, counterflashing strips, flashing sheets and metal termination bars, termination mastic, substrate patching materials, adhesives, tapes, foam sealants, lap sealants, and other accessory materials that are recommended in writing by air-barrier manufacturer to

produce a complete air-barrier assembly and that are compatible with primary air-barrier material and adjacent construction to which they may seal.

### PART 3 - EXECUTION

#### 3.1 EXAMINATION

- A. Examine substrates, areas, and conditions affecting installation of the air & water barrier and accessory products for compliance with requirements. Verify that surfaces and conditions are suitable prior to commencing Work of this section. Do not proceed with installation until unsatisfactory conditions have been corrected.
- B. Verify that wall assemblies are dried in, such that water intrusion will not occur from above, behind or around the air barrier installation.
- C. Concrete shall be cured for a minimum of seven days. It shall be smooth, with sharp protrusions such as form joints or fins removed and ground flush. Honeycomb and holes/cracks shall be filled with grout or mortar.
- D. Surfaces shall be sound, dry and free of oil, grease, dirt, excess mortar or other contaminants.
- E. Surfaces shall be supported and flush at joints without large voids or sharp protrusions.
- F. Mortar joints shall be struck flush and shall be free of voids. Mortar droppings shall be removed from brick ties and all other surfaces accepting air barrier.
- G. Sheathing boards shall be flush at joints, with gaps between boards according to building code and sheathing manufacturer's requirements. Sheathing boards shall also be securely fastened to the structure with proper fastener type, technique and spacing according to building code and sheathing manufacturer's requirements. Sheathing boards shall be repaired or replaced if inspection reveals moisture damage, mechanical damage or if sheathing boards have exceeded the exposure duration or exposure conditions as required by the sheathing manufacturer.
- H. Plywood, OSB, lumber or pressure-treated wood moisture content, measured with a wood moisture meter in the core of the substrate, shall be below 20%.
- I. Concrete Masonry units (CMU) shall be prepared according to air and water membrane manufacturer's written recommendations and free of contaminants such as grease oil and wax, free from projections, all joints struck, all voids filled with mortar, sealant or other approved material. All surface irregularities shall be ground flush or made smooth with all gaps around penetrations filled with mortar or sealant and struck flush. Remove any mortar droppings from brick ties, shelf angles, brick shelves or other horizontal obstructions.
- J. Inform Architect and Owner in writing of
  1. Unsatisfactory substrates
  2. Cracks in concrete and masonry.
  3. Gaps or obstructions such as steel beams, angles, plates and projections which cannot be spanned or covered by Product or Accessories.
  4. Anticipated problems applying product and accessories over substrate.

### 3.2 SURFACE PREPARATION

- A. Clean, prepare, treat, fill, and seal substrate and joints and cracks in substrate according to manufacturer's written instructions and details. Provide clean, dust-free, and dry substrate for air-barrier application.
- B. Mask off adjoining surfaces not covered by air barrier to prevent spillage and overspray affecting other construction.
- C. Remove fins, ridges, mortar, and other projections and fill honeycomb, aggregate pockets, holes, and other voids in concrete with substrate-patching material.
- D. Remove excess mortar from masonry ties, shelf angles, and other obstructions.
- E. At changes in substrate plane, apply 3/4" sealant cant beads at sharp corners and edges to form a smooth transition from one plane to another.
- F. Bridge isolation joints, expansion joints, and discontinuous wall-to-wall, deck-to-wall, and deck-to-deck joints with air-barrier accessory material that accommodates joint movement according to manufacturer's written instructions and details.

### 3.3 DETAILING

- A. Additional materials and installation are required at joints, transitions, openings, terminations, penetrations and similar surface irregularities. Perform detailing before or after product installation.
- B. Install product and accessories in details as directed in manufacturer's literature.
- C. Sheathing joints, use one of the following methods:
  - 1. 4 inch reinforcing fabric imbedded in product and centered over joint.
  - 2. 2" width liquid flashing centered over joint.
- D. Fastener Heads: troweled sealant with feathered edges over each fastener. Sealant type as recommended in writing by manufacturer.
- E. Sheathing inside and outside corners. Flashing or reinforcement shall bear 3 inches minimum onto either side of angle change. Use any of the following methods:
  - 1. Sheet detail flashing
- F. Window openings. Flashing or reinforcement shall bear onto wall 3 inches minimum and shall return into window opening according to Project drawings. Use any of the following materials:
  - 1. Sheet detail flashing
- G. Pipe or duct penetrations. Flashing or reinforcement shall bear onto wall 3 inches minimum and shall bear onto pipe or duct 3 inches, or according to Project drawings. Select any:
  - 1. Sheet detail flashing
  - 2. Glass mat imbedded in product
- H. Expansion or deflection joints. Flashing shall bear 3 inches minimum onto either side of joint. Select any:
  - 1. Sheet detail flashing bellows or expansion bulb
  - 2. Transition membrane expansion bulb

- I. Interface of dissimilar substrates: Flashing or reinforcement shall bear 3 inches minimum onto either side of joint. Select any:
  - 1. Sheet detail flashing
  - 2. Reinforcing fabric imbedded in product
  - 3. Glass mat imbedded in product
- J. Seal all terminations of sheet detail flashing with a 1 inch width X 0.040 inch (40 mils) thick ribbon of detail sealant, centered over termination.

### 3.4 INSTALLATION

- A. Apply product and accessories over opaque wall surfaces as indicated in Project drawings.
- B. Use the manufacturer's standard or low temperature formula product as required by the project conditions.
- C. Apply product by spray, roller, brush or other method as recommended by air barrier manufacturer. Apply product at specified wet mil thickness in accordance with air barrier manufacturer's requirements.
- D. Verify compliance with air barrier manufacturer's minimum required thickness by documenting product use per area. Perform and document wet mil thickness measurements every 100 square feet, or more frequently if required, to establish uniform and adequate coverage.
- E. Installation shall produce complete coverage of opaque substrates as indicated in Drawings.
- F. Product and accessories shall be fully-adhered to substrates. Defects such as holes, fishmouths, blistering, de-lamination, bridging or thin spots shall be repaired according to air barrier manufacturer's instructions.

### 3.5 SCHEDULE

- A. Wall substrates and roof or temporary roof shall be in place, effectively enclosing interior space, before proceeding with air barrier installation.
- B. Seal penetrations made through installed product according to manufacturer's instructions and drawings.
- C. Seal fenestration to product with detail membrane, transition membrane, detail sealant, silicone sealant or polyurethane foam sealant according to Project drawings
- D. Through-wall flashing may be installed before or after product. Seal termination of through-wall flashing to product according product manufacturer's instructions.
- E. Exterior cladding shall be installed after product within exposure timeframe.
- F. Rigid or semi-rigid insulation installed over product shall be attached with mechanical fastening, insulation adhesive or a combination of these techniques, according to insulation manufacturer and air barrier manufacturer's instructions.

- G. Sequence Work to enable air barrier continuity at wall-to-foundation, shelf angle, wall-to-roof, fenestration, different wall assemblies and other conditions as indicated in Project drawings.

### 3.6 FIELD QUALITY CONTROL

- A. Manufacturer Representative Inspection: the contractor shall coordinate and be responsible for all costs to and have manufacturer representative inspect and report on installation methods and quality to confirm in writing installation meets warranty requirements or corrections that are needed to meet warranty requirements.
  - 1. Inspections shall occur a minimum of (2) times at each structure, with the first inspection occurring at the start of installation and the second when installation is complete prior to installation of any cladding that would conceal the work.
  - 2. Report requirement: written, signed report to be provided to owner and architect following each site inspection.
- B. Testing Agency: Owner may engage a qualified testing agency to perform tests and inspections.
- C. Tests: As determined by testing agency from among the following tests:
  - 1. Air-barrier dry film thickness.
  - 2. Air-Leakage-Location Testing
  - 3. Air-Leakage-Volume Testing
  - 4. Adhesion Testing
- D. Air barriers will be considered defective if they do not pass tests and inspections.
  - 1. Apply additional air-barrier material, according to manufacturer's written instructions, where inspection results indicate insufficient thickness.
  - 2. Remove and replace deficient air-barrier components for retesting as specified above.
- E. Repair damage to air barriers caused by testing; follow manufacturer's written instructions.

### 3.7 CLEANING AND PROTECTION

- A. Protect air-barrier system from damage during application and remainder of construction period, according to manufacturer's written instructions.
- B. Remove masking materials after installation.

END OF SECTION 07 2726

## SECTION 074100 STANDING SEAM METAL ROOF PANELS

### PART 1 - GENERAL

#### 1.01 SECTION INCLUDES

- A. Work described in this section includes installation of new insulation system, new specified underlayment and specified pre-formed metal roofing system complete with clips, perimeter and penetration flashing, pre-finished coil stock metal fascia, closures, gutters and downspouts.
- B. FM approval of roof system required.

#### 1.02 RELATED SECTIONS

- A. Drawings and general provisions of the Contract, including General Supplementary Conditions apply to this section.

#### 1.04 SUBMITTALS

- A. Shop Drawings
  - 1. Show roofing system including fascia and soffit, with flashings and accessories in plan, sections and details. Include metal thickness' and finishes, panel lengths, joining details, anchorage details, flashings, insulation and special fabrication provisions for termination and penetrations; thermal expansion provisions and special supports.
  - 2. Indicate relationships with adjacent and interfacing work. Indicate fastener types and spacing; and provide fastener pullout values.
  - 3. Shop drawings must be specific to this project and completed by the metal panel manufacturer's engineering department. Any and/or all changes recommended by the successful bidder must be approved by the manufacturer in writing prior to submittal.
- B. Product Data: Include manufacturer's detailed material and system description, sealant and closure installation instructions, engineering performance data and finish specifications. Indicate fastener types and spacing; and required fastener pullout values.
- C. Design Loads: Submit copy of manufacturer's minimum design load calculations according to ASCE 7-16, Method 2 for Components and Cladding, prepared by a an engineer employed by the system manufacturer as a full-time staff engineer. In no case shall the design loads be taken to be less than those detailed in article 1.9 of this specification.

- D. Design Test Reports: Provide certified test reports from an independent testing laboratory that bear the seal of a registered professional engineer to show compliance with the performance criteria specified in article 1.9. Each of the following test reports must be submitted:
1. ASTM E1592-95: Test results must clearly demonstrate compliance with the following requirements:
    - a. The ultimate test failure load shall be reduced by the safety factor specified in article 1.9 to determine the **allowable working load** for the panel system.
    - b. The proposed system has been tested to insure that the **allowable working load** of the panel system meets or exceeds the specified negative wind uplift pressures listed in article 1.9 of this specification for all roof zones.
    - c. The test results are applicable for the panel material, grade, thickness, width, and profile specified. Results are not applicable for systems that are thinner, wider, lower grade, or different material/profile than the system which was tested.
    - d. The results must clearly show that the allowable clip spacing meets or exceeds the requirements specified in article 3.03 E for all roof areas. Clip spacing shall not be increased for any roof zone from that which is specified.
  2. ASTM E283-93 and E331-86: Test results must clearly demonstrate compliance with the performance requirements specified in article 1.9.
  3. ASTM E1646-95 and E1680-95: Test results must clearly demonstrate compliance with the performance requirements specified in article 1.9. Results are not applicable for systems that are thinner, wider, lower grade, or different material/profile than the system which was tested. The differential test pressures must be equal to those specified in article 1.9.
  4. UL 790: The proposed roof panel shall be listed as a non-combustible roof covering material and be approved for use in a UL classification assembly.
  5. UL 263: The panel system shall clearly be shown as approved for use in an UL Construction Assembly which conforms to the construction of this project
  6. Completed form FM GLOBAL FORM X2688 Checklist for roofing system.

- E. Samples: Provide full scale samples of the following materials and system components. Samples shall be of identical material type, thickness, panel width, and material grade/alloy/temper as the system specified for this project.
1. Submit a twelve (12) inch long by actual width sample of panel showing seam profile and stiffening mesas across the flat pan of the panel. Also include separate snap-on cap with factory applied hot melt sealant beads.
  2. Provide a three by five (3 x 5) inch sample of the color selected for this project. The sample shall be the actual specified coating system on a metal substrate.
  3. Provide samples of actual system components, including: each type of anchor/clip required, head closure assembly, roll goods, bearing plates and/or framing.
- F. Manufacturer's Certificate: Certify that the standing seam metal roof panels are physically manufactured by the distributing manufacturer/organization in the United States and conform to requirements specified herein, are chemically and physically compatible with each other, and are suitable for inclusion within the total roof system specified herein.

#### 1.05 DISCLOSURE OF MATERIALS/ALTERNATE MANUFACTURERS

- A. The materials outlined herein are the basis of design and the type of materials that must be used in this project. When a particular make or trade name is specified, it shall be indicative of the minimum standard required.
1. Submit each item listed in article 1.4 (A through F) for evaluation of the proposed system.
  2. Tests shall have been made for identical systems within the ranges of specified performance criteria.
  3. Empirical calculations for roof performance shall only be acceptable for positive loads.
  4. A list of a minimum of five (5) jobs where the proposed alternate material was used under similar conditions. .
  5. Manufacturer's Certificate: The manufacturer must also have current ISO 9001:2008 certification for the manufacturing of the products to be utilized on this project.
  6. A written statement from the manufacturer stating that they will provide the building owner with a **site inspections a minimum of three (3) times per week** by an experienced, full time employee of the company.

7. A written statement from a corporate officer of the manufacturing company stating that he or she has reviewed the specifications and confirms that the proposed system meets or exceeds all performance requirements listed as well as meets the panel size, gauge, weight, clip design, sealant design, uplift pressures and height of the vertical seam.
9. A copy of manufacturer's thirty-five (35) year No Dollar Limit Watertight warranty. Warranty must be a single-source manufacturer's warranty and must include coverage for all trim, flashing, and penetrations associated with this roof.
10. Proof that the manufacturer has been in business for a minimum number of years equal to the warranty period required for this project.
11. Proof that the materials for the standing seam metal roof system are physically manufactured and guaranteed by the material supplier.
12. Submit a certified copy of the roofing manufacturer's ISO 9001:2008 compliance certificate.
13. In making a request for submission, Bidder/Contractor represents:
  - 0) He/she has personally investigated the proposed product or method, and determined that it is equal or superior in all respects to that specified.
  - 1) He/she will provide the same guarantee for substitution as for the product and method specified.
  - 2) He/she will coordinate installation of accepted substitution in work, making such changes as may be required for work to be completed in all respects.
  - 3) He/she waives all claims for additional cost related to substitution, which consequently become apparent.
  - 4) Cost data is complete and includes all related cost under his/her contract or other contracts, which may be affected by the substitution.
  - 5) He will reimburse the Owner for all redesign cost by the Architect for accommodation of the substitute.
14. The Architect reserves the right to be the final authority on the acceptance or rejection of any or all bids, proposed alternate roofing systems or materials.

- B. Site Formed Panels: Panels must be factory pre-manufactured and engineered for this project unless the panels cannot be shipped. Panels in excess of shippable length shall be formed on-site and engineered for this project. Site formed panels shall meet each of the following requirements:
1. Panels shall be formed on heavy duty factory type rollformers. Rollformers shall gradually form the panel profile utilizing no fewer than twelve (12) forming stations to improve quality and minimize oil canning.
  2. All tooling shall be polished and tempered to a minimum hardness of Rockwell C - 52. Tooling shall be maintained clean and in good working condition. Tooling repairs or modifications made by means of welding, sawing, grinding or the like are unacceptable, as they may contribute to poor quality, aesthetics, and performance of the end product.
  3. Panels shall be of identical profile and characteristics as factory formed panels and specimens used as the basis of performance tests.
  4. Sealant shall be factory applied in a separate factory formed snap on cap. Site/field applied seam sealant is unacceptable. Seam caps may be shipped in forty-five (45') or less length and lap spliced over full length panels in accordance with manufacturer's system details.
  5. Site rollforming equipment shall be operated by a trained full time experienced technician. The installer must provide additional personnel to handle raw materials and finished product as necessary.
- C. Panel Length: Panels shall be one piece from ridge/head to eave with NO splices between. Spliced panels will not be acceptable.

#### 1.06 INSTALLER QUALIFICATIONS

- A. Engage an experienced metal roofing contractor (erector) to install standing seam system who has a minimum of five (5) years experience specializing in the installation of structural standing seam metal roof systems.
- B. Contractor must be certified by manufacturer specified as supplier of structural standing seam system and obtain written certification from manufacturer that installer is approved for installation of specified system. If requested, contractor must supply owner with a copy of this certification.
- C. Successful contractor is required to maintain a full-time supervisor/foreman who is on the job-site at all times during installation of new roof system. Foreman must have a minimum of five (5) years experience with the installation of system similar to that specified.
- D. Successful contractor must obtain all components of roof system from a single manufacturer, including any roll good materials if required. Any secondary products that are required which cannot be supplied by the specified manufacturer must be recommended and approved in writing by primary manufacturer prior to bidding.

- E. If required, fabricator/installer shall submit work experience and evidence of adequate financial responsibility. The owners representative reserves the right to inspect fabrication facilities in determining qualifications.

#### 1.07 DELIVERY, STORAGE, AND HANDLING

A. Manufacturer's responsibility:

- 1. Protect components during fabrication and packing from mechanical abuse, stains, discoloration, and corrosion.
- 2. Provide protective interleaving between contact areas of exposed surfaces to prevent abrasion during shipment, storage, and handling.

B. Installer's responsibility:

- 1. Store materials off ground providing for drainage; under cover providing for air circulation; and protected from wind movement, foreign material contamination, mechanical damage, cement, lime or other corrosive substances.
- 2. Stack pre-finished materials to prevent twisting, bending, abrasion and denting and elevate one end to facilitate moisture run-off.
- 3. Handle materials to prevent damage to surfaces, edges and ends of panels and sheet metal items. Damaged material shall be rejected and removed from the site.
- 4. Unload panels using a boom or crane, supporting the panels in at least two (2) locations during lifting.
- 5. Protect panels from wind-related damages.
- 6. Protect moisture-sensitive materials from the weather.
- 7. Inspect materials upon delivery. Reject and remove physically damaged or marred material from project site.

#### 1.08 JOB CONDITIONS

- A. Determine that work of other trades will not hamper or conflict with necessary fabrication and storage requirements for pre-formed metal roofing system.

B. Protection:

- 1. Provide protection or avoid traffic on completed roof surfaces.
- 2. Do not overload roof with stored materials.
- 3. Support no roof-mounted equipment directly on roofing system.

- C. Ascertain that work of other trades which penetrates the roof or is to be made watertight by the roof is in place and approved prior to installation of roofing.

#### 1.09 DESIGN AND PERFORMANCE CRITERIA

##### A. Thermal Expansion and Contraction.

1. Completed metal roofing and flashing system shall be capable of withstanding expansion and contraction of components caused by changes in temperature without buckling, producing excess stress on structure, anchors or fasteners, or reducing performance ability.
2. The design temperature differential shall be not less than 200 degrees F.
3. Interface between panel and clip shall provide for **unlimited** thermal movement in each direction along the longitudinal direction.
4. Location of metal roofing rigid connector shall be at roof ridge unless otherwise approved by the Manufacturer. Metal ridge connector may require design as per job conditions by specified manufacturer.

##### B. Uniform Wind Uplift Load Capacity.

1. Installed roof system shall withstand negative (uplift) design wind loading pressures complying with the following criteria.
  - a. Design Code: FM 1-28.
  - b. Panel Safety Factor: 1.67
  - c. Building with an Importance Factor of III.
  - d. Wind Speed: 90 mph.
  - e. Ultimate Pullout Value: 431 psf.
  - f. Exposure Category: C
  - g. Design Roof Height: (30 feet)
  - h. Minimum Building Width: (59 feet)

<u><b>Canopy Roof Areas</b></u>	<u><b>Design Uplift Pressure:</b></u>
---------------------------------	---------------------------------------

Zone 1 – Mid Roof	34.0 psf
Zone 2 – Eaves, Rake & Ridge	45.0 psf
Zone 3 – Corners	61.0 psf

2. Capacity shall be determined using pleated airbag method in accordance with ASTM E 1592, testing of sheet metal roof panels. Allowable safe working loads shall be determined by dividing the ultimate test load by the safety factor specified above.

C. Uniform Positive Load Capacity.

1. The installed roof system shall be capable of resisting the following positive uniform roof loads: Roof Live Load of 35 psf; Ground Snow Load of 20 psf; Balanced Uniform Roof Snow Load of 22 psf; and Maximum Unbalanced Surcharged Load of 10.7 psf; and an Unbalanced Width of 4.3 feet.
2. Capacity to resist positive loads shall be determined by empirical calculations in accordance with AISI. Calculation shall be sealed by a registered professional engineer.
3. Installed roof system shall carry positive uniform design loads with a maximum system deflection of L/180 as measured at the rib (web) of the panel.

- C. Underwriters' Laboratories, Inc., (UL) fire resistance P ratings for roof assemblies: If applicable, panel system shall be approved for use in an appropriate Construction Assembly, as defined by UL 263.

- D. Underwriters' Laboratories, Inc., (UL) fire rating per UL 790.

- E. ASTM E283: **Static pressure air infiltration (doors, windows, curtain walls):**

<u><b>Pressure</b></u>	<u><b>Leakage Rate</b></u>
1.57 PSF	0.0007 cfm/sq.ft.
6.24 PSF	0.0002 cfm/sq.ft.
20.0 PSF	0.0036 cfm/sq.ft.

- F. ASTM E331: **Static pressure water infiltration (doors, windows, curtain walls):**

<u><b>Pressure</b></u>	<u><b>Result</b></u>
5 Gal/Hr Per S.F. and Static Pressure Of 20.0 Psf for 15 minutes	No Leakage

G. ASTM E1680: **Static pressure air infiltration (roof panels):**

<u>Pressure</u>	<u>Leakage Rate</u>
1.57 PSF	0.0012 cfm/sq.ft.
6.24 PSF	0.0001 cfm/sq.ft.
20.0 PSF	0.0011 cfm/sq.ft.

H. ASTM E1646: **Static pressure water infiltration (roof panels):**

<u>Pressure</u>	<u>Result</u>
5 Gal/Hr Per S.F. and Static Pressure Of 20.0 Psf for 15 minutes	No Leakage

- I. Water penetration (dynamic pressure): No water penetration, other than condensation, when exposed to dynamic rain and 70 mph wind velocities for not less than five minutes duration, when tested in accord with principles of AAMA 501.1.
- J. Capacities for gauge, span or loading other than those tested may be determined by interpolation of test results within the range of test data. Extrapolation for conditions outside test range are not acceptable.

1.10 **WARRANTY**

- A. Owner shall receive one (1) warranty from one manufacturer of the manufactured standing seam metal roof panels covering all of the following criteria.
1. Upon completion of installation, and acceptance by the Owner and Architect, the manufacturer will supply to the Owner a single-source, thirty five (35) year No Dollar Limit (NDL), watertight warranty, including coverage for all trim, flashings, and penetrations associated with the standing seam roof system.
  2. 30 year coverage on finish including checking, crazing, peeling, chalking, fading and/or adhesion.
  3. Installer shall provide manufacturer with three (3) year warranty covering roofing system installation and watertightness. A copy shall be provided directly to the Owner.
  4. Warranty shall commence on the date of substantial completion.
  5. This warranty shall be part of a single-source manufacturer's warranty by ONE manufacturer covering the standing seam metal roof panels. This warranty will include all systems and flashings.
  6. At the request of the Owner, the Manufacturer will provide an annual inspection of the roof. These inspection request can occur for the life of the warranty.

## 1.11 MANUFACTURER'S INSPECTIONS

- A. When the project is in progress, the roofing system manufacturer will provide the following:
  - 1. Keep the Architect informed as to the progress and quality of the work as observed.
  - 2. Provide job site inspections a **minimum of three (3) days a week with reports to the Architect.**
  - 3. Report to the Architect in writing any failure or refusal of the Contractor to correct unacceptable practices called to the Contractor's attention.
  - 4. Confirm after completion that manufacturer has observed no applications procedures in conflict with the specifications other than those that may have been previously reported and corrected.

## PART 2 - PRODUCTS

### 2.01 STANDING SEAM ROOFING SYSTEM

- A. FM GLOBAL **ROOFNAV #: 240874-0-0** Rated 1-28
- B. General.
  - 1. Whenever a particular make of material, trade name and/or manufacturer's name is specified herein, it shall be regarded as being indicative of the minimum standard of quality required. A bidding Contractor who proposes to quote on the basis of an alternate material and/or system will only be considered if the proposed alternate is equivalent or superior in quality to the specified system in accordance with article 1.5. Additionally, all manufacturer and contractor/fabricator guidelines, performance criteria and warranty criteria must be met as specified in article 1.4, 1.5, 1.6, 1.9, and 1.10.
  - 2. Product names for the metal roof panel system and waterproofing materials used in this section shall be based on performance characteristics of the R-MER Span System manufactured by The Garland Company and shall form the basis of the contract documents or approved equal
    - a. Approved equal manufacturers to meet or exceed the following listed characteristics and all performance requirements listed in "Design Criteria" (article 1.9) and Warranty Criteria (article 1.10) must be met and submitted as well as all items listed in the Disclosure of Materials/Alternate Manufacturers (article 1.5).
  - 3. This specification is based on the performance characteristics of the system identified herein. Any proposed alternate systems, specified or not, must meet or exceed the following listed characteristics and be submitted for approval. Additionally, all Warranty Criteria (Section 1.10) and Design and Performance Criteria (Section 1.9) must be met and submitted, FM global rated, as well as all items listed in the Disclosure of Materials and

Substitutions (Section 1.5) must be submitted. Failure of a system to meet all requirements of this specification will result in forfeiture of the bid award.

4. Manufacturers: The following manufacturers are acceptable, providing they meet these specifications and the minimum standards stated.

- a. The Garland Company, Inc. (Basis of Design)
- b. Approved Equal

C. Materials.

1. Panel material: 0.040" thickness aluminum, 3105-H14 alloy, smooth as per ASTM B209-96.
2. Flashing and flat stock material: Unless noted otherwise, fabricate in profiles indicated on approved manufacturer's shop drawings of same material, thickness, and finish as roof system, unless indicated otherwise. Gutters and leaders shall be fabricated as specified in 0.040" aluminum with a kynar paint finish to match the roof panel.

D. Finish on surfaces:

1. Exposed surfaces for coated panels:
  - a. Two coat coil applied, baked-on full-strength (70% resin) fluorocarbon coating system (polyvinylidene fluoride, PVF2), applied by manufacturer's approved applicator.
  - b. Coating system shall provide nominal 1.0 mil dry film thickness, consisting of primer and color coat.
  - c. Color: Custom Orange color to match architect's sample and university's standards.
2. Unexposed surfaces for coated panels shall be baked-on polyester coating with .20 - .30 dry film thickness (DFT).

E. Characteristics:

1. Provide the same panel profile from a single manufacturer for ALL standing seam roof areas.

2. Configuration: Provide standing seam panels incorporating mechanically interlocked, concealed anchor clips allowing unlimited thermal movement, and of configuration which will prevent entrance or passage of water.
  - a. Panel/Cap configuration must have a total of four (4) layers of steel surrounding anchor clip for prevention of water infiltration and increased system strength designed to limit potential for panel blow-off.
  - b. Profile of panel shall have mesa's every two (2) inches on center continuous throughout panel which are a minimum of one point five (1.5) inches wide. These will absorb thermal stresses, reduce oil canning, and increase load carrying capacity.
  - c. Exposed fasteners, screws and/or roof mastic are unacceptable and will be rejected. System configuration only allows for exposed fasteners at trim details (as per manufacturer's guidelines).
  - d. Panels must be fabricated and furnished in continuous lengths from ridge/hip to eave with no joints/splices/overlaps.
  - e. Panels lengths which exceed maximum shipping lengths shall be field rolled on equipment owned by the panel manufacturer. Contractor rolling equipment is NOT allowed. Equipment shall have at least 12 rolling stations and provide a product identical to factory manufactured product. The equipment shall be operated by a trained full time experienced technician.
  - f. Seam caps shall be manufactured in the factory and shall be installed with NO endlaps. Seam sealant must be factory applied.
3. Seam must be two and three-eighths (2-3/8) inches minimum height for added upward pressures and aesthetic appeal. Seam shall have continuous anchor reveals to allow anchor clips to resist positive and negative loading and allow unlimited expansion and contraction of panels due to thermal changes. Integral (not mechanically sealed) seams are NOT acceptable.
4. Concealed Standard Anchor Clips: Clips must be sixteen (16) gauge galvanized steel, ONE (1) piece clip with projecting legs for additional panel alignment and provision for unlimited thermal movement in each direction along the longitudinal dimension.
  - a. Two-piece (2) clips are NOT acceptable.
  - b. Sealant applied in panel cap must be isolated from clip to insure that no sealant damage occurs from the movement of the panel during expansion and contraction.

- c. Clip must maintain a clearance of a minimum of three-eighths (3/8) inches between panel and substrate for proper ventilation to help prevent condensation on underside of panel and eliminate the contact of panel fastener head to panel.
  - 5. Seam cap: Snap-on cap shall be a minimum of 1" wide "T" shaped of continuous length up to forty-five (45) feet according to job conditions and field seamed by means of manufacturer's standard seaming machine.
    - a. Cap shall be designed to receive two (2) beads of continuous hot applied gasketing sealant which will be applied independent of anchor clip to allow unlimited thermal movement of panel without damage to cap sealant.
    - b. Sealant shall be a SIS (Styrene-Isoprene-Styrene) block copolymer type thermoplastic rubber adhesive, non-fatigue water barrier.
  - 6. Standing Seam Panel Width: 16"
  - 7. Stiffening ribs: Located in flat of panel to minimize oil canning and telegraphing of structural members.
  - 8. Replaceability: Panels shall be of a symmetrical design with snap on cap configuration such that individual panels may be removable for replacement without removing adjacent panels.
  - 9. Panel ends shall be panned at ridge or where applicable per the manufacturer's approved shop drawings.
  - 10. Panel length: Panels must be full length without joints.
- F. Accessories.
- 1. Gable anchor clips: Standing Seam style, galvanized steel, minimum thickness 16 gauge.
  - 2. Concealed Z clips: Standing Seam style, galvanized steel, minimum thickness 16 gauge.
  - 3. Fasteners:
    - a. Concealed fasteners: Corrosion resistant steel fasteners (zinc plated, stainless steel or equal) designed to meet structural loading requirements and in accordance with recommendations from the manufacturer of the plywood decking. Provide OMG Standard as the minimum fastener size.

- b. Metal deck has exposed underside to the interior, the fastener shall penetrate only the top flange of the metal roof deck, spacing is to be increased from maximum spacing to align with spacing of decking flutes. Length of fastener shall be selected to prevent possibility of penetrating the lower flange of exposed metal decking while achieving required pull out value and minimum one (1) inch.
- c. Exposed fasteners: Series 410 stainless steel fasteners or one-eighth (1/8) inch diameter stainless steel waterproof rivets. All exposed fasteners shall be factory painted to match the color of the standing seam panels.
- 3. Closures: Factory precut closed cell foam meeting ASTM D1056 or ASTM D3575, enclosed in metal channel matching panels when used at ridge, rake, and jamb.
- 4. Provide all miscellaneous accessories for complete installation.

## 2.02 ACCESSORY PRODUCTS

### A. Sealant:

- 1. Acceptable product:
  - a. Concealed Application : Garland Butyl Sealant or approved equal.
  - b. Exposed Application : Garland Tripolymer Sealant or approved equal.
- 2. Colors: As selected by Architect from sealant manufacturer's standard selection.

### B. Insulation Boards: Flat Polyisocyanurate Roof Insulation; ASTM C-1289. Install two layers of (2.6) inches of polyisocyanurate insulation over metal deck.

Qualities: Rigid, closed cell polyisocyanurate foam core bonded to heavy duty glass fiber mat facers.

Thickness: 2.6" (2 layers of 2.6" thickness)

R-Value: Min. 15.0 (2.6" thickness)

Board Size: Four feet by eight feet (4' x 4')

Compressive Strength: Minimum 25 psi

Source of Supply: Hunter Panels - H-Shield; or Approved equal

Insulation board shall meet the following requirements:

UL, WH or FM listed under Roofing Systems  
Federal Specification HH-I-1972, Class 1

C. Metal Roof Deck Fasteners:

1. OMG Heavy Duty or approved equal corrosion resistant roofing screw fastener with a corrosion resistant coating as recommended by roof membrane manufacturer or approved equal .
2. Approved fasteners with three (3) inch coated disc to meet or exceed the specific project wind uplift requirements Length as required to penetrate roof deck per the screw manufacturers recommendation.

D. Prefabricated Shims:

1. Install prefabricated high density polyethylene plastic shims under the roof panel clip and over the bearing plates to maintain a level/plumb plane to prevent buckling of the roof panel.

E. Snow Retention System:

1. Shall be S-5 Snow Retention System or approved equal as supplied by the standing seam panel manufacturer designed for the appropriate local code ground snow load of 20 psf resulting in the required balanced and unbalanced snow loads, specified roof slopes and lengths, and an 16 inch wide panel. One (1) row of the S-5 Color Guard snow retention system will be required. An S-5 Clip shall be installed at each panel seam, and one (1) Snow Clips between each panel. Color shall match standing seam roof panel color.

F. Gutters and Downspouts:

1. Gutters: Fabricate 5" X 5" box gutters to match profile of gable trim, complete with end pieces, outlet tubes, and other special pieces as required from .040 Aluminum. Fabricate in minimum 10-foot long sections. Furnish gutter supports spaced per SMACNA's recommendation based on gauge and stretch-out, fabricated from same metal as gutters. Finish gutters to match standing seam metal roof panels.
2. Gutter Brackets: External gutter bracket supports shall be 2-inch wide x 1/4-inch thick formed aluminum, and shall be spaced at no greater than 30" on center. Stagger external gutter bracket supports with internal gutter straps. External supports shall be post-painted with a matching full-strength 70 percent PVDF finish and warranted by the panel manufacturer for same term as specified for material finishes.

3. Gutter Straps: Internal gutter straps shall be 2-inch wide x 1/8-inch thick formed aluminum, and shall be spaced at no greater than 30" on center. Stagger internal gutter straps with gutter external bracket supports. Internal straps shall be post-painted with a matching full-strength 70 percent PVDF finish and warranted by the panel manufacturer for same term as specified for material finishes.
4. Downspouts: Formed from .040 Aluminum and of 4"x5" in size with curved corners. Fabricate in 10-foot long sections, complete with curved corners/elbows and offsets, of size and metal thickness according to SMACNA's "Architectural Sheet Metal Manual".
5. Downspout Brackets: Surface mounted downspout protection guards shall be fabricated from 2" wide x double folded .040 Aluminum. Install straps at five (5) feet on center maximum.

G. Underlayment:

1. Underlayment shall be R-Mer Seal or approved equal as part of a tested assembly,
  - . 45 mil self-adhering, high temperature underlayment. Install in accordance with manufacturer's recommendations.

2.03 FABRICATION

- A. Shop fabricate metal roofing and flashing components to the maximum extent possible, forming metal work with clear, sharp, straight, and uniform bends and rises. Hem exposed edges of flashings.
- B. Form flashing components from full single width sheet in minimum ten (10'-0") foot lengths. Provide mitered corners, joined using closed end pop rivets and joint sealant.
- C. Provide splice plates of same material and finish as metal flashing and closures minimum 4" width. Lap each end of abutting metal flashing min 2" onto splice plate and bed in continuous sealant
- C. Fabricate roofing and related sheet metal work in accord with approved shop drawings and applicable standards.

**PART 3 - EXECUTION**

3.01 PREPARATION

- A. Inspection: Examine the alignment and placement of the building structure and substrate. Correct any objectionable warp, waves or buckles in the substrate before proceeding with installation of the pre-formed metal roofing. The installed roof panels will follow the contour of the structure and may appear irregular if not corrected.
- B. Establish straight side and crosswise benchmarks.

- C. Use proper size and length fastener for strength requirements. Approximately five-sixteenths (5/16) inch is allowable for maximum fastener head size beneath the panel.
- D. Rectangular shaped roofs shall be checked for square and straightness. Gable ends may require setting a true line for the gable clips and setting with string line.
- E. Measure the roof lengthwise to confirm panel lengths, overhangs, coverage of flashings at eaves and ridges and verify clearances for thermal movement.
- F. Pre-roofing conference:
  - 1. Prior to beginning metal roofing work, a pre-roofing conference shall be held to review work to be accomplished.
  - 2. Owner, contractor, metal roofing subcontractor, metal roofing system manufacturer's representative and all other subcontractors who have equipment penetrating roof or whose work involves access to roof shall be present.

### 3.02 METAL FABRICATION AND EQUIPMENT

- E. Mechanical panel fabrication for field panels shall be operated by a trained full time experienced technician.
- F. Mechanical equipment shall have a least twelve (12) rolling stations and provide a product identical to factory manufactured product.

### 3.03 ROOFING AND FLASHING INSTALLATION

- A. Details on the project documents are provided for bidding purposes. All details will be shown on manufacturer's shop drawings to successful bidder. Comply with all details and install roofing materials and flashings in accordance with approved manufacturer's shop drawings and manufacturer's product data, within specified erection tolerances.
- B. Mechanically Fastened Polyisocyanurate Insulation System to Metal Roof Deck
  - 1. Approved polyisocyanurate insulation boards, shall be installed with joints in continuous straight lines, perpendicular to roof slopes with end joints staggered between rows. All board joints shall be staggered between layers. Tightly butt substrate boards together. Substrate boards shall be fully attached to the deck with an approved mechanical fastening system. As a minimum, the number of fasteners shall be in accordance with the following:

sixteen (8) fasteners per 4' x 4' board;
  - 2. Filler pieces of insulation require at least two fasteners per piece if size of insulation is less than four square feet.
  - 3. Placement of any fastener from edge of insulation board shall be a minimum of three inches, and a maximum of six (6) inches.

- C. Standing Seam Metal Roof Panel Underlayment Installation
  - 1. Underlayment shall be applied over entire roof areas having rigid insulation.
  - 2. Underlayment shall be applied over entire roof area and turned down over the perimeter edge blocking in accordance with the manufacturer's approved shop drawings.
- D. Prepare roof for the installation of standing seam panels, including:
  - 1. Install insulation in accordance with specifications and manufacturer's recommendations. All joints between the layers of insulation shall be staggered in all directions to provide a thermal break.
  - 2. Install the specified and approved underlayment as required in this specification over the installed insulation system. The specified underlayment shall be applied over the entire roof area.
- E. Install Z-girts directly over first layer of insulation mechanically fastened to metal deck. Z-girts will be nestled between the first and second layer of insulation. All anchor clips will be set on sixteen (16) gauge galvanized pre-punched Z-girts and fastened with two (2) approved fasteners into the top flange of architectural dove-tail metal roof deck. Length of fasteners shall prevent penetration of lower flange of architectural decking. As required, install prefabricated high density polyethylene plastic shims to maintain a level/plumb surface/plane for the standing seam panel to prevent buckling.
- F. Canopy Roof Areas:
  - 1. Clip spacing must be 2 ft. o.c max increased as needed to fasten into top flange of decking for Zone 1 (Mid Roof).
  - 2. Clip spacing must be 2 ft. o.c max increased as needed to fasten into top flange of decking for Zone 2 (Eaves, Rake and Ridge).
  - 3. Clip spacing must be 1 ft. o.c max increased as needed to fasten into top flange of decking for Zone 3 (Corners).

- G. Installation of Roof Panels: Roof panels can be installed by starting from either end and working towards the opposite end. Due to the symmetrical design of the specified panel system, it is also acceptable to start from the middle of the roof and work toward each end.
  - 1. Stainless steel pop rivets shall be secured through the anchor reveal of the panel leg and extend into the arms of the panel clip located at each clip on either side of the top of the curved panel. The panel is then anchored at both sides of each of the clip. Three (3) rivets per panel are required and shall be installed.
    - a. Be sure to capture all drilling debris during this operation with a rag or cloth placed on the panels at the drilling operation.
    - b. Panels are not securely attached to the roof until fixed to the anchor clip. To avoid damage and injury, all panels shall be fixed to the anchor clip immediately as they are installed.
  - 2. The seam caps are shipped with two (2) beads of factory applied hot melt sealant located inside the caps. To install the caps, hook one side of the cap over the panel edge and rotate over the opposite panel leg. For ease of installation, start at one end of the panel and work toward the opposite end.
  - 3. A hand crimping tool is used to crimp the cap around the top of two adjacent panels
  - 4. Caps shall then be permanently seamed with manufacturers mechanical seamer.
  - 5. At the end of each day's work, seam caps shall be mechanically seamed or hand crimped (crimp 4 inches every 8 feet) to reduce the possibility of wind damage prior to completion of the project.
  - 6. Un-installed panels which are temporarily stored on the ground or roof shall be secured in place at the end of each day's work to prevent possible damage or injury.
- H. Isolate dissimilar metals and masonry or concrete from metals with bituminous coating. Use gasketed fasteners where required to prevent corrosive action between fastener, substrate, and panels.
- I. Limit exposed fasteners to extent indicated on shop drawings.
- J. Anchorage shall allow for temperature expansion/contraction movement without stress or elongation of panels, clips, or anchors. Attach clips to structural substrate using fasteners of size and spacing as determined by manufacturer's design analysis to resist specified uplift and thermal movement forces.
- K. Seal laps and joints in accordance with roofing system manufacturer's product data.

- L. Coordinate flashing and sheet metal work to provide weathertight conditions at roof terminations. Fabricate and install in accordance with standards of SMACNA Manual.
- M. Provide for temperature expansion/contraction movement of panels at roof penetrations and roof mounted equipment in accordance with system manufacturer's product data and design calculations.
- N. Installed system shall be true to line and plane and free of dents, and physical defects. In light gauge panels with wide flat surfaces, some oil canning may be present. Oil canning does not affect the finish or structural integrity of the panel and is therefore not cause for rejection.
- O. Maximum variation from true planes or lines shall be one-fourth (1/4) inch in twenty (20) feet and three-eighth (3/8) inch in forty (40) feet or more.
- P. Form joints in linear sheet metal to allow for one-fourth (1/4) inch minimum expansion at twenty (20) feet on center maximum and eight (8) feet from corners.
- Q. At joints in linear sheet metal items, set sheet metal items in two(2), one-fourth (1/4) inch beads of butyl sealant. Extend sealant over all metal surfaces. Mate components for positive seal. Allow no sealant to migrate onto exposed surfaces.
- R. Remove damaged work and replace with new, undamaged components.
- S. Touch up exposed fasteners using paint furnished by roofing panel manufacturer and matching exposed panel surface finish.
- T. Clean exposed surfaces of roofing and accessories after completion of installation. Leave in clean condition at date of substantial completion. Touch up minor abrasions and scratches in finish.
- U. Snow Retention System
  - 2. Shall be S-5 Snow Retention System or approved equal as supplied by the standing seam panel manufacturer designed for the appropriate local code ground snow load of 30 psf resulting in the required balanced and unbalanced snow loads, specified roof slopes and lengths, and an 16 inch wide panel. One (1) row of the S-5 Color Guard snow retention system will be required. An S-5 Clip shall be installed at each panel seam, and one (1) Snow Clips between each panel. Color shall match standing seam roof panel color.

## CHECKLIST FOR ROOFING SYSTEM

FM Global Clients: submit completed form and completed RoofNav Contractor Package to local FM Global field office for review.

### CONTACT INFORMATION:

## CHECKLIST FOR ROOFING SYSTEM

### ROOF COVER / MEMBRANE SECUREMENT:

Roof Cover Fasteners: Trade Name:	Length:	Diameter/No.:
Stress Plate/Batten: Trade Name:	Size:	
Row Spacing: Zone 1':	Zone 1:	Zone 2: Zone 3:
Fastener Spacing: Zone 1':	Zone 1:	Zone 2: Zone 3:
Bonding Adhesive: Trade Name:		
Adhesive Ribbon Width (in.):		
Adhesive Ribbon Spacing (in.): Zone 1':	Zone 1:	Zone 2: Zone 3:
Adhesive Application Rate (gal./sq.):		
Additional Detail:		
See DS 1-49 for additional securement for all ballasted, or mechanically fastened or ribbon adhered roof covers if the roof cover is not secured within 12 in. (300 mm) of the outside edge of the nailer.		

### INSULATION / COVER BOARD:

Layer	Insulation / Cover Board Trade Name	Board Dimensions (ft. x. ft.)	Thickness (in.)	Fastened	Adhered	Tapered
1. Top		X		<input type="checkbox"/>	<input type="checkbox"/>	<input type="checkbox"/>
2. Next		X		<input type="checkbox"/>	<input type="checkbox"/>	<input type="checkbox"/>
3. Next		X		<input type="checkbox"/>	<input type="checkbox"/>	<input type="checkbox"/>
4. Next		X		<input type="checkbox"/>	<input type="checkbox"/>	<input type="checkbox"/>
5. Thermal Barrier		X		<input type="checkbox"/>	<input type="checkbox"/>	<input type="checkbox"/>
<input type="checkbox"/> Glass Fiber/Mineral Wool/Batt <input type="checkbox"/> Facer Type/Vapor Barrier <input type="checkbox"/> Other: <input type="checkbox"/> None						
Additional Detail:						

### INSULATION / COVER BOARD SECUREMENT:

Insulation / Cover Board Fasteners: Trade Name:	Type:	Size:
Stress Plate: Trade Name:	Size:	
Fastener Spacing: Zone 1':	Zone 1:	Zone 2: Zone 3:
Bonding Adhesive: Trade Name:		
Adhesive Ribbon Width (in.):		
Adhesive Ribbon Spacing (in.): Zone 1':	Zone 1:	Zone 2: Zone 3:
Adhesive Application Rate (gal./sq.):		
Additional Detail:		

### BASE SHEET: (Include Trade Name, Type, and Width)

<input type="checkbox"/> None	
Trade Name:	Width: <input type="checkbox"/> 36 in. <input type="checkbox"/> 1 meter (39 in.)
<input type="checkbox"/> Fastened	<input type="checkbox"/> Adhered
<input type="checkbox"/> Lap Width in/mm	<input type="checkbox"/> Lap Adhesion Type
<input type="checkbox"/> Air Retarder	<input type="checkbox"/> Vapor Retarder
Additional Detail:	

### BASE SHEET SECUREMENT:

Base Sheet Adhesive Name:	Adhesive Application Rate:
Base Sheet Fastener Trade Name:	Type:
Head Diameter:	Length:
Spacing: (Attached Sketches as necessary)	
Spacing Along Laps: Zone 1':	Zone 1: Zone 2: Zone 3:
No. Intermediate Rows: Zone 1':	Zone 1: Zone 2: Zone 3:
Spacing Along Intermediate Rows: Zone 1':	Zone 1: Zone 2: Zone 3:
Additional Detail:	

## CHECKLIST FOR ROOFING SYSTEM

### DECK:

<input type="checkbox"/> Steel:	Manufacturer:	Type (e.g., wide rib):	Thickness / Gauge:	Yield Strength:
<input type="checkbox"/> LWIC (Form Deck):	<input type="checkbox"/> Cementitious Wood Fiber (Pullout Test Required):			
<input type="checkbox"/> Concrete:	<input type="checkbox"/> Pre-cast panels or <input type="checkbox"/> Cast in Place			
<input type="checkbox"/> Wood (Pullout Test Required):				
<input type="checkbox"/> Fiber Reinforced Cement:	<input type="checkbox"/> Fiber Reinforced Plastic			
<input type="checkbox"/> Gypsum (Pullout Test Required):	<input type="checkbox"/> Plank	or	<input type="checkbox"/> Poured	
<input type="checkbox"/> Other:				
Additional Detail:				

### DECK or ROOF PANEL SECUREMENT:

Deck Or Roof Panel Fasteners:		Type:					
Trade Name:		Size Washer:					
Length:		Washer:					
If Weld: Size:		Weld:	Washer:

Roof Slope deg.							
≤ 7			>7, ≤ 27			>27, ≤45	
Zone	Fastener / Weld Spacing	External Seam Clamp Spacing	Zone	Fastener / Weld Spacing	External Seam Clamp Spacing	Zone	Fastener / Weld Spacing
1'							
1			1, 2e			1, 2e, 2r	
2			2n, 2r, 3e			2n, 3r	
3			3r			3e	
Deck Side Lap Fastener Spacing:		Zone 1':	Zone 1:	Zone 2:	Zone 3:		
Additional Detail:							

### ROOF STRUCTURE (Include Size, Gage, Etc.):

<input type="checkbox"/> Purlins	<input type="checkbox"/> "C" or <input type="checkbox"/> "Z"	Thickness:
Purlin Spacing: Zone 1': Zone 2: Zone 3:		
<input type="checkbox"/> Joists	<input type="checkbox"/> Wood or <input type="checkbox"/> Steel	
Joist Spacing: Zone 1': Zone 2: Zone 3:		
<input type="checkbox"/> Beams	<input type="checkbox"/> Wood or <input type="checkbox"/> Steel	
Beam Spacing: Zone 1': Zone 2: Zone 3:		
<input type="checkbox"/> Other:		
Additional Detail:		

### PERIMETER FLASHING: (Attach a detailed sketch of metal fascia, gravel stop, nailer, blocking, coping, etc.)

<input type="checkbox"/> FM Approved Flashing
<input type="checkbox"/> Other (applicable only when FM Approved system is not available):
Manufacturer/Trade Name:
Flashing Wind Rating: Zone 2 Zone 3
Fascia / Coping Detail: Face Height: Thickness:
Hook Strip Detail: Height: Thickness: Fastener spacing: Zone 2 Zone 3
Fastener Details: Length: Type & Diameter/No.
Nailer / Blocking Details Per FM Global Data Sheet 1-49? <input type="checkbox"/> Yes <input type="checkbox"/> No (Attach Details)
Nailer Securement: Diameter: Spacing: Zone 2 Zone 3 Embedment:
Additional Detail:

### DRAINAGE:

X2688 ENGINEERING (Rev. October 2021)

## CHECKLIST FOR ROOFING SYSTEM

For new construction: Has roof drainage been designed by a Qualified Engineer per FM Global Loss Prevention Data Sheet 1-54 and the local building code? <input type="checkbox"/> Yes <input type="checkbox"/> No (Attach details)
For re-roofing and recovering: Will the roof drainage be changed from the original design (i.e., drains inserted/covered/removed, new expansion joints, blocked or reduced scupper size)? <input type="checkbox"/> Yes <input type="checkbox"/> No
If yes, were the changes reviewed by a Qualified Engineer? <input type="checkbox"/> Yes <input type="checkbox"/> No (Attach details)
Is secondary (emergency) roof drainage provided per FM Global Data Sheet 1-54? <input type="checkbox"/> Yes <input type="checkbox"/> No (Attach details)
Additional Detail:

### ROOF MOUNTED EQUIPMENT: (Attach drawings, calculations and any supporting detail.)

Roof mounted equipment secured per FM Global Loss Prevention Data Sheet 1-28 and the local building code? <input type="checkbox"/> Yes <input type="checkbox"/> No
Additional Detail:

## **SECTION 074213 – METAL WALL AND SOFFIT PANELS**

### **PART 1 - GENERAL**

#### **1.1 RELATED DOCUMENTS**

- A. Drawings and general provisions of the Contract, including General and Supplementary Conditions and Division 01 Specification Sections, apply to this Section.

#### **1.3 SUMMARY.**

- A. Work described in this section includes single-skin, labyrinth-joint metal cladding panels for rainscreen-principle wall system, complete with sub-structural metal framing, perimeter and penetration flashing, soffit panels and closures.
- B. Related work specified elsewhere:
  - 1. Division 05: Steel studs, girts, and furring.
  - 2. Division 06: Gypsum sheathing, wood sheathing, rough carpentry.
  - 3. Division 07: Flashing and sheet metal, water resistive air barriers, thermal insulation, joint sealants.

#### **1.5 DESIGN AND PERFORMANCE CRITERIA.**

- A. General Performance: Metal wall panel assemblies shall be furnished and installed without failure due to defective manufacture, fabrication, installation, or other defects in construction.
- B. Rainscreen Wall System Performance Rating. The metal wall panel assemblies, and the substructural furring/framing system supporting the panels shall be tested in accordance with AAMA 509 and achieve the following performance results:
  - 1. Water Infiltration: The water infiltration performance of the metal wall panel assembly shall not exceed the classification of W-1.
  - 2. Back Ventilation: The air ventilation performance of the rainscreen cavity air space shall have a minimum classification of V-4.
- C. Rainscreen Wall System Performance Rating. The metal wall panel assemblies, and the substructural furring/framing system supporting the panels shall be tested in accordance with AAMA 508-07 and achieve the following performance results: PASS.
- D. Abrasion Resistance of Underside Coating for Zinc Wall Panels.
  - 1. The underside of all zinc roof panel and flashing materials shall be coated with a high performance abrasion resistant coating to prevent corrosion from the underside due to condensation and/or water vapor.

2. The underside coating shall provide a minimum abrasion resistance equal to 250 liters of falling sand, as testing in accordance with ASTM D968, Method A.

E. Thermal Expansion and Contraction.

1. Completed metal wall panel and flashing system shall be capable of withstanding expansion and contraction of components caused by changes in temperature without buckling, or reducing performance ability.
2. The design temperature differential shall be not less than 220 degrees Fahrenheit.
3. Interface between panel and clip shall provide for unlimited thermal movement in each direction along the longitudinal direction.

F. Uniform Wind Load Capacity.

1. Installed wall system shall withstand negative wind pressures complying with the following criteria.
  - a. Design Code: ASCE 7, Method 2 for Components and Cladding.
  - b. Safety Factor: The metal panel system shall be tested to proof load of 1.5 times the design service load condition, as required by the ASTM E330 method.
  - c. Category III Building with an Importance Factor of 1.15.
  - d. Wind Speed: 124 mph.
  - e. Exposure Category: B..
  - f. Height at Top of Wall System: 40 feet.
  - g. Minimum Building Width: 125 feet.
  - h. Roof Pitch (Above Wall System): 1 inches per foot.
2. The ultimate capacity of the panel system shall be determined based on performance testing in accordance with ASTM E330. The system shall be tested to a proof load that shall be 1.5 times the allowable design service load.

1.6 SUBMITTALS.

A. General, Rainscreen Wall Assembly Components: Complete submittals shall be made jointly and simultaneously for all components of the Rainscreen wall assembly, including:

1. Metal rainscreen wall cladding panels and subframing components;
2. All other trim, flashing, sealants, and components necessary for a complete rainscreen wall assembly as required by these specifications.

B. Shop drawings.

1. All components shall be integrated into a single comprehensive and complete shop drawing set prepared by the metal cladding system manufacturer.

2. Shop drawings shall identify each product and component by manufacturer, product name, and thickness, size, style, or other uniquely distinguishing characteristics.
- C. Warranty: Provide unexecuted specimen warranty documents for each warranty as required in specification article 1.10.
- D. Design Test Reports.
  1. Submit copies of design test reports for each of the performance testing standards listed in specification article 1.4.
  2. Test reports shall be performed by independent, accredited testing laboratories, and shall bear the seal of a registered professional engineer.
- E. Samples.
  1. Submit sample of panel section, at least 6" x 6" showing seam profile, and also a sample of color selected.
  2. Submit sample field applied sealants and all other system components.

#### **1.7 QUALITY CRITERIA/INSTALLER QUALIFICATIONS.**

- A. Engage an experienced metal wall panel contractor (erector) to install wall panel system who has a minimum of three (3) years experience specializing in the installation of Rainscreen metal wall systems.
- B. Contractor must be certified by manufacturer specified as a supplier of the metal wall system and obtain written certification from manufacturer that installer is approved for installation of the specified system.
- C. Successful contractor must obtain all components of Rainscreen wall system from a single manufacturer. Any secondary products that are required which cannot be supplied by the specified manufacturer must be recommended and approved in writing by primary manufacturer prior to bidding.
- D. Fabricator/Installer shall submit work experience and evidence of adequate financial responsibility. Architect reserves the right to inspect fabrication facilities in determining qualifications.

#### **1.8 DELIVERY, STORAGE, AND HANDLING.**

- A. Inspect materials upon delivery.
- B. Handle materials to prevent damage.
- C. Store materials off ground providing for drainage; under cover providing for air circulation and preventing direct UV exposure; and protected from any debris.

#### **1.9 PROJECT CONDITIONS**

- A. Weather Limitations: Proceed with installation only when existing and forecasted weather conditions permit metal wall panel work to be performed according to manufacturer's written instructions and warranty requirements.

1. For natural (unpainted) panel materials, remove any protective films from the exposed surface of panels only after a complete elevation has been full installed.
  2. Rolled zinc materials may only be formed and installed in weather conditions that insure that the primary metal temperature (PMT) is 50 degrees Fahrenheit or greater.
- B. Field Measurements: Verify actual dimensions of construction contiguous with metal wall panels by field measurements before fabrication.

#### 1.11 COORDINATION

- A. Coordinate sizes and locations of windows, doors, and wall penetrations with actual equipment provided.
- B. Coordinate metal wall cladding system with wall sheathing, masonry, air and water resistive barriers, thermal insulation, rain drainage work, flashing, trim, and construction of other adjoining work to provide a leak proof, secure, and noncorrosive installation.

#### 1.12 WARRANTIES

- A. The Manufacturer shall furnish the following warranties for materials and finishes:
1. Exterior metal cladding system Manufacturer's 10 year warranty against defective materials and fabrication.
  2. Exterior metal cladding system Manufacturer's 20 year warranty for performance of prefinished finishes. The finish warranty shall provide coverage for the following:
    - a. Fade Resistance: For a period of 20-years from date of first exposure to UV or weathering, the post-painted material finishes shall exhibit no more than a 5 "delta E" rating for color change from original color standard.
    - b. Chalk Resistance: For a period of 20-years from date of first exposure to UV or weathering, the post-painted material finishes shall exhibit a chalk rating of 8 or less, in accordance with ASTM D4214, Method A.
    - c. Film Integrity: For a period of 20-years from date of first exposure to UV or weathering, the post-painted material finishes shall not chip, peel, crack, or blister as a result of defective coatings, improper preparation of the substrate, improper application of the coatings, or improper curing of the coating system.
  3. Exterior metal cladding system Manufacturer's warranty for performance of Post-painted aluminum finishes. The finish warranty shall provide coverage for the following:
    - a. Fade Resistance: For a period of 10-years from date of first exposure to UV or weathering, the post-painted material finishes shall exhibit no more than a 5 "delta E" rating for color change from original color standard.

- b. Chalk Resistance: For a period of 10-years from date of first exposure to UV or weathering, the post-painted material finishes shall exhibit a chalk rating of 8 or less, in accordance with ASTM D4214, Method A.
  - c. Gloss Retention: For a period of 10-years from date of first exposure to UV or weathering, the post-painted material finishes shall retain at least 50% of original Specular Gloss, as measured in accordance with ASTM D523.
  - d. Film Integrity: For a period of 20-years from date of first exposure to UV or weathering, the post-painted material finishes shall not chip, peel, crack, or blister as a result of defective coatings, improper preparation of the substrate, improper application of the coatings, or improper curing of the coating system.
- B. Installer's 3 year warranty covering wall panel system installation and watertightness.
- C. Warranties shall commence on date of substantial completion.

## **PART 2 - PRODUCTS**

### **2.15 PANEL MATERIALS**

#### **A. Painted Aluminum Sheet.**

- 1. Recycle Content: Provide steel sheet with average recycled content such that postconsumer recycled content plus one-half of preconsumer recycled content is at least 45 percent.
- 2. Aluminum alloy 3003, 3004, 3005, or 3105 with H14 or H24 heat treatment, as per ASTM B209/209M.
- 3. Texture: Smooth surface.
- 4. Prefinished Painted Aluminum:
  - a. Exposed Surfaces: 2-Coat Fluoropolymer finish in accordance with AAMA 621. Fluoropolymer finish containing not less than 70 percent PVDF resin by weight in color coat. Manufacturers' approved applicator to prepare, pretreat, and apply coating to exposed metal surfaces to comply with coating and resin manufacturers' written instructions.
  - b. Exposed surface coating system shall provide nominal 1.0 mil (0.025 mm) dry film thickness, consisting of primer and color coat.
  - c. Concealed Finish: Apply pretreatment and manufacturer's standard white or light-colored polyester backer finish, consisting of prime coat and wash coat with a minimum total dry film thickness of 0.5 mil (0.013 mm).
- 5. Post-Painted Aluminum

- a. Exposed Surfaces: 2-Coat Fluoropolymer finish in accordance with AAMA 2605. Fluoropolymer finish containing not less than 70 percent PVDF resin by weight in color coat. Coating manufacturer's approved applicator to prepare, pretreat, and apply coating to exposed metal surfaces to comply with coating and resin manufacturers' written instructions.
- b. Exposed surface coating system shall provide nominal 1.2 mil (0.030 mm) dry film thickness, consisting of primer and color coat.
- c. Concealed Finish: The unexposed sheet surfaces shall be bare as furnished by the mill. Overspray of primer and/or top coat(s) will not affect the use or performance of the unexposed surface of the material.

**A. Sealants:**

1. Sealant Tape: Non-curing, 100 percent solids, polyisobutylene compound sealant tape with release-paper backing. Provide permanently elastic, nonsag, nontoxic, nonstaining tape 1-inch- (13-mm-) wide and 1/16-inch- (3-mm-) thick.
2. Exposed Sealant: ASTM C 920; elastomeric tripolymer, polyurethane, or other advanced polymer sealant; of type, grade, class, and use classifications required to seal joints in metal wall panels and remain weathertight; and as recommended in writing by metal wall panel manufacturer.
3. Concealed Sealant: ASTM C 1311: Butyl-Based, Solvent-Release, One-Part Sealant.

**2.13 METAL SUBFRAMING**

- A. See section 074800 Rainscreen attachment systems
- B. Miscellaneous Metal Framing, General: ASTM C 645, cold-formed metallic-coated steel sheet, ASTM A 653, G90 (Z275) hot-dip galvanized

**2.14 METAL WALL PANELS (MTL-1 & MTL-2), LAP-SEAM METAL WALL PANELS**

- A. General: Provide factory-formed metal wall panels designed to be field assembled by interlocking seams incorporating concealed anchor clips, allowing thermal movement.
- B. Concealed clip, lap-seam wall panels with pan ribs in varying widths.
  1. Basis of Design: Panel shall be IMETCO LATITUDE Wall system or approved equal
  2. Other manufacturers:
    - a. Atas
    - b. Pac-Clad
    - c. Or approved equal
  3. Material: Aluminum sheet, 0.040 inch (1.02 mm) thick.
  4. Colors shall be:
    - a. MTL-1: IMETCO "Platinum Silver" or approved equal

- b. MTL-2: IMETCO “Charcoal” or approved equal
- 5. Characteristics.
  - a. Fabrication: Panels shall be factory formed from specified metal.
  - b. Profiles: as indicated project drawings.
    - 1) MTL-1 – Varying Widths of 6”, 12”, and 20” coverage panels
      - a) Pan Rib D – 6” Coverage, 1” Reveal
      - b) Pan Rib B – 12” Coverage, 1” Reveal
      - c) Pan Rib A – 20” Coverage, ¾” Reveal
    - 2) MTL-2 – 6” coverage panels
      - a) Pan Rib D – 6” Coverage, 1” Reveal
  - c. Panel orientation: Vertical.
  - d. Configuration: Panel shall have interlocking seams incorporating concealed anchor clips allowing thermal movement.
  - e. Panel Depth (Concealed Leg Height): 7/8 inches (22 mm), nominal.
  - f. Anchor clips: Clips shall be 18 gauge galvanized steel designed to allow thermal movement of the panel in each direction along the longitudinal dimension.
  - g. Panel length: Up to 21 feet (6.4 m) maximum length.

#### **2.15 METAL WALL PANELS (MTL-3), REVEAL JOINT METAL WALL PANELS**

- A. General: Provide factory-formed metal wall panels designed to be field assembled by interlocking seams and incorporating concealed fasteners.
- B. Concealed clip, longitudinal lap-seam panel with labyrinth-joint and reveal on four sides.
  - 1. Basis of Design: Panel shall be IMETCO ELEMENT Wall system or approved equal
  - 2. Other Manufacturers:
    - a. Atas
    - b. Pac-Clad
    - c. Or approved equal

3. Material: Aluminum sheet, 0.063 inch thick.
4. Colors shall be:
  - a. MTL-3 Color A: Custom “Light Gray” as selected by architect.
  - b. MTL-3 Color B: Custom “Orange” as selected by architect.
5. Characteristics.
  - a. Fabrication: Panels shall be factory formed from specified metal.
  - b. The standard profile shall be flat pans with reveal joints on all four sides.
  - c. Panel orientation: Vertical
  - d. Configuration (Vertical): Panel shall be 12-inches long nominal by 14-inches up to 108-inches high nominal, with interlocking seams incorporating concealed fasteners.
  - e. Panel Depth (Concealed Leg Height): 1 1/4 inch (32 mm), nominal.
  - f. Reveal Joint: Panel seams shall join such that adjacent panels form vertical and horizontal reveal joints 3/4-inch- (19-mm) wide.
    - 1) Horizontal reveal joints shall be staggered from panel to panel, as shown on drawings.
    - 2) Vertical reveal joints shall be aligned from panel to panel, as shown on drawings.
  - g. End Folds: Panel ends shall be factory notched by automatic mechanical press equipment to form end tabs of 1 inch (25 mm) nominal length. The end tabs shall be factory folded 90 degrees to produce a “box pan” effect and allow for reveal joints on all four sides of the panel. Vertically oriented panels to have a double end fold.

## **2.16 METAL WALL PANELS (MTL-4), REVEAL JOINT METAL WALL PANELS**

- A. General: Provide factory-formed metal wall panels designed to be field assembled by interlocking seams and incorporating concealed fasteners.
- B. Concealed clip, longitudinal lap-seam panel with labyrinth-joint and reveal on four sides.
  1. Basis of Design: Panel shall be IMETCO ELEMENT Wall system or approved equal
  2. Other Manufacturers:
    - a. Atas
    - b. Pac-Clad
    - c. Or approved equal

6. Material: Aluminum sheet, 0.063 inch thick.
7. Colors shall be:
  - a. MTL-4: Custom “Orange” as selected by architect,
8. Characteristics.
  - a. Fabrication: Panels shall be factory formed from specified metal.
  - b. The standard profile shall be flat pans with reveal joints on all four sides.
  - c. Panel orientation: horizontal
  - d. Configuration (horizontal): Panel shall be up to 96” long nominal by up to 24” height as shown on the drawings, with interlocking seams incorporating concealed fasteners.
  - e. Panel Depth (Concealed Leg Height): 1 1/4 inch (32 mm), nominal.
  - f. Reveal Joint: Panel seams shall join such that adjacent panels form vertical and horizontal reveal joints 3/4-inch- (19-mm) wide.
    - 1) Horizontal reveal joints shall be staggered from panel to panel, as shown on drawings.
    - 2) Vertical reveal joints shall be aligned from panel to panel, as shown on drawings.
  - g. End Folds: Panel ends shall be factory notched by automatic mechanical press equipment to form end tabs of 1 inch (25 mm) nominal length. The end tabs shall be factory folded 90 degrees to produce a “box pan” effect and allow for reveal joints on all four sides of the panel. Vertically oriented panels to have a double end fold.

#### **2.15 METAL SOFFIT PANEL (MSP-1), CONCEALED FASTENER, FLUSH PANEL**

- A. General: Provide factory-formed metal wall panels designed to be field assembled by interlocking seams incorporating concealed anchor clips, allowing thermal movement.
- B. Concealed fastener, flat pan, flush seam wall panels
  1. Basis of Design: Panel shall be IMETCO Super Flush-Lock 311 panel wall system or approved equal
  2. Other Manufacturers:
    - a. Atas
    - b. Pac-Clad
    - c. Or approved equal
  3. Material: Aluminum sheet, 0.040 inch thick.
  4. Colors shall be IMETCO “Charcoal”
  5. Characteristics.
    - a. Fabrication: Panels shall be factory formed from specified metal.

- b. Coverage: 12-inches
- c. Profile: 1 Bead, Model # 311SFL-.75-1B
- d. Panel orientation: per architectural drawings
- e. Panel Depth (Concealed Leg Height):  $\frac{3}{4}$ -inch nominal.

## 2.16 ACCESSORIES

- B. Wall Panel Accessories: Provide components approved by panel manufacturer and as required for a complete metal wall panel assembly including trim, corner units, closures, clips, flashings, sealants, gaskets, fillers, and similar items. Match material and finish of metal wall panels unless otherwise indicated.
  - 1. Anchor Clips: Clips shall be 18 gauge galvanized steel designed to allow thermal movement of the panel in each direction along the longitudinal dimension.
  - 2. Gutter Splice at Element Reveal: At the reveal joint, a sheet metal gutter splice shall be provided in the same material type and finish as the metal cladding panels for all visible space at the reveal joint. Gutter splice material thickness shall be as recommended by manufacturer based on panel height.
  - 3. Ventilation strips shall be provided at top of wall panels, window sills, and transitions between metal panels and other exterior finish materials to allow for air exhaust at top of wall cavity. Vent strips shall be internally baffled to prevent wind driven rain from freely entering the wall cavity.
  - 4. Ventilation strips shall be provided at base of wall panels, window head, and transitions between metal panels and other exterior finish materials to allow for air intake and water weep holes at bottom of wall cavity.
- C. Flashing and Trim: Formed from same material, finish, and gauge as wall panels. Provide flashing and trim as required to provide finished appearance. Locations include, but are not limited to, head, sill, corners, jambs, framed openings, fasciae, and fillers. Finish flashing and trim with same finish system as adjacent metal wall panels.

## 2.16 FABRICATION

- B. Fabricate and finish metal wall panels and accessories at the factory to greatest extent possible, by manufacturer's standard procedures and processes and as necessary to fulfill indicated performance requirements. Comply with indicated profiles and with dimensional and structural requirements.
- C. Provide panel profile, including major ribs and intermediate stiffening ribs, if any, for full length of panel.
- D. Form flashing components from full single width sheet in minimum 10'-0" (3 m) sections. Provide mitered trim corners, joined using closed end pop rivets and butyl-based, solvent released one-part sealant.

- E. Sheet Metal Accessories: Fabricate flashing and trim to comply with recommendations in SMACNA's "Architectural Sheet Metal Manual" that apply to the design, dimensions, metal, and other characteristics of item indicated.
  - 1. Form exposed sheet metal accessories that are without excessive oil canning, buckling, and tool marks and that are true to line and levels indicated, with exposed edges folded back to form hems.
  - 2. Sealed Joints: Form nonexpanding but movable joints in metal to accommodate butyl-based sealant to comply with SMACNA standards.
  - 3. Conceal fasteners and expansion provisions where possible. Exposed fasteners are not allowed on faces of accessories exposed to view.
  - 4. Fabricate cleats and attachment devices of size and metal thickness recommended by SMACNA's "Architectural Sheet Metal Manual" or by metal wall panel manufacturer for application, but not less than thickness of metal being secured.

## 2.17 FINISHES

- B. Comply with NAAMM's "Metal Finishes Manual for Architectural and Metal Products" for recommendations for applying and designating finishes.
- C. Protect mechanical and painted finishes on exposed surfaces from damage by applying a strippable, temporary protective covering before shipping.
- D. Prevent unpainted metals from contact with oils or solvents, including fingerprints, which may cause staining of the natural finishes.
- E. Appearance of Finished Work: Noticeable variations in same piece are not acceptable. Variations in appearance of adjoining components are acceptable if they are within the range of approved Samples and are assembled or installed to minimize contrast. Note that some variation is anticipated and acceptable when natural (unpainted) material finishes are specified.

## PART 3 - PREPERATION & EXECUTION

### 3.15 EXAMINATION

- B. Examine substrates, areas, and conditions, with Installer present, for compliance with requirements for installation tolerances, metal wall panel supports, and other conditions affecting performance of the Work.
- A. Examine primary and secondary wall framing to verify that girts, studs, angles, channels, and other structural panel support members and anchorages have been installed within alignment tolerances required by metal wall panel manufacturer.
- B. Examine solid wall sheathing to verify that sheathing joints are supported by framing or blocking and that installation is within flatness tolerances required by metal wall panel manufacturer.

- C. Examine roughing-in for components and systems penetrating metal wall panels to verify actual locations of penetrations relative to seam locations of metal wall panels before metal wall panel installation.
- A. For the record, prepare written report, endorsed by Installer, listing conditions detrimental to performance of the Work.
- B. Proceed with installation only after unsatisfactory conditions have been corrected.

### **3.4 PREPARATION**

- A. Clean substrates of substances harmful to insulation, including removing projections capable of interfering with insulation attachment.
- B. Establish straight, side and crosswise benchmarks
- C. All walls shall be checked for square and straightness. Inside and outside corners may not be plumb; set a true line for the corner flashing with string line.
- D. Measure the wall lengthwise to confirm panel lengths and verify clearances for thermal movement.

### **3.5 METAL SUBFRAMING INSTALLATION**

- A. See also section 074800 Rainscreen Attachment system
- B. Install metal subframing directly over continuous thermal insulation. Metal subframing shall attach to the structural wall elements with screw fasteners. Metal subframing shall be spaced as necessary to accommodate the required clip spacing for the metal cladding panels.
- C. Attachments shall be as recommended by the metal claddings system manufacturer's approved shop drawings.

### **3.6 METAL WALL PANEL INSTALLATION**

- A. All details will be shown on in accordance with approved shop drawings and manufacturer's product data, within specified erection tolerances

- A. Directly over the completed wall substrate, fasten the top flange of the panel to the metal subframing using panel clips. All panels clips will be fastened into the metal subframing as indicated on the metal cladding panel manufacturer's approved shop drawings.
- B. Installation of Wall Panels: Wall panels can be installed by starting from one end and working towards the opposite end (vertical orientation), or from the bottom of wall working towards the top of the wall (horizontal orientation).
- C. Metal wall panels and trim must be installed only in accordance with the manufacturer's recommendation for acceptable temperature range.
- D. Isolate dissimilar metals and masonry or concrete from metals with bituminous coating. Use gasketed fasteners where required to prevent corrosive action between fastener, substrate, and panels.
- E. Limit exposed fasteners to extent indicated on contract drawings.
- F. Seal laps and joints in accordance with metal cladding panel system manufacturer's product data.
- G. Coordinate flashing and sheet metal work to provide weathertight conditions at wall terminations. Fabricate and install in accordance with standards of SMACNA Manual.
- H. Provide for temperature expansion/contraction movement of panels at wall penetrations and wall mounted equipment in accordance with system manufacturer's product data and design calculations.
- I. Installed system shall be true to line and plane and free of dents, and physical defects. In light gauge panels with wide flat surfaces, some oil canning may be present. Oil canning does not affect the finish or structural integrity of the panel and is therefore not cause for rejection.
- J. At joints in linear sheet metal items, other than metal cladding panels which are intended to provide ventilation, set sheet metal items in two 1/4-inch- (6-mm-) beads of butyl sealant. Extend sealant over all metal surfaces. Mate components for positive seal. Allow no sealant to migrate onto exposed surfaces.
- K. Remove damaged work and replace with new, undamaged components.
- L. Touch up exposed fasteners using paint furnished by the panel manufacturer and matching exposed panel surface finish.
- M. Clean exposed surfaces of wall panels and accessories after completion of installation. Leave in clean condition at date of substantial completion. Touch up minor abrasions and scratches in finish.

### **3.8 ERECTION TOLERANCES**

- A. Installation Tolerances: Shim and align metal wall panel units within installed tolerance of 1/4 inch in 20 feet (6 mm in 6 m) at location lines as indicated and within 1/16-inch (1.5-mm) offset of adjoining faces and of alignment of matching profiles.

**3.9 FIELD QUALITY CONTROL**

- A. Manufacturer's Field Service: Engage a factory-authorized service representative to inspect metal wall panel installation, including accessories. Report results in writing.
- B. Remove and replace applications of metal wall panels where inspections indicate that they do not comply with specified requirements.
- C. Additional inspections, at Contractor's expense, will be performed to determine compliance of replaced or additional work with specified requirements.

**3.11 CLEANING**

- A. Remove temporary protective coverings and strippable films, if any, as metal wall panels are installed unless otherwise indicated in manufacturer's written installation instructions. On completion of metal wall panel installation, clean finished surfaces as recommended by metal wall panel manufacturer. Maintain in a clean condition during construction.
- B. Replace metal wall panels that have been damaged or have deteriorated beyond successful repair by finish touchup or similar minor repair procedures.

END OF SECTION 074113

## SECTION 07 4800 - RAINSCREEN ATTACHMENT SYSTEM

### PART 1 - GENERAL

#### 1.1 SUMMARY

- A. Provide a thermally broken, rainscreen attachment and subgirt system for attachment of exterior cladding installed over continuous exterior-insulation.
- B. Related Sections:
  - 1. Refer to Division 05 Section "Cold-formed metal Framing".
  - 2. Refer to Division 06 Section "Sheathing".
  - 3. Refer to Division 07 Section "Fluid Applied Air Barrier"
  - 4. Refer to Division 07 Section "Formed metal wall panel"
  - 5. Refer to Division 07 Section "Thermal Insulation" for exterior continuous insulation.

#### 1.2 SYSTEM DESCRIPTION

- A. System assembly shall include the following components from the substrate out:
  - 1. Substrate 1: Wall framing assembly and sheathing, and Substrate 2: Concrete masonry unit.
  - 2. Weather Resistant/Air Barrier over substrate.
  - 3. Continuous insulation.
  - 4. Thermally broken rainscreen attachment and subgirt system.
  - 5. Exterior cladding.
- B. Design Requirements:
  - 1. Manufacturer is responsible for designing system, including anchorage to structural system and necessary modifications to meet specified requirements and maintain visual design concepts.
  - 2. Employ registered professional engineer, licensed to practice engineering in jurisdiction where Project is located, to engineer each component of rainscreen attachment system.
  - 3. Structural Design: Exterior-insulated rainscreen wall assembly capable of withstanding effects of load and stresses from dead loads, wind loads, ice loads (if applicable) as indicated on Structural General Notes on Structural Drawings, and normal thermal movement without evidence of permanent defects of assemblies or components.
    - a. Thermal Movements: Provide assemblies that allow for thermal movements resulting from the following maximum ambient temperatures by preventing overstressing of components and other detrimental effects:

- 1) Temperature Change (range): 120 degrees Fahrenheit (67 degrees C), ambient:

C. Performance Requirements:

1. Rainscreen Attachment System Performance: Comply with ANSI/ASHRAE 90.1-2016 definition of continuous insulation (c.i.).
2. No thermal bridges other than fasteners and service openings.
3. Thermal Performance:
  - a. Full constructed assembly must have a minimum 95% EFFECTIVE R-value when compared to the exterior continuous insulations rated R-Value.
  - b. Continuous framing profiles (including C- or Z-shaped sections or furring) penetrating insulation not allowed except where specifically noted in details.
4. Structural Performance:
  - a. Wind Load Performance – Attachment system must show the following results when tested in accordance with ASTM E330-02.
    - 1) 90 pound per square foot negative and positive pressure held for 60 seconds, system components shall not experience failure or gross permanent distortion.
    - 2) 135 pound per square foot negative and positive pressure held for 10 seconds, system components shall not experience failure or gross permanent distortion.
  - b. Wind cycling (air pressure cycling) performance – Attachment system must show conformance to the following results when tested in accordance with ASTM E1886-05.
    - 1) A total of 4,500 air pressure cycles. Cycles must include 50 cycles at a maximum pressure of 90 pounds both positive and negative. Average cycle time must not be less than 3.25 seconds for both negative and positive cycles. Cladding weight supported during test must be a minimum of 11.5 pounds per square foot. No damage or deformation must be seen at end of test.
  - c. Gravity load (dead load) performance – Attachment system must demonstrate resistance to deflection under shear loading, applied parallel to the wall assembly and directly to the attachment system. Testing must be conducted using calibrated equipment by an IAS accredited third party laboratory. Deflection not to exceed 0.050 inches at 150 pounds per square foot.
5. Framing Members:
  - a. Test framing components to AAMA TIR- A8-[04] – Section 7.2 to determine structural performance and effective moment of inertia for each perforated component. Minimum Effective Moment of Inertia: 0.0066 in<sup>4</sup>.

- b. Localized bending stress for eccentrically loaded framing members must be evaluated with the maximum effective length of resisting element not more than 12 inches.
- 6. Fasteners:
  - a. Minimum Safety Factor of 3 for both tension and shear values
  - b. Combined tension and shear shall be evaluated according to an interaction formula. Sum of terms shall not exceed 1.0.

### 1.3 SUBMITTALS

- A. Product Data: Submit manufacturer's product literature and descriptions of testing performed on system components to indicate meeting or exceeding specified performance.
- B. Shop Drawings:
  - 1. Submit connection details to the cladding manufacturer, showing interface of rainscreen attachment system to substrate and panels with adjacent construction, signed and sealed by Professional Engineer.
  - 2. Show system installation and attachment, including fastener size and spacing.
  - 3. Show thru-wall flashings
- C. Structural Calculations:
  - 1. Submit rainscreen attachment manufacturer's comprehensive Structural Design analysis signed and sealed by a Professional Engineer.
- D. Samples: Submit following material samples for verification:
  - 1. Vertical Girts: 12-inch long sample
  - 2. Horizontal panelgirts: 12 inch long sample.
- E. Test Reports:
  - 1. Test to the following standards and provide written test reports by a third party:
    - a. AAMA TIR-A8-[04]: Structural Performance of Composite Thermal Barrier Framing Systems – Section 7.2
    - b. ASTM E330
    - c. ASTM E1233
    - d. Gravity load test report, performed by IAS accredited third party

### 1.4 QUALITY ASSURANCE

- A. Manufacturer Qualifications:
  - 1. Minimum 5 years' experience specializing in the manufacturing of façade attachment/support framing similar to those specified.
  - 2. Ability to demonstrate conformance to testing requirements.

- B. Installer Qualifications:
  - 1. Minimum of 3 years' documented experience or minimum of 5 completed projects of equivalent scope and quality and recommended by manufacturer to perform work of this Section.
  - 2. Onsite superintendent or foreman overseeing installation on site during entire work of this Section with experience equivalent to installer and in good standing with the manufacturer.
- C. Engineer Qualifications: Registered professional engineer experienced in the design of curtain wall systems, anchors, fasteners and licensed to practice engineering in the jurisdiction where Project is located.
- D. Pre-Installation Meeting:
  - 1. Discuss sequence and scheduling of work and interface with other trades.
  - 2. Review metal wall framing assemblies for potential interference and conflicts and coordinate layout and support provisions for interfacing work.
  - 3. Review and document methods, procedures and manufacturer's installation guidelines and safety procedures for exterior wall assembly.
- E. Mock-Ups: Coordinate mock-up materials and requirements with in-place mock-up as noted on exterior elevations to proceed full mobilization and installation.

## 1.5 QUALITY CONTROL

- A. Single source responsibility:
  - 1. Furnish engineered rainscreen attachment system components under direct responsibility of single manufacturer.
- B. Field Measurements: Verify actual supporting and adjoining construction before fabrication.
- C. Record field measurements on project record shop drawings.
- D. Established Dimensions: Where field measurements cannot be made without delaying work, guarantee dimensions and proceed with fabrication of rainscreen attachment system corresponding to established dimensions.

## 1.6 DELIVERY, STORAGE AND HANDLING

- A. Delivery: Deliver materials and components in manufacturers' original, unopened and undamaged containers or bundles, fully identified. Exercise care to avoid damage during unloading, storing and installation.
- B. Store, protect and handle materials and components in accordance with manufacturer recommendations to prevent damage, contamination and deterioration. Keep materials clean, dry, and free of dirt and other foreign matter, and protect from damage due to weather or construction activities.

## 1.7 SEQUENCING

- A. Ordering: Comply with manufacturers' ordering instructions and lead time requirements to avoid construction delays.
- B. Coordinate construction to ensure that assemblies fit properly to supporting and adjoining construction; coordinate schedule with construction in progress to avoid delaying work.

## 1.8 WARRANTY

- A. Manufacturer Warranties:
  - 1. Attachment System: Ten (10) year Limited Warranty.
    - a. Covers components of the attachment system, including structural failure of components when all the materials and components are supplied and installed per manufacturer's requirements.
    - b. Includes labor and material for removal and replacement of defective material.
    - c. Includes labor to remove and reinstall façade finish panels, finish closures and façade finish accessories necessary to access defective material.
- B. Contractor's Warranties: 2-year labor warranty, starting from Substantial Completion, to cover repair of materials found to be defective as a result of installation errors.
- C. Limitation of Warranties: Exclude repairs, replacement, and corrective work to the substrate, primary structure, finish panels, and/or property – unless otherwise noted above. Warranties exclude mechanical damage due to abuse, neglect, primary structure failure, or forces of nature greater than normal weather conditions.

## PART 2 - PRODUCTS

### 2.1 RIGID INSULATION

- A. Refer to Section 07 21 00 – Thermal Insulation.

### 2.2 RAINSCREEN ATTACHMENT/SUPPORT FRAMING SYSTEM

- A. Basis of Design: CI girt as manufactured by Knightwall systems
- B. Other Manufacturers:
  - 1. Imetco IntelliFrame
  - 2. Or Approved equal
- C. Comply with ANSI/ASHRAE 90.1-2016 definition of continuous insulation (c.i.).
- D. Coating Material: ASTM A1046, Zinc-Aluminum-Magnesium, minimum thickness ZM40 or approved equal.
- E. Steel Classification: Structural Steel (SS), Grade 50, 50 ksi Yield.
- F. Spacing: Comply with manufacturer's Professional Engineers calculations but not spaced more the following:

1. Vertical installation of girts: 16" o.c. max
  2. Horizontal installation of girts: 24" o.c. max.
- G. Girt: girt with pre-punched attachment holes, directly attached on top of rigid insulation at regular spacing, with engineered thermally isolated washer assembly and fasteners.
1. Steel Thickness: Minimum 0.046-inch thick (18 gauge).
  2. Profile Depth: 0.75 inches.
  3. Girt Fastening Face, Width: 2-inches.
- H. Thermally isolated Z-furring: Provide where indicated on drawing only. Thru-insulation z-girts are not acceptable at all locations
1. Steel thickness: minimum 0.046-inch thick (18 gauge)
  2. Depth: 1.5 inches
  3. Profile: perforated Z-furring with thermal isolation pad and washers
  4. Furring fastening face width: 1-5/8"
  5. Basis of design: ThermaZee by knightwall
    - a. Or approved equal
- I. Fasteners:
1. Sufficient length to provide solid attachment through rigid insulation to structure as required by manufacturer.
  2. Thermal Isolating Washers: Minimum 0.125 inch thick Polyoxymethylene copolymer (POM) washers with integral centering lip to act as a thermal break between wall anchor fasteners and girt.
    - a. Tensile Yield Strength: 9.57 ksi per ISO 527
    - b. Melting Temperature: 329 degrees Fahrenheit per ISO 3146
    - c. Basis of Design: ThermaStop™ Isolator by Knight Wall Systems.
      - 1) Or approved equal.
  3. Steel stud framing substrate: Self-drill hex-washer-head stainless steel with 1,000 hour salt-spray rated thermoset polyester coating.
    - a. Embedment depth: 0.625 inches or three full threads minimum, whichever is greater.
    - b. Minimum ultimate pull-out capacity from 18 gauge steel: 450 pounds.
  4. Concrete masonry units substrate:
    - a. Embedment depth: 1.25 inches minimum.
    - b. Minimum ultimate pull-out capacity from substrate material: 450 pounds.
      - 1) 1/4 inch Kwik-Con II+ by Hilti

- 2) 1/4 inch Tapcon by Buildex
- 3) 1/4 inch UltraCon by Elco Industries
- 4) Or approved equal.

J. Accessories:

1. Galvanic Protection: Utilize tapes and other methods as necessary to separate and prevent contact between dissimilar metals.

## 2.3 SIDING/CLADDING PANEL

- A. Refer to Division 07 Section "Formed metal wall panels"

## PART 3 - EXECUTION

### 3.1 EXAMINATION

- A. Examine substrates and conditions for compliance with manufacturer requirements for installation conditions affecting performance of the work.
1. Do not proceed with installation until unsatisfactory conditions have been corrected.
  2. Ensure weather-resistant barrier (WRB) and rigid insulation is installed prior to installing rainscreen attachment system.
  3. Ensure fenestration, transitions, discontinuities, sills, and ledgers are flashed and sealed to move moisture to the exterior of the building.
- B. Field verify architectural details and mechanical and electrical requirements prior to commencing installation.
- C. Commencement of installation constitutes acceptance of existing conditions and acceptance of responsibility for satisfactory performance.

### 3.2 RAINSCREEN ATTACHMENT SYSTEM INSTALLATION

- A. Preparation:
1. Verify vertical girt does not cantilever past rigid insulation.
- B. Installation
1. Install girts in vertical or horizontal orientation in strict accordance with manufacturer's installation instructions.
  2. Do not use shims to plumb the wall between the vertical girt and insulation.
  3. Minimum length of installed cut girt is 24-inches and shall be attached with at least two (2) fasteners.

4. Mount box girts, fastened up to 16 inches on center over installed rigid insulation, using one wall anchor per pre-punched attachment hole at spacing indicated on engineering calculations.
  - a. Check plumb of vertical girts both parallel and perpendicular to the structure.
  - b. Tighten screws that attach vertical girt through insulation to substructure to a snug tight condition and not stripped. Do not over-torque beyond manufacturer's recommendation. If installed using hand tools, verify for each installer at beginning of project using snug-tight criteria. Do not use stripped holes.
  - c. Where obstructions are present and unavoidable (i.e. window openings), use laser or chalk line to restart girt.
  - d. Locate vertical girt at jamb conditions and outside corner conditions.
  - e. Use shearing instruments (i.e. snips, nibbler, etc.) for cutting metal framing components. Saws are not recommended, as the sparks produced during cutting will damage the anti-corrosion coating. If sparks are generated during cutting, be sure the portion of the component to be installed on the building is protected from sparks and that any stockpile near the cutting station is also protected.
  - f. The systems components should not be cut while installed on the building, unless using a shearing instrument.
  - g. Replace thermal isolator pieces that break during installation.
  - h. Provide a 3/8" – 1/2" gap between girts for expansion when multiple lengths of vertical girts are installed.

END OF SECTION 07 48 00

## SECTION 07 5400 PVC THERMOPLASTIC SINGLE-PLY ROOFING

### PART 1 GENERAL

#### 1.1 SECTION INCLUDES

- A. Fully adhered PVC thermoplastic single-ply roofing system.
- B. Roof insulation.
- C. Coverboard
- D. Flashing accessories.
- E. Edgings and terminations.
- F. Walkways
- G. Snow guards attached directly to roof deck

#### 1.2 REFERENCES

- A. American Society of Civil Engineers (ASCE) - ASCE 7 - Minimum Design Loads for Buildings and Other Structures, Current Revision.
- B. Factory Mutual (FM Global):
  - 1. Approval Guide.
    - a. Factory Mutual Standard 4470 - Approval Standard for Class 1 Roof Covers.
    - b. Loss Prevention Data Sheets 1-28, 1-29.
- C. International Code Council (ICC):
  - 1. International Building Code (IBC).
- D. National Roofing Contractors Association (NRCA) - Low Slope Roofing and Waterproofing Manual, Current Edition.
- E. Sheet Metal and Air Conditioning Contractors National Association, Inc. (SMACNA) - Architectural Sheet Metal Manual.
- F. Underwriters Laboratories (UL):
  - 1. TGFU R1306 - "Roofing Systems and Materials Guide".
  - 2. UL-790 - Standard Test Method for Fire Tests of Roof Coverings.

#### 1.3 DESIGN CRITERIA

- A. FM Approved assemblies required
- B. Wind Uplift Performance:
  - 1. Roof system is designed to withstand wind uplift forces as calculated using the current revision of ASCE-7. – Zone 1 (-42.3 psf), Zone 2 (-71 psf), Zone 3 (-106.9 psf)
  - 2. Roof system is designed to achieve a minimum FM 1-90 wind uplift rating with prescriptive enhancements at corners and perimeter
  - 3. Safety Factor Requirement: 2.0

- A) Steel Deck - FM Roof NAV # 387334-0-0
- B) Concrete Deck – FM Roof NAV # 364511-0-0 (FM 1-315 Rating)
- C. Fire Resistance Performance:
  - 1. Roof system will achieve a UL Class A rating when tested in accordance with UL-790.
- D. Thermal Performance: Roof system will achieve a minimum R value not less than 30.
- E. Drainage: Provide a roof system with positive drainage where all standing water dissipates within 48 hours after precipitation ends.
- F. Building Codes:
  - 1. Roof system will meet the requirements of all federal, state and local code bodies having jurisdiction.

#### 1.4 SUBMITTALS

- A. Submit under provisions of Section 01 30 00.
- B. Product Data: Manufacturer's data sheets on each product to be used, including:
  - 1. Preparation instructions and recommendations.
  - 2. Storage and handling requirements and recommendations.
  - 3. Installation methods.
- C. Samples: For each finish product specified, two samples, minimum size 4 inches square representing actual product, color, and patterns.
- D. Manufacturer Assembly Letter: stating all components of each roof assembly including the fastening/adhesive spacing of each.
  - 1. Letter shall confirm warranty provided by submitted assembly, uplift criteria met, and state FM assembly number.
- E. Snow guard manufacturer installation instructions and written recommended layout and spacing
- F. Completed form FM GLOBAL FORM X2688 Checklist for roofing system.

#### 1.5 QUALITY ASSURANCE

- A. Manufacturer Qualifications: All primary products specified in this section will be supplied by a single manufacturer with a minimum of twenty (20) years experience.
- B. Installer Qualifications:
  - 1. All products listed in this section are to be installed by a single installer with a minimum of five (5) years demonstrated experience in installing products of the same type and scope as specified.
  - 2. Installer shall be capable of extending the Manufacturer's Labor and Materials guarantee.
  - 3. Installer shall be capable of extending the Manufacturer's No Dollar Limit guarantee.

#### 1.6 DELIVERY, STORAGE, AND HANDLING

- A. Store products in manufacturer's unopened packaging until ready for installation.
- B. Store and dispose of hazardous materials, and materials contaminated by hazardous materials, in accordance with requirements of local authorities having jurisdiction.

## 1.7 PROJECT CONDITIONS

- A. Maintain environmental conditions (temperature, humidity, and ventilation) within limits recommended by manufacturer for optimum results. Do not install products under environmental conditions outside manufacturer's absolute limits.

## 1.8 WARRANTY

- A. At project closeout, provide to Owner or Owners Representative an executed copy of the manufacturer's Total System warranty, outlining its terms, conditions, and exclusions from coverage.
  - 1. Duration: 30 Years, 72 mph Edge to Edge Warranty
  - 2. Coverage to be extended to include roof edge metal water tightness in accordance with terms stated in the Warranty document.

## PART 2 PRODUCTS

### 2.1 MANUFACTURERS

- A. Basis of Design Manufacturer:
  - 1. Carlisle SynTec Systems
- B. Other Manufacturers:
  - 1. Versico
  - 2. Sika Corporation
  - 3. Or approved equal

### 2.2 SCOPE / APPLICATION

- A. Roof System: Provide a waterproof roof system, capable of withstanding uplift forces as specified in this section.
  - 1. Membrane Attachment: Fully Adhered.
- B. Base Flashing: Provide a waterproof, fully adhered base flashing system at all penetrations, plane transitions and terminations.
- C. Insulation: Provide a roof insulation system beneath the finish membrane.
- D. Parapet insulation: Provide nailable composite osb insulation at parapet walls and where indicated on drawings

### 2.3 MEMBRANE ATTACHMENT: FULLY ADHERED

- A. Sure-Flex PVC KEE HP Membrane as manufactured by Carlisle SynTec Systems or approved equal as part of a tested assembly:
  - 1. Membrane consists of polyester fabric that is encapsulated between the monolithically formed PVC KEE HP based top and bottom plies. PVC membrane enhanced with KEE HP/ High Performance Elvaloy copolymer (Elvaloy(r) KEE-Ketone Ethylene Ester) provides enhanced chemical resistance, heat resistance, UV resistance and long-term weldability.
  - 2. Color: White.
  - 3. Membrane Thickness: 80 mil nominal.
    - a. Thickness over Scrim (ASTM D 4434): 0.036 inches (0.91 mm) minimum.
    - b. Breaking Strength (ASTM D 751): 330 lbf/in (58kN/m) minimum.
    - c. Tearing Strength (ASTM D 751): 150 lbf (667 N) minimum.
    - d. Elongation (ASTM D 751): 30 percent.
    - e. Field Sheet Width: 120 inches (3048 mm) maximum.

- f. Length: 75 feet (22.86 m) maximum.

## **2.4 INSULATION**

- A. Polyisocyanurate: A foam core insulation board covered on both sides with glass fiber reinforced facer (GRF) meeting ASTM C 1289, Type II, Class 1. Carlisle InsulBase or approved equal.
  - 1. Compressive Strength: Grade 2 (20 psi) .

## **2.5 COVERBOARD & SUBSTRATE PROTECTION BOARD**

- A. Moisture-, mold- and impact-resistant, nonstructural fiber-reinforced gypsum panel made from 95 percent recycled materials. Securock or approved equal
  - 1. Board Thickness: 1/2 inch (13 mm).

## **2.6 MEMBRANE BASE SHEET VAPOR BARRIER**

- A. VapAir 725TR Air & Vapor Barrier/Temporary Roof or approved equal as part of tested assembly: 40mil composite consisting of 35mils self-adhereing rubberized asphalt laminated to a 5-mil woven polypropylene film. See manufacturer installation requirements.

## **2.7 INSULATION ADHESIVE**

- A. Flexible FAST Adhesive or approved equal: A spray or extruded applied, two-component polyurethane, low-rise expanding foam adhesive used for attaching approved insulations to compatible substrates (concrete, cellular lightweight insulating concrete, gypsum, cementitious wood fiber, wood or steel) or existing smooth or gravel surfaced BUR, modified bitumen or cap sheets.
- B. Flexible FAST Dual Tank Adhesive or approved equal: A two-component, polyurethane construction grade, low-rise expanding adhesive designed for bonding insulation to various substrates using a portable applicator.

## **2.8 NAILABLE COMPOSITE OSB INSULATION**

- A. StormBase or approved equal: rigid insulation composite panel composed of closed-cell polyisocyanurate foam core bonded during the manufacturing process directly to 7/16" oriented strand board (OSB)
  - 1. ATSM C1289, type V
  - 2. APA-TECO-rated exposure 1 oriented strand board one face
  - 3. Provide where indicated: Thickness: 1.5inch, LTTR = 6.3
  - 4. Provide where indicated: Thickness 3inches, LTTER = 15.0

## **2.9 FLASHING ACCESSORIES**

- A. Roof Manufacturer's PVC Inside Corners: Pre-molded corner flashing for inside corners. 60 mil thickness.
  - 1. Color: White.
- B. Roof Manufacturer's PVC Outside Corners: Pre-molded corner flashing for outside corners. 60 mil thickness.
  - 1. Color: White.
- C. Roof Manufacturer's PVC T-Joint Covers: 60 mil thick non-reinforced PVC flashing cut into a 4.5 inch (114 mm) diameter circle used to seal step-offs at splice intersections.
  - 1. Color: White.

- D. Roof Manufacturer's PVC Molded Pipe Flashings: A pre-molded flashing and clamping ring used for pipe penetrations. Available for 3/4 inch to 8 inch (19 to 203 mm) diameter pipes.
- E. Roof Manufacturer's PVC Split Pipe Seals: Pre-fabricated flashing consisting of 60 mil thick reinforced Sure-Flex Membrane for pipes 1 inch to 6 inch (25 to 152 mm) in diameter. A split (cut) and overlap tab are incorporated to allow the pipe seal to be opened and wrapped around the pipe when it is not possible to pull a standard pipe flashing over a round penetration.
- F. Roof Manufacturer's PVC Square Tubing Wraps: Fabricated flashings made of 60 mil thick reinforced Sure-Flex membrane for square tubing. A split (cut) and overlap tab are incorporated into these parts to allow the seals to be opened and wrapped around a square penetration. Available for 3 inches, 4 inches and 6 inches (76, 102, 152 mm) diameter square tubing. Available in white or gray.
- G. Roof Manufacturer's PVC Molded Sealant Pockets:
  - 1. Pre-fabricated, interlocking, 2-piece, injection molded, flexible pocket with a semi rigid PVC vertical wall and pre-formed deck flanges.
  - 2. Use in conjunction with Thermoplastic One-Part Pourable Sealer as specified in this section for waterproofing pipe clusters or other odd shaped penetrations. Forms a 7-1/2 inches by 6 inches (191 x 152 mm) oval when completed. Available in white only.
- H. Roof Manufacturer's PVC Heat Weldable Walkway Rolls: Membrane offering superior tear, puncture and weather resistance and designed to protect membrane in those areas exposed to repetitive foot traffic or other hazards. Walkway material may be heat welded to membrane using an automated heat welder or hand held heat welder. Walkway Rolls are 36 inches (914 mm) wide by 60 feet (18.3 M) long and are nominal 110 mils thick. Color - Gray.
- I. Roof Manufacturer's PVC Non-Reinforced Flashing: 60 mil thick rolls 12 inches (305 mm) and 24 inches (610 mm) wide. Used for inside/outside corners and field fabricated pipe flashings when use of pre-molded accessories is not feasible. Available in white, gray, light gray, slate gray and tan.

## **2.10 CLEANERS, PRIMERS, ADHESIVES AND SEALANTS**

- A. Low VOC PVC Bonding Adhesive: A high-strength solvent based adhesive that allows bonding of PVC and KEE-enhanced PVC membrane to various porous and non-porous substrates.
- B. Flexible FAST Adhesive or approved equal: A two-component (Part A and B), spray applied, low-rise adhesive for bonding FleeceBACK membrane to various surfaces.
- C. Flexible FAST Dual Tank Adhesive or approved equal: A two component (Part A and B), extrusion applied, low rise adhesive for bonding FleeceBACK membrane and insulation to various surfaces.
- D. Water Cut-Off Mastic: A one-component, low viscosity, self wetting, Butyl blend mastic used as a compression sealing agent between membrane and applicable substrates.
- E. Universal Single-Ply Sealant: A 100 percent solids, solvent free, one-part polyether sealant that is used as a termination bar sealant. Available in white only.
- F. PVC and KEE HP Membrane Cleaner: Clear, solvent-based cleaner used to loosen and remove contaminants from the surface of exposed membrane.

## **2.11 FASTENERS**

- A. HP-X Fastener or approved equal: A heavy duty #15 threaded fastener with a #3 Phillips drive used with Carlisle's Piranha Fastening Plate to secure Mechanically Fastened Roofing Systems. It is used on minimum 22 gauge steel decks or minimum 15/32 inch (12 mm) CDX plywood decks. It is also designed to offer an optimum combination of driving performance, back-out and corrosion resistance with excellent pullout performance.
- B. InsulFast Fasteners or approved equal : A threaded Phillips drive fastener used with Carlisle Insulation Plates for insulation attachment to steel or wood decks.
- C. Piranha Plate or approved equal: A 2-3/8 inches (60 mm) diameter metal barbed fastening plate used with Carlisle HP-X, CD-10 or HD 14-10 Fasteners for membrane or insulation securement. This plate can be used for membrane or insulation securement on Mechanically Fastened Roofing Systems.
- D. Insulation Fastening Plate: A nominal 3 inches (76 mm) metal plate used for insulation attachment in conjunction with the appropriate Carlisle Fastener.

## 2.12 EDGINGS AND TERMINATIONS

- A. SecurEdge 2000 or approved equal: An anchor bar roof edge fascia system consisting of 0.100 inch (2.5 mm) thick extruded aluminum bar, corrosion resistant stainless steel fasteners and snap-on fascia cover.
  - 1. Profiles: provide standard fascia and drip edge fascia as indicated on the drawings with associated gutters and leaders.
  - 2. Minimum .040 aluminum thickness.
  - 3. Face dimension: as indicated on the drawings but not less than 5-1/2"
  - 4. Provide accessories as required including miters
  - 5. See specification 076200 sheet metal flashing and trim for gutters and leader requirements
- B. SecurEdge 200 Coping or approved equal: An anchor cleat with pre-slotted holes, a concealed joint cover, and 10 or 12 foot sections of coping cap. Kynar 500 finish as noted on the Finish Schedule of the Contract Drawings.
  - 1. Provide welded accessories at corners and T-intersections
  - 2. Minim .050 aluminum thickness
  - 3. Face Dimension: as shown on drawings but not less than 6" at outside face and 4" at inside face

## 2.13 ROOF GUARDS

- A. Fence style snow and ice guard manufactured by Alpine snowguards PP115 or approved equal attached directly to the roof deck. System shall be approved by roofing membrane manufacturer and not impact or prevent warranty.
  - 1. Components:
    - a. milled aluminum bracket with 2 fastener holes to accept a 5/16" minum base stud and holes in flag to accept 2 continuous horizontal pipes.
    - b. Base plate shall be 8"x8" minimum stainless steel with furrule tubes designed to fit into insulation to be fastened to metal decking.
    - c. Target patch flashing of same material and manufacturer as roofing membrane in size acceptable to roofing manufacturer to meet warranty but not less than 12"x12"
    - d. Pipes fabricated from and couples fabricated from aluminum with internal couples, end caps and end collars
    - e. Ice flags between each bracket to prevent ice and snow from sliding underneath the pipe.
  - 2. Design requirements:

- a. Spacing to be as recommended by manufacturer but not less than 24 inches on center
  - b. Minimum 6 fasteners per snow guard base plate
- 3. Materials:
  - a. Snow Guard Bracket - 6000 Series Aluminum.
  - b. Base Plate – 11-gauge 304 stainless steel with two 5/16" 304 stainless steel machine screws welded into countersinks.
  - c. Pipes: Aluminum – 6000 Series, 1" outside diameter and .120" wall thickness, extruded.
  - d. Couplings: Aluminum – 6000 Series, Internal and concealed coupling 3" long.
  - e. End Caps: 304 Stainless Steel
  - f. End Collars: 6000 Series Aluminum
  - g. Ferrules – 6000 Series Aluminum 1" O.D, .120" wall thickness x 24" long. Cut to length on site.
  - h. Ice Flags: 6000 Series Aluminum 3" wide x length as recommended by manufacturer.
  - i. Fasteners to be compatible with chosen roof application and meet specified pull-out values as shown in load test data.
- 4. FINISH
  - a. Powder Coated selected from manufacturers full range

## PART 3 EXECUTION

### 3.1 EXAMINATION

- A. Do not begin installation until substrates have been properly prepared.
- B. If substrate preparation is the responsibility of another installer, notify Architect of unsatisfactory preparation before proceeding.

### 3.2 PREPARATION

- A. Clean surfaces thoroughly prior to installation.
- B. Prepare surfaces using the methods recommended by the manufacturer for achieving the best result for the substrate under the project conditions.
- C. Do not commence Work until all other work trades have completed jobs that require them to traverse the deck on foot or with equipment.
- D. A vapor retarder / temporary roof (Carlisle VapAir Seal725 TR Air & Vapor Barrier/Temporary Roof or approved equal as part of tested assembly) to be applied to protect the inside of the structure prior to the roof system installation.

### 3.3 SUBSTRATE PREPARATION

- A. Structural Concrete Deck:
  - 1. Minimum deck thickness for structural concrete is 4 inches (102 mm).
  - 2. Allow roof deck to cure prior to application of the roofing system. Where curing is in question, evaluate surface moisture and deck's dryness with the ASTM D 4263 or hot bitumen test procedures.
  - 3. Repair cracks greater than 1/8 inch (3 mm) in width in accordance with the deck manufacturer's recommendations.
  - 4. Sumps for the roof drains shall be provided in the casting of the deck.
  - 5. Where insulation is to be adhered with hot asphalt, prime the deck with

asphalt/concrete primer, ASTM D 41 at the rate of one gallon per 100 square feet (0.4 l/sm). Allow the primer to dry prior to the application of the roofing system.

- B. Steel Deck:
  - 1. Metal decks shall be a minimum uncoated thickness of 22 gauge and have a G-90 galvanized finish on all panels.
  - 2. Decks must comply with the gauge and span requirements in the current Factory Mutual Approval Guide and be installed in accordance with Loss Prevention Data Sheet 1-28 or specific FM approval.
  - 3. Remove any surface corrosion and repair severely corroded areas. Properly fasten loose or inadequately secured decking.

### 3.4 INSULATION - SYSTEM DESIGN

- A. Base Layer:
  - 1. Type: INSULBASE INSULATION or approved equal as part of a tested system
  - 2. Thickness: 2.6 inches
  - 3. Attachment Method: ADHERED
- B. Top Layer:
  - Type: INSULBASE INSULATION or approved equal as part of a tested system
  - 1. Thickness: 2.6 inches
  - 2. Attachment Method: ADHERED
- C. Crickets:
  - 1. Type: INSULBASE TAPERED INSULATION or approved equal as part of a tested system
  - 2. Slope: ½" per foot
  - 3. Attachment Method: Adhered
- D. Coverboard:
  - 1. Type: Securock Gypsum Fiber Roof Board
  - 2. Thickness: 1/2 inch
  - 3. Attachment Method: ADHERED

### 3.5 INSULATION PLACEMENT

- A. Install insulation or membrane underlayment over the substrate with boards butted tightly together with no joints or gaps greater than 1/4 inch (6 mm). Stagger joints both horizontally and vertically if multiple layers are provided.
- B. Secure insulation to the substrate with the required mechanical fasteners or insulation adhesive in accordance with the manufacturer's current application guidelines.
- C. Do not install wet, damaged or warped insulation boards.
- D. Stagger joints in one direction unless joints are to be taped. Install insulation boards snug. Gaps between board joints shall not exceed 1/4 inch (6 mm). Fill all gaps in excess of 1/4 inch (6 mm) with same insulation material.
- E. Wood nailers must be at least 3 1/2 inches (89 mm) wide or 1 inch (25 mm) wider than adjacent metal flange. Thickness must equal that of insulation but not less than 1 inch (25 mm) thickness.
- F. Miter and fill the edges of the insulation boards at ridges, valleys and other changes in plane to prevent open joints or irregular surfaces. Avoid breaking or crushing of the insulation at the corners.

- G. Do not install any more insulation than will be completely waterproofed each day.

### **3.6 INSULATION ATTACHMENT**

- A. Securely attach insulation to the roof deck for Adhered or Mechanically Fastened Roofing Systems. Attachment must have been successfully tested to meet or exceed the calculated uplift pressure required by the International Building Code (ASCE-7) or ANSI/SPRI WD-1.
- B. Enhance the perimeter and corner areas in accordance with the International Building Code (ASCE-7) or ANSI/SPRI WD-1.
- C. Install insulation layers, maximum 4 feet by 4 feet (1220 mm by 1220 mm), applied with FAST adhesive, or a maximum 4 feet by 8 feet (1220 mm by 2438 mm), applied with Flexible FAST Adhesive, coverage rate as necessary to achieve the specified attachment and uplift rating. Press each board firmly into place after adhesive develops strings when touched, typically 1-1/2 to 2 minutes after adhesive was applied, and roll with a weighted roller. Add temporary weight and use relief cuts to ensure boards are well adhered. Stagger the joints of additional layers by a minimum of 6 inches (152 mm).

### **3.7 MEMBRANE PLACEMENT AND ATTACHMENT (Fully Adhered)**

- A. Position Sure-Flex membrane over the acceptable substrate. Fold membrane sheet back lengthwise so half the underside of the membrane is exposed.
- B. Apply Sure-Flex Bonding Adhesive in accordance with the manufacturer's published instructions, to the exposed underside of the membrane and the corresponding substrate area. Do not apply Bonding Adhesive along the splice edge of the membrane to be hot air welded over the adjoining sheet. Allow the adhesive to dry until it is tacky but will not string or stick to a dry finger touch.
  - 1. Roll the coated membrane into the coated substrate while avoiding wrinkles. Brush down the bonded section of the membrane sheet immediately after rolling the membrane into the adhesive with a soft bristle push broom to achieve maximum contact.
  - 2. Fold back the unbonded half of the sheet lengthwise and repeat the bonding procedures.
- C. Position adjoining sheets to allow a minimum overlap of 2 inches (51 mm).
- D. Hot-air weld the Sure-Flex membrane sheets using the Automatic Hot Air Welding Machine or Hot Air Hand Welder in accordance with the manufacturer's hot air welding procedures.
- E. Continue to install adjoining membrane sheets in the same manner, overlapping edges a minimum of 2 inches (51 mm) and complete the bonding procedures as stated previously.

### **3.8 SEAM WELDING**

- A. Hot-air weld membrane using an Automatic Hot Air Welding Machine or Hot Air Hand Welder in accordance with the manufacturer's current guidelines. At all splice intersections, roll the seam with a silicone roller to ensure a continuous hot air welded seam.
- B. Overlay all splice intersections with Sure-Flex T-Joint Covers.
- C. Probe all seams once the hot air welds have thoroughly cooled (approximately 30 minutes).
- D. Repair all seam deficiencies the same day they are discovered.
- E. Apply Cut Edge Sealant on all cut edges of reinforced membrane (where the scrim

reinforcement is exposed) after seam probing is complete. Cut Edge Sealant is not required but recommended on flat surfaces and is not required on vertical splices.

### **3.9 FLASHING**

- A. Flashing of parapets, curbs, expansion joints and other parts of the roof must be performed using Sure-Flex reinforced membrane. Sure-Flex non-reinforced membrane may be used for flashing pipe penetrations, Sealant Pockets, and scuppers, as well as inside and outside corners, when the use of pre-molded accessories is not feasible.
- B. Follow manufacturer's typical flashing procedures for all wall, curb, and penetration flashing including metal edging/coping and roof drain applications.

### **3.10 DAILY SEALS**

- A. On phased roofing, when the completion of flashings and terminations is not achieved by the end of the work day, a daily seal must be performed to temporarily close the membrane to prevent water infiltration.
- B. Complete an acceptable membrane seal in accordance with the manufacturer's requirements.

### **3.11 WALK WAYS**

- A. Position walkways and cut into maximum 10ft segments and position with minimum 1" gap between adjacent pieces to allow for water drainage. Walkways are to be installed perpendicular to field splices and provide minimum 4 to 6" gap at field splices.
- B. Weld all four sides with automatic heat welder to membrane.

### **3.12 SNOW GUARDS:**

- A. Inspect structure on which snow guard system is to be installed and verify it will withstand any additional loading that it may incur. Notify Architect of any deficiencies before installing snow guards
- B. Verify roofing material has been installed correctly prior to installing snow guards.
- C. Comply with architectural drawings and snow guard manufacturer's recommendations for location of system. Comply with manufacturer's written installation instructions for installation and layout.

### **3.13 CLEAN UP**

- A. Perform daily clean-up to collect all wrappings, empty containers, paper, and other debris from the project site. Upon completion, all debris must be disposed of in a legally acceptable manner.
- B. Prior to the manufacturer's inspection for warranty, the applicator must perform a pre-inspection to review all work and to verify all flashing has been completed as well as the application of all caulking.

### **3.14 PROTECTION**

- A. Protect installed products until completion of project.
- B. Touch-up, repair or replace damaged products before Substantial Completion.

## CHECKLIST FOR ROOFING SYSTEM

FM Global Clients: submit completed form and completed RoofNav Contractor Package to local FM Global field office for review.

<b>CONTACT INFORMATION:</b>		<b>FM GLOBAL INDEX NUMBER:</b>

## SECTION 07 6200 - SHEET METAL FLASHING AND TRIM

### PART 1 - GENERAL

#### 1.1 SUMMARY

A. Section Includes:

1. Formed roof-drainage sheet metal fabrications.
2. Formed low-slope roof sheet metal fabrications.
3. Formed wall sheet metal fabrications.
4. Downspouts and hanging gutters.
5. Cast downspout boots
6. Equipment Support Flashing

B. Related sections:

1. Section for 042000 – Unit Masonry for Through-Wall Flashing.
2. Section 074213.1 Formed Metal Panel Cladding Systems
3. Section 077113 Manufactured Coping and Fascia Copings for fascia at low-slope membrane roofing and low-slope membrane wrapped parapet walls.
4. Section 077116 Manufactured Counterflashing Systems for Two-piece thru-wall Counterflashing

#### 1.2 PREINSTALLATION MEETINGS

- A. Preinstallation Conference: Conduct conference at Project site.

#### 1.3 ACTION SUBMITTALS

A. Product Data: For each of the following

1. Underlayment materials.
2. Elastomeric sealant.
3. Butyl sealant.
4. Epoxy seam sealer.

B. Shop Drawings: For sheet metal flashing and trim.

1. Include plans, elevations, sections, and attachment details.
2. Detail fabrication and installation layouts, expansion-joint locations, and keyed details. Distinguish between shop- and field-assembled Work.
3. Include identification of material, thickness, weight, and finish for each item and location in Project.
4. Include details for forming, including profiles, shapes, seams, and dimensions.
5. Include details for joining, supporting, and securing, including layout and spacing of fasteners, cleats, clips, and other attachments. Include pattern of seams.

6. Include details of termination points and assemblies.
7. Include details of expansion joints and expansion-joint covers, including showing direction of expansion and contraction from fixed points.
8. Include details of roof-penetration flashing.
9. Include details of edge conditions, including eaves, ridges, valleys, rakes, crickets, flashings, and counterflashings.
10. Include details of special conditions.
11. Include details of connections to adjoining work.

- C. Samples: For each exposed product and for each color and texture specified, 12 inches (long by actual width).

#### 1.4 INFORMATIONAL SUBMITTALS

- A. Product Certificates: For each type of coping and roof edge flashing that is ANSI/SPRI/FM 4435/ES-1 tested.
- B. Evaluation Reports: For copings and roof edge flashing, from ICC-ES showing compliance with ANSI/SPRI/FM 4435/ES-1.
- C. Sample warranty.

#### 1.5 CLOSEOUT SUBMITTALS

- A. Maintenance data.
- B. Special warranty.

#### 1.6 QUALITY ASSURANCE

- A. Fabricator Qualifications: Employs skilled workers who custom fabricate sheet metal flashing and trim similar to that required for this Project and whose products have a record of successful in-service performance.
1. For copings and roof edge flashings that are ANSI/SPRI/FM 4435/ES-1 tested, shop shall be listed as able to fabricate required details as tested and approved.

#### 1.7 WARRANTY

- A. Special Warranty on Finishes: Manufacturer agrees to repair finish or replace sheet metal flashing and trim that shows evidence of deterioration of factory-applied finishes within specified warranty period.
1. Exposed Panel Finish: Deterioration includes, but is not limited to, the following:
    - a. Color fading more than 5 Delta E units when tested in accordance with ASTM D2244.

- b. Chalking in excess of a No. 8 rating when tested in accordance with ASTM D4214.
  - c. Cracking, checking, peeling, or failure of paint to adhere to bare metal.
- 2. Finish Warranty Period: 30 years from date of Substantial Completion.

## PART 2 - PRODUCTS

### 2.1 PERFORMANCE REQUIREMENTS

- A. Sheet metal flashing and trim assemblies, including cleats, anchors, and fasteners, shall withstand wind loads, structural movement, thermally induced movement, and exposure to weather without failure due to defective manufacture, fabrication, installation, or other defects in construction. Completed sheet metal flashing and trim shall not rattle, leak, or loosen, and shall remain watertight.
- B. Sheet Metal Standard for Flashing and Trim: Comply with NRCA's "The NRCA Roofing Manual: Architectural Metal Flashing, Condensation and Air Leakage Control, and Reroofing" and SMACNA's "Architectural Sheet Metal Manual" requirements for dimensions and profiles shown unless more stringent requirements are indicated.
- C. SPRI Wind Design Standard: Manufacture and install copings roof edge flashings tested in accordance with ANSI/SPRI/FM 4435/ES-1 and capable of resisting the following design pressure:
  - 1. Design Pressure: 120psf.
- D. FM Approvals Listing: Manufacture and install Copings and Roof edge flashings that are listed in FM Approvals' "RoofNav" and approved for windstorm classification, 1-120. Identify materials with name of fabricator and design approved by FM Approvals.
- E. Thermal Movements: Allow for thermal movements from ambient and surface temperature changes to prevent buckling, opening of joints, overstressing of components, failure of joint sealants, failure of connections, and other detrimental effects. Base calculations on surface temperatures of materials due to both solar heat gain and nighttime-sky heat loss.
  - 1. Temperature Change: 120 deg F , ambient; 180 deg F, material surfaces.

### 2.2 SHEET METALS

- A. Protect mechanical and other finishes on exposed surfaces from damage by applying strippable, temporary protective film before shipping.
- B. Stainless Steel Sheet: ASTM A240/A240M, Type 304, dead soft, fully annealed; with smooth, flat surface.
  - 1. Finish: ASTM A480/A480M, No. 2D (dull, cold rolled)

- C. Aluminum Sheet: ASTM B209, alloy as standard with manufacturer for finish required, with temper as required to suit forming operations and performance required; with smooth, flat surface.
  - 1. Exposed Coil-Coated Finish:
    - a. Fluoropolymer: AAMA 2605. Fluoropolymer finish containing not less than 70 percent polyvinylidene fluoride (PVDF) resin by weight in color coat. Prepare, pretreat, and apply coating to exposed metal surfaces to comply with coating and resin manufacturers' written instructions for seacoast and severe environments.
    - b. Color: as indicated on drawings or to match adjacent aluminum panels
  - 2. Concealed Finish: Pretreat with manufacturer's standard white or light-colored acrylic or polyester backer finish, consisting of prime coat and wash coat with minimum total dry film thickness of.
- D. Metallic-Coated Steel Sheet: Provide zinc-coated (galvanized) steel sheet in accordance with ASTM A653/A653M, G90 coating designation or aluminum-zinc alloy-coated steel sheet in accordance with ASTM A792/A792M, Class AZ50 coating designation.

## 2.3 UNDERLAYMENT MATERIALS

- A. Provide underlayment for sheet metal flashing and trim applied directly over metal deck, plywood sheathing, dissimilar metals, pressure treated wood, or corrosive substrates.
  - 1. Felt: ASTM D226/D226M, Type II (No. 30), asphalt-saturated organic felt; nonperforated.
- B. Slip Sheet: Rosin paper, minimum 3lbs per 100sf

## 2.4 MISCELLANEOUS MATERIALS

- A. Provide materials and types of fasteners, solder, protective coatings, sealants, and other miscellaneous items as required for complete sheet metal flashing and trim installation and as recommended by manufacturer of primary sheet metal or manufactured item unless otherwise indicated.
- B. Fasteners: Wood screws, annular threaded nails, self-tapping screws, self-locking rivets and bolts, and other suitable fasteners designed to withstand design loads and recommended by manufacturer of primary sheet metal or manufactured item.
  - 1. General: Blind fasteners or self-drilling screws, gasketed, with hex-washer head.
    - a. Exposed Fasteners: Heads matching color of sheet metal using plastic caps or factory-applied coating. Provide metal-backed EPDM or PVC sealing washers under heads of exposed fasteners bearing on weather side of metal.
    - b. Blind Fasteners: High-strength aluminum or stainless steel rivets suitable for metal being fastened.

- c. Spikes and Ferrules: Same material as gutter; with spike with ferrule matching internal gutter width.
  2. Fasteners for Stainless Steel Sheet: Series 300 stainless steel.
  3. Fasteners for Aluminum Sheet: pre-finished Aluminum or Series 300 stainless steel to match coil-coated finish
  4. Fasteners for Zinc-Coated (Galvanized) and Aluminum-Zinc Alloy-Coated Steel Sheet: Series 300 stainless steel or hot-dip galvanized steel in accordance with ASTM A153/A153M or ASTM F2329.
- C. Solder:
1. For Stainless Steel: ASTM B32, Grade Sn96, with acid flux of type recommended by stainless steel sheet manufacturer.
  2. For Zinc-Coated (Galvanized) Steel: ASTM B32, with maximum lead content of 0.2 percent].
- D. Sealant Tape: Pressure-sensitive, 100 percent solids, polyisobutylene compound sealant tape with release-paper backing. Provide permanently elastic, nonsag, nontoxic, nonstaining tape 1/2 inch wide and 1/8 inch thick.
- E. Elastomeric Sealant: ASTM C920, elastomeric polymer sealant; of type, grade, class, and use classifications required to seal joints in sheet metal flashing and trim and remain watertight.
- F. Epoxy Seam Sealer: Two-part, noncorrosive, un-coated aluminum seam-cementing compound, recommended by aluminum manufacturer for exterior nonmoving joints, including riveted joints.
- G. Bituminous Coating: Cold-applied asphalt emulsion in accordance with ASTM D1187/D1187M.
- H. Asphalt Roofing Cement: ASTM D4586, asbestos free, of consistency required for application.

## 2.5 FABRICATION, GENERAL

- A. Custom fabricate sheet metal flashing and trim to comply with details indicated and recommendations in cited sheet metal standard that apply to design, dimensions, geometry, metal thickness, and other characteristics of item required.
1. Fabricate sheet metal flashing and trim in shop to greatest extent possible.
  2. Fabricate sheet metal flashing and trim in thickness or weight needed to comply with performance requirements, but not less than that specified for each application and metal.
  3. Verify shapes and dimensions of surfaces to be covered and obtain field measurements for accurate fit before shop fabrication.
  4. Form sheet metal flashing and trim to fit substrates without excessive oil-canning, buckling, and tool marks; true to line, levels, and slopes; and with exposed edges folded back to form hems.
  5. Conceal fasteners and expansion provisions where possible. Do not use exposed fasteners on faces exposed to view.
- B. Fabrication Tolerances:

1. Fabricate sheet metal flashing and trim that is capable of installation to a tolerance of 1/4 inch in 20 feet on slope and location lines indicated on Drawings and within 1/8-inch offset of adjoining faces and of alignment of matching profiles.
- C. Expansion Provisions: Form metal for thermal expansion of exposed flashing and trim.
  1. Form expansion joints of intermeshing hooked flanges, not less than 1 inch deep, filled with sealant concealed within joints.
- D. Sealant Joints: Where movable, nonexpansion-type joints are required, form metal in accordance with cited sheet metal standard to provide for proper installation of elastomeric sealant.
- E. Fabricate cleats and attachment devices from same material as accessory being anchored or from compatible, noncorrosive metal.
- F. Fabricate cleats and attachment devices of sizes as recommended by cited sheet metal standard for application, but not less than thickness of metal being secured.
- G. Seams:
  1. Fabricate nonmoving seams with flat-lock seams. Tin edges to be seamed, form seams, and solder.
  2. Fabricate nonmoving seams with flat-lock seams. Form seams and seal with elastomeric sealant unless otherwise recommended by sealant manufacturer for intended use. Rivet joints where necessary for strength.

## 2.6 ROOF-DRAINAGE SHEET METAL FABRICATIONS

- A. Hanging Gutters: Box style gutters to dimensions indicated on drawings but not less than size according to SMACNA's architectural Manual. Provide with expansions joints at not less than 50ft, and gutter straps made of aluminum.
  1. Approvals: ANSI/SPRI GT-1; FM approved I-90 system
  2. Formed length: to maximum available but not less than 12ft; spliced shall be lapped 6" minimum
  3. Fabricate from the following materials
    - a. Aluminum: 0.040 thickness
    - b. Finish: Fluoropolymer, 70% minimum in custom color as noted on drawings to match fascia
- B. Downspouts/leaders: rectangular downspouts to dimensions indicated on Drawings but not less than size according to SMACNA's Architectural manual. Provide with curved elbows, corners and offsets to hold tight to wall including at overhangs.
  1. Hanger Style: F-135J per SMACNA formed of double folded sheet metal, with color matched fasteners.
  2. Spacing: provide hangers at 5 feet on center max.
  3. Fabricate from the following materials:
    - a. Aluminum: .040 thick

- b. Finish: Fluoropolymer, 70% minimum, color as noted on drawings to match wall panels
- C. Conductor Heads: Fabricate conductor heads with flanged back and stiffened top edge and of dimensions and shape required, complete with outlet tubes, exterior flange trim, and built-in overflows. Fabricate from the following materials:
  - 1. Aluminum: 0.050 thick. F
  - 2. Finish: Fluoropolymer, 70% minimum, color as noted on drawings to match wall panels
- D. Cast downspout boots: cast iron conforming to ASTM A-48-70, or AASHO M-105-621. Boot shall have factory provided primer and shall be field painted to match downleaders unless otherwise noted.
  - 1. Casting shall have ears or other method for attachment to façade and offset to allow connection below grade to piping.
  - 2. Length: 24"
  - 3. Inside diameter/top bell size: not less than downspout, refer to drawings
    - a. Provide adapters below grade as required to connect into laterals and splashblocks where noted to spill to grade or roof
  - 4. Provide with cleanout at side of boot
  - 5. Basis of design: as manufactured by Downspoutboots a division of JR Hoe , series A or approved equal

## 2.7 LOW-SLOPE ROOF SHEET METAL FABRICATIONS

- A. Roof Edge Flashing & Coping systems: Refer to Section 075400 PVC roofing and 074100 Standing Seam Metal roofing
- B. Counterflashing: Refer to Section 077116 Manufactured Counterflashing Systems
- C. Roof-Penetration Flashing: Fabricate from the following materials:
  - 1. Stainless Steel: 0.0188 inch thick.
- D. Roof-Drain Flashing: Fabricate from the following materials:
  - 1. Stainless Steel: 0.0156 thick.

## 2.8 WALL SHEET METAL FABRICATIONS

- A. Through-Wall Flashing: refer to Section 042000 Unit Masonry
- B. Opening Flashings in Frame Construction: Fabricate head, sill, jamb, and similar flashings where described in details. Extend 4 inches beyond wall openings. Form head and sill flashing with 2-inch- high, end dams. Fabricate from the following materials:
  - 1. Stainless Steel: 0.0156 inch thick.

## 2.9 EQUIPMENT SUPPORT FABRICATIONS

- A. Material: Fabricated to configuration required to accommodate equipment supports.

1. Stainless Steel: 0.0239 inch thick.

### **PART 3 - EXECUTION**

#### **3.1 INSTALLATION OF UNDERLAYMENT**

- A. Felt Underlayment: Install felt underlayment, wrinkle free, using adhesive to minimize use of mechanical fasteners under sheet metal flashing and trim.
  1. Install in shingle fashion to shed water.
  2. Lap joints not less than 2 inches.
- B. Install slip sheet, wrinkle free, over underlayment or directly on substrates without underlayments before installing sheet metal flashing and trim.
  1. Install in shingle fashion to shed water.
  2. Lapp joints not less than 4 inches.

#### **3.2 INSTALLATION, GENERAL**

- A. Install sheet metal flashing and trim to comply with details indicated and recommendations of cited sheet metal standard that apply to installation characteristics required unless otherwise indicated on Drawings.
  1. Install fasteners, solder, protective coatings, separators, sealants, and other miscellaneous items as required to complete sheet metal flashing and trim system.
  2. Install sheet metal flashing and trim true to line, levels, and slopes. Provide uniform, neat seams with minimum exposure of solder or sealant.
  3. Anchor sheet metal flashing and trim and other components of the Work securely in place, with provisions for thermal and structural movement.
  4. Install sheet metal flashing and trim to fit substrates and to result in watertight performance.
  5. Install continuous cleats with fasteners spaced not more than 12 inches o.c.
  6. Install exposed sheet metal flashing and trim with limited oil-canning, and free of buckling and tool marks.
  7. Do not field cut sheet metal flashing and trim by torch.
- B. Metal Protection: Where dissimilar metals contact each other, or where metal contacts pressure-treated wood or other corrosive substrates, protect against galvanic action or corrosion by painting contact surfaces with bituminous coating or by other permanent separation as recommended by sheet metal manufacturer or cited sheet metal standard.
  1. Coat concealed side of uncoated-aluminum and stainless steel sheet metal flashing and trim with bituminous coating where flashing and trim contact wood, ferrous metal, or cementitious construction.
  2. Underlayment: Where installing sheet metal flashing and trim directly on cementitious or wood substrates, install underlayment and cover with slip sheet.

- C. Expansion Provisions: Provide for thermal expansion of exposed flashing and trim.
  - 1. Space movement joints at maximum of 10 feet with no joints within 24 inches of corner or intersection.
  - 2. Form expansion joints of intermeshing hooked flanges, not less than 1 inch deep, filled with sealant concealed within joints.
- D. Fasteners: Use fastener sizes that penetrate wood blocking or sheathing not less than 1-1/4 inches for nails and not less than 3/4 inch for wood screws or as recommended by fastener manufacturer to achieve maximum pull-out resistance.
- E. Conceal fasteners and expansion provisions where possible in exposed work and locate to minimize possibility of leakage. Cover and seal fasteners and anchors as required for a tight installation.
- F. Seal joints as required for watertight construction.
  - 1. Use sealant-filled joints unless otherwise indicated.
    - a. Embed hooked flanges of joint members not less than 1 inch into sealant.
    - b. Form joints to completely conceal sealant.
    - c. When ambient temperature at time of installation is between 40 and 70 deg F, set joint members for 50 percent movement each way.
    - d. Adjust setting proportionately for installation at higher ambient temperatures.
      - 1) Do not install sealant-type joints at temperatures below 40 deg F.
  - 2. Prepare joints and apply sealants to comply with requirements in Section 079200 "Joint Sealants."
- G. Soldered Joints: Clean surfaces to be soldered, removing oils and foreign matter.
  - 1. Pretin edges of sheets with solder to width of 1-1/2 inches; however, reduce pretinning where pretinned surface would show in completed Work.
  - 2. Do not solder aluminum sheet.
  - 3. Do not pretin zinc-tin alloy-coated copper.
  - 4. Do not use torches for soldering.
  - 5. Heat surfaces to receive solder, and flow solder into joint.
    - a. Fill joint completely.
    - b. Completely remove flux and spatter from exposed surfaces.
  - 6. Stainless Steel Soldering:
    - a. Tin edges of uncoated sheets, using solder for stainless steel and acid flux.
    - b. Promptly remove acid-flux residue from metal after tinning and soldering.
    - c. Comply with solder manufacturer's recommended methods for cleaning and neutralization.
  - 7. Copper Soldering: Tin edges of uncoated sheets, using solder for copper.

- H. Rivets: Rivet joints in[uncoated aluminum where necessary for strength.

### 3.3 INSTALLATION OF ROOF-DRAINAGE SYSTEM

- A. Install sheet metal roof-drainage items to produce complete roof-drainage system in accordance with cited sheet metal standard unless otherwise indicated. Coordinate installation of roof perimeter flashing with installation of roof-drainage system.
- B. Downspouts:
1. Join sections with 1-1/2-inch telescoping joints.
  2. Provide hangers with fasteners designed to hold downspouts securely to walls center.
  3. Locate hangers at top and bottom and at approximately 60 inches o.c.
  4. Where terminate at roof: provide elbows at base of downspout to direct water away from building and onto cast concrete splashblock.
  5. Where terminated at grade: connect downspouts cast downspout boot and underground drainage system.
- C. Conductor Heads: Anchor securely to wall, with elevation of conductor head rim at minimum of 1 inch below scupper or gutter discharge.
- D. Expansion-Joint Covers: Install expansion-joint covers at locations and of configuration indicated on Drawings. Lap joints minimum of 4 inches in direction of water flow.

### 3.4 INSTALLATION OF ROOF FLASHINGS

- A. Install sheet metal flashing and trim to comply with performance requirements, sheet metal manufacturer's written installation instructions, and cited sheet metal standard.
1. Provide concealed fasteners where possible, and set units true to line, levels, and slopes.
  2. Install work with laps, joints, and seams that are permanently watertight and weather resistant.
- B. Pipe or Post Counterflashing: Install counterflashing umbrella with close-fitting collar with top edge flared for elastomeric sealant, extending minimum of 4 inches over base flashing. Install stainless steel draw band and tighten.
- C. Roof-Penetration Flashing: Coordinate installation of roof-penetration flashing with installation of roofing and other items penetrating roof. Seal with elastomeric sealant and clamp flashing to pipes that penetrate roof.

### 3.5 INSTALLATION OF WALL FLASHINGS

- A. Install sheet metal wall flashing to intercept and exclude penetrating moisture in accordance with cited sheet metal standard unless otherwise indicated. Coordinate installation of wall flashing with installation of wall-opening components such as windows, doors, and louvers.

- B. Opening Flashings in Frame Construction: Install continuous head, sill, jamb, and similar flashings to extend 4 inches beyond wall openings.

### 3.6 INSTALLATION TOLERANCES

- A. Installation Tolerances: Shim and align sheet metal flashing and trim within installed tolerance of 1/4 inch in 20 feet on slope and location lines indicated on Drawings and within 1/8-inch offset of adjoining faces and of alignment of matching profiles.

### 3.7 CLEANING

- A. Clean exposed metal surfaces of substances that interfere with uniform oxidation and weathering.
- B. Clean and neutralize flux materials. Clean off excess solder.
- C. Clean off excess sealants.

### 3.8 PROTECTION

- A. Remove temporary protective coverings and strippable films as sheet metal flashing and trim are installed unless otherwise indicated in manufacturer's written installation instructions.
- B. Replace sheet metal flashing and trim that have been damaged or that have deteriorated beyond successful repair by finish touchup or similar minor repair procedures, as determined by Architect.

END OF SECTION 07 6200

**SECTION 07 7116-MANUFACTURED COUNTERFLASHING SYSTEMS**

**PART 1 GENERAL**

**1.1 SECTION INCLUDES**

- A. Two-piece thru-wall Counterflashing.

**1.2 RELATED REQUIREMENTS**

- A. Section 07 92 00 – Joint Sealants.

**1.3 PREINSTALLATION MEETINGS**

- A. Convene preinstallation meeting 2 weeks before start of installation of counterflashing and coordinate with installation of roofing and wall cladding.
- B. Require attendance of parties directly affecting Work of this Section, including Contractor, Architect, installer, and manufacturer's representative.
- C. Review the Following:
  - 1. Materials.
  - 2. Installation.
  - 3. Adjusting.
  - 4. Cleaning.
  - 5. Protection.
  - 6. Coordination with other Work.

**1.4 SUBMITTALS**

- A. Comply with Division 01.
- B. Product Data: Submit manufacturer's product data, including installation instructions.
- C. Shop Drawings: Submit manufacturer's shop drawings, including plans, elevations, sections, and details, indicating dimensions, materials, components, fasteners, finish, and accessories.
- D. Samples: Submit manufacturer's sample of counterflashing.
  - 1. Sample Length: Minimum 5-1/2 inches
- E. Manufacturer's Certification: Submit manufacturer's certification that materials comply with specified requirements and are suitable for intended application.
- F. Warranty Documentation: Submit manufacturer's standard warranty.

**1.5 QUALITY ASSURANCE**

- A. Manufacturer's Qualifications: Manufacturer regularly engaged in the manufacturing of counterflashing of similar type to that specified for a minimum of 10 years.
- B. Installer's Qualifications:
  - 1. Installer regularly engaged in installation of counterflashing of similar type to that specified for a minimum of 5 years.
  - 2. Use persons trained for installation of counterflashing following manufacturer's installation instructions.

## **1.6 DELIVERY, STORAGE, AND HANDLING**

- A. Delivery Requirements: Deliver materials to site in manufacturer's original, unopened containers and packaging.
- B. Storage and Handling Requirements:
  - 1. Store and handle materials in accordance with manufacturer's instructions.
  - 2. Keep materials in manufacturer's original, unopened containers and packaging until installation.
  - 3. Store materials in clean, dry area indoors.
  - 4. Do not store materials directly on floor or ground.
  - 5. Protect materials and finish during storage, handling, and installation to prevent damage.

## **1.7 WARRANTY**

- A. Warranty Period, Product: 5-year workmanship warranty covering replacement or repair of products that are defective in material or workmanship.

# **PART 2 PRODUCTS**

## **2.1 MANUFACTURERS**

- A. Atas international
- B. Metal-Era, Inc
- C. Or approved equal

## **2.2 MANUFACTURED COUNTERFLASHING SYSTEMS**

- A. Counterflashing: "Counter-Flash" 2-piece counterflashing, thru-wall version.
  - 1. Provides watertight termination at leading edge and inside of wall.
  - 2. Model: 5-inch face height.
  - 3. Material: 24-gauge stainless steel
  - 4. Formed Lengths: 12'-0"
  - 5. Slotted Fastening Holes: 12 inches on center.
  - 6. Prenotched Lap Joints: 3 inches.

## **2.3 ACCESSORIES**

- A. Joint Sealants: Specified in Section 07 92 00.
- B. Fasteners: Appropriate for intended substrate.

# **PART 3 EXECUTION**

## **3.1 EXAMINATION**

- A. Examine areas to receive counterflashing.
- B. Verify surfaces to support counterflashing are clean, dry, straight, secure, and of proper dimensions.
- C. Notify Architect of conditions that would adversely affect installation.
- D. Do not begin installation until unacceptable conditions are corrected.

### **3.2 INSTALLATION**

- A. Install counterflashing in accordance with manufacturer's instructions at locations indicated on the Drawings.
- B. Remove protective vinyl film immediately before installation.
- C. Install counterflashing to provide watertight termination at leading edge of roofing material.
- D. Install counterflashing to allow for thermal movement.
- E. Joint Sealants: Apply joint sealants in accordance with manufacturer's instructions.

### **3.3 ADJUSTING**

- A. Repair minor damages to finish in accordance with manufacturer's instructions and as approved by Architect.
- B. Remove and replace with new material, damaged components that cannot be successfully repaired, as determined by Architect.

### **3.4 CLEANING**

- A. Clean counterflashing promptly after installation in accordance with manufacturer's instructions.
- B. Do not use harsh cleaning materials or methods that could damage finish.

### **3.5 PROTECTION**

- A. Protect installed counterflashing to ensure that, except for normal weathering, counterflashing will be without damage or deterioration at time of Substantial Completion.

**END OF SECTION**

## **SECTION 07 7200 - ROOF ACCESSORIES**

### **PART 1 - GENERAL**

#### **1.1 SUMMARY**

**A. Section Includes:**

1. Roof curbs where not factory provided with equipment.
2. Equipment rails.
3. Roof hatches w/ extendable safety post & guardrail.

#### **1.2 ACTION SUBMITTALS**

- A. Product Data:** For each type of roof accessory.
- B. Shop Drawings:** For roof accessories.
- C. Samples:** For each exposed product and for each color and texture specified.

#### **1.3 INFORMATIONAL SUBMITTALS**

- A. Sample warranties.**

#### **1.4 CLOSEOUT SUBMITTALS**

- A. Operation and maintenance data.**

#### **1.5 WARRANTY**

- A. Special Warranty on Painted Finishes:** Manufacturer's standard form in which manufacturer agrees to repair finishes or replace roof accessories that show evidence of deterioration of factory-applied finishes within 20 years from date of Substantial Completion.

### **PART 2 - PRODUCTS**

#### **2.1 ROOF CURBS**

- A. Roof Curbs:** Internally reinforced roof-curb units capable of supporting superimposed live and dead loads, including equipment loads and other construction indicated on Drawings, bearing continuously on roof structure, and capable of meeting performance requirements; with welded

or mechanically fastened and sealed corner joints, straight sides, and integrally formed deck-mounting flange at perimeter bottom.

1. Manufacturers: Subject to compliance with requirements, provide products from one of the following:
  - a. Pate Company
  - b. Greenheck fan corporation
  - c. Loyd industries
  - d. Or approved equal
- B. Size: Coordinate dimensions with roughing-in information or Shop Drawings of equipment to be supported and height to allow minimum of 8" flashing height above adjacent roof surface including crickets. Coordinate with roof insulation shop drawings.
- C. Material: Zinc-coated galvanized steel sheet, 0.052 inch thick minimum or as required to support equipment load.
  1. Finish: Factory prime coating
- D. Construction:
  1. Curb Profile: Manufacturer's standard compatible with roofing system.
  2. On ribbed or fluted metal roofs, form deck-mounting flange at perimeter bottom to conform to roof profile.
  3. Fabricate curbs to minimum height of 12 inches above roofing surface unless otherwise indicated.
  4. Top Surface: Level top of curb, with roof slope accommodated by sloping deck-mounting flange or by use of leveler frame.
  5. Sloping Roofs: Where roof slope exceeds 1:48, fabricate curb with perimeter curb height tapered to accommodate roof slope so that top surface of perimeter curb is level. Equip unit with water diverter or cricket on side that obstructs water flow.
  6. Insulation: Factory insulated with 1-1/2-inch thick glass-fiber board insulation.
  7. Liner: Same material as curb, of manufacturer's standard thickness and finish.
  8. Nailer: Factory-installed wood nailer along top flange of curb or under top flange on side of curb, continuous around curb perimeter as recommended by equipment manufacturer.
  9. Wind Restraint Straps and Base Flange Attachment: Provide wind restraint straps, welded strap connectors, and base flange attachment to roof structure at perimeter of curb, of size and spacing required to meet wind uplift requirements
    - a. Quantity of fasteners, size of strap per manufacturer for basic wind speed of 130mph
    - b. FEMA
  10. Metal Counterflashing: Manufacturer's standard, removable, fabricated of same metal and finish as curb.
  11. Damper Tray: Provide damper tray or shelf with opening 3 inches less than interior curb dimensions indicated, when equipment calls for damper to be provided.

## 2.2 EQUIPMENT SUPPORTS

- A. Equipment Supports: Rail-type metal equipment supports capable of supporting superimposed live and dead loads between structural supports, including equipment loads and other construction indicated on Drawings, spanning between structural supports; capable of meeting performance requirements; with welded corner joints, straight sides, and integrally formed structure-mounting flange at bottom.
  - 1. Manufacturers: Subject to compliance with requirements, provide products from one of the following:
    - a. Pate Company
    - b. Greenheck fan corporation
    - c. Loyd industries
    - d. Or approved equal
- B. Size: Coordinate dimensions with roughing-in information or Shop Drawings of equipment to be supported.
- A. Material: Zinc-coated (galvanized)] steel sheet, 0.052 inch thick minimum or as required to support equipment load.
  - 1. Finish: Factory prime coating
- B. Construction:
  - 1. Curb Profile: Manufacturer's standard compatible with roofing system.
  - 2. Insulation: Factory insulated with 1-1/2-inch thick glass-fiber board insulation.
  - 3. Nailer: Factory-installed continuous wood nailers 5-1/2 inches (on top flange of equipment supports or under top flange on side of curb, continuous around support perimeter as recommended by manufacturer of equipment to be supported.
  - 4. Wind Restraint Straps and Base Flange Attachment: Provide wind restraint straps, welded strap connectors, and base flange attachment to roof structure at perimeter of curb of size and spacing required to meet wind uplift requirements.
  - 5. Platform Cap: Where portion of equipment support is not covered by equipment, provide weathertight platform cap formed from 3/4-inch- thick plywood covered with metal sheet of same type, thickness, and finish as required for curb.
  - 6. Metal Counterflashing: Manufacturer's standard, removable, fabricated of same metal and finish as equipment support.
  - 7. On ribbed or fluted metal roofs, form deck-mounting flange at perimeter bottom to conform to roof profile.
  - 8. Fabricate equipment supports to minimum height of 12 inches above roofing surface unless otherwise indicated.
  - 9. Sloping Roofs: fabricate each support with height to accommodate roof slope so that tops of supports are level with each other. Equip supports with water diverters or crickets on sides that obstruct water flow.

## 2.3 ROOF HATCHES

- A. Roof Hatches: thermally broken Metal roof-hatch units with lids and insulated double-walled curbs, welded or mechanically fastened and sealed corner joints, continuous lid-to-curb counterflashing and weathertight perimeter gasketing, straight sides, and integrally formed deck-mounting flange at perimeter bottom.
1. Manufacturers: Subject to compliance with requirements, provide products from one of the following:
    - a. Bilco Company
    - b. J.L. Industries
    - c. Babcock Davis
    - d. Nystrom
    - e. Or approved equal
  2. Type and Size: Single-leaf lid, size as indicated on Drawings, but not less than 36 by 42 inches
  3. Loads: Minimum 40-lbf/sq. ft. > external live load and 30-lbf/sq. ft. internal uplift load.
    - a. When release is actuated, lid shall open against 10-lbf/sq. ft. snow or wind load and lock in position.
  4. Curb, Framing, and Lid Material: Aluminum sheet.
    - a. Thickness: Manufacturer's standard thickness for hatch size indicated 0.079 inch .
    - b. Finish: Two-coat fluoropolymer
    - c. Color: As selected by Architect from manufacturer's full range
  5. Construction:
    - a. Insulation: 3-inch- thick, polyisocyanurate board].
      - 1) R-Value: 20 according to ASTM C1363.
    - b. Thermally Broken construction
    - c. Nailer: Factory-installed wood nailer continuous around hatch perimeter.
    - d. Hatch Lid: Opaque, insulated, and double walled, with manufacturer's standard metal liner of same material and finish as outer metal lid.
    - e. Exterior Curb Liner: Manufacturer's standard, of same material and finish as metal curb.
    - f. Fabricate curbs to minimum height of 12 inches above roofing surface unless otherwise indicated.
    - g. Sloping Roofs: fabricate curb with perimeter curb height that is constant. Equip hatch with water diverter or cricket on side that obstructs water flow.
  6. Hardware: Manufacturer's standard stainless steel; with hinges, hold-open devices, and independent manual-release devices for inside and outside operation of lids.
  7. Safety Ladder Post: Provide spring assisted telescoping safety post for installation at each roof access hatch ladder. Post to lock in place on full extension. Provide release mechanism to return post to closed position.
    - a. Designed to mount to the top two rungs of a fixed vertical ladder

- b. To extend 42" above the landing platform to provide safe ladder access through the roof hatch
  - c. Construction: 1-5/8" OD round tubing with a pull up loop provided at the upper end to facilitate raising of post.
  - d. Finish: powder-coated in safety yellow
- 8. Roof hatch mounted Safety Railing System: Provide Roof-hatch manufacturer's standard hatch mounted system including rails, clamps, fasteners, safety barrier at railing opening, and accessories required for a complete installation; attached to roof hatch and complying with OSHA 29 CFR 1910.23 & 29 CFR 1926.502 requirements and authorities having jurisdiction.
  - a. Height: 42 inches above finished roof deck.
  - b. Rails:
    - 1) Aluminum pipe, 1-1/4 inch, 1.66 inch outside diameter, schedule 40 6061 T6 alloy pipe.
    - 2) Fittings: Cast aluminum 5052-H32 alloy with set screw hold.
    - 3) Mounting Brackets: 3/16 inch (4.75 mm) steel, zinc plated with nut backing plate.
    - 4) Exit: Self-closing gate, 1-1/4 inch aluminum self-closing with coil spring

## 2.4 METAL MATERIALS

- A. Zinc-Coated (Galvanized) Steel Sheet: ASTM A653/A653M, G90 coating designation
  - 1. Factory Prime Coating: Where field painting is indicated, apply pretreatment and white or light-colored, factory-applied, baked-on epoxy primer coat, with a minimum dry film thickness of 0.2 mil.
- B. Aluminum Sheet: ASTM B209 , manufacturer's standard alloy for finish required, with temper to suit forming operations and performance required.
  - 1. Exposed Coil-Coated Finish: Prepare, pretreat, and apply coating to exposed metal surfaces to comply with coating and resin manufacturers' written instructions.
    - a. Two-Coat Fluoropolymer Finish: AAMA 2605. System consisting of primer and fluoropolymer color topcoat containing not less than 70 percent polyvinylidene fluoride (PVDF) resin by weight.
  - 2. Concealed Finish: Pretreat with manufacturer's standard white or light-colored acrylic or polyester-backer finish consisting of prime coat and wash coat, with a minimum total dry film thickness of 0.5 mil .
- C. Aluminum Extrusions and Tubes: ASTM B221, manufacturer's standard alloy and temper for type of use, finished to match assembly where used; otherwise mill finished.
- D. Stainless Steel Sheet and Shapes: ASTM A240/A240M or ASTM A666, Type 304.
- E. Steel Shapes: ASTM A36/A36M, hot-dip galvanized according to ASTM A123/A123M unless otherwise indicated.

- F. Steel Tube: ASTM A500/A500M, round tube.
- G. Galvanized-Steel Tube: ASTM A500/A500M, round tube, hot-dip galvanized according to ASTM A123/A123M.
- H. Steel Pipe: ASTM A53/A53M, galvanized.

## 2.5 MISCELLANEOUS MATERIALS

- A. Provide materials and types of fasteners, protective coatings, sealants, and other miscellaneous items required by manufacturer for a complete installation.
- B. Cellulosic-Fiber Board Insulation: ASTM C208, Type II, Grade 1, thickness as indicated.
- C. Glass-Fiber Board Insulation: ASTM C726, nominal density of 3 lb/cu. ft. thermal resistivity of 4.3 deg F x h x sq. ft./Btu x in. at 75 deg F thickness as indicated.
- D. Polyisocyanurate Board Insulation: ASTM C1289, thickness and thermal resistivity as indicated.
- E. Wood Nailers: Softwood lumber, pressure treated with waterborne preservatives for aboveground use, acceptable to authorities having jurisdiction, containing no arsenic or chromium, and complying with AWPA C2; not less than 1-1/2 inches thick.
- F. Fasteners: Roof accessory manufacturer's recommended fasteners suitable for application and metals being fastened. Match finish of exposed fasteners with finish of material being fastened. Provide nonremovable fastener heads to exterior exposed fasteners. Furnish the following unless otherwise indicated:
- G. Gaskets: Manufacturer's standard tubular or fingered design of neoprene, EPDM, PVC, or silicone or a flat design of foam rubber, sponge neoprene, or cork.
- H. Elastomeric Sealant: ASTM C920, elastomeric polymer sealant as recommended by roof accessory manufacturer for installation indicated; low modulus; of type, grade, class, and use classifications required to seal joints and remain watertight.
- I. Butyl Sealant: ASTM C1311, single-component, solvent-release butyl rubber sealant; polyisobutylene plasticized; heavy bodied for expansion joints with limited movement.
- J. Asphalt Roofing Cement: ASTM D4586/D4586M, asbestos free, of consistency required for application.

## PART 3 - EXECUTION

### 3.1 INSTALLATION

- A. Verify dimensions of roof openings for roof accessories. Install roof accessories according to manufacturer's written instructions.

1. Install roof accessories level; plumb; true to line and elevation; and without warping, jogs in alignment, buckling, or tool marks.
  2. Anchor roof accessories securely in place so they are capable of resisting indicated loads.
  3. Use fasteners, separators, sealants, and other miscellaneous items as required to complete installation of roof accessories and fit them to substrates.
  4. Install roof accessories to resist exposure to weather without failing, rattling, leaking, or loosening of fasteners and seals.
- B. Metal Protection: Protect metals against galvanic action by separating dissimilar metals from contact with each other or with corrosive substrates by painting contact surfaces with bituminous coating or by other permanent separation as recommended by manufacturer.
1. Coat concealed side of uncoated aluminum roof accessories with bituminous coating where in contact with wood, ferrous metal, or cementitious construction.
  2. Underlayment: Where installing roof accessories directly on cementitious or wood substrates, install a course of underlayment and cover with manufacturer's recommended slip sheet.
- C. Seal joints with elastomeric or butyl sealant as required by roof accessory manufacturer.

### 3.2 REPAIR AND CLEANING

- A. Galvanized Surfaces: Clean field welds, bolted connections, and abraded areas and repair galvanizing according to ASTM A780/A780M.
- B. Touch up factory-primed surfaces with compatible primer ready for field painting according to Section 099113 "Exterior Painting."
- C. Clean exposed surfaces according to manufacturer's written instructions.
- D. Replace roof accessories that have been damaged or that cannot be successfully repaired by finish touchup or similar minor repair procedures.

END OF SECTION 07 7200

## **SECTION 078100 - SPRAYED FIRE-RESISTIVE MATERIALS**

### **PART 1 GENERAL**

#### **1.1 GENERAL REQUIREMENTS**

- A. Work of this Section, as shown or specified, shall be in accordance with the requirements of the Contract Documents.

#### **1.2 SECTION INCLUDES**

- A. The Work of this Section includes all labor, materials, equipment, and services necessary to complete the sprayed fire-resistive materials as shown on the drawings and/or specified herein, including, but not necessarily limited to, the following:
  - 1. Spray-on fireproofing for structural steel and metal decking.
  - 2. Seal coat over fireproofing in special areas.
  - 3. Preparation of surfaces.
  - 4. Field quality control.

#### **1.3 RELATED SECTIONS**

- A. Structural steel – Section 051200.
- B. Metal decking – Section 053100.
- C. Firestops and smoke seals – Section 078413.

#### **1.4 SUBMITTALS**

- A. Product Data: For each fire-resistive product specified.
- B. Shop Drawings: Submit structural framing plans indicating the following:
  - 1. Locations and types of surface preparations required before applying sprayed fire-resistive material.
  - 2. Extent of sprayed fire-resistive material for each construction and fire-resistance rating, including the following:
    - a. Applicable fire-resistive design designations of a qualified testing and inspecting agency acceptable to authorities having jurisdiction.
    - b. Minimum thicknesses needed to achieve required fire-resistance ratings of structural components and assemblies.
  - 3. Identify restrained and unrestrained assemblies on shop drawings, show required thickness of fireproofing for each assembly.

- C. Product Certificates: Signed by manufacturer of sprayed fire-resistive material certifying that the products furnished comply with requirements.
- D. Installer Certificates: Signed by manufacturer certifying that installers comply with specified requirements.
- E. Qualification Data: For firms and persons specified in "Quality Assurance" Article to demonstrate their capabilities and experience. Include lists of completed projects with project names and addresses, names and addresses of architects and owners, and other information specified.
- F. If primer is to be used steel and/or metal deck, submit certifications by supplier of primer that primer is compatible with materials, and will not impair the required performance of the installed fireproofing. Such certification shall be accompanied by evidence that the primer was successfully used in conjunction with the fireproofing material in a UL test applicable to the construction. Submit certification prior to application of primer.
  - 1. Coordinate with Section 051200 – Structural Steel and 053100 – Metal Deck, and Structural Drawings prior to application of primer.
- G. Product Test Reports: Indicate that physical properties of proposed sprayed fire-resistive materials comply with specified requirements based on comprehensive testing of current product formulations by a qualified testing and inspecting agency according to requirements specified in "Quality Assurance" Article.
- H. Code Compliance: Proposed product must comply with prevailing Building Code and be approved by those individuals having jurisdiction.
- I. Letter from manufacturer stating that the UL Design selected for the project is not load restricted.

#### 1.5 QUALITY ASSURANCE

- A. Installer Qualifications: Engage an experienced installer certified, licensed, or otherwise qualified by sprayed fire-resistive material manufacturer as having the necessary experience, staff, and training to install manufacturer's products according to specified requirements. A manufacturer's willingness to sell its sprayed fire-resistive materials to Contractor or to an installer engaged by Contractor does not in itself confer qualification on the buyer.
- B. Submit data indicating that products containing no detectable asbestos as determined according to the method specified in 40 CFR, Part 763, Subpart E, Appendix E, Section 1, "Polarized Light Microscopy."
- C. Mockups: After processing of initial submittals and before delivery and installation of fireproofing materials, prepare a sample installation of fireproofing work, approximately 100 sq. ft. in area; providing an example of each type required, applied on each different substrate, to produce each different rating as required and reasonably representative of entire sprayed on fireproofing work, for joint approval by representative of fire resistant material manufacturer and Owner. Work in other areas shall not proceed until mock-up has been completed. Mock-up work which remains in compliance with requirements and is in undamaged and acceptable condition may be retained as final work in place.

**1.6 DELIVERY, STORAGE, AND HANDLING**

- A. Deliver products to Project site in original, unopened packages with intact and legible manufacturers' labels identifying product and manufacturer; date of manufacture; shelf life, if applicable; and fire-resistance ratings applicable to Project.
- B. Use materials with limited shelf life within period indicated. Remove from Project site and discard materials whose shelf life has expired.
- C. Store materials inside, under cover, aboveground, so they are kept dry until ready for use. Remove from Project site and discard materials that have deteriorated.

**1.7 PROJECT CONDITIONS**

- A. Environmental Limitations: Do not apply sprayed fire-resistive material when ambient or substrate temperatures are 40 deg F. or lower, unless temporary protection and heat is provided to maintain temperatures at or above this level for 24 hours before, during, and for 24 hours after product application.
- B. Ventilation: Ventilate building spaces during and after application of sprayed fire-resistive material to achieve a minimum of four air changes per hour. Use natural means or, where this is inadequate, forced-air circulation until fire-resistive material dries thoroughly.

**1.8 SEQUENCING**

- A. Sequence and coordinate application of sprayed fire-resistive materials with other related work specified in other Sections to comply with the following requirements:
  - 1. Provide temporary enclosures for interior applications to prevent deterioration of fire-resistive material due to exposure to unfavorable environmental conditions.
  - 2. Avoid unnecessary exposure of fire-resistive material to abrasion and other damage likely to occur during construction operations subsequent to its application.
  - 3. Do not apply fire-resistive material to metal roof deck substrates until roofing has been completed; prohibit roof traffic during application and drying of fire-resistive material. Fireproofing shall be considered dry when the moisture content is 6% or less.
  - 4. Do not begin applying fire-resistive material until clips, hangers, supports, sleeves, and other items penetrating fire protection are in place.
  - 5. Defer installing ducts, piping, and other items that would interfere with applying fire-resistive material until application of fire protection is completed.
  - 6. Do not install enclosing or concealing construction until after fire-resistive material has been applied, inspected, tested, and corrections have been made to defective applications.
  - 7. Protect permanently exposed walls, floor or special surfaces.

**1.9 WARRANTY**

- A. General Warranty: The special warranty specified in this Article shall not deprive Owner of other rights Owner may have under other provisions of the Contract Documents and shall be in

addition to, and run concurrent with, other warranties made by Contractor under requirements of the Contract Documents.

- B. Special Warranty: Submit a written warranty, executed by Contractor and cosigned by Installer, agreeing to repair or replace sprayed fire-resistive materials that fail within the specified warranty period.
  - 1. Failures include, but are not limited to, cracking, flaking, eroding in excess of specified requirements; peeling; and delaminating of sprayed fire-resistive materials from substrates due to defective materials and workmanship within the specified warranty period.
  - 2. Not covered under the warranty are failures due to damage by occupants and Owner's maintenance personnel, exposure to environmental conditions other than those investigated and approved during fire-response testing, and other causes not reasonably foreseeable under conditions of normal use.
- C. Warranty Period: Three (3) years from date of Substantial Completion.

## **PART 2 PRODUCTS**

### **2.1 SPRAYED FIRE-RESISTIVE MATERIALS**

- A. General: For applications of sprayed fire-resistive, provide manufacturer's standard products complying with requirements indicated for material composition and for minimum physical properties of each product listed, measured by standard test methods referenced with each property.
  - 1. Steel members are to be considered unrestrained unless specifically noted otherwise.
- B. UL design listings must state that the loading was determined by Allowable Stress Design Method or Load and Resistance Factor Design Method. UL design listings requiring a load restriction factor will not be allowed.
- C. Cementitious Sprayed Fire-Resistive Material: Factory-mixed, dry, cement aggregate formulation, chloride-free formulation of Portland cement binders, additives, and inorganic aggregates, mixed with water at Project site to form a slurry or mortar for conveyance and application, complying with the following requirements:
  - 1. Dry Density: Values for average and individual densities as required for fire-resistance ratings indicated, per ASTM E 605 or AWCI Technical Manual 12-A, Appendix A, "Alternate Method for Density Determination," but with an average density of not less than 22 lb./cu. ft.
  - 2. Bond Strength: 2000 psf minimum per ASTM E 736.
  - 3. Compressive Strength: 100 psi per ASTM E 761.
  - 4. Corrosion Resistance: No evidence of corrosion per ASTM E 937.
  - 5. Deflection: No cracking, spalling, delamination, or the like per ASTM E 759.

6. Effect of Impact on Bonding: No cracking, spalling, delamination, or the like per ASTM E 760.
  7. Air Erosion: Maximum weight loss of 0.025 g/sq. ft. per ASTM E 859.
  8. Combustion Characteristics: Passes ASTM E 136.
  9. Fire-Test-Response Characteristics: Provide sprayed fire-resistive materials with the following surface-burning characteristics as determined by testing identical products per ASTM E 84 by UL or another testing and inspecting agency acceptable to authorities having jurisdiction.
    - a. Flame Spread: 10 or less.
    - b. Smoke Developed: 0.
  10. Fungal Resistance: No observed growth on specimens per ASTM G 21.
  11. For exterior applications of sprayed fire-resistive material, provide manufacturer's formulation approved for surfaces exposed to the exterior.
- D. Products: Subject to compliance with requirements, provide one of the following:
1. Cement-Aggregate Cementitious Sprayed Fire-Resistive Material:
    - a. Pyrocrete 239; Carbolite Co., Fireproofing Products Div.
    - b. Monokote Type Z106HY; GCP Applied Technologies.
    - c. F4; Promat Firetemp.
    - d. Cafco 400, Isolatek International Corp; Cafco Products
    - e. Or approved equal.

## 2.2 AUXILIARY FIRE-RESISTIVE MATERIALS

- A. General: Provide auxiliary fire-resistive materials that are compatible with sprayed fire-resistive materials and substrates and are approved by UL or another testing and inspecting agency acceptable to authorities having jurisdiction for use in fire-resistive designs indicated.
- B. Adhesive for Bonding Fire-Resistive Material: Product approved by manufacturer of sprayed fire-resistive material, used where required by manufacturer to insure proper bond.
- C. Metal Lath: Expanded metal lath fabricated from material of weight, configuration, and finish required to comply with fire-resistive designs indicated and fire-resistive product manufacturer's written recommendations. Include clips, lathing accessories, corner beads, and other anchorage devices required to attach lath to substrates and to receive sprayed fire-resistive material.
- D. Sealer for Sprayed Fire-Resistive Material in Elevator Shafts and Open Area Plenums: Transparent-drying, water-dispersible protective coating by manufacturer of fire-resistive material.
  1. Product: Subject to compliance with requirements, provide "Firebond Concentrate" by GCP Applied Technologies or approved equal

## **PART 3 EXECUTION**

### **3.1 EXAMINATION**

- A. Examine substrates, with Installer present, to determine whether they are in satisfactory condition to receive sprayed fire-resistive material. A substrate is in satisfactory condition if it complies with the following:
  - 1. Substrates are free of oil, grease, rolling compounds, incompatible primers, loose mill scale, dirt, or other foreign substances capable of impairing bond of fire-resistive material with substrate under conditions of normal use or fire exposure.
  - 2. Objects penetrating fire-resistive material, including clips, hangers, support sleeves, and similar items, are securely attached to substrates.
  - 3. Substrates are not obstructed by ducts, piping, equipment, and other suspended construction that will interfere with applying fire-resistive material.
- B. Do not proceed with installation of fire-resistive material until unsatisfactory conditions have been corrected.

### **3.2 PREPARATION**

- A. Clean substrates of substances that could impair bond of fire-resistive material, including oil, grease, rolling compounds, incompatible primers, and loose mill scale.
- B. For exposed applications, repair substrates to remove any surface imperfections that could affect uniformity of texture and thickness in finished surface of sprayed fire-resistive material. Remove minor projections and fill voids that would telegraph through fire-resistive products after application.
- C. Cover other work subject to damage from fallout or overspray of fire-resistive materials during application. Provide temporary enclosure as required to confine spraying operations, protect the environment, and ensure maintenance of adequate ambient conditions for temperature and ventilation.

### **3.3 INSTALLATION**

- A. Comply with fire-resistive material manufacturer's written instructions for mixing materials, application procedures, and types of equipment used to convey and spray on fire-resistive material, as applicable to particular conditions of installation and as required to achieve fire-resistance ratings indicated.
- B. Install metal lath, as required, to comply with fire-resistance ratings and fire-resistive material manufacturer's written recommendations for conditions of exposure and intended use. Securely attach lath to substrate in position required for support and reinforcement of fire-resistive material. Use anchorage devices of type recommended in writing by fire-resistive material manufacturer. Attach lathing accessories where indicated or required for secure attachment to substrate.

- C. Coat substrates with adhesive before applying fire-resistive material where required to achieve fire-resistance rating or as recommended in writing by fire-resistive material manufacturer for material and application indicated.
- D. Extend fire-resistive material in full thickness over entire area of each substrate to be protected.
- E. Spray apply fire-resistive materials to maximum extent possible. Following the spraying operation in each area, complete the coverage by method recommended by the manufacturer.
- F. Where sealers are used, apply products that are tinted to differentiate them from the sprayed fire-resistive material over which they are applied.
- G. Maintain ambient conditions during installation and for cure period following installation, as recommended by manufacturer. Provide ventilation and avoid excessive rate of drying.
- H. Fireproofing to the underside of roof deck assemblies shall be done only after roofing application is complete, all roof mounted mechanical equipment is in place, and the roof is watertight.
- I. No fireproofing shall be applied prior to completion of concrete work on steel decking.
- J. Installation Sequence of Fireproofing: All patching and repairing of sprayed fireproofing, due to cutting by other trades or testing and inspection, shall be performed under this Section.
- K. Provisions shall be made for ventilation to properly dry the fireproofing after application. In enclosed areas lacking natural ventilation, air circulation and ventilation must be provided.

### 3.4 FIELD QUALITY CONTROL

- A. Testing Agency: Owner will engage a qualified independent testing and inspecting agency to perform field tests and inspections and to prepare test reports.
  - 1. Testing and inspecting agency will interpret tests and state in each report whether tested work complies with or deviates from requirements.
- B. Testing and inspecting of completed applications of sprayed fire-resistive material will take place in successive stages, in areas of extent and using methods as follows. Do not proceed with application of fire-resistive material for the next area until test results for previously completed applications of fire-resistive material show compliance with requirements.
  - 1. For each 1000-sq. ft. area, or partial area, on each floor, testing and inspecting agency will evaluate the following characteristics. Tested values must equal or exceed values indicated and values required for approved fire-resistance design.
    - a. Thickness for Floors, Roofs, and Walls: From the average of 10 measurements from a 144-sq. in. sample area, with sample width of not less than 6 inches per ASTM E 605.
  - 2. Thickness for Structural Frame Members: From a sample of 25 percent of structural members per floor, taking 9 measurements at a single cross section for structural frame beams or girders, 7 measurements of a single cross section for joists and trusses, and 12 measurements of a single cross section for columns per ASTM E 605.

3. For each 10,000 sq. ft. area, or partial area, on each floor, testing and inspection agency will evaluate the following characteristics. Tested values must equal or exceed values indicated and values required for approved fire resistance design.
    - a. Bond Strength for Floors, Roofs, Walls, and Structural Framing Members: Cohesion and adhesion at frequency and from sample size indicated for determining thickness of each type of construction, per ASTM E 736.
  4. Density for Floors, Roofs, Walls, and Structural Frame Members: At frequency and from sample size indicated for determining thickness of each type of construction, per ASTM E 605 or AWCI Technical Manual 12-A, Appendix A, "Alternate Method for Density Determination."
  5. When testing discovers applications of fire-resistive material not in compliance with requirements, testing and inspecting agency will perform additional random testing to determine extent of noncompliance.
- C. Remove and replace applications of fire-resistive material where test results indicate that they do not comply with specified requirements for cohesion and adhesion or for density, or both.
  - D. Apply additional fire-resistive material per manufacturer's written instructions where test results indicate that thickness does not comply with specified requirements.
  - E. Additional testing and inspecting, at Contractor's expense, will be performed to determine compliance of replaced or additional work with specified requirements.

### 3.5 CLEANING, PROTECTING, AND REPAIR

- A. Cleaning: Immediately after completing spraying operations in each containable area of Project, remove material overspray and fallout from surfaces of other construction and clean exposed surfaces to remove evidence of soiling.
- B. Cure exposed sprayed fire-resistive material according to product manufacturer's written recommendations to prevent premature drying.
- C. Protect fire-resistive material, according to advice of product manufacturer and Installer, from damage resulting from construction operations or other causes so fire protection will be without damage or deterioration at the time of Substantial Completion.
- D. Coordinate application of fire-resistive material with other construction to minimize the need to cut or remove fire protection. As installation of other construction proceeds, inspect fire-resistive material and patch any damaged or removed areas.
  1. Patch and repair fireproofing where Owner's Testing Agency has performed tests.
- E. Repair or replace work that has not been successfully protected.

END OF SECTION

## **SECTION 07 8413 - PENETRATION FIRESTOPPING**

### **PART 1 - GENERAL**

#### **1.1 SUMMARY**

**A. Section Includes:**

- 1. Penetration firestopping systems for the following applications:**
  - a. Penetrations in fire-resistance-rated walls.**

#### **1.2 PREINSTALLATION MEETINGS**

- A. Preinstallation Conference: Conduct conference at Project site.**

#### **1.3 ACTION SUBMITTALS**

- A. Product Data: For each type of product.**
- B. Product Schedule: For each penetration firestopping system. Include location, illustration of firestopping system, and design designation of qualified testing and inspecting agency.**
- C. Engineering Judgments: Where Project conditions require modification to a qualified testing and inspecting agency's illustration for a particular penetration firestopping system, submit illustration, with modifications marked, approved by penetration firestopping system manufacturer's fire-protection engineer as an engineering judgment or equivalent fire-resistance-rated assembly. Obtain approval of authorities having jurisdiction prior to submittal.**

#### **1.4 INFORMATIONAL SUBMITTALS**

- A. Product test reports.**

#### **1.5 CLOSEOUT SUBMITTALS**

- A. Installer Certificates: From Installer indicating that penetration firestopping systems have been installed in compliance with requirements and manufacturer's written instructions.**

#### **1.6 QUALITY ASSURANCE**

- A. Installer Qualifications: A firm that has been approved by FM Approval according to FM Approval 4991, "Approval of Firestop Contractors," or been evaluated by UL and found to comply with its "Qualified Firestop Contractor Program Requirements."**

## PART 2 - PRODUCTS

### 2.1 PERFORMANCE REQUIREMENTS

#### A. Fire-Test-Response Characteristics:

1. Perform penetration firestopping system tests by a qualified testing agency acceptable to authorities having jurisdiction.
2. Test per testing standards referenced in "Penetration Firestopping Systems" Article. Provide rated systems complying with the following requirements:
  - a. Penetration firestopping systems shall bear classification marking of a qualified testing agency.
    - 1) UL in its "Fire Resistance Directory."

### 2.2 PENETRATION FIRESTOPPING SYSTEMS

- #### A. Penetration Firestopping Systems: Systems that resist spread of fire, passage of smoke and other gases, and maintain original fire-resistance rating of construction penetrated. Penetration firestopping systems shall be compatible with one another, with the substrates forming openings, and with penetrating items if any.
1. Manufacturers:
    - a. 3M fire protection
    - b. Hilti, Inc
    - c. Specified Technologies, inc
    - d. Tremco, inc
    - e. Or approved equal
- #### B. Penetrations in Fire-Resistance-Rated Walls: Penetration firestopping systems with ratings determined per ASTM E814 or UL 1479, based on testing at a positive pressure differential of 0.01-inch wg.
1. F-Rating: Not less than the fire-resistance rating of constructions penetrated.
- #### C. Exposed Penetration Firestopping Systems: Flame-spread and smoke-developed indexes of less than 25 and 450, respectively, per ASTM E84.
- #### D. Accessories: Provide components for each penetration firestopping system that are needed to install fill materials and to maintain ratings required. Use only those components specified by penetration firestopping system manufacturer and approved by qualified testing and inspecting agency for conditions indicated.

## **PART 3 - EXECUTION**

### **3.1 INSTALLATION**

- A. Examine substrates and conditions, with Installer present, for compliance with requirements for opening configurations, penetrating items, substrates, and other conditions affecting performance of the Work.
- B. General: Install penetration firestopping systems to comply with manufacturer's written installation instructions and published drawings for products and applications.
- C. Install forming materials and other accessories of types required to support fill materials during their application and in the position needed to produce cross-sectional shapes and depths required to achieve fire ratings.
  - 1. After installing fill materials and allowing them to fully cure, remove combustible forming materials and other accessories not forming permanent components of firestopping.
- D. Install fill materials by proven techniques to produce the following results:
  - 1. Fill voids and cavities formed by openings, forming materials, accessories and penetrating items to achieve required fire-resistance ratings.
  - 2. Apply materials so they contact and adhere to substrates formed by openings and penetrating items.
  - 3. For fill materials that will remain exposed after completing the Work, finish to produce smooth, uniform surfaces that are flush with adjoining finishes.

### **3.2 IDENTIFICATION**

- A. Wall Identification: Permanently label walls containing penetration firestopping systems with the words "FIRE AND/OR SMOKE BARRIER - PROTECT ALL OPENINGS," using lettering not less than 3 inches high and with minimum 0.375-inch strokes.
  - 1. Locate in accessible concealed floor, floor-ceiling, or attic space at 15 feet from end of wall and at intervals not exceeding 30 feet .
- B. Penetration Identification: Identify each penetration firestopping system with legible metal or plastic labels. Attach labels permanently to surfaces adjacent to and within 6 inches of penetration firestopping system edge so labels are visible to anyone seeking to remove penetrating items or firestopping systems. Use mechanical fasteners or self-adhering-type labels with adhesives capable of permanently bonding labels to surfaces on which labels are placed. Include the following information on labels:
  - 1. The words "Warning - Penetration Firestopping - Do Not Disturb. Notify Building Management of Any Damage."
  - 2. Contractor's name, address, and phone number.
  - 3. Designation of applicable testing and inspecting agency.

4. Date of installation.
5. Manufacturer's name.
6. Installer's name.

### 3.3 FIELD QUALITY CONTROL

- A. Owner will engage a qualified testing agency to perform tests and inspections according to ASTM E2174.
- B. Where deficiencies are found or penetration firestopping system is damaged or removed because of testing, repair or replace penetration firestopping system to comply with requirements.
- C. Proceed with enclosing penetration firestopping systems with other construction only after inspection reports are issued and installations comply with requirements.

END OF SECTION 078413

## **SECTION 07 8443 - JOINT FIRESTOPPING**

### **PART 1 - GENERAL**

#### **1.1 SUMMARY**

**A. Section Includes:**

1. Joints in or between fire-resistance-rated constructions.

#### **1.2 PREINSTALLATION MEETINGS**

- A. Preinstallation Conference:** Conduct conference at Project site.

#### **1.3 ACTION SUBMITTALS**

- A. Product Data:** For each type of product.

**B. Product Schedule & Shop drawing**

1. Provide Schedule identifying each joint firestopping system to be installed
2. Include floor plan and indicate location of each joint to be installed and design designation of qualified testing agency.
3. Include illustration and description of firestopping system to be used.

- C. Engineering Judgments:** Where Project conditions require modification to a qualified testing agency's illustration for a particular joint firestopping system condition, submit illustration, with modifications marked, approved by joint firestopping system manufacturer's fire-protection engineer as an engineering judgment or equivalent fire-resistance-rated assembly.

#### **1.4 INFORMATIONAL SUBMITTALS**

- A. Product test reports.**

#### **1.5 CLOSEOUT SUBMITTALS**

- A. Installer Certificates:** From Installer indicating that joint firestopping systems have been installed in compliance with requirements and manufacturer's written instructions.

#### **1.6 QUALITY ASSURANCE**

- A. Installer Qualifications:** A firm that has been approved by FM Approvals according to FM Approvals 4991, "Approval of Firestop Contractors," or been evaluated by UL and found to comply with UL's "Qualified Firestop Contractor Program Requirements."

## PART 2 - PRODUCTS

### 2.1 PERFORMANCE REQUIREMENTS

#### A. Fire-Test-Response Characteristics:

1. Perform joint firestopping system tests by a qualified testing agency acceptable to authorities having jurisdiction.
2. Test per testing standards referenced in "Joint Firestopping Systems" Article. Provide rated systems complying with the following requirements:
  - a. Joint firestopping systems shall bear classification marking of a qualified testing agency.
    - 1) UL in its "Fire Resistance Directory."
    - 2) Intertek Group in its "Directory of Listed Building Products."

### 2.2 JOINT FIRESTOPPING SYSTEMS

- A. Joint Firestopping Systems: Systems that resist spread of fire, passage of smoke and other gases, and maintain original fire-resistance rating of assemblies in or between which joint firestopping systems are installed. Joint firestopping systems shall accommodate building movements without impairing their ability to resist the passage of fire and hot gases.
- B. Joints in or between Fire-Resistance-Rated Construction: Provide joint firestopping systems with ratings determined per ASTM E1966 or UL 2079.
  1. Joints between fire-rated gwb partitions to unrated metal roof deck and steel framing
  2. Joints between fire-rated gwb partition and CMU partitions
  3. Joints between fire-rated CMU partitions and unrated concrete on metal deck floors
  4. Manufactured by:
    - a. Hilti, inc
    - b. Specified Technologies, Inc
    - c. 3m fire-protective products
    - d. Or approved equal
  5. Fire-Resistance Rating: Equal to or exceeding the fire-resistance rating of the wall, floor, or roof in or between which it is installed.
- C. Exposed Joint Firestopping Systems: Flame-spread and smoke-developed indexes of less than 25 and 450, respectively, as determined per ASTM E84.
- D. Accessories: Provide components of joint firestopping systems, including primers and forming materials, that are needed to install elastomeric fill materials and to maintain ratings required. Use only components specified by joint firestopping system manufacturer and approved by the qualified testing agency for conditions indicated.

## PART 3 - EXECUTION

### 3.1 INSTALLATION

- A. Examine substrates and conditions, with Installer present, for compliance with requirements for joint configurations, substrates, and other conditions affecting performance of the Work.
- B. General: Install joint firestopping systems to comply with manufacturer's written installation instructions and published drawings for products and applications indicated.
- C. Install forming materials and other accessories of types required to support elastomeric fill materials during their application and in position needed to produce cross-sectional shapes and depths required to achieve fire ratings indicated.
  - 1. After installing elastomeric fill materials and allowing them to fully cure, remove combustible forming materials and other accessories not indicated as permanent components of fire-resistive joint system.
- D. Install elastomeric fill materials for joint firestopping systems by proven techniques to produce the following results:
  - 1. Elastomeric fill voids and cavities formed by joints and forming materials as required to achieve fire-resistance ratings indicated.
  - 2. Apply elastomeric fill materials so they contact and adhere to substrates formed by joints.
  - 3. For elastomeric fill materials that will remain exposed after completing the Work, finish to produce smooth, uniform surfaces that are flush with adjoining finishes.

### 3.2 IDENTIFICATION

- A. Joint Identification: Identify joint firestopping systems with legible metal or plastic labels. Attach labels permanently to surfaces adjacent to and within 6 inches (150 mm) of joint edge so labels are visible to anyone seeking to remove or joint firestopping system. Use mechanical fasteners or self-adhering-type labels with adhesives capable of permanently bonding labels to surfaces on which labels are placed. Include the following information on labels:
  - 1. The words "Warning - Joint Firestopping - Do Not Disturb. Notify Building Management of Any Damage."
  - 2. Contractor's name, address, and phone number.
  - 3. Designation of applicable testing agency.
  - 4. Date of installation.
  - 5. Manufacturer's name.
  - 6. Installer's name.

### 3.3 FIELD QUALITY CONTROL

- A. Inspecting Agency: Owner will engage a qualified testing agency to perform tests and inspections according to ASTM E2393.

- B. Where deficiencies are found or joint firestopping systems are damaged or removed due to testing, repair or replace joint firestopping systems so they comply with requirements.
- C. Proceed with enclosing joint firestopping systems with other construction only after inspection reports are issued and installations comply with requirements.

END OF SECTION 07 8443

## **SECTION 07 9200 - JOINT SEALANTS**

### **PART 1 - GENERAL**

#### **1.1 SUMMARY**

- A. Section Includes:
  - 1. Nonstaining silicone joint sealants.
  - 2. Mildew Resistant joints
  - 3. Urethane joint sealants.
  - 4. Latex joint sealants.

#### **1.2 PREINSTALLATION MEETINGS**

- A. Preinstallation Conference: Conduct conference at Project site.

#### **1.3 ACTION SUBMITTALS**

- A. Product Data: For each joint-sealant product.
- B. Samples: For each kind and color of joint sealant required.
- C. Joint-Sealant Schedule: Include the following information:
  - 1. Joint-sealant application, joint location, and designation.
  - 2. Joint-sealant manufacturer and product name.
  - 3. Joint-sealant formulation.
  - 4. Joint-sealant color.

#### **1.4 INFORMATIONAL SUBMITTALS**

- A. Product test reports.
- B. Preconstruction laboratory test reports.
- C. Preconstruction field-adhesion-test reports.
- D. Sample warranties.

#### **1.5 QUALITY ASSURANCE**

- A. Testing Agency Qualifications: Qualified according to ASTM C1021 to conduct the testing indicated.

## 1.6 PRECONSTRUCTION TESTING

- A. Preconstruction Laboratory Testing: Submit to joint-sealant manufacturers, for testing indicated below, samples of materials that will contact or affect joint sealants.
  - 1. Adhesion Testing: Use ASTM C794 to determine whether priming and other specific joint preparation techniques are required to obtain rapid, optimum adhesion of joint sealants to joint substrates.
  - 2. Compatibility Testing: Use ASTM C1087 to determine sealant compatibility when in contact with glazing and gasket materials.
  - 3. Stain Testing: Use ASTM C1248 to determine stain potential of sealant when in contact with masonry substrates.
- B. Preconstruction Field-Adhesion Testing: Before installing sealants, field test their adhesion to Project joint substrates. Test joint sealants according to Method A, Field-Applied Sealant Joint Hand Pull Tab, in Appendix X1.1 in ASTM C1193 or Method A, Tail Procedure, in ASTM C1521.

## 1.7 WARRANTY

- A. Special Installer's Warranty: Installer agrees to repair or replace joint sealants that do not comply with performance and other requirements specified in this Section within specified warranty period.
  - 1. Warranty Period: Two years from date of Substantial Completion.
- B. Special Manufacturer's Warranty: Manufacturer agrees to furnish joint sealants to repair or replace those joint sealants that do not comply with performance and other requirements specified in this Section within specified warranty period.
  - 1. Warranty Period: Five years from date of Substantial Completion.

## PART 2 - PRODUCTS

### 2.1 JOINT SEALANTS, GENERAL

- A. Compatibility: Provide joint sealants, backings, and other related materials that are compatible with one another and with joint substrates under conditions of service and application, as demonstrated by joint-sealant manufacturer, based on testing and field experience.
- B. Liquid-Applied Joint Sealants: Comply with ASTM C 920 and other requirements indicated for each liquid-applied joint sealant specified, including those referencing ASTM C 920 classifications for type, grade, class, and uses related to exposure and joint substrates.

- C. Stain-Test-Response Characteristics: Sealants are to be nonstaining to porous substrates, provide products that have undergone testing according to ASTM C 1248 and have not stained porous joint substrates indicated for Project.
- D. Colors of Exposed Joint Sealants: selected by Architect from manufacturer's full range.

## 2.2 NONSTAINING SILICONE JOINT SEALANTS

- A. Silicone, Nonstaining, type S, NS, 50, NT: Non-staining Single-component, nonsag, plus 50 percent and minus 50 percent movement capability, nontraffic-use, neutral-curing silicone joint sealant; ASTM C920, Type S, Grade NS, Class 50, Use NT.
  - 1. Refer to article 3.3 "joint sealant schedule" for location of acceptable use
  - 2. Basis of design: Dow Corning 795, as manufactured by Dow Corning Corp
  - 3. Other Manufacturers:
    - a. Pecora Corporation
    - b. Sika Corporation
    - c. GE construction sealants
    - d. Or approved equal

## 2.3 URETHANE JOINT SEALANTS FOR INTERIOR HORIZONTAL TRAFFIC SURFACES

- A. Urethane, S, P, 25, T, NT: Single-component, pourable, plus 25 percent and minus 25 percent movement capability, traffic, urethane joint sealant; ASTM C920, Type S, Grade P, Class 25, Uses T.
  - 1. Refer to article 3.3 "joint sealant schedule" for location of acceptable use
  - 2. as Manufactured by, subject to performance requirements
    - a. Dow Corning
    - b. Pecora Corporation
    - c. Sika Corporation
    - d. GE construction sealants
    - e. Or approved equal

## 2.4 MILDEW-RESISTANT JOINT SEALANTS

- A. Mildew-Resistant Joint Sealants: Formulated for prolonged exposure to humidity with fungicide to prevent mold and mildew growth.

Silicone, Mildew Resistant, S, NS, 25, NT, G, A, O: Mildew-resistant, single-component, nonsag, plus 25 percent and minus 25 percent movement capability, nontraffic-use, silicone joint sealant; as applicable to nonporous joint substrates indicated, O; formulated with fungicide, intended for sealing interior ceramic tile joints and other nonporous substrates that are subject to in-service exposures of high humidity and extreme temperatures.

- 1. Refer to article 3.3 "joint sealant schedule" for location of acceptable use

2. as Manufactured by, subject to performance requirements
  - a. Dow Corning
  - b. Pecora Corporation
  - c. Sika Corporation
  - d. GE construction sealants
  - e. Or approved equal
- B. Acrylic Latex: Acrylic latex or siliconized acrylic latex, ASTM C834, Type OP, Grade NF.
  1. Refer to article 3.3 "joint sealant schedule" for location of acceptable use
  2. as Manufactured by, subject to performance requirements
    - a. Dow Corning
    - b. Pecora Corporation
    - c. Sika Corporation
    - d. GE construction sealants
    - e. Or approved equal

## 2.5 MASTIC

- A. Butyl based mastic: ASTM C1311, Butyl-based sealant with 10% movement capability
  1. Refer to article 3.3 "joint sealant schedule" for location of acceptable use
  2. as Manufactured by, subject to performance requirements
    - a. Dow Corning
    - b. Pecora Corporation
    - c. Sika Corporation
    - d. GE construction sealants
    - e. tremco
    - f. Or approved equal

## 2.6 JOINT-SEALANT BACKING

- A. Cylindrical Sealant Backings: ASTM C1330, Type C (closed-cell material with a surface skin, Type B (bicellular material with a surface skin or any of the preceding types, as approved in writing by joint-sealant manufacturer for joint application indicated, and of size and density to control sealant depth and otherwise contribute to producing optimum sealant performance.
- B. Bond-Breaker Tape: Polyethylene tape or other plastic tape recommended by sealant manufacturer.

## 2.7 MISCELLANEOUS MATERIALS

- A. Primer: Material recommended by joint-sealant manufacturer where required for adhesion of sealant to joint substrates indicated, as determined from preconstruction joint-sealant-substrate tests and field tests.
- B. Cleaners for Nonporous Surfaces: Chemical cleaners acceptable to manufacturers of sealants and sealant backing materials.

- C. Masking Tape: Nonstaining, nonabsorbent material compatible with joint sealants and surfaces adjacent to joints.

### **PART 3 - EXECUTION**

#### **3.1 PREPARATION**

- A. Surface Cleaning of Joints: Clean out joints immediately before installing joint sealants to comply with joint-sealant manufacturer's written instructions and the following requirements:
  - 1. Remove laitance and form-release agents from concrete.
  - 2. Clean nonporous joint substrate surfaces with chemical cleaners or other means that do not stain, harm substrates, or leave residues capable of interfering with adhesion.
- B. Joint Priming: Prime joint substrates where recommended by joint-sealant manufacturer or as indicated by preconstruction joint-sealant-substrate tests or prior experience.
- C. Masking Tape: Use masking tape where required to prevent contact of sealant or primer with adjoining surfaces.

#### **3.2 INSTALLATION OF JOINT SEALANTS**

- A. General: Comply with ASTM C1193 and joint-sealant manufacturer's written installation instructions for products and applications indicated, unless more stringent requirements apply.
- B. Install sealant backings of kind indicated to support sealants during application and at position required to produce cross-sectional shapes and depths of installed sealants relative to joint widths that allow optimum sealant movement capability.
- C. Install bond-breaker tape behind sealants where sealant backings are not used between sealants and backs of joints.
- D. Install sealants using proven techniques that comply with the following and at the same time backings are installed:
  - 1. Place sealants so they directly contact and fully wet joint substrates.
  - 2. Completely fill recesses in each joint configuration.
  - 3. Produce uniform, cross-sectional shapes and depths relative to joint widths that allow optimum sealant movement capability.
- E. Tooling of Nonsag Sealants: Immediately after sealant application and before skinning or curing begins, tool sealants to form smooth, uniform beads of configuration indicated. Use tooling agents that are approved in writing by sealant manufacturer and that do not discolor sealants or adjacent surfaces.
  - 1. Provide concave joint profile per Figure 8A in ASTM C1193 unless otherwise indicated.

### 3.3 JOINT-SEALANT SCHEDULE

- A. Joint-Sealant Application: Exterior joints in vertical surfaces and horizontal nontraffic surfaces
  - 1. Joint Locations:
    - a. Control and expansion joints in unit masonry
    - b. Façade joints at metal panel cladding locations.
  - 2. Joint Sealant: Silicone, nonstaining, S, NS, 50, NT.
  - 3. Joint-Sealant Color: As selected by Architect from manufacturer's full range of colors
- B. Joint-Sealant Application: Interior joints in horizontal traffic surfaces
  - 1. Joint Locations:
    - a. Isolation joints in cast-in-place concrete slabs.
  - 2. Joint Sealant: Urethane, S, P, 25, T, NT.
  - 3. Joint-Sealant Color: As selected by Architect from manufacturer's full range of colors
- C. Joint-Sealant Application: Interior joints in vertical surfaces and horizontal nontraffic surfaces not subject to significant movement
  - 1. Joint Locations:
    - a. Control joints on exposed interior surfaces of exterior walls.
    - b. Perimeter joints between interior wall surfaces and frames of interior doors
  - 2. Joint Sealant: Acrylic latex.
  - 3. Joint-Sealant Color: As selected by Architect from manufacturer's full range of colors
- D. Joint-Sealant Application: Mildew-resistant interior joints in vertical surfaces and horizontal nontraffic surfaces
  - 1. Joint Locations:
    - a. Joints between plumbing fixtures and adjoining walls, floors, and counters.
    - b. Tile control and expansion joints.
  - 2. Joint Sealant: Silicone, mildew resistant, acid curing, S, NS, 25, NT
  - 3. Joint-Sealant Color: As selected by Architect from manufacturer's full range of colors
- E. Joint-Sealant Application: Concealed mastics
  - 1. Joint Locations:
    - a. Aluminum thresholds.
    - b. Sill plates.
    - c. Other joints as indicated on Drawings.
  - 2. Joint Sealant: Butyl-rubber based.

3. Joint-Sealant Color: As selected by Architect from manufacturer's full range of colors

END OF SECTION 07 9200

## **SECTION 079500 EXPANSION CONTROL**

### **PART 1 - GENERAL**

#### **1.1 GENERAL REQUIREMENTS**

- A. Work of this section, as shown or specified, shall be in accordance with the requirements of the Contract Documents.

#### **1.2 SECTION INCLUDES**

- A. Work of this Section includes all labor, materials, equipment, and services necessary to complete the expansion joint covers as shown on the drawings and/or specified herein, including, but not necessarily limited to, the following:
  - 1. Floor expansion joint cover assemblies.
  - 2. Wall expansion joint cover assemblies.
  - 3. Ceiling expansion joint cover assemblies.
  - 4. Expansion joint covers between new and existing construction for walls, floors, ceilings.
- B. Fire rated expansion joint cover assemblies where required.

#### **1.3 RELATED SECTIONS**

- A. Selective Demolition and Alteration Work - Section 024119.
- B. Cast-in-Place Concrete - Section 033000.
- C. Unit Masonry - Section 042000.
- D. Roofing - Division 7.
- E. Painting and Finishing - Section 099000.

#### **1.4 SUBMITTALS**

- A. Submit product data for each type of expansion joint cover assembly specified, including manufacturer's product specifications, installation instructions, details of construction relative to materials, dimensions of individual components, profiles, and finishes.
- B. Submit shop drawings showing fabrication and installation of expansion joint cover assemblies, including plans, elevations, sections, details of components, joints, splices, and attachments to other units of work.
- C. Submit samples for verification purposes in full size units of each type of expansion joint cover assembly indicated; within sets for each finish, color, texture, and pattern

specified, showing full range of variations expected in these characteristics. Install elastomeric material for joints, samples to verify color selected.

#### 1.5 QUALITY ASSURANCE

- A. Fire Test Response Characteristics: Where indicated, provide expansion joint cover assemblies identical to those assemblies whose fire resistance has been determined per ANSI/UL 263, NFPA 251, U.B.C. 43-1, or ASTM E 119, including hose stream test of vertical wall assemblies, by a testing and inspecting agency acceptable to authorities having jurisdiction.

- 1. Fire Resistance Ratings: Rating as shown on drawings and Specifications.

- B. Joint covers shall permit unrestrained movement of joint without disengagement of cover.
- C. Provide a single source manufacture for all expansion joints in order to maintain manufacturer's warrantee for factory fabricated transitions for both cover and fire barrier.
- D. Floor joint cover plate assemblies shall be capable of supporting a 200 psf uniform load and a 300 lb. concentrated load with a deflection not to exceed 1/16".

#### 1.6 DELIVERY, STORAGE AND HANDLING

- A. Provide temporary protective cover on finished surfaces.
- B. Deliver joint covers to jobsite in new, clean, unopened crates of sufficient size and strength to protect materials during transit.
- C. Store components in original containers in a clean, dry location.
- D. Handle components with equipment of sufficient size to preclude hazard to personnel or components.

### PART 2 PRODUCTS

#### 2.1 MANUFACTURER

- A. Basis of Design as manufactured by Construction specialties
  - 1. Other Manufacturers, Subject to compliance with requirements specified,
    - a. MM Systems Corporation,
    - b. Watson Bowman Acme
    - c. Or approved equal.
  - 2. Joint width: 2" unless otherwise noted on the drawings.
- B. Designated as EXP-1 On Drawings: Pre-compressed impregnated foam with waterproof silicone on face for construction joints concealed from view to maintain watertight integrity

1. VFR series
2. approved equal
- C. Designated as EXP-2 on drawings: surface mounted Anodized aluminum cover for GWB wall to wall and GWB ceiling to GWB ceiling
  1. ASM series and ASMC series where occurs in a corner.
  2. Or approved equal
- D. Designated as EXP-3 on drawings: Exterior flush cover with silicone gasket for wall to wall joints including masonry to metal joints
  1. SF series
  2. Or approved equal
- E. Designed as formed expansion joint cover: Exterior cover noted on drawings as formed expansion joint cover shall be fabricated from materials matching façade cladding and complying with SMACNA guidelines. As contractor option: manufactured exterior cover with vapor barrier shall be acceptable where can be suitably installed per manufacturer recommendations in finish matching adjacent wall panel:
  1. AFW-S series, AFWC-X:
  2. Or approved equal

## 2.2 MATERIALS

- A. Aluminum: ASTM B 221, alloy 6063-T5 for extrusions; ASTM B 209, alloy 6061-T6, sheet and plate; aluminum to have the following finishes:
  1. Interior and exterior walking surfaces shall have clear anodized (A41) finish.
  2. Exterior surfaces not subject to pedestrian traffic shall have a "Kynar 500" finish conforming to NAAMM 605.2; two (2) colors shall be required, one (1) color to match metal siding and the other color to match adjacent concrete surfaces.
  3. Interior surfaces not subject to pedestrian traffic shall be shop primed with rust inhibitive primer, minimum 2 mils thick, ready to receive field painted finish.
- B. Stainless Steel: ASTM A 666, Type 304, No. 4 finish.
- C. Protect metal surfaces to be placed in contact with cementitious materials with a protective coating.
- D. Extruded Preformed Seals: Single or multi-cellular elastomeric profiles as classified under ASTM D 2000, designed with or without continuous, longitudinal, internal baffles. Formed to fit compatible frames, in color, as selected by Architect from manufacturer's standard colors.
- E. Fire Barriers: provide where noted designed for indicated or required dynamic structural movement without material degradation or fatigue when tested according to

ASTM E 1399. Tested in maximum joint width condition with a field splice as a component of an expansion joint cover per ANSI/UL 263, NFPA 251, U.B.C. 43-1, or ASTM E 119, including hose stream test of vertical wall assemblies by a nationally recognized testing and inspecting agency acceptable to authorities having jurisdiction.

1. Supply Monoflex Fire Barrier Sealing System or approved equals for Architectural Joints fire-resistive barrier systems that have ratings equal to or greater than the rating of adjacent construction when tested in accordance with the aforementioned standards. Provide specified 1 hour rated fire barrier expansion joint assembly for floors and/or specified 2 hour rated fire barrier expansion joint assembly for walls
- F. Accessories: Manufacturer's standard anchors, fasteners, set screws, spacers, flexible moisture barrier and filler materials, drain tubes, lubricants, adhesive, and other accessories compatible with material in contact, as indicated or required for complete installations.

## 2.3 EXPANSION JOINT COVER ASSEMBLIES

- A. General: Provide expansion joint cover assemblies of design, basic profile, materials, and operation indicated on drawings. Provide units comparable to those indicated or required to accommodate joint size, variations in adjacent surfaces, and dynamic structural movement without material degradation or fatigue when tested according to ASTM E 1399. Furnish units in longest practical lengths to minimize number of end joints. Provide hairline mitered corners where joint changes direction or abuts other materials. Include closure materials and transition pieces, tee-joints, corners, transition pieces, curbs, cross-connections, and other accessories as required to provide continuous joint cover assemblies.
1. Special conditions shall be shop fabricated.
  2. Fabricate components in largest practical lengths to minimize field splicing.
- B. Moisture Barrier: Provide manufacturer's continuous, standard, flexible vinyl moisture barrier under covers at locations indicated.
- C. All shop drawings shall be signed and sealed by a third-party engineering firm.
- D. Fire Rated Joint Covers: Provide expansion joint cover assemblies with manufacturer's continuous, standard, flexible fire barrier seals under covers at locations indicated to provide fire-resistive rating not less than the rating of adjacent construction.
- E. All transitions between vertical and horizontal joints shall be factory fabricated.

## PART 3 EXECUTION

### 3.1 PREPARATION

- A. Manufacturer's Instructions: In addition to requirements of these specifications, comply with manufacturer's instructions and recommendations for phases of Work, including preparing substrate, applying materials, and protecting installed units.

- B. Coordinate and furnish anchorages, setting drawings, templates, and instructions for installation of expansion joint cover assemblies to be embedded in or anchored to concrete or to have recesses formed into edges of concrete slab for later placement and grouting-in of frames.
- C. Fastening to In-Place Construction: Provide anchorage devices and fasteners where necessary to secure expansion joint cover assemblies to in-place construction, including threaded fasteners with drilled-in expansion shields for masonry and concrete where anchoring members are not embedded in concrete. Provide fasteners of metal, type, and size to suit type of construction indicated and provide for secure attachment of expansion joint cover assemblies.

### 3.2 INSTALLATION

- A. Cutting, Fitting, and Placement: Perform cutting, drilling, and fitting into new and existing construction as required to install expansion joint covers. Install joint cover assemblies in true alignment and proper relationship to expansion joints and adjoining finished surfaces measured from established lines and levels. Allow adequate free movement of thermal expansion and contraction of metal to avoid buckling. Set floor covers at elevations to be flush. Locate wall, ceiling, roof, and soffit covers in continuous contact with adjacent surfaces. Securely attach in place with required accessories. Locate anchors at interval recommended by manufacturer, but not less than 3" from each end and not more than 24" o.c.
  - 1. Where cutting into existing construction, conform to the requirements of Section 024119.
- B. Continuity: Maintain continuity of expansion joint cover assemblies with a minimum number of end joints and align metal members mechanically using splice joints. Cut and fit ends to produce joints that will accommodate thermal expansion and contraction of metal to avoid buckling of frames. Adhere flexible filler materials (if any) to frames with adhesive or pressure sensitive tape as recommended by manufacturer.
- C. Extruded Preformed Seals: Install seals complying with manufacturer's instructions and with minimum number of end joints. For straight sections provide preformed seals in continual lengths. Vulcanize or heat-weld field splice joints in preformed seal material to provide watertight joints using procedures recommended by manufacturer. Apply adhesive, epoxy, or lubricant adhesive approved by manufacturer to both frame interfaces before installing preformed seal. Seal transitions according to manufacturer's instructions.
- D. Elastomeric Sealant Joint Assemblies: Seal end joints within continuous runs and joints at transitions according to manufacturer's directions to provide a watertight installation.
- E. Fire Barriers: Install fire barriers, including transitions and end joints, according to manufacturer's instructions so that fire-rated construction is continuous.

### 3.3 CLEANING AND PROTECTION

- A. Do not remove protective covering until finish work in adjacent areas is complete. When protective covering is removed, clean exposed metal surfaces to comply with manufacturer's instructions.

END OF SECTION

## SECTION 080671 – DOOR HARDWARE SCHEDULE

### PART 1 - GENERAL

#### 1.1 RELATED DOCUMENTS

- A. Drawings and general provisions of the Contract, including General and Supplementary Conditions and Division 1 Specification Sections, apply to this Section.

#### 1.2 SUMMARY

- A. This Section references specification sections relating to commercial door hardware for the following:
  - 1. Swinging doors.
  - 2. Sliding Doors.
  - 3. Other doors to the extent indicated.
- B. Commercial door hardware includes, but is not necessarily limited to, the following:
  - 1. Mechanical door hardware.
  - 2. Electromechanical and access control door hardware.
  - 3. Electromechanical and access control door hardware power supplies, back-ups and surge protection.
  - 4. Automatic operators.
  - 5. Cylinders specified for doors in other sections.
- C. Related Sections:
  - 1. Division 08 Section “Integrated Door Opening Assemblies”.
  - 2. Division 08 Section “Door Hardware”.
  - 3. Division 26 Section “Electrical”.
  - 4. Division 28 Section “Access Control Hardware Devices”.
- D. Codes and References: Comply with the version year adopted by the Authority Having Jurisdiction.
  - 1. ANSI A117.1 - Accessible and Usable Buildings and Facilities.
  - 2. ICC/IBC - International Building Code.
  - 3. NFPA 70 - National Electrical Code.
  - 4. NFPA 80 - Fire Doors and Windows.
  - 5. NFPA 101 - Life Safety Code.
  - 6. NFPA 105 - Installation of Smoke Door Assemblies.
  - 7. State Building Codes, Local Amendments.

- E. Standards: Reference Related Sections for requirements regarding compliance with applicable industry standards.

### 1.3 SUBMITTALS

- A. Product Data: Manufacturer's product data sheets including installation details, material descriptions, dimensions of individual components and profiles, operational descriptions and finishes.
- B. Door Hardware Schedule: Prepared by or under the supervision of supplier, detailing fabrication and assembly of door hardware, as well as procedures and diagrams. Coordinate the final Door Hardware Schedule with doors, frames, and related work to ensure proper size, thickness, hand, function, and finish of door hardware.
  - 1. Format: Comply with scheduling sequence and vertical format in DHI's "Sequence and Format for the Hardware Schedule."
  - 2. Organization: Organize the Door Hardware Schedule into door hardware sets indicating complete designations of every item required for each door or opening. Organize door hardware sets in same order as in the Door Hardware Sets at the end of Part 3. Submittals that do not follow the same format and order as the Door Hardware Sets will be rejected and subject to resubmission.
  - 3. Content: Include the following information:
    - a. Type, style, function, size, label, hand, and finish of each door hardware item.
    - b. Manufacturer of each item.
    - c. Fastenings and other pertinent information.
    - d. Location of door hardware set, cross-referenced to Drawings, both on floor plans and in door and frame schedule.
    - e. Explanation of abbreviations, symbols, and codes contained in schedule.
    - f. Mounting locations for door hardware.
    - g. Door and frame sizes and materials.
  - 4. Submittal Sequence: Submit the final Door Hardware Schedule at earliest possible date, particularly where approval of the Door Hardware Schedule must precede fabrication of other work that is critical in the Project construction schedule. Include Product Data, Samples, Shop Drawings of other work affected by door hardware, and other information essential to the coordinated review of the Door Hardware Schedule.
- C. Keying Schedule: Prepared under the supervision of the Owner, separate schedule detailing final keying instructions for locksets and cylinders in writing. Include keying system explanation, door numbers, key set symbols, hardware set numbers and special instructions. Owner to approve submitted keying schedule prior to the ordering of permanent cylinders.
- D. Product Test Reports: Indicating compliance with cycle testing requirements, based on evaluation of comprehensive tests performed by manufacturer and witnessed by a qualified independent testing agency.

- E. Operating and Maintenance Manuals: Provide manufacturers operating and maintenance manuals for each item comprising the complete door hardware installation in quantity as required in Division 01, Closeout Submittals. The manual to include the name, address, and contact information of the manufacturers providing the hardware and their nearest service representatives. The final copies delivered after completion of the installation test to include "as built" modifications made during installation, checkout, and acceptance.
- F. Warranties and Maintenance: Special warranties and maintenance agreements specified in the Related Sections.

#### 1.4 DELIVERY, STORAGE, AND HANDLING

- A. Inventory door hardware on receipt and provide secure lock-up and shelving for door hardware delivered to Project site. Do not store electronic access control hardware, software or accessories at Project site without prior authorization.
- B. Tag each item or package separately with identification related to the final Door Hardware Schedule, and include basic installation instructions with each item or package.
- C. Deliver, as applicable, permanent keys, cylinders, cores, access control credentials, software and related accessories directly to Owner via registered mail or overnight package service. Instructions for delivery to the Owner shall be established at the "Keying Conference".

#### 1.5 WARRANTY

- A. General Warranty: Reference Division 01, General Requirements. Special warranties specified in this Article shall not deprive Owner of other rights Owner may have under other provisions of the Contract Documents and shall be in addition to, and run concurrent with, other warranties made by Contractor under requirements of the Contract Documents.

#### 1.6 MAINTENANCE SERVICE

- A. Maintenance Tools and Instructions: Furnish a complete set of specialized tools and maintenance instructions as needed for Owner's continued adjustment, maintenance, and removal and replacement of door hardware.

### PART 2 - PRODUCTS

#### 2.1 SCHEDULED DOOR HARDWARE

- A. Refer to "PART 3 – EXECUTION" for required specification sections.

## PART 3 - EXECUTION

### 3.1 DOOR HARDWARE SETS

- A. The door hardware sets represent the design intent and direction of the owner and architect. They are a guideline only and should not be considered a detailed hardware schedule. Discrepancies, conflicting hardware and missing items should be brought to the attention of the architect with corrections made prior to the bidding process. Omitted items not included in a hardware set should be scheduled with the appropriate additional hardware required for proper application and functionality.
1. Quantities listed are for each pair of doors, or for each single door.
  2. The supplier is responsible for handling and sizing all products.
  3. Where multiple options for a piece of hardware are given in a single line item, the supplier shall provide the appropriate application for the opening.
  4. At existing openings with new hardware the supplier shall field inspect existing conditions prior to the submittal stage to verify the specified hardware will work as required. Provide alternate solutions and proposals as needed.
- B. Products listed in the hardware sets shall be supplied by and in accordance with the requirements described in the specification section as noted for each item.
1. Section 08 17 00 – Integrated Door Opening Assemblies.
  2. Section 08 71 00 – Door Hardware (unless noted otherwise).
  3. Section 28 15 00 (Div 28) – Access Control Hardware Devices.
- C. Manufacturer's Abbreviations:
1. MK - McKinney
  2. MR - Markar
  3. PE - Pemko
  4. RI - RITE Door
  5. SU - Securitron
  6. RO - Rockwood
  7. RU - Corbin Russwin
  8. AD - Adams Rite
  9. RF - Rixson
  10. NO - Norton
  11. OT – Other

### Hardware Sets

#### Set: 1.0

Description: Exterior Alum Pair - Card Access; Auto

2 Continuous Hinge	CFM-SLF-HD1-M EL-CEPTx32D	PE
1 Magnetic Lock (double)	DM62BD	SU

2	Dual Sense Touch Bar	DSB-CL		SU
2	Door Pull (straight)	BF 112	US32D	RO
2	Concealed Overhead Stop	6-X36	630	RF
1	Closer (Reg or PA)	DC8200 / DC8210	689	RU
1	Door Operator (hard-wired)	5831xLPB 24VDC	689	NO
1	Threshold (coord w/ details)	2010APK Frost Guard FHSL14SS-2		PE
4	Door & Frame Wire Harness	QC-Series		MK
1	Emerg Exit Button (pneumatic)	EEB2		SU
1	Bollard	530POST (prep card reader & switch)		NO
1	Wireless Interface Module	ADA1028W		NO
1	Hard-Wired Kit (24VDC output)	ADA1015P		NO
2	Door Switch	501 (sgl or 2-gang elec box)		NO
1	Power Supply	AQD-8F8R Series (coord w/ security)		SU
1	Card Reader	Owner furnished, Contractor installed		
1	Weather Seals	Supplied with door & frame assembly		00
1	Remote Release Button	TS-33		AC

Notes: Provide KCFM hinge where required to suit door mfg. Provide (2) M62BD maglocks where a DM62 will not fit. (Typ)

Operation: Doors are normally closed and secured. Valid card at reader (or signal from remote release button at reception, where shown) unlocks maglock for momentary access, then enables outside actuator. Inside actuator unlocks maglock, then auto opens door. Monitoring by internal door position switch/bond sensor. During a loss of power the maglock will unlock immediately. Free egress at all times via touch bar built-in switch. Maglock status will change to unlocked when fire detection/suppression systems are activated. Emergency exit button will unlock maglock for 30 seconds.

**Set: 2.0**

Description: Exterior Alum Single - Card Access; Auto

1	Continuous Hinge	CFM-SLF-HD1-M EL-CEPTx32D		PE
1	Magnetic Lock	M62BD		SU
1	Dual Sense Touch Bar	DSB-CL		SU
1	Door Pull (straight)	BF 112	US32D	RO
1	Concealed Overhead Stop	6-X36	630	RF
1	Door Operator (hard-wired)	5831xLPB 24VDC	689	NO
1	Threshold (coord w/ details)	2010APK Frost Guard FHSL14SS-2		PE
1	Door & Frame Wire Harness	QC-Series		MK
1	Emerg Exit Button (pneumatic)	EEB2		SU
1	Bollard	530POST (prep card reader & switch)		NO
1	Wireless Interface Module	ADA1028W		NO
1	Hard-Wired Kit (24VDC output)	ADA1015P		NO
1	Door Switch	501 (sgl or 2-gang elec box)		NO
1	Power Supply	AQD-8F8R Series (coord w/ security)		SU
1	Card Reader	Owner furnished, Contractor installed		
1	Weather Seals	Supplied with door & frame assembly		00

Notes: Provide KCFM hinge where required to suit door mfg.

Operation: Doors are normally closed and secured. Valid card at reader (or signal from remote release button at reception, where shown) unlocks maglock for momentary access, then enables outside actuator. Inside actuator unlocks maglock, then auto opens door. Monitoring by internal door position switch/bond sensor. During a loss of power the maglock will unlock immediately. Free egress at all times via touch bar built-in switch. Maglock status

will change to unlocked when fire detection/suppression systems are activated. Emergency exit button will unlock maglock for 30 seconds.

**Set: 3.0**

Description: Exterior Alum Pair

2 Continuous Hinge	CFM-SLF-HD1-M EL-CEPTx32D		PE
1 Magnetic Lock (double)	DM62BD		SU
2 Dual Sense Touch Bar	DSB-CL		SU
2 Door Pull (straight)	BF 112	US32D	RO
2 Concealed Overhead Stop	6-X36	630	RF
2 Closer (Reg or PA)	DC8200 / DC8210	689	RU
1 Threshold (coord w/ details)	2010APK Frost Guard FHSL14SS-2		PE
4 Door & Frame Wire Harness	QC-Series		MK
1 Emerg Exit Button (pneumatic)	EEB2		SU
1 Power Supply	AQD-8F8R Series (coord w/ security)		SU
1 Weather Seals	Supplied with door & frame assembly		00

Notes:

Operation: Doors are normally closed and secured. Monitoring by internal door position switch/bond sensor. During a loss of power the maglock will unlock immediately. Free egress at all times via touch bar built-in switch. Maglock status will change to unlocked when fire detection/suppression systems are activated. Emergency exit button will unlock maglock for 30 seconds.

**Set: 4.0**

Description: Exterior Alum Pair - Exit Only

2 Continuous Hinge	CFM-SLF-HD1-M EL-CEPTx32D		PE
1 Magnetic Lock (double)	DM62BD		SU
2 Dual Sense Touch Bar	DSB-CL		SU
2 Concealed Overhead Stop	6-X36	630	RF
2 Closer (Reg or PA)	DC8200 / DC8210	689	RU
1 Threshold (coord w/ details)	2010APK Frost Guard FHSL14SS-2		PE
4 Door & Frame Wire Harness	QC-Series		MK
1 Emerg Exit Button (pneumatic)	EEB2		SU
1 Power Supply	AQD-8F8R Series (coord w/ security)		SU
1 Weather Seals	Supplied with door & frame assembly		00

Notes:

Operation: Doors are normally closed and secured. Monitoring by internal door position switch/bond sensor. During a loss of power the maglock will unlock immediately. Free egress at all times via touch bar built-in switch. Maglock status will change to unlocked when fire detection/suppression systems are activated. Emergency exit button will unlock maglock for 30 seconds.

**Set: 5.0**

Description: Vestibule Alum Pair - Auto

2 Continuous Hinge	CFM-SLF-HD1-M		PE
2 Inactive Pushrail	8099-M0	628	AD
2 Door Pull (straight)	BF 112	US32D	RO
2 Concealed Overhead Stop	6-X36	630	RF
1 Closer (Reg or PA)	DC8200 / DC8210	689	RU

1 Door Operator (hard-wired)	5831xLPB 24VDC	689	NO
1 Threshold (coord w/ details)	272A FHSL14		PE
1 Wireless Interface Module	ADA1028W		NO
1 Hard-Wired Kit (24VDC output)	ADA1015P		NO
1 Door Switch	501 (sgl or 2-gang elec box)		NO
1 Vestibule Switch (dual)	504 (2-gang elec box)		NO
1 Weather Seals	Supplied with door & frame assembly		00

Notes: Provide KCFM hinge where required to suit door mfg.  
 Actuator from either direction auto opens door.

**Set: 6.0**

Description: Vestibule Alum Single - Auto

1 Continuous Hinge	CFM-SLF-HD1-M		PE
1 Inactive Pushrail	8099-M0	628	AD
1 Door Pull (straight)	BF 112	US32D	RO
1 Concealed Overhead Stop	6-X36	630	RF
1 Door Operator (hard-wired)	5831xLPB 24VDC	689	NO
1 Threshold (coord w/ details)	272A FHSL14		PE
1 Wireless Interface Module	ADA1028W		NO
1 Hard-Wired Kit (24VDC output)	ADA1015P		NO
1 Door Switch	501 (sgl or 2-gang elec box)		NO
1 Vestibule Switch (dual)	504 (2-gang elec box)		NO
1 Weather Seals	Supplied with door & frame assembly		00

Notes: Provide KCFM hinge where required to suit door mfg.  
 Actuator from either direction auto opens door.

**Set: 7.0**

Description: Vestibule Alum Pair

2 Continuous Hinge	CFM-SLF-HD1-M		PE
2 Inactive Pushrail	8099-M0	628	AD
2 Door Pull (straight)	BF 112	US32D	RO
2 Concealed Overhead Stop	6-X36	630	RF
2 Closer (Reg or PA)	DC8200 / DC8210	689	RU
1 Threshold (coord w/ details)	272A FHSL14		PE
1 Weather Seals	Supplied with door & frame assembly		00

Notes: Provide KCFM hinge where required to suit door mfg.

**Set: 8.0**

Description: Vestibule Alum Pair (Rated) - Natatorium

2 Continuous Hinge	CFM-SLF-HD1-M		PE
2 Exit Device (SVR, LBR, passage)	ED5470B N910ET M55	630	RU
2 Concealed Overhead Stop	6-X36	630	RF
2 Closer (Reg or PA)	DC8200 / DC8210	689	RU
1 Threshold (coord w/ details)	272A FHSL14		PE
1 Weather Seals	Supplied with door & frame assembly		00

Notes: Provide KCFM hinge where required to suit door mfg. Coordinate hardware with alum door manufacturer.

**Set: 9.0**

Description: Exterior HM Pair - Card Access

2	Continuous Hinge	FM300 EL-CEPTx32D	630	MR
1	Magnetic Lock (double)	DM62BD		SU
2	Dual Sense Touch Bar	DSB-CL		SU
2	Door Pull (straight)	BF 112	US32D	RO
2	Closer (Unitrol)	DC8210 A11	689	RU
2	Kick Plate	K1050 10"	US32D	RO
2	Astragal	305CN		PE
1	Rain Guard	346C		PE
1	Head & Jamb Gasketing	2891APK		PE
2	Sweep	345AV		PE
1	Threshold (coord w/ details)	2010APK Frost Guard FHSL14SS-2		PE
4	Door & Frame Wire Harness	QC-Series		MK
1	Emerg Exit Button (pneumatic)	EEB2		SU
1	Power Supply	AQD-8F8R Series (coord w/ security)		SU
1	Card Reader	Owner furnished, Contractor installed		

**Notes:**

Operation: Doors are normally closed and secured. Valid card at reader unlocks maglocks for momentary access. Monitoring by internal door position switch/bond sensor. During a loss of power the maglock will unlock immediately. Free egress at all times via touch bar built-in switch. Maglock status will change to unlocked when fire detection/suppression systems are activated. Pressing emergency exit button will unlock maglock for 30 seconds.

**Set: 10.0**

Description: Exterior HM Pair - Card Access; Auto; Remote Release

2	Continuous Hinge	FM300 EL-CEPTx32D	630	MR
1	Magnetic Lock (double)	DM62BD		SU
2	Dual Sense Touch Bar	DSB-CL		SU
2	Door Pull (straight)	BF 112	US32D	RO
1	Closer (Unitrol)	DC8210 A11	689	RU
1	Door Operator (hard-wired)	5831xLPB 24VDC	689	NO
2	Kick Plate	K1050 10"	US32D	RO
2	Astragal	305CN		PE
1	Rain Guard	346C		PE
1	Head & Jamb Gasketing	2891APK		PE
2	Sweep	345AV		PE
1	Threshold (coord w/ details)	2010APK Frost Guard FHSL14SS-2		PE
4	Door & Frame Wire Harness	QC-Series		MK
1	Emerg Exit Button (pneumatic)	EEB2		SU
1	Wireless Interface Module	ADA1028W		NO
1	Hard-Wired Kit (24VDC output)	ADA1015P		NO
2	Door Switch	501 (sgl or 2-gang elec box)		NO
1	Power Supply	AQD-8F8R Series (coord w/ security)		SU
1	Card Reader	Owner furnished, Contractor installed		
1	Remote Release Button	TS-33		AC

**Notes:**

Operation: Doors are normally closed and secured. Valid card at reader (or signal from remote release button, where shown) unlocks maglock for momentary access, then enables outside actuator. Inside actuator unlocks maglock, then auto opens door. Monitoring by internal door position switch/bond sensor. During a loss of power the maglock will

unlock immediately. Free egress at all times via touch bar built-in switch. Maglock status will change to unlocked when fire detection/suppression systems are activated. Emergency exit button will unlock maglock for 30 seconds.

**Set: 11.0**

Description: Corridor Integrated Assembly Pair - Hold Open

2 Continuous Hinge	D309 (Section 081700)	630	RI
2 Recessed Panic (LBR)	D3676 MEC (081700)	US32D	RI
2 Lever Trim (classroom)	D3080 x matching lever (081700)	US32D	RI
2 Cylinder	As required	626	RU
2 Door Closer (pocket)	D-DCT-351PKT90 (Section 081700)	EN	RI
2 Electromagnetic Holder	D-MDH-310 (or to suit pocket depth, 081700)	689	RI
1 Head; Jamb; Mtg Stile Seal Kit	D-SS-STK-DBZ (Section 081700)	Dark Bronze	RI

Notes: Interface with building fire alarm system to release door(s) from hold open.

**Set: 12.0**

Description: Assembly Area Pair; Weights / Cardio; Natatorium Pair - Panic; Card Access

6 Hinge (heavy weight)	T4A3786	US26D	MK
2 Electric Power Transfer	EL-CEPT	630	SU
1 Access Control SVR Exit, LBR (Div 28)	ED5470N-SN200 N9S605ET BIPS B03 M55	630	RU
1 Surface Vert Rod Exit, Exit Only	ED5470 EO M55 M92 M51	630	RU
2 Closer (Reg or PA)	DC8200 / DC8210	689	RU
2 Kick Plate	K1050 10"	US32D	RO
2 Door Stop	400 / 441CU; overhead per part 2	US26D	RO
1 Astragal (adhesive, edge)	S772D		PE
1 Head & Jamb Gasketing (adhesive)	S88BL (HM frames)		PE
4 Door & Frame Wire Harness	QC-Series		MK
1 Power Supply	AQD-8F8R Series (coord w/ security)		SU

Notes: Coordinate hardware with aluminum door manufacturer at alum doors. Provide fire-rated hardware at rated conditions.

Provide CFM-SLF-HD1-M EL-CEPT hinges for aluminum doors.

Operation: Door is normally closed and locked. Valid card at reader unlocks outside lever for momentary access. Monitoring by door position switch. During a loss of power the door will default to secure. Free egress at all times. Lock status will not change when the fire detection/suppression systems are activated. Depressing pushrail will activate request to exit switch for appropriate monitor by EAC systems. Outside key override.

**Set: 13.0**

Description: Single Interior - Panic; Card Access

3 Hinge (heavy weight)	T4A3786	US26D	MK
1 Electric Power Transfer (no wires)	CEPT-NW	630	SU
1 Access Control Exit Device (PoE)	Owner provided, Contractor installed (Div 28)	630	RU
1 Closer (Reg or PA)	DC8200 / DC8210	689	RU
1 Kick Plate	K1050 10"	US32D	RO
1 Door Stop	400 / 441CU; overhead per part 2	US26D	RO
1 Head & Jamb Gasketing (adhesive)	S88BL (HM frames)		PE
1 PoE Door & Frame Wire Harness	PoE-Series		MK

Notes: Coordinate hardware with door manufacturer at aluminum doors. Provide CFM-SLF-HD1-M CEPT hinges for aluminum doors.

Operation: Door is normally closed and secured. Valid card at reader unlocks outside lever for momentary access. Monitoring by door position switch. During a loss of power the door will default to secure. Free egress at all times. Depressing pushrail will activate request to exit switch for appropriate monitor by EAC systems. No Outside key override.

**Set: 14.0**

Description: Storage

3 Hinge, Full Mortise	TA2714	US26D	MK
1 Storeroom Lock	ML2057 NSA	626	RU
1 Closer (Reg or PA)	DC8200 / DC8210	689	RU
1 Kick Plate	K1050 10"	US32D	RO
1 Door Stop	400 / 441CU; overhead per part 2	US26D	RO
3 Silencer	608		RO

**Set: 15.0**

Description: Weight Rm / Cardio Pair - Mech Hold Open 180 Deg

6 Hinge (heavy weight)	T4A3786	US26D	MK
1 Dust Proof Strike	570	US26D	RO
2 Flush Bolt	555	US26D	RO
1 Classroom Lock	ML2055 NSA	626	RU
1 Half Dummy Trim	ML2050 NSA	626	RU
2 Surface Closer w/ Hold Open	DC8210 A2	689	RU
2 Kick Plate	K1050 10"	US32D	RO
2 Door Stop	400 / 441CU; overhead per part 2	US26D	RO
2 Silencer	608		RO

**Set: 16.0**

Description: Single Interior - Card Access

3 Hinge (heavy weight)	T4A3786	US26D	MK
1 Electric Power Transfer (no wires)	CEPT-NW	630	SU
1 Access Control Mort Lock (PoE)	Owner provided, Contractor installed (Div 28)	626	RU
1 Closer (Reg or PA)	DC8200 / DC8210	689	RU
1 Kick Plate	K1050 10"	US32D	RO
1 Door Stop	400 / 441CU; overhead per part 2	US26D	RO
1 Head & Jamb Gasketing (adhesive)	S88BL (HM frames)		PE
1 PoE Door & Frame Wire Harness	PoE-Series		MK

Notes: Alum frames are supplied with integral perimeter gasketing (typ).  
Provide CFM-SLF-HD1-M CEPT hinges for aluminum doors and omit kickplate.

Operation: Door is normally closed and secured. Valid card at reader unlocks outside lever for momentary access. Monitoring by door position switch. During a loss of power the door will default to secure. Free egress at all times. Rotating inside lever will activate request to exit switch for appropriate monitor by EAC systems. No Outside key override.

**Set: 17.0**

Description: Single Interior - Card Access; Remote Release

3 Hinge (heavy weight)	T4A3786	US26D	MK
1 Electric Power Transfer (no wires)	CEPT-NW	630	SU

1 Access Control Mort Lock (PoE)	Owner provided, Contractor installed (Div 28)	626	RU
1 Closer (Reg or PA)	DC8200 / DC8210	689	RU
1 Kick Plate	K1050 10"	US32D	RO
1 Door Stop	400 / 441CU; overhead per part 2	US26D	RO
1 Head & Jamb Gasketing (adhesive)	S88BL (HM frames)		PE
1 PoE Door & Frame Wire Harness	PoE-Series		MK

Notes: Alum frames are supplied with integral perimeter gasketing.

Operation: Door is normally closed and secured. Valid card at reader (or signal from remote switch at reception) unlocks outside lever for momentary access. Monitoring by door position switch. During a loss of power the door will default to secure. Free egress at all times. Rotating inside lever will activate request to exit switch for appropriate monitor by EAC systems. No Outside key override.

**Set: 18.0**

Description: Pair Interior - Card Access

END OF SECTION 080671

## SECTION 081103: FIRE-PROTECTIVE FRAMING AND GLAZING SYSTEMS

### PART 1 GENERAL

#### 1.01 SUMMARY

- A. Section Includes: Fire protective framing system.
  - 1. Fire Protective 45 minute fire protective doors and openings for interior applications.
  - 2. Applications of fire protective framing includes:
    - a. Vision lites in fire protective doors, fire protective openings, fire protective sidelites, borrowed lites, and transoms with fire rating requirements as specified.
- B. Related Sections:
  - 1. Section 08 71 00: Door Hardware

#### 1.03 SYSTEM DESCRIPTION

- A. Performance Requirements:
  - 1. Fire Rating: must meet 45 minutes for fire protective doors and openings as specified.
  - 2. Window Certifications: Window assemblies with ratings of less than 60 minutes may be tested in accordance with ASTM E2010-01, NFPA 80, NFPA 257, UL 9, CAN4-S106.
  - 3. Door Certifications: Doors shall be tested in accordance with ASTM E2074-00, NFPA 80, NFPA 252, UL 10C, 10C, or CAN4-S104.
  - 4. Testing Laboratory: Fire test must be conducted by a nationally recognized independent testing laboratory.
  - 5. Glazing: Must use fire protective glazing less than 60 minutes up to the max. size tested. All glazing used in doors, sidelites and other hazardous locations must meet CPSC Cat. I or II impact safety.
  - 6. Max. Door Opening Sizes: must meet maximum sizes of 54 in. x 120 in. for single doors and 108 in. x 120 in. for pair doors. No intermediate rails required. For max. door sizes, continuous hinges may be required.
- B. Listings and Labels:
  - 1. Fire rated framing system shall be under current follow-up service by a nationally recognized independent testing laboratory approved by OSHA and maintain a current listing or certification. Assemblies shall be labeled in accordance with limits of listings.

#### 1.04 SUBMITTALS

- A. Submit listed submittals in accordance with Conditions of the Contract and Division 1 Submittal Procedure Section.
  - 1. Shop Drawings: Submit shop drawings showing layout, profiles and product components.
  - 2. Samples: Submit samples for finishes, colors and textures.
    - a. Provide sample chips on metal substrate of color, finishes, texture for selection of manufacturer's full range.
    - b. 12"x12" glazing sample for each type of glass.
  - 3. Technical Information: Submit latest edition of manufacturer's product data.

#### 1.05 DELIVERY, STORAGE AND HANDLING

- A. General: Comply with Division 1 Product Requirements Sections.
- B. Ordering: Comply with manufacturer's ordering instructions and lead-time requirements to avoid construction delays.
- C. Delivery: Deliver materials to specified destinations in manufacturer's or distributor's packaging undamaged, complete with installation instructions.
- D. Storage and Protection: Store off ground, under cover, protected from weather and construction activities and at temperature conditions recommended by manufacturer.

#### 1.06 FABRICATION DIMENSIONS

- A. Field Measurements: Verify actual measurements for openings by field measurements before fabrication. Show recorded measurements on shop drawings. Coordinate field measurements and fabrication schedule with construction progress to avoid construction delays.

#### 1.07 WARRANTY

- A. Special Assembly Warranty: Manufacturer's standard form in which manufacturer agrees to repair or replace components of fire-rated framing system that do not comply with requirements or that deteriorate as defined in this Section within specified warranty period.
  - a. Failures include, but are not limited to, the following:
    - i. Structural failures including, but not limited to, excessive deflection.
    - ii. Deterioration of metals or metal finishes, and other materials beyond normal weathering.
    - iii. Failure of operating components to function properly.
  - b. Warranty Period: Five years from date of Substantial Completion.

### PART 2 PRODUCTS

#### 2.01 MANUFACTURERS – FIRE PROTECTIVE FRAMING AND GLAZING SYSTEMS

- A. Fire - resistive glass and framing shall be provided from a single-source, US manufacturer. Distributors of fire rated glass and framing are not to be considered as manufacturers.
- B. Basis-of-Design; Products for Fire-protective Framing Systems: Subject to project requirements, provide the following or approved equal:
  - a. GPX builder Series Fire Protective Framing as supplied by SAFTI FIRST Fire Rated Glazing Solutions or approved equal
  - b. Glazing Materials: SuperClear 45-HS as supplied by SAFTI FIRST Fire Rated Glazing Solutions in durations specified on drawings and meeting hose stream and radiant heat barrier requirements.

- C. Other Manufacturers:
  - a. 'TGP'- Technical Glass Products
  - b. McGory
  - c. Or approved equal.

## 2.02 MATERIALS – FRAMING

- A. Fire protective framing system for 45 minute doors and openings.
- B. Properties:
  - 1. Constructed in accordance with the individual manufacturer's listings or in accordance with HMMA 861-06 and HMMA 850.
  - 2. Maximum door opening sizes are 54 in. x 120 in. for single doors and 96 in. x 120 in. for pair doors. No intermediate rails required. For max. door sizes, continuous hinges may be required.
  - 3. Standard door profile includes 5 in. rail and 2 in. frame. Narrow door profile includes 3- 3/4 in. rail and 1-1/8 in frame.
  - 4. 10 in. ADA compliant bottom rail
  - 5. 4 to 5 in. door depth

## 2.03 MATERIALS – GLASS

- A. Properties:
  - 1. Fire protective glazing 45 minutes rated and complying with hose stream and radiant heat protection up to the max. size tested.
  - 2. Individual Lites shall be permanently identified with a listing mark.
  - 3. Glazing material installed in "Hazardous Locations" (subject to human impact) shall be certified to meet the applicable requirements for fire rated assemblies referenced in ANSI Z97.1 Standard for Safety Glazing Materials Used In Buildings and/or CPSC 16 CFR 1201 Safety Standard for Architectural Glazing Materials
  - 4. STC: 37 min
- B. Logo: Each piece of fire rated glazing shall be labeled with a permanent logo.

## 2.03 FABRICATION

- A. Assemblies shall be furnished knocked down for field assembly and will be glazed in the field
- B. Door assemblies shall be factory prepared for field mounting of hardware.
- C. Fabrication Dimensions: Fabricate to approved dimensions. The general contractor shall guarantee dimensions within required tolerance. Obtain approved shop drawings prior to fabrication.

## 2.04 FINISHES

- A. Aluminum clad door with high performance 2-coat fluoropolymer finish applied
  - a. Color selected from manufacturer's full range.
- B. Framing to receive with high performance 2-coat fluoropolymer finishes applied
  - a. Color selected from manufacturer's full range

## 2.05 DOOR HARDWARE FOR DOORS

- A. Manufacturer to prep for all hardware with hardware field installed.
- B. Refer to specification 087100 for hardware and 080671 for hardware sets.
- C. Hardware to be coordinated with manufacturer to maintain fire-ratings and UL listing.

## PART 3 EXECUTION

### 3.01 MANUFACTURER'S INSTRUCTIONS

- A. Compliance: Comply with manufacturer's product data including product technical bulletins and installation instructions.

### 3.02 EXAMINATION

- A. Site Verification of Conditions: Verify substrate conditions, have been previously installed under other sections, and are acceptable for product installation in accordance with manufacturer's instructions. Openings shall be plumb, square and within allowable tolerances. The Architect/Engineer shall be notified of any conditions that jeopardize the integrity of the proposed fire wall/door framing system. Do not proceed until such conditions are corrected.

### 3.03 INSTALLATION

- A. Fire door/window installation shall be by a licensed contractor and in strict accordance with the approved shop drawings.

### 3.04 CLEANING AND PROTECTION

- 1. Protect glass from contact with contaminating substances resulting from construction operations. Remove such substances by method approved by manufacturer.
- 2. Wash glass on both faces not more than four days prior to date schedule for inspections intended to establish date of Substantial Completion. Wash glass by method recommended by glass manufacturer.
- 3. Remove temporary coverings and protection of adjacent work areas.
- 4. Remove construction debris from project site and legally dispose of debris.

END OF SECTION

## SECTION 081113 - HOLLOW METAL DOORS AND FRAMES

### PART 1 - GENERAL

#### 1.1 RELATED DOCUMENTS

- A. Drawings and general provisions of the Contract, including General and Supplementary Conditions and Division 01 Specification Sections, apply to this Section.

#### 1.2 SUMMARY

- A. Section Includes:
  - 1. Standard and custom hollow metal doors and frames.
  - 2. Steel sidelight, borrowed lite and transom frames.
  - 3. Louvers installed in hollow metal doors.
  - 4. Light frames and glazing installed in hollow metal doors.

#### 1.3 QUALITY ASSURANCE

- A. Source Limitations: Obtain hollow metal doors and frames through one source from a single manufacturer wherever possible.
- B. Quality Standard: In addition to requirements specified, furnish SDI-Certified manufacturer products that comply with ANSI/SDI A250.8, latest edition, "Recommended Specifications for Standard Steel Doors and Frames".
- C. Fire-Rated Door Assemblies: Assemblies complying with NFPA 80 that are listed and labeled by a qualified testing agency, for fire-protection ratings indicated, based on testing at positive pressure according to UL10C (neutral pressure at 40" above sill) or UL 10C.
  - 1. Oversize Fire-Rated Door Assemblies Construction: For units exceeding sizes of tested assemblies, attach construction label certifying doors are built to standard construction requirements for tested and labeled fire rated door assemblies except for size.
  - 2. Temperature-Rise Limit: Where indicated and at vertical exit enclosures (stairwell openings) and exit passageways, provide doors that have a maximum transmitted temperature end point of not more than 450 deg F (250 deg C) above ambient after 30 minutes of standard fire-test exposure.
  - 3. Smoke Control Door Assemblies: Comply with NFPA 105.
    - a. Smoke "S" Label: Doors to bear "S" label, and include smoke and draft control gasketing applied to frame and on meeting stiles of pair doors.
- D. Fire-Rated, Borrowed-Light Frame Assemblies: Assemblies complying with NFPA 80 that are listed and labeled, by a testing and inspecting agency acceptable to authorities having

jurisdiction, for fire-protection ratings indicated, based on testing according to NFPA 257. Provide labeled glazing material.

- E. Energy Efficient Exterior Openings: Comply with minimum thermal ratings, based on ASTM C1363. Openings to be fabricated and tested as fully operable, thermal insulating door and frame assemblies.
  - 1. Thermal Performance (Exterior Openings): Independent testing laboratory certification for exterior door assemblies being tested in accordance with ASTM C1363 and meet or exceed the following requirements:
    - a. Door Assembly Operable U-Factor and R-Value Ratings: U-Factor 0.37, R-Value 2.7, including insulated door, thermal-break frame and threshold.
  - 2. Air Infiltration (Exterior Openings): Independent testing laboratory certification for exterior door assemblies being tested in accordance with ASTM E283 to meet or exceed the following requirements:
    - a. Rate of leakage of the door assembly shall not exceed 0.25 cfm per square foot of static differential air pressure of 1.567 psf (equivalent to 25 mph wind velocity).
- F. Pre-Submittal Conference: Conduct conference in compliance with requirements in Division 01 Section "Project Meetings" with attendance by representatives of Supplier, Installer, and Contractor to review proper methods and procedures for installing hollow metal doors and frames and to verify installation of electrical knockout boxes and conduit at frames with electrified or access control hardware.

#### 1.4 DELIVERY, STORAGE, AND HANDLING

- A. Deliver hollow metal work palletized, wrapped, or crated to provide protection during transit and Project site storage. Do not use non-vented plastic.
- B. Deliver welded frames with two removable spreader bars across bottom of frames, tack welded to jambs and mullions.
- C. Store hollow metal work under cover at Project site. Place in stacks of five units maximum in a vertical position with heads up, spaced by blocking, on minimum 4-inch high wood blocking. Do not store in a manner that traps excess humidity.
  - 1. Provide minimum 1/4-inch space between each stacked door to permit air circulation. Door and frames to be stacked in a vertical upright position.

#### 1.5 PROJECT CONDITIONS

- A. Field Measurements: Verify actual dimensions of openings by field measurements before fabrication.

## 1.6 COORDINATION

- A. Coordinate installation of anchorages for hollow metal frames. Furnish setting drawings, templates, and directions for installing anchorages, including sleeves, concrete inserts, anchor bolts, and items with integral anchors. Deliver such items to Project site in time for installation.
- B. Building Information Modeling (BIM) Support: Utilize designated BIM software tools and obtain training needed to successfully participate in the Project BIM processes. All technical disciplines are responsible for the product data integration and data reliability of their Work into the coordinated BIM applications.

## 1.7 WARRANTY

- A. Special Warranty: Manufacturer's standard form in which manufacturer agrees to repair or replace doors that fail in materials or workmanship within specified warranty period.
- B. Warranty includes installation and finishing that may be required due to repair or replacement of defective doors.

## PART 2 - PRODUCTS

### 2.1 MANUFACTURERS

- A. Manufacturers: Subject to compliance with requirements, provide steel doors and frames from a SDI Certified manufacturer:
  - 1. CECO Door Products (C).
  - 2. Curries Company (CU).
  - 3. Pioneer Industries (PI).
  - 4. Or approved equal

### 2.2 MATERIALS

- A. Cold-Rolled Steel Sheet: ASTM A 1008/A 1008M, Commercial Steel (CS), Type B; suitable for exposed applications.
- B. Metallic-Coated Steel Sheet: ASTM A 653/A 653M, Commercial Steel (CS), Type B; with minimum G60 (Z180) or A60 (ZF180) metallic coating.
- C. Frame Anchors: ASTM A 653/A 653M, Commercial Steel (CS), Commercial Steel (CS), Type B; with minimum G60 (Z180) or A60 (ZF180) metallic coating.

### 2.3 HOLLOW METAL DOORS

- A. General: Provide 1-3/4 inch doors of design indicated, not less than thickness indicated; fabricated with smooth surfaces, without visible joints or seams on exposed faces unless otherwise indicated. Comply with ANSI/SDI A250.8 and ANSI/NAAMM HMMA 867.

- B. Exterior Doors (Energy Efficient): Face sheets fabricated of commercial quality hot-dipped zinc coated steel that complies with ASTM A924 A60. Provide doors complying with requirements indicated below by referencing ANSI/SDI A250.8 for level and model, ANSI/SDI A250.4 for physical performance level, and HMMA 867 for door construction.
1. Basis of design: Curries Company (CU) - Energy Efficient - 777 Trio-E Series or approved equal subject to performance criteria below..
  2. Design: Flush panel.
  3. Core Construction: Foamed in place polyurethane and steel stiffened laminated core with no stiffener face welds, in compliance with HMMA 867 "Laminated Core".
    - a. Provide 22-gauge steel stiffeners at 6 inches on-center internally welded at 5" on-center to integral core assembly, foamed in place polyurethane core chemically bonded to all interior surfaces. No stiffener face welding is permitted.
    - b. Thermal properties to rate at a fully operable minimum U-Factor 0.37 and R-Value 2.7, including insulated door, thermal-break frame and threshold.
    - c. Kerf Type Frames: Thermal properties to rate at a fully operable minimum U-Factor 0.38 and R-Value 2.6, including insulated door, kerf type frame, and threshold.
  4. Level/Model: Level 3 and Physical Performance Level A (Extra Heavy Duty), Minimum 16 gauge (0.053 inch - 1.3-mm) thick steel, Model 2.
  5. Vertical Edges: Vertical edges to be mechanically interlocked with hairline seam. Beveled Lock Edge, 1/8 inch in 2 inches (3 mm in 50 mm).
  6. Top and Bottom Edges: Reinforce tops and bottoms of doors with a continuous steel channel not less than 16 gauge, extending the full width of the door and welded to the face sheet. Doors with an inverted top channel to include a steel closure channel, screw attached, with the web of the channel flush with the face sheets of the door. Plastic or composite channel fillers are not acceptable.
  7. Hinge Reinforcement: Minimum 7 gauge (3/16") plate 1-1/4" x 9".
  8. Hardware Reinforcements: Fabricate according to ANSI/SDI A250.6 with reinforcing plates from same material as door face sheets.
  9. Hot-dipped galvanized G90 galvanizing coating
- C. Interior Doors: Face sheets fabricated of commercial quality cold rolled steel that complies with ASTM A 1008/A 1008M. Provide doors complying with requirements indicated below by referencing ANSI/SDI A250.8 for level and model and ANSI/SDI A250.4 for physical performance level:
1. Basis of design Interior doors: Curries Company (CU) - honeycomb Core - 707 Series or approved equal subject to performance criteria below.
  2. Design: Flush panel.
  3. Core Construction: Manufacturer's standard kraft-paper honeycomb, securely bonded to both faces.
    - a. Fire Door Core: As required to provide fire-protection and temperature-rise ratings indicated.

4. Level/Model: Level 2 and Physical Performance Level B (Heavy Duty), Minimum 18 gauge (0.042-inch - 1.0-mm) thick steel, Model 2.
5. Vertical Edges: Vertical edges to have the face sheets spot welded and filled full height with an epoxy filler. Welds are to be ground, filled and dressed smooth. Beveled Lock Edge, 1/8 inch in 2 inches (3 mm in 50 mm).
6. Top and Bottom Edges: Reinforce tops and bottoms of doors with a continuous steel channel not less than 16 gauge, extending the full width of the door and welded to the face sheet. Doors with an inverted top channel to include a steel closure channel, screw attached, with the web of the channel flush with the face sheets of the door. Plastic or composite channel fillers are not acceptable.
7. Hinge Reinforcement: Minimum 7 gauge (3/16") plate 1-1/4" x 9" or minimum 14 gauge continuous channel with pierced holes, drilled and tapped.
8. Hardware Reinforcements: Fabricate according to ANSI/SDI A250.6 with reinforcing plates from same material as door face sheets.
9. Tested STC = 31, OITC = 29
10. Provide hot dipped galvanized G90 galvanizing coating where specified within the door schedule.

## 2.4 HOLLOW METAL FRAMES

- A. General: Comply with ANSI/SDI A250.8 and with details indicated for type and profile.
- B. Thermal Break Frames: Subject to the same compliance standards and requirements as standard hollow metal frames. Tested for thermal performance in accordance with NFRC 102, and resistance to air infiltration in accordance with NFRC 400. Where indicated provide thermally broken frame profiles available for use in both masonry and drywall construction. Fabricate with 1/16" positive thermal break and integral vinyl weatherstripping.
- C. Exterior Frames: Fabricated of hot-dipped zinc coated steel that complies with ASTM A 653/A 653M, Coating Designation A90/G90.
  1. Fabricate frames with mitered or coped corners. Profile as indicated on drawings.
  2. Frames: Minimum 14 gauge (0.067-inch -1.7-mm) thick steel sheet.
- D. Interior Frames: Fabricated from cold-rolled steel sheet that complies with ASTM A 1008/A 1008M. Where noted by door schedule provide with hot-dipped zinc coated steel that complies with ASTM A653/A653M, coating designation A90/G90
  1. Fabricate frames with mitered or coped corners. Profile as indicated on drawings.
  2. Frames: Minimum 16 gauge (0.053-inch -1.3-mm) thick steel sheet.
- E. Fire rated frames: Fabricate frames in accordance with NFPA 80, listed and labeled by a qualified testing agency, for fire-protection ratings indicated.
- F. Hardware Reinforcement: Fabricate according to ANSI/SDI A250.6 Table 4 with reinforcement plates from same material as frames.
- G. Fill frames with mineralwool insulation

## 2.5 FRAME ANCHORS

- A. Jamb Anchors:
  - 1. Masonry Type: Adjustable strap-and-stirrup or T-shaped anchors to suit frame size, formed from A60 metallic coated material, not less than 0.042 inch thick, with corrugated or perforated straps not less than 2 inches wide by 10 inches long; or wire anchors not less than 0.177 inch thick.
  - 2. Stud Wall Type: Designed to engage stud and not less than 0.042 inch thick.
  - 3. Compression Type for Drywall Slip-on (Knock-Down) Frames (requires Architect approval): Adjustable compression anchors.
- B. Floor Anchors: Floor anchors to be provided at each jamb, formed from A60 metallic coated material, not less than 0.042 inches thick.
- C. Mortar Guards: Formed from same material as frames, not less than 0.016 inches thick.

## 2.6 LOUVERS

- A. Metal Louvers: Unless otherwise indicated provide louvers to meet the following requirements.
  - 1. Blade Type: Vision proof inverted V or inverted Y.
  - 2. Metal and Finish: G90 Galvanized steel, 0.040 inch thick, factory primed for paint finish with baked enamel or powder coated finish. Match pre-finished door paint color where applicable.
- B. Louvers for Fire Rated Doors: Metal louvers with fusible link and closing device, listed and labeled for use in doors with fire protection rating of 1-1/2 hours and less.
  - 1. Manufacturers: Subject to compliance with requirements, provide louvers to meet rating indicated.
  - 2. Metal and Finish: G90 Galvanized steel, 0.040 inch thick, factory primed for paint finish with baked enamel or powder coated finish. Match pre-finished door paint color where applicable.

## 2.7 LIGHT OPENINGS AND GLAZING

- A. Stops and Moldings: Provide stops and moldings around glazed lites where indicated. Form corners of stops and moldings with butted or mitered hairline joints at fabricator's shop. Fixed and removable stops to allow multiple glazed lites each to be removed independently. Coordinate frame rabbet widths between fixed and removable stops with the type of glazing and installation indicated.
- B. Moldings for Glazed Lites in Doors and Loose Stops for Glazed Lites in Frames: Minimum 20 gauge thick, fabricated from same material as door face sheet in which they are installed.
- C. Fixed Frame Moldings: Formed integral with hollow metal frames, a minimum of 5/8 inch (16 mm) high unless otherwise indicated. Provide fixed frame moldings and stops on outside of exterior and on secure side of interior doors and frames.

- D. Preformed Metal Frames for Light Openings: Manufacturer's standard frame formed of 0.048-inch-thick, cold rolled steel sheet; with baked enamel or powder coated finish; and approved for use in doors of fire protection rating indicated. Match pre-finished door paint color where applicable.

## 2.8 ACCESSORIES

- A. Mullions and Transom Bars: Join to adjacent members by welding or rigid mechanical anchors.
- B. Grout Guards: Formed from same material as frames, not less than 0.016 inches thick.

## 2.9 FABRICATION

- A. Fabricate hollow metal work to be rigid and free of defects, warp, or buckle. Accurately form metal to required sizes and profiles, with minimum radius for thickness of metal. Where practical, fit and assemble units in manufacturer's plant. When shipping limitations so dictate, frames for large openings are to be fabricated in sections for splicing or splining in the field by others.
- B. Tolerances: Fabricate hollow metal work to tolerances indicated in ANSI/SDI A250.8.
- C. Hollow Metal Doors:
  - 1. Exterior Doors: Provide optional weep-hole openings in bottom of exterior doors to permit moisture to escape where specified.
  - 2. Glazed Lites: Factory cut openings in doors with applied trim or kits to fit. Factory install glazing where indicated.
  - 3. Astragals: Provide overlapping astragals as noted in door hardware sets in Division 08 Section "Door Hardware" on one leaf of pairs of doors where required by NFPA 80 for fire-performance rating or where indicated. Extend minimum 3/4 inch beyond edge of door on which astragal is mounted.
  - 4. Continuous Hinge Reinforcement: Provide welded continuous 12 gauge strap for continuous hinges specified in hardware sets in Division 08 Section "Door Hardware".
  - 5. Electrical Raceways: Provide hollow metal doors to receive electrified hardware with concealed wiring harness and standardized Molex™ plug connectors on both ends to accommodate up to twelve wires. Coordinate connectors on end of the wiring harness to plug directly into the electrified hardware and the through-wire transfer hardware or wiring harness specified in hardware sets in Division 08 Sections "Door Hardware" and "Access Control Hardware". Wire nut connections are not acceptable.
- D. Hollow Metal Frames:
  - 1. Shipping Limitations: Where frames are fabricated in sections due to shipping or handling limitations, provide alignment plates or angles at each joint, fabricated of same thickness metal as frames.
  - 2. Welded Frames: Weld flush face joints continuously; grind, fill, dress, and make smooth, flush, and invisible.

- a. Welded frames are to be provided with two steel spreaders temporarily attached to the bottom of both jambs to serve as a brace during shipping and handling. Spreader bars are for bracing only and are not to be used to size the frame opening.
3. Sidelight and Transom Bar Frames: Provide closed tubular members with no visible face seams or joints, fabricated from same material as door frame. Fasten members at crossings and to jambs by butt welding.
4. High Frequency Hinge Reinforcement: Provide high frequency hinge reinforcements at door openings 48-inches and wider with mortise butt type hinges at top hinge locations.
5. Continuous Hinge Reinforcement: Provide welded continuous 12 gauge straps for continuous hinges specified in hardware sets in Division 08 Section "Door Hardware".
6. Provide countersunk, flat- or oval-head exposed screws and bolts for exposed fasteners unless otherwise indicated for removable stops, provide security screws at exterior locations.
7. Mortar Guards: Provide guard boxes at back of hardware mortises in frames at all hinges and strike preps regardless of grouting requirements.
8. Electrical Knock Out Boxes: Factory weld 18 gauge electrical knock out boxes to frame for electrical hardware preps; including but not limited to, electric through wire transfer hardware, electrical raceways and wiring harnesses, door position switches, electric strikes, magnetic locks, and jamb mounted card readers as specified in hardware sets in Division 08 Sections "Door Hardware" and "Access Control Hardware".
  - a. Provide electrical knock out boxes with a dual 1/2-inch and 3/4-inch knockouts.
  - b. Conduit to be coordinated and installed in the field (Division 26) from middle hinge box and strike box to door position box.
  - c. Electrical knock out boxes to comply with NFPA requirements and fit electrical door hardware as specified in hardware sets in Division 08 Section "Door Hardware".
  - d. Electrical knock out boxes for continuous hinges should be located in the center of the vertical dimension on the hinge jamb.
9. Floor Anchors: Weld anchors to bottom of jambs and mullions with at least four spot welds per anchor.
10. Jamb Anchors: Provide number and spacing of anchors as follows:
  - a. Masonry Type: Locate anchors not more than 18 inches from top and bottom of frame. Space anchors not more than 32 inches on-center and as follows:
    - 1) Two anchors per jamb up to 60 inches high.
    - 2) Three anchors per jamb from 60 to 90 inches high.
    - 3) Four anchors per jamb from 90 to 120 inches high.
    - 4) Four anchors per jamb plus 1 additional anchor per jamb for each 24 inches or fraction thereof above 120 inches high.
  - b. Stud Wall Type: Locate anchors not more than 18 inches from top and bottom of frame. Space anchors not more than 32 inches o.c. and as follows:
    - 1) Three anchors per jamb up to 60 inches high.
    - 2) Four anchors per jamb from 60 to 90 inches high.
    - 3) Five anchors per jamb from 90 to 96 inches high.

- 4) Five anchors per jamb plus 1 additional anchor per jamb for each 24 inches or fraction thereof above 96 inches high.
    - 5) Two anchors per head for frames above 42 inches wide and mounted in metal stud partitions.
  11. Door Silencers: Except on weatherstripped or gasketed doors, drill stops to receive door silencers. Silencers to be supplied by frame manufacturer regardless if specified in Division 08 Section "Door Hardware".
  12. Bituminous Coating: Where frames are fully grouted with an approved Portland Cement based grout or mortar, coat inside of frame throat with a water based bituminous or asphaltic emulsion coating to a minimum thickness of 3 mils DFT, tested in accordance with UL 10C and applied to the frame under a 3rd party independent follow-up service procedure.
- E. Hardware Preparation: Factory prepare hollow metal work to receive template mortised hardware; include cutouts, reinforcement, mortising, drilling, and tapping according to the Door Hardware Schedule and templates furnished as specified in Division 08 Section "Door Hardware."
1. Locate hardware as indicated, or if not indicated, according to ANSI/SDI A250.8.
  2. Reinforce doors and frames to receive non-template, mortised and surface mounted door hardware.
  3. Comply with applicable requirements in ANSI/SDI A250.6 and ANSI/DHI A115 Series specifications for preparation of hollow metal work for hardware.
  4. Coordinate locations of conduit and wiring boxes for electrical connections with Division 26 Sections.

## 2.10 STEEL FINISHES

- A. Prime Finishes: Doors and frames to be cleaned, and chemically treated to insure maximum finish paint adhesion. Surfaces of the door and frame exposed to view to receive a factory applied coat of rust inhibiting shop primer.
1. Shop Primer: Manufacturer's standard, fast-curing, lead and chromate free primer complying with ANSI/SDI A250.10 acceptance criteria; recommended by primer manufacturer for substrate; and compatible with substrate and field-applied coatings.

## PART 3 - EXECUTION

### 3.1 EXAMINATION

- A. Examine substrates, areas, and conditions, with Installer present, for compliance with requirements for installation tolerances and other conditions affecting performance of the Work.
- B. General Contractor to verify the accuracy of dimensions given to the steel door and frame manufacturer for existing openings or existing frames (strike height, hinge spacing, hinge back set, etc.).
- C. Proceed with installation only after unsatisfactory conditions have been corrected.

### 3.2 PREPARATION

- A. Remove welded in shipping spreaders installed at factory. Restore exposed finish by grinding, filling, and dressing, as required to make repaired area smooth, flush, and invisible on exposed faces.
- B. Prior to installation, adjust and securely brace welded hollow metal frames for square, level, twist, and plumb condition.
- C. Tolerances shall comply with SDI-117 "Manufacturing Tolerances Standard Steel Doors and Frames."
- D. Drill and tap doors and frames to receive non-template, mortised, and surface-mounted door hardware.
- E. Verify tolerances against manufacturers installations instructions for tornado and hurricane storm shelter openings.

### 3.3 INSTALLATION

- A. General: Install hollow metal work plumb, rigid, properly aligned, and securely fastened in place; comply with Drawings and manufacturer's written instructions.
- B. Hollow Metal Frames: Install hollow metal frames of size and profile indicated. Comply with ANSI/SDI A250.11 and NFPA 80 at fire rated openings.
  - 1. Set frames accurately in position, plumbed, leveled, aligned, and braced securely until permanent anchors are set. After wall construction is complete and frames properly set and secured, remove temporary braces, leaving surfaces smooth and undamaged. Shim as necessary to comply with installation tolerances.
  - 2. Floor Anchors: Provide floor anchors for each jamb and mullion that extends to floor, and secure with post-installed expansion anchors.
  - 3. Masonry Walls: Coordinate installation of frames to allow for solidly filling space between frames and masonry with mortar.
  - 4. Grout Requirements: Do not grout head of frames unless reinforcing has been installed in head of frame. Do not grout vertical or horizontal closed mullion members.
- C. Hollow Metal Doors: Fit hollow metal doors accurately in frames, within clearances specified below. Shim as necessary.
  - 1. Non-Fire-Rated Standard Steel Doors:
    - a. Jambs and Head: 1/8 inch plus or minus 1/16 inch.
    - b. Between Edges of Pairs of Doors: 1/8 inch plus or minus 1/16 inch.
    - c. Between Bottom of Door and Top of Threshold: Maximum 3/8 inch.
    - d. Between Bottom of Door and Top of Finish Floor (No Threshold): Maximum 3/4 inch.
  - 2. Fire-Rated Doors: Install doors with clearances according to NFPA 80.

- D. Field Glazing: Comply with installation requirements in Division 08 Section "Glazing" and with hollow metal manufacturer's written instructions.

### 3.4 ADJUSTING AND CLEANING

- A. Final Adjustments: Check and readjust operating hardware items immediately before final inspection. Leave work in complete and proper operating condition. Remove and replace defective work, including hollow metal work that is warped, bowed, or otherwise unacceptable.
- B. Remove grout and other bonding material from hollow metal work immediately after installation.
- C. Prime-Coat and Painted Finish Touchup: Immediately after erection, sand smooth rusted or damaged areas of prime coat, or painted finishes, and apply touchup of compatible air drying, rust-inhibitive primer, zinc rich primer (exterior and galvanized openings) or finish paint.

### 3.5 FIELD QUALITY CONTROL

- A. Field Inspection (Punch Report): Reference Division 01 Sections "Closeout Procedures". Produce project punch report for each installed door opening indicating compliance with approved submittals and verification hardware is properly installed, operating and adjusted. Include list of items to be completed and corrected, indicating the reasons or deficiencies causing the Work to be incomplete or rejected.
  - 1. Organization of List: Include separate Door Opening and Deficiencies and Corrective Action Lists organized by Mark, Opening Remarks and Comments, and related Opening Images and Video Recordings.

END OF SECTION 081113

## SECTION 081217 INTERIOR ALUMINUM FRAMES AND GLAZING FRAMES

### PART 1 GENERAL

#### 1.1 GENERAL REQUIREMENTS

- A. Work of this Section, as shown or specified, shall be in accordance with the requirements of the Contract Documents.

#### 1.2 SECTION INCLUDES

- A. Work of this Section includes all labor, materials, equipment, and services necessary to complete the interior aluminum frames and glazing frames as shown on the drawings and/or specified herein, including, but not necessarily limited to, the following:
  - 1. Pre-finished aluminum window frames for interior use.
  - 2. Pre-finished aluminum framing systems for interior use.

#### 1.3 RELATED SECTIONS

- A. Door Hardware - Section 087100.
- B. Glass and Glazing - Section 088000.

#### 1.4 QUALITY ASSURANCE

- A. Manufacturer: Provide office partition system manufactured by a single firm specializing in production of this type of work.
- B. Shop Assembly: Preassemble items in shop to greatest extent possible. Disassemble units only to extent necessary for shipping and handling limitations. Clearly mark units for reassembly and coordinated installation.
- C. Installed partitions shall have a deflection limit of L/240 when subject to a 5 psf uniform lateral load and a concentrated load of 200 lbs.

#### 1.5 SUBMITTALS

- A. Product Data: Submit manufacturer's detailed materials and fabrication specifications and installation instructions. Include catalog cuts of fastenings and other data as required.
- B. Shop Drawings: Submit shop drawings for fabrication and erection of partition assemblies which are not fully described by manufacturer's data. Show anchorage and accessory items and finishes.
- C. Samples: Submit samples of each required finish and color. Prepare samples on same materials which will be used in partition assemblies.

#### 1.6 DELIVERY, STORAGE AND HANDLING

- A. Deliver partition components cartoned or crated to provide protection during transit and job storage.

- B. Inspect partition components upon delivery for damage. Minor damages may be repaired, provided finish items are equal to new work and acceptable to Architect. Remove and replace damaged items as directed.
- C. Store partition components on raised platforms in vertical positions with blocking between units to allow air circulation. Keep stored material covered and protected from damage.

#### 1.7 WARRANTY

- A. Warrant against defects in manufacturing of materials for a period of 2 years from date of substantial completion.
- B. Warrant framing finish against defects, including cracking, flaking, blistering, peeling and excessive fading, chalking and non-uniformity in color for a period of 5 years.

### PART 2 PRODUCTS

#### 2.1 PARTITION SYSTEM

- A. Provide interior aluminum frames Series 200 as manufactured by Wilson Partitions, or approved equal.
  - 1. Extruded Aluminum Frames: Provide frames with 2" snap-on trim profile. System shall be designed to accept 1/4", 3/8" or 1/2" glass as scheduled glass.
  - 2. Snap-On Trim Profile: Rectilinear design, 2" trim, expandable throat from 3" to 9-1/2" or approved equal

#### 2.2 MATERIALS

- A. Aluminum: Extruded aluminum conforming to alloy 6063-T5, ASTM B 221. Exposed fasteners shall be stainless steel. Frames shall be internally reinforced as required for door hardware and to meet performance standard specified herein. Provide door hardware reinforcing as standard with the manufacturer.
- B. Anchorage Devices, Clips and Fasteners: Manufacturer's standard type, compatible with materials being secured.
- C. Finish: Flurocryn coating, complying with AAMA (2603) 603.8 and AA-DAF-45.
  - 1. Factory applied painted finish.
  - 2. Color Coat: Dry film thickness 0.8 +/- 0.05 mil.
  - 3. Color: As selected by Architect.
- D. Glass: refer to glazing schedule
- E. Glazing: Set glass in glazing strips for firm retention and tight seal and to permit easy removal and reinstallation without damage. Loose glazing stops and exposed screws are not acceptable.
- F. Connectors and Accessories: Provide connectors, fasteners, and accessories required for rigid, secure, complete, and finished partition system.

## 2.3 FABRICATION

- A. Pre-machine jambs and prepare for hardware, with concealed reinforcement plates, drilled and tapped as required, and fastened within the frame.
- B. Provide corner reinforcements and alignment clips for precise butt or mitered connections.
- C. Fabricate all components to allow secure installation without exposed fasteners.
- D. Manufacturer shall pre-cut and ship all frame materials knock-down.

## PART 3 EXECUTION

### 3.1 INSPECTION

- A. Examine the areas and conditions where interior aluminum partitions are to be installed and correct any conditions detrimental to the proper and timely completion of the work. Do not proceed with the work until unsatisfactory conditions have been corrected by the Contractor in a manner acceptable to the Architect.

### 3.2 INSTALLATION

- A. Install partitions before floor coverings and after suspended drywall ceilings have been installed. Coordinate partition work with work of other trades which are affected by partition installation. Avoid damage to installed work.
- B. Repair damaged or defaced work or replace with new work, as acceptable to Architect. Completely refinish defaced partition components with factory finished materials or replace defaced components.
- C. Furnish, drill for and install anchoring devices required, and secure partitions to floor, ceiling and walls, using concealed fasteners.
- D. Install partitions rigid, level, plumb and in alignment, with components secure together, in accordance with manufacturer's instructions.
- E. Provide through posts to ceiling, or other concealed supports as required to assure lateral stability of partition runs.
- F. Install continuous and positive seal to prevent light and sound transmission at partition contacts with floor, ceiling, wall and other abutting surfaces.

END OF SECTION

## SECTION 08 1416 - FLUSH WOOD DOORS

### PART 1 - GENERAL

#### 1.1 RELATED DOCUMENTS

- A. Drawings and general provisions of the Contract, including General and Supplementary Conditions and Division 1 Specification Sections, apply to this Section.

#### 1.2 SUMMARY

- A. Section Includes:

- 1. Solid core doors with wood veneer faces.
  - 2. Factory finishing wood doors.
  - 3. Light frames and glazing installed in wood doors.

- B. Related Sections:

- 1. Division 08 Section "Door Schedule".
  - 2. Division 08 Section "Hollow Metal Doors and Frames".
  - 3. Division 08 Section "Glazing".
  - 4. Division 08 Section "Door Hardware".

- C. Standards and References: Comply with the version year adopted by the Authority Having Jurisdiction.

- 1. ANSI A117.1 - Accessible and Usable Buildings and Facilities.
  - 2. ANSI A208.1 – Wood Particleboard.
  - 3. Intertek Testing Service (ITS Warnock Hersey) - Certification Listings for Fire Doors.
  - 4. NFPA 80 - Standard for Fire Doors and Fire Windows; National Fire Protection Association.
  - 5. NFPA 252 - Standard Methods of Fire Tests of Door Assemblies; National Fire Protection Association.
  - 6. UL 10C - Positive Pressure Fire Tests of Door Assemblies; UL 1784 - Standard for Air Leakage Tests of Door Assemblies.
  - 7. Window and Door Manufacturers Association - WDMA I.S.1-A Architectural Wood Flush Doors.

#### 1.3 SUBMITTALS

- A. Product Data: For each type of door indicated. Include details of core and edge construction, louvers, trim for openings, and WDMA I.S.1-A classifications. Include factory finishing specifications.

- B. Shop Drawings shall include:

1. Indicate location, size, and hand of each door.
2. Indicate dimensions and locations of mortises and holes for hardware.
3. Indicate dimensions and locations of cutouts.
4. Indicate requirements for veneer matching.
5. Indicate location and extent of hardware blocking.
6. Indicate construction details not covered in Product Data.
7. Indicate doors to be factory finished and finish requirements.
8. Indicate fire protection ratings for fire rated doors.

C. Samples for Initial Selection: For factory finished doors.

1. Factory finishes applied to actual door face materials, approximately 8 by 10 inches, for each material and finish. For each wood species and transparent finish, provide set of three samples showing typical range of color and grain to be expected in the finished work.
2. Corner sections of doors, 8 by 10 inches, with door faces and edges representing actual materials to be used.
  - a. Provide samples for each species of veneer and core material.
  - b. Finish veneer faced door samples with same materials proposed for factory finished doors.
3. Frames for light openings, 6 inches long, for each material, type, and finish required.

D. Warranty: Provide sample of manufacturer's warranty.

1.4 QUALITY ASSURANCE

- A. Source Limitations: Obtain flush wood doors through one source from a single manufacturer wherever possible.
- B. Quality Standard: In addition to requirements specified, comply with WDMA I.S.1-A, latest edition, "Industry Standard for Architectural Wood Flush Doors".
- C. Fire Rated Wood Doors: Doors complying with NFPA 80 that are listed and labeled by a testing and inspecting agency acceptable to authorities having jurisdiction, for fire ratings indicated, based on testing at positive pressure according to NFPA 252 (neutral pressure at 40" above sill) or UL10C.
  1. Oversize Fire Rated Door Assemblies: For units exceeding sizes of tested assemblies provide manufacturer's construction label, indicating compliance to independent 3<sup>rd</sup> party certification agency's procedure, except for size.
  2. Temperature Rise Limit: Where required and at vertical exit enclosures (stairwell openings) and exit passageways, provide doors that have a maximum transmitted temperature end point of not more than 450 deg F (250 deg C) above ambient after 30 minutes of standard fire test exposure.

3. Smoke Control Door Assemblies: Comply with NFPA 105.

- 1) Smoke "S" Label: Doors to bear "S" label, and include smoke and draft control gasketing applied to frame and on meeting stiles of pair doors.

- D. Pre-Submittal Conference: Conduct conference in compliance with requirements in Division 01 Section "Project Meetings" with attendance by representatives of Supplier, Installer, and Contractor to review proper methods and procedures for receiving, handling, and installing flush wood doors.

1.5 DELIVERY, STORAGE, AND HANDLING

- A. Comply with requirements of referenced standard and manufacturer's written instructions.
- B. Package pre-finished doors individually in plastic bags and wrap bundles of doors in plastic sheeting.
- C. Mark each door on top rail with opening number used on Shop Drawings.

1.6 PROJECT CONDITIONS

- A. Environmental Limitations: Do not deliver or install doors until spaces are enclosed and weather tight, wet work in spaces is complete and dry, and HVAC system is operating and maintaining ambient temperature and humidity conditions at occupancy levels during the remainder of the construction period.

1.7 WARRANTY

- A. Warranty: Manufacturer's standard form in which manufacturer agrees to repair or replace doors that fail in materials or workmanship within specified warranty period.
  1. Failures include, but are not limited to, the following:
    - a. Warping (bow, cup, or twist) more than 1/4 inch in a 42-by-84-inch section.
    - b. Telegraphing of core construction in wood face veneers exceeding 0.01 inch in a 3-inch span.
  2. Warranty includes installation and finishing that may be required due to repair or replacement of defective doors.
  3. Warranty Period for Solid Core Interior Doors: Life of installation.

PART 2 - PRODUCTS

2.1 DOOR CONSTRUCTION – GENERAL

- A. WDMA I.S.1-A Performance Grade: Extra Heavy Duty; Aesthetic Grade: Premium.

B. Fire Rated Doors: Provide construction and core as needed to provide fire ratings indicated.

1. Category A Edge Construction: Provide fire rated door edge construction with intumescent seals concealed by outer stile (Category A) at 45, 60, and 90 minute rated doors. Comply with specified requirements for exposed edges.
2. Pairs: Provide stiles with concealed intumescent seals. Comply with specified requirements for exposed edges.
  - a. Provide fire retardant stiles that are listed and labeled for applications indicated without formed steel edges and astragals.

## 2.2 CORE CONSTRUCTION

A. Structural Composite Lumber Core Doors:

1. Structural Composite Lumber: Engineered hardwood composite wood products tested in accordance with WDMA I.S.1A, Testing Cellulosic Composite Materials for Use in Fenestration Products containing no added Urea Formaldehyde.

## 2.3 BLOCKING

A. Non-Fire-Rated Doors:

1. Blocking is not required when using SCLC or SLC doors.

B. Fire Rated Doors:

1. Provide blocking as indicated below:
  - a. HB1: 5 inch in doors indicated to have closers and overhead stops.
  - b. HB4: Two 5 inch x 14 inch lock blocking, in doors indicated to have exit devices.
  - c. HB5: Two 5 inch x 14 inch corner blocking, in doors indicated to have flush bolts.
  - d. HB8: Two 5 inch x 14 inch corner blocking and two 5 inch x 14 inch lock blocking on doors to have vertical rod exit devices.

## 2.4 VENEERED DOORS FOR TRANSPARENT FINISH

A. Manufacturers: Subject to compliance with requirements, provide products by one of the following:

1. VT industries
2. Masonite Industries
3. Mohawk
4. Or approved equal

B. Interior Solid Core Doors:

1. Grade: Premium.
2. Faces: Veneer grades as noted below; veneer minimum 1/50-inch (0.5mm) thickness at moisture content of 12% or less.
  - a. Plain Rift Sawn Oak, AA grade faces stained as approved by architect.
3. Match between Veneer Leaves: Book match.
4. Assembly of Veneer Leaves on Door Faces:
  - a. Running Match.
5. Pair and Set Match: Provide for doors hung in same opening or separated only by mullions.
6. Transom Match: Continuous match.
7. Vertical Edges: Matching same species as faces. Wood or composite material, one piece, laminated, or veneered. Minimum requirements per WDMA section P-1, Performance Standards for Architectural Wood Flush Doors.
8. Horizontal Edges: Solid wood or structural composite material meeting the minimum requirements per WDMA section P-1, Performance Standards for Architectural Wood Flush Doors
9. Construction: Five plies. Stiles and rails are bonded to core, then entire unit sanded before applying face veneers.
10. At doors over 40% of the face cut-out for lights and or louvers, furnish engineered composite lumber core.

## 2.5 LIGHT FRAMES AND GLAZING

- A. Wood Beads for Light Openings in Wood Doors up to and including 20-minute rating:
  1. Wood Species: Same species as door faces.
  2. Profile:
    - a. M1 Flush Bead.
    - b. At wood core doors with 20-minute fire protection ratings, provide wood beads and metal glazing clips approved for such use.
- B. Metal Frames for Light Openings in Fire Rated Doors over 20-minute Rating: Manufacturer's standard frame formed of 0.048-inch-thick, cold rolled steel sheet; with baked enamel or powder coated finish; and approved for use in doors of fire protection rating indicated.
  1. Manufacturers:
    - a. Air Louver.
    - b. All Metal Stamping.

- c. Anemostat.
- d. Pemko
- e. Or approved equal.

- C. Glazing: Comply with installation requirements in Division 08 Section "Glazing" and with the flush wood door manufacturer's written instructions.

## 2.6 FABRICATION

- A. Factory fit doors to suit frame opening sizes indicated.
  - 1. Comply with requirements in NFPA 80 for fire rated doors.
  - 2. Undercut: As required per manufacturer's templates and sill condition.
- B. Factory machine doors for hardware that is not surface applied. Comply with final hardware schedules, door frame Shop Drawings, DHI A115-W series standards, and hardware templates.
  - 1. Coordinate with hardware mortises in metal frames to verify dimensions and alignment before factory machining.
  - 2. Metal Astragals: Factory machine astragals and formed steel edges for hardware for pairs of fire rated doors.
- C. Openings: Cut and trim openings through doors in factory.
  - 1. Light Openings: Trim openings with moldings of material and profile indicated.
  - 2. Glazing: Comply with applicable requirements in Division 08 Section "Glazing."
  - 3. Louvers: Factory install louvers in prepared openings.
- D. Electrical Raceways: Provide flush wood doors receiving electrified hardware with concealed wiring harness and standardized Molex™ plug connectors on both ends to accommodate up to twelve wires. Coordinate connectors on end of the wiring harness to plug directly into the electrified hardware and the through wire transfer hardware or wiring harness specified in hardware sets in Division 08 "Door Hardware". Wire nut connections are not acceptable.

## 2.7 FACTORY FINISHING

- A. General: Comply with referenced quality standard for factory finishing. Complete fabrication, including fitting doors for openings and machining for hardware that is not surface applied, before finishing.
  - 1. Finish faces, all four edges, edges of cutouts, and mortises. Stains and fillers may be omitted on top and bottom edges, edges of cutouts, and mortises.
- B. Transparent Finish: Provide a clear protective coating over the wood veneer allowing the natural color and grain of the selected wood species to provide the appearance specified. Stain is applied to the wood surface underneath the transparent finish to add color and design flexibility.
  - 1. Finish: Meet or exceed WDMA I.S. 1A TR8 UV Cured Acrylated Polyester finish performance requirements.
  - 2. Staining:

- a. As selected by Architect from manufacturer's full range.
  - b. Custom stain to match architect's sample.
3. Sheen: Satin.

### PART 3 - EXECUTION

#### 3.1 EXAMINATION

- A. Examine doors and installed door frames before hanging doors.
  1. Verify that frames comply with indicated requirements for type, size, location, and swing characteristics and have been installed with level heads and plumb jambs.
  2. Reject doors with defects.
- B. Proceed with installation only after unsatisfactory conditions have been corrected.

#### 3.2 INSTALLATION

- A. Hardware: For installation, see Division 8 Section "Door Hardware."
- B. Installation Instructions: Install doors and frames to comply with manufacturer's written instructions and the referenced quality standard, and as indicated.
  1. Install fire rated doors in corresponding fire rated frames according to NFPA 80.
- C. Factory Fitted Doors: Align in frames for uniform clearance at each edge.
- D. Factory Finished Doors: Restore finish before installation if fitting or machining is required at Project site.
- E. Field modifications to doors shall not be permitted, except those specifically allowed by manufacturer or fire rating requirements.

#### 3.3 ADJUSTING

- A. Operation: Re-hang or replace doors that do not swing or operate freely.
- B. Finished Doors: Replace doors that do not comply with requirements. Doors may be repaired or refinished if work complies with requirements and shows no evidence of repair or refinishing.

END OF SECTION 08 1416

## SECTION 081700 – INTEGRATED DOOR OPENING ASSEMBLIES

### PART 1 - GENERAL

#### 1.1 RELATED DOCUMENTS

- A. Drawings and general provisions of the Contract, including General and Supplementary Conditions and Division 01 Specification Sections, apply to this Section.

#### 1.2 SUMMARY

- A. Section Includes:
  - 1. Integrated door opening assemblies including metal frame, integrated door system with operating hardware, and associated door hardware as specified in this section.
  - 2. Factory fitting and hardware preparation for doors and frames.
- B. Standards: All hardware specified herein to comply with the current version year of the following industry standards:
  - 1. ANSI/BHMA Certified Product Standards, A156 Series.

#### 1.3 SUBMITTALS

- A. Product Data: Manufacturer's product data sheets including integrated opening assembly construction and installation details, material descriptions, core descriptions, hardware reinforcements, profiles, anchorage, fire resistance rating, operational descriptions and finishes.
- B. Door Hardware Schedule: Organize the Door Hardware Schedule into door hardware sets indicating complete designations of every item required for each door or opening. Comply with scheduling sequence and vertical format in DHI's "Sequence and Format for the Hardware Schedule." Include the following information:
  - 1. Type, style, function, size, label, hand, and finish of each door hardware item.
  - 2. Manufacturer of each item.
  - 3. Fastenings and other pertinent information.
  - 4. Location of door hardware set, cross-referenced to Drawings, both on floor plans and in door and frame schedule.
  - 5. Explanation of abbreviations, symbols, and codes contained in schedule.
  - 6. Mounting locations for door hardware.
- C. Shop Drawings: Include the following:
  - 1. Elevations of each door design.
  - 2. Details of door and frames types including dimensioned profiles and metal thicknesses.
  - 3. Locations of reinforcement and preparations for hardware.
  - 4. Details of anchorages, joints, field splices, and connections.
  - 5. Details of accessories.

6. Details of moldings, removable stops, and glazing.
  7. Details of conduit and preparations for power, signal, and control systems.
  8. Provide all dimensions necessary required to complete recessed pockets.
- D. Keying Schedule: Reference Division 08 Section "Door Hardware" for keying requirements.
- E. Operating and Maintenance Manuals: Provide manufacturers operating and maintenance manuals for each item comprising the complete integrated assembly installation in quantity as required in Division 01, Closeout Submittals. The manual to include the name, address, and contact information of the manufacturers providing the installed assemblies and their nearest service representatives. The final copies delivered after completion of the installation test to include "as built" modifications made during installation, checkout, and acceptance.
- F. Warranties and Maintenance: Special warranties and maintenance agreements specified in this Section.
- 1.4 DELIVERY, STORAGE, AND HANDLING
- A. Deliver products to the project site under provisions Division 01 Section "Product Storage and Handling Requirements". Inspect doors, frames, and hardware with representatives of the supplier to verify shipment is complete and to rectify discrepancies promptly.
1. Integrated door assembly systems to be delivered to the job site complete with necessary screws, miscellaneous parts, instructions, and installation templates. Each package legibly and properly labeled to correspond to the approved Door Schedule.
- B. Furnish integrated door opening assemblies with operating hardware flush to door skin, using protective wrappings and spacers between projecting hardware. Maintain and protect door assemblies using cardboard spacers and protective edge guards along the door edges, to reduce exposure to marring or damage during storage.
- C. Store integrated door opening assemblies in dry and secure area. Do not store electronic access control software, credentials, or accessories at Project site without prior authorization.
- 1.5 PROJECT CONDITIONS
- A. Field Measurements: Verify actual dimensions of openings by field measurements before fabrication.
- 1.6 COORDINATION
- A. Building Information Modeling (BIM) Support: Utilize designated BIM software tools and obtain training needed to successfully participate in the Project BIM processes. All technical disciplines are responsible for the product data integration and data reliability of their Work into the coordinated BIM applications.
- B. Electrical Connections: Coordinate the layout and installation of scheduled electrified hardware and related access control equipment with required connections to source power junction boxes, low voltage power supplies, detection and monitoring hardware, and fire and detection alarm systems.
- 1.7 WARRANTY
- A. General Warranty: Reference Division 01, General Requirements. Special warranties specified in this Article will not deprive Owner of other rights Owner may have under other provisions of

the Contract Documents and are in addition to, and run concurrent with, other warranties made by Contractor under requirements of the Contract Documents.

- B. Warranty Periods: Manufacturer's standard written form, with the exceptions noted below, warranting integrated door opening assemblies to be free of defect in material or workmanship under normal use for a period of five (5) years.
  - 1. Hollow Metal Doors: Lifetime.
  - 2. Hinges: Up to twenty-five (25) years based upon model and manufacturer.
  - 3. Continuous Hinges: Ten (10) years.
  - 4. Door Closers: Up to twenty-five (25) years based upon model and manufacturer.
  - 5. Electrical Products (except MLR exit devices): Three (3) years.
- C. Warranty includes the manufacturer, at their sole option, agreeing to repair or replace products or parts found to be defective in material or workmanship according to details contained in the warranty certificate.

#### 1.8 MAINTENANCE SERVICE

- A. Maintenance Tools and Instructions: Furnish a complete set of specialized tools and maintenance instructions as needed for Owner's continued adjustment, maintenance, and removal and replacement of integrated door opening assemblies.

### PART 2 - PRODUCTS

#### 2.1 MANUFACTURERS

- A. Manufacturers: Subject to compliance with requirements, provide products by the following:
  - 1. Adams Rite Manufacturing (RD) - The RITE Door.
  - 2. Total Door systems
  - 3. Or approved equal

#### 2.2 STEEL MATERIAL REQUIREMENTS

- A. General:
  - 1. Cold-Rolled Steel Sheet: ASTM A 1008/A 1008M, Commercial Steel (CS), Type B; suitable for exposed applications.
  - 2. Metallic-Coated Steel Sheet: ASTM A 653/A 653M, Commercial Steel (CS), Type B; with minimum G60 (Z180) or A60 (ZF180) metallic coating.
- B. Hollow Metal Doors: Face sheets fabricated of commercial quality cold rolled steel that complies with ASTM A 1008/A 1008M. Provide doors complying with requirements indicated below by referencing ANSI/SDI A250.8 for level and model and ANSI/SDI A250.4 for physical performance level:
  - 1. Design: Flush panel.
  - 2. Core Construction: Manufacturer's standard vertical steel-stiffener core. Minimum 22 gauge steel-stiffeners at 6 inches on-center construction attached by spot welds spaced

not more than 5" on centers. Spaces between stiffeners filled with fiberglass insulation (minimum density 0.8#/cubic ft.).

- 1). Fire Door Core: As required to provide fire-protection and temperature-rise ratings indicated within the door schedule.
  3. Level/Model: Level 2 and Physical Performance Level B (Heavy Duty), Minimum 18 gauge (0.042-inch - 1.0-mm) thick steel, Model 2.
  4. Top and Bottom Edges: Reinforce tops and bottoms of doors with a continuous steel channel not less than 16 gauge, extending the full width of the door and welded to the face sheet.
  5. Hinge Reinforcement: Minimum 7 gauge (3/16") plate 1-1/4" x 9" or minimum 14 gauge continuous channel with pierced holes, drilled and tapped.
  6. Hardware Reinforcements: Fabricate according to ANSI/SDI A250.6 with reinforcing plates from same material as door face sheets.
- C. Steel Frames:
- Fabricated from cold-rolled steel sheet that complies with ASTM A 1008/A 1008M. Comply with ANSI/SDI A250.8 and with details indicated for type and profile.
1. Fabricate frames with mitered or coped corners.
  2. Fabricate frames with "closed and tight" miter seams continuously welded on face, finished smooth with no visible seam unless otherwise indicated.
  3. Frames for openings up to 48 inches in width: Minimum 16 gauge thick steel sheet.
  4. Frames for openings 48 inches and wider in width: Minimum 14 gauge thick steel sheet.
  5. Fire rated frames: Fabricate frames in accordance with NFPA 80, listed and labeled by a qualified testing agency, for fire-protection ratings indicated.
  6. Hardware Reinforcement: Fabricate according to ANSI/SDI A250.6 Table 4 with reinforcement plates from same material as frames.
  7. Provide suitable adjustable type anchors for wall condition, minimum 4 each per jamb.

### 2.3 DOOR HARDWARE MATERIAL REQUIREMENTS:

- A. Provide a complete integrated door opening assembly, including the installation and adjustment of the latching mechanism within the door construction.
- B. Door hardware to include the following minimum products for each integrated door opening assembly as specified in the Door Hardware Sets under Part 3.
  1. Hanging Device: Continuous Hinges (geared or pinned), Pocket Pivots, Offset/Intermediate Pivots, or Butt Hinges.
  2. Integrated Locking/Latching Hardware: Exit Devices, Lever Handle Trim, or Flush Push/Pulls.
- C. Integrated exit device hardware to be clean and unobtrusive in design with a minimal bar height of 2-7/16-inches. Push rails not exceed a projection of 1-1/8-inches when in the latched position and be made of heavy duty aluminum extrusion, available in anodized and architectural finishes

using metal cladding. Exit device end caps to be of metal construction, and should match the trim cover caps when available.

- D. Push and pull hardware to be clean and unobtrusive in design with a maximum projection of 1/4-inches on pull side and 5/8-inches on the push side. To be used on hollow metal doors only.
- E. Lever handles to be clean and unobtrusive in design with a maximum projection of 3-1/2-inches and match design of similar lever locking hardware furnished on project.
- F. Door hardware may include the following optional products for each integrated door opening assembly as specified in the Door Hardware Sets under Part 3:
  - 1. Door Closers: Surface Closer or Pocket Closer.
  - 2. Accessory Items: Magnetic Holders, Protection Plates, Edge Guards, Astragals, Smoke Seals.

## 2.4 FINISH REQUIREMENTS

- A. Prime Finishes: Doors and frames to be cleaned, and chemically treated to insure maximum finish paint adhesion. Surfaces of the door and frame exposed to view to receive a factory applied coat of rust inhibiting shop primer.
  - 1. Shop Primer: Manufacturer's standard, fast-curing, lead and chromate free primer complying with ANSI/SDI A250.10 acceptance criteria; recommended by primer manufacturer for substrate; and compatible with substrate and field-applied coatings.
- B. HPDL Wrapped: Color and pattern as selected by the architect.
- C. Embossed Wood Grain Pattern: Color and pattern as selected by the architect from the manufacturer's standard range.
- D. Hardware Finishes: As specified in Hardware Sets.

## PART 3 - EXECUTION

### 3.1 EXAMINATION

- A. Examine substrates, areas, and conditions, with Installer present, for compliance with requirements for installation tolerances and other conditions affecting performance of the Work.
- B. Verify the accuracy of dimensions given to the integrated door opening assembly manufacturer for existing openings or existing frames (strike height, hinge spacing, hinge back set, etc.).
- C. Proceed with installation only after unsatisfactory conditions have been corrected. Beginning of installation indicates acceptance of the existing conditions.
- D. Verify power supplies, as required, are available to power electrically operated devices.

### 3.2 INSTALLATION

- A. General: Install integrated door opening assemblies plumb, rigid, properly aligned, and securely fastened in place; comply with Drawings and manufacturer's written instructions.
- B. Install each item of mechanical and electromechanical hardware and access control equipment to comply with manufacturer's written instructions and according to specifications.

1. Installers are to be trained and by the manufacturer on the proper installation and adjustment of fire, life safety, and security products including: hanging devices; integrated locking/latching devices; closing devices; and seals.
  - C. Mounting Heights: Mount door hardware units at heights indicated in following applicable publications, unless specifically indicated or required to comply with governing regulations:
    1. Standard Steel Doors and Frames: DHI's "Recommended Locations for Architectural Hardware for Standard Steel Doors and Frames."
    2. Where indicated to comply with accessibility requirements, comply with ANSI A117.1 "Accessibility Guidelines for Buildings and Facilities."
    3. Provide blocking in drywall partitions where wall stops or other wall mounted hardware is located.
  - D. Coordinate installation and interface wiring with fire alarm and smoke detection systems.
  - E. Remove or protect furnished hardware accessories, prior to painting or finishing completed after the installation of the hardware accessories.
- 3.3 FIELD QUALITY CONTROL
- A. Field Inspection (Punch Report): Reference Division 01 Sections "Closeout Procedures". Produce project punch report for each installed door opening indicating compliance with approved submittals and verification hardware is properly installed, operating and adjusted. Include list of items to be completed and corrected, indicating the reasons or deficiencies causing the Work to be incomplete or rejected.
    1. Organization of List: Include separate Door Opening and Deficiencies and Corrective Action Lists organized by Mark, Opening Remarks and Comments, and related Opening Images and Video Recordings.
- 3.4 ADJUSTMENT
- A. Adjustment: Adjust and check each operating item of door hardware and each door to ensure proper operation or function of every unit. Remove and replace units that cannot be adjusted to operate as intended. Adjust door control devices to compensate for final operation of heating and ventilating equipment and to comply with referenced accessibility requirements.
- 3.5 CLEANING AND PROTECTION
- A. Protect all door opening assemblies and hardware stored on construction site in a covered and dry place. Protect exposed hardware installed on doors during the construction phase. Install hardware at the latest possible time frame.
  - B. Clean operating items as necessary to restore proper finish and provide final protection and maintain conditions that ensure integrated door and operating hardware is without damage or deterioration at time of owner occupancy.
  - C. Prime-Coat and Painted Finish Touchup: Immediately after erection, sand smooth rusted or damaged areas of prime coat, or painted finishes, and apply touchup of compatible air drying, rust-inhibitive primer or finish paint.

**3.6 DEMONSTRATION**

- A. Instruct Owner's maintenance personnel to adjust, operate, and maintain integrated door opening assemblies and hardware.

**3.7 HARDWARE SETS**

- A. The integrated door opening hardware sets represent the design intent and direction of the owner and architect. They are a guideline only and should not be considered a detailed hardware schedule. Discrepancies, conflicting hardware and missing items should be brought to the attention of the architect with corrections made prior to the bidding process. Omitted items not included in a hardware set should be scheduled with the appropriate additional hardware required for proper application and functionality.

END OF SECTION 081700

## **SECTION 08 3110 - ACCESS DOORS AND FRAMES**

### **PART 1 - GENERAL**

#### **1.1 SUMMARY**

- A. Work Included: Provide labor, materials and equipment necessary to complete the work of this Section, including but not limited to the following:

1. Access doors and frames for walls and ceilings.

#### **1.2 SUBMITTALS**

- A. Product Data: For each type of access door and frame indicated. Include construction details, fire ratings, materials, individual components, profiles, and finishes.
- B. Shop Drawings: Show fabrication and installation details of access doors and frames for each type of substrate. Include plans, elevations, sections, details, and attachments to other work.
- C. Samples: For each door face material, at least 3 by 5 inches in size, in specified finish.
- D. Access Door and Frame Schedule: Provide complete access door and frame schedule, including types, locations, sizes, latching or locking provisions, and other data pertinent to installation.
- E. Ceiling Coordination Drawings: Reflected ceiling plans, drawn to scale, on which ceiling-mounted items including access doors and frames, lighting fixtures, diffusers, grilles, speakers, sprinklers, and special trim are shown and coordinated with each other.

#### **1.3 QUALITY ASSURANCE**

- A. Source Limitations: Obtain each type of access door and frame through one source from a single manufacturer.
- B. Fire-Rated Access Doors and Frames: Units complying with NFPA 80 that are identical to access door and frame assemblies tested for fire-test-response characteristics per the following test method and that are listed and labeled by UL or another testing and inspecting agency acceptable to authorities having jurisdiction:
1. NFPA 252 for vertical access doors and frames.
  2. ASTM E 119 for horizontal access doors and frames.
- C. Size Variations: Obtain Architect's acceptance of manufacturer's standard-size units, which may vary slightly from sizes indicated.

#### **1.4 COORDINATION**

- A. Verification: Determine specific locations and sizes for access doors needed to gain access to concealed plumbing, mechanical, or other concealed work, and indicate in the schedule specified in "Submittals" Article.

## **PART 2 - PRODUCTS**

### **2.1 STEEL MATERIALS**

- A. Steel Plates, Shapes, and Bars: ASTM A 36/A 36M.
  - 1. ASTM A 123/A 123M, for galvanizing steel and iron products.
  - 2. ASTM A 153/A 153M, for galvanizing steel and iron hardware.
- B. Steel Sheet: Electrolytic zinc-coated, ASTM A 879/A 879M with cold-rolled steel sheet substrate complying with ASTM A 1008/A 1008M, Commercial Steel (CS), exposed.
- C. Steel Finishes: Comply with NAAMM's "Metal Finishes Manual for Architectural and Metal Products" for recommendations for applying and designating finishes.
  - 1. Surface Preparation for Steel Sheet: Clean surfaces to comply with SSPC-SP 1, "Solvent Cleaning," to remove dirt, oil, grease, or other contaminants that could impair paint bond. Remove mill scale and rust, if present, from uncoated steel, complying with SSPC-SP 5/NACE No. 1, "White Metal Blast Cleaning," or SSPC-SP 8, "Pickling."
    - a. Galvanizing Repair Paint: High-zinc-dust-content paint for regalvanizing welds in steel, complying with SSPC-Paint 20.
  - 2. Factory-Primed Finish: Apply shop primer immediately after cleaning and pretreating.
- D. Drywall Beads: Edge trim formed from 0.0299-inch zinc-coated steel sheet formed to receive joint compound and in size to suit thickness of gypsum board.

### **2.2 STAINLESS-STEEL MATERIALS**

- A. Rolled-Stainless-Steel Floor Plate: ASTM A 793, manufacturer's standard finish.
- B. Stainless-Steel Sheet, Strip, Plate, and Flat Bars: ASTM A 666, Type 316. Remove tool and die marks and stretch lines or blend into finish.
  - 1. Finish: Directional Satin Finish, No. 4.

### **2.3 ACCESS DOORS AND FRAMES FOR WALLS AND CEILINGS**

- A. Available Manufacturers: Subject to compliance with requirements, manufacturers offering products that may be incorporated into the Work include, but are not limited to, the following:
  - 1. Acudor Products, Inc.
  - 2. Babcock-Davis; A Cierra Products Co.
  - 3. Dur-Red Products.
  - 4. J. L. Industries, Inc.
  - 5. Karp Associates, Inc.
  - 6. Larsen's Manufacturing Company.
  - 7. Milcor Inc.
  - 8. Nystrom, Inc.
  - 9. Or approved equal
- B. Flush Access Doors and Trimless Frames: Fabricated from steel sheet at typical areas and from stainless-steel sheet at toilet and wet areas and in masonry.
  - 1. Locations: Wall and ceiling surfaces.
  - 2. Size: Minimum 18"x18" unless otherwise noted
  - 3. Door: Minimum 0.060-inch-thick sheet metal, set flush with surrounding finish surfaces.
  - 4. Frame: Minimum 0.060-inch-thick sheet metal with drywall bead flange.
  - 5. Hinges: concealed pivot
  - 6. Latch: screwdriver-

7. Lock: rim cylinder or mortise cylinder for small-format interchangeable cores (SFIC) to match facility keying or approved equal.
- C. Fire Rated, Uninsulated, Flush Access Doors and Frames with Exposed Trim: Fabricated from steel at typical areas and from stainless-steel sheet at toilets and wet areas.
  1. Locations: Wall surfaces where located in fire-rated walls.
  2. Size: minimum 18"x18" unless otherwise noted
  3. Fire-Resistance Rating: Not less than that of adjacent construction.
  4. Door: Minimum 0.060-inch-thick sheet metal, flush construction.
  5. Frame: Minimum 0.060-inch-thick sheet metal with 1-inch-wide, surface-mounted trim.
  6. Hinges: concealed pivot.
  7. Automatic Closer: Spring type.
  8. Lock: Self-latching device with rim cylinder or mortise cylinder for small-format interchangeable cores (SFIC) to match facility keying or approved equal.

## **2.4 FABRICATION**

- A. General: Provide access door and frame assemblies manufactured as integral units ready for installation.
- B. Metal Surfaces: For metal surfaces exposed to view in the completed Work, provide materials with smooth, flat surfaces without blemishes. Do not use materials with exposed pitting, seam marks, roller marks, rolled trade names, or roughness.
- C. Doors and Frames: Grind exposed welds smooth and flush with adjacent surfaces. Furnish attachment devices and fasteners of type required to secure access panels to types of supports indicated.
  1. For trimless frames with drywall bead, provide edge trim for gypsum board and gypsum base securely attached to perimeter of frames.
  2. For trimless frames with plaster bead for full-bed plaster applications, provide zinc-coated expanded metal lath and exposed casing bead welded to perimeter of frames.
  3. Provide mounting holes in frames for attachment of units to metal or wood framing.
  4. Provide mounting holes in frame for attachment of masonry anchors.
- D. Recessed Access Doors: Form face of panel to provide recess for application of applied finish. Reinforce panel as required to prevent buckling.
  1. For recessed doors with plaster infill, provide self-furring expanded metal lath attached to door panel.
- E. Latching Mechanisms: Furnish number required to hold doors in flush, smooth plane when closed.
  1. For cylinder lock:
    - a. Rim cylinder or mortise cylinder for small-format interchangeable cores (SFIC) to match facility keying or approved equal.
    - b. Furnish two keys per lock and key all locks alike.
  2. For recessed panel doors, provide access sleeves for each locking device. Furnish plastic grommets and install in holes cut through finish.

**PART 3 - EXECUTION**

**3.1 INSTALLATION**

- A. Comply with manufacturer's written instructions for installing access doors and frames.
- B. Set frames accurately in position and attach securely to supports with plane of face panels aligned with adjacent finish surfaces.
- C. Install doors flush with adjacent finish surfaces or recessed to receive finish material.

**3.2 ADJUSTING AND CLEANING**

- A. Adjust doors and hardware after installation for proper operation.
- B. Remove and replace doors and frames that are warped, bowed, or otherwise damaged.

**END OF SECTION 08 3110**

## SECTION 08 4313 - ALUMINUM ENTRANCES AND STOREFRONTS

### PART 1 GENERAL

#### 1.1 GENERAL REQUIREMENTS

- A. Work of this Section, as shown or specified, shall be in accordance with the requirements of the Contract Documents.

#### 1.2 SECTION INCLUDES

- A. Work of this Section includes all labor, materials, equipment and services necessary to complete the aluminum entrances and storefronts as indicated on the drawings and/or specified herein including the following:
  - 1. Exterior storefront and entrance systems.

#### 1.3 RELATED SECTIONS

- A. Joint Sealants - Section 07 9200.
- B. Door hardware - Section 08 7100.
- C. glazing - Section 08 8000.

#### 1.4 SUBMITTALS

- A. Product Data: Submit manufacturer's printed product data, specifications, standard details, installation instructions, use limitations and recommendations for each material used. Provide certifications that materials and systems comply with specified requirements.
- B. Shop Drawings: Provide large scale shop drawings for fabrication, installation and erection of all parts of work. Provide plans, elevations, and details of anchorages, connections and accessory items. Provide installation templates for work installed by others. Show interfaces and relationships to work of other trades.
- C. Field Measurements: Take necessary field measurements before preparation of shop drawings and fabrication. Do not delay progress of job. If field measurements are not possible prior to fabrication, allow for field cutting and fitting.
- D. Verification Samples: Submit representative samples of each material that is to be exposed in completed work. Show full color ranges and finish variations expected. Provide samples having minimum size of 144 sq. in.
- E. Calculations: Provide professionally prepared calculations and certification of performance of this work. Indicate how design requirements for loading and other performance criteria have been satisfied; refer to Article 1.5, paragraph D for further description.
- F. Test Reports: Provide certified test reports for specified tests.

**1.5 QUALITY ASSURANCE**

- A. Source: For each material type required for work of this Section, provide primary materials which are products of one manufacturer. Provide secondary or accessory materials which are acceptable to manufacturers of primary materials.
- B. Installer: A firm with a minimum of three years experience in type of work required by this Section and which is acceptable to manufacturers of primary materials.
- C. Design Criteria: Drawings indicate sizes, member spacings, profiles, and dimensional requirements of work of this Section. Minor deviations will be accepted in order to utilize manufacturer's standard products when, in the Architect's sole judgment, such deviations do not materially detract from the design concept or intended performances.
- D. Engineering: Provide services of a Professional Engineer, registered in the jurisdiction in which the Project will be built, to design and certify that work of this Section meets or exceeds performance requirements specified.

**1.6 TESTS AND PERFORMANCE REQUIREMENTS**

- A. Manufacturer's Standard Tests: Provide manufacturer's standard test data showing compliance with specified requirements.
- B. Testing and performance data applies to exterior assemblies.
- C. Test Sequence: Test sequence is optional, except that air infiltration tests shall precede water resistance tests.
- D. Air Infiltration Test: Test unit in accordance with ASTM E 283, as follows:
  - 1. Static Air Pressure Difference: 6.24 psf for fixed storefront units, and 1.567 psf for doors.
  - 2. Performance: Maximum air leakage shall not exceed the following:
    - a. Fixed Storefront Units: 0.06 cfm per sq. ft. of window area.
    - b. Door Units: 0.50 cfm per sq. ft. of single doors, 1.00 cfm per sq. ft. for doors hinged in pairs.
- E. Water Leakage Test: Test fixed framing system in accordance with ASTM E 331.
  - 1. Test Pressure: 6.24 psf.
  - 2. Performance: No leakage as defined in test method at specified test pressure.
- F. Uniform Load Deflection Test: Test units in accordance with ASTM E 330, at following static air pressure difference (Design Wind Pressure), or loads prescribed by code for this project site, whichever is greater. Apply pressure first to exterior side (positive) and then interior side (negative).
  - 1. Design Wind Pressure: 30 pounds per square foot minimum.
  - 2. Test Procedure: Procedure A as specified in ASTM E 330.

3. Performance: Deflection in each member measured at locations of greatest deflection shall not exceed  $L/175$  at specified Design Wind Pressure.
- G. Uniform Load Structural Test: Test units in accordance with ASTM E 330 at following static air pressure difference. Apply high pressure load first on one side and then on other side. At conclusion of test there shall be no glass breakage, permanent damage to fasteners, hardware parts, support arms or activating mechanisms.
  1. Static Air Pressure: Minimum 1.5 times the Design Wind Pressure.
  2. Permanent Deformation in Any Member: Not to exceed 0.2% of member span.
- H. Condensation Resistant Factor: Not less than 45 for fixed storefront units, and not less than 48 for doors; per AAMA 1502.7.
- I. Thermal Movement: Provide storefront systems that allow for expansion and contraction of members throughout an ambient temperature range of 120°F.
- J. Seismic Loads: Provide entrance and storefront systems, including anchorage, capable of withstanding the effects of earthquake motions calculated according to requirements of authorities having jurisdiction or ASCE 7, "Minimum Design Loads for Buildings and Other Structures", Section 9, "Earthquake Loads", whichever are more stringent.

#### 1.7 DELIVERY, STORAGE, AND HANDLING

- A. Deliver materials and products in unopened, factory labeled packages. Store and handle in strict compliance with manufacturer's instructions and recommendations. Store under cover and protect from weather damage.
- B. Sequence deliveries to avoid delays, but minimize on-site storage.

#### 1.8 WARRANTIES

- A. Provide written warranty, signed by manufacturer, agreeing to repair or replace work that exhibits defects in materials or workmanship. "Defects" is defined to include, but not limited to, leakage of water, abnormal aging or deterioration, abnormal deterioration or fading of finishes, and failure to perform as required. Include requirement for removal and replacement of covering and connected adjacent work.
  1. Warranty Period: Three (3) years from date of Substantial Completion; except finish shall be warranted for a period of fifteen (15) years from date of Substantial Completion.

### PART 2 PRODUCTS

#### 2.1 ACCEPTABLE MANUFACTURERS/PRODUCTS

- A. Provide storefronts and entrance systems of one of the following manufacturers that meet or exceed requirements of these specifications:
  1. Kawneer Company, Inc – Trifab 451UT with AA425 entrance system.
  2. EFCO – Xtherm 403X with D502 entrance system.

3. YKK – YES 45 XT with Megatherm XT entrance system.
4. Or approved equal.

**B. Products:**

1. Exterior frame system shall be equal to Series 451UT utilizing a thermal strut (double thermal break), manufactured by Kawneer Company, Inc.; or approved equal manufacturer listed above.
  - a. Mullion size 2" x 4-1/2"
2. Doors shall be "AA425 wide stile thermal entrance system" with thermally broken doors manufactured by the Kawneer Co. Inc. or approved equal manufacturer listed above and be installed as part of a complete system by a single manufacturer with adjacent storefront framing.
  - a. 4-1/4" vertical stile, 4-1/4" top rail, 10" bottom rail

**2.2 MATERIALS AND ACCESSORIES**

- A. Aluminum Members: Provide 6063-T5 alloy and temper as recommended by manufacturer for strength, corrosion resistance, and application of required finish. Comply with ASTM B 221 for extrusions, and ASTM B 209 for sheet/plate. Provide 0.125 in. thick extrusions for door stiles and storefront framing. Provide 0.050 in. thick aluminum for glazing moldings.
  1. Structural aluminum shapes shall conform to ASTM B 308.
- B. Fasteners: Provide non-magnetic stainless steel fasteners, warranted by manufacturer to be non-corrosive and compatible with aluminum components.
- C. Concealed Flashing: Dead-soft stainless steel, 26 gage minimum, or extruded aluminum 0.062 in. minimum, of an alloy and type selected by manufacturer for compatibility with other components.
- D. Brackets and Reinforcements: Non-magnetic stainless steel or hot-dip galvanized steel complying with ASTM A 386.
- E. Concrete/Masonry Inserts: Cast-iron, malleable iron, or hot-dip galvanized steel complying with ASTM A 386.
- F. Bituminous Coatings: Cold-applied asphalt mastic compounded for 30-mil thickness per coat.
- G. Compression Weatherstripping: Manufacturer's standard replaceable stripping of molded neoprene or PVC gaskets complying with ASTM D 2287.
- H. Sliding Weatherstripping: Manufacturer's standard replaceable stripping of wool, polypropylene, or nylon woven pile, with nylon fabric or aluminum strip backing.

## 2.3 HARDWARE

- A. Provide hardware units as indicated, scheduled, or required for operation of each door. Refer to Section 087100, Finish Hardware for hardware description.

## 2.4 FABRICATION

- A. Sizes and Profiles: Required sizes for door and frame units, including profile requirements, are indicated on Drawings. Any variable dimensions are indicated, together with maximum and minimum dimensions required to achieve design requirements and coordination with other work.
- B. Prefabrication: To greatest extent possible, complete fabrication, assembly, finishing, hardware application, and other work before shipment to project site. Disassemble components only as necessary for shipment and installation.
  - 1. Preglaze door and frame units to greatest extent possible, in coordination with installation and hardware requirements.
  - 2. Do not drill and tap for surface-mounted hardware items until time of installation at project site.
  - 3. Perform fabrication operations, including cutting, fitting, forming, drilling and grinding of metal work in manner which prevents damage to exposed finish surfaces. For hardware, perform these operations prior to application of finishes.
- C. Welding: Comply with recommendations of American Welding Society to avoid discoloration; grind exposed welds smooth and restore mechanical finish.
- D. Reinforcing: Install reinforcing as necessary for performance requirements; separate dissimilar metals with bituminous paint or other separator to prevent corrosion.
- E. Continuity: Maintain accurate relation of planes and angles, with hairline fit of contacting members.
- F. Fasteners: Conceal fasteners.
- G. Provide EPDM/vinyl blade gasket weatherstripping in bottom exterior door rail, adjustable for contact with threshold.
- H. At interior doors and other locations without weatherstripping, provide neoprene silencers on stops to prevent metal-to-metal contact.
- I. Provisions shall be made in the framing for minimum edge clearance, nominal edge cover, and nominal pocket width for the thickness and type of glazing installed, and shall be in accordance with the FGMA Glazing Manual.
- J. Pocket glazed framing shall provide:

	<u>Single Glass</u>	<u>Ins. Glass</u>
1. Nominal edge cover (or bite) framing only	5/16"	1/2"
2. Min. nominal edge clearance	1/8"	1/4"
3. Min. face clearance	1/8"	5/32"

## 2.5 STOREFRONT FRAMING

- A. General: Provide inside-outside matched resilient flush glazed system with provisions for glass replacement. Shop fabricate and preassemble frame components where possible.
- B. Thermal-Break Construction: Fabricate exterior aluminum storefront framing system with integrally concealed, low conductance thermal barrier, located between exterior materials and exposed interior members, in manner which eliminates direct metal-to-metal contact. Provide manufacturer's standard construction which has been in use for similar projects for at least three years.
- C. For glass and glazing, refer to Section 088000.

## 2.6 ALUMINUM DOORS

- A. Aluminum entrance doors shall be wide stile thermally broken factory-glazed aluminum doors, manufactured by same manufacturer as storefront framing with optional 10" bottom rail.
- B. Aluminum entrance doors shall be stile and rail type swing doors. Aluminum shall be extruded aluminum conforming to ASTM B 221, 0.125 in. thick for door stiles and 0.050 in. thick for glazing molding.
  - 1. Sections shall be of sizes and profiles indicated; shall present straight, sharply defined lines and arrises; and shall be free from defects impairing strength, durability, and appearance.
  - 2. Fasteners where exposed shall be aluminum stainless steel or plated steel conforming to ASTM A 164.
- C. Each door shall be factory glazed set in neoprene glazing gasket, refer to Section 088000 for glass.
- D. Doors shall meet the following resistance to corner racking when tested by the Dual Moment Load Test.
  - 1. Test section shall consist of a standard top door corner assembly. Side rail section shall be 24" long and top rail section shall be 12" long.
  - 2. Anchor "top rail" positively to test bench so that corner protrudes 3" beyond bench edge.
  - 3. Anchor a lever arm positively to "side rail" at a point 19" from inside edge of "top rail". Attach weight support pad at a point 19" from inner edge of "side rail".
  - 4. Test section shall withstand a load of 245 lbs. On the lever arm before reaching the point of failure, which shall be considered a rotation of the lever arm in excess of 45 deg.
- E. Air Infiltration: (Applies only to single acting offset pivot or butt hung entrances).
  - 1. Air infiltration shall be tested in accordance with ASTM E 283, at a pressure differential of 1.567 psf. A single 3'-0" x 7'-0" entrance door and frame shall not

exceed .50 cfm per linear foot of perimeter crack. A pair of 6'-0" x 7'-0" entrance doors and frame shall not exceed 1.0 cfm per linear foot of perimeter crack.

- F. For door hardware, refer to Section 087100.
- G. Door bottom rail of exterior doors shall have an EPDM blade gasket sweep strip applied with concealed fasteners.
- H. Corner construction shall consist of mechanical clip fastening, SIGMA deep penetration and fillet welds. Glazing stops shall be hook-in type with EPDM glazing gaskets.
- I. The door weatherstripping on a single acting offset pivot or butt hung exterior door and frame (single or pairs) shall be thermoplastic elastomer weathering on a tubular shape with a semi-rigid polymeric backing.
- J. The door weatherstripping on a double acting, center pivoted door and frame (single or pairs) shall be pile cloth. The door bottom rail shall be weathered with an EPDM blade gasket sweep strip applied with concealed fasteners.
- K. The meeting stiles on pairs of doors shall be equipped with an adjustable astragal.

## 2.7 FINISH

- A. High- Performance Organic Finish: Two-coat fluoropolymer finish complying with AAMA 2605 and containing not less than 70 percent PVDF resin by weight in color coat.
  - 1. Prepare, pretreat, and apply coating to exposed metal surfaces to comply with coating and resin manufacturers' written instructions.
  - 2. Provide clear topcoat where required by coating manufacturer for color selected.
  - 3. Color and Gloss: As selected by the Architect from manufacturers full color range or indicated on the drawings.

## PART 3 EXECUTION

### 3.1 INSPECTION

- A. Examine the areas and conditions where aluminum entrances and storefronts are to be installed and correct any conditions detrimental to the proper and timely completion of the work. Do not proceed with the work until unsatisfactory conditions are corrected to permit proper installation of the work.

### 3.2 INSTALLATION

- A. Install aluminum entrance doors and storefront framing in openings prepared under other Sections plumb, square, level, in exact alignment with surrounding work, with proper clearances, and securely and positively anchored to building structure, to meet performance requirements specified herein, in accordance with manufacturer's published instructions and approved submittals.
- B. Use only skilled mechanics for erection, under supervision of manufacturer's representative.

- C. Provide protection against galvanic action. Isolate dissimilar materials with bituminous coating or non-absorptive dielectric tape.
- D. Install aluminum entrance doors, storefront frame, and finish hardware. Carefully fit and adjust doors and hardware to frames and weatherstripping. After erection check and adjust operating hardware for smooth and proper operation.
- E. Set continuous sill members and flashing in a full sealant bed to provide weathertight construction, unless otherwise indicated. Comply with requirements of Section 079200.
- F. Erection Tolerances: Install entrance and storefront systems to comply with the following maximum tolerances.
  - 1. Variation from Plane: Limit variation from plane or location shown to 1/8" in 12'; 1/4" over total length.
  - 2. Alignment: Where surfaces abut in line, limit offset from true alignment to 1/16". Where surfaces meet at corners, limit offset from true alignment to 1/32".
  - 3. Diagonal Measurements: Limit difference between diagonal measurements to 1/8".

### **3.3 PROTECTION AND CLEANING OF ALUMINUM**

- A. Protect finished metal surfaces from damage during fabrication, shipping, storage, and erection, and from then until acceptance by Owner.
- B. Clean metal surfaces promptly after installation, exercising care to avoid damage. Remove excess sealant, dirt, and other substances. Lubricate hardware and other moving parts.

### **3.4 PROTECTION AND CLEANING OF GLASS**

- A. Replace glass that is broken, cracked or chipped prior to time of final acceptance of Project by Owner.
- B. Clean glass surfaces promptly after installation, exercising care to avoid damage to same.
- C. Remove all labels, and label adhesive

**END OF SECTION 08 4313**

## SECTION 08 4413 GLAZED ALUMINUM CURTAIN WALLS

### PART 1-GENERAL

#### 1.1 GENERAL REQUIREMENTS

- A. Work of this Section, as shown or specified, shall be in accordance with the requirements of the Contract Documents.

#### 1.2 SECTION INCLUDES

- A. Work of this Section includes all labor, materials, equipment, and services necessary to complete the aluminum and glass curtain wall as shown on the drawings and/or specified herein, including, but not limited to, the following:
  - 1. Aluminum and glass curtain wall assemblies.
  - 2. Glass and glazing in conjunction with the work of this Section.
  - 3. Spandrel insulation, fire separation, fire safing and smoke stop.
  - 4. All necessary steel or aluminum members where required to support, strengthen and/or reinforce aluminum members.
  - 5. Sealants, caulking, joint fillers, gaskets, fasteners, vents and weeps, weep tubes, bellows, closures, gutters, end dams, flashings, trim, as shown or as may be required in conjunction with the system or to joint the system to adjacent construction.
  - 6. Anchors, inserts and insert setting diagrams, furnishing of inserts and insert setting diagrams, support brackets, reinforcing, bracing, stiffeners, flashing.
  - 7. Shop drawings engineering calculations, erection drawings, samples and conformance test data.
  - 8. Field check for water leakage.
  - 9. Protection and cleaning, as defined herein.
  - 10. Field measurements of adjacent and/or supporting construction and verification of existing conditions.

#### 1.3 RELATED SECTIONS

- A. Aluminum Entrances and Storefronts - Section 084113.
- B. Glazing – Section 088000
- C. Insulated translucent fiberglass panel wall systems – Section 084523

#### 1.4 PERFORMANCE REQUIREMENTS

- A. General Performance: Comply with performance requirements specified, as determined by manufacturer's documented performance criteria and field testing of glazed aluminum curtain walls representing those indicated for this Project without failure due to defective manufacture, fabrication, installation, or other defects in construction.
  - 1. Glazed aluminum curtain walls shall withstand movements of supporting structure and deflection from uniformly distributed and concentrated live loads.
  - 2. Failure also includes the following:
    - a. Thermal stresses transferring to building structure.
    - b. Glass breakage.
    - c. Noise or vibration created by wind and thermal and structural movements.
    - d. Loosening or weakening of fasteners, attachments, and other components.
    - e. Failure of operating units.
- B. Delegated Design: Design glazed aluminum curtain walls, including comprehensive engineering analysis by a qualified professional engineer licensed in the State of New Jersey, including, but not limited to story drift, twist, column shortening, long term creep, using performance requirements and design criteria indicated.
- C. Design Wind loads (unless greater by Code): See Structural Drawings.
- D. Structural-Test Performance: Test according to ASTM E 330 as follows:
  - 1. When tested at positive and negative wind-load design pressures, assemblies do not evidence deflection exceeding specified limits.
  - 2. When tested at 150 percent of positive and negative wind-load design pressures, assemblies, including anchorage, do not evidence material failures, structural distress, and permanent deformation of main framing members exceeding 0.2 percent of span.
  - 3. Test Durations: As required by design wind velocity, but not less than 10 seconds.
- E. Deflection of Framing Members: At design wind pressure, as follows:
  - 1. Deflection Normal to Wall Plane: Limited to edge of glass in a direction perpendicular to glass plane not exceeding L/175 of the glass edge length for each individual glazing lite or an amount that restricts edge deflection of individual glazing lites to 3/4 inch, whichever is less.
  - 2. Deflection Parallel to Glazing Plane: Limited to L/360 of clear span or 1/8 inch, whichever is smaller.
  - 3. Cantilever Deflection: Where framing members overhang an anchor point, limit deflection to two times the length of cantilevered member, divided by 175.
- F. Seismic Performance: Glazed aluminum curtain walls shall withstand the effects of earthquake motions determined according to SEI/ASCE 7.
- G. Story Drift: 3/4" maximum.

- H. Water Penetration under Static Pressure: No evidence of water penetration through fixed glazing and framing areas when tested according to ASTM E 331 at a minimum static-air-pressure differential of 20 percent of positive wind-load design pressure, but not less than 15 lbf/sq. ft.
- I. Water Penetration under Dynamic Pressure: No evidence of water penetration through fixed glazing and framing areas when tested according to AAMA 501.1 at dynamic pressure equal to 20 percent of positive wind-load design pressure, but not less than 15 lbf/sq. ft.
  - 1. Maximum Water Leakage: No uncontrolled water penetrating assemblies or water appearing on assemblies' normally exposed interior surfaces from sources other than condensation. Water leakage does not include water controlled by flashing and gutters that is drained to exterior.
- J. Thermal Movements: Allow for thermal movements resulting from the following maximum change (range) in ambient and surface temperatures:
  - 1. Temperature Change (Range): 120 deg F, ambient; 180 deg F, material surfaces.
  - 2. Test Interior Ambient-Air Temperature: 75 deg F.
  - 3. Test Performance: No buckling; stress on glass; sealant failure; excess stress on framing, anchors, and fasteners; or reduction of performance when tested according to AAMA 501.5.
- K. Energy Performance: Glazed aluminum curtain walls shall have certified and labeled energy performance ratings in accordance with NFRC.
  - 1. Thermal transmittance simulation results using NFRC 100 or AAMA 507 are based upon argon-filled 1" (25.4 mm) or 1-3/4" (44.4 mm) clear low-emissivity coated glass with warm edge spacer
    - a. Thermal Transmittance (U-factor): Fixed glazing and framing areas shall have U- factor of not more than 0.32 Btu/sq. ft. x h x deg F as determined according to NFRC 100 with u-value of glazing equal to 0.24 Center of glazing
  - 2. Solar Heat Gain Coefficient: See drawings.
  - 3. Air Infiltration: Maximum air leakage through fixed glazing and framing areas of 0.06 cfm/sq. ft. of fixed wall area as determined according to ASTM E 283 at a minimum static-air-pressure differential of 6.24/sq. ft.
  - 4. Condensation Resistance Frame: 79
  - 5. Condensation Resistance glass: 76
- L. Dimensional Tolerances: Provide glazed aluminum curtain wall system, including anchorage, that accommodates dimensional tolerances of building frame and other adjacent construction.

1.5 SUBMITTALS

- A. Submit Product Data for each product specified, including details of construction relative to materials, dimensions of individual components, profiles, and finishes.
- B. Submit Shop Drawings showing fabrication and installation of glazed aluminum curtain wall system including plans, elevations, sections, details of components, and attachments to other units of Work.
  - 1. For installed products indicated to comply with certain design loadings, include structural analysis data signed and sealed by a professional engineer licensed in the State of New Jersey responsible for their preparation.
- C. Submit samples for verification of each type of exposed finish required in manufacturer's standard sizes. Where finishes involve normal color and texture variations, include Sample sets showing the full range of variations expected.
- D. Submit cutaway sample of each vertical-to-horizontal intersection of system, made from 12-inch lengths of full-size components and showing details of the following:
  - 1. Joinery.
  - 2. Anchorage.
  - 3. Expansion provisions.
  - 4. Glass and glazing.
  - 5. Flashing and drainage.
- E. Submit welder certificates indicating that welders comply with requirements specified in "Quality Assurance" Article.
- F. Submit installer certificates signed by manufacturer certifying that installers comply with requirements in "Quality Assurance" Article.
- G. Submit product test reports from a qualified independent testing agency evidencing compliance of glazed aluminum curtain wall system with requirements based on comprehensive testing of manufacturer's current system.
- H. Submit test reports, calculations, computer analysis and other necessary data from a qualified independent inspecting and testing agency retained by the Contractor indicating compliance with performance requirements of glazed aluminum curtain wall system.

#### **1.6 QUALITY ASSURANCE**

- A. **Testing Agency Qualifications:** To qualify for approval, an independent testing agency must demonstrate to Architect's satisfaction, based on evaluation of agency-submitted criteria conforming to ASTM E 699, that it has the experience and capability to satisfactorily conduct the testing indicated without delaying the Work.
- B. **Professional Engineer Qualifications:** A professional engineer who is legally qualified

to practice in the jurisdiction where Project is located and who is experienced in providing engineering services of the kind indicated. Engineering services are defined as those performed for installations of glazed aluminum curtain wall systems that are similar to those indicated for this Project in material, design, and extent.

- C. **Installer Qualifications:** Engage an experienced installer to assume engineering responsibility and perform work of this Section who has specialized in installing glazed aluminum curtain wall systems similar to those required for this Project and who is acceptable to manufacturer.
  - 1. **Engineering Responsibility:** Engage a qualified professional engineer to prepare or supervise the preparation of data for glazed aluminum curtain wall systems, including drawings, testing program development, test-result interpretation, and comprehensive engineering analysis that shows systems' compliance with specified requirements.
- D. **Source Limitations:** Obtain each type of glazed aluminum curtain wall system from one source and by a single manufacturer.
- E. **Product Options:** Information on Drawings and in Specifications establishes requirements for system's aesthetic effects and performance characteristics. Aesthetic effects are indicated by dimensions, arrangements, alignment, and profiles of components and assemblies as they relate to sight lines and relationships to one another and to adjoining construction. Performance characteristics are indicated by criteria subject to verification by one or more methods including preconstruction testing, field testing, or in-service performance.
  - 1. Do not modify intended aesthetic effects, as judged solely by Architect, except with Architect's approval and only to the extent needed to comply with performance requirements. Where modifications are proposed, submit comprehensive explanatory data to Architect for review.
- F. **Welding Standards:** Comply with applicable provisions of AWS D1.2, "Structural Welding Code--Aluminum."
  - 1. Engage welders who have satisfactorily passed AWS qualification tests for welding processes involved and who are currently certified for these processes.
- G. **Mockups:** Prior to installing glazed aluminum curtain wall system, construct mockups for each form of construction and finish required to verify selections made under Sample submittals and to demonstrate aesthetic effects as well as qualities of materials and execution. Build mockups to comply with the following requirements, using materials indicated for Work.
  - 1. Locate mockups on-site in the location and of the size indicated or, if not indicated, as directed by Architect.
  - 2. Notify Architect 7 days in advance of the dates and times when mockups will be constructed.
  - 3. Demonstrate the proposed range of aesthetic effects and workmanship.

4. Obtain Architect's approval of mockups before start of Work.
  5. Retain and maintain mockups during construction in an undisturbed condition as a standard for judging the completed Work.
    - a. Approved mockups in an undisturbed condition may become part of the completed Work.
- H. Preinstallation Conference: Conduct conference at Project site to comply with requirements of Division 1 Section "Project Meetings." Review methods and procedures related to glazed aluminum curtain wall system including, but not limited to, the following:
1. Inspect and discuss condition of substrate and other preparatory work performed by other trades.
  2. Review structural loading limitations.
  3. Review and finalize construction schedule and verify availability of materials, Installer's personnel, equipment, and facilities needed to make progress and avoid delays.
  4. Review required inspecting, testing, and certifying procedures.
  5. Review weather and forecasted weather conditions and procedures for coping with unfavorable conditions.
- 1.7 PROJECT CONDITIONS
- A. Field Measurements: Verify dimensions by field measurements before fabrication and show recorded measurements on Shop Drawings. Coordinate fabrication schedule with construction progress to avoid delaying the Work.
1. Where field measurements cannot be made without delaying the Work, guarantee dimensions and proceed with fabrication without field measurements. Coordinate construction to ensure that actual dimensions correspond to guaranteed dimensions.
- 1.8 WARRANTY
- A. General Warranty: The special warranty specified in this Article shall not deprive the Owner of other rights the Owner may have under other provisions of the Contract Documents and shall be in addition to, and run concurrent with, other warranties made by the Contractor under requirements of the Contract Documents.
- B. Special Warranty: Submit a written warranty executed by the manufacturer agreeing to repair or replace components of a glazed aluminum curtain wall system that fail in materials or workmanship within the specified warranty period. Failures include, but are not limited to, the following:
1. Structural failures including, but not limited to, excessive deflection.

2. Noise or vibration caused by thermal movements.
  3. Failure of system to meet performance requirements.
  4. Failure of operating components to function normally.
  5. Water leakage.
  6. Glazing breakage.
- C. Warranty Period: 10 years from date of Substantial Completion (except as noted below).
- D. Special Finish Warranty: Standard form in which manufacturer agrees to repair finishes or replace aluminum that shows evidence of deterioration of factory-applied finishes within specified warranty period.
1. Deterioration includes, but is not limited to, the following:
    - a. Color fading more than 5 Hunter units when tested according to ASTM D 2244.
    - b. Chalking in excess of a No. 8 rating when tested according to ASTM D 4214.
    - c. Cracking, checking, peeling, or failure of paint to adhere to bare metal.
  2. Warranty Period: 20 years from date of Substantial Completion.

## **PART 2 PRODUCTS**

### **2.1 MANUFACTURERS**

- A. Manufacturers: Subject to compliance with requirements, provide products by one of the following:
1. Kawneer Company, Inc. 1600UT with fiberglass pressure plate basis of design
    - 2-1/2" x 7" profile or as indicated on the drawings
  2. EFCO Corporation 5500X therm with fiberglass pressure plate.
  3. YKK – YCW 750XT with fiberglass pressure plate
  4. Architectural Windows 1800i series with fiberglass pressure plate.
  5. Or approved equal.

### **2.2 METALS**

- A. Aluminum: Alloy and temper recommended by manufacturer for type of use and finish indicated, complying with the requirements of standards indicated below.
1. Sheet and Plate: ASTM B 209.

2. Extruded Bars, Rods, Shapes, and Tubes: ASTM B 221.
  3. Extruded Structural Pipe and Tubes: ASTM B 429.
  4. Structural Profiles: ASTM A 1008.
  5. Welding Rods and Bare Electrodes: AWS A5.10.
- B. Steel Reinforcement: Manufacturer's standard zinc-rich, corrosion-resistant primer complying with SSPC-PS Guide No. 12.00; applied immediately after surface preparation and pretreatment. Select surface preparation methods according to recommendations in SSPC-SP COM and prepare surfaces according to applicable SSPC standard.
1. Structural Shapes, Plats, and Bars: ASTM A 36.
  2. Cold Rolled Sheet and Strip: ASTM A 1008.
  3. Hot Rolled Sheet and Strip: ASTM A 1011.

## 2.3 FRAMING

- A. Framing Members: Extruded or formed aluminum framing members of thickness required and reinforced as required to support imposed loads.
1. Construction: Thermally broken.
  2. Glazing System: Retained mechanically with gaskets on four sides.
  3. Glazing Plane: Front.
- B. Brackets and Reinforcements: Manufacturer's standard high strength aluminum with non-staining, non-ferrous shims for aligning system components.
- C. Fasteners and Accessories: Manufacturer's standard corrosion resistant, non-staining, non-bleeding fasteners and accessories compatible with adjacent materials.
1. Use self-locking devices where fasteners are subject to loosening or turning out from thermal and structural movements, wind loads, or vibration.
  2. Reinforce members as required to receive fastener threads.
  3. Use exposed fasteners with countersunk Phillips screw heads, finished to match framing system.
- D. Anchors: Three way adjustable anchors with minimum adjustment of 2" that accommodate fabrication and installation tolerances in material and finish compatible with adjoining materials and recommended by manufacturer.
1. Concrete and Masonry Inserts: Hot dip galvanized cast iron, malleable iron, or steel inserts complying with ASTM A 123 or ASTM A 153 requirements.

## **2.4 INSULATED METAL PANELS**

- A. Insulated Aluminum Panels: Manufacturer's standard laminated aluminum faced panels of 1" thickness. Panel shall be flat, with no deviation in any direction exceeding 1/16" in 2'-0", or 1/8" for the entire panel.
  - 1. Face Sheets: Not less than 0.0249" thick and finished to match curtain wall faming.
  - 2. Concealed Back Sheets: Aluminum or galvanized steel.
  - 3. Stabilizer Sheets: 1/8" thick tempered hardboard.
  - 4. Core Material: Rigid mineral wool.
  - 5. Edge Condition: Prepared for glazing into framing and either sealed or vented to the exterior only.
  - 6. Basis of Design Mapes R+ or approved equal.

## **2.5 PRESSURE PLATE:**

- A. Pressure plate shall be fiberglass.
- B. Fiberglass pressure plate shall be tested to ASTM D638, D790, D695, D953, D3846

## **2.6 GLASS & TRANSLUCENT FIBERGLASS WALL PANELS**

- A. Glass and translucent fiberglass wall panels shall be of the types and minimum thickness, as shown on the drawings and specified herein, and shall, in addition, meet the requirements of the following paragraphs.
- B. All glass shall be the manufactured product of one (1) company. All fabricated glass products shall be the fabricated and coated products of one (1) company. All glass shall be delivered to the site bearing the manufacturer's label, complete with glazing instructions where applicable.
- C. Refer to specification 088000 Glazing for additional criteria & specification 084523 Insulated translucent fiberglass panel wall systems

## **2.7 GASKETS/WEATHERSTRIPPING**

- A. All gaskets and weather stripping shall be neoprene, except where used in contact with a silicone sealant. In contact with silicone sealants, gaskets and spacers shall be preformed, heat-cured, silicone rubber, chemically compatible with the silicone sealant and suitable for the specific purpose intended or equal, as recommended by the sealant manufacturer and approved by the Architect. All gaskets, weather stripping, and spacers shall have continuous mechanical engagement to framing members; adhesive attachment is not acceptable. All weather strips and gaskets shall be continuous with vulcanized/molded corners where possible.
- B. Sponge gaskets/weatherstripping/spacers shall be extruded black neoprene or silicone

rubber (or equal as provided for in 2.4 A) with a hardness of 40 + 5 durometer Shore A and conform to ASTM C 509-79 (for neoprene). Sponge gaskets shall be compressed 20% to 35% in the final installed position.

- C. Dense gaskets/weatherstripping shall be extruded black neoprene conforming to NAAMM SG-1-70 or silicone rubber (or equal as provided for in 2.04 A) with a hardness of 75 + 5 durometer Shore A for hollow profiles and 60 + 5 for solid profiles.

## 2.8 SEALANTS (NON-STRUCTURAL)

- A. All joints, which are sealed with sealant as part of the fabrication or erection procedure, shall be sealed with an approved butyl (concealed) or low modulus silicone (exposed or concealed) sealant in color to match the adjoining surfaces or as may be required by the Architect. All perimeter sealant (metal to adjacent construction) shall be low or medium modulus silicone sealant. Silicone sealant shall be as manufactured by General Electric, Dow Corning, or Pecora. Butyl sealant shall be PTI 707.
- B. In using specified sealants, strictly observe the printed instructions of sealant manufacturer regarding joint size, limitations, backer rod, mixing, cleaning, surface preparation, priming and application. A primer shall be used, unless printed instructions advise to the contrary, and sealant manufacturer certifies that the use thereof will reduce its performance. Sealant shall not be applied when substrates are wet or when the temperature is below 40 deg. F.
- C. Care shall be exercised to insure against "Three Surface Adhesion." Bond breakers shall be provided where necessary.
- D. Contractor shall provide certification from sealant manufacturer that the sealant manufacturer has reviewed all sealant details and finds same suitable for the purpose intended, compatible with and will not stain the surfaces with which they are in contact. Statement as to compatibility, adhesion sufficiency and non-staining shall be accompanied by actual test results on production substrates performed in accordance with applicable ASTM procedures.

## 2.9 SEALANTS (STRUCTURAL)

- A. All components which are adhered with a structural silicone sealant/adhesive as part of the fabrication, glazing or erection procedure, shall be sealed/adhered with an approved structural silicone, as manufactured by General Electric, Dow Corning or Pecora and approved by the Architect. All glazing with structural silicone sealant/adhesive shall be accomplished in a shop wherever consistent with the design.
- B. In using specified sealants, strictly observe the printed instructions of sealant manufacturer regarding joint size, limitations, backer rod, mixing, cleaning, surface preparation, priming and application. A primer shall be used, unless printed instructions advise to the contrary. Sealant shall not be applied when substrates are wet or when the temperature is below 40 deg. F. Units shall not be moved until structural silicone seal has achieved full cure.
- C. Care shall be exercised to insure against "Three Surface Adhesion." Bond breakers shall be provided where necessary.

- D. Contractor shall provide certification from sealant manufacturer that the sealant manufacturer has reviewed all sealant details and tested all contact surfaces, and finds same suitable for use with proposed sealant, the purpose intended and compatible with the surfaces with which they are in contact. Sealant manufacturer's certification shall include the following based upon tests performed on production run materials:
1. Test data of adhesion to production samples of metal and glass, tested in accordance with ASTM C 794.
  2. Compatibility statement that the materials in contact with the sealant such as gaskets, spacers, setting blocks, are compatible with the sealant after 21 days exposure to ultra violet, 2000 - 4000 (micro watt UV radiation).
  3. Stress statement that when exposed to the specified wind load the stress in the silicone sealant of dimensions shown does not exceed 20 psi with a safety factor of 6:1.
- E. Where silicone bonds to a metal or glass surface, the weakest element in the line of stress must have a minimum strength of 120 psi. For each combination of substrates submit report from an independent laboratory for tests performed in the following manner:
1. Assemble and fully cure a minimum of 6 samples using actual substrates and a minimum sample length of 5".
  2. Subject sample to a tensile load such that nominal stress on silicone is 20 psi, hold for one minute and remove load. Repeat for additional loadings, increasing nominal silicone stress by 20 psi with each successive loading. Continue until failure occurs or until 200 psi is successfully applied.
  3. All 6 samples must successfully withstand at least 120 psi. Report maximum stress and mode of failure. If one or more samples do not meet this criterion, revise failed element and repeat tests with 6 new samples. Repeat until all 6 samples are successfully tested.
  4. Testing shall be performed in such a manner as to establish stress and safety factor over the temperature range described herein.
  5. Prepare an outline for a quality assurance program for evaluation of adhesion and other physical attributes of sealants and submit to Architect for review and approval.
  6. Program shall cover both initial testing of components for sealant adhesion/compatibility, etc., and also random testing of production run materials, etc. Include testing at full negative design pressure, one unit per one hundred units manufactured for the project. Also include methods which will be employed to monitor sealant application to insure full sealant contact. No sealant work shall be performed prior to approval of program.

## **2.10 GLAZING BLOCKS**

- A. Provide setting blocks at the sill quarter points of all glass lites. Setting blocks shall be black dense neoprene or heat cured silicone rubber with a hardness of 80 to 90 durometer, Shore A, a minimum length of 4", and a minimum width, which will permit full support of both panes of glass in an insulating glass unit or a monolithic unit no matter how positioned within the glazing rabbet.
- B. Shims used in conjunction with setting blocks must be of the same materials, hardness, length and width as the setting blocks.
- C. Provide side blocks within the upper half of both jambs of all glass lites. Side blocks shall be black dense neoprene or heat cured silicone rubber with a 60 to 70 durometer, Shore A, or as recommended by the selected glass manufacturer. Provide 1/8" clearance between block and bearing surface.

#### **2.11 MISCELLANEOUS MATERIALS**

- A. Provide straps, plates and brackets, built-in inserts, as required for support and anchorage of the fabricated items to adjacent surfaces.
- B. Where steel reinforcement of units is required for strength or other unavoidable necessity and concealed within (encased) in aluminum sections or employed in potentially wetted areas, hot dip galvanize the pieces after fabrication with 2.0 ounce zinc coating, complying with ASTM A 123. All other steel reinforcement shall be coated with two (2) heavy coats of zinc rich primer in differing colors.
- C. Slip Joint Linings/Sleeves: Provide stainless steel sleeve spacers and/or suitable bearing pads, as required, to insure free movement between surfaces where expansion and deflection movements are intended. Provide "Eel Slip," "Nylatron" or high impact polystyrene shims or pads or equivalent plastic units of sizes and thicknesses (minimum 1/16" except 1/8" for "Eel Slip") recommended by the manufacturer to permanently prevent "freeze up" of joints. All sleeves, spacers, bracing pads and shims must be incombustible and rated by UL.
- D. Flashing required within the system shall be 26 ga. stainless steel.
- E. Flashing required to join the system to adjacent construction shall be 26 ga. stainless steel.
- F. Back Pans: Provide 22 gauge aluminum backpans, insulated where shown on drawings, 4" depth.

#### **2.12 INSULATION AND FIRESAFING**

- A. Provide thermal and fire separation insulation where shown and where required. Use U.S. Gypsum Thermafiber CW 90 curtain wall insulation or approved equal with a minimum thickness of 4" (or thicker if required to meet specified thermal performance) and the foil vapor barrier (permeability not to exceed 0.020 perms) at interior surface and all edges. Provide insulation and "fire wrap" at mullions and/or stiffeners as required to meet overall thermal and condensation resistance requirements and as required by Code.

- B. Tape and seal all joints in vapor barrier and along edges and supports to insure continuous vapor barrier.
- C. Apply insulation utilizing welded or screw applied impaling pins and retaining clips. Adhesive attachment will not be accepted.
- D. Provide 5" thick (minimum) compacted four (4) PCF USG Thermafiber safing insulation or approved equal at full perimeter at each floor level between floor edge and curtain wall to meet requirements of Building Code. Provide hourly rating as required by Code. Seal all edges with an approved fire resistant sealant to provide a continuous fire/smoke barrier.
- E. Insulation and firesafing shall be suitably isolated/separated from direct contact with spandrel glass.

#### **2.13 THERMAL STRUT**

- A. Provide thermal strut construction, complying with the requirements of these Specifications and which have been in service on comparable installations for no less than ten (10) years. Submit data to prove structural sufficiency over full exterior thermal range specified, and anticipated wind loading. In the event a structural thermal break is employed, manufacturer shall establish structural properties over full thermal range.

#### **2.14 FABRICATION**

- A. General: Fabricate glazed aluminum curtain wall system according to Shop Drawings. Fabricate components that, when assembled, will have accurately fitted joints with ends coped or mitered to produce hairline joints free of burrs and distortion. After fabrication, clearly mark components to identify their locations in Project according to Shop Drawings.
- B. Forming: Form shapes with sharp profiles, straight and free of defects or deformations, before finishing.
- C. Prepare components to receive concealed fasteners and anchor and connection devices.
- D. Fabricate components to drain water passing joints, condensation occurring in glazing channels, condensation occurring within framing members, and moisture migrating within the system to the exterior.
- E. Welding: Weld components to comply with referenced standard and Shop Drawings, unless otherwise indicated. Weld before finishing components. Weld in concealed locations to greatest extent possible to minimize distortion or discoloration of finish. Remove weld spatter and welding oxides from exposed surfaces by descaling or grinding.
- F. Glazing Pockets: Provide minimum clearances for thickness and type of glass indicated according to GANA's "Glazing Manual."
- G. Glazing Pockets: Provide minimum clearances for thickness and type of plastic sheet

indicated according to plastic sheet manufacturer's recommendations.

- H. Metal Protection: Where aluminum will contact dissimilar metals, protect against galvanic action by painting contact surfaces with primer or by applying sealant or tape recommended by manufacturer for this purpose. Where aluminum will contact concrete or masonry, protect against corrosion by painting contact surfaces with bituminous paint.
- I. Frame Units: Factory assemble frame units according to Shop Drawings to greatest extent possible. Rigidly secure non-movement joints. Seal joints watertight, unless otherwise indicated. Assemble components to drain water passing joints, condensation occurring in glazing channels, condensation occurring within framing members, and moisture migrating within the system to the exterior.
  - 1. Install glazing according to approved Shop Drawings.
- J. All machining, cutting and welding shall be done before finish is applied.

## 2.15 ALUMINUM FINISH

- A. High-Performance Organic Finish : AA-C12C42R1x (Chemical Finish: Cleaned with inhibited chemicals; Chemical Finish: Acid-chromate-fluoride-phosphate conversion coating; Organic Coating: As specified below). Prepare, pretreat, and apply coating to exposed metal surfaces to comply with coating and resin manufacturer's written instructions.
  - 1. Fluoropolymer Two-Coat System: Manufacturer's standard two-coat, thermocured system consisting of specially formulated inhibitive primer and fluoropolymer color topcoat containing not less than 70 percent polyvinylidene fluoride resin by weight; complying with AAMA 2605.
  - 2. Color as indicated on the drawings or selected from manufacturers full range.

## PART 3 EXECUTION

### 3.1 EXAMINATION

- A. Examine areas, with Installer present, for compliance with requirements for installation tolerances and other conditions affecting performance of glazed aluminum curtain wall system. Do not proceed with installation until unsatisfactory conditions have been corrected.

### 3.2 INSTALLATION

- A. General: Comply with manufacturer's written instructions for protecting, handling, and installing glazed aluminum curtain wall system. Do not install damaged components. Fit joints to produce hairline joints free of burrs and distortion. Rigidly secure non-movement joints. Seal joints watertight, unless otherwise indicated. Provide means to drain water to the exterior to produce a permanently weatherproof system.
- B. Metal Protection: Where aluminum will contact dissimilar metals, protect against galvanic action by painting contact surfaces with primer or by applying sealant or tape

recommended by manufacturer for this purpose. Where aluminum will contact concrete or masonry, protect against corrosion by painting contact surfaces with bituminous paint.

- C. Install components to drain water passing joints, condensation occurring in glazing channels, condensation occurring within framing members, and moisture migrating within the system to the exterior.
- D. Install framing members plumb and true in alignment with established lines and grades.
- E. Install factory-assembled frame units plumb and true in alignment with established lines and grades.
- F. Install column covers plumb and true in alignment with established lines and grades.
- G. Anchorage: After system components are positioned, fix connections to building structure as indicated on Shop Drawings.
  - 1. Provide separators and isolators to prevent metal corrosion and electrolytic deterioration and to prevent impeding movement of moving joints.
- H. Welding: Weld components to comply with referenced standard and Shop Drawings, unless otherwise indicated. Weld in concealed locations to minimize distortion or discoloration of finish. Protect glazing surfaces from welding.
- I. Install glazing according to approved Shop Drawings.
- J. Install sealant according to approved Shop Drawings. Comply with requirements of Section 079200, "Joint Sealants."
- K. Install firesafing in locations indicated. Comply with requirements of Section 078413, "Firestops and Smokes seals."
- L. Erection Tolerances: Install glazed aluminum curtain wall system to comply with the following maximum tolerances:
  - 1. Plumb: 1/16" in 10 feet; 1/8" in 40 feet.
  - 2. Level: 1/16" in 20 feet; 1/8" in 40 feet.
  - 3. Alignment: Where surfaces abut in line, limit offset from true alignment to 1/16"; where a reveal or protruding element separates aligned surfaces by less than 2", limit offset to 1/4".
  - 4. Location: Limit variation from plane or location shown on Shop Drawings to 1/8" in 12 feet; 1/4" over total length.

### **3.3 FIELD QUALITY CONTROL**

- A. Testing Agency: Contractor shall engage a qualified independent testing agency to perform testing indicated.

- B. Static air infiltration test(s) as well as the static pressure water test(s) shall be performed on 100 sq feet to determine if curtain wall meets performance requirements specified herein under Article 1.4.
- C. Test for water infiltration per AAMA 501.2. Test within the first 10% of work complete, area to be a minimum of 100 SF of wall and including a perimeter where CW adjoins masonry construction. Interior finishes must not interfere with observation of test area or be removed from test area. Not appropriate for operable windows and doors.
  - 1. This test (AAMA 501.2) shall be performed infield on new construction.
- D. Repair or remove Work that does not meet requirements or that is damaged by testing; replace to conform to specified requirements.

**3.4 PROTECTION**

- A. Provide final protection and maintain conditions, in a manner acceptable to manufacturer and Installer, that ensure glazed aluminum curtain wall system is without damage or deterioration at the time of Substantial Completion.

**END OF SECTION**

## SECTION 084523 INSULATED TRANSLUCENT FIBERGLASS PANEL WALL SYSTEM

### PART 1 - GENERAL

#### 1.01 SUMMARY

- A. Section includes the insulated translucent sandwich panel system and accessories, factory unitized, as shown and specified. Work includes providing and installing:
  - 1. Flat factory prefabricated structural insulated translucent sandwich panels for installation into curtainwall systems with 1" perimeter Curtainwall adaptor glazed into curtainwall system
  - 2. Flat factor prefabricated structural insulated translucent sandwich panels for installation into factory aluminum system
  - 3. Aluminum installation system
  - 4. Aluminum sill flashing
  - 5. Thermal break windows

#### 1.02 Related sections:

- A. 084413 Glazed Aluminum curtainwalls

#### 1.03 SUBMITTALS

- A. Submit manufacturer's product data. Include construction details, material descriptions, profiles and finishes of components.
- B. Submit shop drawings. Include elevations and details.
- C. Submit manufacturer's color charts showing the full range of colors available for factory-finished aluminum.
  - 1. When requested, submit samples for each exposed finish required, in same thickness and material indicated for the work and in size indicated below. If finishes involve normal color variations, include sample sets consisting of two or more units showing the full range of variations expected.
    - a. Sandwich panels: 14" x 28" units
    - b. Factory finished aluminum: 5" long sections
- D. Submit Installer Certificate, signed by installer, certifying compliance with project qualification requirements.
- E. Submit product reports from a qualified independent testing agency indicating each type and class of panel system complies with the project performance requirements, based on comprehensive testing of current products. Previously completed reports will be acceptable if for current manufacturer and indicative of products used on this project.
  - 1. Reports required are:
    - a. International Building Code Evaluation Report
    - b. Flame Spread and Smoke Developed (UL 723) – Submit UL Card

- c. Burn Extent (ASTM D 635)
- d. Color Difference (ASTM D 2244)
- e. Impact Strength (UL 972)
- f. Bond Tensile Strength (ASTM C 297 after aging by ASTM D 1037)
- g. Bond Shear Strength (ASTM D 1002)
- h. Beam Bending Strength (ASTM E 72)
- i. Insulation U-Factor (NFRC 100)
- j. NFRC System U-Factor Certification (NFRC 700)
- k. Solar Heat Gain Coefficient (NFRC or Calculations)
- l. Condensation Resistance Factor (AAMA 1503)
- m. Air Leakage (ASTM E 283)
- n. Structural Performance (ASTM E 330)
- o. Water Penetration (ASTM E 331)
- p. 1200°F Fire Resistance (SWRI)
- q. ASTM E1886/1996 or TAS 201, 202 and 203

#### 1.04 QUALITY ASSURANCE

##### A. Manufacturer's Qualifications

- 1. Material and products shall be manufactured by a company continuously and regularly employed in the manufacture of specified materials for a period of at least ten consecutive years and which can show evidence of those materials being satisfactorily used on at least six projects of similar size, scope and location. At least three of the projects shall have been in successful use for ten years or longer.
- 2. Panel system must be listed by an ANSI accredited Evaluation Service, which requires quality control inspections and fire, structural and water infiltration testing of sandwich panel systems by an accredited agency.
- 3. Quality control inspections shall be conducted at least once each year and shall include manufacturing facilities, sandwich panel components and production sandwich panels for conformance with AC177 "Translucent Fiberglass Reinforced Plastic (FRP) Faced Panel Wall, Roof and Skylight Systems" as issued by the ICC-ES.

- B. Installer's Qualifications: Installation shall be by an experienced installer, which has been in the business of installing specified panel systems for at least two consecutive years and can show evidence of satisfactory completion of projects of similar size, scope and type.

#### 1.05 PERFORMANCE REQUIREMENTS

- A. The manufacturer shall be responsible for the configuration and fabrication of the complete unitized panel system. Testing shall include sill flashings and corner closures.

- 1. Include structural analysis data signed and sealed by the qualified professional engineer responsible for their preparation.
- 2. Standard panel system shall have less than 0.01 cfm/ft<sup>2</sup> air leakage by ASTM E 283 at 6.24 PSF (50 mph) and no water penetration by ASTM E 331 at 15 PSF; and structural testing by ASTM E 330.
- 3. Structural Loads; Provide system capable of handling the following loads per ASCE 7-16 for risk category III, exposure category B, basic wind speed 124mph.

- B. Windborne Debris Impact Resistance Performance: not required.

## 1.06 DELIVERY STORAGE AND HANDLING

- A. Deliver panel system, components and materials in manufacturer's standard protective packaging.
- B. Store panels on the long edge; several inches above the ground, blocked and under cover in accordance with manufacturer's storage and handling instructions.

## 1.07 WARRANTY

- A. Submit manufacturer's and installer's written warranty agreeing to repair or replace panel system work, which fails in materials or workmanship within one year of the date of delivery. Failure of materials or workmanship shall include leakage, excessive deflection, deterioration of finish on metal in excess of normal weathering, defects in accessories, insulated translucent sandwich panels and other components of the work.

## PART 2 - PRODUCTS

### 2.01 MANUFACTURER

- A. Basis of Design:
  - 1. Kalwall Corporation
- B. Other manufacturers may bid this project provided they comply with all of the performance requirements of this specification and submit evidence thereof. Listing other manufacturers' names in this specification does not constitute approval of their products or relieve them of compliance with all the performance requirements contained herein.
  - 1. Kingspan, Unigrid
  - 2. Structures Unlimited Inc.
  - 3. Approved equal

### 2.02 PANEL COMPONENTS

- A. Face Sheets
  - 1. Translucent faces: Manufactured from glass fiber reinforced thermoset resins, formulated specifically for architectural use.
    - a. Thermoplastic (e.g. polycarbonate, acrylic) faces are not acceptable.
    - b. Face sheets shall not deform, deflect or drip when subjected to fire or flame.
  - 2. Interior face sheets:
    - a. Flame spread: Underwriters Laboratories (UL) listed, which requires periodic unannounced retesting, with flame spread rating no greater than 50 and smoke developed no greater than 250 when tested in accordance with UL 723.
    - b. Burn extent by ASTM D 635 shall be no greater than 1".
  - 3. Exterior face sheets:
    - a. Color stability: Full thickness of the exterior face sheet shall not change color more than 3 CIE Units DELTA E by ASTM D 2244 after 5 years outdoor South Florida weathering at 5° facing south, determined by the average of at least three white samples with and without a protective

- film or coating to ensure long-term color stability. Color stability shall be unaffected by abrasion or scratching.
- b. Strength: Exterior face sheet shall be uniform in strength, with panel meeting ASTM E1996 and ASTM E1886 or TAS 201, 202 and 203.
4. Appearance:
- a. Exterior face sheets: Smooth .070" thick and CRYSTAL in color.
  - b. Interior face sheets: Smooth .045" thick and WHITE in color.
  - c. Face sheets shall not vary more than  $\pm 10\%$  in thickness and be uniform in color.
- B. Grid Core
1. Thermally broken composite I-beam grid core shall be of 6063-T6 or 6005-T5 alloy and temper with provisions for mechanical interlocking of muntin-mullion and perimeter. Width of I-beam shall be no less than 7/16".
  2. I-beam Thermal break: Minimum 1", thermoset fiberglass composite.
- C. Laminate Adhesive
1. Heat and pressure resin type adhesive engineered for structural sandwich panel use, with minimum 25-years field use. Adhesive shall pass testing requirements specified by the International Code Council "Acceptance Criteria for Sandwich Panel Adhesives".
  2. Minimum tensile strength of 750 PSI when the panel assembly is tested by ASTM C 297 after two exposures to six cycles each of the aging conditions prescribed by ASTM D 1037.
  3. Minimum shear strength of the panel adhesive by ASTM D 1002 after exposure to four separate conditions:
    - a. 50% Relative Humidity at 68° F: 540 PSI
    - b. 182° F: 100 PSI
    - c. Accelerated Aging by ASTM D 1037 at room temperature: 800 PSI
    - d. Accelerated Aging by ASTM D 1037 at 182° F: 250 PSI

## 2.03 PANEL CONSTRUCTION TYPE GL-04 AS DESIGNATED ON THE DRAWINGS

- A. Provide sandwich panels of flat fiberglass reinforced translucent face sheets laminated to a grid core of mechanically interlocking I-beams. The adhesive bonding line shall be straight, cover the entire width of the I-beam and have a neat, sharp edge.
1. Thickness: 2-3/4"
  2. Grid core insulation: Fiberglass Batt
  3. Light transmission: 30%
  4. Solar heat gain coefficient 0.25.
  5. Panel U-factor by NFRC certified laboratory: 2-3/4" thermally broken grid 0.23 "U".
  6. Complete insulated panel system shall have NFRC certified U-factor of 0.30 "U".
  7. Grid pattern: Nominal size 8" wide VertiKal pattern or approved equal.
  8. Provide 1" curtainwall adapter (CW-A) for panel to be installed into Curtainwall Framing system
- B. Standard panels shall deflect no more than 1.9" at 30 PSF in 10' 0" span without a supporting frame by ASTM E 72.
- C. Standard panels shall withstand 1200° F fire for minimum one hour without collapse or exterior flaming.

- D. Thermally broken panels: Minimum Condensation Resistance Factor of 80 by AAMA 1503 measured on the bond line.

#### 2.04 PANEL CONSTRUCTION TYPE GL-04A AS DESIGNATED ON THE DRAWINGS

- A. Provide sandwich panels of flat fiberglass reinforced translucent face sheets laminated to a grid core of mechanically interlocking I-beams. The adhesive bonding line shall be straight, cover the entire width of the I-beam and have a neat, sharp edge.
  - 1. Thickness: 2-3/4"
  - 2. Grid core insulation: Fiberglass Batt
  - 3. Light transmission: 30%
  - 4. Solar heat gain coefficient 0.25.
  - 5. Panel U-factor by NFRC certified laboratory: 2-3/4" thermally broken grid 0.23 "U".
  - 6. Complete insulated panel system shall have NFRC certified U-factor of 0.30 "U".
  - 7. Grid pattern: Nominal size 8" wide VertiKal pattern or approved equal.
- B. Standard panels shall deflect no more than 1.9" at 30 PSF in 10' 0" span without a supporting frame by ASTM E 72.
- C. Standard panels shall withstand 1200° F fire for minimum one hour without collapse or exterior flaming.
- D. Thermally broken panels: Minimum Condensation Resistance Factor of 80 by AAMA 1503 measured on the bond line.

#### 2.05 THERMALLY BROKEN ALUMINUM CLOSURE SYSTEM FOR USE WITH PANEL TYPE GL-04A

- A. Provide at locations where not installed into curtainwall system
- B. Closure system: Thermally broken with thermal strut standard extruded aluminum 6063-T6 and 6063-T5 alloy and temper clamp-tite screw type closure system.
- C. Sealing tape: Manufacturer's standard, pre-applied to closure system at the factory under controlled conditions.
- D. Fasteners: 300 series stainless steel screws for aluminum closures, excluding final fasteners to the building.
- E. Battens and extruded profiles finish:
  - 1. Manufacturer's factory applied finish, which meets the performance requirements of AAMA 2604. - Color as selected from manufacturers full standard range.

#### 2.06 ALUMINUM SILL FLASHING & CORNER CLOSURES FOR USE WITH PANEL TYPE GL-04A

- A. Provide at locations where not installed into curtainwall system
- B. .040 thickness aluminum 3105-H14 alloy, smooth as per ASTM B209-96.
- C. Two coat coil applied, baked-on full-strength (70% resin) fluorocarbon coating system (polyvinylidene fluoride, PVF2), applied by manufacturer's approved applicator.
- D. Finish to be provided in colors as specified on drawings as the following different locations
  - 1. Sill Color as selected from manufacturers full standard range to match framing system.

#### 2.07 WINDOWS (E-series or approved equal )

- A. Windows shall be designed specifically for inclusion in the translucent panel unit wall system and factory unitized to panels.
  - 1. Units shall be of the following type is sizes and locations shown in the drawings:
    - a. Fixed lite, with thermal strut
- B. Performance: Windows shall pass or exceed requirements of AAMA/WDMA/CSA-101/I.S.2/A440-05 (08).
  - 1. Fixed widows or approved equal: F-AW80; shall pass requirements at 120 psf uniform structural load with air infiltration  $< .01$  CFM/FT<sup>2</sup> at 6.24 PSF and no water penetration at 15 PSF. Poured and debridged thermal breaks are not acceptable.
- C. Construction: All window frame members and sash shall be of tubular extruded aluminum. Frame and sash to have enhanced thermal performance and mechanical strength using polyamide thermal strut construction. Frame sections shall be mitered and joined using heavy internal aluminum corner gussets that are mechanically staked and epoxy sealed. All openings are double sealed using continuous EPDM bulb, foam and wedge weather stripping to insure minimum air infiltration and maximum water resistance. Both project-out and fixed lites to have snap-in aluminum glazing bead for ease of field glazing.
- D. Glazing:
  - 1. windows shall be glazed with 1" double insulated glass with low-e coating and warm edge spacer matching assembly specified in the drawings and window schedule with outside lite = 1/4" clear tempered glass with solarban70 on #2 surface, air space = 1/2" argon filled, interior line 1/4" clear tempered
- E. Finish is to be coordinated with closure system.

## PART 3 - EXECUTION

### 3.01 EXAMINATION

- A. Installer shall examine substrates, supporting structure and installation conditions.
- B. Do not proceed with panel installation until unsatisfactory conditions have been corrected.

### 3.02 PREPARATION

- A. Metal Protection:
  - 1. Where aluminum will contact dissimilar metals, protect against galvanic action by painting contact surfaces with primer or by applying sealant or tape recommended by manufacturer for this purpose.
  - 2. Where aluminum will contact concrete, masonry or pressure treated wood, protect against corrosion by painting contact surfaces with bituminous paint or method recommended by manufacturer.

### 3.03 INSTALLATION

- A. Install the panel system in accordance with the manufacturer's suggested installation recommendations and approved shop drawings.
  - 1. Anchor component parts securely in place by permanent mechanical attachment system.
  - 2. Accommodate thermal and mechanical movements.
  - 3. Set perimeter framing in a full bed of sealant compound, or with joint fillers or gaskets to provide weather-tight construction.
- B. Install joint sealants at perimeter joints and within the panel system in accordance with manufacturer's installation instructions.

**3.04 CLEANING**

- A. Clean the panel system interior and exterior, immediately after installation.
- B. Refer to manufacturer's written recommendations.

END OF SECTION 08 45 23

## SECTION 08 5113 - ALUMINUM WINDOWS

### PART 1 - GENERAL

#### 1.1 RELATED DOCUMENTS

- A. Drawings and general provisions of the Contract, including General and Supplementary Conditions and Division 01 Specification Sections, apply to this Section.

#### 1.2 SUMMARY

- A. This Section includes fixed and/or operable aluminum-framed windows for exterior locations.
- B. Related Sections include the following:
  - 1. Division 08 Section "Aluminum-Framed Entrances and Storefronts" for coordinating finish among aluminum fenestration units.
  - 2. Division 08 Section "Glazing" for additional glazing requirements for aluminum windows.
  - 3. Division 08 Section "Glazed Aluminum Curtain Walls" for incorporating aluminum windows into glazed curtain walls and for coordinating finish among aluminum fenestration units.

#### 1.3 DEFINITIONS

- A. Performance class designations according to AAMA/WDMA/CSA 101/I.S.2/A440-08:
  - 1. AW: Architectural.
- B. Performance grade number according to AAMA/WDMA/CSA 101/I.S.2/A440-08:
  - 1. Design pressure number in pounds force per square foot (pascals) used to determine the structural test pressure and water test pressure.
- C. Structural Test Pressure: For uniform load structural test, is equivalent to 150 percent of the design pressure.
- D. Minimum Test Size: Smallest size permitted for performance class (gateway test size) or as specified elsewhere in this section, whichever is more stringent. Products must be tested at minimum test size or at a size larger than minimum test size to comply with requirements for performance class. Downsized test reports will not be considered acceptable.

#### 1.4 PERFORMANCE REQUIREMENTS

- A. General: Provide aluminum windows capable of complying with performance requirements indicated, based on testing manufacturer's windows that are representative of those specified, and that are of minimum test size indicated below:
  - 1. Projected Windows: 60" x 144" (F/PO/F/PI). Down sized test reports will not be acceptable for this project

- B. Structural Performance: Provide aluminum windows capable of withstanding the effects of the following loads, based on testing units of the minimum test size specified herein that pass AAMA/WDMA/CSA 101/I.S.2/A440-08, Uniform Load Structural and Uniform Load Deflection Tests:
  - 1. Uniform Load Structural Test: 150 psf (positive and negative).
  - 2. Uniform Load Deflection Test: 100 psf (positive and negative).

## 1.5 SUBMITTALS

- A. Product Data: Include construction details, material descriptions, fabrication methods, dimensions of individual components and profiles, hardware, finishes, and operating instructions for each type of aluminum window indicated.
- B. Shop Drawings: Include plans, elevations, sections, details, hardware, attachments to other work, operational clearances, installation details, and the following:
  - 1. Mullion details, including reinforcement and stiffeners.
  - 2. Joinery details.
  - 3. Weather-stripping details.
  - 4. Thermal-break details.
  - 5. Glazing details.
- C. Samples for Initial Selection: For units with factory-applied color finishes.
  - 1. Include similar samples of hardware and accessories involving color selection.
- D. Maintenance Data: For operable window sash, operating hardware and finishes to include in maintenance manuals.
- E. Warranty: Special warranty specified in this Section.

## 1.6 QUALITY ASSURANCE

- A. Product Qualifications: In order to confirm that the proposed product(s) conform to the material and performance requirements contained in these specifications, bidders shall include the following with their bid. Failure to comply with these requirements shall cause the bid to automatically be rejected.
  - 1. Bidder's Acknowledgement: Bidders shall include a letter in their bid stating the manufacturer and series (model) number of the product upon which its bid has been based. Changes in product (manufacturer or series) will not be permitted after the bid.
  - 2. Product Data: Bidders submitting bids based on products other than the Basis of Design product listed in Paragraph 2.1 must also include the following with their bid:
    - a. Comprehensive test reports not more than four years old prepared by a qualified testing agency for each product type being used on the project demonstrating compliance with the air, water and structural requirements outlined herein. Test reports based on the use of downsized test units will not be accepted.
    - b. Thermal simulations prepared by a qualified independent testing agency for each product type being used on the project demonstrating compliance with the thermal transmittance requirements outlined in Paragraph 2.3.

- c. Full size product details showing all frame and sash details, dimensions, thermal break construction, wall thicknesses and joinery. Details must accurately reflect all glazing and hardware options specified herein.
- B. Product Requirements: For maximum performance, windows for this project must meet both the testing requirements as contained herein and the minimum material requirements specified. Windows that carry the applicable AAMA rating but do not meet the material thicknesses, depths, etc. shall not be acceptable for use on this project.
- C. Installer Qualifications: An installer acceptable to aluminum window manufacturer for installation of units required for this Project.
- D. Source Limitations: Obtain aluminum windows through one source from a single manufacturer.
- E. Product Options: Drawings indicate size, profiles, and dimensional requirements of aluminum windows and are based on the specific system indicated. Do not modify size and dimensional requirements.
  - 1. Do not modify intended aesthetic effects, as judged solely by Architect, except with Architect's approval. If modifications are proposed, submit comprehensive explanatory data to Architect for review.
- F. Fenestration Standard: Comply with AAMA/WDMA/CSA 101/I.S.2/A440-08, "Standard/Specification for Windows, Doors, and Unit Skylights" for definitions and minimum standards of performance, materials, components, accessories, and fabrication. Comply with more stringent requirements if indicated.
- G. Glazing Publications: Comply with published recommendations of glass manufacturers and with GANA's "Glazing Manual" unless more stringent requirements are indicated.
- H. Preinstallation Conference: If requested, conduct conference at project site to review methods and procedures related to aluminum windows including, but not limited to, the following:
  - 1. Review and finalize construction schedule and verify availability of materials, Installer's personnel, equipment, and facilities needed to make progress and avoid delays.
  - 2. Review, discuss, and coordinate the interrelationship of aluminum windows with other exterior wall components.
  - 3. Review and discuss the sequence of work required to construct a watertight and weathertight exterior building envelope.
  - 4. Inspect and discuss the condition of substrate and other preparatory work performed by other trades.

#### 1.7 PROJECT CONDITIONS

- A. Field Measurements: For retrofit installations, verify aluminum window openings by field measurements before fabrication and indicate measurements on Shop Drawings.
  - 1. Established Dimensions: Where field measurements cannot be made without delaying the Work, establish opening dimensions and proceed with fabricating aluminum windows without field measurements. Coordinate wall construction to ensure that actual opening dimensions correspond to established dimensions.

## 1.8 WARRANTY

- A. Special Warranty: Manufacturer's standard form in which manufacturer agrees to repair or replace aluminum windows that fail in materials or workmanship within specified warranty period.
1. Failures include, but are not limited to, the following:
    - a. Failure to meet performance requirements.
    - b. Structural failures including excessive deflection, water leakage, or air infiltration.
    - c. Faulty operation of movable sash and hardware.
    - d. Deterioration of metals or other materials beyond that which is normal.
    - e. Failure of insulating glass.
  2. Warranty Period:
    - a. Window: Ten years from date of Substantial Completion.
    - b. Insulated Glazing: Ten years from date of Substantial Completion.
    - c. Painted Metal Finishes:
      - 1) Ten years from date of Substantial Completion for AAMA 2603 Baked Enamel Finishes.
      - 2) Twenty years from date of Substantial Completion for AAMA 2605 Superior Performance Finishes.

## PART 2 - PRODUCTS

### 2.1 MANUFACTURERS

- A. Basis-of-Design Product: The basis of design for these specifications is the Series 3000i Projected/Fixed as manufactured by Architectural Window Manufacturing Corporation, Rutherford, New Jersey or approved equal .

### 2.2 MATERIALS

- A. Aluminum Extrusions: Alloy and temper recommended by aluminum window manufacturer for strength, corrosion resistance, and application of required finish, but not less than 22,000-psi (150-MPa) ultimate tensile strength, not less than 16,000-psi (110-MPa) minimum yield strength, and not less than 0.080-inch thickness at any location for the frame, sash or sill members.
- B. Frame/Sash Depth: 3 ½" minimum frame depth; 3 ½" minimum sash depth.
- C. Fasteners: Aluminum, nonmagnetic stainless steel, epoxy adhesive, or other materials warranted by manufacturer to be noncorrosive and compatible with aluminum window members, trim, hardware, anchors, and other components.
1. All fasteners must be concealed except where unavoidable for application of hardware.
  2. For application of hardware, where required, use non-magnetic stainless steel phillips machine screws.
- D. Anchors, Clips, and Accessories: Aluminum, nonmagnetic stainless steel, or zinc-coated steel or iron complying with ASTM B 633 for SC 3 severe service conditions; provide sufficient strength to withstand design pressure indicated.

- E. Compression-Type Weather Stripping: Provide compressible weather stripping designed for permanently resilient sealing under bumper or wiper action and for complete concealment when aluminum window is closed.
  - 1. Weather-Stripping Material: Manufacturer's standard system and materials complying with AAMA/WDMA/CSA 101/I.S.2/A440-08.
- F. Sliding-Type Weather Stripping: Provide woven-pile weather stripping of wool, polypropylene, or nylon pile and resin-impregnated backing fabric. Comply with AAMA 701/702.
  - 1. Weather Seals: Provide weather stripping with integral barrier fin or fins of semirigid, polypropylene sheet or polypropylene-coated material. Comply with AAMA 701/702.
- G. Replaceable Weather Seals: Comply with AAMA 701/702.
- H. Sealant: For sealants required within fabricated windows, provide window manufacturer's standard, permanently elastic, nonshrinking, and nonmigrating type recommended by sealant manufacturer for joint size and movement.

## 2.3 WINDOW

- A. Window Type: Projected Out/Fixed
- B. AAMA/WDMA Performance Requirements: Provide aluminum windows of performance indicated that comply with AAMA/WDMA/CSA 101/I.S.2/A440-08.
  - 1. Performance Class and Grade: AW-PG100.
- C. Condensation-Resistance Factor (CRF): Provide aluminum windows tested with insulating glass for thermal performance according to AAMA 1503, showing a minimum CRF of 56.
- D. Thermal Transmittance: Provide aluminum windows with whole-window U-factor and SHGC maximums indicated when simulated in accordance with NFRC 100 and NFRC 200 at an equal lite fixed/project-out model size of 48" x 72" and glazed with 1" Argon filled sputter coat Low-E (#2) insulated glass using a warm edge spacer.
  - 1. U-Factor: 0.31 Btu/sq. ft. x h x deg F or less.
  - 2. SHGC: 0.23.
- E. Air Infiltration: Maximum rate not more than indicated when tested according to AAMA/WDMA/CSA 101/I.S.2/A440-08, Air Infiltration Test.
  - 1. Maximum Rate: <0.01 cfm/sq. ft. of area at an inward test pressure of 6.24 lbf/sq. ft. (300 Pa).
- F. Water Resistance: No water leakage as defined in AAMA/WDMA referenced test methods at a water test pressure equaling that indicated, when tested according to AAMA/WDMA 101/I.S.2/NAFS, Water Resistance Test.
  - 1. Test Pressure: 20 percent of positive design pressure, but not less than 20 lbf/sq. ft.
- G. Forced-Entry Resistance: Comply with Performance Grade 10 requirements when tested according to ASTM F 588.

- H. Life-Cycle Testing: Test according to AAMA 910 and comply with AAMA/WDMA/CSA 101/I.S.2/A440-08.
- I. Operating Force and Auxiliary (Durability) Tests: Comply with AAMA/WDMA/CSA 101/I.S.2/A440-08 for operating window types indicated.

## **2.4 INSULATED GLAZING**

- A. Construction: All windows (except those receiving insulated panels) shall be factory glazed with hermetically sealed 1" insulating glass units with a dual seal of polyisobutylene and silicone and a desiccant filled spacer with warm edge black spacer. Insulated glass must be set into a continuous bed of two-part structural silicone sealant and held in place with removable extruded aluminum snap-in beads. Wrap around (marine) glazing which requires the removal and disassembling of the sash for re-glazing will not be acceptable. Units must be IGCC certified for a CBA rating level.
  - 1. Refer to glazing schedule in drawings for specific IGU makeup, tinted glass is used and is required to match storefront and fully-vision sectional door glazing provided by other trades/suppliers. General Contractor to coordinate between different trades if alternate tinted glass to be submitted by any one trade/supplier for its use at all locations.

## **2.5 HARDWARE: Not applicable**

## **2.6 ACCESSORIES**

- A. Rescue Labels: Not applicable.

## **2.7 FABRICATION**

- A. Fabricate aluminum windows in sizes indicated. Include a complete system for assembling components and anchoring windows.
- B. Fabricate aluminum windows that are reglazable without dismantling sash or framing.
- C. Thermally Improved Construction: Fabricate aluminum windows with an integral, concealed (products with exposed thermal barriers will not be acceptable), low-conductance thermal barrier; located between exterior materials and window members exposed on interior side; in a manner that eliminates direct metal-to-metal contact.
  - 1. All exterior aluminum shall be separated from interior aluminum by a rigid, structural thermal barrier. For purposes of this specification, a structural thermal barrier is defined as a system that shall transfer shear during bending and, therefore, promote composite action between the exterior and interior extrusions.
  - 2. No thermal short circuits shall occur between the exterior and interior.
  - 3. The thermal barrier shall be INSULBAR® or equal and shall consist of two glass reinforced polyamide nylon 6/6 struts mechanically crimped in raceways extruded in the exterior and interior extrusions.
  - 4. Poured and debridged urethane thermal barriers shall not be permitted.
- D. Weather Stripping: Provide full-perimeter weather stripping for each operable sash and ventilator.

- E. Weep Holes: Provide weep holes and internal passages to conduct infiltrating water to exterior.
- F. Mullions: Provide mullions and cover plates as shown, matching window units, complete with anchors for support to structure and installation of window units. Allow for erection tolerances and provide for movement of window units due to thermal expansion and building deflections. Provide mullions and cover plates capable of withstanding design loads of window units.
- G. Subframes and receptors: Provide subframes with anchors for window units as shown, of profile and dimensions indicated but not less than 0.093-inch thick extruded aluminum. Finish to match window units. Provide subframes capable of withstanding design loads of window units.
- H. Factory-Glazed Fabrication: Glaze aluminum windows in the factory where practical and possible for applications indicated. Comply with requirements in Division 08 Section "Glazing" and with AAMA/WDMA/CSA 101/I.S.2/A440-08.
- I. Muntins: Where shown on drawings, muntins shall be 2-3/16" wide true divided lites extruded aluminum with beveled edges to match frame. Muntins must be thermally broken. The thermal barrier shall be INSULBAR® or equal and shall consist of two glass reinforced polyamide nylon 6/6 struts mechanically crimped in raceways extruded in the exterior and interior extrusions. Products using applied flat stock will not be accepted.
- J. Extruded Aluminum Sills: Provide extruded aluminum sills in profiles and depths shown on drawings, complete with fasteners and retainer clips of same material. Finish to match exterior window finish. Allow for erection tolerances and provide for movement of window units due to thermal expansion and building deflections.

## 2.8 FINISHES, GENERAL

- A. Comply with NAAMM's "Metal Finishes Manual for Architectural and Metal Products" for recommendations for applying and designating finishes.
- B. Finish designations prefixed by AA comply with the system established by the Aluminum Association for designating aluminum finishes.
- C. Exterior of Window:
  - 1. Superior-Performance Organic Finish: AA-C12C40R1x (Chemical Finish: cleaned with inhibited chemicals; Chemical Finish: acid-chromate-fluoride-phosphate conversion coating; Organic Coating: as specified below). Prepare, pretreat, and apply coating to exposed metal surfaces to comply with AAMA 2605 and with coating and resin manufacturer's written instructions.
    - a. Fluoropolymer Two-Coat System: Manufacturer's standard two-coat thermocured system consisting of specially formulated inhibitive primer and fluoropolymer color topcoat containing not less than 70 percent polyvinylidene fluoride resin by weight; complying with AAMA 2605.
    - b. Color: as indicated on the window schedule and window finish schedule within the drawings.
- D. Interior of Window:
  - 1. Baked-Enamel Finish: AA-C12C42R1x (Chemical Finish: cleaned with inhibited chemicals; Chemical Finish: acid-chromate-fluoride-phosphate conversion coating;

Organic Coating: as specified below). Apply baked enamel complying with paint manufacturer's written instructions for cleaning, conversion coating, and painting.

- a. Organic Coating: Thermosetting, modified-acrylic enamel primer/topcoat system complying with AAMA 2603 Organic Coating: Thermosetting, modified-acrylic enamel primer/topcoat system complying with AAMA 2603.
- b. Color: As selected by Architect from manufacturer's colors to match exterior color.

### **PART 3 - EXECUTION**

#### **3.1 EXAMINATION**

- A. Examine openings, substrates, structural support, anchorage, and conditions, with Installer present, for compliance with requirements for installation tolerances and other conditions affecting performance of work. Verify rough opening dimensions, levelness of sill plate, and operational clearances. Examine wall flashings, vapor retarders, water and weather barriers, and other built-in components to ensure a coordinated, weathertight window installation.
  - 1. Masonry Surfaces: Visibly dry and free of excess mortar, sand, and other construction debris.
  - 2. Wood Frame Walls: Dry, clean, sound, well nailed, free of voids, and without offsets at joints. Ensure that nail heads are driven flush with surfaces in opening and within 3 inches (76 mm) of opening.
  - 3. Metal Surfaces: Dry; clean; free of grease, oil, dirt, rust, corrosion, and welding slag; without sharp edges or offsets at joints.
  - 4. Proceed with installation only after unsatisfactory conditions have been corrected.

#### **3.2 INSTALLATION**

- A. Comply with Drawings, Shop Drawings, and manufacturer's written instructions for installing windows, hardware, accessories, and other components.
- B. Install windows level, plumb, square, true to line, without distortion or impeding thermal movement, anchored securely in place to structural support.
- C. Set sill members in bed of sealant or with gaskets, as indicated, for weathertight construction.
- D. Install windows and components to drain condensation, water penetrating joints, and moisture migrating within windows to the exterior.
- E. Separate aluminum and other corrodible surfaces from sources of corrosion or electrolytic action at points of contact with other materials.

#### **3.3 FACTORY TESTING**

- A. One window for each seventy-five manufactured shall be randomly selected by the Owner and Architect to be tested at the manufacturer's facility for air and water infiltration in order to confirm compliance of the project's windows with the performance requirements contained in these specifications. Bidders are to include the cost of transportation, food, and lodging for four representatives of the Owner and/or Architect to witness these tests.

### 3.4 FIELD QUALITY CONTROL

- A. Testing Agency: If desired, Owner will engage and pay for a qualified testing agency to perform tests and inspections and prepare test reports.
  - 1. Testing and inspecting agency will interpret tests and state in each report whether tested work complies with or deviates from requirements.
  - 2. Testing Methodology: Testing of windows for air infiltration and water resistance shall be performed according to AAMA 502, Test Method A. Field test pressures and allowable limits shall be as factored by AAMA 502 from those minimums required to determine laboratory compliance with the applicable Performance Class and Grade pursuant to AAMA/WDMA/CSA 101/I.S.2/A440-08.
  - 3. Testing Extent: Three windows as selected by Architect and a qualified independent testing and inspecting agency. Windows shall be tested immediately after installation.
  - 4. Test Reports: Shall be prepared according to AAMA 502.
- B. Contractor Responsibility: coordinate with owner testing service during initial testing. If initial testing determines non-compliance at any of the tested locations, at contractor expense necessary work to remediate noncomplying windows and retest as specified above shall be performed. .
- C. Additional testing and inspecting, at Contractor's expense, will be performed to determine compliance of remediated doors or additional work with specified requirements.

### 3.5 ADJUSTING, CLEANING, AND PROTECTION

- A. Adjust operating sashes and ventilators, screens, hardware, and accessories for a tight fit at contact points and weather stripping for smooth operation and weathertight closure. Lubricate hardware and moving parts.
- B. Manufacturer shall clean all glass and aluminum prior to shipment.
- C. Protection of newly installed windows and/or final cleaning of glass and aluminum to remove any accumulations that may have occurred during the construction period is to be the responsibility of the General Contractor or Owner.
- D. Comply with manufacturer's written recommendations for final cleaning and maintenance.

### 3.6 DEMONSTRATION

- A. Engage a factory-authorized service representative to train Owner's maintenance personnel to adjust, operate, and maintain window operating system.

END OF SECTION 085113

## SECTION 087100 - DOOR HARDWARE

### PART 1 - GENERAL

#### 1.1 RELATED DOCUMENTS

- A. Drawings and general provisions of the Contract, including General and Supplementary Conditions and Division 1 Specification Sections, apply to this Section.

#### 1.2 SUMMARY

- A. This Section includes commercial door hardware for the following:
  - 1. Swinging doors.
  - 2. Other doors to the extent indicated.
- B. Door hardware includes, but is not necessarily limited to, the following:
  - 1. Mechanical door hardware.
  - 2. Electromechanical door hardware.
  - 3. Automatic operators.
  - 4. Cylinders specified for doors in other sections.
- C. Related Sections:
  - 1. Division 08 Section "Door Hardware Schedule".
  - 2. Division 08 Section "Hollow Metal Doors and Frames".
  - 3. Division 08 Section "Interior Aluminum Doors and Frames".
  - 4. Division 08 Section "Flush Wood Doors".
  - 5. Division 08 Section "Aluminum-Framed Entrances and Storefronts".
  - 6. Division 08 Section "Integrated Door Assemblies".
  - 7. Division 28 Section "Access Control Hardware Devices".
- D. Codes and References: Comply with the version year adopted by the Authority Having Jurisdiction.
  - 1. ANSI A117.1 - Accessible and Usable Buildings and Facilities.
  - 2. ICC/IBC - International Building Code.
  - 3. NFPA 70 - National Electrical Code.
  - 4. NFPA 80 - Fire Doors and Windows.
  - 5. NFPA 101 - Life Safety Code.
  - 6. NFPA 105 - Installation of Smoke Door Assemblies.
  - 7. UL/ULC and CSA C22.2 - Standards for Automatic Door Operators Used on Fire and Smoke Barrier Doors and Systems of Doors.
  - 8. State Building Codes, Local Amendments.
- E. Standards: All hardware specified herein shall comply with the following industry standards as applicable. Any undated reference to a standard shall be interpreted as referring to the latest edition of that standard:
  - 1. ANSI/BHMA Certified Product Standards - A156 Series.
  - 2. UL10C - Positive Pressure Fire Tests of Door Assemblies.
  - 3. ANSI/UL 294 - Access Control System Units.
  - 4. UL 305 - Panic Hardware.

### 1.3 SUBMITTALS

- A. Product Data: Manufacturer's product data sheets including installation details, material descriptions, dimensions of individual components and profiles, operational descriptions and finishes.
- B. Door Hardware Schedule: Prepared by or under the supervision of supplier, detailing, fabrication and assembly of door hardware, as well as procedures and diagrams. Coordinate the final Door Hardware Schedule with doors, frames, and related work to ensure proper size, thickness, hand, function, and finish of door hardware.
  - 1. Format: Comply with scheduling sequence and vertical format in DHI's "Sequence and Format for the Hardware Schedule."
  - 2. Organization: Organize the Door Hardware Schedule into door hardware sets indicating complete designations of every item required for each door or opening. Organize door hardware sets in same order as in the Door Hardware Sets at the end of Part 3. Submittals that do not follow the same format and order as the Door Hardware Sets will be rejected and subject to resubmission.
  - 3. Content: Include the following information:
    - a. Type, style, function, size, label, hand, and finish of each door hardware item.
    - b. Manufacturer of each item.
    - c. Fastenings and other pertinent information.
    - d. Location of door hardware set, cross-referenced to Drawings, both on floor plans and in door and frame schedule.
    - e. Explanation of abbreviations, symbols, and codes contained in schedule.
    - f. Mounting locations for door hardware.
    - g. Door and frame sizes and materials.
    - h. Warranty information for each product.
  - 4. Submittal Sequence: Submit the final Door Hardware Schedule at earliest possible date, particularly where approval of the Door Hardware Schedule must precede fabrication of other work that is critical in the Project construction schedule. Include Product Data, Samples, Shop Drawings of other work affected by door hardware, and other information essential to the coordinated review of the Door Hardware Schedule.
- C. Shop Drawings: Details of electrified access control hardware indicating the following:
  - 1. Wiring Diagrams: Upon receipt of approved schedules, submit detailed system wiring diagrams for power, signaling, monitoring, communication, and control of the access control system electrified hardware. Differentiate between manufacturer-installed and field-installed wiring. Include the following:
    - a. Elevation diagram of each unique access controlled opening showing location and interconnection of major system components with respect to their placement in the respective door openings.
    - b. Complete (risers, point-to-point) access control system block wiring diagrams.
    - c. Wiring instructions for each electronic component scheduled herein.
  - 2. Electrical Coordination: Coordinate with related sections the voltages and wiring details required at electrically controlled and operated hardware openings.

- D. Proof of Certification: Provide copy of manufacturer(s) official certification or accreditation document indicating proof of status as a qualified and authorized provider of the primary Integrated Wiegand Access Control Products.
- E. Keying Schedule: After a keying meeting with the owner has taken place prepare a separate keying schedule detailing final instructions. Submit the keying schedule in electronic format. Include keying system explanation, door numbers, key set symbols, hardware set numbers and special instructions. Owner must approve submitted keying schedule prior to the ordering of permanent cylinders/cores.
- F. Informational Submittals:
  - 1. Product Test Reports: Indicating compliance with cycle testing requirements, based on evaluation of comprehensive tests performed by manufacturer and witnessed by a qualified independent testing agency.

#### 1.4 CLOSEOUT SUBMITTALS

- A. Operating and Maintenance Manuals: Provide manufacturers operating and maintenance manuals for each item comprising the complete door hardware installation in quantity as required in Division 01, Closeout Procedures.
- B. Project Record Documents: Provide record documentation of as-built door hardware sets in digital format (.pdf, .docx, .xlsx, .csv) and as required in Division 01, Project Record Documents.

#### 1.5 QUALITY ASSURANCE

- A. Manufacturers Qualifications: Engage qualified manufacturers with a minimum 5 years of documented experience in producing hardware and equipment similar to that indicated for this Project and that have a proven record of successful in-service performance.
- B. Certified Products: Where specified, products must maintain a current listing in the Builders Hardware Manufacturers Association (BHMA) Certified Products Directory (CPD).
- C. Installer Qualifications: A minimum 3 years documented experience installing both standard and electrified door hardware similar in material, design, and extent to that indicated for this Project and whose work has resulted in construction with a record of successful in-service performance.
- D. Door Hardware Supplier Qualifications: Experienced commercial door hardware distributors with a minimum 5 years documented experience supplying both mechanical and electromechanical hardware installations comparable in material, design, and extent to that indicated for this Project. Supplier recognized as a factory direct distributor by the manufacturers of the primary materials with a warehousing facility in Project's vicinity. Supplier to have on staff a certified Architectural Hardware Consultant (AHC) available during the course of the Work to consult with Contractor, Architect, and Owner concerning both standard and electromechanical door hardware and keying.
- E. Source Limitations: Obtain each type and variety of door hardware specified in this section from a single source unless otherwise indicated.
  - 1. Electrified modifications or enhancements made to a source manufacturer's product line by a secondary or third party source will not be accepted.

2. Provide electromechanical door hardware from the same manufacturer as mechanical door hardware, unless otherwise indicated.
  - F. Each unit to bear third party permanent label indicating compliance with the referenced testing standards.
  - G. Keying Conference: Conduct conference to comply with requirements in Division 01 Section "Project Meetings." Keying conference to incorporate the following criteria into the final keying schedule document:
    1. Function of building, purpose of each area and degree of security required.
    2. Plans for existing and future key system expansion.
    3. Requirements for key control storage and software.
    4. Installation of permanent keys, cylinder cores and software.
    5. Address and requirements for delivery of keys.
  - H. Pre-Submittal Conference: Conduct coordination conference in compliance with requirements in Division 01 Section "Project Meetings" with attendance by representatives of Supplier(s), Installer(s), and Contractor(s) to review proper methods and the procedures for receiving, handling, and installing door hardware.
    1. Prior to installation of door hardware, conduct a project specific training meeting to instruct the installing contractors' personnel on the proper installation and adjustment of their respective products. Product training to be attended by installers of door hardware (including electromechanical hardware) for aluminum, hollow metal and wood doors. Training will include the use of installation manuals, hardware schedules, templates and physical product samples as required.
    2. Inspect and discuss electrical roughing-in, power supply connections, and other preparatory work performed by other trades.
    3. Review sequence of operation narratives for each unique access controlled opening.
    4. Review and finalize construction schedule and verify availability of materials.
    5. Review the required inspecting, testing, commissioning, and demonstration procedures
  - I. At completion of installation, provide written documentation that components were applied according to manufacturer's instructions and recommendations and according to approved schedule.
- 1.6 DELIVERY, STORAGE AND HANDLING
- A. Inventory door hardware on receipt and provide secure lock-up and shelving for door hardware delivered to Project site. Do not store electronic access control hardware, software or accessories at Project site without prior authorization.
  - B. Tag each item or package separately with identification related to the final Door Hardware Schedule, and include basic installation instructions with each item or package.
  - C. Deliver, as applicable, permanent keys, cylinders, cores, access control credentials, software and related accessories directly to Owner via registered mail or overnight package service. Instructions for delivery to the Owner shall be established at the "Keying Conference".
- 1.7 COORDINATION
- A. Templates: Obtain and distribute to the parties involved templates for doors, frames, and other work specified to be factory prepared for installing standard and electrified hardware. Check

Shop Drawings of other work to confirm that adequate provisions are made for locating and installing hardware to comply with indicated requirements.

- B. Door Hardware and Electrical Connections: Coordinate the layout and installation of scheduled electrified door hardware and related access control equipment with required connections to source power junction boxes, low voltage power supplies, detection and monitoring hardware, and fire and detection alarm systems.
- C. Door and Frame Preparation: Doors and corresponding frames are to be prepared, reinforced and pre-wired (if applicable) to receive the installation of the specified electrified, monitoring, signaling and access control system hardware without additional in-field modifications.

## 1.8 WARRANTY

- A. General Warranty: Reference Division 01, General Requirements. Special warranties specified in this Article shall not deprive Owner of other rights Owner may have under other provisions of the Contract Documents and shall be in addition to, and run concurrent with, other warranties made by Contractor under requirements of the Contract Documents.
- B. Warranty Period: Written warranty, executed by manufacturer(s), agreeing to repair or replace components of standard and electrified door hardware that fails in materials or workmanship within specified warranty period after final acceptance by the Owner. Failures include, but are not limited to, the following:
  - 1. Structural failures including excessive deflection, cracking, or breakage.
  - 2. Faulty operation of the hardware.
  - 3. Deterioration of metals, metal finishes, and other materials beyond normal weathering.
  - 4. Electrical component defects and failures within the systems operation.
- C. Warranty Period: Unless otherwise indicated, warranty shall be one year from date of Substantial Completion.

## PART 2 - PRODUCTS

### 2.1 BUTT HINGES

- A. Hinges: ANSI/BHMA A156.1 butt hinges with number of hinge knuckles and other options as specified in the Door Hardware Sets.
  - 1. Quantity: Provide the following hinge quantity:
    - a. Two Hinges: For doors with heights up to 60 inches.
    - b. Three Hinges: For doors with heights 61 to 90 inches.
    - c. Four Hinges: For doors with heights 91 to 120 inches.
    - d. For doors with heights more than 120 inches, provide 4 hinges, plus 1 hinge for every 30 inches of door height greater than 120 inches.
  - 2. Hinge Size: Provide the following, unless otherwise indicated, with hinge widths sized for door thickness and clearances required:
    - a. Widths up to 3'0": 4-1/2" standard or heavy weight as specified.
    - b. Sizes from 3'1" to 4'0": 5" heavy weight.
  - 3. Hinge Weight and Base Material: Unless otherwise indicated, provide the following:

- a. Exterior Doors: Heavy weight, non-ferrous, ball bearing or oil impregnated bearing hinges unless Hardware Sets indicate standard weight.
  - b. Interior Doors: Standard weight, steel, ball bearing or oil impregnated bearing hinges unless Hardware Sets indicate heavy weight.
4. Hinge Options: Comply with the following:
- a. Non-removable Pins: With the exception of electric through wire hinges, provide set screw in hinge barrel that, when tightened into a groove in hinge pin, prevents removal of pin while door is closed; for all out-swinging lockable doors.
5. Manufacturers:
- a. McKinney (MK) - TA/T4A Series, 5-knuckle.
  - b. Or approved equal

## 2.2 CONTINUOUS HINGES

- A. Continuous Geared Hinges: ANSI/BHMA A156.26 Grade 1-600 continuous geared hinge. with minimum 0.120-inch thick extruded 6063-T6 aluminum alloy hinge leaves and a minimum overall width of 4 inches. Hinges are non-handed, reversible and fabricated to template screw locations. Factory trim hinges to suit door height and prepare for electrical cut-outs.
1. Where specified, provide modular continuous geared hinges that ship in two or three pieces and form a single continuous hinge upon installation.
  2. Manufacturers:..
    - a. Pemko (PE).
    - b. Or approved equal
- B. Pin and Barrel Continuous Hinges: ANSI/BHMA A156.26 Grade 1-600 pin and barrel continuous hinges with minimum 14 gauge Type 304 stainless steel hinge leaves, concealed stainless pin, and twin self-lubricated nylon bearings at each knuckle separation. Factory trim hinges to suit door height and prepare for electrical cut-outs.
1. Manufacturers:
    - a. Markar Products; ASSA ABLOY Architectural Door Accessories (MR).
    - b. Pemko (PE).
    - c. Or approved equal

## 2.3 POWER TRANSFER DEVICES

- A. Concealed Quick Connect Electric Power Transfers: Provide concealed wiring pathway housing mortised into the door and frame for low voltage electrified door hardware. Furnish with Molex™ standardized plug connectors and sufficient number of concealed wires (up to 12) to accommodate the electrified functions specified in the Door Hardware Sets. Connectors plug directly to through-door wiring harnesses for connection to electric locking devices and power supplies. Wire nut connections are not acceptable.
1. Manufacturers:
    - a. Pemko (PE) - EL-CEPT Series.
    - b. Securitron (SU) - EL-CEPT Series.
    - c. Or approved equal

- B. Electric Door Wire Harnesses: Provide electric/data transfer wiring harnesses with standardized plug connectors to accommodate up to twelve (12) wires. Connectors plug directly to through-door wiring harnesses for connection to electric locking devices and power supplies. Provide sufficient number and type of concealed wires to accommodate electric function of specified hardware. Provide a connector for through-door electronic locking devices and from hinge to junction box above the opening. Wire nut connections are not acceptable. Determine the length required for each electrified hardware component for the door type, size and construction, minimum of two per electrified opening.
1. Provide one each of the following tools as part of the base bid contract:
    - a. McKinney (MK) - Electrical Connecting Kit: QC-R001.
    - b. McKinney (MK) - Connector Hand Tool: QC-R003.
    - c. Or approved equal
  2. Manufacturers:
    - a. McKinney (MK) - QC-C Series.
    - b. Or approved equal

#### 2.4 DOOR OPERATING TRIM

- A. Flush Bolts and Surface Bolts: Provide products conforming to ANSI/BHMA A156.3 and A156.16, Grade 1.
1. Flush bolts to be furnished with top rod of sufficient length to allow bolt retraction device location approximately six feet from the floor.
  2. Furnish dust proof strikes for bottom bolts.
  3. Surface bolts to be minimum 8" in length and U.L. listed for labeled fire doors and U.L. listed for windstorm components where applicable.
  4. Provide related accessories (mounting brackets, strikes, coordinators, etc.) as required for appropriate installation and operation.
  5. Manufacturers:
    - a. Rockwood (RO).
    - b. Or approved equal
- B. Door Push Plates and Pulls: ANSI/BHMA A156.6 door pushes and pull units of type and design specified in the Hardware Sets. Coordinate and provide proper width and height as required where conflicting hardware dictates.
1. Push/Pull Plates: Minimum .050 inch thick, size as indicated in hardware sets, with beveled edges, secured with exposed screws unless otherwise indicated.
  2. Door Pull and Push Bar Design: Size, shape, and material as indicated in the hardware sets. Minimum clearance of 2 1/2-inches from face of door unless otherwise indicated.
  3. Offset Pull Design: Size, shape, and material as indicated in the hardware sets. Minimum clearance of 2 1/2-inches from face of door and offset of 90 degrees unless otherwise indicated.
  4. Pulls, where applicable, shall be provided with a 10" clearance from the finished floor on the push side to accommodate wheelchair accessibility.
  5. Fasteners: Provide manufacturer's designated fastener type as indicated in Hardware Sets. When through-bolt fasteners are in the same location as a push plate, countersink the fasteners flush with the door face allowing the push plate to sit flat against the door.
  6. Manufacturers:

- a. Rockwood (RO).
- b. Or approved equal

## 2.5 CYLINDERS AND KEYING

- A. General: Cylinder manufacturer to have minimum (10) years experience designing secured master key systems and have on record a published security keying system policy.
  - 1. Manufacturers:
    - a. Match Existing, Field Verify.
- B. Cylinder Types: Original manufacturer cylinders able to supply the following cylinder formats and types:
  - 1. Threaded mortise cylinders with rings and cams to suit hardware application.
  - 2. Rim cylinders with back plate, flat-type vertical or horizontal tailpiece, and raised trim ring.
  - 3. Bored or cylindrical lock cylinders with tailpieces as required to suit locks.
  - 4. Tubular deadlocks and other auxiliary locks.
  - 5. Mortise and rim cylinder collars to be solid and recessed to allow the cylinder face to be flush and be free spinning with matching finishes.
  - 6. Keyway: Match Facility Standard.
- C. Keying System: Each type of lock and cylinders to be factory keyed.
  - 1. Supplier shall conduct a "Keying Conference" to define and document keying system instructions and requirements.
  - 2. Furnish factory cut, nickel-silver large bow permanently inscribed with a visual key control number as directed by Owner.
  - 3. Existing System: Field verify and key cylinders to match Owner's existing system.
- D. Key Quantity: Provide the following minimum number of keys:
  - 1. Change Keys per Cylinder: Two (2)
  - 2. Master Keys (per Master Key Level/Group): Five (5).
  - 3. Construction Keys (where required): Ten (10).
- E. Construction Keying: Provide construction master keyed cylinders.
- F. Key Registration List (Bitting List):
  - 1. Provide keying transcript list to Owner's representative in the proper format for importing into key control software.
  - 2. Provide transcript list in writing or electronic file as directed by the Owner.

## 2.6 KEY CONTROL

- A. Key Control Cabinet: Provide a key control system including envelopes, labels, and tags with self-locking key clips, receipt forms, 3-way visible card index, temporary markers, permanent markers, and standard metal cabinet. Key control cabinet shall have expansion capacity of 150% of the number of locks required for the project.
  - 1. Manufacturers:
    - a. Lund Equipment (LU).
    - b. MMF Industries (MM).

- c. Telkee (TK).
- d. Or approved equal

## 2.7 MORTISE LOCKS AND LATCHING DEVICES

- A. Mortise Locksets, Grade 1 (Heavy Duty): Provide ANSI/BHMA A156.13, Series 1000, Operational Grade 1 Certified Products Directory (CPD) listed mortise locksets. Listed manufacturers shall meet all functions and features as specified herein.
  - 1. Provide locksets with functions and features as follows:
    - a. Heavy duty 12-gauge wrought steel case.
    - b. Stainless steel 3/4" one-piece anti-friction reversible latchbolt with a one-piece hardened stainless steel 1" projection deadbolt.
    - c. Where required by code, provide knurling or abrasive coating on all levers leading to hazardous areas.
    - d. Meets UL and CUL Standard 10C Positive Pressure, Fire Test of Door Assemblies with levers that meet A117.1 Accessibility Code.
    - e. Meets UL Certification Directory ZHLL.R21744 for products used in windstorm rated assemblies.
    - f. Extended cycle test: Locks to have been cycle tested in ordinance with ANSI/BHMA 156.13 requirements to 14.5 million cycles or greater.
    - g. Status indicators inside, outside, or on both sides of doors as specified; available with wording for "locked/unlocked", "vacant/occupied" or custom wording options. Indicator to be located above the cylinder with the inside thumb-turn not blocking the visibility of the indicator status.
    - h. Ten-year limited warranty for mechanical functions.
  - 2. Manufacturers:
    - a. Corbin Russwin Hardware (RU) - ML2000 Series.
    - b. Or approved equal

## 2.8 DEADLOCKS AND LATCHES

- A. Mortise Deadlocks, Small Case: ANSI/BHMA A156.36, Grade 1, small case mortise type deadlocks constructed of heavy gauge wrought corrosion resistant steel. Steel or stainless steel bolts with a 1" throw and hardened steel roller pins. Deadlocks to be products of the same source manufacturer and keyway as other specified locksets.
  - 1. Manufacturers:
    - a. Corbin Russwin Hardware (RU) - DL4000 Series.
    - b. Or approved equal

## 2.9 LOCK AND LATCH STRIKES

- A. Strikes: Provide manufacturer's standard strike with strike box for each latch or lock bolt, with curved lip extended to protect frame, finished to match door hardware set, unless otherwise indicated, and as follows:
  - 1. Flat-Lip Strikes: For locks with three-piece antifriction latchbolts, as recommended by manufacturer.
  - 2. Extra-Long-Lip Strikes: For locks used on frames with applied wood casing trim.

3. Aluminum-Frame Strike Box: Provide manufacturer's special strike box fabricated for aluminum framing.
4. Short-lipped strikes: For locks at double doors.

B. Standards: Comply with the following:

1. Strikes for Mortise Locks and Latches: BHMA A156.13.
2. Strikes for Bored Locks and Latches: BHMA A156.2.
3. Strikes for Auxiliary Deadlocks: BHMA A156.36.
4. Dustproof Strikes: BHMA A156.16.

2.10 ELECTROMAGNETIC LOCKING DEVICES

- A. Surface Electromagnetic Locks (Heavy Duty): Electromagnetic locks to be surface mounted type conforming to ANSI A156.23, Grade 2 with minimum holding force strength of 1,200 pounds. Locks to be capable of either 12 or 24 voltage and be UL listed for use on fire rated door assemblies. Electronics are to be fully sealed against tampering and allow exterior weatherproof applications. As indicated in Hardware Sets, provide specified mounting brackets and housings. Power supply to be by the same manufacturer as the lock with combined products having a lifetime replacement warranty.

1. Manufacturers:
  - a. Securitron (SU) - M62 Series.
  - b. Or approved equal

2.11 CONVENTIONAL EXIT DEVICES

- A. General Requirements: All exit devices specified herein shall meet or exceed the following criteria:

1. Exit devices shall have a five-year warranty.
2. At doors not requiring a fire rating, provide devices complying with NFPA 101 and listed and labeled for "Panic Hardware" according to UL305. Provide proper fasteners as required by manufacturer including sex nuts and bolts at openings specified in the Hardware Sets.
3. Where exit devices are required on fire rated doors, provide devices complying with NFPA 80 and with UL labeling indicating "Fire Exit Hardware". Provide devices with the proper fasteners for installation as tested and listed by UL. Consult manufacturer's catalog and template book for specific requirements.
4. Except on fire rated doors, provide exit devices with keyed cylinder dogging device to hold the pushbar and latch in a retracted position.
5. Devices must fit flat against the door face with no gap that permits unauthorized dogging of the push bar. The addition of filler strips is required in any case where the door light extends behind the device as in a full glass configuration.
6. Flush End Caps: Provide flush end caps made of architectural metal in the same finish as the devices as in the Hardware Sets. Plastic end caps will not be acceptable.
7. Lever Operating Trim: Where exit devices require lever trim, furnish manufacturer's heavy duty escutcheon trim with threaded studs for thru-bolts.
  - a. Lock Trim Design: As indicated in Hardware Sets, provide finishes and designs to match that of the specified locksets.
  - b. Where function of exit device requires a cylinder, provide a cylinder (Rim or Mortise) as specified in Hardware Sets.

8. Vertical Rod Exit Devices: Where surface or concealed vertical rod exit devices are used at interior openings, provide as less bottom rod (LBR) unless otherwise indicated. Provide dust proof strikes where thermal pins are required to project into the floor.
  9. Narrow Stile Applications: At doors constructed with narrow stiles, or as specified in Hardware Sets, provide devices designed for maximum 2" wide stiles.
  10. Dummy Push Bar: Nonfunctioning push bar matching functional push bar.
  11. Rail Sizing: Provide exit device rails factory sized for proper door width application.
  12. Through Bolt Installation: For exit devices and trim as indicated in Door Hardware Sets.
- B. Conventional Push Rail Exit Devices (Heavy Duty): ANSI/BHMA A156.3, Grade 1 Certified Products Directory (CPD) listed exit devices. Listed manufacturers shall meet all functions and features as specified herein.
1. Provide exit devices with functions and features as follows:
    - a. Where required by code, provide knurling or abrasive coating on all levers leading to hazardous areas.
    - b. Meets UL and CUL Standard 10C Positive Pressure, Fire Test of Door Assemblies with levers that meet A117.1 Accessibility Code.
    - c. Five-year limited warranty for mechanical features.
  2. Electromechanical exit devices shall have the following functions and features:
    - a. Universal Molex plug-in connectors that have standardized color-coded wiring and are field configurable in fail safe or fail secure and operate from 12vdc to 24vdc regulated.
    - b. EcoFlex or equivalent technology that reduces energy consumption up to 92% as certified by GreenCircle.
    - c. Options to be available for request-to-exit or enter signaling, latchbolt and touchbar monitoring.
    - d. Field configurable electrified trim to fail-safe or fail-secure that operates from 12-24VDC.
    - e. Five-year limited warranty for electromechanical features.
  3. Manufacturers:
    - a. Corbin Russwin Hardware (RU) - ED4000 / ED5000 Series.
    - b. Or approved equal
- 2.12 TOUCH SENSE EXIT BARS
- A. Touch Sense Exit Bars: U.L. listed dual sense touch bar for use on magnetically locked, non-fire-rated metal, aluminum or wood doors requiring two independent switch circuits to release the locking device. Touching the bar or engaging mechanical movement (1/8") allows for free egress. Touch sensing and redundant movement activated switches to comply with current fire and life safety egress codes. Operates on either 12 or 24VDC with optional illuminated "Push to Exit" fiber optic strip.
1. Manufacturers:
    - a. Securitron (SU) - DSB Series.
    - b. Or approved equal

## 2.13 SURFACE DOOR CLOSERS

- A. All door closers specified herein shall meet or exceed the following criteria:
1. General: Door closers to be from one manufacturer, matching in design and style, with the same type door preparations and templates regardless of application or spring size. Closers to be non-handed with full sized covers.
  2. Standards: Closers to comply with UL-10C for Positive Pressure Fire Test and be U.L. listed for use of fire rated doors.
  3. Cycle Testing: Provide closers which have surpassed 15 million cycles.
  4. Size of Units: Comply with manufacturer's written recommendations for sizing of door closers depending on size of door, exposure to weather, and anticipated frequency of use. Where closers are indicated for doors required to be accessible to the Americans with Disabilities Act, provide units complying with ANSI ICC/A117.1.
  5. Closer Arms: Provide heavy duty, forged steel closer arms unless otherwise indicated in Hardware Sets.
  6. Closers shall not be installed on exterior or corridor side of doors; where possible install closers on door for optimum aesthetics.
  7. Closer Accessories: Provide door closer accessories including custom templates, special mounting brackets, spacers and drop plates as required for proper installation. Provide through-bolt and security type fasteners as specified in the hardware sets.
- B. Door Closers, Surface Mounted (Large Body Cast Iron): ANSI/BHMA A156.4, Grade 1 Certified Products Directory (CPD) listed surface mounted, heavy duty door closers with complete spring power adjustment, sizes 1 thru 6; and fully operational adjustable according to door size, frequency of use, and opening force. Closers to be rack and pinion type, one piece cast iron body construction, with adjustable backcheck and separate non-critical valves for closing sweep and latch speed control.
1. Large body cast iron surface mounted door closers shall have a 30-year warranty.
  2. Manufacturers:
    - a. Corbin Russwin Hardware (RU) - DC8000 Series.
    - b. Or approved equal

## 2.14 ELECTROMECHANICAL DOOR OPERATORS

- A. Electromechanical Door Operators (High Traffic, Door Mounted, Regenerative): Provide ANSI/BHMA A156.19 Certified Products Directory (CPD) listed low energy operators that are ETL tested to UL325 and UL10C certified and comply with requirements for the Americans with Disabilities Act (ADA). Operators shall be verified by GreenCircle to offer energy savings of 91% (plug-in) and 100% (wireless) when compared to similar products. Operators shall accommodate openings up to 250 pounds and 48" wide.
1. Provide operators with features as follows:
    - a. Non-handed with push and pull side mounting.
    - b. Regenerative drive or continuous duty operation.
    - c. Radio frequency stainless steel wall switches with integral radio frequency receiver.
    - d. Shock absorbing arm.
    - e. Auxiliary activation input port and 24VDC input port.
    - f. Two-year limited warranty.

2. Operators shall have the following functionality:
  - a. Adjustable Hold Open: Amount of time a door will stay in the full open position after an activation.
  - b. Dynamic Braking: Braking or slowing of the door if excessive door speed occurs resulting from a wind load or an abusive open condition.
  - c. Emergency Interface Relay: Door closes and ignores any activation input until signal is discontinued. Only available when used with Wireless Interface Module.
  - d. Latch Assist: At closed position, after an activation, the door is pulled in. After the door has closed, the door is pulled in to assist with latch release/engagement.
  - e. Obstruction Detection: Door closes if it hits an obstruction while opening. Door will stop once it hits an obstruction and will rest against the obstruction until obstruction is removed.
  - f. On/Off Switch: Disables operator activation.
  - g. Open Delay: Delays operator opening for locking hardware. Only available when used with Wireless Interface Module.
  - h. Outside Wall Switch Disable: When contact is closed, outside wall switch is disabled. Only available when used with Wireless Interface Module.
  - i. Power Close: Additional force to assist door closing between 90° and 70° and 10° and 0°.
  - j. Push & Go: As the door is manually opened, the operator "senses" movement and opens door to the full-open position.
  - k. Single Relay Output: Closes to indicate a valid activation. Only available when used with Wireless Interface Module.
3. Manufacturers:
  - a. Norton Rixson (NO) - 5800 Series.
  - b. Or approved equal

## 2.15 ARCHITECTURAL TRIM

### A. Door Protective Trim

1. General: Door protective trim units to be of type and design as specified below or in the Hardware Sets.
2. Size: Fabricate protection plates (kick, armor, or mop) not more than 2" less than door width (LDW) on stop side of single doors and 1" LDW on stop side of pairs of doors, and not more than 1" less than door width on pull side. Coordinate and provide proper width and height as required where conflicting hardware dictates. Height to be as specified in the Hardware Sets.
3. Where plates are applied to fire rated doors with the top of the plate more than 16" above the bottom of the door, provide plates complying with NFPA 80. Consult manufacturer's catalog and template book for specific requirements for size and applications.
4. Protection Plates: ANSI/BHMA A156.6 protection plates (kick, armor, or mop), fabricated from the following:
  - a. Stainless Steel: 300 grade, 050-inch thick.
5. Options and fasteners: Provide manufacturer's designated fastener type as specified in the Hardware Sets. Provide countersunk screw holes.
6. Manufacturers:

- a. Rockwood (RO).
- b. Or approved equal

## 2.16 DOOR STOPS AND HOLDERS

- A. General: Door stops and holders to be of type and design as specified below or in the Hardware Sets.
- B. Door Stops and Bumpers: ANSI/BHMA A156.16, Grade 1 door stops and wall bumpers. Provide wall bumpers, either convex or concave types with anchorage as indicated, unless floor or other types of door stops are specified in Hardware Sets. Do not mount floor stops where they will impede traffic. Stops should not be mounted any nearer to the hinge than One-half the width of the door. Where floor or wall bumpers are not appropriate, provide overhead type stops and holders.
  - 1. Manufacturers:
    - a. Rockwood (RO).
    - b. Or approved equal
- C. Overhead Door Stops and Holders: ANSI/BHMA A156.8, Grade 1 Certified Products Directory (CPD) listed overhead stops and holders to be surface or concealed types as indicated in Hardware Sets. Track, slide, arm and jamb bracket to be constructed of extruded bronze and shock absorber spring of heavy tempered steel. Provide non-handed design with mounting brackets as required for proper operation and function.
  - 1. Manufacturers:
    - a. Norton Rixson (RF).
    - b. Rockwood (RO).
    - c. Or approved equal

## 2.17 ARCHITECTURAL SEALS

- A. General: Thresholds, weatherstripping, and gasket seals to be of type and design as specified below or in the Hardware Sets. Provide continuous weatherstrip gasketing on exterior doors and provide smoke, light, or sound gasketing on interior doors where indicated. At exterior applications provide non-corrosive fasteners and elsewhere where indicated.
- B. Smoke Labeled Gasketing: Assemblies complying with NFPA 105 that are listed and labeled by a testing and inspecting agency acceptable to authorities having jurisdiction, for smoke control ratings indicated, based on testing according to UL 1784.
  - 1. Provide smoke labeled perimeter gasketing at all smoke labeled openings.
- C. Fire Labeled Gasketing: Assemblies complying with NFPA 80 that are listed and labeled by a testing and inspecting agency acceptable to authorities having jurisdiction, for fire ratings indicated, based on testing according to UL-10C.
  - 1. Provide intumescent seals as indicated to meet UL10C Standard for Positive Pressure Fire Tests of Door Assemblies, and NFPA 252, Standard Methods of Fire Tests of Door Assemblies.

- D. Sound-Rated Gasketing: Assemblies that are listed and labeled by a testing and inspecting agency, for sound ratings indicated.
- E. Replaceable Seal Strips: Provide only those units where resilient or flexible seal strips are easily replaceable and readily available from stocks maintained by manufacturer.
- F. Manufacturers:
  - 1. Pemko (PE)
  - 2. Or approved equal

## 2.18 ELECTRONIC ACCESSORIES

- A. Switching Power Supplies: Provide power supplies with either single or dual voltage configurations at 12 or 24VDC. Power supplies shall have battery backup function with an integrated battery charging circuit and shall provide capability for power distribution, direct lock control and Fire Alarm Interface (FAI) through add on modules. Power supplies shall be expandable up to 16 individually protected outputs. Output modules shall provide individually protected, continuous outputs and/or individually protected, relay controlled outputs.
  - 1. Provide the least number of units, at the appropriate amperage level, sufficient to exceed the required total draw for the specified electrified hardware and access control equipment.
  - 2. Manufacturers:
    - a. Securitron (SU) - AQD Series.
    - b. Or approved equal

## 2.19 FABRICATION

- A. Fasteners: Provide door hardware manufactured to comply with published templates generally prepared for machine, wood, and sheet metal screws. Provide screws according to manufacturers recognized installation standards for application intended.

## 2.20 FINISHES

- A. Standard: Designations used in the Hardware Sets and elsewhere indicate hardware finishes complying with ANSI/BHMA A156.18, including coordination with traditional U.S. finishes indicated by certain manufacturers for their products.
- B. Provide quality of finish, including thickness of plating or coating (if any), composition, hardness, and other qualities complying with manufacturer's standards, but in no case less than specified by referenced standards for the applicable units of hardware
- C. Protect mechanical finishes on exposed surfaces from damage by applying a strippable, temporary protective covering before shipping.

## PART 3 - EXECUTION

### 3.1 EXAMINATION

- A. Examine scheduled openings, with Installer present, for compliance with requirements for installation tolerances, labeled fire door assembly construction, wall and floor construction, and other conditions affecting performance.

- B. Notify architect of any discrepancies or conflicts between the door schedule, door types, drawings and scheduled hardware. Proceed only after such discrepancies or conflicts have been resolved in writing.

### 3.2 PREPARATION

- A. Hollow Metal Doors and Frames: Comply with ANSI/DHI A115 series.
- B. Wood Doors: Comply with ANSI/DHI A115-W series.

### 3.3 INSTALLATION

- A. Install each item of mechanical and electromechanical hardware and access control equipment to comply with manufacturer's written instructions and according to specifications.
  - 1. Installers are to be trained and certified by the manufacturer on the proper installation and adjustment of fire, life safety, and security products including: hanging devices; locking devices; closing devices; and seals.
- B. Mounting Heights: Mount door hardware units at heights indicated in following applicable publications, unless specifically indicated or required to comply with governing regulations:
  - 1. Standard Steel Doors and Frames: DHI's "Recommended Locations for Architectural Hardware for Standard Steel Doors and Frames."
  - 2. DHI TDH-007-20: Installation Guide for Doors and Hardware.
  - 3. Where indicated to comply with accessibility requirements, comply with ANSI A117.1 "Accessibility Guidelines for Buildings and Facilities."
  - 4. Provide blocking in drywall partitions where wall stops or other wall mounted hardware is located.
- C. Retrofitting: Install door hardware to comply with manufacturer's published templates and written instructions. Where cutting and fitting are required to install door hardware onto or into surfaces that are later to be painted or finished in another way, coordinate removal, storage, and reinstallation of surface protective trim units with finishing work specified in Division 9 Sections. Do not install surface-mounted items until finishes have been completed on substrates involved.
- D. Push Plates and Door Pulls: When through-bolt fasteners are in the same location as a push plate, countersink the fasteners flush with the door face allowing the push plate to sit flat against the door.
- E. Thresholds: Set thresholds for exterior and acoustical doors in full bed of sealant complying with requirements specified in Division 7 Section "Joint Sealants."
- F. Storage: Provide a secure lock up for hardware delivered to the project but not yet installed. Control the handling and installation of hardware items so that the completion of the work will not be delayed by hardware losses before and after installation.

### 3.4 FIELD QUALITY CONTROL

- A. Field Inspection (Punch Report): Reference Division 01 Sections "Closeout Procedures". Produce project punch report for each installed door opening indicating compliance with approved submittals and verification hardware is properly installed, operating and adjusted. Include list of items to be completed and corrected, indicating the reasons or deficiencies causing the Work to be incomplete or rejected.

1. Organization of List: Include separate Door Opening and Deficiencies and Corrective Action Lists organized by Mark, Opening Remarks and Comments, and related Opening Images and Video Recordings.

### 3.5 ADJUSTING

- A. Initial Adjustment: Adjust and check each operating item of door hardware and each door to ensure proper operation or function of every unit. Replace units that cannot be adjusted to operate as intended. Adjust door control devices to compensate for final operation of heating and ventilating equipment and to comply with referenced accessibility requirements.

### 3.6 CLEANING AND PROTECTION

- A. Protect all hardware stored on construction site in a covered and dry place. Protect exposed hardware installed on doors during the construction phase. Install any and all hardware at the latest possible time frame.
- B. Clean adjacent surfaces soiled by door hardware installation.
- C. Clean operating items as necessary to restore proper finish. Provide final protection and maintain conditions that ensure door hardware is without damage or deterioration at time of owner occupancy.

### 3.7 DEMONSTRATION

- A. Instruct Owner's maintenance personnel to adjust, operate, and maintain mechanical and electromechanical door hardware.

### 3.8 DOOR HARDWARE SETS

- A. The hardware sets represent the design intent and direction of the owner and architect. They are a guideline only and should not be considered a detailed hardware schedule. Discrepancies, conflicting hardware and missing items should be brought to the attention of the architect with corrections made prior to the bidding process. Omitted items not included in a hardware set should be scheduled with the appropriate additional hardware required for proper application and functionality.
  1. Quantities listed are for each pair of doors, or for each single door.
  2. The supplier is responsible for handing and sizing all products.
  3. Where multiple options for a piece of hardware are given in a single line item, the supplier shall provide the appropriate application for the opening.
- B. Refer to Section 080671, Door Hardware Sets, for hardware sets.

END OF SECTION 087100

## **SECTION 08 8000 – GLAZING**

### **PART 1 - GENERAL**

#### **1.1 SUMMARY**

- A. Work Included: The Work of this Section shall include:
  - 1. Insulated glazing units with low-e coating
  - 2. Insulated spandrel glazing units with low-e coatings and ceramic frit
  - 3. Tempered safety glazing at interior locations
  - 4. Mirrored Glass
  - 5. Acid-Etched Glass

#### **1.2 ACTION SUBMITTALS**

- A. Product Data: For each type of product.
- B. Samples: Submit 12-inch square samples of each type of glass indicated, and 12-inch long samples of each color of gasket.
- C. Delegated-Design Submittal: For glass indicated to comply with performance requirements and design criteria, including analysis data signed and sealed by the qualified professional engineer responsible for their preparation.

#### **1.3 INFORMATIONAL SUBMITTALS**

- A. Glazing Schedule: List glass types and thicknesses for each size opening and location. Use same designations indicated on Drawings.
- B. Certificates: Submit certificates from respective manufacturers attesting that glass and glazing materials furnished for Project comply with requirements of agencies having jurisdiction.
  - 1. Separate certification will not be required for glazing materials bearing manufacturer's permanent labels that represent a quality control program of a certification agency or independent testing laboratory acceptable to authorities having jurisdiction.
  - 2. Submit certification that tempered glass intended for use on the project has been heat soaked.
- C. Compatibility and Adhesion Test Report: Submit statement from sealant manufacturer that glass and glazing materials have been tested for compatibility and adhesion with glazing sealants and interpreting test results, with recommendations for primers and substrate preparation.
- D. Suitability and stress statements from sealant manufacturer.

#### **1.4 QUALITY ASSURANCE**

- A. Installer Qualifications: A qualified installer who employs glass installers for this Project who are certified under the National Glass Association's Certified Glass Installer Program.

- B. Mockups: Build mockups to demonstrate aesthetic effects and match to existing curtainwall.

- 1. Provide glazing in integrated exterior mockup specified in Division 01 Section "Quality Requirements" to match glazing systems required for Project, including glazing methods.

#### 1.5 PRECONSTRUCTION TESTING

- A. Preconstruction Adhesion and Compatibility Testing: Test each glass product, tape sealant, gasket, glazing accessory, and glass-framing member for adhesion to and compatibility with elastomeric glazing sealants.

- 1. Testing is not required if data are submitted based on previous testing of current sealant products and glazing materials matching those submitted.
  - 2. Use ASTM C794 for adhesion testing.
  - 3. Use ASTM C 1087 to determine whether priming and other specific joint-preparation techniques are required to obtain rapid, optimum adhesion of glazing sealants to glass, tape sealants, gaskets, and glazing channel substrates.
  - 4. Test no fewer than eight Samples of each type of material, including joint substrates, shims, sealant backings, secondary seals, and miscellaneous materials.
  - 5. Schedule enough time for testing and analyzing results to prevent delaying the Work.
  - 6. For materials failing tests, submit sealant manufacturer's written instructions for corrective measures including the use of specially formulated primers.

#### 1.6 DELIVERY, STORAGE, AND HANDLING

- A. Protect glass and glazing materials during delivery, storage and handling to comply with manufacturer's directions and to prevent damage to glass and glazing materials from moisture, temperature changes, direct exposure to sun, and from other causes.

#### 1.7 PROJECT CONDITIONS

- A. Environmental Conditions: Do not proceed with glazing when air and substrate temperatures are outside the limits permitted by glazing material manufacturer or when joint substrates are wet or dirty.

#### 1.8 WARRANTY

- A. Manufacturer's Special Warranty for Coated-Glass and Acid Etched Products: Manufacturer agrees to replace coated-glass and Acid-etched units that deteriorate within specified warranty period. Deterioration of coated glass and etched glass is defined as defects developed from normal use that are not interpreting test results, with recommendations and cleaning coated glass contrary to manufacturer's written instructions. Defects include peeling, cracking, and other indications of deterioration in coating.

- 1. Warranty Period: 10 years from date of Substantial Completion.

- B. Manufacturer's Special Warranty for Insulating Glass: Manufacturer agrees to replace insulating-glass units that are found to be defective or deteriorate within specified warranty period. Deterioration of insulating glass is defined as failure of hermetic seal under normal use that is not attributed to glass breakage or to maintaining and cleaning insulating glass contrary to manufacturer's written instructions. Evidence of failure is the obstruction of vision by dust,

moisture, or film on interior surfaces of glass or glazing spacer migration.

1. Warranty Period: 10 years from date of Substantial Completion.
- C. Manufacturer's Special Warranty for Laminated Glass: Manufacturer agrees to replace laminated-glass units that deteriorate within specified warranty period. Deterioration of laminated glass is defined as defects developed from normal use that are not attributed to glass breakage or to maintaining and cleaning laminated glass contrary to manufacturer's written instructions. Defects include edge separation, delamination materially obstructing vision through glass, and blemishes exceeding those allowed by referenced laminated-glass standard.
1. Warranty Period: 10 years from date of Substantial Completion

## PART 2 - PRODUCTS

### 2.1 MANUFACTURERS

- A. Products: Subject to compliance with requirements, provide products as indicated in Part 2 articles or by one of the following:
1. Basis of design manufacturer: Vitro (formerly PPG Industries, Inc.)
  2. Other manufacturers:
    - a. Guardian Glass; SunGuard.
    - b. Vetrotech Saint-Gobain.
    - c. Oldcastle Building Envelope™.
    - d. Or approved equal.
- B. Source Limitations for Glass: Obtain all tinted and insulated glass type from single source from single manufacturer.
- C. Source Limitations for Glazing Accessories: Obtain from single source from single manufacturer for each product and installation method.

### 2.2 PERFORMANCE REQUIREMENTS

- A. General: Installed glazing systems shall withstand normal thermal movement and wind and impact loads (where applicable) without failure, including loss or glass breakage attributable to the following: defective manufacture, fabrication, or installation; failure of sealants or gaskets to remain watertight and airtight; deterioration of glazing materials; or other defects in construction.
- B. Delegated Design: Engage a qualified professional engineer, as defined in Section 014000 "Quality Requirements," to design glazing.
- C. Structural Performance: Glazing shall withstand the following design loads within limits and under conditions indicated determined per the IBC and ASTM E 1300.
1. Design Wind Pressures: As indicated on Structural Drawings.
    - a. Risk category III
    - b. Exposure category B

- c. Basic wind speed 124mph
- 2. Thermal Loads: Design glazing to resist thermal stress breakage induced by differential temperature conditions and limited air circulation within individual glass lites and insulated glazing units.
- 3. Maximum Lateral Deflection: For glass supported on all four edges, limit center-of-glass deflection at design wind pressure to not more than 1/60 times the short-side length or 1 inch, whichever is less.
- D. Safety Glazing: Where safety glazing is indicated, provide glazing that complies with 16 CFR 1201, Category II.
- E. Thermal and Optical Performance Properties: Provide glass with performance properties specified, as indicated in manufacturer's published test data, based on procedures indicated below:
  - 1. For insulating-glass units, properties are based on units of thickness indicated for overall unit and for each lite.
  - 2. U-Factors: Center-of-glazing values, per NFRC 100 and based on LBL's WINDOW 5.2 computer program, expressed as Btu/sq. ft. x h x deg F.
  - 3. Solar Heat-Gain Coefficient and Visible Transmittance: Center-of-glazing values, per NFRC 200 and based on LBL's WINDOW 5.2 computer program.
- 4. Visible Reflectance: Center-of-glazing values, per NFRC 300

### 2.3 GLASS PRODUCTS, GENERAL

- A. Glazing Publications: Comply with published recommendations of glass product manufacturers and organizations below unless more stringent requirements are indicated. See these publications for glazing terms not otherwise defined in this Section or in referenced standards.
  - 1. NGA Publications: "Laminated Glazing Reference Manual" and "Glazing Manual."
  - 2. IGMA Publication for Insulating Glass: SIGMA TM-3000, "North American Glazing Guidelines for Sealed Insulating Glass Units for Commercial and Residential Use."
- B. Safety Glazing Labeling: Where safety glazing is indicated, permanently mark glazing with certification label of the SGCC or another certification agency acceptable to authorities having jurisdiction or manufacturer. Label shall indicate manufacturer's name, type of glass, thickness, and safety glazing standard with which glass complies.
- C. Insulating-Glass Certification Program: Permanently marked either on spacers or on at least one component lite of units with appropriate certification label of IgCC.
- D. Thickness: Where glass thickness is indicated, it is a minimum. Provide glass that complies with performance requirements and is not less than the thickness indicated.
- E. Strength: Where annealed float glass is indicated, provide annealed float glass, heat-strengthened float glass, or fully tempered float glass as needed to comply with "Performance Requirements" Article. Where heat-strengthened float glass is indicated, provide heat-strengthened float glass or fully tempered float glass as needed to comply with "Performance Requirements" Article. Where fully tempered float glass is indicated, provide fully tempered

float glass.

## 2.4 PRIMARY GLASS PRODUCTS

- A. Fully Tempered Float Glass: ASTM C 1048, Kind FT (fully tempered), Condition A (uncoated) unless otherwise indicated, Type I, Class 1 (clear) or class 2 (tinted) as indicated, Quality-Q3.
  - 1. Fully tempered glass shall be heat soaked and tested in accordance with BS EN 14179 “Glass in Buildings-Heat Soaked Thermally Toughened Soda Lime Silicate Safety coat.
- B. Heat-Strengthened Float Glass: ASTM C1048, Kind HS (heat strengthened), Type I, Condition A (uncoated) unless otherwise indicated, Type I, Class 1 (clear), Quality-Q3.
- C. Acid-Etched Glass: Acid-etched glass with decorative pattern evenly etched into glass
  - 1. ASTM C1048, Kind HS (heat strengthened), Type I, Condition A (uncoated) unless otherwise indicated, Type I, Class 1 (clear), Quality-Q3.
- D. Ceramic Frit Spandrel Glass
  - 1. Heat-treated glass with ceramic coating complying with ASTM C 1048, Condition B (spandrel glass, one surface ceramic-coated), Type 1 (transparent, flat), Quality Q3 (Glazing Select), with other requirements as specified.
  - 2. GANA/GTA 66-9-20, Specification for Heat-Strengthened or Fully Tempered Ceramic Enamel Spandrel Glass Used for Building Window/Curtain Walls.
  - 3. Custom color selected by the Architect.
  - 4. Install as part of insulated unit as specified in glazing schedule
- E. Silicone-Coated Spandrel Glass: ASTM C1048, Type I, Condition C, Quality-Q3.
  - 1. Spandrel glass installed as part of Insulated glazing unit where specified with silicone coating on #4 surface
  - 2. Coating as manufactured by ICD High Performance Coating or approved equal

## 2.5 COATED GLASS PRODUCTS

- A. Low Emissivity (Low 'E') Coated Glass: Factory- applied coating complying with ASTM C1376 and resulting in a stable, uniform, nearly invisible coating which imparts average maintained insulating performance of at least R equal to 3.5.
  - 1. Basis-of-Design, Product: Subject to compliance with requirements, provide the following:
    - a. Solarban 70 as supplied by Vitro (formerly PPG Industries, Inc.) or approved equal

## 2.6 LAMINATED GLASS

- A. Laminated Glass: ASTM C1172. Use materials that have a proven record of no tendency to bubble, discolor, or lose physical and mechanical properties after fabrication and installation.

1. Construction: Laminate glass with polyvinyl butyral interlayer to comply with interlayer manufacturer's written instructions.
2. Interlayer Thickness: Provide thickness not less than that indicated and as needed to comply with requirements.
3. Interlayer Color: Clear, or transparent as indicated by glazing type

## 2.7 SEALED INSULATING GLASS UNITS

- A. General: Provide insulating glass units qualified per ASTM E 2190, and complying with other requirements specified below, unless otherwise indicated.
- B. Insulating glass (IGUs): Units shall consist of the following, unless otherwise required to meet project performance requirements:
  1. Glass thickness as indicated on drawings or thicker as required by calculations and delegated design
  2. Air spaces in dimension indicated on drawing filled with 95% argon gas
  3. All Insulating glass shall be dual seal and certified for compliance with seal classification "CBA" by the Insulating Glass Certification Council (IGC) and tested in accordance with the following ASTM Test methods.
    - a. ASTM E2188 Test Method for Insulating Glass Unit Performance
    - b. ASTM E2189 Test Method for Testing Resistance to Fogging in Insulating Glass Units.
  4. Perimeter Spacer: Manufacturer's warm edge spacer construction, color black
  5. Sealing System: Dual seal, with manufacturer's standard polyisobutylene and silicone primary and secondary sealants.
    - a. Secondary seal on structural silicone glazed units shall be a special silicone edge seal certified for use in structural silicone glazing applications over the temperature range and structural loading.
  6. Provide accurate and straight edge deletions of coatings at areas of insulating glass assemblies where Low "E" coatings, metallic coating or other decorative coatings are applied to surfaces scheduled to be in contact with the primary seal of insulating glass units.
  7. Minimum insulated glazing performance: as indicated on the drawings for each glass type
  8. Units shall be certified for compliance with seal classification "CBA" by the Insulating Glass Certification Council (IGCC) or by IGMA, and tested in accordance with the above ASTM Test Methods.
  9. Insulating glass shall conform to the following tolerances:
    - a. Length and Width: + 3.0 mm/ -2.0 mm.
    - b. Diagonal: +/- 3.0 mm.
    - c. Thickness: As agreed +/- 1.0 mm.
    - d. Edge-Deletion of Coating: Minimum 8 mm wide. Width of deletion must be more

- than the width of the secondary seal. Silver layer(s) must be completely removed. Appearance must be uniform.
- e. Primary PIB Seal: Must be complete with no breaks. Appearance must be uniform. PIB bead must overlap coating. No visible bright line when glass is viewed in transmission. The width of the PIB bead shall be  $4.0 \text{ mm} + 3.0/-1.5 \text{ mm}$ .
  - f. Secondary Seal: Nominal  $6 \text{ mm} + 3.0/-1.5 \text{ mm}$ . The minimum width of the secondary silicone seal for IG units that are glazed structurally must be determined according to ASTM C 1249. The secondary seal must be uniformly applied without bubbles, cavities or gaps. Avoid excess sealant that will need to be trimmed off later.
10. Additional requirements and properties for primary and secondary insulating glass seals and spacers:
- a. All glass units shall comply with IGMA Guidelines which limits the dimension of the visible edge seal encroachment into the vision area to be no greater than the "sightline infringement of 3mm (0.12").
  - b. Insulating glass unit hermetic seal to consist of butyl primary and silicone secondary seals with bent, welded, or soldered interpane spacer corners; keyed corners are not acceptable unless also soldered or welded. Spacers shall be aluminum or stainless steel. Locate spacer joint at the top or sides of the units, but in no instances at the sill. Design units to minimize the number of spacer joints. Provide solid keys, embedded in butyl sealant on all four sides, at spacer joints.
  - c. Hermetic seals must be continuous and intimately bonded to both lites of glass. Provide primary seal of uniform depth with a nominal width of  $1/8$  to  $3/16$  in. Hermetic seals shall not be contaminated with debris, fingerprints, or other foreign matter and shall not contain voids or air pockets that decrease the width of the seal below the minimum widths listed in these Specifications, or that breach the seal. The width of the primary seal shall not be less than  $1/16$  in., and the total cumulative length of the primary seal between  $1/16$  in. and  $1/8$  in. shall be less than 12 in. in any one insulating glass unit. The primary seal shall not have a reduced thickness at the corners. An increased thickness of the primary seal at the corners is acceptable.
  - d. Provide secondary seal of uniform depth with a nominal width of  $1/4$  in. Provide a total width of the primary and secondary seal of  $1/2$  in. Units shall meet SIGMA 65-7-2, latest edition. Units shall not contain breather or capillary tubes or similar penetrations.

## 2.8 GLAZING SEALANTS

- A. Glazing sealants shall comply with ASTM C 920 for the specific Type, Grade, and Use, and shall be marked on Shop Drawings.
- B. General:
  - 1. Compatibility: Compatible with one another and with other materials they contact, including glass products, seals of insulating-glass units, and glazing channel substrates, under conditions of service and application, as demonstrated by sealant manufacturer based on testing and field experience.
  - 2. Suitability: Comply with sealant and glass manufacturers' written instructions for selecting glazing sealants suitable for applications indicated and for conditions existing at time of installation.

3. Stress: When exposed to wind load the stress in the silicone sealant of dimensions shown shall not exceed 20 psi with a safety factor of 5:1.
4. Colors of Exposed Glazing Sealants: As selected by Architect from manufacturer's full range.

## 2.9 GLAZING GASKETS

- A. Dense Gaskets: Extruded one piece gaskets of neoprene, complying with ASTM C 864, of profile required for a watertight seal, with a Shore A hardness of 75 plus 5 for hollow profiles and 60 plus 5 for solid profiles.
- B. Cellular Gaskets: Preformed cellular neoprene gaskets of profile required for a watertight seal; complying with ASTM C 509, with a Shore A hardness of 40 plus 5, to provide 20 to 35 percent compression.

## 2.10 MISCELLANEOUS GLAZING MATERIALS

- A. Compatibility: Provide materials with proven record of compatibility with surfaces contacted in installation.
- B. Cleaners, Primers and Sealers: Type recommended by gasket manufacturer.
- C. Setting Blocks: As per ASTM C864; Neoprene, EPDM or silicone blocks as required for compatibility with glazing sealants, 80 to 90 Shore A durometer hardness, 4-inch minimum length by width to suit glass thickness.
- D. Shims: As per ASTM C864; shims used with setting blocks shall be of the same material, hardness, length and width as the setting blocks.
- E. Edge Blocks: Same material as setting blocks, of 50-60 Shore A durometer, of size to limit lateral movement of glass.

## PART 3 - EXECUTION

### 3.1 EXAMINATION

- A. Verify compliance with applicable tolerances; for functioning of weep system; for face and edge clearances; and for effective sealing of joinery. Report conditions detrimental to glazing work. Perform glazing work after unsatisfactory conditions have been corrected.

### 3.2 PREPARATION

- A. Clean glazing channels immediately before glazing. Remove coatings which are not firmly bonded to substrates.

### 3.3 GLAZING, GENERAL

- A. Comply with recommendations of glass manufacturers, of manufacturers of gaskets and other glazing materials, except where more stringent requirements are indicated by referenced glazing standards.

- B. Comply with combined written instructions of manufacturers of glazing materials, sealants, gaskets, and other glazing materials unless more stringent requirements are indicated, including those in referenced glazing publication.
  - 1. Remove burrs and other projections from glazing channel surfaces.
  - 2. Protect glazing surfaces from abrasion and other damage during handling and installation.
  - 3. Apply primers to joint surfaces where required for adhesion of sealants, as determined by preconstruction sealant-substrate testing.
  - 4. Install elastomeric setting blocks in sill channels, sized and located to comply with referenced glazing publication, unless otherwise instructed by plastic glazing manufacturer. Set blocks in thin course of compatible sealant suitable for heel bead.
  - 5. Provide edge blocking to comply with referenced glazing publication unless otherwise instructed by glazing manufacturer.
- C. Glazing channels are intended to provide for necessary bite on glass, minimum edge and face clearances, with reasonable tolerances.
- D. Protect glass from damage. Remove and dispose of glass units with damage or imperfections of kind that impairs performance or appearance.

### 3.4 GLAZING

- A. Install setting blocks one quarter of glass width from each corner but with edge nearest corner not closer than 6 inches from corner or 0.125 times glass width, whichever is greater. Install blocks to prevent movement.
- B. Provide edge blocking to comply with referenced glazing standard. Install edge blocks securely, between the midheight and top of glass.
- C. Set units of glass in each series with uniformity of appearance.
- D. Install sponge and dense gaskets to protrude slightly out of channel, to eliminate dirt and moisture pockets.
- E. Provide adequate anchorage to ensure that gaskets will not "walk" out.

### 3.5 PROTECTION AND CLEANING

- A. Promptly protect installed glass from breakage with crossed streamers attached to framing and held away from glass. Do not apply markers on glass. Remove nonpermanent labels and clean glass.
- B. Protect glass from contact with contaminating substances. If contaminating substances do come into contact with glass, remove immediately as recommended by glass manufacturer.
- C. Examine glass adjacent to or below exterior concrete and masonry at least once a month, for build-up of dirt, scum, alkali deposits or staining. Remove residue as recommended by glass manufacturer.

- D. Remove and replace glass which is broken, chipped, cracked, abraded or damaged in other ways during construction period, including natural causes, accidents and vandalism.
- E. Wash glass on both faces not more than 4 days prior to date scheduled for inspections to establish date of Substantial Completion in each area of Project. Wash glass as recommended by glass manufacturer.
- F. Glass to be cleaned according to:
  - 1. GANA Glass Information Bulletin GANA 01-0300 – “Proper Procedure for Cleaning Architectural Glass Products”.
  - 2. GANA Glass Informational Bulletin GANA TD-02-0402 – “Heat Treated Glass Surfaces are Different”.
- G. Do not use razor blades, scrapers or metal tools to clean glass.

### 3.6 GLAZING SCHEDULE

- 1. Refer to drawings.

**END OF SECTION 08 8000**

## SECTION 088300 -ATHLETIC MIRRORS

### PART 1 - GENERAL

#### 1.1 RELATED DOCUMENTS

- A. Drawings and general provisions of the Contract, including General and Supplementary Conditions and Division 01 Specification Sections, apply to this Section.

#### 1.2 SUMMARY

- A. Section includes the following types of silvered flat glass mirrors:
  - 1. Annealed glass mirrors with safety backing qualifying as safety glazing.

#### 1.3 ACTION SUBMITTALS

- A. Product Data: For each type of product.
  - 1. Mirrors. Include description of materials and process used to produce each type of silvered flat glass mirror specified that indicates sources of glass, glass coating components, edge sealer, and quality-control provisions.
- B. Shop Drawings: Include mirror elevations, edge details, mirror hardware, and attachment details.
- C. Samples: For each type of the following:
  - 1. Mirrors: 12 inches (300 mm) square, including edge treatment on two adjoining edges.
  - 2. Mirror Clips: Full size.
  - 3. Mirror Trim: 12 inches (300 mm) long.

#### 1.4 INFORMATIONAL SUBMITTALS

- A. Product Certificates: For each type of mirror, safety backing, mirror mastic, and aluminum trim channels.
- B. Preconstruction Test Reports: From mirror manufacturer indicating that mirror mastic was tested for compatibility and adhesion with mirror backing and substrates on which mirrors are installed.
- C. Sample Warranty: For special warranty.

#### 1.5 CLOSEOUT SUBMITTALS

- A. Maintenance Data: For mirrors to include in maintenance manuals.

1.6 QUALITY ASSURANCE

- A. Installer Qualifications: A qualified installer who employs glass installers for this Project who are certified under the National Glass Association's Certified Glass Installer Program.

1.7 PRECONSTRUCTION TESTING

- A. Preconstruction Mirror Mastic Compatibility Test: Submit mirror mastic products to mirror manufacturer for testing to determine compatibility of mastic with mirror backing.
  - 1. Testing is not required if data are submitted based on previous testing of mirror mastic products and mirror backing matching those submitted.

1.8 DELIVERY, STORAGE, AND HANDLING

- A. Protect mirrors according to mirror manufacturer's written instructions and as needed to prevent damage to mirrors from moisture, condensation, temperature changes, direct exposure to sun, or other causes.
- B. Comply with mirror manufacturer's written instructions for shipping, storing, and handling mirrors as needed to prevent deterioration of silvering, damage to edges, and abrasion of glass surfaces and applied coatings. Store indoors.

1.9 FIELD CONDITIONS

- A. Environmental Limitations: Do not install mirrors until ambient temperature and humidity conditions are maintained at levels indicated for final occupancy.

1.10 WARRANTY

- A. Special Warranty: Manufacturer agrees to replace mirrors that deteriorate within specified warranty period. Deterioration of mirrors is defined as defects developed from normal use that are not attributed to mirror breakage or to maintaining and cleaning mirrors contrary to manufacturer's written instructions. Defects include discoloration, black spots, and clouding of the silver film.
  - 1. Warranty Period: Five

PART 2 - PRODUCTS

2.1 MANUFACTURERS

- 1. Basis of Design Manufacturer:
  - a. Guardian Ultra Mirror
  - b. Pilkington Mirrorpane Chrome
  - c. Or approved Equal
- B. Source Limitations for Mirrors: Obtain mirrors from single source from single manufacturer.

- C. Source Limitations for Mirror Accessories: Obtain mirror glazing accessories from single source.
- D. Silvered Flat Glass Mirrors:
  - 1. ASTM C1503 manufactured using copper-free, low-lead mirror coating process
  - 2. Annealed monolithic glass mirrors of mirror select glazing quality, clear
  - 3. Nominal Thickness: 6.0 mm
- E. Safety Glazing Products: For film-backed mirrors, provide products that comply with 16 CFR 1201, Category II and ANSI Z97.1.

## 2.2 MISCELLANEOUS MATERIALS

- A. Setting Blocks: Elastomeric material with a Shore, Type A durometer hardness of 85, plus or minus 5.
- B. Edge Sealer: Coating compatible with glass coating and approved by mirror manufacturer for use in protecting against silver deterioration at mirrored glass edges.
- C. Film Backing for Safety Mirrors: Film backing and pressure-sensitive adhesive; both compatible with mirror backing paint, as certified by mirror manufacturer and mastic.
  - 1. Basis of Design:
    - a. CRL category 2 shatterproof safety tape for mirrors
    - b. Or approved equal
- D. Mirror Mastic: An adhesive setting compound, asbestos-free, produced specifically for setting mirrors and certified by both mirror and mastic manufacturer as compatible with glass coating and substrates on which mirrors will be installed. Mastic is to be tested for compatibility with safety backing with written approval provided by film manufacturer.
  - 1. Basis of Design :
    - a. CRL Gunther Premier Plus Mirror Mastic
    - b. Or approved Equal

## 2.3 MIRROR HARDWARE

- A. Aluminum J-Channels: Aluminum extrusions with a return deep enough to produce a glazing channel to accommodate mirrors of thickness indicated and in lengths required to cover edges of mirrors in a single piece.
  - 1. Bottom Trim and side: J-channels formed with front leg and back leg not less than 3/8 and 7/8 inch in height, respectively, and a thickness of not less than 0.04 inch
    - a. Basis of Design Manufacturer:
      - 1) CRL Standard “J” channel
      - 2) Or approved Equal
  - 2. Top Trim: J-channels formed with front leg and back leg not less than 5/8 and 1 inch in height, respectively, and a thickness of not less than 0.04 inch .
    - a. Basis of Design Manufacturer:
      - 1) CRL Deep “J” Channel
      - 2) Or approved Equal

3. Finish: Clear bright anodized.

- B. Fasteners: Fabricated of same basic metal and alloy as fastened metal and matching it in finished color and texture where fasteners are exposed.
- C. Anchors and Inserts: Provide devices as required for mirror hardware installation. Provide toothed or lead-shield, expansion-bolt devices for drilled-in-place anchors. Provide galvanized anchors and inserts for applications on inside face of exterior walls and where indicated.

## 2.4 FABRICATION

- A. Fabricate mirrors in the shop to greatest extent possible.
- B. Fabricate cutouts for notches and holes in mirrors without marring visible surfaces. Locate and size cutouts so they fit closely around penetrations in mirrors.
- C. Mirror Edge Treatment: Flat polished
  - 1. Seal edges of mirrors with edge sealer after edge treatment to prevent chemical or atmospheric penetration of glass coating.
  - 2. Require mirror manufacturer to perform edge treatment and sealing in factory immediately after cutting to final sizes.
- D. Film-Backed Safety Mirrors: Apply film backing with adhesive coating over mirror backing paint, as recommended in writing by film-backing manufacturer, to produce a surface free of bubbles, blisters, and other imperfections.

## PART 3 - EXECUTION

### 3.1 EXAMINATION

- A. Examine substrates, over which mirrors are to be mounted, with Installer present, for compliance with installation tolerances, substrate preparation, and other conditions affecting performance of the Work.
- B. Verify compatibility with and suitability of substrates, including compatibility of existing finishes or primers with mirror mastic.
- C. Proceed with installation only after unsatisfactory conditions have been corrected and surfaces are dry.

### 3.2 PREPARATION

- A. Comply with mastic manufacturer's written installation instructions for preparation of substrates, including coating substrates with mastic manufacturer's special bond coating where applicable.

### 3.3 INSTALLATION

- A. General: Install mirrors to comply with mirror manufacturer's written instructions and with referenced GANA publications. Mount mirrors accurately in place in a manner that avoids distorting reflected images.
  - 1. GANA Publications: "Laminated Glazing Reference Manual," "Glazing Manual" and "Mirrors, Handle with Extreme Care: Tips for the Professional on the Care and Handling of Mirrors."
- B. Provide a minimum airspace of 1/8 inch between back of mirrors and mounting surface for air circulation between back of mirrors and face of mounting surface.
- C. Install mirrors with mastic and mirror hardware. Attach mirror hardware securely to mounting surfaces with mechanical fasteners installed with anchors or inserts as applicable. Install fasteners so heads do not impose point loads on backs of mirrors.
  - 1. Aluminum J-Channels: Provide setting blocks 1/8 inch thick by 4 inches long at quarter points. To prevent trapping water, provide, between setting blocks, two slotted weeps not less than 1/4 inch wide by 3/8 inch long at bottom channel.
  - 2. Install mastic as follows:
    - a. Apply barrier coat to mirror backing where approved in writing by manufacturers of mirrors and backing material.
    - b. Apply mastic to comply with mastic manufacturer's written instructions for coverage and to allow air circulation between back of mirrors and face of mounting surface.
    - c. After mastic is applied, align mirrors and press into place while maintaining a minimum airspace of 1/8 inch between back of mirrors and mounting surface.

### 3.4 CLEANING AND PROTECTION

- A. Protect mirrors from breakage and contaminating substances resulting from construction operations.
- B. Do not permit edges of mirrors to be exposed to standing water.
- C. Maintain environmental conditions that prevent mirrors from being exposed to moisture from condensation or other sources for continuous periods of time.
- D. Clean exposed surface of mirrors not more than four days before date scheduled for inspections that establish date of Substantial Completion. Clean mirrors as recommended in writing by mirror manufacturer.

END OF SECTION 088300

## SECTION 089000 - LOUVERS

### PART 1 GENERAL

#### 1.1 GENERAL REQUIREMENTS

- A. Work of this Section, as shown or specified, shall be in accordance with the requirements of the Contract Documents.

#### 1.2 SECTION INCLUDES

- A. Work of this Section includes all labor, materials, equipment, and services necessary to complete the louvers as shown on the drawings and/or specified herein, including, but not necessarily limited to, the following:
  - 1. Aluminum louvers.
  - 2. Blank off panels.
  - 3. Bird screens.

#### 1.3 RELATED SECTIONS

- A. Masonry - Section 042000.
- B. Sealant work - Section 079200.
- C. Louvers in metal doors - Section 081113.
- D. Louvers connected to ductwork - Division 23.

#### 1.4 QUALITY ASSURANCE

- A. Structural Performance: Provide exterior metal louvers capable of withstanding the effects of loads and stresses from wind and snow and normal thermal movement without evidencing permanent deformation of louver components including blades, frames, and supports; noise or metal fatigue caused by louver blade rattle or flutter or permanent damage to fasteners and anchors.
  - 1. Wind Load: ASCE-7-16 or greater if required by applicable Building Code.
- B. Thermal Movements: Provide louvers that allow for thermal movements resulting from the following maximum change (range) in ambient and surface temperatures by preventing buckling, opening of joints, overstressing of components, and other detrimental effects.
  - 1. Temperature Change (Range): 120 deg. F., ambient; 180 deg. F, material surfaces.
- C. Comply with SMACNA "Architectural Sheet Metal Manual" recommendations for fabrication, construction details and installation procedures, except as otherwise indicated.

- D. Field Measurements: Verify size, location and placement of louver units prior to fabrication.
- E. Shop Assembly: Coordinate field measurements and shop drawings with fabrication and shop assembly to minimize field adjustments, splicing, mechanical joints and field assembly of units. Preassemble units in shop to greatest extent possible and disassemble as necessary for shipping and handling limitations. Clearly mark units for reassembly and coordinated installation.
- F. Louvers shall be tested and certified in accordance with AMCA 500-L

#### 1.5 SUBMITTALS

- A. Product Data: Submit manufacturer's specifications, certified test data, where applicable, and installation instructions for required products, including finishes.
- B. Shop Drawings: Submit shop drawings for fabrication and erection of louver units and accessories. Include plans, elevations and details of sections and connections to adjoining work. Indicate materials, finishes, fasteners, joinery and other information to determine compliance with specified requirements.
- C. Samples: Submit six (6) inch square samples of each required finish. Prepare samples on metal of same gauge and alloy to be used in work. Where normal color and texture variations are to be expected, include two (2) or more units in each sample showing limits of such variations.

#### 1.6 PRODUCT HANDLING

- A. Protection: Use all means necessary to protect the materials of this Section before, during and after installation and to protect the installed work and materials of all other trades.
- B. Replacements: In the event of damage, immediately make all repairs and replacements necessary.

#### 1.7 WARRANTY

- A. Finish shall be warranted for a period of 20 years, starting from date of Substantial Completion of the Project.

### PART 2 PRODUCTS

#### 2.1 Louvers:

- A. **FOR LOUVERS installed within a wall provide:** 4" storm-resistant fixed horizontal Louver Model RS-4700 as manufactured by Construction Specialties, Inc. or other approved equal model by Air Performance, Airolite, American Warming or approved equal and Ventilating meeting these performance specifications.
  - 1. **Material:** Heads, sills, jambs and mullions to be one-piece structural aluminum members with integral caulking slot and retaining beads. Mullions shall be sliding

interlock type. Blades to be one-piece aluminum extrusions with front lip gutter and multiple secondary gutters designed to catch and direct water to sill. Louvers to be supplied with 4" (101.6mm) high by full depth sill flashings formed from minimum 0.050" (1.27mm) thick aluminum. Sill flashings to have welded side panels. Louvers and sill flashings to be installed in accordance with the manufacturer's recommended procedures to ensure complete water integrity performance of the louver system.

2. Material minimum thickness to be as follows:
  - a. Heads, sills, jambs and mullions: 0.075"
  - b. Fixed blades: 0.060"
3. AMCA Performance: A 4' x 4' unit shall conform to the following:
  - a. Free Area: 8.25 sq. ft. min 51.6% free area or greater.
  - b. Free area velocity at beginning point of water penetration: 1250ft/min
  - c. Intake Pressure drop must not exceed 0.37" in. WG. at 1050 fpm free area velocity.
  - d. Exhaust pressure drop must not exceed 0.50 in WG at 1357 fpm free area velocity
4. Wind Driven Rain performance: The louver test was based on a 39.370"(1.00m) x 39.370" (1.00 m) core area. Unit tested at a rainfall rate of 3.0 inches per hour (75 mm/hr) and with a wind directed to the face of the louver at a velocity 29.1-mph (13 m/s). The test data shall show the water penetration effectiveness rating at each corresponding ventilation rate

Core Ventilation Rate (m/s):	0.0	0.5	1.0	1.5	2.0	2.5	3.0	3.5	4.0	4.5	5.0
Core Ventilation Rate (ft/min):	0	132	197	287	377	469	600	684	773	880	985
Free Area Velocity (ft/min):	0	231	344	502	659	820	1049	1195	1351	1538	1721
Rating Effectiveness @ 29 & 3:	A	A	A	A	A	A	A	B	C	D	D
Effectiveness Ratio @ 29 & 3:					99.6	99.5	99.0	95.7	86.3	78.1	66.4
Core Ventilation Rate (m/s):	0.0	0.5	1.0	1.5	2.0	2.5	3.0	3.5	4.0	4.5	5.0
Core Ventilation Rate (ft/min):	0	94	197	290	399	499	570	686	796	879	968
Free Area Velocity (ft/min):	0	164	344	507	697	872	996	1199	1391	1536	1692
Rating Effectiveness @ 50 & 8:	A	A	A	A	B	B	B	C	C	D	D
Effectiveness Ratio @ 50 & 8:		99.4	99.2	99.0	98.4	97.1	95.1	89.5	81.2	75.7	68.5
Effectiveness Rating:	A = 1 to 0.99		B = 0.989 to 0.95		C = 0.949 to 0.80		D = 0.80 to 0				

5. High-Performance Organic Finish: AA-C12C42R1x (Chemical Finish: Cleaned with inhibited chemicals; Chemical Finish: Acid-chromate-fluoride-phosphate conversion coating; Organic Coating: As specified below). Prepare, pretreat, and apply coating to exposed metal surfaces to comply with coating and resin manufacturer's written instructions.
  - a. Fluoropolymer Two-Coat System: Manufacturer's standard two-coat, thermocured system consisting of specially formulated inhibitive primer and

fluoropolymer color topcoat containing not less than 70 percent polyvinylidene fluoride resin by weight; complying with AAMA 2605.

- b. Custom color and gloss as selected by the Architect.

6. Insect Screen

- a. All louvers to be furnished with insect screens, finish to match louvers.
- b. Frames to have mitered corners and corner locks.

- 7. Blank-off panels to be 2" (50.8mm) thick and to be faced on both sides with 0.032" (0.81 mm) thick aluminum sheet. Panels to be fabricated with a mineral wool core (#6 density) having an R-value of 8 (0F\*ft<sup>2</sup>\*h/Btu). Panel perimeter frame to be 0.050" (1.27mm) thick-formed aluminum channels. Panel frame to be mitered at the corners. Panels to be finished black, unless otherwise noted.

- B. Fastenings: Fasteners for exterior application shall be stainless steel. Provide types, gauges and lengths to suit unit installation conditions. Use Phillips flat head machine screws for exposed fasteners, unless otherwise indicated.

- C. Anchors and Inserts: Use non-ferrous metal or hot dip galvanized anchors and inserts for exterior installations and elsewhere as required for corrosion resistance. Use steel or lead expansion bolt devices for drilled in place anchors. Furnish inserts, as required, to be set into concrete or masonry work.

- D. Fastenings: Fasteners for exterior application shall be stainless steel. Provide types, gauges and lengths to suit unit installation conditions. Use Phillips flat head machine screws for exposed fasteners, unless otherwise indicated.

- E. Anchors and Inserts: Use non-ferrous metal or hot dip galvanized anchors and inserts for exterior installations and elsewhere as required for corrosion resistance. Use steel or lead expansion bolt devices for drilled in place anchors. Furnish inserts, as required, to be set into concrete or masonry work.

- F. Bituminous Paint: SSPC-Paint 12 (cold applied asphalt mastic).

2.2 FABRICATION, GENERAL

- A. Fabricate frames including integral sills to suit adjacent construction with tolerances for installation, including application of sealants in joints between louvers and adjoining work.

- B. Include supports, anchorages, and accessories required for complete assembly.

- C. Provide sill extensions made of same material as louvers, where indicated, or required for drainage to exterior and to prevent water penetrating to interior.

- D. Join frame members to one another and to stationary louver blades by welding or mechanical fasteners as is standard for manufacturer, except where indicated otherwise or where field bolted connections between frame members are necessary by size of louvers. Maintain equal blade spacing, including separation between blades and frames at head and sill, to produce uniform appearance.

## **PART 3 EXECUTION**

### **3.1 INSPECTION**

- A. Examine the areas and conditions where louvers are to be installed and correct any conditions detrimental to the proper and timely completion of the work. Do not proceed with the work until unsatisfactory conditions are corrected to permit proper installation of the work.

### **3.2 PREPARATION**

- A. Coordinate setting drawings, diagrams, templates, instructions and directions for the installation of anchorages which are to be embedded in masonry construction. Coordinate the delivery of such items to the project site.

### **3.3 INSTALLATION**

- A. Comply with manufacturer's instructions and recommendations for installation of the work.
- B. Verify dimensions of supporting structure at the site by accurate field measurements so that the work will be accurately designated, fabricated and fitted to the structure.
- C. Anchor louvers to the building substructure.
- D. Erection Tolerances:
  - 1. Maximum variation from plane or location shown on the approved shop drawings: 1/8" per 12 feet of length, but not exceeding 1/2" in any total building length or portion thereof (non-cumulative).
  - 2. Maximum offset from true alignment between two members abutting end to end, edge to edge in line or separated by less than 3": 1/16" (shop or field joints). This limiting condition shall prevail under both load and no load conditions.
- E. Cut and trim component parts during erection only with the approval of the manufacturer or fabricator, and in accordance with his recommendations. Restore finish completely. Remove and replace members where cutting and trimming has impaired the strength or appearance of the assembly.
- F. Do not erect warped, bowed, deformed or otherwise damaged or defaced members. Remove and replace any members damaged in the erection process as directed.
- G. Set units level, plumb and true to line, with uniform joints.

### **3.4 PROTECTION**

- A. Protect installed materials to prevent damage by other trades. Use materials that may be easily removed without leaving residue or permanent stains.

### 3.5 ADJUSTING AND CLEANING

- A. Immediately clean exposed surfaces of the louvers to remove fingerprints and dirt accumulation during the installation process. Do not let soiling remain until the final cleaning.
- B. Before final inspection, clean exposed surfaces with water and a mild soap or detergent not harmful to the material finishes. Thoroughly rinse surfaces and dry.
- C. Restore louvers and accessory components damaged during installation and construction so no evidence remains of corrective work. If results of restoration are unsuccessful, as determined by the Architect, remove damaged materials and replace with new materials.
  - 1. Touch up minor abrasions in finishes with a compatible air-dried coating that matches the color and gloss of the factory applied coating.

END OF SECTION

## **SECTION 09 2216 - NON-STRUCTURAL METAL FRAMING**

### **PART 1 - GENERAL**

#### **1.1 RELATED DOCUMENTS**

- A. Drawings and general provisions of the Contract, including General and Supplementary Conditions and Division 01 Specification Sections, apply to this Section.

#### **1.2 SUMMARY**

- A. Section Includes:
  - 1. Non-load-bearing steel framing systems for interior gypsum board assemblies.
  - 2. Suspension systems for interior gypsum ceilings, soffits, and grid systems.

#### **1.3 ACTION SUBMITTALS**

- A. Product Data: For each type of product.
- B. Evaluation Reports: For equivalent gauge steel studs and runners and firestop tracks, submit evaluation reports certified under an independent third-party inspection program administered by an agency accredited by IAS to ICC-ES AC98 accreditation criteria for inspection agencies, from ICC-ES, or other qualified testing agency acceptable to authorities having jurisdiction.

#### **1.4 QUALITY ASSURANCE**

- A. Code-Compliance Certification of Studs and Tracks: Provide documentation that framing members are certified in accordance with the product-certification program of the Steel Framing Industry Association (SFIA) or a similar organization that provides a verifiable code-compliance program.

#### **1.5 DELIVERY, STORAGE, AND HANDLING**

- A. Protect cold-formed metal framing from corrosion, deformation, and other damage during delivery, storage, and handling as required by AISI S202, "Code of Standard Practice for Cold-Formed Steel Framing."

### **PART 2 - PRODUCTS**

#### **2.1 PERFORMANCE REQUIREMENTS**

- A. Fire-Test-Response Characteristics: For fire-resistance-rated assemblies that incorporate non-load-bearing steel framing, provide materials and construction identical to those tested in assembly indicated, according to ASTM E 119 by an independent testing agency.
- B. STC-Rated Assemblies: For STC-rated assemblies, provide materials and construction identical to those tested in assembly indicated, according to ASTM E 90 and classified according to ASTM E

413 by an independent testing agency.

- C. For framing systems the gage specified is the minimum gage.
  - 1. Increase gage as required to limit the deflection of partitions with painted finish to 1/240 without increasing the thickness of the partition
  - 2. Increase gage as required to limit the deflection of partitions with tiled or other hard finish to 1/360 without increasing the thickness of the partition
  - 3. Lateral loading of 5psf should be used except where higher pressures are indicated.
- D. Design framing systems in accordance with AISI S220, "North American Specification for the Design of Cold-Formed Steel Framing - Nonstructural Members," unless otherwise indicated.

## 2.2 FRAMING SYSTEMS

- A. Provide all framing components from a single source manufacturer
  - 1. Manufacturers:
    - a. ClarkDietrich
    - b. MarinoWare
    - c. SCAFCO
    - d. Or approved equal
- B. Framing Members, General: Comply with ASTM C 754 for conditions indicated.
  - 1. Steel Sheet Components: Comply with AISI S220 requirements for metal unless otherwise indicated.
  - 2. Protective Coating: Comply with AISI S220; ASTM A653/A653M, G40 (Z120) hot-dip galvanized; or coating with equivalent corrosion resistance, unless otherwise indicated. Galvannealed products are unacceptable.
    - a. Coating shall demonstrate equivalent corrosion resistance with an evaluation report acceptable to authorities having jurisdiction.
- C. Studs and Runners: AISI S220. Use either steel studs and runners or steel studs and runners of equivalent minimum base-steel thickness.
  - 1. Steel Studs and Runners:
    - a. Minimum Base-Steel Thickness: .0296 inch typical, 0.0329 inch at tiled walls.
    - b. Depth: As indicated on Drawings.
  - 2. Equivalent Gauge Steel Studs and Runners, not acceptable at tiled walls:
    - a. Minimum Base-Steel Thickness: 0.0181 inch.
    - b. Depth: As indicated on Drawings.

D. Slip-Type Head Joints: Where indicated, provide one of the following:

1. Single Long-Leg Runner System: AISI S220 top runner with 2-inch- deep flanges in thickness not less than indicated for studs, installed with studs friction fit into top runner and with continuous bridging located within 12 inches of the top of studs to provide lateral bracing.
2. Deflection Track: Steel sheet top runner manufactured to prevent cracking of finishes applied to interior partition framing resulting from deflection of structure above; in thickness not less than indicated for studs and in width to accommodate depth of studs.

E. Firestop Tracks: not allowed.

F. Flat Strap and Backing Plate: Steel sheet for blocking and bracing in length and width indicated.

1. Minimum Base-Steel Thickness: 0.0566 in (16 ga.)

G. Cold-Rolled Channel Bridging: Steel, 0.053-inch minimum base-steel thickness, with minimum 1/2-inch- wide flanges.

1. Depth: 1-1/2 inches.
2. Clip Angle: Not less than 1-1/2 by 1-1/2 inches, 0.068-inch- thick, galvanized steel.

H. Hat-Shaped, Rigid Furring Channels: AISI S220.

1. Minimum Base-Steel Thickness: 0.0296 inch.
2. Depth: 7/8 inch.

I. Resilient Furring Channels: 1/2-inch- deep, steel sheet members designed to reduce sound transmission.

1. Configuration: Asymmetrical or hat shaped.

J. Cold-Rolled Furring Channels: 0.053-inch base-steel thickness, with minimum 1/2-inch- wide flanges.

1. Depth: 3/4 inch.
2. Furring Brackets: Adjustable, corrugated-edge type of steel sheet with minimum base-steel thickness of 0.0296 inch.
3. Tie Wire: ASTM A 641/A 641M, Class 1 zinc coating, soft temper, 0.062-inch- diameter wire, or double strand of 0.048-inch- diameter wire.

K. Z-Shaped Furring: With slotted or non-slotted web, face flange of 1-1/4 inches, wall attachment flange of 3/4 inch, minimum base-steel thickness of 0.018 inch, and depth required to fit insulation thickness indicated.

## 2.3 SUSPENSION SYSTEMS

A. Size ceiling support components to comply with the requirements of ASTM C 754.

- B. Tie Wire: ASTM A 641/A 641M, Class 1 zinc coating, soft temper, 0.062-inch- diameter wire, or double strand of 0.048-inch- diameter wire.
- C. Hanger Attachments to Concrete:
  - 1. Anchors: Fabricated from corrosion-resistant materials with holes or loops for attaching wire hangers and capable of sustaining, without failure, a load equal to 5 times that imposed by construction as determined by testing according to ASTM E 488 by an independent testing agency.
    - a. Type: Post-installed, expansion anchor.
  - 2. Powder-Actuated Fasteners: Suitable for application indicated, fabricated from corrosion-resistant materials with clips or other devices for attaching hangers of type indicated, and capable of sustaining, without failure, a load equal to 10 times that imposed by construction as determined by testing according to ASTM E 1190 by an independent testing agency.
- D. Flat Hangers: Steel sheet, 1 by 3/16 inch by length indicated.
- E. Carrying Channels: Cold-rolled, commercial-steel sheet with a base-steel thickness of 0.053 inch and minimum 1/2-inch- wide flanges.
  - 1. Depth: 1-1/2 inches.
- F. Furring Channels (Furring Members):
  - 1. Cold-Rolled Channels: 0.053-inch base-steel thickness, with minimum 1/2-inch- wide flanges, 3/4 inch deep.
  - 2. Steel Studs and Runners: AISI S220.
    - a. Minimum Base-Steel Thickness: 0.0296 inch.
    - b. Depth: 2-1/2 inches.
  - 3. Equivalent Gauge Steel Studs and Runners: AISI S220.
    - a. Minimum Base-Steel Thickness: 0.0181 inch.
    - b. Depth: 2-1/2 inches.
  - 4. Hat-Shaped, Rigid Furring Channels: AISI S220, 7/8 inch deep.
    - a. Minimum Base-Steel Thickness: 0.0296 inch.
  - 5. Resilient Furring Channels: 1/2-inch- deep members designed to reduce sound transmission.
    - a. Configuration: Asymmetrical or hat shaped.
- G. Grid Suspension System for Gypsum Board Ceilings: ASTM C 645, direct-hung system composed of main beams and cross-furring members that interlock.
  - 1. Products: Subject to compliance with requirements, products that may be incorporated into

the Work include, but are not limited to, the following:

- a. Armstrong World Industries, Inc.; Drywall Grid Systems.
- b. Chicago Metallic Corporation; Drywall Grid System.
- c. USG Corporation; Drywall Suspension System.
- d. Or approved equal

## 2.4 SOUND ISOLATION CLIP

- A. Where noted provide resilient sound isolation clips.
- B. Basis of design: IsoMax Resilient Sound Isolation Clip by Kinetics Noise Control.
  1. Alternate option: Sound Clip (CDSC) by ClarkDietrich
  2. Or approved equal

## 2.5 AUXILIARY MATERIALS

- A. General: Provide auxiliary materials that comply with referenced installation standards.
  1. Fasteners for Metal Framing: Of type, material, size, corrosion resistance, holding power, and other properties required to fasten steel members to substrates.
- B. Isolation Strip at Exterior Walls: Provide one of the following:
  1. Asphalt-Saturated Organic Felt: ASTM D 226, Type I (No. 15 asphalt felt), non- perforated.
  2. Foam Gasket: Adhesive-backed, closed-cell vinyl foam strips that allow fastener penetration without foam displacement, 1/8 inch thick, in width to suit steel stud size.

## PART 3 - EXECUTION

### 3.1 EXAMINATION

- A. Examine areas and substrates, with Installer present, and including welded hollow-metal frames, cast-in anchors, and structural framing, for compliance with requirements and other conditions affecting performance of the Work.
- B. Proceed with installation only after unsatisfactory conditions have been corrected.

### 3.2 INSTALLATION, GENERAL

- A. Installation Standard: ASTM C 754.
  1. Gypsum Board Assemblies: Also comply with requirements in ASTM C 840 that apply to framing installation.
- B. Install supplementary framing, and blocking to support fixtures, equipment services, heavy trim,

grab bars, toilet accessories, furnishings, or similar construction.

- C. Install bracing at terminations in assemblies.
- D. Do not bridge building control and expansion joints with non-load-bearing steel framing members. Frame both sides of joints independently.

### 3.3 INSTALLING FRAMED ASSEMBLIES

- A. Install framing system components according to spacings indicated, but not greater than spacings required by referenced installation standards for assembly types.
  - 1. Single-Layer Application: 24 inches o.c. unless otherwise indicated.
  - 2. Multilayer Application: 24 inches o.c. unless otherwise indicated.
  - 3. Tile Backing Panels: 16 inches o.c. unless otherwise indicated.
- B. Where studs are installed directly against exterior masonry walls or dissimilar metals at exterior walls, install isolation strip between studs and exterior wall.
- C. Install studs so flanges within framing system point in same direction.
- D. Install tracks (runners) at floors and overhead supports. Extend framing full height to structural supports or substrates above suspended ceilings except where partitions are indicated to terminate at suspended ceilings. Continue framing around ducts penetrating partitions above ceiling.
  - 1. Slip-Type Head Joints: Where framing extends to overhead structural supports, install to produce joints at tops of framing systems that prevent axial loading of finished assemblies.
  - 2. Door Openings: Screw vertical studs at jambs to jamb anchor clips on door frames; install runner track section (for cripple studs) at head and secure to jamb studs.
    - a. Install two studs at each jamb unless otherwise indicated.
    - b. Install cripple studs at head adjacent to each jamb stud, with a minimum 1/2-inch clearance from jamb stud to allow for installation of control joint in finished assembly.
    - c. Extend jamb studs through suspended ceilings and attach to underside of overhead structure.
  - 3. Other Framed Openings: Frame openings other than door openings the same as required for door openings unless otherwise indicated. Install framing below sills of openings to match framing required above door heads.
  - 4. Fire-Resistance-Rated Partitions: Install framing to comply with fire-resistance-rated assembly indicated and support closures and to make partitions continuous from floor to underside of solid structure.
    - a. Firestop Track: Where indicated, install to maintain continuity of fire-resistance-rated assembly indicated.
  - 5. Sound-Rated Partitions: Install framing to comply with sound-rated assembly indicated.

E. Direct Furring:

1. Screw to wood framing.
2. Attach to concrete or masonry with stub nails, screws designed for masonry attachment, or powder-driven fasteners spaced 24 inches o.c.

F. Z-Furring Members:

1. Erect insulation, specified in Division 07 Section "Thermal Insulation," vertically and hold in place with Z-furring members spaced 24 inches o.c.
2. Except at exterior corners, securely attach narrow flanges of furring members to wall with concrete stub nails, screws designed for masonry attachment, or powder-driven fasteners spaced 24 inches o.c.
3. At exterior corners, attach wide flange of furring members to wall with short flange extending beyond corner; on adjacent wall surface, screw-attach short flange of furring channel to web of attached channel. At interior corners, space second member no more than 12 inches from corner and cut insulation to fit.

G. Sound Isolation Clips shall be spaced at 16 inches on center, vertical and horizontal in accordance with manufacturer testing and written recommendations.

H. Installation Tolerance: Install each framing member so fastening surfaces vary not more than 1/8 inch from the plane formed by faces of adjacent framing.

3.4 INSTALLING SUSPENSION SYSTEMS

A. Install ceiling support components to comply with the local Building Code and with requirements of ASTM C 754.

B. Install suspension system components according to spacings indicated, but not greater than spacings required by referenced installation standards for assembly types.

1. Hangers: 48 inches o.c.
2. Carrying Channels (Main Runners): 48 inches o.c.
3. Furring Channels (Furring Members): 16 inches o.c.

C. Isolate suspension systems from building structure where they abut or are penetrated by building structure to prevent transfer of loading imposed by structural movement.

D. Suspend hangers from building structure as follows:

1. Install hangers plumb and free from contact with insulation or other objects within ceiling plenum that are not part of supporting structural or suspension system.
  - a. Splay hangers only where required to miss obstructions and offset resulting horizontal forces by bracing, countersplaying, or other equally effective means.
2. Where width of ducts and other construction within ceiling plenum produces hanger spacings

that interfere with locations of hangers required to support standard suspension system members, install supplemental suspension members and hangers in the form of trapezes or equivalent devices.

- a. Size supplemental suspension members and hangers to support ceiling loads within performance limits established by referenced installation standards.
- 3. Flat Hangers: Secure to structure, including intermediate framing members, by attaching to inserts, eye screws, or other devices and fasteners that are secure and appropriate for structure and hanger, and in a manner that will not cause hangers to deteriorate or otherwise fail.
- E. Seismic Bracing: Sway-brace suspension systems with hangers used for support.
- F. Grid Suspension Systems: Attach perimeter wall track or angle where grid suspension systems meet vertical surfaces. Mechanically join main beam and cross-furring members to each other and butt-cut to fit into wall track.
- G. Installation Tolerances: Install suspension systems that are level to within 1/8 inch in 12 feet measured lengthwise on each member that will receive finishes and transversely between parallel members that will receive finishes.

END OF SECTION 09 2216

## **SECTION 09 2900 - GYPSUM BOARD**

### **PART 1 - GENERAL**

#### **1.1 SUMMARY**

**A. Work Included:** The Work of this Section includes:

1. Gypsum board wall and ceiling applications screw-attached to steel systems.
2. Tile Backing Panels.
3. Finishing with joint tape-and-compound.
4. Acoustical batt insulation (SAFB).
5. Acoustical sealants
6. Electrical and low-voltage box acoustical pads in acoustical walls and other places where acoustical seal is required.
7. Metal trim.

#### **1.2 ACTION SUBMITTALS**

- A. Product Data:** Submit manufacturer's specifications and installation instructions for materials for gypsum board and tile backer panels. Submit other data as required to show compliance with requirements.
- B. Samples:** Full-size Sample in 12 inch long length for each trim accessory indicated.

#### **1.3 INFORMATION SUBMITTALS**

- A. Product Certificates:** Submit manufacturer's certificates showing compliance with performance requirements for each type of gypsum board product from manufacturer.
- B. Maintenance Data:** Submit manufacturer's maintenance instructions or recommendations for gypsum board products to include in maintenance manuals.

#### **1.4 QUALITY ASSURANCE**

- A. Gypsum Board Terminology Standard:** GA-505 by Gypsum Association.
- B. Fire-Resistance-Rated Assemblies:** For fire-resistance-rated assemblies, provide materials and construction identical to those tested in assembly indicated according to ASTM E 119 by an independent testing agency.
- C. STC-Rated Assemblies:** For STC-rated assemblies, provide materials and construction identical to those tested in assembly indicated according to ASTM E 90 and classified according to ASTM E 413 by an independent testing agency.

1. STC Ratings: As indicated within the Partition Types on the Drawings.
- D. Mockups: Before beginning gypsum board installation, install mockups of at least 10 sq ft of perforated gypsum board with surrounding drywall border to demonstrate aesthetic effects and set quality standards for materials and execution.
  1. Apply or install final painting, on exposed surfaces for review of mockups.
  2. Simulate finished lighting conditions for review of mockups.
  3. Approved mockups may become part of the completed Work if undisturbed at time of Substantial Completion.

## 1.5 DELIVERY, STORAGE AND HANDLING

- A. Store materials inside under cover and keep them dry and protected against weather, condensation, direct sunlight, construction traffic, and other potential causes of damage. Stack panels flat and supported on risers on a flat platform to prevent sagging.

## 1.6 FIELD CONDITIONS

- A. Environmental Limitations: Comply with ASTM C 840 requirements or gypsum board manufacturer's written recommendations, whichever are more stringent.
- B. Do not install panels that are wet, those that are moisture damaged, and those that are mold damaged.
  1. Indications that panels are wet or moisture damaged include, but are not limited to, discoloration, sagging, or irregular shape.
  2. Indications that panels are mold damaged include, but are not limited to, fuzzy or splotchy surface contamination and discoloration.

## PART 2 - PRODUCTS

### 2.1 INTERIOR GYPSUM BOARD

- A. General: Complying with ASTM C 1396, as applicable to type of gypsum board indicated.
  1. Use: Typical areas indicated.
  2. Core: 5/8 inch, Type X.
  3. Long Edges: Tapered.
- B. Mold-Resistant Gypsum Board: ASTM C 1396/C 1396M. With moisture- and mold-resistant core and paper surfaces.
  1. Use: At toilet room walls without tile, janitor closets and other areas as indicated
  2. Core: 5/8 inch, Type X.
  3. Long Edges: Tapered.

- C. Impact-Resistant Gypsum Board: ASTM C 1396/C 1396M gypsum board, tested according to GYPSUM BOARD

ASTM C 1629/C 1629M.

1. Locations:
  - a. All corridors & within lobby, outer layer only where multiple layers to be used
2. Products: Subject to compliance with requirements, provide the following:
  - a. USG Corporation; USG Sheetrock® Brand Mold Tough® VHI (Very High Impact) Firecode® Core or approved equal.
3. Other Products:
  - a. Continental Building Products, LLC; Protecta HIR 300 Type X with Mold Defense.
  - b. National Gypsum Company; eXP Interior Extreme IR or Hi-Impact Brand XP Fire- Shield Wallboard.
  - c. Temple-Inland Building Products by Georgia-Pacific; Comfort Guard IR.
  - d. Or approved equal.
4. Core: 5/8 inch, Type X, unless otherwise indicated.
5. Surface Abrasion: ASTM C 1629/C 1629M, meets or exceeds Level 1 requirements, unless otherwise indicated..
6. Indentation: ASTM C 1629/C 1629M, meets or exceeds Level 1 requirements, unless otherwise indicated..
7. Soft-Body Impact: ASTM C 1629/C 1629M, meets or exceeds Level 1 requirements, unless otherwise indicated..
8. Hard-Body Impact: ASTM C 1629/C 1629M, meets or exceeds Level 1 Level 2 Level 3 requirements according to test in Annex A1, unless otherwise indicated..
9. Long Edges: Tapered.
10. Mold Resistance: ASTM D 3273, score of 10 as rated according to ASTM D 3274.

## 2.2 TILE BACKING PANELS

- A. Provide cementitious backer units complying with ANSI A118.9 in maximum lengths available to minimize end-to-end butt joints.
  1. Use: Substrate to tile.
  2. Products: Subject to compliance with requirements, provide one of the following to suit project application:
    - a. Gold bond: eXP tile backer
    - b. CertainTeed Corporation; GlasRoc tile backer
    - c. Georgia Pacific: denshield tile backer
    - d. USG Corporation: durock glass-mat tile backerboard.
    - e. Or approved equal.
  3. Width: Manufacturer's standard width, but not less than 32 inches.
  4. Thickness: 5/8 inch , unless otherwise indicated.
  5. Mold Resistance: ASTM D 3273, score of 10 as rated according to ASTM D 3274.

## 2.3 TRIM ACCESSORIES

- A. Interior Trim: ASTM C 1047.
    - 1. Material: paper faced or structural laminate.
    - 2. Shapes:
      - a. Cornerbead. Structural laminate.
        - 1) Basis of Design, Product: Subject to compliance with requirements, provide the following:
          - a) Nocoat as supplied by CERTAINTEED (formerly Structus Building Technologies or approved equal.
          - b. LC-Bead: J-shaped; exposed long flange receives joint compound.
          - c. L-Bead: L-shaped; exposed long flange receives joint compound.
          - d. Expansion (control) joint.
- B. Aluminum Trim: Extruded type of profiles, dimensions and trim height as indicated with integrated taping flange.
  - 1. Basis of Design, Product: Subject to compliance with requirements, provide the following:
    - a. Compäso™ Elite for Drywall as supplied by USG Corporation or approved equal.
  - 2. Other Trim/ Reveal Manufacturers:
    - a. Fry Reglet Corporation.
    - b. Gordon, Inc.
    - c. Pittcon Industries.
    - d. Or approved equal.
  - 3. Aluminum: Alloy and temper with not less than the strength and durability properties of ASTM B 221, Alloy 6063-T5.
  - 4. Finish: Manufacturers standard, compatible with joint compound and finish materials indicated.

## 2.4 JOINT TREATMENT MATERIALS

- A. General: Comply with ASTM C 475.
- B. Joint Tape:
  - 1. Interior Gypsum Wallboard: Paper.
  - 2. Tile Backing Panels: fiberglass mesh tape or as recommended by panel manufacturer
- C. Joint Compound:
  - 1. Interior Gypsum Wallboard: For each coat use formulation that is compatible with other compounds applied on previous or for successive coats.

- a. Prefilling: At open joints, rounded or beveled panel edges, and damaged surface areas, use setting-type taping compound.

## 2.5 ACOUSTIC BATT INSULATION (SAFB):

- A. ASTM C 665, Type I (blankets without membrane facing) produced by combining thermosetting resins with mineral fibers manufactured from slag wool or rock wool
- B. Fire-Resistance-Rated Assemblies: Comply with mineral-fiber requirements of assembly
- C. Manufacturers
  - 1. Roxul, AFB
  - 2. Thermafiber, SAFB
  - 3. John Mansville, MinWool SAFB .
  - 4. Or approved equal

## 2.6 AUXILIARY MATERIALS

- A. General: Provide auxiliary materials that comply with referenced installation standards and manufacturer's written recommendations.
- B. Steel Drill Screws: ASTM C 1002. Provide galvanized screws, unless otherwise indicated.
  - 1. Use screws complying with ASTM C 954 for fastening panels to steel members from 0.033 to 0.112 inch thick.
- C. Leveling and Patching Compound: Latex cement as recommended by gypsum board manufacturer.
- D. Acoustical Sealant: Manufacturer's standard nonsag, paintable, nonstaining latex sealant complying with ASTM C 834. Product effectively reduces airborne sound transmission through perimeter joints and openings in building construction as demonstrated by testing representative assemblies according to ASTM E 90.
  - 1. Products: Subject to compliance with requirements, provide one of the following:
    - a. Pecora Corporation; AC-20 FTR or AIS-919.
    - b. Specified Technologies, Inc.; Smoke N Sound Acoustical Sealant.
    - c. USG Corporation; SHEETROCK Acoustical Sealant.
    - d. Or approved equal.
- E. Refer to Division 07 Section "Joint Sealants" for other requirements.

## 2.7 ELECTRICAL & LOW-VOLTAGE BOX PADS:

- A. Provide at outlet, switch , low-voltage, and all junction boxes in walls with STC value of 50 or higher.
  - 1. Electrical Box Pad Manufacturers for Non-Fire Rated Partitions:
    - a. Harry A. Lowry & Associates (800.772.2521)/Lowry's Electrical Box Pads.

- b. Tremco Sheet Caulking (650.572.1656).
- c. Fire rated partition material manufacturers.
- d. Or approved equal.

2. Electrical Box Pad Manufacturers for Fire Rated Partitions:

- a. Hevi-Duty Nelson (800.331.7325)/Fire Rated FSP Firestop Putty Pads.
- b. Specified Technologies, Inc. (800.992.1180)/Fire Putty Pads.
- c. Hilti, Corp./Hilti Box Pads.
- d. Or approved equal.

**PART 3 - EXECUTION**

**3.1 EXAMINATION**

- A. Examine areas and substrates, with Installer present, and including welded hollow-metal frames and framing, for compliance with requirements and other conditions affecting performance.
- B. Examine panels before installation. Reject panels that are wet, moisture damaged, and mold damaged.
- C. Proceed with installation only after unsatisfactory conditions have been corrected.

**3.2 APPLYING AND FINISHING PANELS, GENERAL**

- A. Comply with ASTM C 840.
- B. Install ceiling panels across framing to minimize the number of abutting end joints and to avoid abutting end joints in central area of each ceiling. Stagger abutting end joints of adjacent panels not less than one framing member.
- C. Install panels with face side out. Butt panels together for a light contact at edges and ends with not more than 1/16 inch of open space between panels. Do not force into place.
- D. Form control and expansion joints with space between edges of adjoining gypsum panels.
- E. Cover both faces of support framing with gypsum panels in concealed spaces (above ceilings, etc.), except in chases braced internally.
- F. Seal joints between edges and abutting structural surfaces with acoustical sealant.
- G. Attachment to Steel Framing: Attach panels so leading edge or end of each panel is attached to open (unsupported) edges of stud flanges first.
- H. No drywall layers shall be continuous between two adjacent rooms. Interrupt drywall panels at all partition intersections, and close through perimeter fascia to the base building construction.
- I. Install sound attenuation blankets before installing gypsum panels, unless blankets are readily installed after panels have been installed on one side.

- J. Isolate perimeter of gypsum board applied to non-load-bearing partitions at structural abutments, except floors. Provide 1/4- to 1/2-inch wide spaces at these locations and trim edges with edge trim where edges of panels are exposed. Seal joints between edges and abutting structural surfaces with acoustical sealant.
- K. STC-Rated Assemblies: Seal construction at perimeters, behind control joints, and at openings and penetrations with a continuous bead of acoustical sealant. Install acoustical sealant at both faces of partitions at perimeters and through penetrations. Comply with ASTM C 919 and with manufacturer's written recommendations for locating edge trim and closing off sound-flanking paths around or through assemblies, including sealing partitions above acoustical ceilings.

### 3.3 APPLYING INTERIOR GYPSUM BOARD

#### A. Single-Layer Application:

- 1. On ceilings, apply gypsum panels before wall/partition board application to greatest extent possible and at right angles to framing.
- 2. On partitions/walls, apply gypsum panels vertically (parallel to framing or required by fire-resistance-rated assembly, and minimize end joints.
  - a. Stagger abutting end joints not less than one framing member in alternate courses of panels.
- 3. On Z-furring members, apply gypsum panels vertically (parallel to framing) with no end joints. Locate edge joints over furring members.
- 4. Fastening Methods: Apply gypsum panels to supports with steel drill screws.

#### B. Multilayer Application:

- 1. On ceilings, apply gypsum board indicated for base layers before applying base layers on walls/partitions; apply face layers in same sequence. Apply base layers at right angles to framing members and offset face-layer joints 1 framing member, 16 inches minimum, from parallel base-layer joints.
- 2. On partitions/walls, apply gypsum board indicated for base layers and face layers vertically (parallel to framing) with joints of base layers located over stud or furring member and face-layer joints offset at least one stud or furring member with base-layer joints.
- 3. On Z-furring members, apply base layer vertically (parallel to framing) and face layer either vertically (parallel to framing) or horizontally (perpendicular to framing) with vertical joints offset at least one furring member. Locate edge joints of base layer over furring members.
- 4. Fastening Methods: Fasten base layers and face layers separately to supports with screws.
- 5. Stagger joints for multiple layers of drywall.

- C. Seal gypsum board shaft walls with acoustical sealant at perimeter of each assembly where it abuts other work and at joints and penetrations within each assembly. Install acoustical sealant to withstand dislocation by air-pressure differential between shaft and external spaces; maintain an airtight and smoke-tight seal; and comply with ASTM C 919 requirements or with manufacturer's written instructions, whichever are more stringent.

- D. In shafts where gypsum board shaft-wall assemblies cannot be positioned within 4 inches of the shaft face of structural beams, floor edges, and similar projections into shaft, install 5/8-inch thick, gypsum board cants covering tops of projections.
  - 1. Slope cant panels at least 75 degrees from horizontal. Set base edge of panels in adhesive and secure top edges to shaft walls at 24 inches o.c. with screws fastened to shaft-wall framing.
  - 2. Where steel framing is required to support gypsum board cants, install framing at 24 inches o.c. and extend studs from the projection to shaft-wall framing.
- E. Apply acoustical sealant as follows:
  - 1. Gap equal to 1/4 inch: Acoustical sealant or similar non-hardening caulking compound.
  - 2. Gap from 1/4 inch up to 1 inch: Compressed backer rod with acoustical sealant or similar non-hardening caulking compound.

### 3.4 INSTALLING TRIM ACCESSORIES

- A. Control Joints: Install control joints according to ASTM C 840 and in specific locations approved by the Architect for visual effect.

### 3.5 FINISHING GYPSUM BOARD

- A. General: Treat gypsum board joints, interior angles, edge trim, control joints, penetrations, fastener heads, surface defects, and elsewhere as required to prepare gypsum board surfaces for decoration. Promptly remove residual joint compound from adjacent surfaces.
- B. Prefill open joints, rounded or beveled edges, and damaged surface areas.
- C. Apply joint tape over gypsum board joints, except those with trim having flanges not intended for tape.
- D. Gypsum Board Finish Levels: Finish panels to levels indicated below and according to ASTM C 840:
  - 1. Level 1: Ceiling plenum areas, concealed areas, and where indicated.
  - 2. Level 2: Panels that are substrate for tile, and where indicated.
  - 3. Level 4: At panel surfaces that will be exposed to view, unless otherwise indicated.
    - a. Primer and its application to surfaces are specified in other Division 09 Sections.

### 3.6 PROTECTION

- A. Protect installed products from damage from weather, condensation, direct sunlight, construction, and other causes during remainder of the construction period.
- B. Remove and replace panels that are wet, moisture damaged, and mold damaged.

## SECTION 09 3100 - TILING

### PART 1 - GENERAL

#### 1.1 SUMMARY

- A. Work Included: The Work of this Section includes:
  - 1. Porcelain floor tile.
  - 2. Ceramic floor and wall tile.
  - 3. Simulated stone thresholds.
  - 4. Epoxy grout
  - 5. Waterproof membrane for thin-set tile installations, including flood- testing prior to tile installation.
  - 6. Metal Transitions installed as part of tile installations
  - 7. Shower Systems:
    - a. Mortar Bed Shower Basins installed as part of shower system with flanged drain and waterproofing.
    - b. pre-cast terrazzo basins installed as part of shower subsystem

#### 1.2 DEFINITIONS

- A. General: Definitions in the ANSI A108 series of tile installation standards and in ANSI A137.1 apply to Work of this Section unless otherwise specified.
- B. Module Size: Actual tile size, minor facial dimension as measured per ASTM C 499 plus joint width indicated.
- C. Facial Dimension: Actual tile size, minor facial dimension as measured per ASTM C 499.
- D. Facial Dimension: Nominal tile size as defined in ANSI A137.1.

#### 1.3 ACTION SUBMITTALS

- A. Product Data: For each type of product indicated.
- B. Shop Drawings: Show locations of each type of tile and tile pattern. Show widths, details, and locations of expansion, contraction, control, and isolation joints in tile substrates and finished tile surfaces.
- C. Samples for Verification:
  - 1. Full-size units of each type and composition of tile and for each color and finish required.
  - 2. Assembled samples with grouted joints for each type and composition of tile and for each color and finish required, at least 24x48 inches and mounted on rigid panel. Use grout of type and in color or colors approved for completed work.
  - 3. Full-size units of each type of trim and accessory.
  - 4. thresholds in 6-inch lengths.
  - 5. Metal edge strips in 6-inch lengths.

#### 1.4 INFORMATIONAL SUBMITTALS

- A. Master Grade Certificates: For each shipment, type, and composition of tile, signed by tile manufacturer and Installer.
- C. Product Certificates: For each type of product, signed by product manufacturer.
- D. Qualification Data: For Installer.
- E. Material Test Reports: For each tile-setting and -grouting product.

#### 1.5 QUALITY ASSURANCE

- A. Source Limitations for Tile: Obtain all tile of same type and color or finish from one source or producer.
  - 1. Obtain tile from same production run and of consistent quality in appearance and physical properties for each contiguous area.
- B. Source Limitations for Liquid Waterproofing, Setting and Grouting Materials: Obtain ingredients of a uniform quality for all mortar, adhesive, grout, and liquid waterproofing/crack isolation components from a single manufacturer and each aggregate from one source or producer.
- C. Source Limitations for Other Products: Obtain each of the following products specified in this Section through one source from a single manufacturer for each product:
  - 1. thresholds.
  - 2. Joint sealants.
  - 3. Cementitious backer units.
  - 4. Metal edge strips.
- D. Preinstallation Conference: Conduct conference at Project site to comply with requirements in Division 1 Section "Project Management and Coordination."
- E. Flood Testing requirements and procedures:
  - 1. Flood testing per ASTM D5957-98(2013) to be performed in each space, room and location waterproofing membrane is installed.
  - 2. Testing is to occur a minimum of 24 hours after installation of membrane to allow full curing and prior to tile installation.
  - 3. Procedures:
    - i. Dams to be fabricated from a 2x6 board or scrap of gypsum board or cement board. Seal dams with waterproofing membrane or sealant to allow testing area to be fully immersed.
    - ii. Each space to be filled for a duration of 24 hours minimum at a minimum depth of 4" measured from tile substrate
    - iii. Water level to be marked at start of testing and compared at end of test period. If drop in water detected or a leak is visible, membrane is to be repaired and retested until it can be passed.
    - iv. Architect or owner's representative is to observe testing prior to draining. Provide minimum of 72 hours notice prior to start of testing.

**1.6 DELIVERY, STORAGE, AND HANDLING**

- A. Deliver and store packaged materials in original containers with seals unbroken and labels intact until time of use. Comply with requirement in ANSI A137.1 for labeling sealed tile packages.
- B. Store tile and cementitious materials on elevated platforms, under cover, and in a dry location.
- C. Store aggregates where grading and other required characteristics can be maintained and contamination avoided.
- D. Store liquid latexes and emulsion adhesives in unopened containers and protected from freezing.
- E. Handle tile that has temporary protective coating on exposed surfaces to prevent coated surfaces from contacting backs or edges of other units. If coating does contact bonding surfaces of tile, remove coating from bonding surfaces before setting tile.

**1.7 PROJECT CONDITIONS**

- A. Environmental Limitations: Do not install tile until construction in spaces is complete and ambient temperature and humidity conditions are maintained at the levels indicated in referenced standards and manufacturer's written instructions.

**1.8 EXTRA MATERIALS:**

- A. Provide minimum 2% area installed but not less than one unopened box in full-size units including special shapes and profiles
- B. Provide one additional threshold

**PART 2 - PRODUCTS**

**2.1 PRODUCTS, GENERAL**

- A. ANSI Ceramic Tile Standard: Provide tile that complies with ANSI A137.1, "Specifications for Ceramic Tile," for types, compositions, and other characteristics indicated.
  - 1. Provide tile complying with Standard grade requirements, unless otherwise indicated.
  - 2. For facial dimensions of tile, comply with requirements relating to tile sizes specified in Part 1 "Definitions" Article.
- B. ANSI Standards for Tile Installation Materials: Provide materials complying with ANSI standards referenced in "Setting and Grouting Materials" Article.
- C. Colors, Textures, and Patterns: Where manufacturer's standard products are indicated for tile, grout, and other products requiring selection of colors, surface textures, patterns, and other appearance characteristics, provide specific products or materials complying with the following requirements:
  - 1. As indicated on drawings and Finish Schedules.

- D. Factory Blending: For tile exhibiting color variations within ranges selected during Sample submittals, blend tile in factory and package so tile units taken from one package show same range in colors as those taken from other packages and match approved Samples.
- E. Mounting: For factory-mounted tile, provide back- or edge-mounted tile assemblies as standard with manufacturer, unless otherwise indicated.
  - 1. Where tile is indicated for installation in wet areas, do not use back- or edge-mounted tile assemblies unless tile manufacturer specifies in writing that this type of mounting is suitable for installation indicated and has a record of successful in-service performance.
- F. Factory-Applied Temporary Protective Coating: Where indicated under tile type, protect exposed surfaces of tile against adherence of mortar and grout by precoating with continuous film of petroleum paraffin wax, applied hot. Do not coat unexposed tile surfaces.

## 2.2 MANUFACTURERS

- A. Products: Subject to compliance with requirements, manufacturers offering products that may be incorporated in the work include the following:
  - 1. Porcelain and Ceramic Tile: Refer to the drawings Finish Schedules for tile products and manufacturers or approved equal.
  - 2. Setting and Grout Manufacturers:
    - a. Laticrete International, Inc.
    - b. Bostik, Inc.
    - c. MAPEI Corporation.
    - d. Schluter
    - e. Or approved equal

## 2.3 THRESHOLDS

- A. General: Fabricate to sizes and profiles indicated or required to provide transition between adjacent floor finishes.
  - 1. Bevel edges at 1:2 slope for 1/4", Max vertical edge to be 1/4" with max overall height above adjacent floor finish to be 1/2".
- B. Simulated Stone Thresholds: solid sheets consisting of quartz aggregates bound together with a matrix of filled plastic resin and complying with ICPA SS-1, except for composition.
  - 1. Description: see finish schedule.

## 2.4 WATERPROOFING MEMBRANES FOR THIN-SET TILE INSTALLATIONS

- A. General: Manufacturer's standard product that complies with ANSI A118.10.

- B. Latex Rubber Waterproofing: Manufacturer's standard factory- prepackaged, job-mixed, proprietary two-part formulation consisting of liquid latex rubber and powder for trowel application and glass fiber fabric reinforcing.
  - 1. Products: Subject to compliance with requirements, provide one of the following:
    - a. "hydroban xp" as manufactured by Laticrete, with reinforcing fabric
    - b. "Bostik Gold Plus Waterproofing" as manufactured by Bostik Inc. with reinforcing fabric
    - c. "Mapelastic Aqua defense" as manufacturers by Mapei with reinforcing fabric
    - d. "redguard" as manufacturers by Custom inc. with reinforcing fabric
    - e. "Kerdi" as manufacturers by Schluter
    - f. or approved equal
- C. Locations: Install in locations per architectural drawings and as follows:
  - 1. At Tiled floors Floors including for full extent of the room and to include wrapping up wall surface a minimum of 6" to create continuous pan and wrapped onto drain flanges
  - 2. At walls within showers full height and within fortified mortar shower basins as part of complete shower system

## 2.5 SETTING AND GROUTING MATERIALS

- A. General: Manufacturer's standard product that complies with ANSI A118.10 and is recommended by the manufacturer for the application indicated. Include reinforcement and accessories recommended by manufacturer.

## 2.6 SETTING MATERIALS

- A. Latex-Portland Cement Mortar (Thin Set) for use with large and heavy tiles: ANSI A118.4.
  - 1. Provide prepackaged, dry-mortar mix containing dry, redispersible, vinyl acetate or acrylic additive to which only water must be added at Project site.
  - 2. For wall applications, provide mortar that complies with requirements for nonsagging mortar in addition to the other requirements in ANSI A118.4
  - 3. Suitable for submerged applications.
  - 4. Products: Subject to compliance with requirements, provide one of the following:
    - a. "Multimax light" by Laticrete
    - c. or approved equal
- B. Fortified Mortar Bed for use in shower pans where precast terrazzo not specified:
  - 1. Provide prepackaged, dry-mortar mix containing dry, redispersible, vinyl acetate or polymer additive to which only water must be added at Project site.
  - 2. Exceeds requirements of ASTM C270
  - 3. Suitable for submerged applications.
  - 4. Slurry coat to be used to bond to substrate with manufacturer's recommended product.
  - 5. Products: Subject to compliance with requirements, provide one of the following:
    - a. "Fortified 3701 Mortar Bed" by Laticrete

c. or approved equal

## 2.7 GROUT MATERIALS

- A. Multi-component, Chemical resistant, water cleanable, 100 percent epoxy grout.
  - 1. Location for use: All tiled floors and walls
  - 2. Physical properties when tested per ANSI A118.3:
    - a. Compression: Greater than 5000psi
    - b. Water Absorption: 0 percent
  - 3. Products: "Spectralok Pro" by Laticrete, Inc. or approved equal

## 2.8 ELASTOMERIC SEALANTS

- A. General: Provide manufacturer's standard chemically curing, elastomeric sealants of base polymer and characteristics indicated that comply with applicable requirements in Division 7 Section "Joint Sealants."
- B. Colors: Provide colors of exposed sealants to match colors of grout in tile adjoining sealed joints, unless otherwise indicated.
- C. One-Part, Mildew-Resistant Silicone Sealant: ASTM C 920; Type S; Grade NS; Class 25; Uses NT, G, A, and, as applicable to nonporous joint substrates indicated, O; formulated with fungicide, intended for sealing interior ceramic tile joints and other nonporous substrates that are subject to in-service exposures of high humidity and extreme temperatures.

## 2.9 CEMENTITIOUS BACKER UNITS

- A. Refer to Section 092900 – Gypsum Board.

## 2.10 MISCELLANEOUS MATERIALS

- A. Trowelable Underlayment and Patching Compounds: Latex-modified, Portland cement-based formulation provided or approved by manufacturer of tile-setting materials for installations indicated.
- B. Temporary Protective Coating: Either product indicated below that is formulated to protect exposed surfaces of tile against adherence of mortar and grout; compatible with tile, mortar, and grout products; and easily removable after grouting is completed without damaging grout or tile.
- C. Tile Cleaner: A neutral cleaner capable of removing soil and residue without harming tile and grout surfaces, specifically approved for materials and installations indicated by tile and grout manufacturers.

## 2.11 METAL TILE TRANSITIONS

- A. Metal Edge Strips: L-shape and cove, height to match tile and setting-bed thickness, metallic or combination of metal and PVC or neoprene base, designed specifically for flooring and wall applications, white zinc alloy exposed-edge material.

- a. Manufacturer endcaps, inside corners and outside corners to be provided.
- 1. Basis of design: By Schluter as noted on the drawings or approved equal, see finish schedule and details

## 2.12 MIXING MORTARS AND GROUT

- A. Mix mortars and grouts to comply with referenced standards and mortar and grout manufacturers' written instructions.
- B. Add materials, water, and additives in accurate proportions.
- C. Obtain and use type of mixing equipment, mixer speeds, mixing containers, mixing time, and other procedures to produce mortars and grouts of uniform quality with optimum performance characteristics for installations indicated.

## 2.13 FABRICATION

- A. Facial Dimensions of Stone Tiles with Polished Faces: Do not vary facial dimensions from specified dimensions by more than plus or minus 1/64 inch.
- B. Joint Surfaces: Except for specified beveled or eased edges, if any, dress joint surfaces square for full depth of tile.

## 2.14 SHOWER SYSTEMS

- A. All Showers with ADA sloped fortified mortar basins and integrated flanged drains shall be installed as part of a complete shower system with waterproofing, thin-set, fortified bonded mortar basin, trim flashings and integrated flanged drain by a single manufacturer. At locations where pre-cast terrazzo basin specified: complete shower wall waterproofing, thin-set, trims and trim flashings shall be by a single manufacturer and installed as a complete system excluding the pre-cast basin.
  - Products: Subject to compliance with requirements, provide one of the following:
    - a. "Hydroband Shower System" by Laticrete
    - b. "Kerdi Shower System" by Schluter
    - c. Mapeiguard Shower System" by Mapei
    - d. or approved equal
- B. Where occurs: 36"x36" fortified mortar bed with minimum 1-1/2" to 2" thickness formed and sloped as a shower basins meeting ANSI A118.10 required and IAPMO approved with slope complying with ADA requirements maximum of 1/4" per foot.
- C. Membrane to be tested approved for steam showers with maximum 0.06 perms.
- D. Accessories: Provide manufacturer's accessories required for warranty and the following:
  - a. a membrane drain collar for adapting to standard bonding flange drains where bonding flange drains are not specified by plumbing drawings.
  - b. Interior and exterior corners as required
  - c. Shower trim flashings
  - d. Manufacturer's recommended adhesives and sealants
- E. Warranty: system warranty of 25 years to be provided, contractor to schedule onsite inspections and submit documentation as needed to achieve warranty.

## **PART 3 - EXECUTION**

### **3.1 EXAMINATION**

- A. Examine substrates, areas, and conditions where tile will be installed, with Installer present, for compliance with requirements for installation tolerances and other conditions affecting performance of installed tile.
  - 1. Verify that substrates for setting tile are firm; dry; clean; free of oil, waxy films, and curing compounds; and within flatness tolerances required by referenced ANSI A108 Series of tile installation standards for installations indicated.
  - 2. Verify that installation of grounds, anchors, recessed frames, electrical and mechanical units of work, and similar items located in or behind tile has been completed before installing tile.
  - 3. Verify that joints and cracks in tile substrates are coordinated with tile joint locations; if not coordinated, adjust joint locations in consultation with Architect.
- B. Proceed with installation only after unsatisfactory conditions have been corrected.

### **3.2 PREPARATION**

- A. Remove coatings, including curing compounds and other substances that contain soap, wax, oil, or silicone, that are incompatible with tile-setting materials.
- B. Provide concrete substrates for tile floors installed with adhesives or thin-set mortar that comply with flatness tolerances specified in referenced ANSI A108 Series of tile installation standards.
  - 1. Fill cracks, holes, and depressions with trowelable leveling and patching compound according to tile-setting material manufacturer's written instructions. Use product specifically recommended by tile-setting material manufacturer.
  - 2. Remove protrusions, bumps, and ridges by sanding or grinding.
- C. Blending: For tile exhibiting color variations within ranges selected during Sample submittals, verify that tile has been factory blended and packaged so tile units taken from one package show same range of colors as those taken from other packages and match approved Samples. If not factory blended, either return to manufacturer or blend tiles at Project site before installing.

### **3.3 INSTALLATION, GENERAL**

- A. ANSI Tile Installation Standards: Comply with parts of ANSI A108 Series "Specifications for Installation of Ceramic Tile" that apply to types of setting and grouting materials and to methods indicated in ceramic tile installation schedules.
- B. Installation Guidelines: TNCA's "Handbook for Ceramic, Glass, and Stone Tile." Comply with TNCA installation tile installation schedules.
- C. Extend tile work into recesses and under or behind equipment and fixtures to form complete covering without interruptions, unless otherwise indicated. Terminate work neatly at obstructions, edges, and corners without disrupting pattern or joint alignments.
- D. Accurately form intersections and returns. Perform cutting and drilling of tile without marring visible surfaces. Carefully grind cut edges of tile abutting trim, finish, or built-in items for

straight aligned joints. Fit tile closely to electrical outlets, piping, fixtures, and other penetrations so plates, collars, or covers overlap tile.

- E. Jointing Pattern: As indicated on drawings. Align joints when adjoining tiles on floor, base, walls, and trim are same size.
  - 1. Lay out tile work and center tile fields in both directions in each space or on each area and provide uniform joint widths.
  - 2. Adjust layout to minimize tile cutting, as approved by the Architect,
  - 3. For tile mounted in sheets, make joints between tile sheets same width as joints within tile sheets so joints between sheets are not apparent in finished work.
- F. Expansion Joints: Locate expansion joints and other sealant-filled joints, including control, contraction, and isolation joints, where indicated during installation of setting materials, mortar beds, and tile. Do not saw-cut joints after installing tiles.
  - 1. Locate joints in tile surfaces directly above joints in concrete substrates.
  - 2. Prepare joints and apply sealants to comply with requirements in Division 7 Section "Joint Sealants."
- G. Large Format Tile general installation requirements (tile with one dimension larger than 15 inch:
  - 1. Spread adhesive at minimum 80 percent of substrate area with 1/2 by 1/2-inch notched trowel for tile sizes 13 to 20 inch and 3/4 by 3/4-inch notched trowel for tile sizes larger than 20 inch.
  - 2. Backbutter tile prior to installation.
  - 3. Maximum lippage - 1/8 inch in 10 feet and no more than 1/16-inch variation in 24 inches when measured from high point
- H. Grout tile to comply with requirements of the following tile installation standards:
  - 1. comply with ANSI A108 and manufacturers written instructions, including product technical bulletins and product package instructions:
    - A. Lightly dampen tile before grouting
    - B. Spread grout over face of tile using the type of float or sponge recommended by tile manufacturer
    - C. Work grout back and forth at 45 degree angle to the face of tile to ensure complete filing of joints
    - D. On completion of grouting, clean surfaces according to manufacturer's written instructions so they are free of foreign matter. Special care to be provided for textured tiles to maintain clean surface.
    - E. Allow to cure

### 3.4 WATERPROOFING MEMBRANE INSTALLATION

- A. Install waterproofing to comply with ANSI A108.13 and waterproofing manufacturer's written instructions to produce waterproof membrane of uniform thickness bonded securely to substrate.
- B. Install crack-suppression membrane and reinforcing at corners and joints to comply with manufacturer's written instructions to produce membrane of uniform thickness bonded securely to substrate.

- C. Wrap up wall surfaces as recommended by manufacturer but not less than 6"
- D. Do not install tile over waterproofing until waterproofing has cured and been flood- tested to determine that it is watertight.

### 3.5 WALL TILE INSTALLATION

- A. Install types of wall tile designated to comply with requirements indicated below for setting bed methods, and TNCA installation methods related to subsurface and grout.
  - 1. Interior TCNA W244C-19 at stud and tile backer board locations not within showers
    - a. Cement Backer Board
    - b. Cementitious bond coat
    - c. Grout: 100% epoxy
  - 2. Interior TCNA B412-19 at stud and tile backer board locations within showers with receptor
    - a. Cement Backer Board
    - b. Latex-Portland Cement Mortar, Thin Set
    - c. Waterproofing Membrane, full coverage
    - d. Grout: 100% epoxy

### 3.6 FLOOR TILE INSTALLATION

- A. Install tile to comply with requirements in the finish Installation Schedule, including those referencing TNCA installation methods and ANSI A108 Series of tile installation standards.
  - 1. Interior Slab on Grades: TCNA F122-19 tiled floor with waterproofing membrane
    - a. Concrete Subfloors on-grade, Interior:
    - b. Latex-Portland Cement Mortar, Thin Set
    - c. Waterproofing Membrane, full coverage
    - d. Grout: 100% epoxy
  - 2. Interior Concrete Decks above grade: TCNA F122A-19 tiled floor with waterproofing membrane
    - e. Concrete Subfloors on-grade, Interior:
    - f. Latex-Portland Cement Mortar, Thin Set
    - g. Waterproofing Membrane, full coverage
    - h. Grout: 100% epoxy
- B. Thresholds: Install thresholds at locations indicated; set in same type of setting bed as abutting field tile.
  - 1. Set thresholds in modified cement mortar where mortar bed would otherwise be exposed above adjacent no tile floor finish.
- C. Metal Edge Strips: Install metal edge strips at locations indicated to include top of wainscot, wall/floor intersection, outside corners between two tiled walls; set according to manufacturer's recommendations.

### 3.7 SHOWER RECEPTOR WHERE PRECAST TERRAZZO NOT SPECIFIED.

- A. Install tile to comply with requirements in the finish Schedule, including those referencing TNCA installation methods and ANSI A108 Series of tile installation standards.
  - 1. Mortar bed shower receptors: TCNA B422C-19 tiled floor with waterproofing membrane and integrated flanged drain
    - i. Recessed blockout in Concrete Subfloors on-grade; bonded slurry coat
    - j. Fortified Mortar bed with 2" thickness sloped to 1-1/2" min thickness
    - k. Waterproofing Membrane, full coverage
    - l. Latex-Portland Cement Mortar, Thin Set
    - m. Grout: 100% epoxy
- B. Metal Edge Strips: Install metal edge strips at locations indicated to include top of wainscot, wall/floor intersection, outside corners between two tiled walls; set according to manufacturer's recommendations.

### 3.7 EXPANSION AND MOVEMENT JOINTS

- A. Install tile to comply with requirements in the drawings and TNCA installation methods and ANSI A108 Series of tile installation standards
  - 1. Contraction joints: EJ171B-19 at all saw-cut control joints
  - 2. Perimeter Joints: EJ171G-19 at all perimeter joints

### 3.8 CLEANING AND PROTECTING

- A. Cleaning: On completion of placement and grouting, clean all ceramic tile surfaces so they are free of foreign matter.
  - 1. Remove Latex-Portland cement grout residue from tile as soon as possible.
  - 2. Clean grout smears and hazes from tile according to tile and grout manufacturer's written instructions, but no sooner than 10 days after installation. Use only cleaners recommended by tile and grout manufacturers and only after determining that cleaners are safe to use by testing on samples of tile and other surfaces to be cleaned. Protect metal surfaces and plumbing fixtures from effects of cleaning. Flush surfaces with clean water before and after cleaning.
  - 3. Remove temporary protective coating by method recommended by coating manufacturer that is acceptable to tile and grout manufacturer. Trap and remove coating to prevent it from clogging drains.
- B. When recommended by tile manufacturer, apply coat of neutral protective cleaner to completed tile walls and floors. Protect installed tile work with Kraft paper or other heavy covering during construction period to prevent staining, damage, and wear.
- C. Prohibit foot and wheel traffic from tiled floors for at least seven days after grouting is completed.
- D. Before final inspection, remove protective coverings and rinse neutral cleaner from tile surfaces.

END OF SECTION 09 3100

## **SECTION 09 5000 SUSPENDED WOOD GRILLE CEILING**

### **PART 1 - GENERAL**

#### **1.1 RELATED DOCUMENTS**

Drawings and general conditions of Contract, including General and Supplementary Conditions and Divisions-1 Specification sections apply to work of this section.

#### **1.2 SUMMARY**

- a) Section Includes:
  - 1. Veneered Wood Ceiling Panels with Centered Notched and Flat Backers
  - 2. Exposed grid suspension system.
  - 3. Wire hangers, fasteners, main runners, cross tees, wall angle moldings and accessories.
  - 4. Torsion spring mounted access panels

#### **1.4 SUBMITTALS**

- a) Shop Drawings: Layout and details of ceilings. Show locations of items that are to be coordinated with or supported by the ceilings. Identify locations of all access panels and attachment methods
- b) Installation Instructions: Submit manufacturer's installation instructions as referenced in Part three, Installation.
- c) Product Data: Submit manufacturer's technical data for each type of ceiling unit and suspension system required.
- d) Samples: 12" X 12" panel showing size, finish specified
- e) Certifications: Manufacturer's certifications that products comply with specified requirements, including laboratory reports showing compliance with specified tests and standards.

#### **1.5 QUALITY ASSURANCE**

- a) Single-Source Responsibility: Provide ceiling panel units and grid components by a single manufacturer.
- b) Fire Performance Characteristics: Identify ceiling components with appropriate markings of applicable testing and inspecting organization.
  - 1. Surface Burning Characteristics: As follows, tested per ASTM E-84 and complying with ASTM E 1264 for Class A products.
  - 2. HPVA (Hardwood Plywood and Veneer Association) certification and audit program per ASTM E-84 tunnel test.
- c) Woodworking Standards: Manufacturer must comply with specified provisions of Architectural Woodworking Institute quality standards.

- d) Coordination of Work: Coordinate ceiling work with installers of related work including, but not limited to building insulation, gypsum board, light fixtures, mechanical systems, electrical systems, and sprinklers.

#### **1.6 DELIVERY, STORAGE, AND HANDLING**

- a) Store ceiling components in a dry interior location in their cartons prior to installation to avoid damage. Store cartons in a flat, horizontal position. The protectors between the panels should not be removed until installation.
- b) Do not store in unconditioned spaces with humidity greater than 55 percent or lower than 25 percent relative humidity and temperatures lower than 50 degrees F or greater than 86 degrees F. Panels must not be exposed to extreme temperatures, for example, close to a heating source or near a window with direct sunlight.
- c) Handle ceiling units carefully to avoid chipped edges or damage to units in any way.

#### **1.7 PROJECT CONDITIONS**

- a) Wood ceiling materials should be permitted to reach room temperature and have a stabilized moisture content for a minimum of 72 hours before installation. (Remove plastic wrap to allow panels to climatize).
- b) The wood panels should not be installed in spaces where the temperature or humidity conditions vary from the temperatures and conditions that will be normal in the occupied space.
- c) As interior finish products, the veneered panels are designed for installation in temperature conditions between 50 degrees F and 86 degrees F, in spaces where the building is enclosed, and HVAC systems are functioning and will be in continuous operation. Relative humidity should not fall below 25 percent or exceed 55 percent.

#### **1.8 WARRANTY**

- a) Veneered Wood Panel: Submit a written warranty executed by the manufacturer, agreeing to repair or replace panels that fail within the warranty period. Failures include, but are not limited to:
  - 1. Veneered Wood Panels: Defects in materials or factory workmanship.
  - 2. Grid System: Rusting and manufacturing defects.
- b) Warranty Period:
  - 1. Veneered Wood panels: One (3) year from date of installation.
  - 2. Grid: Ten years from date of installation.
- c) The Warranty shall not deprive the Owner of other rights the Owner may have under other provisions of the Contract Documents and will be in addition to and run concurrent with other warranties made by the Contractor under the requirements of the Contract Documents.

## **1.9 MAINTENANCE**

- a) Extra Materials: Deliver extra materials to Owner. Furnish extra materials described below that match products installed. Packaged with protective covering for storage and identified with appropriate labels.
  - 1. Ceiling Units: Furnish quality of full-size units equal to 2.0 percent of amount installed.
  - 2. Exposed Suspension System Components: Furnish quantity of each exposed suspension component equal to 1.0 percent of amount installed.

## **PART 2 - PRODUCTS**

### **2.1 MANUFACTURERS**

- a) Basis of Design
  - a. Armstrong Word Industries Inc, WoodWorks Grille - Forte' Veneered Ceilings Panels & suspension systems
- b) Other Manufacturers subject to performance requirements
  - a. Certainteed
  - b. Rockfon
  - c. Or approved equal

### **2.2.0 WOOD CEILING UNITS (AC-1)**

- a) Ceiling Panels:
  - 1. Surface Texture: Smooth
  - 2. Composition: Real wood veneer on fire rated particle board
  - 3. Finish: Real Wood Veneer
    - Plain Slice White Oak (NOK)
  - 4. Panel Width: 12-inch x 72inch with 1" reveal panel to panel (actual size 12" x 71")
  - 5. Slat Width: 3/4"
  - 6. Height: 2-1/4", 5 slates per panel (69% open) 6335L\_S14
  - 7. Acoustical Performance Infill Options:
    - 1) Black BioAcoustic Infill Panes - NRC 0.75, CAC N/A or approved equal
  - 8. Flame Spread:  
Class A: ASTM E84 surface burning characteristics. Flame Spread Index 25 or less. Smoke Developed Index 50 or less.
- b) Accessories:

1. Backer Clip - item 5687 or approved equal
2. Flat Backer Kit - item 7920GBL or approved equal
3. Heavy Duty Wall Anchor – item 7100 or approved equal
4. Torsion springs and brackets for removeable access panels made to match the ceiling panels.

### **2.2.1 SUSPENSION SYSTEMS**

- c) Components: All main beams and cross tees shall be commercial quality hot dipped galvanized steel as per ASTM A653. Main beams and cross tees are double-web steel construction with 15/16-inch type exposed flange design. Exposed surfaces chemically cleansed, capping prefinished galvanized steel in baked polyester paint. Main beams and cross tees shall have rotary stitching.
  1. Structural Classification: ASTM C635 (Heavy Duty).
  2. Color: Tech Black.
  3. 15/16" Exposed Tee Main beam item as manufactured by Armstrong World Industries, Inc or approved equal.
- d) Attachment Devices: Size for five times design load indicated in ASTM C 635, Table 1, Direct Hung unless otherwise indicated.
- e) Wire for Hangers and Ties: ASTM A641, Class 1 zinc coating, soft temper, pre-stretched, with a yield stress load of at least times-three design load, but not less than 12 gauge.
- f) Accessories/Edge Moldings and Perimeter Trim:
  - a. 7/8" Angle Wall Molding
  - b. Replacement Trim Clip
  - c. Adjustable Trim Clip
  - d. WoodWorks Edgebanding for cut panels where edge exposed.

## **PART 3 - EXECUTION**

### **3.1 EXAMINATION**

- a) Do not proceed with installation until all wet work such as concrete, terrazzo, plastering and painting has been completed and thoroughly dried out.
- b) Proper designs for both supply air and return air, maintenance of the HVAC filters and building interior space are essential to minimize soiling. Before starting the HVAC system, make sure supply air is properly filtered and the building interior is free of construction dust.

### **3.2 PREPARATION**

- a) Measure each ceiling area and establish layout of acoustical units to balance border widths at opposite edges of each ceiling. Avoid use of less than half width units at

borders and comply with reflected ceiling plans. Coordinate panel layout with mechanical and electrical fixtures.

- b) WoodWorks ceiling materials should be permitted to reach room temperature and have a stabilized moisture content for a minimum of 72 hours before installation. (Remove plastic wrap to allow panels to climatize).

### **3.3 INSTALLATION**

- a) Veneered wood panels are designed for installation in temperature conditions between 50 degrees F and 86 degrees F, in spaces where the building is enclosed, and HVAC systems are functioning and will be in continuous operation. Relative humidity should not fall below 25 percent or exceed 55 percent.
- b) Install suspension system and panels in compliance with ASTM C636, ASTM E580, with the approval of the authorities having jurisdiction, and in accordance with the manufacturer's Installation Instructions.
- c) Apply Edgebanding at all exposed cut edges
- d) Provide access panels at all locations indicated in drawings and as required to maintain equipment above the ceiling.

### **3.4 ADJUSTING AND CLEANING**

- a) Replace damaged and broken panels.
- b) Clean exposed surfaces of ceilings panels, including trim, edge moldings, and suspension members. Comply with manufacturer's instructions for cleaning and touch up of minor finish damage.

**END OF SECTION**

## SECTION 09 5113 - ACOUSTICAL PANEL CEILINGS

### PART 1 - GENERAL

#### 1.1 SUMMARY

A. Work Included: Work of this Section includes:

1. Acoustic ceiling panels. (ACT1, ACT1A, ACT2, ACT3, ACT4)
2. Wood-look acoustic ceiling panels (AC2)
3. Suspension systems.
4. Edge trim and installation accessories.

#### 1.2 PREINSTALLATION MEETINGS

A. Prior to the start of ceiling installation, conduct a conference at the Project Site with the installers of related work, including lighting, ductwork and similar work in the ceiling plenum.

1. Review areas of potential interference and resolve conflicts before proceeding with the work.
2. Coordinate ceiling layout with the layout of other work which penetrates or is supported by the ceiling.

#### 1.3 ACTION SUBMITTALS

A. Manufacturer's Data: Manufacturer's product specifications and installation instructions for acoustical ceiling material, and for suspension system, including certified laboratory test reports and other data as required showing compliance with this Section.

1. Indicate structural classification of suspension system.

B. Shop Drawings: Submit shop drawing details and reflected ceiling plans of each type of suspension systems and ceiling required by this Section. Show location of ceiling units and other items of general construction, equipment, mechanical and electrical work which are to be coordinated with the ceilings. Indicate framing and support details for work supported by the suspension system.

1. Ceiling suspension members.
2. Locations and method of attaching hangers to building structure.
3. Ceiling-mounted items including light fixtures, air outlets and inlets, speakers, sprinkler heads, moldings at walls, column penetrations, and other junctures with adjoining construction,
4. Indicate quantity of "extra material" to be provided as required per article below.

C. Coordination Drawings: Reflected ceiling plans, mechanical ductwork plans, mechanical equipment, stormwater and other non-pressurized piping, Fire sprinkler piping, drawn to scale, and coordinated with each other, using input from installers of the items involved.

D. Samples:

1. Acoustical Panels: Submit full size samples of each acoustic panel unit specified. Samples shall show the full range of exposed color and texture to be expected in the completed work.
2. Suspension System: Submit 12" long samples of each trim molding of suspension system.

**1.4 QUALITY ASSURANCE**

- A. Single-Source Responsibility for Ceiling Units: Obtain each type of acoustical ceiling unit from a single source with resources to provide products of consistent quality in appearance and physical properties without delaying progress of the Work.
- B. Single-Source Responsibility for Suspension System: Obtain each type of suspension system from a single source with resources to provide products of consistent quality in appearance and physical properties without delaying progress of the Work.
- C. Qualifications of Installer: Work under this Section shall be performed by an experienced specialty installer who is regularly engaged in the type of work required herein and acceptable to selected product manufacturer.

**1.5 DELIVERY, STORAGE AND HANDLING**

- A. Deliver all acoustical units and suspension system components in manufacturer's original unopened packages fully identified with type, finish, performance data and compliance labels.
- B. Handle and store in accordance with manufacturer's instructions and recommendations. Store in a place protected from damage, exposure to the elements and high humidity.
- C. Acoustical ceiling panels are to be stored per manufacturer's recommendations for allowable temperature and humidity range. Products shall not be allowed to become damp.

**1.6 COORDINATION**

- A. Coordinate layout and installation of acoustical ceiling units and suspension system components with other construction that penetrates ceilings or is supported by them, including light fixtures, HVAC equipment, fire-suppression system components, and partition system.

**1.7 ENVIRONMENTAL CONDITIONS**

- A. Do not install ceilings until wet work in the space has been completed and is nominally dry, and until work above ceilings has been completed, and until ambient conditions of temperature and humidity will be continuously maintained at values near those indicated for final occupancy.

**1.8 EXTRA MATERIALS**

- A. General: Furnish extra materials described below that match products installed and that are packaged with protective covering for storage and identified with labels describing contents.
  - 1. Acoustical Ceiling Panels: Full-size panels equal to 5% of each different tile/panel installed; but not less than one unopened carton.
  - 2. Suspension System Components: Quantity of each exposed component equal to 2% of quantity installed.
  - 3. Touchup Paint: provide manufacturer's standard touchup paint in minimum 2 containers 8oz each with brush in cap.

## **PART 2 - PRODUCTS**

### **2.1 MANUFACTURERS**

- A. Basis-of-Design, Products: Subject to compliance with requirements, provide products, scheduled on the drawings Finish Schedules for each ceiling type and suspension system as supplied by the following:
  - 1. Armstrong World Industries, Inc, or approved equal.
- B. Other Manufacturers:
  - 1. USG Interiors, Inc.
  - 2. Chicago metallic
  - 3. Rockfon.
  - 4. Or approved equal.

### **2.2 PERFORMANCE REQUIREMENTS**

- A. Delegated Design: Engage a qualified professional engineer, as defined in Section 014000 "Quality Requirements," to design seismic restraints for ceiling systems.
- B. Seismic Performance: Suspended ceilings shall withstand the effects of earthquake motions determined according to ASCE/SEI 7 – category A and installed in conformance with ASTM C636.
  - 1. Surface-Burning Characteristics: Comply with ASTM E84; testing by a qualified testing agency. Identify products with appropriate markings of applicable testing agency.
    - a) Flame-Spread Index: Class A (25 or less) according to ASTM E1264.
    - b) Smoke-Developed Index: 50 or less.

### **2.3 ACOUSTICAL CEILING UNITS, GENERAL**

- A. Standard for Acoustical Ceiling Units: Provide manufacturers' standard units of configuration indicated that comply with ASTM E 1264 classifications as designated by reference to types, patterns, acoustical ratings, and light reflectance, unless otherwise indicated.
- B. Acoustical Ceiling System (ACT1):
  - 1. Basis of design: Armstrong Ultima HIGH NRC 2082 with Armstrong 9/16" suprafine grid or approved equal
  - 2. Size: 24inch x 24inches x 1inches thick
  - 3. Classification: Type IV, Form 2, Pattern E.
  - 4. Color: White
  - 5. LR: Not less than 0.88.
  - 6. NRC: Not less than 0.85.
  - 7. CAC: not less than 35
  - 8. AC: Not less than 170
  - 9. Edge Detail, Exposed Face: Reveal sized to fit flange of exposed suspension-system members (beveled-regular).
  - 10. Antimicrobial Treatment: Broad spectrum fungicide and bactericide based.
  - 11. Grid Type: 9/16" face width, color white subject to requirements listed below.
  - 12. Note: all visible cut edges to be painted with manufacturer touch-up paint to match finish
- C. Acoustical Ceiling System (ACT1A):
  - 1. Basis of design: Armstrong CALLA 2482 to be installed into grid of ACT1
  - 2. Size: 24inch x 24inches x 1inches thick

3. Classification: Type IV, Form 2, Pattern E.
  4. Color: custom color, refer to finish schedule
  5. LR: Not less than 0.88.
  6. NRC: Not less than 0.85.
  7. CAC: not less than 35
  8. AC: Not less than 170
  9. Edge Detail, Exposed Face: Reveal sized to fit flange of exposed suspension-system members (beveled-tegular).
  10. Antimicrobial Treatment: Broad spectrum fungicide and bactericide based.
  11. Note: all visible cut edges to be painted with manufacturer touch-up paint to match finish
- D. Acoustical Ceiling System (ACT2):
1. Basis of design: Armstrong Ultima health zone high nrc 1446 with Armstrong 9/16" suprafine grid or approved equal
  2. Size: 24inch x 24inches x 7/8inches thick
  3. Classification: Type IV, Form 2, Pattern E.
  4. Color: White
  5. LR: Not less than 0.88.
  6. NRC: Not less than 0.80.
  7. CAC: not less than 35
  8. AC: Not less than 170
  9. Edge Detail, Exposed Face: Reveal sized to fit flange of exposed suspension-system members (beveled-tegular).
  10. Antimicrobial Treatment: Broad spectrum fungicide and bactericide based.
  11. Grid Type: 9/16" face width, color white subject to requirements listed below.
  12. Note: all visible cut edges to be painted with manufacturer touch-up paint to match finish
- E. Acoustical Ceiling System (ACT3):
1. Basis of design: Armstrong Ultima HIGH NRC 2085 with Armstrong 9/16" suprafine grid or approved equal
  2. Size: 24inch x 48inches x 1inches thick
  3. Classification: Type IV, Form 2, Pattern E.
  4. Color: White
  5. LR: Not less than 0.88.
  6. NRC: Not less than 0.85.
  7. CAC: not less than 35
  8. AC: Not less than 170
  9. Edge Detail, Exposed Face: Reveal sized to fit flange of exposed suspension-system members (beveled-tegular).
  10. Antimicrobial Treatment: Broad spectrum fungicide and bactericide based.
  11. Grid Type: 9/16" face width, color white subject to requirements listed below.
  12. Note: all visible cut edges to be painted with manufacturer touch-up paint to match finish
- F. Acoustical Ceiling System (ACT4):
1. Basis of design: Armstrong Ultima HIGH NRC 1437 with Armstrong 9/16" suprafine grid or approved equal
  2. Size: 24inch x 72inches x 7/8inches thick
  3. Classification: Type IV, Form 2, Pattern E.
  4. Color: White
  5. LR: Not less than 0.88.
  6. NRC: Not less than 0.80.
  7. CAC: not less than 35
  8. AC: Not less than 170
  9. Edge Detail, Exposed Face: Reveal sized to fit flange of exposed suspension-system members (beveled-tegular).
  10. Antimicrobial Treatment: Broad spectrum fungicide and bactericide based.
  11. Grid Type: 9/16" face width, color white subject to requirements listed below.
  12. Note: all visible cut edges to be painted with manufacturer touch-up paint to match finish

- G. Wood-Look Acoustical Ceiling System (AC2):
1. Basis of design: Armstrong Lyra PB in a wood-look color or approved equal
  2. Size: 24inch x 48inches x 1inches thick
  3. Color: Honey Oak (WH) with edge color (SW6115)
  4. NRC: Not less than 0.95.
  5. CAC: n/a
  6. Edge Detail, Exposed Face: Reveal sized to fit flange of exposed suspension-system members (tegular).
  7. Antimicrobial Treatment: Broad spectrum fungicide and bactericide based.
  8. Grid Type: 9/16" face width in color SHY
  9. Note: all visible cut edges to be painted with manufacturer touch-up paint to match finish

## 2.4 METAL SUSPENSION SYSTEM FOR ACOUSTICAL PANEL CEILINGS

- A. Steel Suspension System: Main and cross runners roll formed from cold-rolled steel sheet, pre-painted, electrolytically zinc coated, or hot-dip galvanized according to ASTM A 653/A 653M, not less than G30 coating designation, with prefinished metal caps on flanges.
1. Structural Classification: Intermediate-duty system.
  2. Construction: double web
  3. End Condition of Cross Runners: Override (stepped) type.
  4. Face Design: Flat, flush.
  5. Face width: 9/16"
  6. Cap Material: Steel or aluminum cold-rolled sheet.
  7. Cap Finish: White at ACT1 locations; Black at CC1 locations.

## 2.5 MISCELLANEOUS MATERIALS

- A. Provide manufacturer's standard molding for edges and penetrations of ceiling units which fit with type of edge detail and suspension system indicated.
- B. Acoustical Sealant for Exposed and Concealed Joints: Manufacturer's standard nonsag, paintable, nonstaining latex sealant, complying with ASTM C 834 and effective in reducing airborne sound transmission through perimeter joints and openings in building construction as demonstrated by testing representative assemblies according to ASTM E 90.
- C. Attachment Devices: Size for five times the design load indicated in ASTM C635/C635M, Table 1, "Direct Hung," unless otherwise indicated. Comply with seismic design requirements.
- D. Seismic Clips, where required by project application: Manufacturer's standard seismic clips designed and spaced to secure acoustical panel's in-place.
- E. Impact Clips, where required by project application: Where indicated, provide manufacturer's standard impact-clip system designed to absorb impact forces against acoustical panels.
- F. Leveling splines and attachment clips, where required by project application: Manufacturer's standard material.
- G. Hold-Down Clips, where required by project application: Manufacturer's standard hold-down clips spaced as standard with manufacturer and with key hole slot., where required.
- H. Touch-up Paint: manufacturer's standard type and color to match acoustical and grid units.

## **2.6 METAL EDGE MOLDINGS AND TRIM**

- A. Roll-Formed, Sheet-Metal Edge Moldings and Trim: Type and profile indicated or, if not indicated, manufacturer's standard moldings for edges and penetrations that comply with seismic design requirements; formed from sheet metal of same material, finish, and color as that used for exposed flanges of suspension-system runners.
- B. Perimeter Moldings: Type and profile indicated or, if not indicated, manufacturer's standard moldings for edges and penetrations that fit acoustical panel edge details and suspension systems indicated; formed from sheet metal of same material, finish, and color as that used for exposed flanges of suspension system runners.
  - 1. For lay-in panels with reveal edge details, provide stepped edge molding that forms reveal of same depth and width as that formed between edge of panel and flange at exposed suspension member. Extend reveal edge all around room where edge is indicated or required to accommodate tile layout indicated.
- C. Extruded Aluminum Exposed Edge Suspension Trim: Subject to compliance with requirements from same manufacturer as suspension grid, provide one of the following where indicated on drawings:
  - 1. Armstrong World Industries, Inc.; Axiom in depth indicated.
  - 2. CertainTeed Ceilings;.
  - 3. USG Interiors, Inc.; Compasso.
  - 4. Or approved equal

## **PART 3 - EXECUTION**

### **3.1 EXAMINATION**

- A. Examine substrates, areas, and conditions, including structural framing to which acoustical panel ceilings attach or abut, with Installer present, for compliance with requirements specified in this and other Sections that affect ceiling installation and anchorage and with requirements for installation tolerances and other conditions affecting performance of acoustical panel ceilings.
- B. Examine acoustical panels before installation. Reject panels that are wet, moisture damaged, or mold damaged.
- C. Proceed with installation only after unsatisfactory conditions have been corrected.

### **3.2 PREPARATION**

- A. Measure each ceiling area and establish layout of acoustical panels to balance border widths at opposite edges of each ceiling. Avoid using less-than-half-width panels at borders unless otherwise indicated, and comply with layout shown on reflected ceiling plans.
- B. Layout openings for penetrations centered on the penetrating items.

### **3.3 INSTALLATION, GENERAL**

- A. Install materials in accordance with manufacturer's printed instructions, in accordance with approved Shop Drawings.
  - 1. Comply with governing regulations and fire resistance rating requirements, and industry standards applicable to the work.
- B. Arrange panels in manner shown by reflected ceiling plans in accordance with approved Shop Drawings. Install units with uniform joints and with pattern running in one direction, unless

otherwise indicated.

- C. Suspended Ceiling Installation: Comply with ASTM C-636 as applicable to acoustical panel ceilings, except to the extent more stringent requirements are indicated or required.
- D. Suspend ceiling hangers from building's structural members and as follows:
  - 1. Install hangers plumb and free from contact with insulation or other objects within ceiling plenum that are not part of supporting structure or of ceiling suspension system.
  - 2. Splay hangers only where required to miss obstructions; offset resulting horizontal forces by bracing, countersplaying, or other equally effective means.
  - 3. Where width of ducts and other construction within ceiling plenum produces hanger spacing that interfere with location of hangers at spacing required to support standard suspension-system members, install supplemental suspension members and hangers in form of trapezes or equivalent devices.
  - 4. Comply with one of the following techniques, as indicated and required by Building Code:
    - a. Secure wire hangers to ceiling-suspension members and to supports above. Connect hangers directly to structure or to inserts, eye screws, or other devices that are secure and appropriate for substrate and that will not deteriorate or otherwise fail due to age, corrosion, or elevated temperatures.
    - b. Secure flat, angle, channel, and rod hangers to structure, including intermediate framing members, by attaching to inserts, eye screws, or other devices that are secure and appropriate for both the structure to which hangers are attached and the type of hanger involved. Install hangers in a manner that will not cause them to deteriorate or fail due to age, corrosion, or elevated temperatures.
  - 5. Do not support ceilings directly from permanent metal forms or floor deck. Fasten hangers to cast-in-place hanger inserts, postinstalled mechanical or adhesive anchors, or power-actuated fasteners that extend through forms into concrete.
  - 6. When steel framing does not permit installation of hanger wires at spacing required, install carrying channels or other supplemental support for attachment of hanger wires.
  - 7. Do not attach hangers to steel deck tabs.
  - 8. Do not attach hangers to steel roof deck. Attach hangers to structural members.
  - 9. Space hangers not more than 48 inches o.c. along each member supported directly from hangers unless otherwise indicated; provide hangers not more than 8 inches from ends of each member.
  - 10. Size supplemental suspension members and hangers to support ceiling loads within performance limits established by referenced standards.
- E. Install edge moldings and reveal moldings of the type indicated at edges of acoustical panel ceiling areas, and at locations where edge of tile would otherwise be exposed after completion of the work.
  - 1. Apply continuous ribbon or tape of acoustical sealant on back of vertical leg before fastening to vertical surface. Locate so that sealant will not be exposed after installation is completed.
  - 2. Secure moldings to building construction by fastening through holes drilled in vertical leg. Space holes not more than 3" from each end and not more than 16" o.c. between end holes.
    - a) Draw-up fasteners for tight set against vertical surfaces. Fasten with toggle bolts, or similar self-expanding screw anchors.
  - 3. Miter corners of moldings accurately to provide hairline joints.
  - 4. Level moldings with ceiling suspension system, to a level tolerance of 1/8" in 12'-0".
  - 5. All joints in moldings shall be cut accurately and installed with tight neat joint; all corners shall be mitered. Field applied tape and excess drywall compound shall be removed from moldings immediately.

- 6. Do not use exposed fasteners, including pop rivets, on moldings and trim.
- F. Install exposed spline acoustical panel systems in coordination with suspension system and according to ASTM C-636 "Recommended Practice for Installation of Metal Ceiling Suspension Systems for Acoustical Tile and Lay-in Panels".
- G. Furnish and install a minimum of four (4) hangers at all light fixture locations in accordance with manufacturer's standards.
- H. Install the frames supplied by Electrical, Heating and Ventilation and Plumbing installers for their respective diffusers, grilles, access doors or electrical lighting fixtures.
- I. Where tiles are tegular or have reveals, cut tiles are to be kerfed with reveal cut to match factory edges and lay fully within the ceiling grid. Apply touchup paint to exposed cut edges.
- J. Install hold-down, impact clips in areas indicated; space according to panel manufacturer's written instructions unless otherwise indicated.

#### **3.4 CLEANING AND PROTECTION**

- A. Clean exposed surfaces of acoustical panels and edge moldings; comply with manufacturer's instructions for cleaning and touch-up of minor finish damage. Remove and replace work which cannot be successfully cleaned and repaired to permanently eliminate evidence of damage
- B. Protect acoustical panel ceilings so that the work will be without damage and deterioration at the time of acceptance by the Owner.

END OF SECTION 09 5113

## **SECTION 095446 - FELT CEILING SYSTEM**

### **PART 1 - GENERAL**

#### **1.1 RELATED DOCUMENTS**

Drawings and general conditions of Contract, including General and Supplementary Conditions and Divisions-1 Specification sections apply to work of this section.

#### **1.2 SUMMARY**

a) Section Includes:

1. Non-Woven layered and formed Polyester felt fiber ceiling panels designated as FSC1 on the finish schedule and drawings
2. Wire hangers, fasteners, main runners, cross tees, wall angle moldings and accessories.

#### **1.3 SUBMITTALS**

- a) Shop Drawings: Provide layout including panel type and components used in the assembly of the ceiling. Show locations of items that are to be coordinated with the ceiling.
- b) Installation Instructions: Submit manufacturer's installation instructions as referenced in Part three, Installation.
- c) Samples: Minimum 6 inch x 6 inch sample of the colors selected in the ceiling design, include manufacturer sample of suspension components.
- d) Product Data: Submit manufacturer's technical data for each type of ceiling unit and suspension system required.
- e) Certifications: Manufacturer's certifications that products comply with specified requirements, including laboratory reports showing compliance with specified tests and standards.

#### **1.4 QUALITY ASSURANCE**

- a) Single-Source Responsibility: Provide ceiling panel units and suspension components by a single manufacturer.
- b) Fire Performance Characteristics: Identify ceiling components with appropriate markings of applicable testing and inspecting organization.
  1. Surface Burning Characteristics: As follows, tested per ASTM E 84 and complying with Class A products.
    - i. Flame Spread: 25 or less
    - ii. Smoke Developed: 450 or less
- c) Coordination of Work: Coordinate ceiling work with installers of related work including, but not limited to building insulation, gypsum board, light fixtures, mechanical systems, electrical systems, and sprinklers.

### 1.5 DELIVERY, STORAGE, AND HANDLING

- a) Deliver acoustical ceiling units to project site in original, unopened packages and store them in a fully enclosed space where they will be protected against damage from moisture, direct sunlight, surface contamination, and other causes.
- b) Before installing acoustical ceiling units, permit them to reach room temperature and a stabilized moisture content.
- c) White gloves recommended for handling to avoid marring, especially on light color panels.

### 1.6 PROJECT CONDITIONS

- a) Space Enclosure:
  - I. Building areas to receive ceilings shall be free of construction dust and debris and fully enclosed.

### 1.7 WARRANTY

- a) Acoustical Panel: Submit a written warranty executed by the manufacturer, agreeing to repair or replace panels that fail within the warranty period.
- b) Warranty Period:
  - I. Acoustical panels and Suspension: five (5) years from date of substantial completion

### 1.8 MAINTENANCE

- a) Extra Materials: Deliver extra materials to Owner. Furnish extra materials described below that match products installed. Packaged with protective covering for storage and identified with appropriate labels.
  - 1. Ceiling Units: Furnish quality of full-size units equal to 2.0 percent of amount installed but not less than one box.
  - 2. Exposed Suspension System Components: Furnish quantity of each exposed suspension component equal to 1.0 percent of amount installed but not less than one box.

## PART 2 - PRODUCTS

### 2.1 MANUFACTURERS

- a) Basis of Design Armstrong world industries inc or approved equal
  - a. Product: FELTWORKS Ebbs & Flows open Cell or approved equal

### 2.2 CEILING UNITS

- a) Ceiling Panel:
  - 1. Surface Texture: Soft
  - 2. Composition: Non-woven layered and formed Polyester felt (PET) fiber
  - 3. Color: as designated on the finished schedule
  - 4. Edge Profile: Square

5. Light Reflectance (LR): ASTM E 1477; 0.80
6. Green Guard Gold Certified
7. Acoustical Performance: tested per ASTM C423 and mounted in accordance with ASTM E795. NRC of 0.80
8. Sizes: 96"x96"x9",
  - i. Item no: 6532KOE09S8 or approved equal
  - ii. S8 Ebbs & Flows Open Cell Kit or approved equal
9. Flame Spread: Class A
10. Dimensional Stability: HumiGuard Plus

#### 2.2.1 SUSPENSION SYSTEMS

- a) Aluminum Suspension System:
  - i. Blades Hanging Kit, Item 6655 or approved equal
    1. Each kit includes 4 hanging assemblies, use one kit for each suspension

### PART 3 - EXECUTION

#### 3.1 EXAMINATION

- a) Do not proceed with installation until all wet work such as concrete, terrazzo, plastering and painting has been completed and thoroughly dried out.
- b) Proper designs for both supply air and return air, maintenance of the HVAC filters and building interior space are essential to minimize soiling. Before starting the HVAC system, make sure supply air is properly filtered and the building interior is free of construction dust.

#### 3.2 PREPARATION

- a) Measure each ceiling area and establish layout of acoustical units to balance border widths at opposite edges of each ceiling. Avoid use of less than half width units at borders, and comply with reflected ceiling plans. Coordinate panel layout with mechanical and electrical fixtures.

#### 3.3 INSTALLATION

- a) Install suspension system and blades in compliance with the approval of the authorities having jurisdiction, and in accordance with the manufacturer's FELTWORKS Open Cell Installation Instructions.

#### 3.4 ADJUSTING AND CLEANING

- a) Replace damaged and broken panels.
- b) Clean exposed surfaces of ceilings panels, including trim, edge moldings, and suspension members. Comply with manufacturer's instructions for cleaning and touch up of minor finish damage.

END OF SECTION

## **096263 – STAINLESS STEEL WALL BASE**

### **PART 1 GENERAL**

#### **1.01 RELATED DOCUMENTS**

A. Drawings and general provisions of the Contract, including General Conditions and Division 1 Specification Sections apply to this Section.

#### **1.02 SUMMARY**

A. This Section includes stainless steel wall base and installation accessories of the following type:

1. Stainless steel cove base.

#### **1.03 SUBMITTALS**

A. Product Data: Submit manufacturer's product data for each type of wall base specified, including the following:

1. Installation accessories.
2. Installation instructions.

B. Shop Drawings: Submit shop drawings showing mounting details. Include corner details showing pre-formed corners, and end conditions.

C. Samples: Submit samples to the Architect for review prior to [constructing job-site mock-ups,] delivering materials to the site or commencing the work in this Section.

1. Stainless Steel Base: Submit full size samples, minimum 4 inches in length, of each type of stainless steel base required with specified finish.

#### **1.04 DELIVERY, STORAGE AND HANDLING**

A. Packing and Shipping: Deliver materials to site in manufacturer's original unopened packaging with labels intact. Protect finished surfaces with removable wrapping or protective plastic film which will not bond when exposed to sunlight.

B. Storage: Store wall base in manufacturer's original packaging, off ground and under cover away from direct sunlight, protected from weather, extreme temperature, moisture or other damage.

C. Handling: Handle materials so that surfaces are protected. Prevent distortion or damage to fabricated pieces.

#### **1.05 PROJECT/SITE CONDITIONS**

A. Environmental Requirements: Areas to receive wall base shall be enclosed with HVAC in operation and maintaining temperatures within range expected during building occupancy to avoid thermal dimensional change in lengths of material after installation.

#### **1.07 SCHEDULING AND SEQUENCING**

A. Coordination: Coordinate installation of stainless steel base with associated wall coverings, corner guards, ceramic tile floor and wall finishes and other adjacent

floor and wall finishes.

## **PART 2 PRODUCTS**

### **2.01 MANUFACTURERS**

- A. Approved Distributor/Manufacturer:
  - a. Inpro Corporation
  - b. Protek Systems
  - c. Pitcon
  - d. Or approved equal

### **2.02 MATERIALS**

- A. Stainless Steel Sheet: ASTM A240, Type 304.
  - 1. Gauge: 18 gauge.
  - 2. Finish: No. 4 Brushed in accordance with ASTM A480, horizontal grain.

### **2.03 MANUFACTURED WALL BASE**

- A. Type 304 Stainless Steel Wall Base (MTB1 as indicated on finish schedule):
  - 1. 4 inch Cove Base
- B. Preformed Corner Units: Provide preformed inside and outside corner units.

### **2.04 INSTALLATION ACCESSORIES**

- B. Adhesive: Manufacturer's standard polyurethane adhesive

### **2.05 FABRICATION**

- A. Stainless steel wall base and corners shall be factory formed from stainless steel sheet with directional polish grain oriented parallel with length.
  - 1. Edges shall be free of burrs.
  - 2. Standard Length: 8'-0"
  - 3. Fabricate exposed ends with filler to match profile of cover base.
  - 4. Preformed corners shall be 90 degree, or as otherwise required to suite corner degree indicated on Drawings. Fabricate preformed corners with minimum 4 inch legs.

## **PART 3 EXECUTION**

### **3.01 EXAMINATION**

- A. Verification of Conditions: Examine subsurfaces to receive Work and report detrimental conditions in writing to Architect. Commencement of Work will be construed as acceptance of subsurfaces.
  - 1. Painted walls shall be dry and thoroughly cured prior to application of stainless steel wall base.
  - 2. Perform adhesion test on painted drywall or plaster walls to receive stainless steel wall base in accordance with manufacturer's installation instructions to verify proper adhesion.
  - 3. Verify floors within areas where stainless steel wall base is to be installed

are level to within 1/8 inch in 10'-0".

B. Coordination: Coordinate with other work which affects, connects with, or will be concealed by this Work.

1. Coordinate installation of base with application of wall finishes.
2. Where stainless steel base is installed after application of wall finish, verify application is completed and ready for installation of base.
3. Install wall base prior to application of finishes installed after installation of stainless steel wall base, such as wall tile, stainless steel wall sheeting, FRP, etc.

### 3.02 PREPARATION

A. Surface Preparation: Surfaces to receive stainless steel wall base shall be cleaned to remove all dust, debris, and other contaminants that would interfere with adhesive bond.

B. Place stainless steel base and accessory units in locations/rooms where material is to be installed and acclimate to building conditions as specified herein in Project/Site Conditions article for a minimum period of 24 hours prior to installation.

### 3.03 INSTALLATION

A. Adhesive Installation: Install stainless steel wall base with adhesive in strict accordance with manufacturer's printed installation instructions.

B. Install base accurately placed in proper location, level, and in proper alignment with adjoining work and applied finishes.

1. Fit field connections accurately together to form hairline joints.

C. Where necessary to provide secure attachment at corners, end terminations, or where higher abuse is anticipated, supplement adhesive installation with two (2) countersunk #10 stainless steel screws (installer supplied) placed in pre-drilled and countersunk holes located within 1 inch of each exposed end or corner. Set screw heads flush in countersunk hole.

D. Field Fabricated Corners: Where preformed corners are not utilized, field fabricate corners by V-notching back of base to 1/2 depth maximum of thickness of material and bend to form tightly to corner substrate.

### 3.04 DAMAGE AND REPAIR

A. Upon completion of the installation, visually check exposed surfaces of the work of this Section, and touch up scratches and damaged surfaces by field polishing so they are completely invisible to the unaided eye from a distance of five feet.

### 3.05 CLEANING

A. Upon completion of installation of stainless steel walls base, promptly clean exposed surfaces in accordance with recommendations of the stainless steel base manufacturer to remove all traces of dust, dirt, adhesive, and other foreign materials.

B. During the course of the Work and on completion, remove and dispose of excess materials, equipment and debris away from premises. Leave Work in clean condition.

END OF SECTION

## SECTION 096516 SHEET VINYL FLOORING

### PART 1 - GENERAL

#### 1.1 SUMMARY

- A. Work Included: Provide labor, materials and equipment necessary to complete the installation of safety resilient sheet vinyl flooring and accessories Designated as SV1 on the finish schedule, including but not limited to the following:
  - 1. substrate preparation.
  - 2. moisture and pH testing.
  - 3. Coordination of plumbing fixtures for connections with flooring accessories.
  - 4. Floor installation and heat welding of all seams, horizontal and vertical.

#### 1.2 SUBMITTALS

- A. Product Data: Submit manufacturer's current printed product literature, specifications, and installation instructions, including the Wet Area Installation Practices Guide and Kitchen Detailing Guide.
- B. Certificate of recommendation for installer from manufacturer stating installer's completion of Manufacturer approved training course. Certificate must be for individual who will be installing or directly on-site overseeing installation of product.
- C. Shop Drawings: Submit shop drawings indicating materials, details, and accessories including but limited to the following:
  - 1. Floor plans indicating seam locations and roll direction.
  - 2. Floor plans including notations at each drainage protrusion (drains, cleanouts, grease traps, and similar items) as to the method of connection.
  - 3. Wall caps and transition to adjacent materials.
- D. Operations and Maintenance Data: Submit manufacturer's operation and maintenance data for each installed product.
- E. Warranty: Submit executed copy of manufacturer's standard limited warranty.
- F. Field Quality Control Reports: Submit reports indicating results of moisture testing, substrate preparation procedures and installation methods employed.
- G. Extra Stock Materials: Provide 2 percent extra materials and store where directed, properly packaged and labeled.

- H. Samples: submit duplicate 8" x 10" sample pieces of sheet material, 6" long gulley edge, cap strip, AND cove former, in accordance with section 01330 - submittal procedures.

### 1.3 QUALITY ASSURANCE

- A. Manufacturer: To the greatest extent practical, provide each type of resilient flooring and accessories by a single manufacturer, including recommended primers, adhesives, sealants, finish accessories, and leveling compounds.
- B. Installer Qualifications: Installer experienced in performing work of this section who has specialized in installation of work similar to that required for this project.
  - 1. Training: Installers who have attended a Manufacturer's Installation Clinic and is recommended installer.
- C. Regulatory Requirements: Provide slip resistant sheet vinyl safety flooring in compliance with the following:
  - 1. Americans with Disabilities Act Architectural Guidelines (ADAAG)
  - 2. Occupational Safety and Health Administration (OSHA).

### 1.4 DELIVERY, STORAGE, AND HANDLING

- A. Store rolls of sheet goods in a secured upright position. Store materials in dry spaces protected from the weather, with ambient temperatures not less than 68 deg F or more than 80 deg F and floor temperature 65 degrees or higher.

### 1.5 PROJECT CONDITIONS

- A. Comply with manufacturer's requirements for project conditions including the following:
  - 1. Maintain ambient temperatures of 68 deg F (18 deg C) and 80 deg F (26 deg C) in spaces to receive resilient products for 72 hours before installation, during installation and 24 hours after installation.
  - 2. Maintain the ambient relative humidity between 40 percent and 60 percent during installation.
  - 3. Close spaces to traffic during resilient flooring installation until the the adhesive has set.
  - 4. Verify permanent HVAC is operational. If temporary heat is required, use electric or indirect heat sources. Do not use kerosene or propane in direct contact with the ambient air.
  - 5. Verify other finishing operations, including painting, have been completed.
  - 6. Food service casework, counters and other items are to be installed on top of sheet resilient flooring material, install flooring material before these items are to be installed.
  - 7. Coordinate with plumbing subcontractor surface membrane clamping drainage connections will be used, including but not limited to, surface clamping round drains, surface clamping trench drains, surface clamping floor sinks, surface clamping grease traps. Where specified product does not contain flashing lamp, provide flooring manufacturer's Angle/Edge that turned down into drain.

1.6 WARRANTY

- A. Warranty: Provide manufacturer's standard limited warranty, but not less than 10 years from date of substantial completion.
- B. Labor warranty period of 2 years to be supplied by installer.

PART 2 - PRODUCTS

2.1 MANUFACTURER

- A. Basis-of-Design Manufacturer: Altro USA, Inc.,
- B. Other manufacturers:
  - 1. Forbo, Flooring systems
  - 2. Or approved equal

2.2 SHEET VINYL FLOORING

- A. Sheet Vinyl Flooring designated as SV1 on the finish schedule and plans: Basis of design: Altro Aquarius by Altro USA, Inc. or approved equal complying with the following:
  - 1. ASTM F1303: Type II, Grade 1, Class A with moisture resistant backing
  - 2. Wear Layer/Overall Thickness: 2.0 mm (0.12 inches), with non-directional pattern and slip retardant particulate suspended evenly throughout the product thickness.
  - 3. Roll/Sheet Width & Length: 6 feet 7 inches (2 m) x 66 feet
  - 4. Backing: non-woven polyester/cellulose, glass fiber reinforcement.
  - 5. Slip Resistance: ADA compliant, ASTM D 2047 James Machine, SCoF Dry .88 / Wet 1.03 DIN 51130 Ramp Test - R 11
  - 6. Static Load Limit: ASTM F 970, Standard Test Method for Static Load Limit, Modified – 2000 psi.
  - 7. Fire Performance: ASTM E 648, Standard Test method for Critical Radiant Flux of 0.45 watts/cm<sup>2</sup> or greater, Class I, ASTM E662 Smoke Development.
  - 8. Sustainable Properties: Phthalate-free, contains rapidly renewable bio-based content, 100 percent recyclable, SCS FloorScore Certified, meets CAL Section 01350, contributes to LEED credits for recycled content, adhesives, low VOC emitting material. EPD Environmental Product Declaration and HPD Health Product Declaration Available.
  - 9. Colors: As indicated on the Drawings.
- B. System Accessories
  - 1. Vinyl Welding Rod:
    - a. Weld Rod (in matching color): to be used at seams, corners, drains, & transitions including with Angle/Edge transitions

2. Cover Former:, sized to suit application:
  - a. Manufacturer's Cove Former 0.75" radius: to be used at base of walls for coving of the flooring. Cove Former and Cove should be installed using manufacturer Double-Sided Contact Tape
  - b. Cove to be minimum 4" height or as indicated on drawings.
3. Drains & Penetrations: flooring MUST be mechanically fastened to all drain outlets and cleanouts to ensure a permanent watertight installation.
  - a. New Construction, Round Drain Covers and floor sinks with clamping flanges: anchor flooring in clamping flange of drain.
    - 1) Where non-clamping drains are specified, flooring sub contractor shall modify the drain covers to mechanically fasten flooring to drain outlets
  - b. Rectangular Drains, Clean Outs, Trench Drains, Floor Sinks without clamping flanges:
    - 1) Manufacturer recommended angle or edge transition installed as part of system. Provide around every square/rectangular drain, floor sink, and cleanout without a clamping flange. Refer to plumbing drains for drain specifications.
      - a) Basis of Design: Altro Gulley Angle or approved equal: Provide in color as selected by architect.
  - c. Pipes & Penetrations:
    - 1) Manufacturers recommended sealant installed as part of system:
      - a) Basis of Design: AltroMastic or approved equal (color coordinating): To be used at around any pipe or penetration through the flooring (with the exception of drains)
4. Perimeters/Edging: Acceptable Material, vinyl, sized to suit application:
  - a. Manufacturer's recommended edge transition with vertical leg and flange to overlap adjacent flooring. Provide as all transitions to other flooring types.
    - 1) Basis of design: Altro Gulley Edge GE 35RE or GE25RE or approved equal
      - a) provide in color as selected by architect.
5. Cap Strip: Acceptable material, sized to suit application:
  - a. Color/material: Stainless steel
6. Subfloor Filler and Leveler: Use only gray Portland cement-based "moisture tolerant" underlayments, and patching compounds with a 3000 PSI. Use for filling cracks, holes, or leveling. White gypsum materials may not be acceptable.

C. Installation Materials:

1. Leveling and Patching Compounds: Latex-modified, moisture resistant, silicate free, Portland cement based or blended hydraulic-cement-based formulation with a 3000 PSI
2. Adhesives:
  - a. Manufacturer recommended 2 part polyurethane for use with heavy rolling loads and surface water.
    - 1) Basis of design: Altrofix 30 or approved equal
3. The installation of floor is a system installation. All circular drain covers must be modified in the field where no Surface-Membrane Clamping Style Drains provided and installed per the instructions in the manufacturer Flooring installation guide.

### PART 3 - EXECUTION

#### 3.1 EXAMINATION

- A. Examine substrates, with installer present, for compliance with requirements for maximum moisture content and other conditions affecting performance of the work.
- B. Verify that finishes of substrates comply with tolerances and other requirements specified in other Sections and that substrates are free of cracks, ridges, depressions, scale, and foreign deposits that might interfere with adhesion of resilient products.
- C. Proceed with installation only after unsatisfactory conditions have been corrected.
- D. The general contractor shall test, substrate moisture content and field conditions to verify conditions are suitable for installation. Submit written reports in a timely manner and indicate remedial actions taken.

#### 3.2 PREPARATION

- A. Prepare substrates in accordance with manufacturer's written instructions including the following:
  1. Verify that substrates are dry and free of curing compounds, sealers, and hardeners.
  2. Remove substrate paint, coatings and other substances that are incompatible with adhesives or contain soap, wax, oil, solvents, or silicone, using mechanical methods recommended by manufacturer. Do not use solvents.
  3. Mechanically remove contamination on the substrate that may cause damage to the resilient flooring material. Permanent and non-permanent markers, pens, crayons, and paint shall not be used to write on the back of the flooring material or used to mark the substrate as they could bleed through and stain the flooring material.
  4. If chemical adhesive removal is used, comply with regulations of authorities having jurisdiction. If hazardous materials in existing conditions are present or suspected, notify the Owner in writing and stop work in that area until notified by Owner of actions to be taken.

- B. Concrete Subfloors: Testing by methods specified below to determine moisture content in concrete, for all concrete regardless of age or grade level:
1. Comply with recommendations of ASTM F 2170 Standard Test Method for Determining Relative Humidity in Concrete Slab Using in-situ probes. This test method covers the quantitative determination of percent relative humidity in concrete slabs for field or laboratory test.
  2. The readings shall not exceed 90%.
  3. Alkalinity Testing per ASTM F710 with an acceptable range of 7-9.9 pH.
  4. Comply with ASTM and ACI Standards as listed in References.
- C. Contingency for High Moisture Readings in Concrete: If at the time of installation the moisture readings are in excess of Altro's recommendations, the General Contractor shall employ a means of Moisture Mitigation. This includes, but is not limited to, the following methods:
1. Temporary use of dehumidification equipment.
  2. Postponing of the flooring installation start time.
- D. Additional Preparation Requirements:
1. Fill cracks, holes, depressions and irregularities in the substrate with underlayment leveling and patching compounds; remove bumps and ridges to produce a uniform and smooth substrate.
  2. Allow minimum 24 hours curing time after leveling/patching compound has been applied.
  3. Do not install floor covering over expansion joints.
  4. Do not install resilient products until they are similar to the temperature as the space where they are to be installed. Move resilient products and installation materials into spaces where they will be installed at least 24 hours in advance of installation.
  5. Sweep and vacuum clean substrates to be covered by resilient products immediately before installation.
  6. When installing over existing floor coverings, completely degrease using a power washer and a high pH degreaser. Rinse repeatedly with clean water until runoff is clear and allow sufficient dry time.

### 3.3 INSTALLATION

- A. Install products in strict accordance with manufacturer's instructions and approved submittals. Use installation method suitable for substrate and project conditions.
- B. Coved Installation: Where flooring is coved up wall surfaces and other abutments, installation shall be in accordance with safety flooring Installation Practices using the following accessories:
1. At ceramic tile, Use Altro C8 Vinyl Captile Strip or C4 cap, respectively or approved equal. Substituted products should provide a similar installation detail.
  2. Provide 0.75" (19.1 mm) radius coving at juncture of vertical and horizontal surfaces: Use Altro Vinyl Cove Former 20R or approved equal. Substituted products should provide a similar installation detail.
  3. Top set cove base: Install in accordance with manufacturer's instructions.

4. Any outside corners should be created using a butterfly cut or a V cut. Heat welds shall not be created along the corner of the coved material as it runs up the wall.
- C. Proceeding with the installation means the installer's acceptance that substrates are acceptable for installation of resilient flooring.
- D. Install with manufacturer's adhesive recommended for the site conditions.
- E. Install rolls in sequential order following roll numbers on the labels.
- F. Do not reverse sheets unless instructed otherwise by manufacturer's technical representative.
- G. Immediately place the flooring into the wet adhesive. Roll spread adhesive with acceptable nap paint roller before setting flooring into adhesive.
- H. Roll the flooring in both directions using a 100-150 lb 3 section roller.
- I. Heat-weld all seams, vertical and horizontal. Allow 12 hours cure time before heat-welding.
- J. When flash-coving, use manufacturer's recommended accessories for cove former, cap, edging and other details.

### 3.4 CLEANING AND PROTECTION

- A. Comply with manufacturer's written instructions for cleaning and protection of resilient products. Perform the following operations immediately after completing resilient product installation:
  1. Remove adhesive and other blemishes from exposed surfaces.
  2. Sweep and vacuum surfaces thoroughly.
  3. Damp-mop surfaces to remove marks and soil.
- B. Protect resilient products from mars, marks, indentations, and other damage from construction operations and placement of equipment and fixtures during remainder of construction period.
  1. Never use tapes on the surface on the finish flooring
  2. Never use Sharpies, pens, crayons or construction markers on either the finish flooring or the substrate.
  3. No traffic for 24 hours after installation, unless approved by Altro technical.
  4. No heavy traffic, rolling loads, or furniture placement for 72 hours after installation.
- C. Wait 72 hours after installation before performing initial cleaning. Start a regular maintenance program after the initial cleaning as recommended by manufacturer.

END OF SECTION

## SECTION 09 6519 - RESILIENT TILE FLOORING

### PART 1 - GENERAL

#### 1.1 SUMMARY

- A. Section Includes:
  - 1. Luxury Vinyl Tile (LVT).
  - 2. Resilient Rubber Base
  - 3. Resilient transition strips.
  - 4. Installation accessories.

#### 1.2 ACTION SUBMITTALS

- A. Product Data: For each type of product.
- B. Sample for verification. For each exposed product and for each color and pattern specified.
  - 1. Full size tile in each color and pattern
  - 2. Resilient base: minimum 12" long in each color and type specified.
- C. Moisture Testing results, see moisture testing requirements below.
- D. Submit manufacturer's warranty as noted herein.

#### 1.3 CLOSEOUT SUBMITTALS

- A. Maintenance data.

#### 1.4 QUALITY ASSURANCE

- A. Installer Qualifications: An entity that employs installers and supervisors who are competent in techniques required by manufacturer for floor tile installation.

#### 1.5 DELIVERY, STORAGE AND HANDLING

- A. Store floor tile and installation materials in dry spaces protected from the weather, with ambient temperatures maintained within range recommended by manufacturer, but not less than 50 deg F or more than 90 deg F. Store floor tiles on flat surfaces.

#### 1.6 PROJECT CONDITIONS:

- A. Maintain ambient temperatures within range recommended by manufacturer, but not less than 70 deg F or more than 95 deg F, in spaces to receive floor tile during the following time periods:
  - 1. 1. 48 hours before installation.
  - 2. During installation.

3. 48 hours after installation.
  - B. Until Substantial Completion, maintain ambient temperatures within range recommended by manufacturer, but not less than 55 deg F or more than 95 deg F.
  - C. Close spaces to traffic during floor tile installation, and for 48 hours after floor tile installation or as recommended by manufacturer.
  - D. Install floor tile after other finishing operations, including painting, have been completed.
- 1.7 EXTRA MATERIALS:
- A. Provide minimum 5% area installed in full-size units for each type of flooring and base material from same lot as installed product but not less than 1 unopened box.
    1. If multiple lots are used in separate spaces, identify locations and provide extra material in amount indicated above for each lot.
- 1.8 WARRANTY
- A. Provide manufacturers 5 year limited warranty.

## PART 2 - PRODUCTS

- 2.1 LUXURY VINYL TILE (LVT-1, LVT-2, LVT-3, LVT-4, LVT-5)
- A. MANUFACTURERS
    1. Luxury Vinyl Tile Products: Subject to compliance with requirements, provide products as scheduled on the drawings Finish Schedule, or approved equal. Evaluation of equals will be reviewed for similar aesthetics, appearance, and meet or exceed performance requirements
      - a. Refer to drawings for Basis of Design Manufacturers and products, or approved equal from
        - 1) Patcraft
        - 2) Armstrong World Industries, Inc
        - 3) Mohawk Floors
        - 4) Mannington Mills
        - 5) or approved equal.
  - B. PERFORMANCE REQUIREMENTS FOR ALL LVT TYPES
    1. Fire-Test-Response Characteristics: For resilient floor tile, as determined by testing identical products according to ASTM E648 or NFPA 253 by a qualified testing agency.
      - a. Critical Radiant Flux Classification: Class I, not less than 0.45 W/sq. cm.
    2. ASTM F1914 RESIDUAL INDENTATION: Pass, less than 10%
    3. ASTM F970 MODIFIED FOR MAX WEIGHT: 1000lbs
    4. ASTM E662 (NFPA 258) SMOKE DENSITY: Passes, less than 450
    5. ASTM D2047 SLIP RESISTANCE: ASTM D2047 SLIP RESISTANCE: <0.5 (DRY)
    6. FLOOR SCORE CERTIFIED
  - C. LUXURY VINYL FLOOR TILE (LVT-1, LVT-2, LVT-3, LVT-4)
    1. Tile Standard: ASTM F1700.

- a. Class: Class III, Printed Film Vinyl Tile.
- b. Type: B, Embossed Surface.
2. Flor-Score Certified
3. Wear thickness: 22mil
4. Total Thickness: 5.0mm.
5. Size, color and patterns: as indicated on the drawings in the finish schedule
6. Attachment: full spread glue-down
7. 22 year commercial warranty

D. LUXURY VINYL FLOOR TILE (LVT-5)

1. Tile Standard: ASTM F1700.
  - a. Class: Class III, Printed Film Vinyl Tile.
  - b. Type: B, Embossed Surface.
2. Flor-Score Certified
3. Wear thickness: 20mil
4. Total Thickness: 5.0mm.
5. Size, color and patterns: as indicated on the drawings in the finish schedule
6. Attachment: full spread glue-down
7. 20 year commercial warranty

2.2 RESILIENT BASE (RB1, as noted on finish schedule)

A. MANUFACTURERS

1. Subject to compliance with requirements, provide products as scheduled on the drawings Finish Schedule, or approved equal product. Evaluation of equals will be reviewed for similar aesthetics, appearance and meet or exceed performance requirements
  - a. Basis of Design
    - 1) Roppe
  - b. Other Manufacturers:
    - 1) Johnsonite Tarkett group
    - 2) Armstrong World Industries, Inc
    - 3) Or approved equal

A. Base Standard: ASTM F 1861, Type TS (rubber, thermoset).

1. Group: I (solid, homogeneous).
2. Style as follows, unless otherwise indicated on the drawings:
  - a. Style B, Cove toe
3. Minimum Thickness: 0.125 inch.
4. Height: 4 inches, unless otherwise as indicated on Drawings.
5. Length: 100-foot roll length.
6. Colors: As indicated on drawings Finish Schedule.
7. Provide with preformed factory inside corners and preformed factory outside corners.

2.3 RESILIENT FLOOR TRANSITIONS

1. Subject to compliance with requirements, provide products as scheduled on the drawings Finish Schedule, or approved equal product. Evaluation of equals will be reviewed for similar aesthetics, appearance and meet or exceed performance requirements
  - a. Basis of design:
    - 1) Johnsonite (Tarkett group)
  - b. Other manufacturers:

- 1) Armstrong World Industries, Inc
  - 2) Roppe
  - 3) Or approved equal
2. Solid composition, color and profile as selected by architect where metal transition strip has not been specified.

## **2.4 INSTALLATION MATERIALS**

- A. Trowelable Leveling and Patching Compounds: Latex-modified, portland-cement-based or blended hydraulic-cement-based formulation provided or approved by floor tile manufacturer for applications indicated.
- B. Adhesives: Water-resistant type recommended by floor tile and adhesive manufacturers to suit floor tile and substrate conditions indicated.
- C. Concrete Slab Primer: Non-staining type recommended by the tile manufacturer
- D. Leveling Compound: Latex/Portland cement flash patching and leveling compound equal to No. DSP-520 made by H.B. Fuller or No. 226 with 3701 admixture made by Laticrete or approved equal made by Mapei, Bostik, or approved equal.
- E. Edging Strips: 1/8" thick, homogeneous vinyl or rubber composition, tapered or bullnose edge, color as selected by the Architect from manufacturer's standards
- F. Stair-Tread-Nose Filler: Two-part epoxy compound recommended by resilient tread manufacturer to fill nosing substrates that do not conform to tread contours.

## **PART 3 - EXECUTION**

### **3.1 INSPECTION**

- A. Examine the areas and conditions where resilient tile flooring is to be installed and correct any conditions detrimental to the proper and timely completion of the work. Do not proceed with the work until unsatisfactory conditions are corrected to permit proper installation of the work.

### **3.2 CONDITION OF SURFACES**

- A. Allowable Variations in Substrate Levels (Floors):  $\pm 1/8"$  in 10'-0" distance and 1/4" total maximum variation from levels shown.
- B. Grind or fill concrete substrates as required to comply with allowable variation.

### **3.3 PREPARATION**

- A. Prepare substrates according to floor tile manufacturer's written instructions to ensure adhesion of resilient products.
- B. Concrete Substrates: Prepare according to ASTM F710.

1. Verify that substrates are dry and free of curing compounds, sealers, and hardeners.
  2. Remove substrate coatings and other substances that are incompatible with adhesives and that contain soap, wax, oil, or silicone, using mechanical methods recommended by floor tile manufacturer. Do not use solvents.
  3. Alkalinity and Adhesion Testing: Perform tests recommended by floor tile manufacturer. Proceed with installation only after substrate alkalinity falls within range on pH scale recommended by manufacturer in writing, but not less than 5 or more than 10 pH.
  4. Moisture Testing: Perform tests so that each test area does not exceed 1000 sq. ft. and perform no fewer than three tests in each installation area and with test areas evenly spaced in installation areas.
    - a. Relative Humidity Test: Using in-situ probes, ASTM F2170. Proceed with installation only after substrates have a maximum 75 percent relative humidity level measurement or as recommended by tile and adhesive product requirements.
    - b. Perform additional moisture tests recommended in writing by adhesive and carpet tile manufacturers. Proceed with installation only after substrates pass testing.
- C. Fill cracks, holes, and depressions in substrates with trowelable leveling and patching compound; remove bumps and ridges to produce a uniform and smooth substrate.
- D. Do not install floor tiles until materials are the same temperature as space where they are to be installed.
1. At least 48 hours in advance of installation, move resilient floor tile and installation materials into spaces where they will be installed.
- E. Immediately before installation, sweep and vacuum clean substrates to be covered by resilient floor tile.

### 3.4 FLOOR TILE INSTALLATION

- A. Comply with manufacturer's written instructions for installing floor tile.
- B. Lay out floor tiles from center marks established with principal walls, discounting minor offsets, so tiles at opposite edges of room are of equal width. Adjust as necessary to avoid using cut widths that equal less than one-half tile at perimeter.
1. Lay tiles square with room axis and in pattern indicated.
- C. Match floor tiles for color and pattern by selecting tiles from cartons in the same sequence as manufactured and packaged, if so numbered. Discard broken, cracked, chipped, or deformed tiles.
1. Lay tiles in pattern of colors and sizes indicated.
- D. Scribe, cut, and fit floor tiles to butt neatly and tightly to vertical surfaces and permanent fixtures including built-in furniture, cabinets, pipes, outlets, and door frames.
- E. Extend floor tiles into toe spaces, door reveals, closets, and similar openings. Extend floor tiles to center of door openings.

- F. Maintain reference markers, holes, and openings that are in place or marked for future cutting by repeating on floor tiles as marked on substrates. Use chalk or other nonpermanent marking device.
- G. Install floor tiles on covers for telephone and electrical ducts, building expansion-joint covers, and similar items in installation areas. Maintain overall continuity of color and pattern between pieces of tile installed on covers and adjoining tiles. Tightly adhere tile edges to substrates that abut covers and to cover perimeters.
- H. Install resilient transition strips at differences in flooring heights, and transitions between flooring types. Provide profiles as scheduled on drawings and to meet ANSI A117.1-2009 accessibility requirements.
- I. Adhere floor tiles to substrates using a full spread of adhesive applied to substrate to produce a completed installation without open cracks, voids, raising and puckering at joints, telegraphing of adhesive spreader marks, and other surface imperfections.
- J. Stair Treads
  - 1. Use stair-tread-nose filler to fill nosing substrates that do not conform to tread contours.
  - 2. Tightly adhere to substrates throughout length of each piece.
  - 3. For treads installed as separate, equal-length units, install to produce a flush joint between units.

### 3.5 Cleaning and Protection

- A. Remove any excess adhesive or other surface blemishes from tile, using neutral type cleaners as recommended by the tile manufacturer. Protect installed flooring from damage by use of heavy Kraft paper or other covering.

END OF SECTION 09 6519

## SECTION 09 6560 SYNTHETIC SPORTS FLOORING

### PART 1 – GENERAL

#### 1.1 SECTION INCLUDES

- A. Supply and installation of the indoor resilient multipurpose surfacing defined as “SSF1” on the finish schedule
- B. Application of the game lines, painted logos, lettering, and out-of-bounds and key field areas.
- C. References for the correct construction and preparation of concrete slabs to receive resilient flooring.
- D. Second story volleyball net sleeves specified under section 116600 to be installed under this section.

#### 1.2 RELATED SECTIONS:

- A. Athletic Equipment – 116600

#### 1.3 SUBMITTALS

- A. Product Data:
  - 1. Manufacturer’s promotional brochures, specifications and installation instructions
- B. Manufacturer Certifications:
  - 1. Provide certification that accurately identifies the Original Equipment Manufacturer (OEM) of flooring furnished for this project including manufacturer’s name, address and factory location.
  - 2. Suppliers of private label flooring for this project must identify themselves as such and fully disclose the OEM information listed above.
  - 3. All “manufacturer” requirements in these specifications must be complied with by the OEM, including warranties, certifications, qualifications, product data, test results, environmental requirements, performance data, etc.
- C. Samples:
  - 1. Submit for selection and approval of the indoor resilient multipurpose surfacing, manufacturer’s brochures, samples or sample boards of all of the available colors, textures and styles.
  - 2. Submit color samples of all the available game line paint colors for selection and approval.
- D. Closeout Submittals:
  - 1. Submit the indoor resilient multipurpose surfacing and manufacturer’s maintenance instructions.
  - 2. Submit the material and installation warranties as specified.

#### 1.4 QUALITY ASSURANCE

A. Qualifications:

1. The indoor resilient multipurpose surfacing shall have been actively marketed for a minimum of ten (10) years.
2. The indoor resilient multipurpose surfacing shall be manufactured in an ISO 9001 OR 14001 certified plant.
3. The indoor resilient multipurpose surfacing supplier shall be an established firm, experienced in the field, and competent in the techniques required by the manufacturer.
4. The installer of the indoor resilient multipurpose surfacing shall have a minimum of five (5) years of experience in the field installing indoor resilient multipurpose surfacing and have worked on at least five (5) projects of similar size, type and complexity.

B. Certifications:

1. Installer to submit the indoor resilient athletic surfacing manufacturer's certification attesting that they are a trained installer of the indoor resilient multipurpose surfacing.
2. The indoor resilient multipurpose surfacing manufacturer to submit official ISO 9001 certification for the facility in which the indoor resilient multipurpose surfacing is manufactured.

C. Testing:

1. Tests shall be relative for multi-purpose use with certificates from independent testing resources to be made available upon request.
2. Test results shall be no more than 5 years old and performed according to ASTM standard testing procedures.

1.5 DELIVERY, STORAGE AND HANDLING

A. Delivery:

Material shall not be delivered until all related work is in place and finished and/or proper storage facilities and conditions can be provided and guaranteed stable according to manufacturer recommendations.

B. Storage:

1. Store the material in a secure, clean and dry location.
2. Maintain temperature between 55° and 85° Fahrenheit.
3. Store the indoor resilient athletic surfacing rolls in an upright position on a smooth flat surface immediately upon delivery to jobsite.
4. Rolls shipped in rigid protective cardboard containers can be laid horizontally prior to unpacking and installation.

1.6 PROJECT/SITE CONDITIONS

- A. It is the responsibility of the general contractor/construction manager to maintain project/site conditions acceptable for the installation of the indoor resilient multipurpose flooring.
- B. The area in which the indoor resilient multipurpose surfacing will be installed shall be dry and weather tight. Permanent heat, light and ventilation shall be installed and operable.

- C. All other trades shall have completed their work prior to the installation of the resilient athletic flooring. The general contractor or construction manager shall maintain a secure and clean working environment before, during and after the installation.
- D. Maintain a stable room temperature of at least 65°F for a minimum of one (1) week prior to, during and thereafter installation.
- E. An effective low-permeance vapor barrier is placed directly beneath the concrete subfloor. For “on” or “below grade” installations, it is recommended to provide a permanent vapor barrier resistant to long term hydrostatic pressure/moisture exposure. Protrusions should be sealed to prevent moisture migration into the slab. Moisture should not be allowed to enter the slab after the completed construction.
- F. Concrete subfloor surface pH level within the 7 to 11 range dependent upon installation type.
- G. Concrete subfloor should be no greater than 1/8" within a 10 ft diameter. This tolerance can be measured in accordance with ASTM E1155. A specified ( $F_F$ ) of 50 and an ( $F_L$ ) of 30 should reach this degree of floor flatness and floor level. There is no numerical correlation between F numbers and the deviation from the straight edge. However, the above specified numbers should achieve a flat floor with minimal deviation in the slab. Reference ACI 117 and ACI 302.1R. The general contractor should provide a certificate of compliance with the above recommendations.
- H. Concrete subfloor must be clean and free of all foreign materials or objects including, but not limited to, curing compounds and sealers.
- I. Fill cracks, grooves, voids, depressions, and other minor imperfections. Follow the manufacturer’s directions. Moveable joints must be treated utilizing specific transition joint devices depending upon the architect’s recommendations. Follow current ASTM F710 guidelines for the preparation of concrete slabs to receive resilient flooring.
- J. Refer to ACI 302.2R “Guidelines for Concrete Slabs that Receive Moisture-Sensitive Flooring Materials” for concrete design and construction.
- K. Concrete slab shall be fortified with continual steel reinforcement. Fiber reinforcement alone shall not be considered adequate fortification.

#### 1.7 WARRANTY

- A. Special Limited Warranty:
  - 1. Manufacturer's standard form in which manufacturer agrees to repair or replace sports flooring including labor that fails within specified warranty period.
- B. Material warranty must be direct from the product manufacturer.
  - 1. Material warranties from separate or third party insurance providers are not valid.
  - 2. Material warranties must come from original manufacturer or division thereof. Private label warranties from distributors or brokers are not valid. Supply original point of manufacturing upon request.
- C. Failures include, but are not limited to, the following:
  - 1. Material manufacturing defects.

2. Surface wear and deterioration to the point of wear-through of wear layer per ASTM F410/ASTM F1303.
  3. Failure due to substrate moisture exposure exceeding 98 percent relative humidity when tested according to ASTM F2170.
- D. Warranty Period:
1. For material defects and surface wear-through: 25 years from date of substantial completion.
  2. For moisture vapor tolerance: 25 years from date of substantial completion.
- E. Installer's Limited Warranty:
1. Installer's standard form in which installer agrees to repair or replace sports flooring that fails due to poor workmanship or faulty installation within the specified warranty period.
  2. Warranty Period: 2 years from date of substantial completion.

## 1.8 ADDITIONAL MATERIALS

- A. Furnish to the owner additional materials containing a total of at least 1% of each different color or design of the indoor resilient athletic surfacing used on the project.

## PART 2 - PRODUCTS

### 2.1 MANUFACTURERS

- A. The basis of the design for the indoor resilient multipurpose surfacing is Omnisports ACTIVE+ as manufactured by Tarkett
- a. All other installation accessories and related components must be either made or approved by the indoor resilient athletic surfacing manufacturer.
- B. Other Manufacturers: or approved equal subject to compliance requirements of the basis of design

### 2.2 MATERIALS

- A. Prefabricated sport surface with wood flooring design and slightly textured embossed surface.
1. Embossing of wood design and solid colors must be the same; varying embossing or surface textures will not be allowed.
  2. Printing of wood design shall closely resemble standard wood strip flooring in size, color, board length, and grain appearance.
  3. Surface friction per ASTM F2772
  4. The wood design shall be protected by a clear layer of pure PVC (Polyvinyl Chloride) and a factory-applied UV cured urethane treatment.
  5. Fore reduction layer shall be high-density closed cell PVC foam with honeycomb embossing applied in one continuous manufacturer process. Laminated or adhered foam layers will not be allowed.
- B. Physical properties of the indoor resilient athletic surfacing shall conform to the following minimums:

Width		6' 6" (2 m)
Length		85' (25.9m) approx.

Wear Layer	Omnisports	2 mm
Total Thickness	Omnisports HPL	8.1 mm
Wear Layer	Type 1- grade 1	ASTM F1303/F410
Vertical Deformation	PASED	ASTM F2772
Rolling load	Passed	0.30 (EN 1569 {11/1999})
Surface finish effect	Passed	ASTM F2772 (80-110)
Chemical resistance	Excellent	ASTM F925
Impact resistance	Passed	EN 1717
Abrasion resistance	Passed	0.10 (EN ISO 5470- {06/1999})
Static load limit	Passed	ASTM F970 -Load 175lbs
Sound insulation	excellent	+/- 19 dB (ISO 717/12)
In round sound insulation	excellent	61 dB (NF S31-074)
Ball rebound	passed	ASTM > 90%
Fore Reduction	passed	ASTM F2772 Class 3
Fire Rating	Passed	ASTM E648 Class 1
Microbial Assay Test	No Growth	G21 ASTM – backing
Asthma and Allergy Friendly	ASP: 05-01/101	Certified Compliant
Phthalate-free technology	—	YES
REACH Compliant	—	YES
Heavy Metals	—	NO
ISO 9001	—	YES
ISO 14001	—	YES

1. Color: As noted on the finish plans and schedule consisting of a wood grained primary field, and color accents
  - a. As indicated on the drawings or selected from manufacturers full range
  - b. Texture: Texture to remain consistent between solid colors and wood design when blending colors.
- C. Welding Rod: As supplied by the indoor resilient athletic surfacing manufacturer or supplier.
  1. Color to blend with the indoor resilient athletic surfacing color or design.
  2. All seams shall be welded to create a monolithic and impermeable surface.
- D. Adhesive: As approved by the indoor resilient athletic surfacing manufacturer.
- E. Game Line Paint and Primer: As approved by the indoor resilient athletic surfacing manufacturer.
  1. Provide in custom colors as noted on the drawings for lettering, out-of-bounds areas, lines, custom logo, basketball key, volleyball lines and all other areas
- F. Second floor volleyball sleeves specified under section 116600 athletic equipment to be installed under this section and located per approved shop drawings for court layouts.

### PART 3 - EXECUTION

#### 3.1 EXAMINATION

- A. It is the responsibility of the general contractor/construction manager to ensure that project/site conditions are acceptable for the installation of the indoor resilient athletic flooring.
- B. Verify that the area in which the indoor resilient athletic surfacing will be installed is dry and weather tight. Verify that permanent heat, light and ventilation are installed and operable.
- C. Verify that all other work that could cause damage, dirt and dust or interrupt the normal pace of the indoor resilient athletic flooring installation is completed or suspended.
- D. Verify that there is a stable room temperature of at least 65°F.
- E. Verify that there are no foreign materials or objects on the subfloor and that the subfloor is clean and ready for installation.
- F. Direct Full Spread Adhering to Concrete Subfloor Multi-poxy: moisture content less than 98% RH when tested per ASTM F2170.
- G. Follow manufacturers installation recommendations.
- H. Do not average the results of the tests. Report all field test results in writing to the General Contractor, Architect, and End User prior to installation.
- I. Verify that the concrete subfloor surface pH level is within the 7 - 11 range.
- J. Document the results confirming the slab is within manufacturer's tolerances for slab deviation.

### 3.2 PREPARATION OF SURFACES

- A. Sand the entire surface of the concrete slab.
- B. Sweep the concrete slab so as to remove all dirt and dust. If a sweeping compound is to be used it must be a sweeping compound that does not contain oil or other items that may inhibit the adhesive bond.
- C. Slab must be dust free. In the event that dust impairs adhesive bond, priming the slab prior to application of adhesive may be necessary. Follow installation guidelines.
- D. Follow OSHA guidelines.

### 3.3 INSTALLATION

- A. The installation area shall be closed to all traffic and activity for a period to be set by the indoor resilient athletic surfacing installer. The indoor resilient athletic surfacing installation shall not begin until the installer is familiar with the existing conditions.
- B. All necessary precautions should be taken to minimize noise, smell, dust, the use of hazardous materials and any other items that may inconvenience others.
- C. Install the indoor resilient athletic surfacing in strict accordance with the indoor resilient athletic surfacing manufacturer's written instructions.
- D. Install the indoor resilient athletic surfacing minimizing cross seams. Provide a seam diagram during the submittal process for approval prior to installation. Vinyl Sheet Flooring Seams: Comply with ASTM F 1516. Rout joints and heat weld to permanently and seamlessly fuse sections together.
- E. Paint game lines and all other areas, logos, and lettering using approved game line paint primer and game line paint in strict accordance with the game line paint manufacturer's instructions.
- F. Install appropriate threshold plates or transition strips where necessary

- G. Installation of athletic equipment sleeves to be coordinate and installed under this section in locations identified for proper striping.

3.5 CLEANING

- A. Remove all unused materials, tools, and equipment and dispose of any debris properly. Clean the indoor resilient athletic surfacing in accordance with the manufacturer's instructions.

3.6 PROTECTION

- A. If required, protect the indoor resilient athletic surfacing from damage using coverings approved by the manufacturer until acceptance of work by the customer or their authorized representative.

END OF SECTION

## **SECTION 096566 - RESILIENT ATHLETIC FLOORING**

### **PART 1 GENERAL**

#### **1.1 GENERAL REQUIREMENTS**

- A. Work of this Section, as shown or specified, shall be in accordance with the requirements of the Contract Documents.

#### **1.2 SECTION INCLUDES**

- A. Work of this Section includes all labor, materials, equipment, and services necessary to complete the resilient athletic flooring, as shown on the drawings and/or specified herein.

#### **1.3 RELATED SECTIONS**

- A. Cast-in-Place Concrete - Section 033000.

#### **1.4 REFERENCES**

- A. American Society for Testing and Materials (ASTM)
  - 1. ASTM D 2047: Standard Test Method for Static Coefficient of Friction of Floor Surfaces.
  - 2. ASTM D 5116: Standard Guide for Small-Scale Environmental Chamber Determinations of Organic Emissions from Indoor Materials/Products.
  - 3. ASTM F 710: Standard Practice for Preparing Concrete Floors to Receive Resilient Flooring.
  - 4. ASTM F 1344: Standard Specification for Rubber Floor Tile (Sections 7.1-7.6, 8.4, 5 & 6).
  - 5. ASTM F 1859: Standard Specification for Rubber Sheet Floor Covering Without Backing (Sections 7.1-7.6, 8.4, 5 & 6).
  - 6. ASTM F 1869: Standard Test Method for Measuring Moisture Vapor Emission Rate of Concrete Sub-floor Using Anhydrous Calcium Chloride.
  - 7. ASTM E 648: Standard Test Method for Critical Radial Flux of Floor-Covering Systems Using a Radiant Heat Energy Source.
  - 8. ASTM E 662: Standard Test Method for Specific Optical Density of Smoke Generated by Solid Materials.
  - 9. ASTM E 1745: Standard Specification for Water Vapor Retarders Used in Contact with Soil or Granular Fill under Concrete Slabs.

10. ASTM G 21: Standard Practice for Determining Resistance of Synthetic Polymeric Materials to Fungi.

B. National Fire Protection Association

1. NFPA 101: Code for Safety to Life from Fire in Buildings and Structures.

## **1.5 SYSTEM DESCRIPTION**

A. Provide commercial rubber flooring composed of 100% synthetic rubber (styrene butadiene), the finest quality mineral aggregates, organic stabilizing agents, plus high quality fade resistant pigmentation.

## **1.6 QUALITY ASSURANCE**

A. Qualifications of Installers: Use only personnel who are thoroughly trained and experienced in the skills required and completely familiar with the requirements established for this work and are approved by flooring manufacturer.

## **1.7 SUBMITTALS**

A. Manufacturer's Data: Submit manufacturer's technical information and installation instructions for type of resilient sheet flooring required.

B. Samples: Submit samples of resilient sheet flooring in selected color. Provide 12" square samples to illustrate the range of color and pattern variation.

C. Maintenance Instructions: Submit 2 copies of manufacturer's written instructions for recommended maintenance practices for each type of resilient sheet flooring.

## **1.8 DELIVERY AND STORAGE**

A. Materials must be delivered in manufacturer's original, unopened and undamaged containers with identification labels intact.

B. Store material protected from exposure to harmful weather conditions, on a clean, dry, flat surface protected from all possible damage.

C. Recommended environmental conditions for storage is a minimum of 55 deg F.

D. Material should not suffer excessive damage during handling (i.e. edge chipping, excessive warping, etc)

## **1.9 JOB CONDITIONS**

A. Maintain a stable room and subfloor temperature of 65 to 80 deg F for a period of 48 hrs prior, during and 48 hrs after installation.

B. Moisture vapor emission content of the concrete slab must not exceed 3 lbs/1000 ft<sup>2</sup> per 24 hrs when using the calcium chloride test per ASTM F 1869.

## **PART 2 PRODUCTS**

### **2.1 SHEET RUBBER FLOORING MATERIALS**

- A. Product/Manufacturer: Subject to compliance with requirements, provide products manufactured by Thor Performance Products or approved equal.
  - 1. Basis for Project Design: "Thor rolled rubber" by Thor Performance Products
  - 2. Other Manufacturers:
    - Ecosurfaces
    - Roppe
    - Or approved equal.
- B. Product Description: Prefabricated commercial rubber flooring composed of 100% synthetic virgin rubber (styrene butadiene), mineral aggregates, organic stabilizing agents, plus high quality fade-resistant pigmentation.
  - 1. Total Thickness: 9mm in locations specified in drawings and 12mm in locations specified in drawings, see finish schedule
  - 2. Weight: 2.0 lb/ft<sup>2</sup> where 9mm and 2.6 lb/ft<sup>2</sup> where 12mm.
  - 3. Size: 48" wide rolls
- C. Colors: as indicated on the drawings.

### **2.2 ACCESSORIES**

- A. Adhesives: one or two component polyurethane, moisture cured capable of installation at a minimum of 85% RH and recommended by the flooring manufacturer.
- B. Leveling Compound: Latex/Portland cement flash patching and leveling compound equal to No. 226 with 3701 admixture made by Laticrete or equal made by Mapei, H.B. Fuller, or approved equal.
  - 1. Install with primer recommended in writing by leveling compound manufacturer.

## **PART 3 EXECUTION**

### **3.1 INSPECTION**

- A. Examine the areas and conditions where resilient athletic flooring is to be installed and correct any conditions detrimental to the proper and timely completion of the work. Do not proceed with the work until unsatisfactory conditions are corrected to permit proper installation of the work.

### **3.2 PREPARATION**

- A. Subfloors: Prior to start of laying the sheet flooring, broom clean or vacuum all surfaces to be covered.
  - 1. Lightly grind concrete subfloors with a terrazzo grinder to remove any trowel marks or other surface irregularities which will telegraph to the sheet flooring surface. If grinding is not required, acid etch floor with 10 percent muriatic acid as required to

remove any curing compound that would interfere with adhesive bond.

2. Use leveling compound as recommended by sheet flooring manufacturer for filling small cracks and depressions in subfloors.
  3. Subfloor shall be level to  $\pm 1/8"$  in 10'-0" distance and 1/4" total maximum variation from level shown.
  4. Perform moisture tests on concrete slabs to determine that concrete surfaces are sufficiently cured and are ready to receive flooring installation. Minimum three test locations for the first 1000gsf, and an additional test for every additional 1000gsf. Testing to be performed per ASTM F2170 for RH.
- B. Concrete Primer: Apply concrete slab primer if recommended by the sheet flooring manufacturer, prior to application of the adhesive. Apply in compliance with manufacturer's directions.

### **3.3 INSTALLATION OF SHEET FLOORING**

- A. Install sheet flooring only after all finishing operations, including painting, have been completed and permanent heating system is operating. Moisture content of concrete slabs, building air temperature and relative humidity must be within limits recommended by sheet flooring manufacturer.
- B. Flooring shall be installed to a tolerance of 1/8" in 10'-0" run; 1/32" offset at any location.
- C. Place sheet flooring with adhesive cement in strict compliance with the manufacturer's recommendations. Butt tightly to vertical surfaces, thresholds, nosings and edgings. Scribe around obstructions and to produce neat joints, laid tight, even and in straight, parallel lines. Extend sheet flooring into toe spaces, door reveals, and into closet and similar openings.
- D. Lay sheet flooring to substrate without open cracks, voids, raising and puckering at joints, telegraphing of adhesive spreader marks, or other surface imperfections.
- E. Lay sheet flooring to provide as few seams as possible. Match edges for color shading and pattern at seams in compliance with the manufacturer's recommendations, such as reversing adjoining sheets of the same roll, so that abutting edges are from the same edge of the roll.

### **3.4 CLEANING AND PROTECTION**

- A. Remove any excess adhesive or other surface blemishes from flooring, using neutral type cleaners as recommended by the flooring manufacturer. Protect installed flooring from damage by use of heavy Kraft paper or other covering.
- B. Finishing: After completion of the project and just prior to the final inspection of the work, thoroughly clean flooring.

**END OF SECTION**

## SECTION 096616 - PRECAST TERRAZZO TREADS AND RISERS

### PART 1 GENERAL

#### 1.1 GENERAL REQUIREMENTS

- A. Work of this Section, as shown or specified, shall be in accordance with the Contract Documents.

#### 1.2 SECTION INCLUDES

- A. Work of this Section includes all labor, materials, equipment, and services necessary to complete the terrazzo as shown on the drawings and specified herein, including, but not limited to, the following:
  - 1. Precast terrazzo stair treads with risers and landing panels.
  - 2. Setting bed.
  - 3. Accessories.

#### 1.3 RELATED SECTIONS

- A. Cast-in-Place Concrete - Section 033000.

#### 1.4 REFERENCES

- A. *National Terrazzo and Mosaic Association, inc*
- B. *ASTM: C-150, C-33, C-140, C-293, C-12028*
- C. TCNA - Handbook for Ceramic, Glass and Stone Tile Installation; Tile Council of North America, latest 2013 Edition.
- D. ISO 13007 - International Standards Organization; classification for Grout and Adhesives.
- E. Stone Tile: Conform to requirements of MIA (Marble Institute of America) Dimension Stone Design Manual and ASTM C 1242.

#### 1.5 SYSTEM DESCRIPTION

- A. Performance Requirements
  - 1. Compressive Strength at the time of delivery to be not less than 10,000 psi, averaging 7,000psi when tested in accordance with ASTM C 140.
  - 2. Water Absorption shall not be greater than 5-1/2% to 6-1/2% when tested in accordance with ASTM C 293.
  - 3. Flexural Strength shall not be less than 3,000 psi, averaging,
  - 4. DCOF minimum 0.42.:

**1.6 QUALITY ASSURANCE**

- A. Setting and Grouting Materials: Provide material obtained from one source for each type and color of grout and setting materials.
- B. TCA Standards: Comply with specified provisions and recommendations of Tile Council of America (TCA).
- C. Manufacturer's Instructions: In addition to specified requirements, comply with precast terrazzo manufacturer's instructions and recommendations for substrate preparation, materials storage, mixing and application, finishing and curing.
- D. Qualifications: Precast Terrazzo Manufacturer and Trade Contractor must have a minimum of five (5) years of successful experience on projects of similar magnitude and complexity to that indicated for this project.
- E. Trade contractor to use only trained qualified tile setters for precast terrazzo installation.
- F. Manufacturer to supply a written Quality Assurance Program and Procedure Manual.

**1.7 SUBMITTALS**

- A. Samples: Submit 1'-0" square samples of each pattern, color and type of precast terrazzo required, including grout colors. Minimum 6" long samples of each type accessory item.
- B. Product Data: Manufacturer's specifications and technical data for system including:
  - 1. Installation Instructions: Precast Terrazzo Installation as recommended by TCA standards.
  - 2. Test Reports: Submit test reports from all testing required by Article 1.6 herein.
  - 3. Maintenance Instructions: Submit two copies of written instructions for recommended periodic maintenance of each type of precast terrazzo.

**1.8 TESTING**

- A. The manufacturer of the precast terrazzo tile shall perform independent testing for slip resistance per ASTM C 1028 and shall submit results of such test to the Architect.
- B. The Owner shall retain the services of an Independent Testing Laboratory to test the precast terrazzo tile for slip resistance in accordance with ASTM C 1028. The Contractor shall provide necessary material for testing and shall coordinate with the testing Laboratory as required. The Testing Laboratory shall submit results of the tests to the Owner, Architect and Contractor.

**1.9 DELIVERY, STORAGE AND HANDLING**

- A. Packaging and Shipping: Precast terrazzo to be stretch wrapped in rows and banded on pallets, delivered in original unopened packaging with legible manufacturer identification, including size, quantity, manufacture date and inspection initials.
- B. Storage and Protection: Precast terrazzo to be stored indoors, sheltered from moisture in original packaging. Protect from damage by other trades.

**1.10 PROJECT CONDITIONS**

- A. Inspect surfaces to receive precast but do not proceed with installation of precast terrazzo until

improper conditions have been corrected.

- B. Provide temperatures in precast terrazzo areas during installation and after completion as required by installation standard or manufacturer's instructions, but not less than 50 degrees F.
- C. If necessary to use temporary heaters, vent units to exterior to protect precast terrazzo work from carbon dioxide accumulation.

#### 1.11 MAINTENANCE

- A. Extra Materials: Deliver supply of maintenance materials to the Owner. Furnish maintenance materials from same lot as materials installed, and enclosed in protective packaging with appropriate identifying labels.
  - 1. Furnish not less than 1 percent of total product installed maintenance stock for each type, color, pattern and size of precast terrazzo product installed.

### PART 2 PRODUCTS

#### 2.1 MATERIALS

- A. Aggregates: All aggregates to meet ASTM C 33 specifications, cleaned and properly graded to size. Aggregate shall be blended to meet individual project requirements.
- B. Coloring: Pigments used shall be inorganic, resistant to alkalinity and used per manufacturer's recommendations.
- C. Color Blending: Factory blend precast terrazzo that has a natural color range so products taken from one container will have the same range as products from a separate container. Pallets to be marked and shipped numerically. Install tile from pallets in a numerical sequence blending from two to three pallets.
- D. Stair Treads with Risers and landings: TCNA S-151.
- E. Setting Materials: Epoxy Adhesive non-staining on white and light-color marble with high bond strength conforming to ISO13007 with a R2 classification
  - 1. Basis of design Latapoxy 300 as manufactured by Laticrete or approved equal
- F. Grouting Materials
  - 1. High performance epoxy grout: 100% epoxy grout comply with ANSI A118.3, Iso 13007-3 RG
    - a. Basis of Design: Spectralock pro premium grout as manufactured by Laticrete or approved equal
  - 2. Grout Colors: To be determined by Architect, based upon final selection of colors for precast terrazzo. May require a custom color if satisfactory color is not available in manufacturer's standard range.
- G. Cleaner: Liquid neutral chemical cleaner with pH factory between 7 and 8, of formulation recommended by sealer manufacturer for type of precast terrazzo used, and complying with NTMA requirements.

- H. Impregnator: Colorless, slip and stain resistant penetrating impregnator that does not affect color or physical properties of precast terrazzo surface. Flash point (ASTM D 56): 80 degrees F., minimum. Provide terrazzo impregnator equal to "Stone Impregnator O.R." made by Vic International Corp.
- I. Abrasive Inserts: Shall consist of silica carbide and black epoxy. In number of lines indicated on drawings and extending the full width of the tread
- J. Caulks and Sealants: Urethane or polyurethane sealant as recommended by tread and riser manufacturer.
  - 1. Color to be selected by architect from full color range

## 2.2 MIXES

- A. Aggregate: Natural, sound, crushed marble chips without excessive flats or flakes complying with NTMA requirements.
- B. Matrix Pigments: Pure mineral or synthetic pigments, resistant to alkalis and non-fading. Mix pigments with matrix to provide required colors.
- C. Face layer shall include 70% coverage of the precast terrazzo face with marble aggregate.

## 2.3 PRECAST TERRAZZO STAIR TREADS WITH RISERS AND LANDINGS

- A. Provide precast terrazzo stair treads and risers as detailed on drawings with abrasive nosings consisting of aluminum oxide or silicone carbide; as manufactured by Wausau Tile, or approved equal from Concrete Collaborative or approved equal; color as selected by the Architect or as indicated on drawings.
  - 1. Basis of Design: Precast terrazzo E-31 epoxy tread and riser or approved equal
- B. Comply with NTMA specifications and recommendations for fabrication of precast terrazzo. Reinforce all precast terrazzo units.
- C. Match color and pattern of precast work with color and pattern of cast in place work, unless different color and pattern required.
- D. Materials shall conform to the requirements specified above in Para. 2.1.
- E. Furnish all inserts, anchors and accessories required for complete installation.

## PART 3 - EXECUTION

### 3.1 EXAMINATION

- A. Examine substrate conditions over which terrazzo tile will be installed. Do not proceed until unsatisfactory conditions have been corrected.

### 3.2 PREPARATION

- A. Before installing terrazzo tile, clean substrates to remove dust, debris, sealers, coatings, oil, curing compounds, and loose particles.
- B. Ascertain that substrates are free of previous surface-applied material. Prepare substrate

surfaces to accept new material.

1. Use trowelable leveling and patching compounds per tile-setting material manufacturer's written instructions to fill cracks, holes, and depressions.
  2. Remove protrusions, bumps, and ridges by sanding or grinding.
- C. Illuminate areas of installation using building's permanent lighting system; temporary lighting alone will not be acceptable.
- D. Verify that materials are those specified before installing.

### 3.3 INSTALLATION TOLERANCES

- A. Variations from Plumb: For surfaces of columns and walls, as well as for arrises, external corners, joints, and other conspicuous lines, do not exceed 1/8 inch in 8 feet.
- B. Variation in Level: For grades shown on counters, horizontal joints, and other conspicuous lines, do not exceed 1/8 inch in any room.
- C. Variation in Surface Plane of Flooring: Do not exceed 1/8" in 10'-0" from level or slope indicated when tested with a 10-foot straight edge.

### 3.4 INSTALLATION OF PRECAST TERRAZZO

- A. Install precast terrazzo as shown in accordance with NTMA specifications. Tamp units into setting bed to achieve a full bond without voids. Level units at joints. Finish grind at joints if required to remove any minor discrepancies in level of units. Replace warped, stained, damaged and non-matching units as directed. Grout joints with a mixture of Portland cement, pigment and water, matching the matrix of the joints.

### 3.5 ADJUSTING AND CLEANING

- A. Remove and replace material that is broken, chipped, stained, or otherwise damaged or that does not match adjoining tile. Provide new matching units, installed as specified and in manner to eliminate evidence of replacement.
- B. Clean terrazzo tiles after setting with MiraSeal "MiraClean #1." Or approved equal. Use procedures recommended by tile manufacturer for types of application indicated.
- C. Apply one coat of sealer to cleaned terrazzo tile flooring. Use product compatible with cement terrazzo, and follow sealer manufacturer's guidelines.

### 3.6 PROTECTION

- A. Prohibit traffic from terrazzo tile after installation is completed for at least 7 days.
- B. Protect terrazzo tile flooring during construction period with Kraft paper or other heavy covering or type that will not stain or discolor tile.
- C. Before inspection for Substantial Completion, remove protective covering and clean surfaces using procedures and materials recommended by tile and accessory manufacturers.

END OF SECTION

## SECTION 09 6813 - TILE CARPETING

### PART 1 - GENERAL

#### 1.1 SUMMARY

- A. Section Includes:
  - 1. Modular carpet tile.
  - 2. Carpet accessories.
  - 3. Substrate preparation for carpet and accessories.

#### 1.2 PREINSTALLATION MEETINGS

- A. Pre-installation Conference: Conduct conference at Project site.

#### 1.3 ACTION SUBMITTALS

- A. Product Data: For each type of product.
- B. Shop Drawings: For carpet tile installation, plans showing the following:
  - 1. Carpet tile type, color, and dye lot.
  - 2. Type of installation.
  - 3. Pattern of installation.
  - 4. Pattern type, location, and direction.
  - 5. Pile direction.
  - 6. Type, color, and location of insets and borders.
  - 7. Type, color, and location of edge, transition, and other accessory strips.
  - 8. Transition details to other flooring materials.
- C. Samples: For each of the following products and for each color and texture required. Label each Sample with manufacturer's name, material description, color, pattern, and designation indicated on Drawings and in schedules.
  - 1. Carpet Tile: Full-size Sample.
  - 2. Exposed Edge, Transition, and other Accessory Stripping: 12-inch-long Samples
- D. Moisture Testing results, see moisture testing requirements below.
- E. Maintenance Data: For carpet tiles to include in maintenance manuals. Include the following:
  - 1. Methods for maintaining carpet tile, including cleaning and stain-removal products and procedures and manufacturer's recommended maintenance schedule.
  - 2. Precautions for cleaning materials and methods that could be detrimental to carpet tile

#### 1.4 INFORMATIONAL SUBMITTALS

- A. Product test reports.
- B. Sample warranty.

**1.5 QUALITY ASSURANCE**

- A. Installer Qualifications: Certified by the International Certified Floorcovering Installers Association at the Commercial II certification level.

**1.6 EXTRA MATERIALS:**

Provide minimum 5% area installed in full-size units for each carpet type from same dye-lot as installed product but not less than 10 square yards.

- 1. If multiple dye-lots are used in separate spaces, identify locations and provide extra material in amount indicated above for each dye-lot.

**1.7 DELIVERY, STORAGE AND HANDLING**

- A. Store floor tile and installation materials in dry spaces protected from the weather, with ambient temperatures maintained within range recommended by manufacturer, but not less than 50 deg F or more than 90 deg F. Store floor tiles on flat surfaces.

**1.8 PROJECT CONDITIONS:**

- A. Maintain ambient temperatures within range recommended by manufacturer, but not less than 70 deg F or more than 95 deg F, in spaces to receive floor tile during the following time periods:
  - 1. 48 hours before installation.
  - 2. During installation.
  - 3. 48 hours after installation.
- B. Until Substantial Completion, maintain ambient temperatures within range recommended by manufacturer, but not less than 55 deg F or more than 95 deg F.
- C. Close spaces to traffic during floor tile installation, and for 48 hours after floor tile installation or as recommended by manufacturer.
- D. Install after other finishing operations, including painting, have been completed.

**1.9 WARRANTY**

Special Carpet Warranty: Written warranty, signed by carpet manufacturer agreeing to replace carpet that does not comply with requirements or that fails within specified warranty period. Warranty does not include deterioration or failure of carpet due to unusual traffic, failure of substrate, vandalism, or abuse. Failures include, but are not limited to, more than 10 percent loss of face fiber, edge raveling, snags, runs, and delamination.

- 1. Warranty Period: Ten years from date of Substantial Completion.

## PART 2 - PRODUCTS

### 2.1 CARPET TILE (WOT1 as defined in the finish schedule)

- A. Color, Pattern, Source: refer to the drawings and finish schedule for basis of design
- B. Fiber Content, type, pile characteristic, yarn twist, yarn count, and density: to match or exceed basis of design
- C. Size: as indicated on the drawings
- D. Dye Method: solution dyed
- E. GSA Stain release rating: Pass
- F. Applied Treatments:
  - 1. Soil-Resistance Treatment: Manufacturer's standard treatment.
  - 2. Antimicrobial Treatment: Manufacturer's standard treatment that protects carpet tiles as follows:
    - a. Antimicrobial Activity: Not less than 2-mm halo of inhibition for gram-positive bacteria, not less than 1-mm halo of inhibition for gram-negative bacteria, and no fungal growth, according to AATCC 174.
- G. Performance Characteristics:
  - 1. Appearance Retention Rating: Heavy traffic, 3.0 minimum according to ASTM D7330.
  - 2. Critical Radiant Flux Classification: Not less than 0.45 W/sq. cm according to NFPA 253.
  - 3. Dry Breaking Strength: Not less than 100 lbf according to ASTM D2646.
  - 4. Tuft Bind: Not less than 5 lbf for cut pile, 10 lbf for loop pile according to ASTM D1335.
  - 5. Delamination: Not less than 3.5 lbf/in. according to ASTM D3936.
  - 6. Dimensional Tolerance: Within 1/32 inch of specified size dimensions, as determined by physical measurement.
  - 7. Dimensional Stability: 0.2 percent or less according to ISO 2551 (Aachen Test).
  - 8. Colorfastness to Crocking: Not less than 4, wet and dry, according to AATCC 165.
  - 9. Colorfastness to Light: Not less than 4 after 40 AFU (AATCC fading units) according to AATCC 16, Option E.
  - 10. Electrostatic Propensity: Less than 3.5 kV according to AATCC 134.

### 2.2 INSTALLATION ACCESSORIES

- A. Trowelable Leveling and Patching Compounds: Latex-modified, hydraulic-cement-based formulation provided or recommended by carpet tile manufacturer.
- B. Adhesives: Water-resistant, mildew-resistant, nonstaining, pressure-sensitive type to suit products and subfloor conditions indicated, that comply with flammability requirements for installed carpet tile, and are recommended by carpet tile manufacturer for releasable installation
  - 1. VOC Limits: Provide adhesives with VOC content not more than 50 g/L when calculated according to 40 CFR 59, Subpart D (EPA method 24).
  - 2. Capable of moist

## **PART 3 - EXECUTION**

### **3.1 EXAMINATION**

#### **A. Concrete Slabs:**

1. Moisture Testing: Perform tests so that each test area does not exceed 1000 sq. ft. and perform no fewer than three tests in each installation area and with test areas evenly spaced in installation areas.
  - a. Relative Humidity Test: Using in situ probes, ASTM F2170. Proceed with installation only after substrates have a maximum 75 percent relative humidity level measurement or as recommended by tile and adhesive product requirements.
  - b. Perform additional moisture tests recommended in writing by adhesive and carpet tile manufacturers. Proceed with installation only after substrates pass testing.

### **3.2 PREPARATION**

- A. General: Comply with the Carpet and Rug Institute's CRI 104 and with carpet tile manufacturer's written installation instructions for preparing substrates indicated to receive carpet tile.
- B. Use trowelable leveling and patching compounds, according to manufacturer's written instructions, to fill cracks, holes, depressions, and protrusions in substrates. Fill or level cracks, holes and depressions 1/8 inch wide or wider, and protrusions more than 1/32 inch unless more stringent requirements are required by manufacturer's written instructions.
- C. Concrete Substrates: Remove coatings, including curing compounds, and other substances that are incompatible with adhesives and that contain soap, wax, oil, or silicone, without using solvents. Use mechanical methods recommended in writing by adhesive and carpet tile manufacturers.
- D. Broom and vacuum clean substrates to be covered immediately before installing carpet tile.

### **3.3 INSTALLATION**

- A. General: Comply with the Carpet and Rug Institute's CRI 104, Section 10, "Carpet Tile," and with carpet tile manufacturer's written installation instructions.
- B. Installation Method: Glue down; install every tile with full-spread, releasable, pressure-sensitive adhesive unless indicated otherwise on drawings
- C. Maintain dye-lot integrity. Do not mix dye lots in same area.
- D. Maintain pile-direction patterns recommended in writing by carpet tile manufacturer.
- E. Cut and fit carpet tile to butt tightly to vertical surfaces, permanent fixtures, and built-in furniture including cabinets, pipes, outlets, edgings, thresholds, and nosings. Bind or seal cut edges as recommended by carpet tile manufacturer.
- F. Extend carpet tile into toe spaces, door reveals, closets, open-bottomed obstructions, removable flanges, alcoves, and similar openings.

- G. Maintain reference markers, holes, and openings that are in place or marked for future cutting by repeating on carpet tile as marked on subfloor. Use nonpermanent, nonstaining marking device.
- H. Install pattern parallel to walls and borders.
- I. Protect carpet tile against damage from construction operations and placement of equipment and fixtures during the remainder of construction period. Use protection methods indicated or recommended in writing by carpet tile manufacturer.

END OF SECTION 09 6813

## SECTION 09 7200 - WALL COVERINGS

### PART 1 - GENERAL

#### 1.1 RELATED DOCUMENTS

- A. Drawings and general provisions of the Contract, including General and Supplementary Conditions and Division 1 Specification Sections, apply to this Section.

#### 1.2 SUMMARY

- A. Section Includes:
  - 1. Wall Coverings (WC1)
  - 2. Digital printed vinyl wall coverings (DWC1 & DWC2)
  - 3. Wall liners for installation under wall coverings

#### 1.3 SUBMITTALS

- A. Product Data: For each type of product indicated. Include data on physical characteristics, durability, fade resistance, and flame-resistance characteristics.
- B. Shop Drawings: Show location and extent of each wall-covering type. Indicate pattern placement, seams and termination points.
- C. Samples for Verification: Full width by 36-inch- long section of wall covering.
  - 1. Sample from same print run or dye lot to be used for the Work, with specified treatments applied. Show complete pattern repeat. Mark top and face of fabric.
  - 2. Provide full width x 36" long printed full scale mockup for each digitally printed wall covering.
- D. Qualification Data: For qualified testing agency.
- E. Product Test Reports: Based on evaluation of comprehensive tests performed by a qualified testing agency, for wall covering.
- F. Maintenance Data: For wall coverings to include in maintenance manuals.

#### 1.4 QUALITY ASSURANCE

- A. Fire-Test-Response Characteristics: As determined by testing identical wall coverings applied with identical adhesives to substrates according to test method indicated below by a qualified testing agency. Identify products with appropriate markings of applicable testing agency.
  - 1. Surface-Burning Characteristics: As follows, per ASTM E 84:
    - a. Flame-Spread Index: 25 or less.
    - b. Smoke-Developed Index: 450 or less.
  - 2. Fire-Growth Contribution: Textile wall coverings tested according to NFPA 265, or NFPA 286 and complying with test protocol and criteria of UBC Standard 8-2, or in the 2003 IBC, as applicable.

- B. Mockup: Build mockup to verify selection made under sample submittals and to demonstrate aesthetic effects and set quality standards for fabrication and installation.
  - 1. Build mockup for each type of wall covering on each substrate. Comply with requirements in ASTM F 1141.
  - 2. Architect to approve seam matching of wall coverings.
  - 3. Approved mockups may become part of the completed Work if undisturbed at time of Substantial Completion.

## 1.5 PROJECT CONDITIONS

- A. Environmental Limitations: Do not deliver or install wall coverings until wet work in spaces is complete and dry, work above ceilings is complete, and HVAC system is operating and maintaining ambient temperature and humidity conditions at occupancy levels during the remainder of the construction period.
- B. Lighting: Do not install wall covering until a permanent level of lighting is provided on the surfaces to receive wall covering.
- C. Ventilation: Provide continuous ventilation during installation and for not less than the time recommended by wall-covering manufacturer for full drying or curing.

## PART 2 - PRODUCTS

### 2.1 WALL COVERINGS:

- A. Manufacturers: Subject to compliance with requirements, provided wall coverings as follows:
  - 1. See the finish schedule:
    - Carnegie Fabrics (basis of Design) Xorel type covering or approved equal from Wolf-Gordon, Astek, or approved equal

### 2.2 DIGITALLY PRINTED VINYL WALL COVERING

- A. Manufacturers: Subject to compliance with requirements, provide wall coverings as follows:
  - 1. Surface Materials (Basis of Design)
  - 2. Wolf-Gordon
  - 3. Astek
  - 4. Or approved equal
- B. Products: Refer to Finish Schedule on Drawings for products and visual appearance of graphics to be printed and installed

### 2.3 ACCESSORIES

- A. Adhesive: Mildew-resistant, non-staining, strippable adhesive, for use with specific wall covering and substrate application; as recommended in writing by wall-covering manufacturer and with a VOC content of 50 g/L or less when calculated according to 40 CFR 59, Subpart D (EPA Method 24).
  - 1. Adhesive: "Sure Grip Plus Mold and Mildew-Proof Commercial Wall Covering Adhesive" made by The Zinsser Co. Inc. or approved equal.
- B. Primer/Sealer: Mildew resistant, complying with requirements in Division 9 Section "Interior Painting" and recommended in writing by wall-covering manufacturer for intended substrate.

- C. Wall Liner: Nonwoven, synthetic underlayment and adhesive as recommended by wall-covering manufacturer.
- D. Seam Tape: As recommended in writing by wall-covering manufacturer.
- E. Metal Primer: Where required, provide interior ferrous metal primer complying with Division 9 Section "099000 Painting & Coatings."

### **PART 3 - EXECUTION**

#### **3.1 EXAMINATION**

- A. Examine substrates and conditions, with Installer present, for compliance with requirements for levelness, wall plumbness, maximum moisture content, and other conditions affecting performance of the Work.

#### **3.2 Proceed with installation only after unsatisfactory conditions have been corrected**

#### **3.3 PREPARATION**

- A. Comply with manufacturer's written instructions for surface preparation.
- B. Clean substrates of substances that could impair bond of wall covering, including dirt, oil, grease, mold, mildew, and incompatible primers.
- C. Prepare substrates to achieve a smooth, dry, clean, structurally sound surface free of flaking, unsound coatings, cracks, and defects.
  - 1. Moisture Content: Maximum of 5 percent when tested with an electronic moisture meter.
  - 2. Metals: If not factory primed, clean and apply metal as recommended in writing by primer/sealer manufacturer and wall-covering manufacturer.
  - 3. Gypsum Board: Prime with primer as recommended in writing by primer/sealer manufacturer and wall-covering manufacturer.
  - 4. Painted Surfaces: Treat areas susceptible to pigment bleeding.
- D. Check painted surfaces for pigment bleeding. Sand gloss, semigloss, and eggshell finish with fine sandpaper.
- E. Remove hardware and hardware accessories, electrical plates and covers, light fixture trims, and similar items.
- F. Acclimatize wall-covering materials by removing them from packaging in the installation areas not less than 24 hours before installation.
- G. Install wall liner, with no gaps or overlaps, where required by wall-covering manufacturer. Form smooth wrinkle-free surface for finished installation. Do not begin wall-covering installation until wall liner has dried.

#### **3.4 INSTALLATION**

- A. General: Comply with wall-covering manufacturers' written installation instructions applicable to products and applications indicated except where more stringent requirements apply.
- B. Cut wall-covering strips in roll number sequence. Change roll numbers at partition breaks and corners.
- C. Install strips in same order as cut from roll.
- D. Install wall covering with no gaps or overlaps, no lifted or curling edges, and no visible shrinkage.
- E. Match pattern 72 inches above the finish floor.
- F. Install seams vertical and plumb at least 6 inches from outside corners and 6 inches from inside corners unless a change of pattern or color exists at corner. No horizontal seams are permitted.
- G. Fully bond wall covering to substrate. Remove air bubbles, wrinkles, blisters, and other defects.
- H. Trim edges and seams for color uniformity, pattern match, and tight closure. Butt seams without any overlay or spacing between strips.

### 3.5 CLEANING

- A. Remove excess adhesive at finished seams, perimeter edges, and adjacent surfaces.
- B. Use cleaning methods recommended in writing by wall-covering manufacturer.
- C. Replace strips that cannot be cleaned.
- D. Reinstall hardware and hardware accessories, electrical plates and covers, light fixture trims, and similar items.

### 3.6 WALL COVERING SCHEDULE

- A. General: Provide wall coverings as indicated on the Drawings and Finish Schedules.

END OF SECTION 09 7200

## SECTION 09 9000 - PAINTS AND COATINGS

### PART 1 GENERAL

#### 1.1 SECTION INCLUDES

- A. Interior and exterior paint and coating commercial systems including surface preparation.

#### 1.2 REFERENCES

- A. Steel Structures Painting Council (SSPC):
  - 1. SSPC-SP 1 - Solvent Cleaning.
  - 2. SSPC-SP 2 - Hand Tool Cleaning.
  - 3. SSPC-SP 3 - Power Tool Cleaning.
  - 4. SSPC-SP 13 / NACE No. 6 Surface Preparation for Concrete.
- B. Material Safety Data Sheets / Environmental Data Sheets: Per manufacturer's MSDS/EDS for specific VOCs (calculated per 40 CFR 59.406). VOCs may vary by base and sheen.

#### 1.3 SUBMITTALS

- A. Product Data: For each paint system indicated, including.
  - 1. Product characteristics.
  - 2. Surface preparation instructions and recommendations.
  - 3. Primer requirements and finish specification.
  - 4. Storage and handling requirements and recommendations.
  - 5. Application methods.
  - 6. Cautions for storage, handling and installation.
- B. Verification Samples: For each finish product specified, submit samples that represent actual product, color, and sheen.

#### 1.4 QUALITY ASSURANCE

- A. Installer Qualifications: A firm or individual experienced in applying paints and coatings similar in material, design, and extent to those indicated for this Project, whose work has resulted in applications with a record of successful in-service performance.
- B. Paint exposed surfaces. If a color of finish, or a surface is not specifically mentioned, Architect will select from standard products, colors and sheens available.
- C. Do not paint prefinished items, concealed surfaces, finished metal surfaces, operating parts, and labels unless indicated.

#### 1.5 DELIVERY, STORAGE, AND HANDLING

- A. Delivery: Deliver manufacturer's unopened containers to the work site. Packaging shall bear the manufacturer's name, label, and the following list of information.
  - 1. Product name, and type (description).
  - 2. Application and use instructions.

3. Surface preparation.
  4. VOC content.
  5. Environmental handling.
  6. Batch date.
  7. Color number.
- B. Storage: Store and dispose of solvent-based materials, and materials used with solvent-based materials, in accordance with requirements of local authorities having jurisdiction.
- C. Store materials in an area that is within the acceptable temperature range, per manufacturer's instructions. Protect from freezing.
- D. Handling: Maintain a clean, dry storage area, to prevent contamination or damage to the coatings.

## 1.6 PROJECT CONDITIONS

- A. Maintain environmental conditions (temperature, humidity, and ventilation) within limits recommended by manufacturer for optimum results. Do not install products under environmental conditions outside manufacturer's recommended limits.

## 1.7 EXTRA MATERIALS

- A. Furnish extra paint materials from the same production run as the materials applied and in the quantities described below. Package with protective covering for storage and identify with labels describing contents. Deliver extra materials to Owner.
- B. Furnish Owner with an additional one percent of each material and color, but not less than 2 gallons of each product, color, and sheen, including primers and intermediate coat products. Provide as un-catalyzed product in separate containers, Part-A & Part-B where applicable

## PART 2 PRODUCTS

### 2.1 MANUFACTURERS

- A. Basis of Design Manufacturer: Sherwin-Williams
- B. Other Manufacturers:
1. PPG
  2. Benjamin Moore
  3. Approved Equal

### 2.2 APPLICATIONS/SCOPE

- A. Interior Paint and Coating Commercial Systems:
1. Masonry: Concrete masonry units, including split-face, scored, and smooth block.
  2. Metal: Aluminum, galvanized steel.
  3. Metal: Structural steel, joists, trusses, beams, partitions and similar items.
  4. Drywall: Drywall board, Gypsum board.
- B. Interior Paint and Coating Healthcare Systems:
1. Concrete: Non-vehicular floors.

## 2.3 PAINT MATERIALS - GENERAL

- A. Paints and Coatings:
  - 1. Unless otherwise indicated, provide factory-mixed coatings. When required, mix coatings to correct consistency in accordance with manufacturer's instructions before application. Do not reduce, thin, or dilute coatings or add materials to coatings unless such procedure is specifically described in manufacturer's product instructions.
  - 2. For opaque finishes, tint each coat including primer coat and intermediate coats, one-half shade lighter than succeeding coat, with final finish coat as base color. Or follow manufacturer's product instructions for optimal color conformance.
- B. Primers: Where the manufacturer offers options on primers for a particular substrate, use primer categorized as "best" by the manufacturer.
- C. Coating Application Accessories: Provide all primers, sealers, cleaning agents, cleaning cloths, sanding materials, and clean-up materials required, per manufacturer's specifications.
- D. Color: Refer to Finish Schedule for paint colors, and as selected.

## 2.4 PAINT AND COATING COMMERCIAL SYSTEMS

- A. Masonry CMU:
    - 1. Vinyl Acrylic Latex over filler
      - a. Eg-Shel/Low Luster Finish:
        - 1) 1st Coat: S-W Pro Industrial Heavy-Duty Block Filler, B42W150 (75-125sq f/gal)
        - 2) 2nd Coat: S-W ProMar200 HP Zero VOC Interior Latex Eg-shel, B20-1950 series
        - 3) 3rd Coat: S-W ProMar200 HP Zero VOC Interior Latex Eg-shel, B20-1950 series (4.0 mils wet, 1.7 mils dry per coat).
        - 4) Or approved equal 3 coat system by approved equal manufacturer
- B. Masonry CMU walls within the Natatorium, Pool Mechanical Room, and Chem Storage rooms
  - 1. Eg-Shel/Low Luster Finish:
    - a. 1<sup>st</sup> coat: S-W Loxon Acrylic Block Surface LX01W020 (50-100sf/gal)
    - b. 2<sup>nd</sup> Coat: S-W Pro Industrial Waterbased Catalyzed Epoxy, B73 Series(5.0-12.0 mils wet, 2.0-4.9 mils dry)
    - c. 3<sup>rd</sup> Coat: S-W Pro Industrial Waterbased Catalyzed Epoxy, B73 Series(5.0-12.0 mils wet, 2.0-4.9 mils dry)
    - d. Or approved equal 3 coat system by approved equal manufacturer
- C. Interior and Exterior Hollow Metal Doors and Frames, loose lintels, bearing plates, other Miscellaneous Aluminum, Galvanized, and ferrous metals:
  - 1. Latex Systems:
    - a. Eg-Shel / Satin Finish High Performance:
      - 1) 1st Coat: S-W Pro Industrial Pro-Cryl Universal Primer, B66-1310 Series (5.0 mils wet, 2.0 mils dry).
      - 2) 2nd Coat: S-W Pro Industrial Acrylic Eg-Shel, B66-660 Series. (2.0-4.0 mils dry per coat).
      - 3) 3rd Coat: S-W Pro Industrial Acrylic Eg-Shel, B66-660 Series (2.0-4.0 mils dry per coat).

- 4) Or approved equal 3 coat system by approved equal manufacturer
- D. Painted exposed ceilings & Structural Steel Columns where high-performance coating not specified: (exposed ceilings to include Joists, Trusses, Beams, Miscellaneous and Ornamental Iron, Structural Iron, Ferrous Metal, conduit, ductwork, fire sprinkler piping, compressed air piping and all other ceiling mounted components).
  1. Dryfall Waterborne Topcoat:
    - a. Flat Finish:
      - 1) 1st Coat: S-W Pro Industrial Pro-Cryl Universal Primer, B66-1310 Series (5.0 mils wet, 2.0 mils dry).
      - 2) 2nd Coat: S-W Pro Industrial Waterborne Acrylic Dryfall, B42-181 Series.
      - 3) 3rd Coat: S-W Pro Industrial Waterborne Acrylic Dryfall, B42-181 Series (6.0 mils wet, 1.7 mils dry per coat).
      - 4) Or approved equal 3 coat system by approved equal manufacturer
- E. Gypsum board: Walls, Ceilings, Gypsum Board and similar items.
  1. Latex Systems:
    - a. Eg-Shel / Satin Finish:
      - 1) 1st Coat: S-W ProMar 200 Zero VOC Interior Latex Primer, B28W2600 (4 mils wet, 1.5 mils dry).
      - 2) 2nd Coat: S-W ProMar 200 Zero VOC Latex Eg-Shel, B20-2600 Series.
      - 3) 3rd Coat: S-W ProMar 200 HP Zero VOC Latex Eg-Shel, B20-2600 Series (4 mils wet, 1.7 mils dry per coat).
      - 4) Or approved equal 3 coat system by approved equal manufacturer
- F. Concrete Floors:
  1. Water-Based Solid Color Stain System:
    - a. Matte Finish:
      - 1) 1st Coat: Acid etch surface using H&C ConcreteReady Etching Solution.
      - 2) 2nd Coat: H&C Colortop Water Based solid color stain
      - 3) 3<sup>rd</sup> Coat: H&C Colortop Water Based solid color stain
      - 4) Or approved equal 2 coat system by approved equal manufacturer

## PART 3 EXECUTION

### 3.1 EXAMINATION

- A. Do not begin installation until substrates have been properly prepared; notify Architect of unsatisfactory conditions before proceeding. If substrate preparation is the responsibility of another installer, notify Architect of unsatisfactory preparation before proceeding.
- B. Proceed with work only after conditions have been corrected and approved by all parties, otherwise application of coatings will be considered as an acceptance of surface conditions.
- C. Previously Painted Surfaces: Verify that existing painted surfaces do not contain lead based paints, notify Architect immediately if lead based paints are encountered.

### 3.2 SURFACE PREPARATION

- A. General: Surfaces shall be dry and in sound condition. Remove oil, dust, dirt, loose rust,

peeling paint or other contamination to ensure good adhesion. Prepare surfaces based on manufacturer recommendations and with compatible primers.

1. Prior to attempting to remove mildew, it is recommended to test any cleaner on a small, inconspicuous area prior to use. Bleach and bleaching type cleaners may damage or discolor existing paint films. Bleach alternative cleaning solutions are advised.
  2. Remove mildew before painting by washing with a solution of 1 part liquid household bleach and 3 parts of warm water. Apply solution and scrub the mildewed area. Allow solution to remain on the surface for 10 minutes. Rinse thoroughly with clean water and allow surface to dry before painting. Wear protective glasses or goggles, waterproof gloves, and protective clothing. Quickly wash off any of the mixture that comes in contact with your skin. Do not add detergents or ammonia to the bleach/water solution.
  3. Remove items including but not limited to thermostats, electrical outlets, switch covers and similar items prior to painting. After completing painting operations in each space or area, reinstall items removed using workers skilled in the trades involved.
  4. No exterior painting should be done immediately after a rain, during foggy weather, when rain is predicted, or when the temperature is below 50 degrees F (10 degrees C), unless products are designed specifically for these conditions. On large expanses of metal siding, the air, surface and material temperatures must be 50 degrees F (10 degrees F) or higher to use low temperature products.
- B. Aluminum: Remove all oil, grease, dirt, oxide and other foreign material by cleaning per SSPC-SP1, Solvent Cleaning.
- C. Block (Cinder and Concrete): Remove all loose mortar and foreign material. Surface must be free of laitance, concrete dust, dirt, form release agents, moisture curing membranes, loose cement, and hardeners. Concrete and mortar must be cured at least 30 days at 75 degrees F (24 degrees C). Test concrete to verify pH of the surface is between 6 and 9 unless the products are designed to be used in high pH environments. On poured-in-place concrete, provide commercial detergents and abrasive blasting as necessary to prepare the surface. Fill bug holes, air pockets, and other voids with a cement patching compound.
- D. Concrete, SSPC-SP13 or NACE 6: This standard gives requirements for surface preparation of concrete by mechanical, chemical, or thermal methods prior to the application of bonded protective coating or lining systems. The requirements of this standard are applicable to all types of cementitious surfaces including cast-in-place concrete floors and walls, precast slabs, masonry walls, and shotcrete surfaces. An acceptable prepared concrete surface should be free of contaminants, laitance, loosely adhering concrete, and dust, and should provide a sound, uniform substrate suitable for the application of protective coating or lining systems.
- E. Stainless Steel: Remove all oil, grease, dirt, oxide and other foreign material by cleaning per SSPC-SP 2, Hand Tool Cleaning.
- F. Drywall - Interior: Must be clean and dry. All nail heads must be set and spackled. Joints must be taped and covered with a joint compound. Spackled nail heads and tape joints must be sanded smooth and all dust removed prior to painting.
- G. Interior Galvanized Metal: Aged 6 months or greater from galvanization, clean per SSPC-SP1 using detergent and water or a degreasing cleaner to remove greases and oils. Apply a

test area, priming as required. Allow the coating to dry at least one week before testing.

- H. Steel: Structural, Plate, And Similar Items: Should be cleaned by one or more of the surface preparations described below. These methods are used throughout the world for describing methods for cleaning structural steel. Visual standards are available through the Society of Protective Coatings. A brief description of these standards together with numbers by which they can be specified follow.
  - 1. If no visible rust observed provide Solvent Cleaning, SSPC-SP1: Solvent cleaning is a method for removing all visible oil, grease, soil, drawing and cutting compounds, and other soluble contaminants. Solvent cleaning does not remove rust or mill scale. Change rags and cleaning solution frequently so that deposits of oil and grease are not spread over additional areas in the cleaning process. Be sure to allow adequate ventilation.
  - 2. If rust observed: provide Power Tool Cleaning, SSPC-SP3: Power Tool Cleaning removes all loose mill scale, loose rust, and other detrimental foreign matter. It is not intended that adherent mill scale, rust, and paint be removed by this process. Before power tool cleaning, remove visible oil, grease, soluble welding residues, and salts by the methods outlined in SSPC-SP1.
- I. Wood: Must be clean and dry. Prime and paint as soon as possible. Knots and pitch streaks must be scraped, sanded, and spot primed before a full priming coat is applied. Patch all nail holes and imperfections with a wood filler or putty and sand smooth.

### 3.3 INSTALLATION

- A. Apply all coatings and materials with the manufacturer's specifications in mind. Mix and thin coatings according to manufacturer's recommendations.
- B. Do not apply to wet or damp surfaces. Wait at least 30 days before applying to new concrete or masonry. Or follow manufacturer's procedures to apply appropriate coatings prior to 30 days. Test new concrete for moisture content and PH. Wait until wood is fully dry after rain or morning fog or dew.
- C. Apply coatings using methods recommended by manufacturer, including recommendations for surface preparation.
- D. Uniformly apply coatings without runs, drips, or sags, without brush marks, and with consistent sheen.
- E. Apply coatings at spreading rate required to achieve the manufacturers recommended dry film thickness.
- F. Regardless of number of coats specified, apply as many coats as necessary for complete hide, and uniform appearance.
- G. Inspection: The coated surface must be inspected and approved by the Architect just prior to the application of each coat.

### 3.4 PROTECTION

- A. Protect finished coatings from damage until completion of project.
- B. Touch-up damaged coatings after substantial completion, following manufacturer's

recommendation for touch up or repair of damaged coatings. Repair any defects that will hinder the performance of the coatings.

END OF SECTION

## **SECTION 09 9600 - HIGH PERFORMANCE COATINGS**

### **PART 1 GENERAL**

#### **1.1 SECTION INCLUDES**

- A. Exterior high-performance paint and coatings systems including surface preparation.

#### **1.2 RELATED SECTIONS**

- A. Section 05 1200 – Structural Steel Framing
- B. Section 05 50 00 - Metal Fabrications.

#### **1.3 REFERENCES**

- A. Steel Structures Painting Council (SSPC):
  - 1. SSPC-SP 1 - Solvent Cleaning.
  - 2. SSPC-SP 16 Brush-off blast cleaning of non-ferrous metals
  - 3. SSPC-SP 6 Commercial blast cleaning for non-galvanized structural steel.
- B. Material Safety Data Sheets / Environmental Data Sheets: Per manufacturer's MSDS/EDS for specific VOCs (calculated per 40 CFR 59.406). VOCs may vary by base and sheen.

#### **1.4 SUBMITTALS**

- A. Product Data: For each paint system indicated, including.
  - 1. Product characteristics.
  - 2. Surface preparation instructions and recommendations.
  - 3. Primer requirements and finish specification.
  - 4. Storage and handling requirements and recommendations.
  - 5. Application methods.
  - 6. Cautions for storage, handling and installation.
- B. Verification Samples: For each finish product specified, submit samples that represent actual product, color, and sheen.

#### **1.5 QUALITY ASSURANCE**

- A. Installer Qualifications: A firm or individual experienced in applying paints and coatings similar in material, design, and extent to those indicated for this Project, whose work has resulted in applications with a record of successful in-service performance.
- B. Paint exposed surfaces including fasteners. If a color of finish, or a surface is not specifically mentioned, Architect will select from standard products, colors and sheens available.
- C. Do not paint prefinished items, concealed surfaces, finished metal surfaces, operating parts, and labels unless indicated.
- D. Coordinate installation of conduit and lighting fixtures,
  - 1. Conduit, junction boxes, fasteners & bolts to be painted to match adjacent steel
  - 2. prefinished light fixtures to remain unpainted.

- E. In-Place Mock-Up: Provide a mock-up for evaluation of surface preparation techniques and application workmanship and to ensure proper adhesion. Mockup may remain if determined to be acceptable by architect.
  - 1. Finish surfaces for verification of products, colors and sheens.
  - 2. Finish area minimum one column and one beam.
  - 3. Provide samples that designate primer and finish coats.
  - 4. Do not proceed with remaining work until the Architect approves the mock-up.

#### 1.6 DELIVERY, STORAGE, AND HANDLING

- A. Delivery: Deliver manufacturer's unopened containers to the work site. Packaging shall bear the manufacturer's name, label, and the following list of information.
  - 1. Product name, and type (description).
  - 2. Application and use instructions.
  - 3. Surface preparation.
  - 4. VOC content.
  - 5. Environmental handling.
  - 6. Batch date.
  - 7. Color number.
- B. Storage: Store and dispose of solvent-based materials, and materials used with solvent-based materials, in accordance with requirements of local authorities having jurisdiction.
- C. Store materials in an area that is within the acceptable temperature range, per manufacturer's instructions. Protect from freezing.
- D. Handling: Maintain a clean, dry storage area, to prevent contamination or damage to the coatings.

#### 1.7 PROJECT CONDITIONS

- A. Proceed with installation only when environmental conditions (temperature, humidity, and ventilation) are within limits recommended by manufacturer for optimum results. Do not install products under environmental conditions outside manufacturer's recommended limits for a period not less than the cure time of product being installed.

#### 1.8 EXTRA MATERIALS

- A. Furnish extra paint materials from the same production run as the materials applied and in the quantities described below. Package with protective covering for storage and identify with labels describing contents. Deliver extra materials to Owner.
- B. Furnish Owner with one gallon of each material and color including primers, intermediate coats and top coats. Provide in un-catalyzed form as separate components (part a and part b) where applicable.

### PART 2 PRODUCTS

#### 2.1 MANUFACTURERS

- A. Basis of Design Manufacturer: Sherwin-Williams
- B. Other Manufacturers:

1. Tnemec
2. PPG
3. Approved equal

## 2.2 APPLICATIONS/SCOPE

- A. High Performance Exterior Paint and Coating Systems:
1. Metal: Aluminum, galvanized steel.
  2. Metal: Ferrous Steel

## 2.3 PAINT MATERIALS - GENERAL

- A. Paints and Coatings:
1. Unless otherwise indicated, provide factory-mixed coatings. When required, mix coatings to correct consistency in accordance with manufacturer's instructions before application. Do not reduce, thin, or dilute coatings or add materials to coatings unless such procedure is specifically described in manufacturer's product instructions.
  2. For opaque finishes, tint each coat including primer coat and intermediate coats, one-half shade lighter than succeeding coat, with final finish coat as base color. Or follow manufactures product instructions for optimal color conformance.
- B. Primers: Where the manufacturer offers options on primers for a particular substrate, use primer categorized as "best" by the manufacturer unless otherwise noted in coating system.
- C. Coating Application Accessories: Provide all primers, sealers, cleaning agents, cleaning cloths, sanding materials, and clean-up materials required, per manufacturer's specifications.
- D. Color: Refer to Exterior Finish Schedule for colors, and as selected.

## 2.4 HIGH PERFORMANCE COATING SYSTEMS

- A. Ferrous Metal: Non-Galvanized Steel (HPC-1)
1. Hi-Solids Aliphatic Polyurethane System over zinc primer
    - a. Semi-Gloss Finish:
      - 1) Primer: Coat Zinc Clad IV
      - 2) 1st Coat: S-W Macropoxy 646-100 Fast Cure Epoxy, B58 Series (7.0-13.5 mils wet, 5.0-10.0 mils dry per coat).
      - 3) 2nd Coat: S-W Hi-Solids Polyurethane 250, B65 Series, (4.5-8.0 mils wet, 3.0-5.0 mils dry per coat).
      - 4) 3<sup>rd</sup> Coat: S-W Hi-Solids Polyurethane 250, B65 Series, (4.5-8.0 mils wet, 3.0-5.0 mils dry per coat).
      - 5) Or approved equal 3 coat system by approved equal manufacturer
- B. Non-Ferrous Metal: Galvanized Metal (HPC-2 & HPC-3)
1. Fluoropolymer System (Pigmented Fluoropolymer over Epoxy Intermediate and Epoxy Zinc-Rich Primer system):
    - a. Semi-Gloss Finish:
      - 1) 1st Coat: S-W Macropoxy 646-100 Fast Cure Epoxy, B58 Series (7.0-13.5 mils wet, 5.0-10.0 mils dry per coat).
      - 2) 2nd Coat: S-W Fluorokem HS 100, B65 Series, (6.0-9.0 mils wet, 4.0-6.0 mils dry per coat).

- 3) Or approved equal 2 coat system by approved equal manufacturer

## PART 3 EXECUTION

### 3.1 EXAMINATION

- A. Do not begin installation until substrates have been properly prepared; notify Architect of unsatisfactory conditions before proceeding. If substrate preparation is the responsibility of another installer, notify Architect of unsatisfactory preparation before proceeding.
- B. Proceed with work only after conditions have been corrected and approved by all parties, otherwise application of coatings will be considered as an acceptance of surface conditions.

### 3.2 SURFACE PREPARATION

- A. General: Surfaces shall be dry and in sound condition. Remove oil, dust, dirt, loose rust, peeling paint or other contamination to ensure good adhesion.
  - 1. Prior to attempting to remove mildew, it is recommended to test any cleaner on a small, inconspicuous area prior to use. Bleach and bleaching type cleaners may damage or discolor existing paint films. Bleach alternative cleaning solutions are advised.
  - 2. Remove mildew before painting by washing with a solution of 1 part liquid household bleach and 3 parts of warm water. Apply solution and scrub the mildewed area. Allow solution to remain on the surface for 10 minutes. Rinse thoroughly with clean water and allow surface to dry before painting. Wear protective glasses or goggles, waterproof gloves, and protective clothing. Quickly wash off any of the mixture that comes in contact with your skin. Do not add detergents or ammonia to the bleach/water solution.
  - 3. Remove items including but not limited to thermostats, electrical outlets, switch covers and similar items prior to painting. After completing painting operations in each space or area, reinstall items removed using workers skilled in the trades involved.
  - 4. No exterior painting should be done immediately after a rain, during foggy weather, when rain is predicted, or when the temperature is below 50 degrees F (10 degrees C), unless products are designed specifically for these conditions. On large expanses of metal siding, the air, surface and material temperatures must be 50 degrees F (10 degrees F) or higher to use low temperature products
  - 5. Repair galvanized coating where bare steel is visible. Apply zinc-rich primer as recommended by high-performance coating manufacturer.
- B. Galvanized Steel: Allow galvanized steel to weather a minimum of 6 months in exposed environment then clean per SSPC-SP1 using detergent and water or a degreasing cleaner to remove greases and oils. Apply a test area, priming recommended by system manufacturer. Allow the coating to dry at least one week before testing. If galvanized steel not allowed to weather for full duration or if adhesion is poor during testing, Brush Blast per SSPC-SP16 to profile galvanized coating and remove oil and residue.
  - 1. Solvent Cleaning, SSPC-SP1: Solvent cleaning is a method for removing all visible oil, grease, soil, drawing and cutting compounds, and other soluble contaminants. Solvent cleaning does not remove rust or mill scale. Change rags and cleaning solution frequently so that deposits of oil and grease are not spread

over additional areas in the cleaning process. Be sure to allow adequate ventilation.

2. If required due to insufficient adhesion after weathering: Brush Blast cleaning of non-ferrous metal surfaces, SSPC-SP16: A brush-off blast cleaned non-ferrous metal surface, when viewed without magnification, shall be free of all visible oil, grease, dirt, dust, metal oxides (corrosion products), and other foreign matter. Intact, tightly adherent coating is permitted to remain. A coating is considered tightly adherent if it cannot be removed by lifting with a dull putty knife. Bare metal substrates shall have a minimum profile of 19 micrometers (0.75 mil)
- C. Ferrous ungalvanized steel: Shop apply primer specified within coating system is recommended. If not shop applied, steel to prepared per SSPC-SP1 removing all oil and grease from surface by solvent cleaning and then Commercial Blast cleaned per SSPC-SP6 immediate prior to installation of primer on the same day. Prior to painting on-site, Clean per SSPC-SP1 using detergent and water or a degreasing cleaner to remove greases and oils.
1. Solvent Cleaning, SSPC-SP1: Solvent cleaning is a method for removing all visible oil, grease, soil, drawing and cutting compounds, and other soluble contaminants. Solvent cleaning does not remove rust or mill scale. Change rags and cleaning solution frequently so that deposits of oil and grease are not spread over additional areas in the cleaning process. Be sure to allow adequate ventilation.
  2. SSPC-SP6: Commercial blast cleaning allows for stains or shadows up to 33 percent of each unit area of surface to remain. SSPC-SP 6/NACE No. 3 removes all visible oil, grease, dust, dirt, mill scale, rust, coating, oxides, corrosion products, and any other foreign matter on the surface

### 3.3 INSTALLATION

- A. Apply all coatings and materials with the manufacturer's specifications in mind. Mix and thin coatings according to manufacturer's recommendations.
- B. Do not apply to wet or damp surfaces. Wait at least 30 days before applying to new concrete or masonry. Or follow manufacturer's procedures to apply appropriate coatings prior to 30 days. Test new concrete for moisture content. Wait until wood is fully dry after rain or morning fog or dew.
- C. Apply coatings using methods recommended by manufacturer.
- D. Uniformly apply coatings without runs, drips, or sags, without brush marks, and with consistent sheen.
- E. Apply coatings at spreading rate required to achieve the manufacturers recommended dry film thickness.

- F. Regardless of number of coats specified, apply as many coats as necessary for complete hide, and uniform appearance.
- G. Inspection: The coated surface must be inspected and approved by the Architect just prior to the application of each coat.

#### **3.4 PROTECTION**

- A. Protect finished coatings from damage until completion of project.
- B. Touch-up damaged coatings after substantial completion, following manufacturer's recommendation for touch up or repair of damaged coatings. Repair any defects that will hinder the performance of the coatings.

END OF SECTION

## **SECTION 10 1100 - VISUAL DISPLAY SURFACES**

### **PART 1 - GENERAL**

#### **1.1 SUMMARY**

A. Work Included: The Work of this Section includes:

1. Magnetic, glass dry erase whiteboards.

#### **1.2 ACTION SUBMITTALS**

A. Product Data: For each type of product indicated. Include construction details, material descriptions, dimensions of individual components and profiles, and finishes for visual display surfaces.

1. Include individual panel weights for visual display units.

B. Shop Drawings: For visual display surfaces.

1. Include plans identify locations, elevations, and attachments to other work.
2. Show locations of panel joints.

C. Samples for Verification: For each type of visual display surface indicated.

1. Visual Display Surface: Not less than 8-1/2 by 11 inches, mounted on substrate indicated for final Work. Include one panel for each type, color, and texture required.
2. Accessories: Full-size Sample of each type of accessory.

#### **1.3 INFORMATIONAL SUBMITTALS**

A. Product Schedule: For visual display surfaces.

B. Qualification Data: For qualified Installer.

C. Product Test Reports: Based on evaluation of comprehensive tests performed by a qualified testing agency, for surface-burning characteristics of fabrics.

D. Maintenance Data: For visual display surfaces to include in maintenance manuals. Provide manufacturer's instructions for handling, installing, protecting and maintaining markerboards have been adhered to during the warranty period.

E. Warranties: Sample of special warranties.

#### **1.4 QUALITY ASSURANCE**

A. Source Limitations: Obtain visual display surfaces from single source from single manufacturer.

B. Surface- Burning Characteristics: As determined by testing identical products according to

ASTM E 84 by a qualified testing agency. Identify products with appropriate markings of applicable testing agency.

1. Flame- Spread Index: 25 or less.

#### 1.5 DELIVERY, STORAGE, AND HANDLING

- A. Deliver factory-built visual display surfaces, including factory-applied trim where indicated, completely assembled in one piece without joints, where possible. If dimensions exceed maximum manufactured panel size, provide two or more pieces of equal length as acceptable to Architect. When overall dimensions require delivery in separate units, prefabricate components at the factory, disassemble for delivery, and make final joints at the site.
- B. Store visual display surfaces vertically with packing materials between each unit.

#### 1.6 PROJECT CONDITIONS

- A. Environmental Limitations: Do not deliver or install visual display surfaces until spaces are enclosed and weathertight, wet work in spaces is complete and dry, work above ceilings is complete, and temporary HVAC system is operating and maintaining ambient temperature and humidity conditions at occupancy levels during the remainder of the construction period.
- B. Field Measurements: Verify actual dimensions of construction contiguous with visual display surfaces by field measurements before fabrication.
  1. Allow for trimming and fitting where taking field measurements before fabrication might delay the Work.

#### 1.7 WARRANTY

- A. Warranty on Markerboards:
  1. Provide written warranty, signed by manufacturer, agreeing to replace enamel markerboards which do not retain original writing and erasing qualities.
  2. Failures shall be defined:
    - a. To include surfaces which become slick and shiny, or exhibit crazing, cracking or flaking;
    - b. Replacement shall be limited to material replacement only and not include labor for removal and reinstallation.
  3. Warranty Period: Twenty-five (25) years from date of substantial completion.

### PART 2 - PRODUCTS

#### 2.1 MATERIALS, GENERAL

- A. Hardboard: ANSI A135.4, tempered.
- B. Extruded Aluminum: ASTM B 221, Alloy 6063.

- C. Glass: Conforming to Division 08 Glazing section.

## 2.2 MARKERBOARD ASSEMBLIES

- A. Magnetic, Glass Markerboards: Manufacturer's standard markerboard assembly with low-gloss magnetic finish

- 1. Basis-of-Design, Products: Subject to compliance with requirements, provide the following:
  - a. Glasswrite Linxx with magnetic backing as supplied by Egan Glass or approved equal.
- 2. Other Manufacturers:
  - a. MooreCo
  - b. Bangor Cork Company, Inc.
  - c. Claridge Products and Equipment, Inc.
  - d. Greensteel.
  - e. PolyVision Corporation; a Steelcase company.
  - f. Or approved equal.

- B. Materials for Markerboards:

- 1. Writing Surface: Tempered, safety Glass on substrate with magnetic backing or paint.
- 2. Accessories:
  - a. 12" wide Marker System fastened or adhered to board, basis of design" egan aero marker tray" or approved equal,
  - b. 1 set of rare-earth magnets
  - c. 1 set of markers
  - d. 1 magnetic cleaning cloth

- C. Core: 7/ 16-inch medium density fiberboard (MDF), composed of approximately 90% post-industrial waste.

- D. Writing Surface Backing: Manufacturers standard moisture barrier.

- E. Panel Size: Refer to drawings.

- F. Color: as selected by the Architect, refer to finish schedule.

- G. Panelize markerboards to avoid seam in center or within projection areas as indicated on drawings.

## 2.3 MOUNTING DEVICES AND TRIM, GENERAL

- A. Concealed on back of panel, as recommended by manufacturer to support weight of panel, and as follows:

- 1. Splines: Manufacturer's standard concealed metal splines that engage the kerfed edges of

the panel, with other moldings and trim for interior corners, exterior corners, and exposed edges, with factory-applied finish on exposed items.

2. Adhesives: As recommended panel manufacturer and with a VOC content of 70 g/L or less when calculated per 40 CFR 59, Subpart D (EPA Method 24).

## 2.4 FABRICATION

- A. Visual Display Boards: Factory assemble visual display boards unless otherwise indicated.

## 2.5 GENERAL FINISH REQUIREMENTS

- A. Comply with NAAMM's "Metal Finishes Manual for Architectural and Metal Products" for recommendations for applying and designating finishes.
- B. Protect mechanical finishes on exposed surfaces from damage by applying a strippable, temporary protective covering before shipping.
- C. Appearance of Finished Work: Noticeable variations in same piece are not acceptable. Variations in appearance of adjoining components are acceptable if they are within the range of approved Samples and are assembled or installed to minimize contrast.

## 2.6 ALUMINUM FINISHES

- A. Clear Anodic Finish: AAMA 611, AA-M12C22A31, Class II, 0.010 mm or thicker.

# PART 3 - EXECUTION

## 3.1 EXAMINATION

- A. Examine substrates and conditions, with Installer present, for compliance with requirements for installation tolerances, surface conditions of wall, and other conditions affecting performance of the Work.
- B. Examine walls and partitions for proper preparation and backing for visual display surfaces.
- C. Examine walls and partitions for suitable framing depth where sliding visual display units will be installed.
- D. Proceed with installation only after unsatisfactory conditions have been corrected.

## 3.2 PREPARATION

- A. Comply with manufacturer's written instructions for surface preparation.
- B. Clean substrates of substances that could impair the performance of and affect the smooth, finished surfaces of visual display boards, including dirt, mold, and mildew.

## 3.3 INSTALLATION, GENERAL

- A. General: Install visual display surfaces in locations and at mounting heights indicated on

Drawings, or if not indicated, at heights indicated below.

- B. Keep perimeter lines straight, level, and plumb.
- C. Provide grounds, clips, backing materials, adhesives, brackets, anchors, trim, and accessories necessary for complete installation.

#### **3.4 INSTALLATION OF VISUAL DISPLAY SURFACES**

- A. Marker Boards: Attach concealed clips, hangers, and grounds to wall surfaces and to visual display boards with fasteners at not more than 16 inches on center.
  - 1. Secure both top and bottom of boards to walls.
- B. Tack Boards and Panels: Install on wall surfaces in accordance with approved Shop Drawings and material manufacturers recommendations.

#### **3.5 CLEANING AND PROTECTION**

- A. Clean visual display surfaces per manufacturer's written instructions. Attach one cleaning label to visual display surface in each room.
- B. Touch up factory-applied finishes to restore damaged or soiled areas.
- C. Cover and protect visual display surfaces after installation and cleaning.

END OF SECTION 10 1100

## SECTION 101400 - SIGNAGE

### PART 1 - GENERAL

#### 1.1 SUMMARY

A. Work Included: The Work of this Section includes:

1. Panel Signs
2. Pin mounted Aluminum dimensional lettering
3. Painted Acrylic Sign Panels
4. Applied Vinyl Graphics

#### 1.2 ACTION SUBMITTALS

- A. Product Data: Submit manufacturer's construction details relative to materials, dimensions of individual components, profiles, and finishes for each type of sign required.
- B. Shop Drawings: Provide Shop Drawings for fabrication and erection of signs. Include plans, elevations, and large-scale sections of typical members and other components. Show anchors, grounds, reinforcement, accessories, layout, and installation details.
1. Provide message list for each sign required, including full-size details of wording and layout of lettering.
  2. For signs supported by or anchored to permanent construction, provide setting drawings, templates, and directions for installation of anchor bolts and other anchors to be installed as a unit of Work in other Sections.
  3. Furnish full-size spacing templates for individually mounted dimensional numbers.
- C. Samples for Verification Panel Signs: For each type of panel sign showing each component and with the required finishes, in manufacturer's standard size unless otherwise indicated and as follows:
1. Panel Signs: Not less than 12 inches square, including corner; including one of each type insert indicated.
  2. Sign panels will not be returned for use in project.
- D. Samples for Verification Pin-mounted Dimensional Letters: For each type of sign assembly showing all components and with the required finish, in manufacturer's standard size unless otherwise indicated and as follows:
1. Dimensional Characters: Full-size Sample
  2. Exposed Accessories: Full-size Sample of each accessory type.
  3. Full-size Samples, will not be returned to Contractor for use in the Project.
- E. Samples for Verification Painted Acrylic: showing all components and with the required finish, in manufacturer's standard size unless otherwise indicated and as follows:
1. Panel Signs: Partial sign Not less than 12 inches square with all selected painted colors, including corner;
  2. Sign panels will not be returned for use in project

#### 1.4 CONTRACT CLOSEOUT

- A. Contract close out:
  - 1. Furnish appropriate checklist for aiding in reordering after Date of Substantial Completion. Maintain computer schedule program for five years for ordering new signage required by Owner.
  - 2. Maintenance data and cleaning requirements for sign surfaces.
  - 3. Furnish one complete software package compatible with Windows 10 for printing label inserts including all licensing fees for standalone installation

#### 1.5 QUALITY ASSURANCE

- A. Installer Qualifications: An employer of workers trained and approved by signage manufacturer.
- B. Source Limitations: Obtain each sign type through one source from a single manufacturer.
- C. Comply with the Americans with Disabilities Act (ADA) and with code provisions as adopted by authorities having jurisdiction.

#### 1.6 PROJECT CONDITIONS

- A. Field Measurements: Take field measurements prior to preparation of shop drawings and fabrication to ensure proper fitting. Show recorded measurements on final shop drawings. Coordinate fabrication schedule with construction progress to avoid delay.

#### 1.7 WARRANTY

- A. Special Warranty: Manufacturer agrees to repair or replace components of signs that fail in materials or workmanship within specified warranty period.
  - 1. Failures include, but are not limited to, the following:
    - a. Deterioration of finishes beyond normal weathering.
    - b. Separation or delamination of sheet materials and components.
    - c. Failure of all electrical and lighting components
  - 2. Warranty Period: Five years from date of Substantial Completion.

### PART 2 - PRODUCTS

#### 2.1 MANUFACTURERS

- A. Basis- of- Design: ASI Signage Innovations or comparable product by one of the following:
  - 1. APCO Graphics, Inc.
  - 2. Appenx, Inc.
  - 3. ASI Sign Systems, Inc.
  - 4. Best Sign Systems, Inc.
  - 5. Clarke Systems.
  - 6. Or Approved Equal

B. Panel Signs Product:

1. Provide InForm thermoformed sign panels or approved equal

C. Pin mounted Aluminum Dimensional Lettering:

1. Provide Cut Metal dimensional letters or approved equal

D. Painted Acrylic Signs:

1. Provide cut Acrylic Dimension letters or approved equal solid acrylic with painted finish

## 2.2 FABRICATION, GENERAL

- A. Provide tamperproof, slightly recessed identifying devices for all locations indicated on the Drawings, if not indicated. Provide at all locations specified herein.
- B. Comply with Americans with Disabilities Act (ADA) requirements and elements required to be identified as accessible shall have international symbol of accessibility.

## 2.3 INTERIOR MODULAR PANEL SIGNS

- A. Panel Signs: High impact Acrylic/PVC thermoplastic allow, pressure molded as single unit.
  1. Sign Size: As indicated.
  2. Backer Panel: Shaped, decorative backing panel mounted behind signage system where installed on glass.
  3. Tactile Graphics and Text: Provide tactile copy and grade 2 Braille raised 1/32 inch minimum from surface using manufacturer's co-molding process.
    - a. Provide lettering and graphics precisely formed, uniformly opaque to comply with relevant ADA regulations and requirements indicated for size, style, spacing, content, position, and colors.
  4. Colors: high contract semi-matte integral colors for graphics. All integral resins are to be UV stabilized resins utilizing automotive grade pigments
    - a. As indicated on drawings or selected from manufacturers full range
  5. Fabrication options:
    - a. Panel depth: 0.25 inches
    - b. Attachable backplate panel depths: 0.25 inches
    - c. Panel appearance: selected from manufacturers standard, high contract, semi-matte product range
    - d. Surface texture: Smooth non-glare Matte, unless otherwise indicated.
    - e. Letter style, size, and layout: as indicated on drawings.
    - f. Signage size: as indicated on drawings.
    - g. Sign shape: as indicated on drawings
    - h. Edge profile: straight.
  6. Integral window option:
    - a. Subsurface, lateral slot, separate changeable graphic insert plaque construction in compliance with indicated materials, thickness, finish, colors, designs, shapes, sizes, and details. Subsurface graphics to comply with manufacturer's standard process for precisely formed, uniformly opaque graphics.
    - b. Graphic insert: die-cut paper with laser printed graphics and text
    - c. Panel size: as indicated on drawings
    - d. Visible window: size as indicated on drawings.
    - e. Lens: clear 0.80 inch thick matte first surface.

B. Mounting: Mount signs to wall surfaces using manufacturer's standard method with silicone adhesive or high-bond tape and with mechanical fasteners.

C. Accessories:

1. Provide user-changeable paper insert feature where indicated.
2. Adhesive: As recommended by sign manufacturer.
3. Adhesives shall have a VOC content of 70 g/L or less.

D. Fabrication:

1. General: comply with requirements indicated for materials, thicknesses, finishes, colors, designs, shapes, sizes, and details of construction
2. Preassembly signs in the shop to the greatest extent possible to minimize field assembly. Disassemble signs only as necessary for shipping and handling limitations.
3. Form panels to required size and shape. Comply with requirements indicated for design, dimensions, finish, color, and details of construction.
4. Coordinate dimensions and attachment methods to produce message panels with closely fitting joints. Align edges and surfaces with one another in the relationship indicated

#### 2.4 PIN-MOUNTED ALUMINUM DIMENSIONAL LETTERING

- A. Scope: Lettering and hardware necessary for installation. Characters with uniform faces; square-cut, smooth, eased edges; precisely formed lines and profiles; and as follows:
- B. Materials: Aluminum, 1/2" thick unless otherwise indicated
- C. General Construction: Laser or Water-jet cut using computer controlled equipment
- D. Finishes: as indicated on the drawings, both of the following occur:
1. Integral Aluminum Finish: Anodized color as selected by Architect from full range of industry colors and color densities
    - a) typical finish unless otherwise noted.
- E. Font: as indicated on drawings or selected from Manufacturers full range
- F. Letter Size: as indicated on the drawings
- G. Mounting: Drilled and tapped with stainless steel spacer sleeved creating projection from face of wall. No fasteners to be visible. Minimum spacer depth 1/2" unless otherwise noted.

#### 2.5 PAINTED ACRYLIC SIGNS

- A. Panel Signs: High impact Acrylic/PVC thermoplastic.
1. Sign Size: As indicated, segment as required to achieve when exceeds single panel size.
  2. Colors: painted in scratch resistant finish. All paints and pigments to be UV stabilized resins
    - a. As indicated on drawings or selected from manufacturers full range
  3. Fabrication options:
    - a. Panel depth: 1 inches

- b. Panel appearance: selected from manufacturers standard, high contract, semi-matte product range
- c. Surface texture: Smooth non-glare Matte, unless otherwise indicated.
- d. Letter style, size, and layout: as indicated on drawings.
- e. Signage size: as indicated on drawings.
- f. Sign shape: as indicated on drawings
- g. Edge profile: eased with finished and painted edge.

B. Mounting: Mount signs to wall surfaces using manufacturer's standard method with silicone adhesive or high-bond tape and with mechanical fasteners.

C. Accessories:

1. Adhesive: As recommended by sign manufacturer.
2. Adhesives shall have a VOC content of 70 g/L or less.

D. Fabrication:

1. General: comply with requirements indicated for materials, thicknesses, finishes, colors, designs, shapes, sizes, and details of construction
2. Preassembly signs in the shop to the greatest extent possible to minimize field assembly. Disassemble signs only as necessary for shipping and handling limitations.
3. Form panels to required size and shape. Comply with requirements indicated for design, dimensions, finish, color, and details of construction.
4. Coordinate dimensions and attachment methods to produce message panels with closely fitting joints. Align edges and surfaces with one another in the relationship indicated.

## 2.6 APPLIED VINYL GRAPHICS

A. Vinyl graphics: fully adhered UV stable vinyl applied to interior of glass.

1. Sign Size: As indicated, segment as required to achieve overall size.
2. Vinyl Film: UV stable printable film for permanent installation with minimum 7 year service life when installed on glass and exposed to sunlight. Removeable with heat.
  - a. Basis design: 3M™ Controltac™ Print Film 40C-114R or approved equal.
3. Colors:
  - a. As indicated on drawings or selected from manufacturers full range
4. Maximum service temperature 194 degrees f and minimum service temperature of -58 degrees F.

B. Mounting: Mount signs to inside face of glass surfaces with pressure-sensitive adhesive using manufacturer's standard method and procedures.

1. Adhesive type: solvent acrylic.

C. Fabrication:

1. Transparent film with printed areas as shown in the drawings. Print and cut film for installation on glass.
2. Provide templates as required.
3. Form panels to required size and shape. Comply with requirements indicated for design, dimensions, finish, color, and details of construction.
4. Coordinate dimensions and attachment methods to produce message panels with closely fitting joints. Align edges and surfaces with one another in the relationship indicated.

### PART 3 - EXAMINATION

- A. Examine substrates, areas, and conditions, with Installer present, for compliance with requirements for installation tolerances and other conditions affecting performance of work.
- B. Verify that items provided under other sections of Work are sized and located to accommodate signs.
- C. Examine supporting members to ensure that surfaces are at elevations indicated or required to comply with authorities having jurisdiction and are free from dirt and other deleterious matter.
- D. Proceed with installation only after unsatisfactory conditions have been corrected.

### 3.2 INSTALLATION

- A. General: Locate sign units and accessories where indicated, using mounting methods of the type described and in compliance with the manufacturer's instructions.
  - 1. Install signs level, plumb, and at the height indicated, with sign surfaces free from distortion or other defects in appearance.
- B. Painted Acrylic & Panel Signs: Attach panel signs to wall surfaces using the methods indicated below:
  - 1. Vinyl-Tape Mounting & Mechanical Fastenings:
    - a. Use double-sided foam tape and silicone adhesive, to mount signs to smooth, nonporous surfaces. Do not use this method for vinyl-covered or rough surfaces.
    - b. Mount signs using tamperproof, concealed fastening methods as recommended by the manufacturer. Provide heavy paper template to locate holes for fasteners.
- C. Mounting Locations: Mount signs as directed by the Architect to comply with the Americans with Disabilities Act (ADA) and with code provisions and as indicated on the drawings.

### 3.3 CLEANING AND PROTECTION

- A. At completion of the installation, clean soiled sign surfaces in accordance with the manufacturer's instructions. Protect units from damage until acceptance by the Owner.

END OF SECTION 1014000

## SECTION 101410 – RECORDS BOARD

### PART 1 - GENERAL

#### 1.1 SUMMARY

A. Work Included: The Work of this Section includes:

1. Records Board (within Pool)

#### 1.2 ACTION SUBMITTALS

A. Product Data: Submit manufacturer's construction details relative to materials, dimensions of individual components, profiles, and finishes for each type of sign required.

B. Shop Drawings: Provide Shop Drawings for fabrication and erection of signs. Include plans, elevations, and large-scale sections of typical members and other components. Show anchors, grounds, reinforcement, accessories, layout, and installation details.

1. Provide message list for each sign required, including full-size details of wording and layout of lettering.
2. For signs supported by or anchored to permanent construction, provide setting drawings, templates, and directions for installation of anchor bolts and other anchors to be installed as a unit of Work in other Sections.
3. Furnish full-size spacing templates for individually mounted dimensional numbers.

C: Samples for Verification Records Board: showing all components and with the required finish, in manufacturer's standard size unless otherwise indicated and as follows:

1. Panel Signs: Partial sign Not less than 12 inches square with all selected painted colors, including corner;
2. Sample snap in letter in size and colors to be provided with board having rails to demonstrate function
3. Sign panels will not be returned for use in project

#### 1.4 CONTRACT CLOSEOUT

A. Contract close out:

1. Furnish appropriate checklist for aiding in reordering after Date of Substantial Completion. Maintain computer schedule program for ten years for ordering new signage required by Owner.
2. Maintenance data and cleaning requirements for sign surfaces.

#### 1.5 QUALITY ASSURANCE

A. Installer Qualifications: An employer of workers trained and approved by signage manufacturer.

B. Source Limitations: Obtain each sign type through one source from a single manufacturer.

- C. Comply with the Americans with Disabilities Act (ADA) and with code provisions as adopted by authorities having jurisdiction.

#### 1.6 PROJECT CONDITIONS

- A. Field Measurements: Take field measurements prior to preparation of shop drawings and fabrication to ensure proper fitting. Show recorded measurements on final shop drawings. Coordinate fabrication schedule with construction progress to avoid delay.

#### 1.7 WARRANTY

- A. Special Warranty: Manufacturer agrees to repair or replace components of signs that fail in materials or workmanship within specified warranty period.

1. Failures include, but are not limited to, the following:

- a. Deterioration of finishes beyond normal weathering.
- b. Separation or delamination of sheet materials and components.
- c. Failure of all electrical and lighting components

2. Warranty Period: Five years from date of Substantial Completion.

### PART 2 - PRODUCTS

#### 2.1 MANUFACTURERS:

- 1. Basis- of- Design Products: Subject to compliance with requirements, provide the following:
  - a. School Pride Ltd.
  - b. Approved Equal

#### 2.3 RECORDS BOARD:

- A. General: Fabricated PVC board sign with painted graphics and removeable panels for athlete's names, times, event listings, and top ten record holders. Panels to plastic rails for snap-in lettering to allow ease of changing records
- B. Panel Signs: High impact Acrylic/PVC thermoplastic
  - 1. Board Back Panel substrate: Manufacturer's recommended thickness for size of sign indicated but not less than 1"
    - a. Painted in colors and with custom logos as indicated on drawings
  - 2. Overall records board size: 11'-0" x 8'-6"
  - 3. Applied Panels:
    - a. Provided in quantity indicated in drawings
    - b. All panels to be removeable with industrial hook hook and loop
    - c. Panels to have permanently printed graphics or plastic slots for snap-in lettering as indicated by design layout in drawings.
    - d. Size: see drawings.
  - 4. Snap-In Lettering: provide in size and color indicated in quantity recommended by manufacturer to allow all slots to be filled with names and record times.
  - 5. Colors: high contrast UV stable

C. Mounting: Mount signs to wall surfaces using manufacturer's standard method with corrosion resistant fasteners

D. Accessories:

1. Additional set of lettering in each color and size indicated

E. Fabrication:

1. General: comply with requirements indicated for materials, thicknesses, finishes, colors, designs, shapes, sizes, and details of construction
2. Preassembly signs in the shop to the greatest extent possible to minimize field assembly. Disassemble signs only as necessary for shipping and handling limitations.
3. Form panels to required size and shape. Comply with requirements indicated for design, dimensions, finish, color, and details of construction.
4. Coordinate dimensions and attachment methods to produce message panels with closely fitting joints. Align edges and surfaces with one another in the relationship indicated

### **PART 3 - EXAMINATION**

- A. Examine substrates, areas, and conditions, with Installer present, for compliance with requirements for installation tolerances and other conditions affecting performance of work.
- B. Verify that items provided under other sections of Work are sized and located to accommodate signs.
- C. Examine supporting members to ensure that surfaces are at elevations indicated or required to comply with authorities having jurisdiction and are free from dirt and other deleterious matter.
- D. Proceed with installation only after unsatisfactory conditions have been corrected.

### **3.2 INSTALLATION**

- A. General: Locate sign units and accessories where indicated, using mounting methods of the type described and in compliance with the manufacturer's instructions.
  1. Install signs level, plumb, and at the height indicated, with sign surfaces free from distortion or other defects in appearance.
- B. Mounting Locations: Mount signs as directed by the Architect to comply with the Americans with Disabilities Act (ADA) and with code provisions and as indicated on the drawings.

### **3.3 CLEANING AND PROTECTION**

- A. At completion of the installation, clean soiled sign surfaces in accordance with the manufacturer's instructions. Protect units from damage until acceptance by the Owner.

END OF SECTION 1014000

## **SECTION 10 2113 – COLOR-THRU PHENOLIC TOILET COMPARTMENTS**

### **PART 1 - GENERAL**

#### **1.1 SUMMARY**

**A. Section Includes:**

1. Phenolic toilet compartments configured as toilet enclosure.

#### **1.2 ACTION SUBMITTALS**

- A. Product Data:** For each type of product.
- B. Shop Drawings:** For toilet compartments. Include plans, elevations, sections, details, and attachment details.
- C. Samples** for each type of toilet compartment material indicated.

#### **1.3 INFORMATIONAL SUBMITTALS**

- A. Product certificates.**

#### **1.4 CLOSEOUT SUBMITTALS**

- A. Maintenance data.**

#### **1.5 WARRANTY**

- A. Special Manufacturer's Warranty:** Provide manufacturer's standard form in which manufacturer agrees to repair or replace products that fail in materials, workmanship, corrosion, delamination, or breakage during the following period after substantial completion:
1. Toilet Partitions: 25 years.
  2. Hardware: Lifetime.

### **PART 2 - PRODUCTS**

#### **2.1 PERFORMANCE REQUIREMENTS**

- A. Surface-Burning Characteristics:** Comply with ASTM E84; testing by a qualified testing agency. Identify products with appropriate markings of applicable testing agency.
1. Class A

- a. Flame-Spread Index: 25 or less.
  - b. Smoke-Developed Index: 450 or less.
- B. Regulatory Requirements: Comply with applicable provisions in the U.S. Architectural & Transportation Barriers Compliance Board's ADA-ABA Accessibility Guidelines for Buildings and Facilities and ICC ANSI A117.1-2009 for toilet compartments designated as accessible.

## 2.2 COLOR-THRU PHENOLIC TOILET COMPARTMENTS

- A. Manufacturer:
  - 1. ASI global partitions (basis of design manufacturer)
  - 2. Decolam
  - 3. Marlite
  - 4. Spec-rite Designs, LCC
  - 5. Or approved equal
- B. Toilet-Enclosure Style: Floor mounted, Overhead braced with integral no-sightline privacy system.
- C. Door, Panel, and Pilaster Construction and Materials: Solid phenolic with multiple resin-impregnated kraft sheets fused at high temperature and pressure. Phenolic core color shall be the same as the surface sheets. Provide manufacturer's optional privacy enhancements and integral zero-sightline routed edges.
  - 1. Doors & Pilasters: 3/4" thickness; 72" height and 9" above floor
  - 2. Panels: 1/2" thickness
  - 3. Grab-Bar Reinforcement: Provide concealed internal reinforcement for grab bars mounted on units of size and material adequate for panel to withstand applied downward load on grab bar of at least 250 lbf when tested according to ASTM F446, without deformation of panel.
  - 4. Tapping Reinforcement: Provide concealed reinforcement for tapping (threading) at locations where machine screws are used for attaching items to units.
  - 5. Headrail shall be provided to bridge all compartments and brace the end freestanding pilasters to the wall; the headrail to comprise anodized aluminum with satin finish, contoured to provide anti-grip features.
  - 6. Finish: as selected from manufacturer's full range or as indicated on the drawings
- D. Pilaster Shoes and Sleeves (Caps): alloy 306 Stainless steel sheet with brushed #4 finish, not less than 0.031-inch nominal thickness and 3 inches high,
- E. Brackets (Fittings):
  - 1. Full-Height (Continuous) Type: Manufacturer's standard design; stainless steel

## 2.3 HARDWARE AND ACCESSORIES

- A. Hardware and Accessories: stainless steel operating hardware and accessories with brushes finish.

1. Provide units that comply with regulatory requirements for accessibility at compartments designated as accessible.
  2. Hinges: Self-closing continuous spring-loaded type adjustable to hold doors open at any angle up to 90 degrees, with emergency access by lifting door.
  3. Latch and Keeper: Concealed slide latch with wraparound rubber-faced combination door strike and keeper, with provision for emergency access, meeting requirements for accessibility at accessible compartments.
  4. Coat Hook: Combination hook and rubber-tipped stop, sized to prevent door from hitting compartment-mounted accessories. Provide wall bumper where door abuts wall.
  5. Provide formed L-shaped hook without stop at outswing doors.
  6. Door Pull: Standard unit on outside of inswing doors. Provide pulls on both sides of outswing doors.
  7. Occupancy indicator latch
- B. Overhead Bracing: Manufacturer's standard continuous, extruded-aluminum head rail with antigrip profile and in manufacturer's standard finish.
- C. Anchorages and Fasteners: Manufacturer's standard exposed fasteners of stainless steel, finished to match the items they are securing, with theft-resistant-type heads. Provide sex-type bolts for through-bolt applications. For concealed anchors, use stainless steel, hot-dip galvanized-steel, or other rust-resistant, protective-coated steel anchors compatible with related materials.

## 2.4 FABRICATION

- A. Fabrication, General: Fabricate toilet compartment components to sizes indicated with overall height of 82" minimum. Coordinate requirements and provide cutouts for through-partition toilet accessories and solid blocking within panel where required for attachment of toilet accessories.
- B. Overhead-Braced Units: Provide manufacturer's standard corrosion-resistant supports, leveling mechanism, and anchors at pilasters to suit floor conditions. Provide shoes at pilasters to conceal supports and leveling mechanism.
- C. Door Size and Swings: Unless otherwise indicated, provide 24-inch- wide in-swinging doors for standard toilet compartments and 36-inch- wide out-swinging doors with a minimum 32-inch- (813-mm-) wide clear opening for compartments designated as accessible.

## PART 3 - EXECUTION

### 3.1 INSTALLATION

- A. General: Comply with manufacturer's written installation instructions. Install units rigid, straight, level, and plumb. Secure units in position with manufacturer's recommended anchoring devices.
1. Maximum Clearances:
    - a. Pilasters and Panels: 1/2 inch.

- b. Panels and Walls: 1 inch.
- 2. Full-Height (Continuous) Brackets: Secure panels to walls and to pilasters with full-height brackets.
  - a. Locate bracket fasteners so holes for wall anchors occur in masonry or tile joints.
  - b. Align brackets at pilasters with brackets at walls.

### 3.2 ADJUSTING

- A. Hardware Adjustment: Adjust and lubricate hardware according to hardware manufacturer's written instructions for proper operation. Set hinges on in-swinging doors to hold doors open approximately 30 degrees from closed position when unlatched. Set hinges on out-swinging doors to return doors to fully closed position.

END OF SECTION 10 2113

## **SECTION 10 2124 - CUBICLE TRACK SYSTEM AND CURTAIN**

### **PART 1 – GENERAL**

#### **1.01 SUMMARY**

- A. Section includes:
  - a. Ceiling mounted curtain track
  - b. Track accessories and attachments
  - c. Cubicle curtain

#### **1.02 SUBMITTALS**

- A. Product Data: Manufacturer's product data sheets for all specified curtain track.
- B. Detail Drawings: Mounting details with the appropriate fasteners for specified project substrates.
- C. Samples:
  - a. Verification samples of cubicle track, 4" in length. Complete with (1) carrier as specified and stop
  - b. Selection sample of curtain fabric, 12"x12"
  - c. Selection sample of curtain top mesh panel, 12"x12"
- D. Manufacturer's standard installation instructions

#### **1.03 DELIVERY, STORAGE, AND HANDLING**

- A. Deliver materials in unopened factory packaging.
- B. Inspect material on delivery to verify products are as specified.

#### **1.04 WARRANTY**

- A. Manufacturer's standard warranty against manufacturer defects.

### **PART 2 - PRODUCTS**

#### **2.01 ACCEPTABLE MANUFACTURERS**

- A. Subject to compliance with the requirements listed, provide cubicle track, carriers, and curtains from a single manufacturer as follows:

1. Construction Specialties Cubicle Curtains
2. Clickeze, InPro Corporation,
3. Cubicle Curtain Factory, Inc
4. Or approved Equal

## **2.02 CUBICLE TRACK SYSTEM**

- A. Basis of Design:

1. Track system: CS Cubicle Curtains #6062N with breakway carrier CS Cubicle Curtains 975P or approved equal

- B. Cubicle Tracks: surface-mounted tracks of heavy extruded aluminum alloy 6063-T4, 1 3/8" x 3/4", slotted to receive roller carriers, complete with accessories and components required for complete and secure installations including splices, end caps and corner bends.

1. Corner Bends: Corner bends up to 36" radius are to be fabricated in one continuous "L" shape. Radiuses above 36" to be continuous or spliced based on room condition.
2. Ends: shall be provided with manufacturer's standed end caps of aluminum or molded thermoplastic with finish to match track.
3. Finish:
  1. White powder coat finish

- C. Carriers:

1. Breakaway Carriers: Manufacturers standard all nylon breakaway carriers. Carrier to have virgin nylon hook, axle and nylon wheels. Carrier hook is to be designed to break away from axle at 22 pounds of applied pressure.
  - i. Provide one carrier for each 6" of cubicle curtain width

## **2.03 CUBICLE CURTAIN**

- A. Basis of Design:

- a. Curtain fabric: Construction Specialties Kaylor Cube fabric line or approved equal
  - i. , color selected by architect from manufacturers full produce line or as noted on the drawings

- B. Curtain Fabric: Cubicle manufacturer's standard, as follows:

- a. Fiber Content: 100 percent polyester, inherently and permanently flame resistant. Complies with NFPA 701 fire code standards.
- b. Products: Subject to compliance with requirements, provide the following:
  - i. Pattern: As selected by Architect from manufacturer's full range of available fabrics.
  - ii. Color: As selected by Architect from manufacturer's full range of available colors.
- C. Mesh: No snag, tightly woven selvedge, 1 1/4 inch fire retardant grommet band at top edge. White or beige nylon mesh with openings having a minimum of 70 percent open (1/2" diagonal).
- D. Curtain Grommets: #2 rolled-edge, rustproof, nickel-plated brass; spaced not more than 6 inches on center and machined into top header.
- E. Fabricate curtains to comply with the following requirements:
  - a. Width: Equal to track length from which curtain is hung plus 10-15 percent added fullness, unless otherwise specified.
  - b. Length: Equal to floor-to-ceiling height, with a minimum of 20 inches mesh top unless otherwise specified, and minus distance above finished floor at bottom as follows:
    - i. Cubicle Curtains: 10-12 inches.
  - c. Mesh: Mesh is serged to face fabric, turned and stitched with double needle lock stitch no less than 1/2 inch in width.
  - d. Bottom and Side Hems: Fabric is 3/4 inch and sewn with lock stitch drapery hems.
  - e. Vertical Seams: Vertical seams are serged together and sewn with double needle lock stitch not less than 1/2 inch wide.

### **PART 3 INSTALLATION**

- A. General: Install tracks level and plumb, according to manufacturer's written instructions. Provide track fabricated from one continuous length up to 18 feet.
- B. Curtain Track Mounting. Surface
- C. Surface Track Mounting: Fasten surface-mounted tracks at intervals of not more than 24 inches. Fasten support at each splice and tangent point of each corner. Center fasteners in track to ensure unencumbered carrier operation. Attach track to ceiling as follows:

- a. Mechanically fasten to suspended ceiling grid with screws.
- D. Track Accessories: Install end caps, connectors, end stops, coupling and joining sleeves, and other accessories as required for a secure and operational installation.
- E. Curtain Carriers: Provide curtain carriers adequate for 6-inch spacing along the full length of the curtain.
- F. Curtains: Hang curtains on each curtain track.

END OF SECTION

## 102800 TOILET ACCESSORIES

### PART 1 - GENERAL

#### 1.1 SUMMARY

A. Work Included: Work of this Section includes:

1. Toilet room accessories.
2. Under lavatory guards.
3. Mirrors.

#### 1.2 ACTION SUBMITTALS

A. Product Data: For each type of product indicated. Include the following:

1. Construction details and dimensions.
2. Anchoring and mounting requirements, including requirements for cutouts in other work and substrate preparation.
3. Material and finish descriptions.
4. Features that will be included for Project.
5. Manufacturer's warranty.

B. Samples: Full size, for each accessory item to verify design, operation, and finish requirements.

1. Approved full-size Samples will be returned and may be used in the Work.

#### 1.3 INFORMATIONAL SUBMITTALS

A. Product Schedule: Indicating types, quantities, sizes, and installation locations by room of each accessory required.

1. Identify locations using room designations indicated.
2. Identify products using designations indicated.

B. Setting Drawings: Provide setting drawings, templates, instructions, and directions for installation of anchorage devices and for cut-outs in other work.

C. Warranty: Sample of special warranty.

D. ADA Compliance certification

E. Maintenance Data: For toilet accessories to include in maintenance manuals.

#### 1.4 QUALITY ASSURANCE

A. Single Source Responsibility: Subject to compliance with requirements, provide toilet accessories of same manufacturer for each type of accessory unit with not less than 5 years successful experience manufacturing similar products.

- B. Inserts and Anchorages: Furnish inserts and anchoring devices which must be set in concrete or built into masonry; coordinate delivery with other work to avoid delay.

- C. Accessory Locations: Coordinate accessory locations with other work to avoid interference and to assure proper operation and servicing.

#### 1.5 COORDINATION

- A. Coordinate accessory locations with other work to prevent interference with clearances required for access by people with disabilities, and for proper installation, adjustment, operation, cleaning, and servicing of accessories.
- B. Deliver inserts and anchoring devices set into concrete or masonry as required to prevent delaying the Work.

#### 1.6 WARRANTY

- A. Manufacturer's Special Warranty for Mirrors: Manufacturer agrees to repair or replace mirrors that fail in materials or workmanship within specified warranty period.
  - 1. Failures include, but are not limited to, visible silver spoilage defects.
  - 2. Warranty Period: 5 years from date of Substantial Completion.

### PART 2 - PRODUCTS

#### 2.1 MANUFACTURERS

- A. Manufacturers: Subject to compliance with requirements, provide toilet accessories as supplied by
  - 1. Bobrick (basis of design)
  - 2. American Specialties, Inc
  - 3. Gamco
  - 4. or approved equal.

#### 2.2 MATERIALS

- A. Stainless Steel: ASTM A 666, Type 304, 0.031-inch minimum nominal thickness unless otherwise indicated.
  - 1. Thickness: 22 gage (.034 inch) minimum, unless otherwise indicated.
- B. Galvanized Steel Mounting Devices: ASTM A 123, hot-dip galvanized after fabrication, 20 ga.
- C. Fasteners: Screws, bolts, and other devices of same material as accessory unit or of galvanized steel where concealed.
- D. Galvanized Steel Grab Bar Reinforcement: ASTM A 153/A 153M, 20 gauge, hot-dip galvanized after fabrication.
- E. ABS Plastic: Acrylonitrile-butadiene-styrene resin formulation.
- F. Mirrors: ASTM C 1503, Mirror Glazing Quality, clear-glass mirrors, nominal 6.0 mm thick.

## **2.3 UNDERLAVATORY GUARDS**

- A. Manufacturers: Subject to compliance with requirements, manufacturers offering products that may be incorporated into the Work include, but are not limited to the following. Refer to plumbing fixture schedule on drawings for basis of design models:
  - 1. Plumberex Specialty Products, Inc.
  - 2. Truebro by IPS Corporation.
  - 3. Or approved equal.

## **2.4 FABRICATION**

- A. If approved by the Architect, an unobtrusive logo of manufacturer is permitted on exposed surfaces. Provide manufacturer's name and product model number on concealed surfaces.
- B. Surface- Mounted Accessories, General: Fabricate units with tight seams and joints, exposed edges rolled. Hang doors or access panels with continuous stainless steel piano hinge. Provide concealed anchorage.
- C. Recessed Accessories, General: Fabricate units of all welded construction. Hang doors or access panels with full-length stainless steel piano hinge. Provide concealed anchorage.
- D. Keys: Provide universal keys for internal access to accessories for servicing and resupplying. Provide minimum of six keys to Owner's representative.

# **PART 3 - EXECUTION**

## **3.1 INSTALLATION**

- A. Install accessories in accordance with manufacturers' instructions. Install units plumb and level, firmly anchored in locations indicated.
- B. Secure units to walls in concealed, tamperproof manner with special hangers, toggle bolts, or screws. Set units plumb, level, and square, at locations indicated, and in accordance with manufacturer's instructions.
- C. Secure mirrors to walls in concealed, tamper-resistant manner with special hangers, toggle bolts, or screws. Set units level, plumb, and square at locations indicated, according to manufacturer's written instructions for substrate indicated
- D. Grab Bars: Install to withstand a downward load of at least 250 lbf, when tested per ASTM F 446.

## **3.2 ADJUSTING AND CLEANING**

- A. Adjust accessories for unencumbered, smooth operation. Replace damaged or defective items.
- B. Remove temporary labels and protective coatings.

- C. Clean and polish exposed surfaces per manufacturer's written recommendations.

**3.3 TOILET ACCESSORY SCHEDULE**

- A. Refer to drawings Restroom Fixture Schedules for accessories.

END OF SECTION 10 2800

## **SECTION 10 2813 - ELECTRIC HAND DRYERS**

### **PART 1 GENERAL**

#### **1.1 SECTION INCLUDES**

- A. High Efficiency ADA Compliant Electric Hand Dryer

#### **1.2 RELATED SECTIONS**

- A. Section 061000 - Rough Carpentry: Blocking in stud partitions for mounting hand dryers.

#### **1.3 REFERENCES**

- A. ICC/ANSI A117.1 - American National Standard for Accessible and Useable Buildings and Facilities; 2017.
- B. UL, LLC / UL Environment - Product Category Rules (PCR) for Hand Dryers, 2016.

#### **1.4 SUBMITTALS**

- A. Product Data: Manufacturer's data sheets on each product to be used, including:
  - 1. Preparation instructions and recommendations.
  - 2. Operating instructions and performance.
  - 3. Storage and handling requirements and recommendations.
  - 4. Electrical wiring diagrams
  - 5. Installation methods.

#### **1.5 QUALITY ASSURANCE**

- A. Manufacturer Qualifications: Company specializing in manufacturing electric hand dryers with 10 years minimum experience.
- B. Source Limitations: Obtain all electric hand dryers from a single source and from single manufacturer.
- C. Equipment certified by Underwriters Laboratory, Inc., with UL and ULC labels.
- D. Comply with ICC/ANSI A117.1-2017

#### **1.6 WARRANTY**

- A. Special Manufacturer's Warranty: Provide manufacturer's standard form in which manufacturer agrees to repair or replace products that fail in materials or

workmanship within the following periods following the date of Substantial Completion:

1. Sensors: 1 year.
2. Motor Brushes: 3 years.
3. All Other Components: 10 years.

## **PART 2 PRODUCTS**

### **2.1 MANUFACTURERS**

- A. Excel Dryer Inc., ThinAir model TA-SB (basis of Design)
- B. Bradley corporation: Aerix+ model 2923-287401
- C. Palmer Fixture BluStorm Bolt
- D. Or approved equal

### **2.2 PERFORMANCE**

- A. UL Product Category Rule (PCR) Testing:
  1. Dry Time: Not greater than 15 seconds
  2. Energy Per Use: Not greater than 3.7 Wh (13.32 J)
  3. Sound level: 76db max
- B. Electrical Components: Listed and labeled per NFPA 70, Article 100, by a testing agency acceptable to authorities having jurisdiction.
- C. Certification: Products certified by Underwriters Laboratory, Inc., with UL and ULC labels.
- D. Accessibility Requirements: Comply with requirements of ADA/ABA and accessibility requirements of authorities having jurisdiction.
  1. Comply with ICC/ANSI A117.1.
  2. Maximum protrusion from wall, 4"

### **2.3 ELECTRIC HAND DRYERS**

- A. High Efficiency Surface Mounted ADA Compliant Hand Dryer: high speed, energy efficient, rapid drying, automatic sensor, surface mounted, ADA Compliant, adjustable speed and sound control, adjustable heat control, electric hand dryer; entire dryer internally grounded. Made in the USA Certified.
  - a. Cover: Stainless steel.

- b. Finish: Brushed Number 4 finish.
- 2. Mounting: Surface Mounted (ADA Complaint) with maximum 4" protrusion from wall. Any approved substitution must meet protrusion requirements or be provided with recessed alcove.
- 3. Controls: Automatic, activated by infrared optical sensor located next to the air outlet. Dryer will operate as long as hands are under the air outlet and has a 35-second lockout feature if hands are not removed. Control includes adjustable sound and speed control mechanism, adjustable heat control with High, Medium, Low and Off settings. Sensor equipped with externally visible Red LED light that flashes error codes to assist in troubleshooting. Control assembly sealed for protection against moisture, lint, dust and vandalism.
- 4. Air Intake: Inlet openings on bottom of cover.
- 5. Air Outlet: Air baffle; designed to keep foreign objects out of dryer.
- 6. Nominal Size: 12-1/4 inches wide by 14-1/2 inches high by less than 4 inches deep.
- 7. Power Source:
  - a. Universal voltage 120V -277V. 950watts at 120, 208, 240; 1150w at 277V.
- 8. Motor: Thermally protected, series commutated, through-flow discharge vacuum motor/blower (1/2 hp / high-30,000 rpm, low-20,000 rpm) which provides air velocity of up to 13,200-19,800 LFM (linear feet per minute) at the air outlet
- 9. Heater: mounted inside blower housing to be vandal resistant. Heater Safeguard: Automatic resetting thermostat to open when airflow is restricted and close when airflow is resumed.
  - a. Exit Air Temperature: 130 degrees F.
- 10. Noise level at 79" = 69dB max
- 11. All metal parts coated according to Underwriters Laboratories, Inc. requirements.
- 12. Mount at the following heights above floor surface:
  - a. Toilets for Persons with Physical Disabilities: 37 inches (940 mm).

### **PART 3 EXECUTION**

#### **3.1 EXAMINATION**

- A. Do not begin installation until substrates have been properly prepared.
- B. If substrate preparation is the responsibility of another installer, notify Architect of unsatisfactory preparation before proceeding.

### **3.2 PREPARATION**

- A. Clean surfaces thoroughly prior to installation.
- B. Prepare surfaces using the methods recommended by the manufacturer for achieving the best result for the substrate under the project conditions.
- C. Coordinate requirements for blocking to ensure adequate means for support and installation of hand dryers.
- D. Coordinate requirements for power supply, conduit, disconnect switches and wiring.

### **3.3 INSTALLATION**

- A. Install in accordance with manufacturer's instructions.
- B. Install dryers at specified heights.
- C. Install dryers securely to supporting substrate so that fixtures are level and aligned with each other. Use type and length of fastener as recommended by manufacturer for type of substrate.

### **3.4 PROTECTION**

- A. Inspect installation to verify secure and proper mounting. Test each dryer to verify operation, control functions, and performance. Correct deficiencies.
- B. Protect installed dryers until completion of project.
- C. Replace damaged products before Substantial Completion.

**END OF SECTION**

## SECTION 10 4400 - FIRE PROTECTION SPECIALTIES

### PART 1 - GENERAL

#### 1.1 SUMMARY

- A. Work Included: The Work of this Section includes:
  - 1. Fire extinguishers.
  - 2. Semi-recessed mounted cabinets for portable fire extinguishers.
  - 3. Mounting brackets for fire extinguishers, where cabinets are not provided.

#### 1.2 ACTION SUBMITTALS

- A. Product Data: For each type of product. Include rating and classification, material descriptions, dimensions of individual components and profiles, and finishes for fire extinguisher and mounting brackets, where provided.

#### 1.3 INFORMATIONAL SUBMITTALS

- A. Product Schedule: For fire extinguishers. Coordinate final fire-extinguisher schedule with fire-protection cabinet schedule to ensure proper fit and function. Use same designations indicated on Drawings.
- B. Warranty: Sample of special warranty.
- C. Operation and Maintenance Data: For fire extinguishers to include in maintenance manuals.

#### 1.4 COORDINATION

- A. Coordinate type and capacity of fire extinguishers with fire-protection cabinets to ensure fit and function.

#### 1.5 WARRANTY

- A. Special Warranty: Manufacturer's standard form in which manufacturer agrees to repair or replace fire extinguishers that fail in materials or workmanship within specified warranty period.
  - 1. Failures include, but are not limited to, the following:
    - a. Failure of hydrostatic test per NFPA 10.
    - b. Faulty operation of valves or release levers.
  - 2. Warranty Period: Six (6) years from date of Substantial Completion.

## PART 2 - PRODUCTS

### 2.1 PERFORMANCE REQUIREMENTS

- A. NFPA Compliance: Fabricate and label fire extinguishers to comply with NFPA 10, "Portable Fire Extinguishers."
- B. Fire Extinguishers: Listed and labeled for type, rating, and classification by an independent testing agency acceptable to authorities having jurisdiction.
- C. Fire-Rated Fire-Protection Cabinets, where required by project application: Listed and labeled to comply with requirements in ASTM E 814 for fire-resistance rating of walls where they are installed.

### 2.2 MANUFACTURERS

- A. Basis-of-Design, Products: Subject to compliance with requirements, provide the following:
  - 1. Potter-Roemer, Inc.; "Alta" cabinets or approved equal.
- B. Other Manufacturers:
  - 1. Larsen; Architectural Series
  - 2. J.L. Industries.
  - 3. Or approved equal.

### 2.3 PORTABLE, HAND-CARRIED FIRE EXTINGUISHERS

- A. Fire Extinguishers: Type, size, and capacity for each fire-protection cabinet and surface mounted location indicated on drawings.
  - 1. Typical extinguisher: Multi-purpose Dry-chemical Type in enameled-steel container with monoammonium phosphate based dry chemical and having pressure indicating gauge
    - a. Size: UL rated 4-A:40-B:C; 30-lb nominal capacity
  - 2. In Pool Mechanical room where oxidizer stored and where noted in drawings: Pressurized Water Mist type in enameled-steel container with pressurized non-toxic de-ionized water and having pressure indicating gauge
    - a. Size: UL Rated 2A:C 2.5 gallons (9.4 liter) capacity.
  - 3. Valves: Manufacturer's standard.
  - 4. Handles and Levers: Manufacturer's standard.
  - 5. Instruction Labels: Include pictorial marking system complying with NFPA 10, Appendix B, and bar coding for documenting fire-extinguisher location, inspections, maintenance, and recharging.
  - 6. Mounting Bracket: where surface mounted, provide manufacturers standard bracket for size and type of extinguisher

## 2.4 FIRE EXTINGUISHER CABINETS

- A. General: Provide fire extinguisher cabinets where indicated, of suitable size for housing fire extinguishers of types and capacities indicated. Provide portable fire extinguisher in each cabinet in size indicated on drawings and within this specification.
  - 1. Fire-Rated Cabinets: UL listed with UL listing mark with fire-resistance rating of wall where installed.
- B. Cabinet Type: Semi-recessed with rolled edges in walls of sufficient depth to accommodate door construction.
  - 1. Cabinet Construction: Manufacturer's heavy gauge galvanized steel with an electrostatically applied, thermally-fused polyester coating with white finish. Cabinet door shall cover the flange of the tub, with concealed door hinge and pin. Weld joints and grind smooth.
  - 2. Provide rolled edges.
  - 3. Dimensions (Inside Box): to suit fire extinguisher type.
- C. Door and Frame Material and Construction:
  - 1. Door: Manufacturer's standard vertical window panel with 1/8" acrylic glazing and flush pull handle.
  - 2. Door finish: Alloy 306 Stainless steel with No. 4 brushed finish
  - 3. Door Hardware:
    - a. Provide flush pull handle and friction latch.
    - b. Provide manufacturer's aluminum or stainless steel concealed hinge with stainless steel pin to allow for 180 degrees opening of cabinet door.
  - 4. Identification: Provide cabinet door with die-cut letters applied vertically reading the words "FIRE EXTINGUISHER", in color as indicated below:
    - a. Die-Cut Letter and Color: vertical Red or Black, as selected by the Architect.

## 2.5 FACTORY FINISH

- A. General: Factory finish fire extinguishers, brackets and cabinets to comply with NAAMM "Metal Finishes Manual" after products are assembled. Protect finishes with plastic or paper covering, prior to shipment.

## PART 3 - EXECUTION

### 3.1 EXAMINATION

- A. Examine fire extinguishers for proper charging and tagging.
  - 1. Remove and replace damaged, defective, or undercharged fire extinguishers.
- B. Proceed with installation only after unsatisfactory conditions have been corrected.

### 3.2 INSTALLATION

- A. General: Install fire extinguishers in locations indicated and in compliance with requirements of authorities having jurisdiction.
- B. Follow manufacturer's printed instructions for installation.
- C. Install units in locations and at heights indicated, or if not indicated, at heights to comply with applicable regulations of governing authorities. Fasten cabinets to structure, square and plumb.
  - 1. For units to be fully recessed, prepare recesses in walls for cabinets as required by type and size of cabinet and style of trim and to comply with manufacturer's instructions.
  - 2. Fasten mounting brackets to inside surface of fire-protection cabinets, square and plumb.
- D. Identification: Apply letters at locations indicated.

### 3.3 ADJUSTING, CLEANING, AND PROTECTION

- A. Adjust cabinet doors that do not swing or operate freely. Refinish or replace cabinets and doors damaged during installation.
- B. Provide final protection and maintain conditions that ensure that cabinets and doors are without damage or deterioration at the time of Substantial Completion.

END OF SECTION 10 4400

## **SECTION 10 5100 - Solid Phenolic Lockers**

### **Part 1 General**

#### **1.1 Summary**

- A.** Section includes:
  - 1. solid phenolic lockers
  - 2. solid phenolic benches

#### **1.2 Submittals**

- A.** Shop Drawings: Submit shop drawings indicating room sizes, layout, locker dimensions, material thickness, trim, hardware, finishes, locks, base, doors, accessories, and installation details.
- B.** Product Data: Submit manufacturer's technical data for materials, fabrication, finishing, fastenings, hardware, and installation details.
- C.** Samples: Submit samples of edge details, colors, patterns, finishes, and texture
- D.** Closeout Documents: Submit the following:
  - 1. Operation and Maintenance data
  - 2. Warranty

#### **1.3 Quality Assurance**

- A.** Qualifications:
  - 1. Fabricator shall have 10 years or more experience in fabrication of solid phenolic materials and shall be experienced in performing work of similar size and scope.
  - 2. Fabricator shall be capable of providing field service representation.
  - 3. Installer shall be approved by the manufacturer and be experienced in performing work of similar size and scope.
- B.** Pre Installation Meeting: Conduct pre-installation meeting prior to installation to verify project requirements and conditions.

#### **1.4 Delivery, Storage and Handling**

- A.** Ordering: Comply with supplier's ordering and lead-time guidelines to avoid delays.
- B.** Delivery: Deliver materials in the manufacturer's original protective packaging.
- C.** Storage and Handling: Store materials in an enclosed shelter providing protection from damage, temperature, humidity, and exposure to the elements.

#### **1.5 Coordination and Project Conditions**

- A.** Field Measurements: Before material fabrication, verify actual field measurements and show actual measurements on shop drawings.
- B.** Coordination: Coordinate field measurements with fabrication schedule construction progress to avoid construction delays.

## **1.6 QUALITY ASSURANCE**

- A.** Provide all lockers from a single manufacturer.

## **1.7 Warranty**

- A.** Submit executed copy of the Manufacturer 10-year warranty against defects in material and 2 years warranty for system.

## **Part 2 – Products**

### **A. Manufacturers**

### **B. Basis of Design Manufacture: Spectrum Lockers;**

- a.** Model: 1-Tier, 2-Tier and Athletic type as indicated on the drawings

### **C. Other Manufacturers:**

- a.** ASI storage solutions
  - b.** Hollman Inc
  - c.** Or approved equal

## **2.1 Materials**

### **A. Panel Material:**

- 1.** Decorative papers impregnated with the melamine resin on faces with a clear protective overcoat and integrally compression molded within a core consisting of solid phenolic impregnated kraft papers.
  - 2.** Core or panel material shall meet fire resistance per ASTM E84 Class A
  - 3.** High-pressure Laminate adhered to substrate is not acceptable

### **B. Doors:**

- 1.** Material: 1/2”thick solid phenolic composite material.
  - 2.** Corners: Rounded
  - 3.** Color: As selected from manufacturer’s full color range or as indicated on the drawings
  - 4.** Edges: Standard profile is straight edge no profile.
  - 5.** Door Fastening: Through Bolted.

### **C. Locker Bodies**

- 1.** Exposed edges: Straight profile; eased edges to remove sharpness; machine polished and free

from tooling imperfections.

**2.** Tops, bottoms, and intermediate shelves: 1/2" thick solid phenolic composite material with ventilation holes.

**3.** Locker backs: +/- 1/4" thick solid composite material.

**4.** Locker Sides: 3/8" thick solid phenolic composite material.

**D.** End Cover Panels: Finished end panels and closures shall be 1/2" thick solid phenolic composite material finish to match doors where sides are exposed

**E. Hardware**

**1. Hinges:**

**a.** Material: 304-grade stainless steel.

**b.** Quantity: Three (3) for full height doors and two (2) for multi-tier units or full height piano style.

**2. Interior hooks:**

**a.** Material: Stainless steel.

**b.** Top Hook: Two prong, one per opening for 1 and 2 tiers.

**c.** Side Hook: Single prong, two per opening for 1, 2 and 3 tiers.

**3. Interior Shelves:**

**a.** Material 1/2" thick solid phenolic

**b.** Quantity: provide (1) 12" below top of locker in 1-tier lockers and to separate tiered locker compartments

**4.** Fasteners: Exposed fasteners, where present, shall be 304 stainless steel

**5.** Fastener Application: Apply directly into or through the material.

**6.** Other Reinforcement: Aluminum or metal profiles for reinforcements shall not be permitted.

**7.** Door Identification (identification plates): engraved on integrated hasp handle

**F. Ventilation**

**1.** Door Vent: Provide minimum of 20 squares inches opening of front ventilation for full tier 12" wide x 72" high. For other styles, provide front ventilation 1.43 square inches per lineal foot of door perimeter.

**G. Base**

**1.** Base furnished with locker: Adjustable leg mounted: 3 3/4" adjustable to 5", ABS plastic mounting-leveling leg. Finish base plate of 1/2" phenolic panel.

**2.2 Size**

**1. 1-tier lockers:**

**a.** Overall height (without base): 71-3/4"

**b.** Overall width: 15" or 18" as indicated on the drawings

**c.** Overall Depth: 18"

**2. 2-tier lockers:**

- a. Overall height (without base): 71-3/4"
- b. Overall width: 18"
- c. Overall depth: 18"
- 3. Athletic lockers - custom:
  - a. Overall height (without base): 71-3/4"
  - b. Overall width: custom 18"
  - c. Overall depth: custom 18"
  - d. with continuous bench along adjacent units
  - e. Side panels contoured and cut-away sides having angled backrest, see drawings.

**2.3 Accessories and Options: 1-tier and 2-tier lockers:**

- A.** Locking System: Stainless Steel Hasp Plate and Bar with Integrated Handle
- B.** Locker Top: Sloped width 1/4" thick solid phenolic composite material to match door panels.
- C.** Door Identification:
  - 1.** engraved numbers visible on stainless steel hasp lock
  - 2.** Fonts to be a minimum 1/2" high and up to four alphanumeric characters
  - 3.** Numbering sequence to be provided by architect.
- D.** Fillers: 1/2" solid phenolic composite material.
  - 1.** Provide wall fillers where lockers full width of wall or built into alcove.
  - 2.** Provide corner fillers inside corners to allow doors to fully open.
- E.** Base Plate: 1/2" solid phenolic composite material to match door panel finish, miter corners
- F.** Extra Hang Rod: Aluminum, Matte Chrome Finish

**2.4 Accessories and Options: Athletic lockers:**

- A.** Custom lockable compartment with: Stainless Steel Hasp Plate and Bar with Integrated Handle
- B.** Continuous bench along adjacent lockers
- C.** Contoured side-panels, see drawings.
- D.** Locker Top: 1/2" flat finished top panel
- E.** Custom University Logo at rear panel
- F.** Identification:
  - 1.** engraved numbers visible on bench front
  - 2.** Fonts to be a minimum 1/2" high and up to four alphanumeric characters
  - 3.** Numbering sequence to be provided by architect.
- G.** Fillers: 1/2" solid phenolic composite material.
  - 1.** Provide wall fillers where lockers full width of wall or built into alcove.
  - 2.** Provide corner fillers inside corners to allow doors to fully open.
- H.** Adjustable shelf below seat

**2.5 Locker Benches**

- A.** Provide in size indicated on drawings
  - 1.** 2"x2" aluminum tube H-frame with nylon feet and stainless steel screw adjustment, capable of supporting 400lbs

2. ½" solid phenolic top, finish color to match lockers or as indicated on the drawings.

### **Part 3 – Execution**

- 3.1** Examination: Examine site conditions before locker installation. Notify architect of unacceptable areas. Do not install locker until unacceptable conditions have been corrected.

- 3.2** Installation

- A.** Install lockers in locations as shown on shop drawings per manufacturer's instructions.
- B.** Install lockers plumb, level, square, rigid, and flush.
- C.** Install all required trim, fillers, end panels, and closures per manufacturer's instructions.
- D.** Use hardware supplied or recommended by the manufacturer.
- E.** Attach number plates to doors as indicated on shop drawings.
- F.** Correct and/or replace damaged components as directed by architect.

- 3.3** Adjustment

- A.** Adjust doors and locks for smooth operation without binding.
- B.** Lubricate door hinges and locks per manufacturer's instructions.

- 3.4** Cleaning

- A.** Clean all surfaces in accordance with manufacturer's instructions.
- B.** Do not use abrasive cleaners.

End of Section

## SECTION 11 4500 – APPLIANCES AND EQUIPMENT

### PART 1 - GENERAL

#### 1.1 SUMMARY

- A. Work Included: The Work of this Section includes:

1. Appliances and equipment as indicated on the drawings
  - a. Refrigerator/ Freezers.
  - b. Microwaves.
  - c. Multi-function printers
  - d. Vending Machines
  - e. Other equipment listed in equipment schedule on the drawings

#### 1.2 DELIVERY AND STORAGE

- A. Accept delivery of products in manufacturer's undamaged protective containers, after spaces to receive them have been fully enclosed.

### PART 2 – PRODUCTS

- A. refer to drawings for list of equipment and appliances
- B. Where noted as owner provided, provide dates required for delivery
- C. Where noted as contractor provided:
  - The specified product is basis of design, for any brand name manufacturer and/or product “or equal” shall be permitted, but substitutions will be evaluated in accordance with Div 1 specifications with architect to make determination of equivalency. All qualities of basis of design product shall be used as evaluation criteria, including warranty length offered by manufacturer, years in business, thickness of metal/wood/material properties, fabrication method and materials, and overall product size.

### PART 3 - EXECUTION

#### 3.1 EXAMINATION

- A. Examine and coordinate roughing-in for plumbing, mechanical, and electrical services, with Installer present, to verify actual locations of services before appliance and equipment installation.
- B. Proceed with installation only after unsatisfactory conditions have been corrected.

#### 3.2 PREPARATION

- A. Coordinate delivery of appliances, equipment and accessories required for installation.

### 3.3 INSTALLATION

- A. General: Comply with manufacturer's instructions and recommendations.
- B. Built-In Equipment: Securely anchor units with concealed fasteners. Verify that clearances are adequate for proper functioning and rough openings are completely concealed.
- C. Freestanding Equipment: Place units in final locations after finishes have been completed in each area. Verify that clearances are adequate for proper operation of equipment.
- D. Utilities: Refer to Divisions 22, 23 and 26 - For Mechanical and Electrical requirements.

### 3.4 ADJUSTING AND CLEANING

- A. Testing: Test each item of residential equipment to verify proper operation. Make necessary adjustments.
- B. Accessories: Verify that accessory items required have been furnished.
- C. Remove protective coatings and other protection after construction procedures have been completed to assure equipment remains undamaged until the time of substantial completion.
- D. Cleaning: Remove packing material from residential equipment items and leave units in clean condition, ready for operation.

### 3.5 FIELD QUALITY CONTROL

- A. The contractor shall Perform the following tests and inspections
  - 1. Perform visual, mechanical, and electrical inspection and testing for each appliance/equipment according to manufacturers' written recommendations. Certify compliance with each manufacturer's appliance-performance parameters.
  - 2. Leak Test: After installation, test for leaks. Repair leaks and retest until no leaks exist.
  - 3. Operational Test: After installation, start units to confirm proper operation.
  - 4. Test and adjust controls and safeties. Replace damaged and malfunctioning controls and components.
  - 5. See Section 014000 "Quality Requirements" for retesting and reinspecting requirements and Section 017300 "Execution" for requirements for correcting the Work.
  - 6. An appliance will be considered defective if it does not pass tests and inspections.
  - 7. Prepare test and inspection reports.

END OF SECTION 11 4500

## **SECTION 116600 - ATHLETIC EQUIPMENT**

### **PART 1 - GENERAL**

#### **1.1 SUMMARY**

- A. Section includes:
  - 1. Gym Padding
  - 2. Basketball backstops and accessories.
  - 3. Volleyball Equipment.
  - 4. Second Floor Volleyball Sleeve Adapters
- B. Related sections:
  - 1. Section 051200 Structural steel framing to support basketball backstops
  - 2. Section 055000 Miscellaneous metals
  - 3. Section 096560 Synthetic Sports Flooring for installation of second floor volleyball sleeves.

#### **1.2 SUBMITTALS**

- A. Submit in accordance with Section 01330 - Submittal Procedures.
  - 1. List of proposed products and product data.
  - 2. Shop drawings showing layout, elevations, dimensions, fabrication details, method of attachment, loads to be transmitted to building structural members, requirements for supplementary bracing or structural support members and electrical wiring diagrams.
  - 3. Manufacturer must provide calculations and reports for tests performed by an independent testing laboratory accredited by the American Association of Laboratory Accreditation (A2LA) that clearly demonstrate compliance with minimum safety factors included in product specifications.
  - 4. Samples of fabric and all finish selections by Architect.
  - 5. Manufacturer's installation and maintenance instructions.

#### **1.3 QUALITY ASSURANCE**

- A. Source limitation: All components including suspension system, frame assembly, backboards, goals, electric winches, and controls for backstops shall be of a single manufacturer.
- B. All welding to be performed by personnel having passed Welder Qualification testing in accordance with American Welding Society (AWS) code D1.1 or higher. Manufacturer to provide certification and test results upon request.

#### **1.4 DELIVERY, STORAGE, AND HANDLING**

- A. Provide volleyball floor sleeves, covers and floor inserts in accordance with requirements of related trades that are responsible for installation. Do not deliver balance of athletic equipment until building is enclosed and other construction within gymnasium is substantially complete.

### 1.5 PROJECT CONDITIONS

- a. Environmental Limitations: Do not install gymnasium dividers until spaces are enclosed and weatherproof, wet work in spaces is complete and dry, and ambient temperature and humidity conditions are maintained at the levels indicated for Project when occupied for its intended use.
- b. Field Measurements: Verify position for gymnasium basketball hoops.

### 1.5 WARRANTY

- A. All Basketball Backstop support structures including clamps, fittings and tube to have a minimum warranty of 25 years from date of substantial installation.
- B. All volleyball equipment and wall padding to have minimum warranty of 5 years from date of substantial completion.
- C. Manufacturer's standard warranty for all other items and equipment.

## PART 2 - PRODUCTS

### 2.1 ACCEPTABLE MANUFACTURERS

- A. Subject to compliance with the following:
  - a. Draper, Inc
  - b. Or approved equal

### 3.2 WALL PADDING

Wall padding shall be Model UI Greenguard Gold Certified, Class A Flame Retardant Wall Protection Pads EcoVision Fire-Rated Wall Pads or approved equal as supplied by Draper, Inc. or approved equal.

Wall pads to be standard sized 2' by 7' as indicated on drawings.

Wall pads shall be constructed using 7/16" thick urea-formaldehyde free oriented strand board (OSB) backer and 2" thick flexible urethane cushioning material bonded together, then fully wrapped with flexible PVC and scrim laminate that features a leather grain emboss pattern. Cover shall have average weight of 14 oz. per square yard, breaking strength of 350 PSI, tear resistance of 65 pounds and be rated as self-extinguishing in accordance with California State Fire Code F-230 and Class-A Rated in accordance with requirements of NFPA-101.

- 1. Cover to be resistant to rot, mildew, fungus and ultraviolet light.
- 2. Color as selected by the Architect.
- 3. Panel front and edges shall be fully wrapped and securely stapled to the OSB backer so that the backer is not exposed on front or four sides.
- 4. Pads shall be supplied with 1 inch fabric wrapped mounting flanges at panel

- top and bottom, with Z-clips at top.
5. Attachment: Provide pads without solid backing with Z mounting clips top and bottom.
  6. Provide with manufacturer's standard wall pad cutout trims for all devices, receptacles, switches, fire-extinguisher cabinets and other necessary cutouts occurring on walls with pads. Coordinate with MEPFP, AV/IT/Sec drawings for all occurrences which may or may not be shown on the interior elevations.

UL GREENGUARD Gold Certification: Entire wall pad assembly shall have been submitted to indoor air quality evaluation (IAQ) evaluation in accordance with UL 2811 test method to show compliance with emissions limits on UL 2818 Section 7.1 and 7.2. Materials are tested in accordance with ANSI/BIFMA M7.1-2011 and determined to comply with ANSI/BIFMA X7.1-2011 and ANSI/BIFMA e3-2014e credit 7.6.1, 7.6.2 and 7.6.3. Material of emissions of total volatile organic compounds of < 0.22 mg/m<sup>3</sup>, formaldehyde < 0.0135 ppm, total aldehydes < 0.043 ppm, individual volatile organic compounds < 1/1000 TLV and < 1/2 chronic REL and total phthalates < 0.01 mg/m<sup>3</sup>. Manufacturer must be able to provide independent lab and test reports to verify compliance.

Fire Rating: Entire pad assembly has been tested and meets the requirements of NFPA 101 Life Safety Code for class A rating (flame spread 0-25 and smoke development 0-450) when tested in accordance with ASTM E-84 (also published as NFPA-255, ANSI 2.5, UBC 8-1 (42-1) and UL 723). Entire pad assembly has been tested and meets the criteria when tested in accordance with NFPA 286.

Pads shall meet all requirements of ASTM F 2440-04. Manufacturer must be able to provide independent lab and test reports to verify compliance.

Manufacturer shall provide independent lab and test reports to verify compliance with above standards and certifications.

## **2.2 BASKETBALL BACKSTOPS**

### **A. Gym 1 (2 provided base bid, 4 additional as alternate see drawings)**

#### **1. Type:**

Basketball backstop shall be the DRAPER EZ FOLD Model TF-20 or approved equal, ceiling-suspended, forward folding by Draper, Inc or approved equal

Backstop shall be a welded together main frame constructed from steel mechanical tubing to form a rigid tetrahedral "T" design of back-to-back right triangles. The main stem shall be 6" OD 11-ga. steel tubing, the top of the "T" shall be 4" OD 11-ga. steel tubing and the side braces shall be 2-1/4" OD 14-ga. steel tubing. Side braces shall join stem no higher than 4'6" above goal (18" above top of backboard). The main stem shall be long enough to allow ±6" height adjustment of either fan or rectangular banks. The folding front brace shall be jackknife type, fully adjustable, self-locking in the down position and constructed of 2-1/2" OD 13-ga. (outer) steel tubing and 2-1/4" OD 14-ga. (inner) steel tubing.

Pivot or hinge joint for folding of backstop shall not exceed 15" from roof structure except when required by architectural conditions for coordination with other trades or equipment. Pivot or hinge point to be designed in a manner to provide a minimum

structural capacity of approximately 20,000 Lbs. and a safety factor of 50:1. The main backstop frame shall pivot on 1-1/4" minimum solid steel shaft secured in a milled bearing hole in 1/2" minimum steel plate hangers to ensure accurate positioning of bank.

Bank attached to the 6" OD main stem by heavy-duty bank hangers. Hangers constructed of 1" x 2" 11-ga. steel tubing and formed 1/4" steel plate with slotted holes for lateral adjustment. All banks shall have one upper bank hanger and include a goal brace, which attaches directly to the goal mounting plate and directly to the 6" main stem of the backstop to eliminate any strain on the bank and help prevent glass breakage. Backstop to have powder coat finish.

Backstop is raised or lowered by a 1/4" (6.35 mm) aircraft cable, certified minimum break strength of 7,000 pounds (3178 kg), operating on cast iron sheaves with bronze oilite bearings that do not require lubrication.

Backstop shall be supported from 4" OD 11-ga. steel mechanical tubing anchored to roof structure by means of heavy steel support hangers. Attachment to building structure to be with clamps capable of supporting a minimum of 20,000 Lbs. each. Superstructure shall be designed with a minimum of four attachment clamps to produce a combined minimum attachment point safety factor of 75 to 1 and manufacture must be able to present independent testing data to substantiate safety factor. Superstructure tubes shall be reinforced with bridging and/or bracing when truss centers exceed 12'0".

Backstop shall be provided with custom powder coat finish as selected from manufacturers standard offering of a minimum of 25 colors.

## **2. Operation:**

Winch is to be DRAPER model no. 503280 electric winch or approved equal

Winch has a powerful 3/4 HP, 115-volt, single phase, instant reverse motor with thermal overload protection that is governed to stall at 14 amps. Motor is rated at an intermittent 10-minute duty cycle. Winch motor operates at full load amperage rating of 11.5 full load amps. Winch has integral limit switches to stop travel in up and down positions.

Winch has an oil-bath gear case with precision ball bearings and premium seals for a lifetime of maintenance-free, leak free operation. Gear case features hardened steel gears that are securely captured to take on radial and thrust loads. Double worm gear reduction is in a ratio of 200:1 to provide exceptional holding power under load and eliminates the need for special or supplemental braking systems. Winch is specified to continuously run at the maximum rated load of 1250 lbs. (566 kilograms) for the motors rated duty cycle of 10 minutes without sustaining any gear damage.

Winch has a large 4 1/2" (114 mm) diameter cable drum that is helically grooved to accept 1/4" – 7 x 19 galvanized aircraft cable. Drum will accept up to 35' (10.7 meters) on a single layer and has a torsion spring tensioning roller to ensure cable tracks properly into grooves, even if cable is allowed to go slack. Large diameter, grooves and tensioning spring provide long cable life and performance.

Winch can be mounted in any orientation that allows for correct wrap direction and unobstructed cable travel which provides extreme flexibility during installation.

Winch Assembly is covered by a five-year limited warranty and weighs just 68 Lbs. (30.8 kilograms)

Motor shall be controlled by controls specified elsewhere in this section.

**3. Bank:**

Backboard to be DRAPER Model 503136 rectangular glass backboard or approved equal

Backboard to be 72" x 42" to meet all NCAA, NFHS and professional requirements. Backboard frame of a heavy, brushed aluminum extrusion for maximum durability. Extended frame section of high tensile aluminum (6063-T5). Ends of the frame extrusions mitered and fitted with steel brackets on all four corners, with the upper brackets incorporating keyhole slots for mounting the backboard to the support structure at standard mounting centers.

Goal mounting structure of a heavy, formed steel assembly, secured to the lower horizontal frame member to minimize stress on the glass section. Special steel sleeves at the goal mounting hole locations to secure rear structure to front mounting plate, forming a unitized assembly to minimize shock to the glass. Entire frame including goal-mounting structure fitted with a shock absorbing neoprene material to cushion and protect the glass section.

1/2" (12 mm) thick, fully tempered glass section with uniform load and impact strength. Glass is tempered to meet ANSI Standard Z91.1 Class A and CPSC Standard 16 CFR1201 Category II. Glass is tested to conform with requirement of FIBA Rule 2.8 – Rigidity Test for Backboard Tempered Safety Glass. Official white border and target area is permanently fired into front side of glass section so that it cannot wear away.

Goal mount structure provided with two holes (7/16") and two studs (3/8"-16) to secure backboard and goal to a direct mount "goal brace" feature which relieves all stress and shock on the backboard conforming to NCAA (Rule 1.15.1) and NFHS (Rule 1.11.1). Goal mounting holes (4) to be standard 5" (127mm) horizontal x 4" (102 mm) vertical mounting centers.

Backboard covered by a Lifetime Limited Warranty when installed on a Draper EZ Fold basketball backstop with Goal Brace or Direct Mount Height Adjuster.

**4. Backboard Safety Padding:**

Backboard Edge Padding to be DRAPER Model 5032XX bolt-on backboard safety padding or approved equal

Molding process produces a tough "skin" on the outside of the foam padding for long life. Pre-molded corners for improved player safety. Foam has about a 15 lbs. density and durometer of approximately 35 on the Shore A scale. Molded-in steel track and bolt-on attachment system eliminate frustrating re-gluing or taping. Meets or exceeds

all NCAA, NFHS and FIBA requirements. Available in Grey, Dark/Royal Blue, Red/Scarlet, Navy Blue, Marine/Columbia Blue, Kelly Green, Yellow, Forest Green, Orange, Purple, Black, and Maroon.) 10-year warranty when installed indoors.

**5. Goal:**

Goal to be DRAPER Model 503576 breakaway goal or approved equal

Goal is designed to withstand shock loads due to a player slam dunking and/or hanging on the rim. The rim shall deflect down when a static load in excess of 180 pounds is applied. The rim will return to the playing position once the load is removed. The function of the breakaway goal shall meet all NCAA and NFHS rules. Goal shall be set at factory for proper flex and rebound requirements but is field adjustable to ensure continued rule compliance.

Rim is fabricated from a 5/8" diameter steel rod formed into an 18" inside diameter ring. Inside of ring positioned 6" from the face of backboard by a heavy-duty mounting plate with mounting holes centered to match 5" x 5" or 5" x 4" backboard mounting holes. Goal will mount on standard glass, fiberglass, aluminum, steel, and wood backboards.

Rim rigidly braced by means of die cut steel braces formed and welded to underside of rim for maximum support. Goal is provided with twelve "no tie" net attachment clips, welded to rim for net attachment. Goal painted in an official durable orange powder coat and furnished with zinc plated mounting hardware and high-quality white nylon anti-whip net. Goal to have three-year limited warranty.

**6. Controls:**

Group Control System shall be DRAPER EZ Pad 3.0 Control System or approved equal

Group Controller is capable of controlling Basketball Backstops with Electric Winches, Electric Divider Curtains, Electric Height Adjusters, Overhead Volleyball Systems, Wrestling Mat Lifters and other Auxiliary Devices from a centralized location. Controller to consist of a combination of touch screens and relay/processor boxes and is fully programmable to operate gym equipment and auxiliary devices in groups of up to 8 devices. Controller to be capable of being networked with other controller devices (relay boxes or touch screens) in almost unlimited combinations.

Touch Screen(s) are Draper Model No 503337 EZ Pad 3.0 Color Touch Screens or approved equal. Touch Screen is 7 inches diagonally and include a trim ring for a neat clear appearance. Touch Screen communicates with relay/processor boxes via ethernet communications requiring CAT-5e or better cable.

Relay/Processor Box(es) are Draper Model No. 503358 EZ Pad 3.0 Relay Box or approved equal. Relay box is a 16" x 12" x 4" hinged steel enclosure that surfaces mounts. Each Relay Box includes two banks of relays that includes sufficient relays to operate four directional devices from input voltage and one on/off auxiliary device with an outside power source. Each Relay Box receives 2 (one for each bank of relays) dedicated 30-Amp Circuits. Relay enclosure is listed as a complete assembly as meeting requirements of UL Standard 66010-2-201-Standard for Safety Requirements for Electrical Equipment for Measurement, Control and Laboratory Use.

Control System includes multi-level password protection to ensure only authorized individuals can operate devices or alter system programming. User password only allows someone to operate devices individually or groups as defined in system programming. Administrator password allows same function as user password plus allows initial set up and other program modifications. Administrator password also allows user to name connected devices, name relay boxes, define and name groups, define timeout period and change passwords. System includes a hard coded backdoor password that is available from manufacturer to use should other passwords be lost or forgotten. Touch Screen automatically returns to inactive mode if inactive for more than the user defined timeout period.

Relay Boxes can be combined in unlimited quantities to operate as many devices as may be required. Each Relay box can operate up to two touch screens. All communications over ethernet connections using CAT-5e or better cable. Relay boxes must be within 300 feet of next relay box and touch screens must be within 300 feet of relay box to which it is connected

Control System if field programmed and all programming can be done from touch screen or from relay box interface. Programming is soft coded, there are any dip switches to address devices to be set during system set up. System allows for creation of up to 64 unique and namable groups. System will allow groups of up to 8 devices to run simultaneously and includes logic that prevents the creation of groups that might overload input circuits. To do this it will allow no more than two devices connected to any relay bank and a maximum of 4 devices in the same relay box. To have groups of 8 devices, two or more relay boxes are required.

Control system allows for devices or groups to be operated from relay panel if touch screen(s) were to become disabled. Devices are operated following instructions on LED screen and push buttons located on relay box control boards. User defined password(s) are required to operate devices from relay panels

**ELECTRICAL CONTRACTOR SHALL PROVIDE AND INSTALL:** All conduits complete with wire from power source to relay/processor box, from relay/processor box to devices being operated, CAT 5e or better ethernet wire between relay/processor boxes and touch screen, CAT 5e or better cable between each relay/processor box and next relay/processor on network and one standard 5-5/8" x 4-1/2" c 2-1/2" electrical box (RACO Box #942 or equivalent) for each touch screen.

**7. Safety Strap:**

Safety Strap to be DRAPER model no. 503229 Aut-O-Loc safety strap or approved equal

The safety Strap is designed to engage instantly whenever a cable or other lifting mechanism fails. Safety Strap is actuated by speed or inertia in order to stop a load from falling due to a sudden failure such as a cable breakage, cable clamp failure or any increase in speed due to failure or back drive of a winch. Safety strap is rated for a 1000 lbs. (454 Kg) load and incorporates a 2" wide polyester belt with a breaking strength rating of 6000 lbs. (2,721 Kg) to withstand a 1750 lbs. (794 Kg) free-falling load without any failure of components or the belt.

The housing and drum are manufactured from high tensile heat-treated aluminum alloy that naturally resists corrosion without paint. The drum which houses the mechanism is a singular machined piece to retain its structural integrity in the case of a load capture. The locking mechanism always remains in the ready position regardless of whether belt is retracting or extending. The unit operates at a sound level less than 20db to allow the operator to clearly hear the operational sounds of the winch and backstop, so they may stop winch operation if there are abnormal audible warnings to indicate possible mechanical issues.

Safety Strap has a universal mount that can accommodate 3 ½" (89 mm) or 4" tube (102 mm) and can mount to support tubes running parallel and/or perpendicular to the backboard. Unit is self-aligning with the use of two integral guide wheel to the force of a fall positions the unit in the ideal plane to prevent damage to unit and the supporting structure. The locking mechanism will fully engage within 3" (76 mm) of belt travel in the event of failure. The locking mechanism utilizes multiple high strength steel pawls that deploy and evenly load the drum and housing when engaged and do not rely on a singular locking mechanism.

Safety Strap's retractable nylon strap includes a brightly colored warning strip that indicates when maximum payout of the belt has been reached. The strap also features a brightly colored warning indicator that deploys automatically when engaged. Safety strap is permanently locked when a load of more than 1000 lbs. (454 Kg) of force is caught to prevent possible re-use and failure of critical components that are stressed when the unit engages.

## **2.3 VOLLEYBALL EQUIPMENT**

### **A. Competition Volleyball System (2 required):**

Volleyball System shall be Model 500041, EVS-01 Elite Volleyball System or approved equal

The Volleyball System shall consist of one standard with power winch and one standard with an adjustable anchor collar. Post shall meet all FIVB, USVBA, NCAA and NFSHSA requirements for competition. Post shall have infinite height adjustment between 6' and 8'-4" with preset volleyball settings for elementary school use to international competition for both men and women, for use with volleyball, tennis and badminton. The upright shall be 3-1/2" O.D. schedule 80 aluminum tube, with a wall thickness of .300". The upright is provided with a special rubber foot to protect finished floors and to provide precise net height adjustment.

The tensioning winch shall incorporate a heavy-duty, self-locking worm gear mechanism. Winch shall be furnished with a heavy 2" wide high tensile nylon strap with heavy-duty snap hook to eliminate the possibility of hook breaking and guarantee safe connection to net top cable. The power winch is furnished complete with a folding handle for player safety.

Systems shall come complete with Model 500004 Competition Volleyball Net by Draper, Inc or approved equal. Net shall be 32' long x 39-3/8" high. Netting shall be high quality 4" square #36 black nylon cord with vinyl coated polyester hem double stitched around entire perimeter of net. Top hem of net shall be furnished with a 40'6" long by 1/8" diameter 2000 lb. minimum breaking strength galvanized aircraft cable with a nylon coating (3/16" OD) to

protect against fraying. Ends of cable to have loops with heavy swaged type fittings for easy installation.

Hems in end of net shall be furnished with a pocket for use with a 1/2" diameter fiberglass dowel rod. Ends of net shall have six 1" wide polypropylene tension straps with buckles for providing additional tightening of net. Bottom of net shall be furnished with a 1/4" diameter braided white nylon rope equipped with a spring loaded, pressure type rope tensioner.

System also to include Model 500005 Rope Tensioner or approved equal and Model 500016 Combination Antenna and Boundary Marker or approved equal

**B. Floor Plate, Chrome-plated w/swivel cover (6 required)**

Volleyball Cover Plate shall be model 501035 Locking Brass Cover Plate Assembly by Draper, Inc or approved equal.

Cover plate assembly shall be provided for use in either synthetic or wood floors. Cover plate shall consist of cast aluminum recessed mounting flange, 5-3/16" in diameter, and a 5" diameter chrome plated cover. Cover shall be equipped with a swivel type retaining screw to prevent theft. A special key shall be provided for opening cover. Three #10 x 1-1/2" flat head wood screws shall be provided to securely mount cover plate assembly to floor.

**C. Floor Sleeve (One per cover plate and adapter)**

Floor Sleeves to be DRAPER Model 501006 3-1/2" I.D. Floor Sleeve or approved equal

Floor sleeve constructed of steel mechanical tubing with an inside diameter of 3-1/2", welded to an octagonal shaped bottom plate. Sleeve is 8-1/2" long and designed to be installed with the bottom at 9 1/2" below the playing surface and grouted into the floor sleeve adapter.

**D. Judge's Stand with protective pads (1 required)**

Judges stand shall be Model 5013xx (xx=color) by Draper, Inc or approved equal.

Judges stand shall be designed to attach to a collar by means of a removable, self- locking pin. Collar slides over 3-1/2" O.D. volleyball standard and is rigidly positioned to post with allen-head set screws.

Frame shall be constructed of 1-1/2" x 1-1/2", 14-gauge square steel tubing and 1" OD steel tubing, welded together. Legs, steps, platform, and handrails shall all be one solid unit. Judges platform shall consist of 1/2" thick, polyurethane finished Birch plywood, permanently bolted to stand. Handrail/ladder section shall be spaced vertically 16" on center with three (3) ladder steps spaced horizontally of 16" centers. Lower end of ladder tubes shall have 1/2" thick rubber bumper to protect finished floors. Ladder legs shall have 2" O.D. rubber wheels for easy transporting of stand. All metal components of stand shall be finished in black powder coat.

Judges stand shall be supplied complete with safety padding for player protection. Upper section of stand shall have a snapped into place 1/12" polyethylene foam padding. Lower ladder tubes shall have removable, hook and loop attached pads of 1" neoprene foam. All pads shall be wrapped with 14 oz., polyester reinforced,

- a. Color as selected by the Architect from manufacturers full range.

**E. Protective Pads (4 required)**

Volleyball Post Padding to be DRAPER Model 5011XX Official or approved equal  
Padding for 3-1/2" O.D. Volleyball Systems

Pads hinged at corners to fold neatly around posts and tensioning winch to provide maximum player protection. Pads are constructed of 1 1/2" thick polyethylene foam filler covered with polyester reinforced vinyl with three (3) hook and loop fastening straps for quick set-up and take-down, and constructed to accommodate winch, or judges stand when used.

- a. Color: selected from manufacturer's full range.

**F. Transporter (1 required).**

Heavy-Duty Volleyball Post Transporter/Storage Cart to be DRAPER model 501016 or approved equal

Heavy-duty transporter/storage cart capable of storing, and transport one referee stand and six volleyball posts. Transporter/Storage Cart is provided with vinyl covered bottom shelf and pouch to allow for storage of nets, pads antennas and boundary markers. Frame is rectangular steel tubing finished with attractive gloss black powder coat. Transporter/Storage Cart rolls 4" x 1 1/4" non-marking swivel casters.

- a. Color to be selected from manufacturer's full range.

**2.4 SECOND FLOOR SLEEVE ADAPTER**

Floor Sleeve Adapter (6 required) to be installed by GC and its subcontractors under specification 096560 Synthetic Sports Flooring

Floor Sleeve Adapters shall be for a second story raised slab on metal deck Model 501007" by Draper, Inc or approved equal

Second Story Floor sleeve shall be of all welded construction and shall consist of 6" OD – 11 Ga. Tubing, 2" x 3" x 3/16" steel angles and 1/4" HR Flat Steel. Second Story Sleeve Adaptor shall be finished with black powder coat paint. Unit to be bolted to underside of concrete slab so floor sleeves can be installed in a normal manner

**PART 3 – EXECUTION**

**3.1 PREPARATION**

- A. Coordinate support of basketball backstops and roof structure to ensure proper distribution of loads and adequacy of attachment points. Ensure that building structure has been designed for loads of specific gymnasium divider to be provided. Provide additional structural framing members as required in accordance with Section 055000 miscellaneous metals and 051200 Steel Framing.
- B. Coordinate configuration, size, and installation of basketball backstops and gymnasium divider curtains with height, slope, and type of building structure and lighting fixtures, mechanical equipment, ductwork, fire-suppression system, bleachers, athletic equipment, and other potential obstructions.
- C. Field-verify dimensions prior to fabrication.
- D. Coordinate electrical requirements for motorized operating mechanism to ensure proper power source, conduit, wiring, and boxes for keyed switches. Prior to installation, verify type and location of power supply. See "Electrical Contractor Shall Provide and Install"
- E. Coordinate delivery of Volleyball Floor Sleeves and Covers with sub-contractors responsible for installation.
- F. Coordinate delivery of Volleyball Floor Sleeve Adapters with General Contractor and its sub-contractors responsible for installation.
- G. For installations made after wood gymnasium is installed, provide protection and exercise care not to damage flooring.

### **3. 2 INSTALLATION**

- A. Install in accordance with manufacturer's written instructions and shop drawings.
- B. Install even, plumb and level.
- C. Install control switch such that operator has view of complete basketball backstop during lowering and raising.
- D. Adjust limit switches of electric winch to ensure accurate position in both stored and lowered positions.
- E. Erection of assemblies shall be done by the manufacturer or by an erector approved by the manufacturer. Use only thoroughly experienced mechanics for the work.
- F. Set backboards and goals and nets so they are the proper distance from the finished floor as per NCAA rules.
- G. Upon completion of installation, touch up scratched paint and remove blemishes.
- H. Anchoring to In-Place Construction: Use anchors and fasteners where necessary for securing gymnasium equipment to structural support and for properly transferring load to in-place construction.
- I. Connections: Connect automatic operators to building electrical system.

### **3. 3 TESTING AND DEMONSTRATION**

- A. Operate basketball backstops to ensure proper lifting and lowering. Adjust as required to ensure smooth operation and accurate positioning.
- B. Engage a factory-authorized service representative to train Owner's maintenance personnel to adjust, operate and maintain gymnasium equipment.
- C. Demonstrate to Owner's designated representative complete operation and required maintenance.
- D. Adjust movable components of gymnasium equipment to operate safely, smoothly, easily, and quietly, free from binding, warp, distortion, nonalignment, misplacement, disruption, or malfunction, throughout entire operational range. Lubricate hardware and moving parts.

### **3.3 CLEANING**

- A. After completing gymnasium equipment installation, inspect components. Remove spots, dirt, and debris and touch up damaged shop-applied finishes per manufacturer's written instructions.
- B. Replace gymnasium equipment components and finishes that cannot be cleaned and repaired, in a manner approved by Architect, before time of Substantial Completion.

**END OF SECTION**

## SECTION 12 2400 –WINDOW SHADES

### PART 1 GENERAL

#### 1.1 SECTION INCLUDES

- A. Manually operated, dual roller blackout and solar shades interior window shades including mounting and operating hardware.

#### 1.2 REFERENCES

- A. NFPA 70 - National Electrical Code.
- B. NFPA 701-99 - Fire Tests for Flame-Resistant Textiles and Films.
- C. GREENGUARD Environmental Institute Gold.
- D. ANSI/WCMA A100.1-2018

#### 1.3 SUBMITTALS

- A. Product Data: Manufacturer's data sheets on each product specified, including:
  - 1. Preparation instructions and recommendations.
  - 2. Installation and maintenance instructions.
  - 3. Styles, material descriptions, dimensions of individual components, profiles, features, finishes and operating instructions.
  - 4. Storage and handling requirements and recommendations.
  - 5. Mounting details and installation methods.
  - 6. Typical wiring diagrams including integration of motor controllers with building management system, audiovisual and lighting control systems as applicable.
- B. Shop Drawings: Plans, elevations, sections, product details, installation details, operational clearances, wiring diagrams and relationship to adjacent work.
- C. Window Treatment Schedule: For all roller shades. Use same room designations as indicated on the Drawings, field verified window dimensions, quantities, type of shade, controls, fabric, and color, and include opening sizes and key to typical mounting details.
- D. Verification Samples: For each finish product specified, two complete sets of shade components, unassembled, demonstrating compliance with specified requirements. Shade fabric sample and aluminum finish sample as selected, representing actual product, color, and patterns. Mark face of material to indicate interior faces.
- E. Maintenance Data: Methods for maintaining roller shades, precautions regarding cleaning materials and methods, instructions for operating hardware and controls.
- F. Manufacturer's Certificates: Certify products meet or exceed specified requirements.

#### 1.4 QUALITY ASSURANCE

- A. Manufacturer Qualifications: Obtain roller shades through one source from a single manufacturer with a minimum of twenty years experience in manufacturing products comparable to those specified in this section.
- B. NFPA Flame-Test: Passes NFPA 701. Materials tested shall be identical to products proposed for use.

- C. Mock-Up: Provide a mock-up of one manual roller shade assembly specified for evaluation of mounting, appearance and accessories.
  - 1. Locate mock-up in window(s) designated by Architect.
  - 2. Do not proceed with remaining work until mock-up is accepted by Architect.

## 1.5 DELIVERY, STORAGE, AND HANDLING

- A. Do not deliver window shades until building is enclosed and construction within spaces where shades will be installed is substantially complete.
- B. Deliver products in manufacturer's original, unopened, undamaged containers with labels intact.
- C. Label containers and shades according to Window Shade Schedule.
- D. Store products in manufacturer's unopened packaging until ready for installation.

## 1.6 SEQUENCING

- A. Ensure that locating templates and other information required for installation of products of this section are furnished to affected trades in time to prevent interruption of construction progress.
- B. Ensure that products of this section are supplied to affected trades in time to prevent interruption of construction progress.

## 1.7 PROJECT CONDITIONS

- A. Install roller shades after finish work and ambient temperature, humidity and ventilation conditions are maintained at levels recommended for project upon completion.

## 1.8 WARRANTY

- A. Hardware and Shade Fabric: Draper's standard twenty-five year limited warranty.
- B. Motors and Controls: Draper's standard five year limited warranty.

## PART 2 PRODUCTS

### 2.1 MANUFACTURERS

- A. Basis of Design Manufacturer: Draper Inc.
- B. Other manufacturers:
  - 1. Mechoshade
  - 2. Crestron
  - 3. Rollease Acmeda
  - 4. Or approved equal

### 2.2 MANUALLY OPERATED WINDOW SHADES (RS)

- A. Heavy-Duty Manually Operated Window Shades with Independent Control: Manually operated, vertical roll-up, fabric window shade with components necessary for complete installation; Clutch-Operated FlexShade NEXD as manufactured by Draper, Inc. or approved equal
  - 1. Operation: Bead chain and clutch operating mechanism allowing shade to stop when

chain is released. Designed never to need adjustment or lubrication. Provide limit stops to prevent shade from being raised or lowered too far.

- a. Clutch mechanism: Fabricated from POM thermoplastic with welded 0.354 inch (9 mm) primary steel post with rotational bearing, overrunning design, and positive mechanical engagement of drive mechanism to tube. White or Black color as selected by Architect. Center bead chain placement for right or left hand operation and accommodates side channel with no adjustment of chain location.
- b. Bead chain loop: Stainless steel bead chain.
- c. Bead Chain Hold Down: P-Clip.
2. Dual Roller Configuration:
  - a. Mounting:
    - 1) Inside 3-sided extruded aluminum recessed pocket
  - b. Enclosures: Aluminum Pocket – three-sided aluminum extrusion to conceal brackets, roller tube, fabric, and operating system. Provide with endcaps
    - 1) Recessed installation flush with finished ceiling.
    - 2) 4"x6" pocket size minimum
    - 3) Finish color as selected by architect from manufacturer's full range.
3. Shade slat:
  - 1) Closed pocket elliptical slat: 1 inch (25 mm) aluminum elliptical slat inside of a 1-5/8 inch (41 mm) pocket with heat sealed ends.
4. Rollers: Extruded aluminum roller tube of appropriate diameter to support shade fabric with minimal deflection.
  - a. Minimum Roller Tube Diameter: 1.25 inches (32 mm).
  - b. Fabric Connection to Roller Tube: Spline fabric/roller attachment system to allow shade fabric to be removed from roller without having to remove roller from brackets.
  - c. Fabric Length: 6 inches (152 mm) greater than window height minimum.
  - d. Hembar: Machine extruded aluminum, finished to match fascia..

## B. FABRIC

1. Light-Filtering Fabrics
  - a. T Screen with KOOLBLACK Technology 3 percent openness factor by Mermet: PVC coated fiberglass woven mesh. Dark on one side, light on the other. GREENGUARD Gold certified as a low emitting fabric. Manufacturer to supply GREENGUARD Gold certificate. Fire rating: NFPA 701-99 TM #1, California U.S. Title 19. 13.27 oz/sq yd, .029 inches thick. Average 3 percent open.
    - 1) Or approved equal
  - b. Color and pattern: as indicated on the finish schedule or selected from manufacturer's full range
2. Black-out Fabric
  - a. Sparta Twilight with 0 percent openness factor by Mermet or approved equal.
  - b. 100% polyester with acrylic foam coating.
  - c. Provides complete privacy
  - d. Solar reflectance: 73%
  - e. SHGC % improvement: 63%
  - f. GREENGUARD Gold certified as a low emitting fabric. Manufacturer to supply GREENGUARD Gold certificate.
  - g. Fire rating: NFPA 701-99 TM #1,
  - h. Color and pattern: as selected from manufacturers full range.

## **PART 3 EXECUTION**

### **3.1 EXAMINATION**

- A. Do not begin installation until substrates have been properly prepared.
- B. If substrate preparation is the responsibility of another installer, notify Architect of unsatisfactory preparation before proceeding.

### **3.2 PREPARATION**

- A. Coordinate requirements for blocking and structural supports to ensure adequate means for installation of window shades.
- B. Coordinate requirements for power supply conduit, and wiring required for window shade motors and controls.

### **3.3 INSTALLATION**

- A. Install in accordance with manufacturer's instructions.
- B. Install roller shades level, plumb, square, and true. Allow proper clearances for window operation hardware.
- C. Install the following items to conceal roller and operating mechanism. Do not use exposed fasteners.
  - 1. Fascias.

### **3.4 TESTING AND DEMONSTRATION**

- A. Test motorized window shades to verify that controls, limit switches, interface to other building systems, and other operating components are functional. Correct deficiencies.
- B. Demonstrate operation of shades to Owner's designated representatives.

### **3.5 PROTECTION**

- A. Protect installed products until completion of project.
- B. Touch-up, repair or replace damaged products before Substantial Completion.

**END OF SECTION**

## SECTION 127600 - TELESCOPING GYM SEATS

### PART 1 GENERAL

#### 1.01 SUMMARY

- A. Section Includes: Telescoping Gym Seating manually operated systems of multiple-tiered seating rows comprising of seat, deck components, understructure that permits closing without requiring dismantling, into a nested configuration for storing or for moving purposes.
  - 1. Typical applications include the following:
    - a. Wall Attached Telescoping Gym Seats.
- B. Related Sections:
  - 1. Division 9 finishes sections for adequate floor & wall construction for operation of Telescoping Gym Seats. Flooring shall be level and rear wall plumb within 1/8" in 8'-0" Maximum bleacher force on the floor, of a 25'-6" section, shall be a static point load of less than 300 psi.

#### 1.02 REFERENCES

- A. National Fire Protection Association (NFPA)
  - 1. NFPA 102 Standard for Assembly Seating, Tents and Membrane Structures.

- F. Aluminum Association (AA):
  - 1. AA - Aluminum Structures, Construction Manual Series.
- G. American Society for Testing Materials (ASTM):
  - 1. ASTM - Standard Specification for Properties of Materials.
- H. National Forest Products Association (NFoPA):
  - 1. NFoPA - National Design Specification for Wood Construction.
- I. Southern Pine Inspection Bureau (SPIB):
  - 1. SPIB - Standard Grading Rules for Southern Pine.

- J. National Bureau of Standards/Products Standard (NBS/PS):
  - 1. PS1 - Construction and Industrial Plywood.

- K. Americans with Disability Act (ADA)
  - 1. ADA - Standards for Accessible Design.

#### 1.03 MANUFACTURER'S SYSTEM ENGINEERING DESCRIPTION

- A. Structural Performance: Engineer, fabricate and install telescopic gym seating systems to the following structural loads without exceeding allowable design working stresses of materials involved, including anchors and connections. Apply each load to produce maximum stress in each respective component of each gym seat unit.
  - 1. Design Loads: Comply with NFPA 102, 1992 Edition, Chapter 5 for design loads.
- B. Manufacturer's System Design Criteria:
  - 1. Gymnasium seat assembly; Design to support and resist, in addition to it's own weight, the following forces:
    - a. Live load of 120 lbs per linear foot on seats and decking
    - b. Uniformly distributed live load of not less than 100 lbs per sq. ft. of gross horizontal projection.
    - c. Parallel sway load of 24 lbs. per linear foot of row combined with (b.) above
    - d. Perpendicular sway load of 10 lbs. per linear foot of row combined with (b.) above
  - 2. Hand Railings, Posts and Supports: Engineered to withstand the following forces applied separately:
    - a. Concentrated load of 200 lbs. applied at any point and in any direction.
    - b. Uniform load of 50 lbs. per foot applied in any direction.
  - 3. Guard Railings, Post and Supports: Engineered to withstand the following forces applied separately:
    - a. Concentrated load of 200 lbs. applied at any point and in any direction along top rail.
    - b. Uniform load of 50 lbs. per foot applied horizontally at top rail and a simultaneous uniform load of 100 lbs. per foot applied vertically downward.
  - 4. Member Sizes and Connections: Design criteria (current edition) of the following shall be the basis for calculation of member sizes and connections:
    - a. AISC: Manual of Steel Construction
    - b. AISI: Specification for Design of Cold Formed Steel Structural Members
    - c. AA: Specification for Aluminum Structures
    - d. NFOPA: National Design Guide For Wood Construction.

#### 1.04 SUBMITTALS

- A. Section Cross-Reference: Required submittals in accordance with "Conditions of the Contract" and Division 1 General Requirements sections of this "Project Manual."
- B. Project Data: Manufacturer's product data for each system. Include the following:
  - 1. Project list: Ten (10) seating projects of similar size, complexity and in service for at least five (5) years.
  - 2. Deviations: List of deviations from these project specifications, if any.
- C. Shop Drawings: Indicate Telescoping Gym Seat assembly layout. Show seat heights, row spacing and rise, aisle widths and locations, assembly dimensions, anchorage to supporting structure, material types and finishes.
  - 1. Graphics Layout Drawings: Indicate logo pattern of contrasting or matching seat colors
- D. Samples: Seat materials and color finish as selected by Architect from manufacturers offered color finishes.
- E. Manufacturer Qualifications: Certification of manufacturing experience, and copy of a telescopic load test to all loads described in 1.03 above, observed by a qualified independent testing laboratory, and certified by a registered professional structural engineer verifying the integrity of the manufacturer's geometry design and base structural assumptions.
- F. Installer Qualifications: Installer qualifications indicating capability, experience, and official Certification Card issued by manufacturer of telescopic seating.
- G. Engineer Qualifications: Certification by a professional engineer registered in the state of manufacturer that the equipment to be supplied meets or exceeds the design criteria of this specification.
- H. Operating/Maintenance Manuals: Provide to Owner maintenance manuals. Demonstrate operating procedures, recommended maintenance and inspection program.
- I. Warranty: Manufacturers standard warranty documents.

#### 1.05 QUALITY ASSURANCE

- A. Seating Layout: Comply with current NFPA 102 Standard for Assembly seating, Tents, and Membrane Structures, and specifically with Folding and Telescopic Seating, except where additional requirements are indicated or imposed by authorities having jurisdiction.
- B. Welding Standards & Qualification: Comply with AWS D1.1 Structural Welding Code - Steel and AWS D1.3 Structural Welding Code - Sheet Steel.
- D. Manufacturer Qualifications: Manufacturer who has a minimum of 40 years of experience manufacturing telescoping gym seats and can demonstrate continual design enhancement and 25-year minimum product life-cycle support of telescopic seating.

- E. Installer Qualifications: Engage experienced Installer who has specialized in installation of telescoping gym seat types similar to types required for this project and who carries an official Certification Card issued by telescoping gym seat manufacturer.
- F. Engineer Qualifications: Engage licensed professional engineer experienced in providing engineering services of the kind indicated that have resulted in the successful installation of telescoping bleachers similar in material, design, fabrication, and extent to those types indicated for this project.

#### 1.06 DELIVERY, STORAGE AND HANDLING

- A. Deliver telescopic gym seats in manufacturers packaging clearly labeled with manufacturer name and content.
- B. Handle seating equipment in a manner to prevent damage.
- C. Deliver the seating at a scheduled time for installation that will not interfere with other trades operating in the building.

#### 1.07 PROJECT CONDITIONS

- A. Field Measurements: Coordinate actual dimensions of construction affecting telescoping bleachers installation by accurate field measurements before fabrication. Show recorded measurements on final shop drawings. Coordinate field measurements and fabrication schedule with construction progress to avoid delay of Work.

#### 1.08 WARRANTY

- A. Manufacturer's Product Warranty: Submit manufacturer's Special warranty form for telescoping bleachers. This warranty is in addition to, and not a limitation of other rights Owner may have under Contract Documents.
  - 1. Warranty Period: ten years from Date of Acceptance.
  - 2. Beneficiary: Issue warranty in legal name of project Owner.
  - 3. Warranty Acceptance: Owner is sole authority who will determine acceptance of warranty documents.

### PART 2 - PRODUCTS

#### 2.01 MANUFACTURERS

- A. Basis of Design Manufacturer: Hussey Seating Company, U.S.A.
- B. Other Acceptable Manufacturers: The products of the following manufacturer's may be accepted if in compliance with the performance characteristics of this specification.
  - a. Kodiak
  - b. Irwin
  - c. or approved equal

- C. Basis of Design Product: MAXAM Telescopic Gym Seat System by Hussey Seating Company or approved equal
- a. Model: MAXAM26 Series Telescopic Gym Seats, 24" Row Spacing or approved equal
  - b. Aisle Type: foot level aisles, front steps, intermediate aisle steps.
  - c. Seat Type: 10" Courtside (plastic seat module) Seat color finish: manufacturers 15 standard colors. Owner has choice of the following (up to (3) Colors as a standard):
  - d. Operation: manual
  - e. . Product Description/Criteria: (As Shown on Drawings)
    - a. Bank Length: 78'-6"
    - b. Aisle Widths: 4'-6", 3'-0"
    - c. Number of Tiers: 3
    - d. Row Spacing(s): 24"
    - e. Row Rise: 9 5/8"
  - f. Handicap Seating Provisions: Provide first tier modular recoverable Flex-rows per requirements of (ADA) Americans with Disability Act located as indicated. Flex row to be operated without the use of tools. It shall take no longer than fifteen seconds to operate flex-rows.

## 2.02 MATERIALS

- A. Lumber: ANSI/Voluntary Product 20, B & B Southern Pine
- B. Plywood: ANSI/Voluntary Product PS1, APA A-C Exterior Grade.
- C. Structural Steel Shapes, Plates and Bars: ASTM A 36.
- D. Uncoated Steel Strip (Non-Structural Components): ASTM A569, Commercial Quality, Hot-Rolled Strip.
- E. Uncoated Steel Strip (Structural Components): ASTM A570 Grade 33, 40, 45, or 50, Structural Quality, Hot-Rolled Strip.
- F. Uncoated Steel Strip (Structural Components): ASTM A607 Grade 45 or 50, High-Strength, Low Alloy, Hot-Rolled Strip.
- G. Galvanized Steel Strip: ASTM A653 Grade 40, zinc coated by the hot-dip process, structural quality.
- H. Structural Tubing: ASTM A500 Grade B, cold-formed.
- I. Polyethylene Plastic: ASTM D 1248, Type III, Class B; molded, color-pigmented, textured, impact-resistant, structural formulation; in color indicated or, if not otherwise indicated, as selected by Architect from manufacturer's standard colors.

- J. Fasteners: Vibration-proof, of size and material standard with manufacturer.

## 2.03 UNDERSTRUCTURE FABRICATION

### A. Frame System:

1. Wheels: Not less than 5" diameter by 1 1/4" with non-marring soft rubber face to protect wood and synthetic floor surfaces, with molded-in sintered iron oil-impregnated bushings to fit 3/8" [10] diameter axles secured with E-type snap rings.
2. Lower Track: Continuous Positive Interglide System interlocks each adjacent CPI unit using an integral, continuous, anti-drift feature and through-bolted guide at front to prevent separation and misalignment. Frames must have a minimum of 10" of engagement between each other. CPI units at end sections of powered banks and manual sections shall contain a Low Profile Posi-Lock LX to lock each row in open position and allow unlocking automatically. Provide adjustable stops to allow field adjustment of row spacing.
3. Slant Columns: High tensile steel, tubular shape.
5. Sway Bracing: High tensile steel members through-bolted to columns.
6. Deck Stabilizer: High tensile steel member through-bolted to nose and riser at three locations per section. Interlocks with adjacent stabilizer on upper tier using low-friction nylon roller to prevent separation and misalignment. Incorporates multiple stops to allow field adjustment of row spacing.
7. Deck Support: Securely captures front and rear edge of decking at rear edge of nose beam and lower edge of riser beam for entire length of section.

### B. Deck System:

1. Section Lengths: Each bank shall contain sections not to exceed 25'-6" [7772] in length with a minimum of two supporting frames per row, each section.
2. Nose beam and Rear Riser beam: Nose beam shall be continuously roll-formed closed tubular shape of ASTM A653 grade 40. Riser beam shall be continuously roll-formed of ASTM A653 grade 40. Nose and Riser beam shall be designed with no steel edges exposed to spectator after product assembly.
3. Attachment: Through-Bolted fore/aft to deck stabilizers, and frame cantilevers.
4. Decking: 5/8" [16], AC Southern Pine with plugged crossbands, produced in accordance with National Bureau of Standards PS-1-97. Plywood shall be cut and installed with top, center and bottom ply grain-oriented from front of deck to rear of deck (nose beam to riser beam). Adjacent pieces shall be locked together with tongue and groove joint from front to rear of deck. Longest unsupported span: MAXAM 26, 21 1/2" [546]. Deck systems with Polyethylene wear layer will not be accepted.
5. Deck End Overhang: Not to exceed frame support by more than 5'-7" [1702].

## 2.04 SEATING FABRICATION

### B. Plastic Seat System:

1. Seat Modules: 18" long assembled, injection-molded, high density polyethylene modules in mono or two-tone colors providing scuff resistant textured 10" wide seat surface with 1/2" minimum interlock on seat and face. Rear of seat module to be contained allowing a broom to pass down the deck smoothly thus prohibiting the

capture of trash and debris. Seat mounting bracket and support brace shall not be exposed. Seat modules with exposed ribbing will not be accepted. Unit structural tested to 360 lbs occupant load.

2. Comfort Profile: Designed with anatomically contoured seat surface using multiple internal reinforcement ribs that allow form-fit deflection for maximum spectator comfort. Cantilevered to the rear to provide not less than 3" [76] smooth toe space beneath the seat.
3. Seat Support: Each plastic seat module shall be supported by internal steel structural members secured against fore/aft movement by 3/8" grade 5 steel fasteners creating a steel-to-steel connection, tying the seat structure firmly to the steel nose beam.
4. End Caps: Each end of row shall be enclosed with matching end caps. End caps shall be designed flush with end-edge of seat top and provide indent for row letters. Color to match seat top.

#### 2.05 SHOP FINISHES

- A. Understructure: For rust resistance, steel understructure shall be finished on all surfaces with black "Dura-Coat" enamel. Understructure finish shall contain a silicone additive to improve scratch resistance of finish.
- B. Wear Surfaces: Surface subject to normal wear by spectators shall have a finish that does not wear to show different color underneath:
  1. Steel nosing and rear risers shall be pre-galvanized with a minimum spangle of G-60 zinc plating.
  2. Decking shall have use-surfaces to receive both a sealer coat and wear-resistant high gloss clear urethane finish. Decking with Polyethylene finish will not be accepted.
  3. Injection Molded seats to be selected from (15) fifteen standard colors. Colors shall be per manufacturer's standards

#### 2.06 FASTENINGS:

- A. Welds: Performed by welders certified by AWS standards for the process employed.
- B. Structural Connections: Secured by structural bolts with prevailing torque lock nuts, free-spinning nuts in combination with lock washers, or Riv-nuts in combination with lock washers.

#### 2.07 ACCESSORIES

- A. Flex-Row: Provide first row modular recoverable seating units to be utilized by persons in wheelchairs and able-bodied persons. Each Flex-Row unit shall have an unlock handle for easy deployment if wheelchair or team seating access is needed. Unlock handle shall lock the bleacher seats into position when fully opened.

1. Provide a black full-surround steel skirting with no more than ¾" floor clearance for safety and improved aesthetics.
  2. Provide a black injection molded end cap for the nose beam for safety and improved aesthetics.
  3. Provide a mechanical positive lock when the Flex-Row system is in the open and used position.
  4. Flex-Row modular units are designed to achieve multi-use front row seating to accommodate team seating, ADA requirements and facility specific requirements. Flex-Row units are available in modular units from 2 to 7 seats wide as well as full section widths.
  5. Flex-Row units to be operated without the use of tools.
  6. First row is capable of being utilized while the entire bleacher is in the closed position.
  7. Flex-Row is capable of being operated in less than fifteen seconds.
- B. Front Aisle Steps: Provide at each vertical aisle location front aisle step. Front steps shall engage with front row to prevent accidental separation or movement. Steps shall be fitted with four non-skid rubber feet each 1/2" [13] in diameter. Blow molded end caps shall have full radius on all four edges. Quantity and location as indicated.
- C. Non-Slip Tread: Provide at front edge of each aisle location an adhesive-backed abrasive non-slip tread surface.
- D. Foot Level Aisles: Provide deck level full width vertical aisles located as indicated.
- E. Intermediate Aisle Steps: Intermediate aisle steps shall be of boxed fully enclosed type construction. Blow molded end caps shall have full radius on all four edges. Step shall have adhesive-backed abrasive non-slip tread surface. Quantity and location as indicated.
- F. Aisle Handrails: Provide single pedestal mount handrails 34" [864] high with terminating mid rail.
- G. Self Storing End Rails: Provide steel self-storing 42" [1066] high above seat, end rail with tubular supports and intermediate members designed with 4" [102] sphere passage requirements.

### PART 3 - EXECUTION

#### 3.01 EXAMINATION

- A. Verification of Conditions: Verify area to receive telescoping gym seats are free of impediments interfering with installation and condition of installation substrates are acceptable to receive telescoping gym seats in accordance with telescoping gym seats manufacturer's recommendations. Do not commence installation until conditions are satisfactory.

3.02 INSTALLATION

- A. Manufacturer's Recommendations: Comply with telescoping gym seats manufacturer's recommendations for product installation requirements.
- B. General: Manufacturer's Certified Installers to install telescoping gym seats in accordance with manufacturer's installation instructions and final shop drawings. Provide accessories, anchors, fasteners, inserts and other items for installation of telescoping gym seats and for permanent attachment to adjoining construction.

3.03 ADJUSTMENT AND CLEANING

- A. Adjustment: After installation completion, test and adjust each telescoping gym seats assembly to operate in compliance with manufacturer's operations manual.
- B. Cleaning: Clean installed telescoping gym seats on both exposed and semi-exposed surfaces. Touch-up finishes to restore damage or soiled surfaces.

3.04 PROTECTION

- A. General: Provide final protection and maintain conditions, in a manner acceptable to manufacturer and installer to ensure telescoping gym seats are without damage or deterioration at time of substantial completion.

END OF SECTION

## SECTION 131100 - SWIMMING POOLS

### PART 1 - GENERAL

#### 1.1 RELATED DOCUMENTS

- A. The BIDDING REQUIREMENTS, CONTRACT FORMS, AND CONDITIONS OF THE CONTRACT and applicable parts of DIVISION 1 - GENERAL REQUIREMENTS, as listed in the Table of Contents, be included in, and made a part of this Section.

#### 1.2 SUMMARY OF WORK *(for general guidance-not inclusive)*

##### A. Introduction

- 1. Provide labor, materials, equipment, and services necessary to construct the pool(s) and spa. This work must include the structure(s) and installation of pool finishes as well as products listed in Part 2 of Section 131100.

##### B. Work included in this section:

- 1. It is the intent of this section to place the entire responsibility for the construction of the pool(s) (including the construction of the pool shell(s)) under one vested Contractor. Under this section the Contractor will provide but is not necessarily limited to the following:
  - a. Provide equipment and services required for erection and delivery onto the premises the equipment or apparatus provided. Remove equipment from premises when no longer required.
  - b. Grade and replace load bearing or high plasticity index soil, pump and dewater as necessary to keep excavations free from water during construction and provide sub-surface drainage beneath the surge tank as needed or required in the project geotechnical report. Reference Division 31 - Earthwork.
  - c. Provide and maintain proper shoring and bracing for existing utilities, sewers and building foundations where required for related excavations. Reference Division 31 - Earthwork.
  - d. Provide electrical conduit, wiring, junction boxes etc. to low voltage pool equipment within pool filter/chemical rooms per Division 26 - Electrical. (Low voltage is considered less than 110 V.)
  - e. Coordinate for required bonding and grounding of the pool shell, fittings, and equipment.
  - f. Provide necessary piping and valving as shown on the drawings and specified herein.
  - g. Provide individually sized housekeeping pads for each pool pump. Provide housekeeping pads for pool equipment as required in the drawings.
  - h. Provide the main drain hydrostatic relief system and a sight sump as shown on the drawings. Reference Division 31 - Earthwork.
  - i. Construct the cast in place or pneumatically applied concrete pool shells and cast in place surge tanks as described in these specifications and detailed on the drawings, including reinforcement steel, inserts, fittings, fiberglass main drain sumps and embedded items (piping, anchors, spargers, etc.) for the pools and spa. Reference Division 3 - Concrete and Structural. Before commencing the placement of concrete,

verify electrical bonding of the pool and spa embedded items and reinforcing steel. Also, coordinate and arrange required electrical, plumbing and or building inspections. Provide structure drainage around the pool as shown on the drawings. Backfill and compact fill around the pool structure, piping trenches and excavations required by this work. Reference Division 31 - Earthwork.

- j. Provide a ceramic tile finish in the pool and spa. Reference Section 131103 - Swimming Pool Tile - including the tolerance requirements for the concrete substrate.
- k. Provide fully assembled cleaning and maintenance equipment for the pools as specified herein.
- l. Provide for the storage of pool related equipment, materials, and systems. Items are the responsibility of the Contractor until accepted by the owner.
- m. Obtain final acceptance by jurisdictional health department(s).
- n. Start, test, calibrate and adjust mechanical equipment, electrical equipment, recirculation, chemical, and other supplied systems including deck, loose, maintenance, and safety equipment. Instruct the Owner's representative in the systems operation and maintenance as described herein.
- o. Provide the heating system for the pool and spa. Include piping, heaters, heat exchangers, booster pumps, controls, gauges, thermostats, control valves and wiring required to draw water from the recirculation line, heat the water and return it back to the recirculation line and interlock with pool recirculation pumps.

**C. Related work specified in other sections:**

- 1. Section 131103 – Swimming Pool Tile
- 2. Section 131106 – Swimming Pool Timing System
- 3. The following work related to the swimming pools must be completed by other trades.
  - a. Provide, erect, and maintain necessary barricades, signs, lights, and flares for pool construction to protect workers and the public.
  - b. Provide and maintain proper shoring and bracing for existing utilities, sewers and building foundations where required for swimming pool related excavations. Reference Division 31 - Earthwork.
  - c. Provide the under-drain system beneath the pool(s) as needed.
  - d. Provide sub-surface drainage beneath the pump pit and backwash pit. Reference Division 31 - Earthwork.
  - e. Construct pump pit and backwash pit including reinforcement, inserts, wall sleeves, anchors, access hatches, and fittings. Reference Division 3 - Concrete.
  - f. Layout, excavate, remove from the construction site, replace, and grade materials as required beyond the limits of excavation of the pool shell(s) to complete the work described in this section. Reference Division 31 - Earthwork.
  - g. Prior to concrete pours, verify electrical bonding of the pool embedded items. Coordinate and arrange required electrical, plumbing and or building inspections that must be performed on embedded items. Reference Division 26 - Electrical.

- h. Provide sanitary sewer and storm drain connections. Reference Division 22 - Plumbing.
  - i. Provide deck mounted anchors, sockets, and inserts for the pool(s) and coordinate construction locations for each.
  - j. Provide deck finish beyond perimeter tile band. Reference Division 32 - Exterior Improvements.
  - k. Provide rules and regulations signage as required by code. Reference Division 1 - General Requirements.
  - l. Provide chlorine resistant caulking (sealant) and backer rod on pool decks. Reference Division 7 - Thermal and Moisture Protection.
- D. Related work specified in Plumbing section. Reference Division 22 - Plumbing. Work that must be completed by others.
  - 1. Provide trench drains and area drains on pool deck.
  - 2. Provide sanitary sewer piping from the filter room including floor drains, sumps, and sump pump.
  - 3. Provide water service to hose bibbs, flush hydrant boxes and auto-fill bypass to air gap above fill funnel(s). Provide the slow closing solenoid valve(s) in the bypass auto-fill piping.
  - 4. Provide water meter on the fresh water supply line upstream of the manual fill valve and the slow closing solenoid valve.
- E. Related work specified in Mechanical section. Reference Division 23 – HVAC. Work that must be completed by others.
  - 1. Provide air recirculation systems for pool related spaces.
- F. Related work specified in Electrical sections. Reference Division 26 – Electrical. Work that must be completed by others.
  - 1. Provide power to the exhaust fans for the chemical rooms.
  - 2. Provide motor starters, auxiliary contacts, magnetic relays, emergency stops and other electrical control devices necessary for the complete operation of the pool systems. Provide power to Variable Frequency Drive pool pump starters and power from VFD to the pool pump motor.
  - 3. Ground and bond pool structures, fittings, and equipment in accordance with Article 680 of the N.E.C. Test and verify that the system electrical ground is true and solid. Provide certification to this effort.
  - 4. Obtain permits, inspections, and approvals of wiring including grounding and bonding of metal components associated with the pool in accordance with Local, State and National Electrical Codes.
  - 5. Provide power, conduits, electrical boxes, and wiring for the Contractor provided electronic timing and scoreboard system with multi-sport capability for race swimming and diving.
  - 6. Provide power, conduits, electrical boxes, and wiring for the underwater lights and junction boxes.
  - 7. Confirm electrical conduits that penetrate the pool shell are watertight and installed per N.E.C. Article 680.

### 1.3 QUALITY ASSURANCE

- A. The specifications and drawings illustrate and detail three (3) swimming pool systems that are utilized for both competitive and recreational use. Certain technical aspects of the design are common only to pool systems planned for public use. Understanding these aspects, their functions and interaction through experience is vital to completing a successful operating system. It is a mandatory requirement that the Contractor have achieved such experience as a prerequisite for bidding on this project.
  - 1. If the Contractor has not received prior written approval for this project or has not been included in the pre-approved list of Contractors, they must submit a list of projects meeting the aforementioned qualifications, including contact information of the General Contractor must be submitted for review and approval at least 10 days prior to bidding of the project. The Contractor must have completed at least five (5) public-use pools with individual water surface areas in excess of 4500 square feet and a depth of 11'-6" or more within the past 10 years.
  - 2. The Contractor must submit prior to the start of construction the name of the on-site Project Superintendent including their relevant experience. The Contractor's on-site Project Superintendent must have completed at least five (5) public-use pools with individual water surface areas in excess of 4500 square feet and a depth of 11'-6" or more within the past 10 years. A list of projects meeting the aforementioned qualifications, including contact information of the General Contractor as well as Owner must be included with the experience submittal. Project Superintendent on the project cannot change unless written authorization has been provided by the Architect and Owner.
  - 3. The Owner reserves the right to reject a bid if the evidence submitted by, or investigation of, the Contractor fails to satisfy the Owner that the Contractor is properly qualified to carry out the obligation of the contract and to complete the work described or if the Contractor does not have the qualifications stated herein. Subject to compliance with item 2 above on this specification.

### 1.4 REGULATORY AGENCY REQUIREMENTS AND ENGINEERING SERVICES

- A. The system must comply with necessary pre-construction approvals.
- B. Give necessary notices, obtain permits, and pay government fees, and other costs in connection with his work, including the filing of necessary as-built drawings, prepare documents (including any amendments to the approved construction documents) and obtain necessary approvals of governmental departments having jurisdiction over their work. Obtain required certificates of inspection for his work and deliver copies to the Owner and Architect before requesting acceptance and final payment for the work.
- C. Include in the work, without extra cost to the Owner, labor, materials, services, apparatus, or drawings in order to comply with applicable laws, ordinances, rules, and regulations, whether or not shown on drawings and/or specified.

### 1.5 COORDINATION AND CLARIFICATION

- A. Coordinate with other trades' work relating to this section.
- B. Must establish with other trades, having related work in this section, that work necessary to complete the pool(s) as shown on the drawings and in the specifications is included in the base bid and alternates to the Owner.

- C. If in doubt regarding the responsibility for work covered in this section and/or discovery of errors or omissions in the bidding documents, notify the Architect through channels established by the specifications and request a clarification ten (10) days prior to the bid date.

#### 1.6 ALTERNATES

- A. Review the description of the alternates in Division 1 and on the drawings for possible effect upon work in this section. Alternates related to the work in this section are described in this division and on the bid proposal form.
- B. Pool Alternates
  - 1. Alternate #2: Base bid includes spa below deck piping stubbed at the mechanical room and pool deck floor. Add alternate includes construction of spa tank and spa mechanical room equipment.

#### 1.7 CONTRACTOR'S ALTERNATE PROPOSAL

- A. Submit bid to the owner based on materials, equipment and methods as specified in this Section. No substitution of material will be allowed.
- B. It is the intent of the contract documents to encourage competition. The base proposal must include the construction methods and equipment as specified and detailed. Proposed system substitutions must have prior written approval by the Architect.
- C. If there is a deviation from the basis of design equipment, confirm that engineering criteria are appropriate for the substituted equipment.
- D. Substitutions of specified construction methods and equipment must include a complete submittal as required by these specifications and drawings of appropriate scale incorporating required changes. Provide a list of at least ten (10) satisfactory installations comparable to this project that have been manufactured and installed under the manufacturer's current legal name. Submit a list of such projects with the name, address and current telephone number of the Owner's Operator and Architect of Record to the Architect on the bid date.
- E. Changes or modifications to the Contract Documents that are not authorized by the architect are the sole responsibility of the Contractor.

#### 1.8 SUBMITTALS

- A. Submittals must be made in accordance with the requirements of Division 1 - General Requirements and in strict compliance with the following procedures and guidelines.
- B. One (1) set of shop drawings and engineering data must be tabbed, indexed, and referenced to the specifications, compiled into an electronic submittal, and submitted in two stages. The first stage must include items for the pool shell(s), reference swimming pool structural specifications. The second stage must be for remaining items. Each section of items must be prefaced by a cover sheet listing the items submitted within the section. Electronic submittals must be organized, numbered, and submitted in the same format and order as the project specifications. Only complete sets will be reviewed.
  - 1. Engineering data covering systems, equipment, structures, and fabricated materials, which will become a permanent part of the work under this contract, must be submitted for review. This data must include drawings and descriptive information in sufficient detail and scale to show the kind, size, arrangement, and operation of component materials and devices; the external connections, anchorage and supports required; performance characteristics;

fabrication and dimensions needed for installation and correlation with other materials and equipment. A certification, in writing, must be provided indicating that equipment will fit in the space allotted and as shown on the drawings.

2. Submittals regardless of origin must be stamped with the approval of the Contractor and identified with the name and number of this contract, Contractor's name, and references to applicable specification paragraphs and contract drawings. Each submittal must indicate the intended use of the item in the work. When catalog pages are submitted, applicable items must be clearly identified. The current revision, issue number, and date must be indicated on drawings and other descriptive data.
3. The submittals will not be accepted from anyone but the Contractor. Submittals must be consecutively numbered in direct sequence of submittal and without division by subcontracts or trades.
4. The Contractor's stamp of approval is a representation that the Contractor accepts full responsibility for determining and verifying quantities, dimensions, field construction criteria, materials, catalog numbers and similar data, and that he has reviewed or coordinated each submittal with the requirements of the work and the contract documents.
5. Each submittal must include a statement prepared by the originator of the drawings and data, certifying compliance with the contract documents except for deviations, which are specifically identified.
6. Deviations from the contract documents must be identified on each submittal and must be tabulated in the Contractor's letter of transmittal. Such submittals must, as pertinent to the deviation, indicate essential details of changes by the Contractor (including modifications to other facilities that may be a result of the deviation) and required piping and wiring diagrams.
7. The Contractor must accept full responsibility for the completeness of each submission, and, in the case of a resubmission, must verify that exceptions previously noted have been considered.
8. The need for more than one resubmission, or a delay in obtaining review of submittals, will not entitle the Contractor to an extension of the contract time unless the delay of the work is directly caused by a change in the work authorized by a change order.
9. Review of drawings and data submitted by Contractor will cover only general conformity to the drawings and specifications, external connections and dimensions that affect the layout. Review does not indicate a thorough review of dimensions, quantities, and details of the material, equipment, device, or item shown. Review of submittals does not relieve Contractor from responsibility for errors, omissions, or deviations, or responsibility for compliance with the contract documents.
10. When the drawings and data are returned marked REJECTED, REVISE AND RESUBMIT or SUBMIT SPECIFIED ITEM, the corrections must be made as noted thereon and as instructed and six corrected copies (or one copy and one corrected reproducible copy) resubmitted.
11. Resubmittals must bear the number of the first submittal followed by a letter (A, B, etc.) to indicate the sequence of the resubmittal. Resubmittals must be indexed, tabbed, referenced to the specifications, and bound in a three-ring binder and submitted at one time.
12. When corrected copies are resubmitted, the Contractor must, in writing, direct specific attention to revisions and must list separately revisions made other than those called for on previous submissions.

13. When the drawings and data are returned marked NO EXCEPTIONS TAKEN or MAKE CORRECTIONS NOTED, no additional copies are to be provided unless specifically requested to do so for record.
- C. Permits, Receipts and Test Reports
1. Provide the Architect with copies of permits and receipts for fee payments.
  2. Submit a sample format for each test report intended for use. Submit test reports required herein only on approved forms.
- D. Include complete product data indexed, tabbed, and referenced to specifications with 8 ½" x 11" cover sheet covering:
1. Paragraph 2.1 - Overflow System
  2. Paragraph 2.2 - Pumping Equipment
  3. Paragraph 2.3 - Filtration Equipment
  4. Paragraph 2.4 - Recirculation Fittings
  5. Paragraph 2.5 - Piping Systems
  6. Paragraph 2.6 - Chemical Treatment Systems
  7. Paragraph 2.7 - Chemistry Monitoring and Control Systems
  8. Paragraph 2.8 - Flow Meters
  9. Paragraph 2.9 - Water Level Controllers
  10. Paragraph 2.10 - Deck Equipment
  11. Paragraph 2.11 - Loose Equipment
  12. Paragraph 2.12 - Maintenance Equipment
  13. Paragraph 2.13 - Safety Equipment
  14. Paragraph 2.14 - Thermometers
  15. Paragraph 2.15 - Swimming Pool Finishes
  16. Paragraph 2.16 - Waterproofing
  17. Paragraph 2.17 - Sealants
  18. Paragraph 2.18 - Underwater Lights
  19. Paragraph 2.19 - Dive Harness System
  20. Paragraph 2.20 - Pool Heaters
- E. Include engineering/construction drawings for the pool structure.
1. Reference Division 3 - Concrete.
- F. Include engineering construction drawings for pool piping.
- G. Include separate submittal for all color selections required to be made by the Owner/Architect. Physical samples and/or mock ups must be provided as requested and submitted for review. The following items must be included:
1. Gutter Grating

2. Pan Filled Skimmer Lids
3. Sight Sump Frame and Cover
4. Starting Platforms
5. Lifeguard Chairs
6. Pool Lift
7. Competition Floating Lane Ropes
8. Backstroke Flags
9. Lane Line Storage Reels
10. Movable Stanchions and Swag Lines
11. Swimming Pool Tile - Reference Section 131103
12. Sealants

H. Reference Section 131103 - Swimming Pool Tile

I. Reference Section 131106 - Swimming Pool Timing System

#### 1.9 TESTING REPORTS

A. Provide all testing reports as described in the specifications. Testing report(s) and any additional documentation of the test(s) must be submitted to the Architect within seven (7) days of the commencement of the test(s) unless otherwise noted. The following testing report(s) must be submitted for review/record:

1. The pool piping must be hydrostatically pressure tested prior to backfilling. Hydrostatic pressure tests must be performed by the Contractor and witnessed by the Owner, or a representative designated by the Owner.
2. The pool(s), gutter(s), surge/balance tanks(s) and spa(s) must be tested for water tightness prior to the application of any finishes. The water tightness test must be performed by the Contractor and witnessed by the Owner, or a representative designated by the Owner.
3. The pool tile finish must be visually inspected and sound tested prior to filling the pool. The visual inspection and sound testing of the tile finish must be performed by the Contractor and witnessed by the Owner, or a representative designated by the Owner. Refer to specification 131103.
4. Concrete test panels/cylinders must be tested for compressive strength. The Contractor to produce test panels/cylinders to be tested by a third-party testing agency provided by the Owner. Refer to Division 3 – Concrete

#### 1.10 OPERATION AND MAINTENANCE MANUALS AND CLOSE-OUT SUBMITTALS

A. Detailed operation and maintenance information must be supplied for equipment requiring maintenance or other attention. The equipment supplier and/or the Contractor must prepare an operation and maintenance manual for equipment. Parts lists and operating, and maintenance instructions must be provided.

B. Each operation and maintenance manual must include the following:

1. Equipment function and calibration, normal operating characteristics, and limiting conditions.

2. Assembly, installation, alignment, adjustment and checking instructions.
3. Operating instructions for startup, routine and normal operation, regulation, and control, shut down and emergency conditions.
4. One (1) copy of instructional videos.
5. Operating cycles must be specifically described in outline format and in referenced detail. A wall-mounted color-coded piping flow diagram must be provided in the pool equipment room. The diagram must be engraved on laminated plastic with color-coded piping to match the color of coding on piping, and including valves identified with number on tags. The minimum size is 11-inch x 17 inch.
6. Include manufacturer recommended maintenance schedule, parts lists, piping diagram (to agree with wall mounted diagram) and trouble-shooting information for pool mechanical equipment.
7. Using reference to keyed valves and wall diagram, include specific written instructions for procedures that must be followed for the following:
  - a. Emptying and refilling the pool(s) including de-watering during the period that the pool(s) will be empty.
  - b. Water level control adjustment and chemical control operation.
  - c. Normal surge tank operation and balancing.
  - d. Filter operation and backwashing; and
  - e. Super chlorination.
8. Lubrication and maintenance instructions.
9. Guide to "troubleshooting."
10. Parts list and predicted life of parts subject to wear.
11. Outline, cross section, and assembly drawings; engineering data and wiring diagrams.
12. Test data and performance curves, where applicable.
13. Specific written instructions for procedure for emptying and refilling the pool(s) including de-watering during the period that the pool will be empty. Provide a yellow warning sign 8-1/2 in. x 11 in., that must be mounted in the filter room, that reads:

**WARNING**  
Prior to emptying Pool  
Consult O & M Manuals for Procedures

Add another sign that reads:

Keep Caps, Plugs and Tops Tight Fitting to Prevent Escape of Fumes.

14. One set of applicable submittals must be included in each manual.
- C. The operation and maintenance manuals must be in addition to instructions or parts lists packed with or attached to the equipment when delivered, or which may be required by the Contractor.
- D. Manuals and other data must be printed on heavy, first quality paper, 8-1/2 x 11-inch size with standard 3-hole punching and inserted in plastic covers. Drawings and diagrams must be reduced to

8-1/2 x 11 inches or 11 x 17 inches. Where reduction is not practical, larger drawings must be folded separately and placed in envelopes that are bound into the manuals. Each envelope must bear suitable identification on the outside.

- E. Six (6) bound volumes of each manual must be submitted. Parts lists and information must be assembled in substantial manuals and permanent, three-ring or three-post binders. Material must be assembled and bound in the same order as specified, and each volume must have a table of contents and suitable index tabs.
- F. Material must be marked with project identification. Non-applicable information must be marked out or deleted.
- G. Shipment of equipment will not be considered complete until the required manuals and data have been received.
- H. The Contractor must provide, assemble, and inventory all deck, loose, safety, and maintenance equipment including any loose mechanical equipment prior to the Owner taking possession of the pool(s). The Contractor must provide a checklist that has been signed by the Owner verifying receipt of all items listed in Part 2 - Products.

#### **1.11 PRODUCT DELIVERY, STORAGE, AND HANDLING**

- A. Deliver material in manufacturer's original, unopened containers and crates with labels intact and legible.
- B. Deliver materials in sufficient time and quantity to allow continuity of work and compliance with approved construction schedule.
- C. Handle materials in a manner to prevent damage.
- D. Store materials on clean raised platforms with weather protective coverings. Provide continuous protection of materials against damage or deterioration.
- E. Remove damaged materials from site.

#### **1.12 WARRANTIES**

- A. The Contractor warrants to the Owner and Architect that materials and equipment provided under the contract will be of good quality and new unless otherwise required or permitted by the contract documents, that the work will be free from defects not inherent in the quality required or permitted, and that the work will conform with the requirements of the contract documents. Work not conforming to these requirements, including substitutions not properly approved and authorized will be considered defective. The Contractor's warranty will exclude remedies for damage or defect caused by abuse, improper or insufficient maintenance, improper operations, modifications not executed by the Contractor or improper wear and tear under normal use. If required by the Architect, provide satisfactory evidence as to the kind and quality of materials and equipment.
- B. The Contractor must agree to repair or replace defective or non-complying work at no cost to the Owner upon written notification from the Owner within the warranty period. Pro-rated warranties are not acceptable.
- C. Warranties must be for a period of one year from the date of substantial completion or the owner begins using the pool unless otherwise specified. Submit warranties covering, but not limited to the following:
  - 1. Defects in material or workmanship of the pool and surge/balance tank structure(s) causing a loss of water for a period of three (3) years.

2. Defects in material, manufacture and installation of the filtration, backwash, chlorination, pH adjustments and cleaning systems, including controls for a period of one (1) year.
3. Defects in material, manufacture or installation of the recirculating overflow system and interior coating of the gutter/trench for a period of one (1) year.
4. Manufacturer's minimum ten (10) year warranty against defective materials, components, and workmanship in the pool gutter grating system.
5. Defects in material, workmanship, and installation of the pool pumps for a period of one (1) year.
6. Manufacturer's minimum eighteen (18) month warranty against defective materials, components, and workmanship in the variable frequency drive system.
7. Manufacturer's minimum fifteen (15) year warranty on the filter tank against defective materials or workmanship of the tank and components. (Additional warranty time may be purchased from the manufacturer.) Prorated warranties are not acceptable.
8. Defects in material, workmanship, and installation of the pool piping system and recirculation fittings for a period of three (3) years.
9. Manufacturer's minimum one (1) year warranty against defective materials, components, and workmanship in the sanitizing feed system.
10. Manufacturer's minimum one (1) year warranty against defective materials, components, and workmanship in the pH buffer feed system.
11. Manufacturer's minimum one (1) year warranty against defective materials, components, and workmanship in the ultraviolet sanitizing system (excluding the UV lamps, quartz, and seals). Medium pressure ultraviolet bulbs must be warranted for a period of 8,000 hours. Intermittently operated lamps ( $\geq 1$  on/off cycle per day) will be replaced free of charge should failure occur prior to 4,000 hours and replacement will be prorated between 4,000 and 8,000 hours.
12. Manufacturer's minimum three (3) year warranty against defective materials, components, and workmanship in the Clear-Flow Electronic Flocculation System (EFS).
13. Manufacturer's minimum five (5) year warranty against defective materials, components, and workmanship in the pool chemical controller. ORP, pH, flow and temperature sensors must be covered by a standard two (2) year warranty. Other sensors and flow cell components must be covered by a standard one (1) year warranty.
14. Manufacturer's minimum one (1) year warranty against defective materials, components, and workmanship in the pool water level control system.
15. Defects in material, workmanship, and installation of loose, deck, maintenance, and safety equipment including deck anchors for a minimum period of one (1) year.
16. Defects in material, workmanship, and installation of the tile finish against cracking and delamination for a period of five (5) years.
17. Manufacturer's minimum fifteen (15) year systems warranty against defective materials, components and workmanship in the pool tile setting materials.
18. Defects in material, workmanship and installation of the pool, surge/balance tank, gutter, and backwash pit waterproofing finish against delamination for a period of one (1) year.

19. Manufacturer's minimum two (2) year warranty against defective materials, components, and workmanship in the pool underwater lights.
20. Manufacturer's minimum ten (10) year warranty on the complete heat exchanger assembly. The titanium shell and tube heat exchanger must have a minimum five (5) year warranty. The cupronickel shell and tube heat exchanger must have a three (3) year warranty. Parts must be covered by a standard one (1) year warranty.

#### **1.13 SYSTEM TRAINING**

- A. A qualified representative of the Contractor performing work under this section must put the equipment into operation and instruct the Owner's representatives in the operation of this equipment to the Owner's satisfaction immediately after project's substantial completion.
- B. The Contractor's training representative must have completed the equipment/system's manufacturer's training requirements and be certified, by the manufacturer, to provide and teach system training.
- C. The representative from the Contractor must be either a CPO (Certified Pool Operator) or have an AFO (Aquatic Facility Operator) certification.
- D. Training periods to consist of 32 hours of on-site training and scheduled as follows:
  1. 16 hours of initial training on the complete swimming pool system. The 16 hours of initial training must be comprised of at least 4 hours of training on water chemistry analysis and adjustment. The water chemistry training will include in-depth review of the use of the Langlier index and its computation.
  2. The initial 16 hours of training must include information on the care, operation, adjustment, and maintenance of items provided by the Contractor under the "Part 2 – Products" section of this specification.
  3. 16 hours of training after the Owner's staff has had experience operating the system. This time may be requested after the pool has been placed in operation within a period of one (1) year from the time the pool was accepted by the Owner. The additional training must contain at least 2 hours of review of water chemistry.
  4. Provide a project specific video recording instruction manual in addition to the training sessions. The video instructions must be project specific and must include information on the care, operation, adjustment, and maintenance of items provided by the Contractor under the "Part 2 – Products" section of this specification. This video recording must be done separate from the Owner training.
  5. The Contractor must include one (1) copy of video recording instructions in each Operations and Maintenance Manual.

#### **1.14 POOL FILL WATER QUALITY**

- A. The Owner is to bear the cost of the water required for two (2) complete fillings of the pool (the initial water tightness test and the final filling). Removal of iron or copper (if in excess of .3 ppm) will be required for the final fill to avoid staining of the pool finish. Subsequent fillings or partial fillings (more than 25%) of the pool is by the Contractor, at its own expense.
- B. Provide the necessary plant equipment so that the temperature of fill water will be within plus or minus 10 degrees of the ambient air and/or the pool structure at the time of filling. Extreme caution is urged if the temperature variance is greater than 10-degree F.

- C. Provide the necessary chemicals and to adjust and balance the water chemistry in the pools to the following levels:

pH	7.4 - 7.6
Calcium Hardness	200 - 400 PPM
Total Alkalinity (Calcium Hypochlorite)	60 - 80 PPM
Langelier saturation index	-0.3 - +0.3
Total Dissolved Solids (TDS)	not to exceed 1,500 PPM

#### 1.15 START-UP CHEMICALS

- A. The Contractor must maintain the chemical balance of the pool water (including the cost of chemicals required) until the pool and mechanical system(s) are fully operational and accepted by the Architect and the Owner.
- B. Provide the Owner with sufficient quantities of the necessary chemicals to maintain the pool operation after the owner begins using the pool.
1. The Contractor is required to provide chemical quantities as shown on the drawings for the following chemicals:
    - a. Calcium Hypochlorite
    - b. CO<sub>2</sub>
    - c. Sodium Bisulfate
  2. The Contractor is required to provide chemical quantities as shown on the drawings for the following balancing chemicals:
    - a. Sodium Bicarbonate
    - b. Calcium Carbonate
    - c. Sodium Thiosulfate
- C. Chemicals must be provided to the Owner must include those required by the chemical feed systems provided.

#### 1.16 RECORD DRAWINGS

- A. Provide a complete set of record drawings of the entire pool system(s) including sub-systems. Record drawings must be prepared in accordance with the requirements and must be a complete, stand-alone set. The Contractor is permitted to obtain original documents and copy them for this purpose only. Provide a digital record set (latest version of AutoCAD or compatible software).

### PART 2 - PRODUCTS

#### 2.1 OVERFLOW SYSTEM

- A. It is the intent of the specifications that the perimeter overflow system and surface cleaning be maintained under conditions of normal operation and that no water be discharged to waste except when cleaning the filters or emptying the pool.
- B. Concrete Perimeter Overflow System

1. A perimeter overflow system consisting of a continuous concrete and tile overflow channel must be provided as detailed and shown on the drawings for the pool. The bottom of the trough must be level throughout.
2. The complete gutter trough interior must be coated with epoxy paint. Refer to section 2.16. Areas not meeting the manufacturer's recommended thickness will be recoated without additional cost to the Owner.
3. Grating corner installations must be prefabricated thermo-welded corner sections provided by the grating manufacturer and installed with adequate support per manufacturer recommendations. Butting grating sections together at corners is not permitted.
4. The grating must be formed of molded PVC sections. Modular, interlocking pieces of UV stabilized PVC grating. The top surface must have a raised, diamond ridge design to create good friction, wet or dry and be 11/16" wide with an outside depth of 1.0" and a middle depth of 1-3/8" for extra strength. The space between pieces must not exceed 3/8". Each piece of grate must have a slotted hole at the ends for insertion of a stainless-steel fastener clip and anchor screws every 5 feet and must be easily removable. Grating surface bars must run parallel to the pool wall and with the gap, provide at least 35% open space per foot for unrestricted water flow. The color of the grate must be selected by the Owner/Architect. The width of the grating must allow the insertion of the touchpad holding brackets between the grating and the gutter lip.
  - a. Basis of Design: Grating must be manufactured by Lawson Aquatics supplied by Neptune-Benson, Daldorado, or approved equal.
5. Materials, anchors, and fasteners must be 316L stainless-steel.

**C. Skimmer Overflow System**

1. Provide skimming system consisting of units as shown on the drawings. Skimmers must be located to ensure maximum skimming action.
  - a. Basis of Design: Spa skimmers must be Admiral SC-20 by Pentair Products or approved equal.
2. Skimmers must receive pan-filled, removable access lids that receive deck finish to match the surrounding deck. Lids must be manufactured by Pour-A-Lid, or equal. Refer to the Owner/Architect for color selection.
3. The piping and other pertinent components of skimming equipment must be designed for a total capacity of the required filter flow of the recirculation system, and no skimmer can be designed for a flow-through rate of less than 30 gallons per minute or 5 gallons per minute per lineal inch of weir.
4. The skimmer weirs must be automatically adjustable and must operate freely with continuous action to variations in water level over a range of at least 4 inches. The weirs must operate at flow variations. The weir must be of such buoyancy and design so as to develop an effective velocity.
5. An easily removable and cleanable basket or screen through which overflow water passes must be provided to trap large solids.
6. The skimmer equalizer fitting at the base must be capped.
7. The skimmer must be of sturdy, corrosion-resistant materials.

8. Each skimmer must be equipped with a variable orifice trimming device to allow balancing of flow.
9. Skimmers must be NSF approved.
10. Provide a solid aluminum or fiberglass lintel plate spanning the top of each skimmer throat opening in the pool wall to support the pool coping. Lintel to have dimensions of 7'-3/4" by 2'-0" and be 3/8" thick. Aluminum lintel plates require bonding in accordance with NEC Article 680. Fiberglass lintel plates must be of rigid design with factory finished or field sealed edges to prevent exposed jagged surfaces and moisture intrusion into the fiberglass material.

## 2.2 PUMPING EQUIPMENT

- A. Proposed substitutions must include a mechanical drawing incorporating required changes in layout, piping, and valves. The cost of such changes must be included in the price of the substitute. Confirm correct pump motor voltage prior to ordering pump. Motors must be capable of continuously running without overloading at points on the characteristic curve of the pump without overload or damage. Confirm by 1/4-inch scale shop drawing that the pumps provided will fit within the available space and can be reasonably removed for servicing.
  1. Pumps must be certified by the National Sanitation Foundation (NSF) and bear the certification mark.
  2. If the pump is powered with a VFD, the impeller must be trimmed to a maximum diameter based on the most limiting condition of either the diameter of the maximum non-overloading rated motor horsepower at the design point or a diameter resulting in 10% greater head than the specified head.
  3. The pump motor must be totally enclosed, fan cooled (TEFC) and premium efficiency of the horsepower and speed specified. A pump requiring larger horsepower is not acceptable unless submitted as a substitute and approved by the engineer, in which case necessary electrical revisions must be coordinated and provided.
  4. Provide an emergency shutoff switch for the pool(s) and spa pump(s). One (1) switch must be provided for each complete pool and spa system, including all recirculation and feature pump(s). The system must include a clearly labeled emergency shutoff switch for pool and spa pump(s) per Article 680-38 of the NEC. Emergency switch must include tamper-resistant/weather-resistant cover and audible alarm. Architect to approve the location of the switch(es) no less than 5'-0" from the pool or spa wall and within sight of pool or spa users. The wiring must be done per Division 16/26 and coordinated with the pool wiring.
    - a. Basis of Design: Pentair ComPool LX820, STI SS2202PO-EN with cover, or approved equal.
  5. Provide a 15-minute spa timer for each hydrotherapy pump. Architect to approve the location of the timer(s). The wiring must be done per Division 16/26 and coordinated with the pool wiring. Basis of design: Intermatic DPST #FD415M or equal.
  6. The entire pumping unit must be mounted on a base using cap screws to preserve the back-pull-out feature of the pump. Pumps must not be secured with floor studs or "all-thread." The pump base must be coated with the same epoxy coating as the pump. An OSHA approved guard must protect coupling and exposed rotating components of the pump and motor where required.
  7. Recirculation and Feature Pumps – Metallic Components

- a. Provide horizontally mounted centrifugal pumps as shown on the drawings and described in these specifications. Each pump must be of a straight centrifugal, end suction, bronze fitted, close coupled type.
  - b. Pumps manufactured by Paco, Griswold, Aurora or Herborner are considered equal, provided they meet the requirements.
  - c. Pump casing must be cast iron fitted with a replaceable bronze case wear ring. Mechanical seals must be provided specific for a chlorinated water application. Pump impeller must be enclosed type of cast bronze or 316L stainless-steel, statically, and dynamically balanced, and trimmed for the specified design conditions. If a VFD is used in conjunction with a pump, the impeller must be trimmed to the maximum diameter based on the rated motor horsepower. Bronze materials must be suitable for use in a chlorinated environment. Suction and discharge flanges must be provided and tapped for gauge connections. Provide steel or cast-iron bases with equivalent epoxy coating for corrosion protection.
  - d. Provide a fusion-bonded epoxy coating on wetted parts to protect pump internals from corrosion, including pump volute interior and complete pump impeller (bronze impellers only). Sandblast to bare, white metal. The thickness must be 8 to 12 mils (heavy film). Verify thickness by non-destructive testing. Coat parts as recommended by the manufacturer, including preheating parts to 400 degrees and electrostatic deposition or fluidized bed technique. Provide primers if required to resist chlorinated water <10 ppm. The coating must be Scotchkote 134 manufactured by Fusecote or approved equal.
  - e. Provide a hair and lint strainer, for each pump, of fiberglass or epoxy coated stainless-steel construction with a clear observation top in the sizes (or pipe sizes) indicated on the drawings. Verify and coordinate pipe and pump suction sizes in the field. Provide a stainless-steel basket with at least 4 times the free open area as the inlet pipe, and one spare basket with each strainer.
    - 1) Basis of Design: As manufactured by MerMade Filter Inc., or Neptune/Benson Inc., or Fluidtrol Process Technologies, Inc.
  - f. Recirculation pumps must be provided by the same manufacturer. Confirm voltages prior to ordering pumps.
8. Recirculation and Feature Pumps – Composite Components
- a. Provide horizontally mounted, self-priming, centrifugal pumps as shown on the drawings and described in these specifications. The pumps must be of a straight centrifugal, end suction, non-corrosive PPO Resin material construction, closed coupled type, with integral hair and lint strainer.
  - b. The pump body, seal plate, and attached hair and lint strainer must be constructed of non-corrosive PPO Resin materials, and close-coupled to an electric motor by means of an adaptor of the same material.
  - c. The pump must have a PPO Resin diffuser to aid in priming and it must contain a replaceable bronze wear ring for the impeller. The impeller must be of the closed type and PPO Resin, non-overloading at points on the performance curve. The mechanical shaft seal must be constructed of ceramic and carbon seal faces, with stainless-steel, brass, and Buna N materials in the spring bellows portion. The impeller must be secured to the motor shaft by means of a stainless-steel key and locking screw into the end of

the motor shaft. The pump must be capable of operating at up to 50 psi, 104° F continuous water temperature.

- d. The electric motor coupled to the pump must be of the NEMA Rated series JM construction with stainless-steel shaft inside a removable shaft sleeve of 300 series stainless-steel. Motors must be continuous duty rated at 40° C (or realign better) ambient and be suitable for outdoor installation.
  - e. Pumps must meet Department of Energy (DOE) minimum efficiency standards for dedicated-purpose pool pump (DPPP) motors.
  - f. The pump strainer must consist of a PPO Resin body, Polycarbonate Resin Thermoplastic cover with O-ring seal, and Cam and Ramp Lid, and a strainer basket of mineral reinforced polypropylene material.
  - g. The strainer basket must be securely positioned below the suction inlet of the trap, with access for inspection and cleaning through a removable trap body lid. The trap body lid must be secured by means of a locking ring. Provide one spare basket for each strainer.
9. Other System Pumps and Motors
- a. Provide one (1) portable utility pump(s). The pump(s) must be a 1 HP, 3600 RPM, 115/230-volt, 1 phase, 60 cycle unit capable of 60 GPM at 25 ft. TDH.
    - 1) Basis of Design: Pump must be a Godwin GSP10 or approved equal.

B. Variable Frequency Drive Starters

- 1. Provide variable frequency drive starters (VFD) for the pool pumps. VFDs must be Eco-Flow-C by H2Flow Controls, AcuDrive by Pentair, GreenDrive by Neptune Benson, or approved equal.
  - a. Basis of Design: AcuDrive by Pentair
- 2. Ensure that equipment is provided with the correct operating voltage and that interconnected electrical and electronic equipment must adequately communicate and operate the specified pumping equipment. Equipment installations must meet or exceed the requirements of the National Electric Code and other local and state regulations.
- 3. Variable Frequency Drive Capabilities
  - a. Provide complete VFD as specified herein or in the equipment schedule for loads designated that must be variable speed or variable flow.
  - b. The VFD must convert incoming fixed frequency three-phase AC power into a variable frequency and voltage for controlling the speed of three-phase AC induction motors. The VFD must be a six-pulse input design, and the input voltage rectifier must employ a full wave diode bridge. The output waveform must closely approximate a sine wave. The VFD must be of a PWM output design utilizing current IGBT inverter technology and voltage vector control of the output PWM waveform.
  - c. Indoor Applications: VFD must be fully enclosed in a corrosion resistant NEMA 12/IP54 UL listed enclosure.
  - d. VFD and required options will be incorporated by the VFD manufacturer into an integrated package, with a single input feed and main disconnect.

- e. VFD must have a fused disconnect and battery back-up, for the purpose of maintaining programming in the event of a power outage.
  - f. The VFD must produce an output waveform capable of handling maximum motor cable distances of up to 1,000 ft. (unshielded) without tripping or derating.
  - g. The VFD must provide rated RMS fundamental output voltage. The VFD must utilize VVC<sup>PLUS</sup>, an output voltage-vector switching algorithm, or equivalent, in both variable and constant torque modes. This allows the motor to operate at a lower temperature rise, extending its thermal life.
  - h. The VFD selected must be able to source the motor's full load nameplate amperage (fundamental RMS) on a continuous basis and be capable of running the motor at its nameplate RPM, voltage, current, and slip without having to utilize the service factor of the motor.
  - i. The VFD must offer a programmable motor parameter that allows the total number of poles of a motor that must be programmed to optimize motor performance.
  - j. VFD must automatically boost the power factor at lower speeds.
  - k. The VFD will be capable of running either variable or constant torque loads. In either CT or VT mode, the VFD must be able to provide its full rated output current continuously and 110% of rated current for 60 seconds.
  - l. An Automatic Energy Optimization (AEO) selection feature must be provided in the VFD to minimize energy consumption in variable torque applications.
  - m. VFD must offer a motor spinning test that will run the motor at 5 Hz until the OK button is pressed. This feature will allow the user to determine if the motor is running in the correct direction.
  - n. Switching of the input power to the VFD must be possible without interlocks or damage to the VFD at a minimum interval of 2 minutes.
  - o. Switching of power on the output side between the VFD and the motor must be possible with no limitation or damage to the VFD and must require no additional interlocks.
  - p. An Automatic Motor Adaptation (AMA) function must measure motor stator resistance and reactance to optimize performance and efficiency.
  - q. Cooling must be via an aluminum heat sink and must prevent the introduction of ambient air to the electronics for cooling. With the exception of the water-resistant heat sink fan, electronics must be fully sealed within the enclosure.
  - r. The VFD must have temperature-controlled cooling fans for quiet operation, minimized internal losses, and greatly increased fan life.
  - s. VFD must provide full torque to the motor, given input voltage fluctuations of up to +10% to -10% of the rated input voltage.
  - t. The VFD must include additional contacts for interface with a remote start/stop panel and the emergency stop function. When the VFD is supplied for a spa hydrotherapy pump, the drive must also interface with a remote timer switch to control pump operation via a preset timed duration (15-minute timer switch).
4. Harmonics:

- a. The VFD must provide internal DC link reactors to minimize power line harmonics and to provide near unity power factor.
  - b. The VFD must be provided with line-side harmonic reduction, as required, to ensure that the current distortion limits, as defined in table 10.3 of IEEE 519-1992, are met.
  - c. Harmonic solutions must be designed to withstand up to 2%-line imbalances with the maximum Current Distortion not to exceed 11% at 100% load.
  - d. Harmonic solutions must be capable of withstanding up to 2% ambient voltage distortion with the maximum Current Distortion not to exceed 12% at 100% load.
5. Protective Features:
- a. VFD must have input surge protection utilizing MOV's, spark gaps, and Zener diodes to withstand surges of 2.3 times line voltage for 1.3 msec.
  - b. VFD must include circuitry to detect phase imbalance and phase loss on the input side of the VFD.
  - c. Printed Circuit boards must be conformal coated to reduce the corrosion effect from environmental gases and other conditions. The conformal coating must meet IEC 61721-3-3, Class 3C2 as standard.
  - d. Automatic "No-Flow Detection" must be available to detect a no-flow situation in pump systems where valves can be closed. This must be functional in closed loop control or when controlled by an external signal.
  - e. Dry-pump detection must be available to detect if the pump has run dry. If this condition occurs, the drive will be safely stopped. A timer must be included to prevent nuisance tripping.
  - f. End-of-Pump curve detection must stop the motor when the pump is operating outside of its programmed pump curve.
  - g. VFD must provide a flow compensation program to reduce energy by adjusting the Setpoint to match changes in flow (friction loss).
  - h. VFD must include current sensors on three-output phases to detect and report phase loss to the motor. The VFD will identify which of the output phases is low or lost.
6. Interface Features:
- a. VFD must provide an alphanumeric backlit display keypad (LCP) which may be remotely mounted using a standard 9-pin cable. VFD may be operated with keypad disconnected or removed entirely. Keypad may be disconnected during normal operation without the need to stop the motor or disconnect power to the VFD.
  - b. VFD Keypad must feature an INFO key that, when pressed, must display the contents of the programming manual for the parameter that is currently viewed on the display.
  - c. VFD Display must have the ability to display 5 different parameters pertaining to the VFD or the load including: current, speed, DC bus voltage, output voltage, input signal in mA, or other values from a list of 92 different user-selectable parameters.
  - d. A red FAULT light, a yellow WARNING light and a green POWER-ON light must be provided. These indications must be visible both on the keypad and on the VFD when the keypad is removed.

- e. Two-level password protection must be provided to prevent unauthorized changes to the programming of the VFD.
  - f. A quick setup menu with factory preset typical parameters must be provided on the VFD to facilitate commissioning.
  - g. A digital elapsed time meter and kilowatt hour meter must be provided in the display.
  - h. VFD must offer as standard an internal clock. The internal clock can be used for: Timed Actions, Energy Meter, Trend Analysis, date/time stamps on alarms, Logged data, Preventive maintenance, or other uses.
  - i. A battery back-up must be provided to maintain internal clock operation during power interruptions.
  - j. Inputs and outputs must be optically isolated.
  - k. The VFD must have two analog signal inputs. Inputs must be programmable for either 0 -10V or 0/4-20 mA.
  - l. One programmable analog output must be provided for indication of the drive status. This output must be programmable for output speed, voltage, frequency, motor current and output power. The analog output signal must be 0/4-20 mA.
  - m. The run permissive circuit must be capable of sending an output signal as a start command to actuate external equipment before allowing the VFD to start.
  - n. The VFD must be equipped with a standard RS-485 serial communications port and front-of-drive accessible USB port.
7. Adjustments:
- a. The VFD must have an adjustable output switching frequency.
  - b. Four complete programming parameter setups must be provided, which can be locally selected through the keypad or remotely selected via digital input(s), allowing the VFD to program for up to four alternate control scenarios without requiring parameter changes.
  - c. In each programming setup, independent acceleration and deceleration ramps must be provided. Acceleration and deceleration time must be adjustable over the range from 0 to 3,600 seconds to base speed.
  - d. The VFD must have four programmable "Bypass frequencies" with adjustable bandwidths to prevent the driven equipment from running at a mechanically resonant frequency. The feature must offer a Semi-Automatic program to simplify the set-up.
  - e. VFD must include an automatic acceleration and deceleration ramp-time function to prevent nuisance tripping and simplify start-up.
  - f. The VFD will include a user-selectable Reset function, which enables the selection of between zero and twenty restart attempts after a self-clearing fault condition (under-voltage, over-voltage, current limit, inverter overload, and motor overload), or the selection of an infinite number of restart attempts. The time between restart attempts must be adjustable from 0 through 600 seconds.
  - g. An automatic "on-delay" function may be selected from 0 to 120 seconds.

- h. The VFD will include a user-selectable Auto-Restart function that enables the VFD to power up in a running condition after a power loss, to prevent the need to manually reset and restart the VFD.
- 8. Bypass
  - a. Provide a manual bypass in conjunction with the VFD for the recirculation pump(s) consisting of a door interlocked main fused-disconnect pad lockable in the off position, a built-in motor starter and a four position DRIVE/OFF/BYPASS/TEST switch controlling three contactors. In the DRIVE position, the motor is operated at a programmable speed or flow rate from the VFD. In the OFF position, the motor and VFD are disconnected. In the BYPASS position, the motor is operated at full speed from the AC power line and power is disconnected from the drive so that service can be performed. In BYPASS Position, a soft starter will be in the circuit to allow the motor to avoid an across the line start. In the TEST position, the motor is operated at full speed from the AC line power. This allows the drive to give an operational test while continuing to run the motor at full speed in bypass.
- 9. Individual VFD options such as bypass, motor selection contactors, etc. must be incorporated by the manufacturer onto a single panel with a single input feed and main disconnect function. Enclosures must be UL listed and fully assembled by the VFD manufacturer.
- 10. Service Conditions:
  - a. The ambient operating temperature of the VFD must be -10°C to 50°C (14 to 122°F).
  - b. 0 to 95% relative humidity, non-condensing.
  - c. Elevation to 3,300 feet (1000 meters) without derating.
  - d. VFD's must be rated for line voltage of 525 to 690VAC, 380 to 480VAC, or 200 to 240VAC; with +10% to -10% variations. Line frequency variation of  $\pm 2\%$  is acceptable.

C. Pump Gauges

- 1. Pressure gauges must be provided on the discharge of the pumps.
- 2. Compound gauges must be provided at the intake port of the pumps, after the hair and lint strainer.
- 3. Gauges must be liquid filled, 316L stainless-steel bourdon tube type with a minimum 2-1/2-inch diameter dial, high impact polypropylene or stainless-steel case, corrosion resistant white scale with black divisions and numerals, 300 Series stainless-steel heavy duty rotary bushed movement, black enameled balanced Micrometer pointer.
  - a. Basis of Design: Gauges must be manufactured by Weksler Instrument Corporation or approved equal.
- 4. Scale ranges must be selected to indicate the normal system operating pressure of each system or location within the system. Pressure ranges must be calibrated in psig (0-60 psi) and compound gauge must be calibrated in inches of mercury (0-30 in Hg / 0-60 psi).
- 5. A stainless-steel filter type pressure snubber must be provided for each pressure gauge consisting of a 3/8-inch diameter by 1/8-inch-thick micro metallic stainless-steel filter and placed in the line just before the pressure gauge. Provide isolation brass valves or brass gauge cocks at each gauge for easy replacement and maintenance.

## 2.3 FILTRATION EQUIPMENT

- A. The filter system must consist of high-rate pressure sand filter tanks as shown on the drawings. Every aspect and component of the filter system must be certified by the National Sanitation Foundation (NSF) and bear the certification mark. The filter must have an engraved metal data plate permanently affixed on the face of the system that describes operational data and instructions and indicates startup date.
- B. It is the intent of these specifications to describe a filtration system complete in every respect with accessory items and supplied and warranted by one manufacturer.
- C. Horizontally Oriented Fiberglass Tanks
  - 1. The filter tanks must be horizontally oriented single cell fiberglass tanks, minimum 42 inches in diameter. The filter system must be listed as approved by the National Sanitation Foundation prior to bid date.
    - a. Basis of Design: Fiberglass filters must be the product of Stark/Pentair, Waterco, or Neptune Benson provided they meet the specifications and layout. System design is based upon Neptune-Benson. Valves must be provided to backwash one filter at a time.
  - 2. Filter tanks must incorporate components and features as described in this section.
  - 3. Two (2) saddle style bases must be provided for tank support. Systems that incorporate stacked tanks must include similar bases and mounting saddles for the upper vessel. Tank supports and connections must be seismic rated to support the filter tank(s) for the appropriate seismic zone where the project is located. Access to the tank must be provided by a 14" x 18" manhole with two (2) curved yokes. Manhole seal must be complete with a one-piece 1/4" neoprene gasket and positioned so that internal pressure from the filter will augment the seal. No additional hardware or through bolts will be allowed.
  - 4. Each filter tank must be equipped with the necessary flanges and connections for the internal and external piping. Connections must be comprised of fiberglass flanges and schedule 80 PVC flanges.
  - 5. Tank connections 2 inches and smaller must be 150 lb. Type 316L stainless-steel threaded full couplings. Tank connections 3 inches and larger must be heavy steel bosses drilled and tapped on both sides to receive standard flanged fittings or Sch. 40 Type 316L stainless-steel nipples.
  - 6. The discharge from the automatic air release valve must be hard piped to waste. Each filter tank must have a means of releasing air. Each coupling or orifice must be provided with a slotted PVC sand retainer or stainless-steel strainer. An automatic air release system must be provided for each tank.
  - 7. The drain system must consist of a 3/4-inch 316L stainless-steel coupling mounted at the lowest point in the bottom head. This drain must be valved and piped to the nearest floor drain or backwash pit.
  - 8. Filter Piping - Internal
    - a. The lower internal distribution system must be a horizontal header/lateral arrangement. The header must be Schedule 80 PVC construction, capped on one end and flanged or threaded at the other end for field connection. Lateral connections must be spaced no more than 6 inches on centers and must be 1-1/2-inch FPT

- connections. Attachments to header must be solvent welded and thermo-welded to ensure integrity of connection.
- b. Under drain system must be factory installed and constructed of extra heavy Schedule 80 high impact PVC. Multiple PVC main headers must be tapped and threaded to receive laterals.
  - c. Laterals must consist of 1-1/2-inch Schedule 80 PVC pipe with openings as required. Each lateral must be fabricated complete with socket cap on one end and male adapter on the other end. Both fittings must be solvent welded to the slotted pipe. Laterals must be designed and sized at the factory, so they are installed in the field and over the entire cross sections area of the filter.
  - d. The upper distributor must consist of PVC piping Schedule 80 and/or deflector plate per manufacturer standard design.
  - e. Each filter must be supplied with a pressure equalizing upper internal distribution system consisting of a horizontal header/lateral arrangement. The header piping must be constructed of Schedule 80 PVC. The header/lateral piping and connections must be designed and sized to provide uniform distribution and unrestricted flow during the filtration and backwash cycles.
  - f. Upper laterals must be constructed of Schedule 80 PVC pipe with machine slotted openings or orifices. Machined slots or orifices must be clean, de-burred and free of obstructions that would not permit the free flow of water through the opening. Details of the lateral attachment to the header must be submitted for review and approval.
  - g. The lower and upper distribution systems must be properly supported and anchored. Hardware in wetted areas must be Type 316L stainless-steel or non-metallic. Tank interiors must be inspected prior to the media being placed in the filters.
9. Filter Piping - External (Face)
- a. External face piping must be Schedule 80 PVC pipe and fittings. Flanges must be located so as to allow for easy dismantling of face piping. Fittings must be solvent cemented.
  - b. Piping must be drilled and tapped where necessary to accommodate gauge tubing connectors.
  - c. Valves 3" and larger must be constructed with cast aluminum S12A alloy (as defined by ASTM B275) housing and fully coated with Rilsan on interior and exterior surfaces. Internal components include EPDM resilient lining, Rilsan coated ductile iron disc and 316L stainless-steel shaft. Valves must be rated for 150 psi bubble tight shutoff. Unless otherwise specified, nuts and bolts must be stainless-steel with stainless-steel washers and used when secured to PVC flanges. Systems incorporating solenoid, pneumatic, pressure amplified, hydraulic or multi-directional valves are not acceptable.
  - d. Standard accessory items must include sight glass rated for 50 psi with polycarbonate glass, remote mounted gauge panel with two 4½" diameter pressure gauges, ¼" petcocks, ¼" poly vent tubing with PVC compression adapters.
10. Backwash Control

- a. The filter manifold face piping must be designed to allow for one (1) filter tank to backwash at a time while the recirculation system is operating. A manual backwashing system must be provided with the filter system.
- b. Manual Backwash System
  - 1) The manual backwash system must be equipped with a face piping configuration such that the operator must manually control and operate both the time and sequencing of the backwash cycle. Valving on the filter face piping must be a mechanical linkage device allowing the operator to simultaneously move two (2) valves at once. Mechanical linkage components must be PVC or Type 316L Stainless-steel.
- 11. Automatic Air Relief Valve
  - a. A 1" valve must be provided to automatically and continuously release air in the filter. The valve must be fabricated of plastic with Buna-N seals. A plumbing kit must be provided with two (2) PVC ball valves to allow manual air relief and isolation of the automatic valve. Valves fabricated of cast iron, bronze or stainless-steel valves will not be accepted.
- 12. Filter Media
  - a. Filter media must be a carefully selected grade of hard uniformly graded silica material. Media must be milled angular shaped particles of silica quartz. The filter sand must have a particle size between 0.45 mm and 0.55 mm and have a uniformity coefficient not to exceed 1.53. Specific gravity must not be less than 2.5 with a pH of 7.0.
  - b. Media (sand) must be cleaned and free from clay or limestone deposits. The bottom layer of support media must be placed by hand to avoid damage to the under-drain system and leveled before the addition of the upper layer of filter media.
  - c. Media must be delivered after approval by the manufacturer of the filter and stored in 100-pound bags for ease of handling and elimination of possible contamination.
  - d. Media must be supplied by the filter manufacturer and approved by the filter manufacturer prior to shipping.
- 13. Support Media
  - a. A Gravel support media of a hard-coarse aggregate with a sub-angular grain shape with a particle size of 1/8" x 1/4" must be used on the inside of the bottom head to the elevation where the filter media commences. The specific gravity must not be less than 2.5. Support media must be placed by hand to avoid damage to the underdrain system and leveled before the addition of the upper layer of filter media. Concrete under fill is not recommended. Support gravel must be delivered and stored in 100-pound bags (approximately one cubic foot) for ease of handling and elimination of possible contamination. Media must be free from minerals which can precipitate onto pool surfaces.
  - b. Sand must be a carefully selected grade of hard, uniformly graded silica material. Media must be naturally rounded particles of silica or milled angularly shaped particles of silica quartz. Sand must have a particle size between 0.45mm and 0.55 mm (#20). No more than 1.5% is allowed to pass through a #40 sieve (.0164"). Uniformity coefficient must not exceed 1.53. Specific gravity must be not less than

2.5. The filter must contain a minimum bed depth as recommended by the manufacturer. Systems which do not provide a minimum bed depth will not be accepted. Sand must be delivered and stored in 100-pound bags (approximately one cubic foot) for ease of handling and elimination of possible contamination. Media must be free from minerals which can precipitate onto pool surfaces.

## 2.4 RECIRCULATION FITTINGS

- A. Main drains must be PVC/Fiberglass box with PVC grating as sized on the drawings. Grate openings must not exceed 11/32 inch in width, providing an open flow area to allow water velocity not to exceed 1.5 fps. The grate must be PVC and fit closely and flush with top surface of frame and secured to frame with vandal proof fasteners. Provide additional stainless-steel flanged pipe connections where required by the drawings for approved equalizer lines. Provide a no-leak seal flange at the midpoint of the boxes. The exposed edges of main outlets must be rounded and smooth, free of burrs and sharp edges. Main drain covers must comply with the Virginia Graeme Baker Act and ANSI/APSP-16 2017.
- B. Provide a water bonding fitting PB-SK-20 manufactured by Perma-cast Swimming Pool Products or approved equal. Bonding fitting must be installed at the lowest point of the main drains.
- C. Concrete dropout boxes (converters) must be concrete sumps with 12-gauge 316L stainless-steel frame and PVC grating and sized as shown on the plans. Grate openings must not exceed 11/32 inch in width, providing an open flow area to allow water velocity not to exceed 1.0 fps. The grate must be PVC and fit closely and flush with top surface of frame and secured to frame with vandal proof fasteners. Provide a no-leak seal flange at the midpoint of the boxes.
- D. Wall inlet fittings must be cycloc directional inlet Hayward model #SP-1421-E mounted in model #SP-1022S, Aquastar model #3301 or approved equal from Sta-Rite.
- E. Adjustable floor inlet fittings must be provided each consisting of an ABS plastic body and adjusting top plate with a positive locking device. A spanner wrench must be provided to facilitate flow adjustment. The inlet body must be provided with a 2-inch cycloc solvent weld connection and internal NPT threads to facilitate line pressure testing. Floor inlet fittings must be Sta-Rite model #8417-0200-black, Aquastar model #4DIV102 or approved equal.
- F. The sight sump frame and cover must provide access to the vertical sight sump standpipe as indicated in the plans. Frame and cover must be provided as a pan-filled, removable access lid that can receive the surrounding deck finish. Lids must be model #SQ201 PAL (Tan), #SQ201 PAL (Gray) or #SQ201 PAL (Frosted) manufactured by Pour-A-Lid or approved equal. Refer to the Owner/Architect for color selection.
- G. Water surface agitator valve box cover(s) and frame(s) must be Zurn model #ZANB-1461-12-VP, nickel bronze with polished scored top, vandal proof screws or approved equal.
- H. Water Surface Agitator
  - 1. Water surface agitators must be detailed on the plans and connected to the filtered water supply. Construction must be machined of cast bronze/brass and stainless-steel. Face plates must be removable for nozzle alignment or nozzle cleaning by using a security key model WMF083. Water inlet connection must be 1" diameter. The unit must be the Combination Water Surface Agitator WMD108 by Crystal Fountains.
  - 2. Provide a 1" solenoid valve, normally closed, stainless-steel fitted, bronze body, 120 VAC slow closing type. The solenoid must be located on the main water surface agitator supply line as shown on the drawings. The solenoid must be activated through a receptacle located near

the diving boards in the natatorium. Refer to Division 26 for location of receptacle. Slow-closing solenoid must be manufactured by ASCO or approved equal.

- I. Anti-vortex plates must be provided at the suction points of the main recirculation pump(s) in the surge tank(s). Each plate must be connected to the suction pipe via a PVC flange and must be ½ in. thick with minimum dimension of at least 2.5 times the connecting pipe diameter. The plate must be located 4 inches above the finished floor of the surge tank. Four (4) ¾ in. stainless-steel threaded rods, nuts, anchor bolts and washers must be used to fix the offset distance and provide a secure base for the suction pipe. Manufactured fiberglass or PVC anti-vortex plates by Daldorado, Neptune-Benson or approved equal.
- J. Hydrotherapy inlet fittings must be provided consisting of a cast bronze or cyclac venturi body with 1-1/2-inch water inlet pipe connections and 1/2-inch air intake connection. A 1/8-inch IPS thread must be provided in the inlet throat to permit hydrostatic pressure testing of the piping system. The inlet must be designed to operate at 20 GPM at a working pressure of 15 PSI and installed as shown on the drawings. Jet Body must be Waterway model #210-5950 with Waterway Adjustable Fitting model #210-8750 or approved equal. Provide fitting adjustment tool from Waterway, model #210-1770A, or approved equal.

## 2.5 PIPING SYSTEMS

### A. General

- 1. Provide recirculating piping between the pool(s) and the filter room, fill receptor and interconnecting piping to and from the chemical feed systems and chemical controller.
- 2. Provide necessary pipe supports and support systems required to support associated piping and valves.
- 3. Provide other tubing, conduit, or piping associated with equipment specified herein. Coordinate with other trades.

### B. Pipes

- 1. Pipe routing as shown and detailed on the contract drawings is diagrammatic only and is not intended to show minor details or exact locations of piping systems. Installation is required and must be adjusted to accommodate interference and adjustments anticipated and encountered. Pipe sizes on plans refer to the nominal inside diameter of the pipe.
- 2. PVC swimming pool piping must be NSF approved and conform to the requirements of ASTM D-1785.
- 3. PVC pipes must be the product of one manufacturer. Approved manufacturers of PVC piping are Eslon, Harvel, and Chemtrol or approved equal.
- 4. Swimming pool piping above the floor or deck in the filter room must be Schedule 80 PVC.
- 5. Swimming pool piping below the filter room floor or deck must be NSF approved, Schedule 80 PVC.
- 6. Swimming pool piping under the pool floor must be NSF approved, Schedule 80 PVC that is backfilled within a ¾" minus fine crushed aggregate conforming to ASTM C136, and per recommendations indicated in the project geotechnical report. Fill material must be submitted to the Architect for review and approval prior to placement of below grade pool pipe.
- 7. Below grade swimming pool piping not located beneath the pool floor can be backfilled with native granular material free of ice, clay, debris, organic matter, and rocks larger than 4"

across their greatest dimension, and per recommendations indicated in the project geotechnical report.

8. The influent and effluent lines to the heat exchanger unit must be CPVC. Connections between metallic piping and/or equipment and PVC must be flanged.
9. PVC and CPVC fittings must be the product of one manufacturer. Molded fittings must be manufactured by Asahi, Eslon, Chemtrol, Harvel, Spear, Lasco or acceptable substitutes. Fabricated fittings must be manufactured by Harrison Machine, Plastinetics, or acceptable substitute.
10. Vertical sight sump piping must be NSF approved, Schedule 40 PVC. Horizontal sight sump piping must be NSF approved, Schedule 40 PVC that is perforated and wrapped with fabric and have 3/8" diameter holes located top and bottom on 4 ft centers. Horizontal sight sump piping must extend 1 ft minimum beyond the main drain.
11. Chemical feed lines from chemical feeders to recirculation piping must be Schedule 80 PVC piping. Piping must be hard piped into the recirculation piping via tee or saddle per the drawings. Required valves must be of PVC construction.
12. Splash collar(s) for the fill funnel(s) must be clear Schedule 80 PVC and manufactured from a Type I, Grade I PVC compound with a Cell Classification of 12454 per ASTM D1784. The pipe must be manufactured in compliance with ASTM D1785.
13. Flanged plumbing connection hardware must be stainless-steel.
14. Materials must be installed by workmen thoroughly skilled in their trades and work must present a neat and mechanical appearance when complete. At no additional expense to the Owner, replace or correct work not judged acceptable by the Architect, Engineer, or Owner's representation.
15. Support hardware, brackets, fasteners, hangers, etc. furnished and installed in the surge tank must be 316L stainless-steel.
16. No installation allowed that will provide a cross-connection or interconnection between a distributing supply for drinking purposes and the swimming pool, or between the pool and a sanitary or storm water sewer system that will permit a backflow of water into the pool water system.
17. Piping must be hydrostatically (water) pressure tested for leaks before and after backfilling to guarantee water tightness. Pneumatic (air) pressure test not allowed.
18. Provide water seals for watertight penetrations of concrete walls and floor slabs.
  - a. Pool Concrete: Water seals must be coupling or sleeve type with a thermo welded or molded flange and the O.D. must be sized to 150% of the O.D. of the pipe. The thermo-welded type must be welded from both sides. Water seals must be located at the centerline of the wall or slab being penetrated prior to placing the concrete to assure a watertight seal. Manufactured fiberglass and PVC water seal fittings by Daldorado, A.S.A. Manufacturing, Aqaulogic or approved equal.
  - b. Pump Pit: Link seals must be provided in the sizes and quantities shown on the drawings and installed to provide flexible watertight penetration. Metal parts must be made of 316L stainless-steel. Links must form a continuous rubber seal that is tightened with a series of stainless-steel bolts to form a watertight seal. Link seals must be manufactured by GPT, Calpico Inc. or an approved equal. Xypex Patch'n Plug or

approved equal must be used to seal pipe penetration. Link seals must be installed with either a cored hole or a Century Line pipe sleeve.

- c. Surge Tank: Water seals must be coupling type with a thermo welded or molded flange and the O.D. must be sized to 150% of the O.D. of the pipe. The thermo-welded type must be welded from both sides. Water seals must be located at the centerline of the wall or slab being penetrated prior to placing the concrete to assure a watertight seal. Manufactured fiberglass and PVC water seal fittings by Daldorado, A.S.A. Manufacturing, Aqualogic or approved equal. Link seals are also acceptable with a cored hole or a Century Line pipe sleeve.
- 19. Adhere to the applicable provisions in Division 22 - Plumbing, "General Provisions" and "Basic Materials and Methods" for installation of piping system.
- 20. Mechanical equipment must be connected into the recirculation piping system must be connected utilizing flanged or union connections.
- 21. Provisions must be made to purge pipes in the system.
- 22. Concentric reducers must be fiberglass by MerMade Filter, Inc., or equivalent reducers of schedule 80 PVC construction.

C. Pipe Hangers and Supports

- 1. Manufacturer
  - a. Subject to compliance with these specifications, pipe hanger and support systems must be manufactured by Cooper B-line (basis of design), Inc, TOLCO, and Anvil International or approved equal.
- 2. Hangers
  - a. Pipes 2 inches and smaller
    - 1) Adjustable steel clevis hanger, B-Line models B3100 or B3104.
    - 2) Adjustable steel swivel ring (band type) hanger, B-Line model B3170.
  - b. Pipes 2-1/2 inches and larger
    - 1) Adjustable steel clevis hanger, B-Line model B3100.
    - 2) Adjustable steel yoke pipe roll, B-Line model B3114.
- 3. Multiple or Trapeze Hangers
  - a. Trapeze hangers must be constructed from 12-gauge roll formed ASTM A1011 SS, Grade 33 structural steel channel, 1-5/8 by 1-5/8-inch minimum, B-Line B22 strut or stronger as required.
  - b. Mount pipes to trapeze with 2-piece pipe straps sized for outside diameter of pipe, B-Line B-2000 series.
- 4. Wall Supports
  - a. Pipes 2-1/2 inches and smaller
    - 1) Steel offset "J" hook hanger, B-Line model B3600.
  - b. Pipes 3 inches and larger
    - 1) Welded strut bracket and pipe straps, B-Line models B3064 and B2000 series.

- 2) Welded steel bracket B-Line model B3066 or B3067 with roller chair or adjustable steel yoke pipe roll. B-Line model B3120 or B3110.
  5. Floor Supports
    - a. Electroplated carbon steel adjustable pipe saddle and nipple attached to steel base stand sized for pipe elevation. B-Line model B3092 and B3088T or B3090 and B8088. Pipe saddle must be screwed or welded to an appropriate base stand.
  6. Vertical Supports
    - a. Steel riser clamp sized to outside diameter of pipe, B-Line model B3373.
  7. Plastic Pipe Supports
    - a. V-Bottom clevis hangers with galvanized 18-gauge continuous support channel, B-Line models B3106 and B3106V, to form a continuous support system for plastic pipes smaller than 1 inch or flexible tubing.
    - b. A vented and sloped continuous PVC Schedule 40 pipe no smaller than 1-1/2 inch outside diameter will be used to route flexible tubing with the appropriate pipe supports.
  8. Supplementary Structural Supports - Design and fabricate supports using structural quality steel bolted framing materials. Channels must be roll formed, 12-gauge ASTM A1011 SS Grade 33 steel, 1-5/8 inch or greater as required by loading conditions. Submit design for pipe tunnels, pipe galleries etc. for approval. Use clamps and fittings designed for use with the strut system.
- D. Hanger Attachments
1. Upper Attachments
    - a. Beam Clamps
      - 1) Beam clamps must be used where piping must be suspended from building steel. Clamp type must be selected on the basis of load supported and load configuration.
      - 2) C-Clamps must be locknuts and cup point set screws similar to B-Line model B351L or B3036L. Top flange c-clamps must be used when attaching a hanger rod to the flange of structural steel, B-Line model B3034 or B3033 or approved equal. Refer to manufacturer's recommendations for set screw torque. Retaining straps must be used to maintain the clamp position on the beam where required.
      - 3) Center load beam clamps must be used where specified. The steel clamps must be B-Line models B3050 or B3055. Forged steel beam clamps with cross bolt must be B-Line B3291-B3297 series or approved equal as required to fit beams.
    - b. Concrete Inserts
      - 1) Cast in place spot concrete inserts must be used applicable, either steel or malleable iron body, B-line B2500 or B3014 or approved equal. Spot inserts must allow for lateral adjustment and have means for attachment to forms. Select inserts to suit threaded hanger rods sizes, B-line models N2500 or B3014N series.

- 2) Continuous concrete inserts must be used where applicable. Channels must be 12 gauge, ASTM A1011 Grade 33 structural quality carbon steel, complete with Styrofoam inserts and end caps with nail holes for attachment to forms. The continuous concrete insert must have a load rating of 2,000 lbs/ft. in concrete, B-Line models B22I, 32I, or 52I or approved equal. Select channel nuts suitable for strut and rod sizes.

E. Hanger Accessories

1. Hanger rods must be threaded on both ends or continuously threaded rods of circular cross section. Use adjustable lock nuts at upper attachments and hangers. No wire, chain, or perforated straps are allowed.

F. Hanger Finish

1. Indoor Finishes
  - a. Hangers must be zinc plated in accordance with ASTM B633 or must have an electro-deposited green epoxy finish.
  - b. Strut channels must be pre-galvanized in accordance with ASTM A653 SS Grade 33 G90 or must have an electro-deposited green epoxy finish.
  - c. Zinc Plated hardware is not acceptable for use in chemical rooms.

G. Valves

1. Valves 3 inches and larger must be butterfly type valves, with PVC body, 150# SWP with stainless-steel shaft, PVC or polypropylene disc and replaceable resilient seat bonded to a rigid shaft and guaranteed for bubble tight shutoff from 27-inch vacuum to 150 PSI. Extended neck 2 inches beyond flanges for insulated piping must be provided with handle for manual operation. Valve components must be suitable for swimming pool chlorinated water service. Butterfly valves must be Georg Fischer Type 563, Asahi/America Type SP Pool-Pro, Chemtrol Model-B, Simtech VP series, Colonial Valve 411 Series, or approved equal.
2. Valves smaller than 3 inches must be PVC true union ball valves, full port, three-piece construction, blowout-proof stem, Viton seal with socket end connectors.
3. Check valves must be a quick closing non-slam type, either self-aligning wafer or flanged type, of corrosion resistant materials suitable for use in a swimming pool environment. Provide check valves in accordance with the manufacturer's recommendations. Locate check valves at least 5 pipe diameters from pumps and fittings. Check valves must be Technocheck Corp., model 5050, with epoxy coated cast iron body and bronze swing plates on a stainless-steel spring, Colonial Valve model 601N or 601NP PVC valve with EPDM O-ring and stainless-steel spring or approved equal, for installation between 150 lb. flanges.
4. Modulating float valve in the surge tank(s) must have PVC body and stainless-steel wafer disc. Hardware must be non-corrodible. The float-operated valves must be provided horizontally on the main drain lines in the surge tank(s). A valve must consist of non-corrosion components including shaft, float arm, pins, and floats. Valve must be suitable for mounting on a 125E class standard PVC flange. The float arm leverage weight and pivot lengths must be adjustable to obtain desired ratio of surge tank level change to pool gutter overflow level change. Two floats and a stabilizer required. Valve must be model FV-D XWB (Extra Weight Ball) as manufactured by MerMade Filter, Inc. or approved equal manufactured by Neptune-Benson, EPD, or Fluidtrol Process Technologies, Inc.

5. Submerged valves up to 3 inches must be PVC true union ball valves. Submerged valves over 3 inches must be PVC bodied, wafer type, butterfly valves with stainless-steel handle extensions as required. Valves must be by approved manufacturers listed above. Submerged valves must be provided with stainless-steel connectors. The stem housing extensions must be properly supported and braced.
6. Butterfly type valves 8 inches and larger must be fitted with a watertight gear operator.
7. Valves located 7 feet or greater off the floor must be fitted with a chain operator.
8. Submerged valves, valves buried below grade, or valves not readily accessible, must be provided with a stainless-steel reach rod and handle.
9. Valve hardware must be 316L stainless-steel and meet ANSI hardware installation guidelines.

H. Pipe and Valve Identification

1. Exposed pool piping must be equipped with color coded flow directional arrows at thirty (30) inch intervals per local and state swimming pool health code. In addition to the flow direction arrows, exposed pool piping must be fully painted per NY City and State swimming pool health code. Verify that pool piping identification is in accordance with local and state health regulations.
2. Valves must be identified with minimum 1-1/2-inch diameter plastic laminate engraved tags with minimum 1/2-inch-high numbers. Tags must be fastened to valves with a nylon attachment (zip tie). Valves must be described as to their function and referenced in the operating instruction manual and wall mounted piping diagram that must be prepared.

2.6 CHEMICAL TREATMENT SYSTEMS

A. Calcium Hypochlorite (Chlorine Tablets)

1. Shop drawings complete with a piping diagram depicting the location in which the dry chlorination feeder is connected to the system must be provided and approved prior to installation. Installation of the system must be as specified in the manufacturer's directions with no exceptions taken.
2. A factory-authorized representative must provide training to the owner and the training must be video recorded.
3. Accu-Tab PowerBase
  - a. General Description
    - 1) The system must be designed to feed low concentrations of calcium hypochlorite in solution intermittently or continuously as required for pool applications. The system must be a single pre-assembled, package unit with a welded aluminum frame consisting of chlorinator, electrical box, centrifugal pump, and solution tank for ease of installation and operation. The system must be the Accu-Tab PowerBase. Only Accu-Tab Blue SI calcium hypochlorite tablets must be used, the patented blue colorant added for safety (to help prevent accidental mixing with other chemicals).
    - 2) The system must use an NSF Standard 50 listed erosion feeder and tablet combination and must be capable of meeting the requirements of the Health Department having jurisdiction over the installation.

b. System Features

- 1) A maximum chlorine solution level of 0.05% (500 ppm) must be maintained to prevent calcification in system components. Systems producing chlorine concentrations higher than 0.05% are not acceptable.
- 2) Delivery must be by erosion feed technology to control accurate and consistent concentration limits in the chlorine treatment solution. Soaking type, spray and/or vortex technology systems are not acceptable.
- 3) The chlorinator must automatically and continuously feed a limited quantity of chlorine in solution as needed; when the system is not running, no more chlorine than that amount which can be fed in one minute or less must be left in the tank to prevent dilution. Batch systems preparing excess quantities of solution for delivery over an extended period are not acceptable.
- 4) A centrifugal pump wired to the system electrical box must feed freshly mixed chlorine treatment solution only as required for maximum efficiency. Batch systems requiring the use of a metering pump or pumps to feed pre-prepared standing solution are not acceptable.
- 5) Piping in the chlorinator unit must be Schedule 40 PVC. Systems with flexible tubing are not acceptable.

c. System Components

- 1) Accu-Tab PowerBase chlorinators are designed exclusively for Accu-Tab Blue SI calcium hypochlorite tablets. Tablets are placed on a sieve plate inside the chlorinator; as water flows across the sieve plate, the tablets erode at a rate proportional to the flow rate.
- 2) Inlet Water Supply Connection.
  - a) Model 1030: 1.5" (water supply of 10 GPM required)
- 3) Inlet Water Filter: A filter to protect chlorinator components from start-up debris and sand from broken filter laterals.
- 4) Flow Meter:
  - a) A rotameter flow meter, measuring the flow of the water-eroding stream to the chlorinator. (For models 1030, 3070AT, 3140AT)
  - b) Clamp-on flow meter, measuring the flow of the water-dissolving stream to the chlorinator. (For model 3500)
- 5) Solution Tank: PowerBase 3500 made of HDPE; others made of PVC.
- 6) Capacities:
  - a) Model 1030: 7 gallons
- 7) Primary Solution Tank Level Control: Made from Schedule 80 PVC and 316L stainless-steel. The float valve opens to maintain the pump rate as it is manually throttled.
- 8) Overflow Protection: Two (2) level switches in the upper portion of the solution tank will run the pump from high to lower level to prevent system overflow.

- 9) Solution Delivery Pump: Delivers chlorinated solution to the return line. A single-stage centrifugal pump is provided for systems with pressures up to 20 PSIG.
- 10) Primary Backflow Prevention: A PVC swing check valve prevents reverse flow of water into the system.
- 11) Discharge Control Valve (manual): PVC gate valve allows operator to adjust flow of solution to the system.
- 12) Outlet Connection:
  - a) Model 1030: 1"
- 13) Aluminum Frame: Type 6061-T.
- 14) NEMA 4X Electrical Enclosure

B. pH Buffering System (CO<sub>2</sub>)

1. Shop drawings complete with a piping diagram depicting the location in which the CO<sub>2</sub> feeder is connected to the system must be provided and approved prior to installation. Installation of the system must be as specified in the manufacturer's directions with no exceptions taken.
2. Multi-Cylinder Storage
  - a. Provide a system for storing, regulating, and feeding carbon dioxide for pH control. The system must consist of CO<sub>2</sub> storage tanks, a pressure reducing/regulating system, a feed and rate of flow adjustment control system, injection system/mass transfer system, and valves, tubing, fittings, and appurtenances required for a complete and operable system. The system is to include the following components.
    - 1) CO<sub>2</sub> Storage Tanks
      - a) Pressure storage tanks supplied and exchanged by the Owner's chemical supply company. Capacity of each tank must be 50 lbs of CO<sub>2</sub>. Provide CO<sub>2</sub> as necessary for startup and operation prior to Owner acceptance. Provide two (2) full CO<sub>2</sub> tanks at the time of acceptance.
    - 2) Pressure Regulator
      - a) Provide one (1) per CO<sub>2</sub> storage tank; a single tank pressure regulator, with gauges for up to 850 psi nominal cylinder pressure and 40 psi adjustable output to feed unit.
3. Adjustable Rate of Flow Feed Unit(s)
  - a. Provide an adjustable rate of flow feed unit to control the flow of CO<sub>2</sub> from the storage tank(s) to each pool. The feed unit(s) must be connected to the storage system with thick wall 3/8-inch OD reinforced braided polyethylene tubing enclosed in schedule 40 PVC. The feed system must include 120-volt AC solenoid operated valve for remote on/off control of CO<sub>2</sub>. Feed system must be provided by Prominent, BECS, EKO3, or approved equal and as shown on the drawings.
  - b. Injection System: Provide one (1) system for each body of water; a wet stone diffuser designed for use with CO<sub>2</sub>, sized to the pipe in which it must be inserted and for the maximum anticipated rate of CO<sub>2</sub> flow. Provide with pipe saddle connector and fittings

and connectors required for a complete and operable installation. The system must be certified per NSF/ANSI Standard 50.

4. Remote Fill Box

- a. Provide a remote fill station for each storage tank capable of filling at the rate of approximately 30 to 50 pounds per minute in a manner that does not require entry to the storage room containing the CO<sub>2</sub> tank(s). The length of tubing between remote fill box and bulk storage tank must not be more than 20', unless otherwise noted. Each fill station must consist of a flush mounted (recessed) lockable fill box located at the exterior of the building, as indicated, connected to the CO<sub>2</sub> system. It must include a quick disconnect and automatic closure coupling. Box must be 6" x 6" x 4" deep and constructed of painted 16 gauge galvanized or stainless-steel or sized to module with exterior masonry.
- b. Each tank must be connected to an outside fill station, as indicated, with two lengths of 1/2 inch outside diameter copper tubing for the purpose: one to transfer liquid to the tanks from a bulk delivery vehicle, and the other from the relief valves to the outside of the building. Copper tubing from remote fill box to storage tank must be fitted with either double ferrule swage fittings, or silver soldered fittings.
- c. Following the remote fill installation, pressurize the system to 150 PSI with gaseous CO<sub>2</sub> through the fill connection to test for leaks. Pressure test must be Snoop Liquid Leak Detector from Nupro Co. or approved equal.

C. Ultraviolet Dechloramination and Disinfection System

1. Medium Pressure UV

- a. Ultraviolet Disinfection Equipment: Must operate within the UVC electromagnetic spectrum emitting wavelengths in the range of 200nm to 400nm. This required wavelength will provide constant disinfection/inactivation of bacteria, algae, molds, viruses, and destruction of Monochloramines, Trichloramines, and Dichloramines. Ultraviolet Lamp/Chamber and Spectra Touch Control Panel by Evoqua Technologies Ltd. or approved equal. Deviations/exceptions must be provided in writing to and approved by the designer prior to the bid date.
  - 1) Ultraviolet disinfection equipment by Aquionics and Prominent are approved equals.
- b. The UV System must have a MET or equivalent (ETL, CSA, or UL) listing, be NSF-50 2016 certified including Section 14.18 (crypto inactivation) and 3rd party validated to the USEPA UVDGM 2006 Guidelines.
  - 1) Equipment General Description: The Ultraviolet System must be provided in a complete package to include a stainless-steel chamber, Spectra Control System located in NEMA 12 (IP52) rated panel, Medium Pressure Bulb(s) designed to emit wavelengths within the UVC electromagnetic spectrum, automatic wiper system, and Project Commissioning by a Certified Ultraviolet Technician.
- c. Wafer (WF) Units: Ultraviolet manufacturer to offer unit capability of a horizontal OR vertical installation application using state of art design and direct flow through characteristics. Unit must be a medium pressure system with 94% UVT at the indicated design flow rate. Systems validated or designed for flows based on 98%

UVT are not acceptable. Chamber and Control Cabinet must be as indicated on the drawings.

d. Ultraviolet Lamp

- 1) Ultraviolet lamp must be medium pressure high intensity. Lamp must be designed to emit continuous Ultraviolet wavelengths in the range of 200nm to 400nm. This will provide optimal disinfection benefits and destruction of the Monochloramine, Dichloramine, and Trichloramine compounds. The lamp(s) must remain unaffected by temperature variance of 0 degrees F (-17 C) to 200 degrees Fahrenheit (93 degrees Celsius).
- 2) The lamp system must provide a constant dose of not less than 60 mJ/cm<sup>2</sup> until the end of the lamp life for indoor applications and not less than 40 mJ/cm<sup>2</sup> for outdoor disinfection and this must be based on constantly monitoring the full recirculating flow rate, not on a side stream treatment. The system must be equipped with infinitely variable power control of the lamp intensity & dose. Power stepping not acceptable. The lamps must be capable of turndown to 30% of the nominal rated power.
- 3) The lamp must be connected via means of a plug connector and must have a mechanical interlock to prevent lamp removal when lit for safety reasons.

e. Ultraviolet Reactor

- 1) The unit must be constructed of 316L stainless-steel electropolished and passivated to prevent corrosion within the harsh pool environment.
- 2) The Ultraviolet chamber must come complete with the following equipment: Ultraviolet intensity monitor factory calibrated to provide intensity in mWcm<sup>2</sup>, monitors providing percentage of lamp output not acceptable. It must include a built-in alarm system to notify the operator when the output level drops below the required level of 60 mJ/cm<sup>2</sup> for indoor pools or 40mJ/cm<sup>2</sup> for outdoor pools (or operator set dosing levels).
- 3) UV Reactor will be a validated system with third party testing to a recognized international standard such as the USEPA DGM.
- 4) Ultraviolet temperature monitoring system must be provided to maintain system integrity in the event of flow interruptions to the chamber.
- 5) Ultraviolet chamber must come complete with annealed quartz sleeve with "O" ring seals for water tightness. The system must be complete with advanced seal arrangement to reduce the risk of quartz over-compression on the seal face.

f. Automatic Wiper System

- 1) An automatic cleaning system must be provided for cleaning of quartz sleeve and Ultraviolet monitor probe. The system must travel the entire length of the quartz sleeve twice per desired cleaning cycle. Precision molded wiper rings must be provided to ensure thorough quartz tube cleaning and quartz tube protection. The wiper cycle must be user selectable and adjustable within a range of 5 minutes to 24 hours depending on anticipated application and deposit build-up.
- 2) The wiper system must have the following characteristics:

- a) The system must utilize direct drive with square faced coupling and acme threaded shaft to prevent slippage and pin shearing. Systems utilizing shear pins or complicated gear boxes will be unacceptable.
  - b) The wiper power supply must be 24-volt DC for improved safety. Higher voltage not acceptable.
  - c) System must incorporate Direct Shaft Encoding for positional location. Systems relying on external limit switches or internally located magnets will be unacceptable.
  - d) The wiper interval must be operator selectable with optional override switch.
  - e) Wiper faults must be indicated on the control system display.
  - f) Wiper System to utilize “Intelligent Operation” for automatic start-up commissioning.
- 3) Records wiper position at chamber ends. Position must be fixed and not dependent on a timed interval or component striking end of chamber.
- 4) Establish a travel run without using limit switches to ensure system integrity and longevity.
- g. UV Strainer
  - 1) The UV system must be provided with a downstream strainer to protect against the possibility of lamp/quartz breakage traveling downstream.
- h. Ultraviolet Control System
  - 1) The control cabinet must be a SPECTRA control unit and or pre-approved equal.
  - 2) The power must be controllable to provide full power, half power and infinite variable power based on real time interface with changes in UVT, Flow Rate or Combined Chloramines. The power panel must house the electronic ballasts required to ignite and power the lamps.
  - 3) Three levels of operation must be provided to meet the needs of the operator and pool environment: Simple Control (start, stop and reset), Full Parameter Display, and Customized Operator Configuration.
  - 4) Modes of operation must be password protected to secure system critical setup functions. Touch Control system must have clearly identifiable start, stop, and reset icons (suitable for gloved operation) with Running and Fault LCD indicators.
  - 5) The display must include the following:
    - a) Ultraviolet calculated dose
    - b) Ultraviolet intensity (as a percentage and  $\text{mW}/\text{cm}^2$ )
    - c) Lamp Current
    - d) Flow rate (as gallons per minute or  $\text{m}^3/\text{hour}$ )
    - e) Chamber Temperature

- f) Operation hour meter
  - g) Fault indicators to include Lamp fault, low UV & temperature alarm, ground fault trip, wiper fault.
  - h) Alarm functions must have a simple text message display to assist in fault finding.
- i. Ultraviolet Control System Interface
  - 1) The Control system must have a minimum of the following system interface control:
    - a) Remote operation
    - b) Process interrupt features (from valves & flow meters)
    - c) Low UV dose
    - d) Flow meter input.
    - e) Auto-Restrike.
    - f) Half to full power UV setting with 24 hour/7-day settable timer.
    - g) Variable power/Dose pacing interface
  - 2) Control system must have built in data-logging capabilities to record the following information:
    - a) UV intensity required.
    - b) UV intensity measured.
    - c) Lamp current
    - d) Chamber Temperature
    - e) Flow Rate
    - f) Time and date stamp, every alarm generated.
- j. Manufacturers must maintain spare or replacement parts in the USA for the same day or not longer than next day delivery in North America.

D. Electronic Flocculation System

1. The Clear-Flow Electronic Flocculation system must be provided and installed on the recirculation piping for the swimming pools and spas. The Clear-Flow system must be a non-chemical water treatment system designed to operate as an electronic flocculant in recreational water systems. When implemented into the system, the Clear-Flow system must work to agglomerate both organic and mineral particulate resulting in filtration enhancement on all types of filtration systems. This filtration enhancement must allow for a reduction in backwashing frequency - saving water, chemicals, and energy.
2. The Clear-Flow system must be UL listed and certified to NSF/ANSI Standard 50 and documentation of such certification must be provided by the manufacturer with each system.
3. When used in a recreational water application, the Clear-Flow system must work as an electronic flocculant. By generating and propagating a low-frequency treatment signal throughout the entire plumbing system, the technology must produce an ongoing flocculation effect which will aid in a reduction in turbidity and improved clarity.

4. The Clear-Flow system's ongoing flocculation effect must enhance filtration efficiency. The flocculation effect must create larger particles allowing for a reduction in both frequency and duration of backwashing.
5. Equipment
  - a. The following components are contained in a standard Clear-Flow kit and must be provided for each system:
    - 1) ABS or SS enclosure with 3 glands (2 for signal leads and 1 for power supply)
    - 2) Signal cables complete with mounting tags (Temp. rating -40°F to +140°F) (Qty. 2)
    - 3) Stainless steel hose clamps (Qty. 4)
    - 4) Gland plug (Qty. 1)
    - 5) 2A / 250 VAC UL-listed slow blow fuse (Qty. 1)
    - 6) 4mm Allen wrench (for grub screw) (Qty. 1)
6. Clear-Flow electronic flocculation system models must be the following:
  - a. For pipes up to 3": Model # CF-300C
  - b. For 4" pipes: Model # CF-400
  - c. For 6" pipes: Model # CF-600
  - d. For 8" pipes: Model # CF-800
7. Power Requirements:
  - a. Input Voltage: 100–240 VAC
  - b. Input Frequency: 50 - 60 Hz
  - c. Power Rating: 4W for CF-300C, 5.4W for all other models
  - d. Internal Fuse Rating: 2A / 250VAC UL-Listed slow-blow
  - e. Temperature Range: -40°F to +140°F
  - f. The electrical supply must be properly grounded, or the system will not work. Hard wiring is preferred to avoid accidentally unplugging the unit.
  - g. All safety-critical components must conform to relevant CE/IEC/UL 60950, E235235. Terminals, wires, fuse, on/off switch, AC/DC PSU. PSU must be Class II protected.
  - h. Armored 2 Core Cable:
    - 1) Spec. BC 6883; 1999
    - 2) IEC 600332 –3—22 Category A
    - 3) Temperature rating - 22°F to +140°F
    - 4) ISO 9001 – 2008 Approved
8. Installation
  - a. To ensure proper start-up of equipment the Contractor must consult a Clear-Flow representative.

- b. Optimal results are achieved if the Clear-Flow system is connected to a grounded power outlet (100-240 VAC, 50-60 Hz, 4-amp) that shares the same ground as the recirculation system the unit is being installed on.
  - c. The Clear-Flow system must come with two identical signal cables. One is intended as the “T” (transmit) signal connection, the other is intended as the “A” (antenna) signal connection. The “T” signal tag must be installed downstream from the pump and before the filter. It is preferred that the “T” signal tag is mounted on a metal reducer or stainless-steel spool piece downstream of the pump. The “A” tag must be mounted on a metal structure that is electrically connected to the system loop, which may include but is not limited to a grounded filter, nearby structure, or ground rod.
  - d. The maximum cable run length from the control cabinet (typically wall mounted) to the “T” signal tag installed on the pool recirculation pipe must be 33 feet. Installation locations must be coordinated to meet this parameter.
9. The Clear-Flow system unit must be rated for -40° F + 140° F ambient operation. The unit must have no ventilation requirements and be able to be used indoors and outdoors.
10. After identifying the proper installation location for the “T” tag, the Contractor must prepare the point for strong electrical contact with the tag. The Contractor must remove any epoxy or enamel coating which may inhibit a strong connection. The Contractor to make output connections per wiring schematic. Connect “T” and “A” connections into the labeled terminals inside the enclosure.
11. The Contractor must confirm Clear-Flow system is functioning properly and operating under the following conditions. After powering on the unit, consult the LCD screen to determine the frequency and amperage output.
- a. The optimal frequency range is between 100-350 kHz.
  - b. Optimal amperage is between 1 and 5 amps.
  - c. If frequency and amperage are outside of these ranges, the Contractor must adjust capacitor switches on the upper right side inside the enclosure.
  - d. If current amperage is not achievable under 5 amps after making capacitor adjustments, the Contractor must disconnect “A” tag from inside the terminal block and repeat adjustment of capacitors.
  - e. If these steps do not result in an optimal sine wave within the recommended frequency and amperage, the Contractor must consult a Clear-Flow Representative.
  - f. As an additional means of signal verification, an oscilloscope can be used. By touching the oscilloscope probe onto the pipe near where the “T” tag is connected, signal strength and frequency can be measured. A clean, declining sine wave with minimal harmonics should be observed.
12. The Contractor must cut excess signal cable, but not to less than 10 feet (3 meters) in length. The Contractor must not coil power cord or signal cables; doing so will interfere with signal operation.
13. The Clear-Flow system must be powered on/off via a switch on the enclosure.
14. Replacement fuses must be UL-listed.
15. The complete installation must be by the manufacturer’s installation instructions and certified on-site for proper operation by the manufacturer’s representative for each system installation.

16. The Clear-Flow system requires that the electrical supply be properly grounded. The Contractor must follow Institute of Electrical and Electronics Engineers (IEEE) standards ensuring a ground resistance of 5 ohms or less.

## 2.7 WATER CHEMISTRY MONITORING AND CONTROL SYSTEMS

- A. A programmable pool chemical automation system must be provided for continuous monitoring and control of the pool(s) water chemistry and related disinfection equipment. The installation of the system must be per the manufacturer's specification. A factory trained/authorized representative must provide training to the Owner and the training must be video recorded. Water chemistry controllers must be provided by ProMinent Fluid Controls, BECS Technology, SB Control Systems, or a technically equal system capable of providing equal performance for operating functions.
  1. The water chemistry control systems for the pool and spa must feature and be capable of the following. Water chemistry controllers without these capabilities and features are not considered equal. Water chemistry control system requirements are based upon the following products: ProMinent DCM511/512, BECSys7, Chemtrol 3000.
    - a. Continuous, real-time monitoring and control of pH and ORP.
    - b. Free chlorine, total chlorine, combined chlorine in PPM, system flow rate, water chemistry balance calculations, water temperature, and other readings and control as deemed necessary for the project per this section.
    - c. The controller must have the ability to monitor and control the UV treatment system.
    - d. The controller must manage the recirculation pump with a programmable Fireman Cycle feature, which automatically turns off the Heater, UV, and Auxiliary systems prior to shutting off the recirculation pump.
    - e. Management of the recirculation pump on/off status.
    - f. Management of the heater on/off status based on real-time water temperature reading.
    - g. Management of the water level in the pool or surge tank and must provide programming to lock out chemical feed during potable water fill events.
    - h. The utilization of simultaneous ORP and PPM (bracketing) control for managing both the quantity and quality of the sanitizer/oxidizer. Controllers that do not have the ability to control simultaneously to ORP and PPM control points or that utilize an alternate chlorine set point or boost function will not be considered equal.
    - i. Actuating outputs in the following operator selectable modes: off, manual, automatic, proportional and must have a manual on fail-safe timer to ensure that if the controller is left in manual mode, the controller will revert back to automatic mode to prevent an over-feed event.
    - j. Programmable events can be time set to occur daily, weekly, or monthly.
    - k. Remote monitoring of the recirculation flow rate of the system when installed with compatible magmeters.
    - l. Provide use of flow signal as a supplemental chemical feed interlock to prevent the dosing of chemicals during a system low flow/no flow condition.

- m. The controller must continuously monitor data-log while being monitored and control via two-way remote communication.
- n. The controller must continuously calculate and display the Langelier Saturation Index and Ryznar Index using either sensor data and/or manual input for pH, temperature, total alkalinity, and calcium hardness.
- o. Programmable high and low alarm levels for control functions with operator-selectable feed lockout and alarm buzzer options.
- p. Performance and Certifications
  - 1) The controller system must be NSF/ANSI 50 listed for automatic controller equipment for swimming pools, spas, and other recreational water facilities.
  - 2) The controller system must be certified to UL61010/IEC61010, (CSA) C22.2 Number 61010-1, European Union Low Voltage Directive 73/23/EEC EN 61010-1 standards.
  - 3) The controller must automatically activate the appropriate chemical feeders in order to maintain the sanitizer/oxidizer level:
    - a) Within +/- 0.1 parts per million (PPM) or +/- 10 mV (millivolts) of oxidation reduction potential (ORP)
    - b) The pH within +/- 0.1 pH unit of the set points selected by the operator.
    - c) Set point and calibration levels must be adjustable with a keypad mounted on the front panel of the unit as well as the remote interface.
    - d) The controller must use pH sensor with +/- 0.04 accuracy in the operational range of 6.8 – 8.2 as certified by NSF.
    - e) An ORP sensor with an accuracy of +/- 3% mV as certified by NSF.
- q. System Supply
  - 1) The controller must be factory supplied with:
    - a) ORP, pH, temperature, and free chlorine and total chlorine sensors.
    - b) Provide cyanuric acid and/or hydrogen resistant free chlorine sensors available for specific application use with stabilized water or saline pools.
    - c) A relay capable of being named and programmed for controlling a UV system dosing based on a real-time combined chlorine as calculated by the readings from an amperometric free chlorine and total chlorine sensor.
    - d) A flowrate sensor to measure system flowrate.
- r. Hardware
  - 1) The controller must have:
    - a) A minimum of seven (7) fully configurable digital inputs.
    - b) A minimum of four (4) fully assignable digital outputs.
    - c) A minimum of nine (9) configurable analog inputs.

- d) A minimum of five (5), 115 VAC fully assignable relays.
  - e) The controller must be capable of expanded capabilities with an optional input/output expansion card kit.
  - f) High voltage field wiring must be through a separate NEMA 4X factory engineered and supplied enclosure that precludes direct access to controller electronics. High voltage connections must be clearly identified, and a field wiring diagram must be provided with the controller for the Contractor's reference. Controller high-voltage relay assignment parameters must be programmed at the factory prior to delivery to installation location.
  - g) The controller must include a sensing flow cell that is hydraulically designed to allow verified correct flow and consistent pressure across sensors. Flow cell will be clear PVC that is modular in concept and have the flexibility to add supplementary water chemistry sensors as desired. The sensing flow cell must include a safety flow switch sensor, water spigot, and isolation valves.
- s. Communications
- 1) The controller must have as a standard feature:
    - a) The controller must include the capability of ethernet connection and secondary wireless communication.
    - b) The controller must allow full two-way remote communication and full control of parameters.
    - c) Accessibility with a standard internet browser using a fully interactive Ethernet TCP/IP graphical interface that includes security access codes.
    - d) Real-time monitor/control with real-time auto polling, data logging, email and text alarms and providing both graphical and report formats via a personal computer, smartphone, or tablet device.
    - e) The controller must have the ability to facilitate email or text alarm notifications, historical graphing, and real-time control via a personal computer, smartphone, or tablet device.
    - f) The controller must have the ability to export a .csv file once per day with reading type, time, and reading. The export must be done via email and must include the controller serial number. Export data must include ORP, Free Available Chlorine, Total Chlorine, Combined Chlorine, pH, and Temperature.
    - g) The controller must have the ability to allow software upgrades and programming as needed in the field.
- t. The controller must communicate with the Building Automation System.
- 1) The controller must come with a standard, integral 100BaseT Ethernet connection that supports a MODBUS TCP/IP connection to 3rd party applications such as EMS, BMS, BAC and SCADA systems. The MODBUS TCP/IP connection must support access to Inputs (current readings), System

Information, Set Points, Alarm Points, Control Status and Alarms. Set Points and Alarm Points must be modifiable from the 3rd party application via the MODBUS TCP/IP interface.

u. Commissioning and Manuals

- 1) The control system must be provided with on-site start-up operator training performed by a representative trained and authorized by the controller manufacturer.
- 2) The manufacturer must supply an operation and maintenance manual describing features, operating instructions, maintenance procedures and replacement parts.
- 3) Installation of the system must be per the manufacturer's specification and no exceptions must be allowed. A factory trained/authorized representative must provide training to the owner and the training must be video recorded.

2.8 FLOW METERS

- A. Recirculation flow meter (2 required) must be provided according to the manufacturer in the filtered water return lines to each of the pools. The flow sensor must be the GF Signet 2551 insertion magmeter. Provide the coaxial cable from the sensor to the display/transmitter. Flow meter accuracy must be +/- 2% of reading. The flow instrument must have an LCD for simultaneous display of four-digit flow rate and eight-digit totalizer. Display/Transmitter capability will be part of chemical controller function or as separate Signet GF Signet 9900 display/transmitter. Signet GF Signet 9900 display/transmitter must be powered by 24VDC and provide a 4-20mA output.
- B. Backwash piping flow meter (2 required) must be a pilot, impact ball, variable area type with one piece, impact resistant machined acrylic plastic body. GPM scale must be permanently etched or imprinted on the meter. Flow rate indicator must be of stainless-steel material. The scale range must be appropriate for a specific flow rate. Pipe size to accommodate backwash rate. The backwash piping flow meter must be BLUE-WHITE series F-300 or approved equal.

2.9 WATER LEVEL CONTROLLERS

A. In Surge Tank Water Level Controller

1. Provide a water level sensing and control system for the pool(s) that will monitor the water level in the surge tank and automatically activate the auto water make-up control valve. For sensing water level and activating make-up water control valve for the pool(s), use Series ELC-810 controller housed in a watertight NEMA 4X UL94 5V UL flammability rated polycarbonate enclosure to meet IP66 and NEMA 4, 4X, 12 and 13 ratings. The controller must utilize two sensors to control water level. ELC-810 series must have a menu-driven LCD display screen and utilize a five-switch user interface for navigation through the menu. The menu must allow changing the following settings: delay to shutoff, alternate sensor option, maximum time on, manual override, delay to normal, type of sensor, high level option, flow sensor active, and sounder with alarm. Menu settings must be capable of password protection. The controller must be capable of displaying the following data: last fill time, last drain time, last alarm. The controller must be capable of determining the following: maximum time on exceeded, over current to solenoid valve, no valve/valve wiring problem, and sensor not working properly. The controller must have a low voltage interlock with auto water make-up solenoid valve and the high-level shutoff solenoid valve and must provide adjustable time delay for increasing level and manual override. The controller must require 115 VAC, 1 phase,

60 Hz power. The water level control package must be manufactured by AquatiControl Technology, model ELC-810-DS-ST-XXX (Coordinate the specific length(s) of cable required for each controller prior to ordering). Refer to drawings for additional information.

2. Provide a solenoid valve for high level sensor, normally opened, stainless-steel fitted, bronze body, 24 VAC slow closing type. Size to pipe. Interlock with automatic water level control system. Refer to the drawings for additional information. Solenoid must be by ASCO or approved equal.
3. Provide two proximity switch sensor(s) that must be sensitive to within +/- 1/8" (4mm) of nominal water level. Supply voltage to sensor must be 12V to 24V DC from controller. Current consumption must be < or = 15mA. Response frequency must be 100Hz. Maximum control output must be 200mA. The sensor operating temperature must be -25 Deg. C to 70 Deg. C. Operating humidity must range from 0% RH to 95% RH. The sensor(s) must be mounted in a 1" Schedule 80 PVC pipe (length must be determined by depth of surge tank). Sensing pipe must be mounted to surge tank wall with composite/non-metallic hangers and stainless-steel hardware. Sensing pipe(s) must be capable of being submerged under water safely. Refer to drawings for additional information.
4. Wiring from the sensor to the controller must be provided and must be connected to the terminal points mounted within a corrosion resistant, nonmetallic NEMA 4X enclosure. Wiring connections must be made through the bottom of the enclosure. The enclosure size must be no less than 8" wide x 5" high x 4" deep. The access door must be the entire front face panel of the enclosure. Confirm location in field.
5. Major components must be plugged-in using WAGO terminal blocks for ease of installation and replacement. Unit must be designed to activate a 24-volt AC solenoid valve.
6. Provide a make-up water solenoid valve, normally closed, stainless-steel fitted, bronze body, 24 VAC slow-closing type. Size to pipe. Interlock with automatic water level control system. Refer to the drawings for additional information. Solenoid must be by ASCO or approved equal.
7. Discharge of make-up water must be into a fill funnel and piping to the pool. Refer to the drawings for additional information.

**B. In Mechanical Room – Wet Well Water Level Controller**

1. Provide a water level sensing and control system for the spa that will monitor the water level in a well located in the mechanical room and which will automatically activate the auto water make-up control valve. For sensing water level and activating make-up water control valve for the spa, use Series ELC-810 controller housed in a watertight NEMA 4X UL94 5V UL flammability rated polycarbonate enclosure to meet IP66 and NEMA 4, 4X, 12 and 13 ratings. The controller must utilize two sensors to control water level. ELC-810 series must have a menu-driven LCD display screen and utilize a five-switch user interface for navigation through the menu. The menu must allow changing the following settings: delay to shutoff, alternate sensor option, maximum time on, manual override, delay to normal, type of sensor, high level option, flow sensor active, and sounder with alarm. All menu settings must be capable of password protection. The controller must be capable of displaying the following data: last fill time, last drain time, last alarm. The controller must be capable of determining the following: maximum time on exceeded, over current to solenoid valve, no valve/valve wiring problem, and sensor not working properly. The controller must interlock with auto water make-up solenoid valve and must provide adjustable time delay for increasing level and manual override. The controller must require 115 VAC, 1 phase, 60 Hz. The water level

control package must be manufactured by AquatiControl Technology, model ELC-810-DS-WW-XXX (Coordinate the specific length(s), "XXX," of cable required for each controller prior to ordering). Refer to drawings for additional information.

2. Provide a solenoid valve for high level sensor, normally opened, stainless-steel fitted, bronze body, 24 VAC slow closing type. Size to pipe. Interlock with automatic water level control system. Refer to the drawings for additional information. Solenoid must be by ASCO or approved equal.
3. Provide a proximity switch sensor that must be sensitive to within +/- 1/8" (4mm) of nominal water level. Supply voltage to sensor must be 12V to 24V DC from controller. Current consumption must be < or = 15mA. Response frequency must be 100Hz. Maximum control output must be 200mA. The sensor operating temperature must be -25 Deg. C to 70 Deg. C. Operating humidity must range from 0% RH to 95% RH. The sensor must be mounted in a 1" Schedule 80 PVC pipe 3 feet in length – the sensing pipe to then be mounted into a static line from the pool. The sensing pipe must be mounted into the static line via an adjustable collar that allows for quick level adjustments. Refer to drawings for additional information.
4. Wiring from the sensor to the controller must be provided and must be connected to the terminal points mounted within a corrosion resistant, nonmetallic NEMA 4X enclosure. Wiring connections must be made through the bottom of the enclosure. The enclosure size must be no less than 8" wide x 5" high x 4" deep. The access door must be the entire front face panel of the enclosure. Confirm location of controller in field.
5. Major components must be plugged in using WAGO terminal blocks for ease of installation and replacement. Unit must be designed to activate a 24-volt AC solenoid valve.
6. Provide a make-up water solenoid valve, normally closed, stainless-steel fitted, bronze body, 24 VAC slow-closing type. Size to pipe. Interlock with automatic water level control system. Refer to the Drawings for additional information. Solenoid must be by ASCO or approved equal.
7. Discharge of make-up water must be into a fill funnel and piping to the spa. Refer to the drawings for additional information.

## 2.10 DECK EQUIPMENT, INSERTS & ANCHOR SOCKETS

- A. The following items must be supplied unless otherwise noted. Proprietary names are to designate performance only. Equal products will be accepted.
  1. Grab rails must be provided as required in the quantities and to the dimensions as shown on the drawings. Grab rails must be fabricated of one continuous length of polished and buffed tubing. The tubing must be ASTM-A-554 grade 316L stainless-steel, 1.50-inch OD x 0.120-inch minimum wall thickness, polished and buffed to 320 grit finish and must be passivated, in compliance with ASTM A967-99, incorporating organic acid passivation techniques for maximum corrosion resistance. Bends must be smooth and free of wrinkles. Grab rails must be pretzel bend style with dimensions as indicated in the plans and as manufactured by Spectrum Products, SR Smith, Paragon or approved equal. Anchor sockets for grab rails must be of the wedge type, cast bronze or stainless-steel, 4 inches in depth and made to receive 1.50-inch OD tubing as manufactured by Paragon #28105, SR Smith #AS-200B, Spectrum #54052 or approved equal. The wedge must be cast bronze, incorporate a stainless-steel tightening bolt, and flat washer, and be designed as the sacrificial element to the anchor system. Metallic components must be passivated, in compliance with ASTM A967-99, incorporating organic acid passivation techniques for maximum corrosion resistance. Anchors

must be provided with flush closure caps and escutcheons with set screws where indicated. Escutcheons must be of the keyhole or oblong shape, similar to the casted, electro-polished stainless-steel escutcheon with set screw by Paragon #28303SS, SR Smith #IEP-200, Spectrum #35222 or approved equal.

2. Entry rails must be provided as shown on the drawings, fabricated from one continuous piece of polished and buffed ASTM-A-554 grade 316L stainless-steel, 1.50-inch OD x 0.120-inch wall thickness, polished and buffed to 320 grit finish and must be passivated for maximum corrosion resistance. Bends must be smooth and wrinkle free. Custom rails as manufactured by Spectrum Products, Paragon, SR Smith or approved equal. Custom rail submittal drawings must be complete with details of custom fabrication and installation information. Anchor sockets for railings must be of the wedge type, cast bronze or stainless-steel, 4 inches in depth and made to receive 1.50-inch OD tubing as manufactured by Paragon #28105, SR Smith #AS-200B, Spectrum #54052 or approved equal. The wedge must be cast bronze, incorporate a stainless-steel tightening bolt, and flat washer, and be designed as the sacrificial element to the anchor system. Metallic components must be passivated, in compliance with ASTM A967-99, incorporating organic acid passivation techniques for maximum corrosion resistance. Anchors must be provided with flush closure caps and escutcheons with set screws where indicated. Escutcheons must be of the keyhole or oblong shape, similar to the casted, electro-polished stainless-steel escutcheon with set screw by Paragon #28303SS, SR Smith #IEP-200, Spectrum #35222 or approved equal.
3. Spa transfer railing must be provided as shown on the drawings, fabricated from one continuous piece of polished and buffed ASTM-A-554 grade 316L stainless-steel, 1.50-inch OD x 0.120-inch wall thickness, polished and buffed to 320 grit finish and must be passivated for maximum corrosion resistance. Bends must be smooth and wrinkle free. Custom rails as manufactured by Spectrum Products, Paragon, SR Smith or approved equal. Custom rail submittal drawings must be complete with details of custom fabrication and installation information. Anchor sockets for railings must be fabricated from advanced glass reinforced copolymer, 6 inches in depth and made to receive 1.50-inch OD tubing. The anchor body must incorporate four (4) copolymer anti-rotation fins. The fins must be located on the anchor body and will prevent the anchor from spinning in the concrete. The fin must be an integral part of the anchor body. Compression anchors must be manufactured by Spectrum #42696 or approved equal from Paragon or SR Smith. Anchors must be provided with flush closure caps and escutcheons with set screws where indicated. Escutcheons must be of circular, similar to the casted, electro-polished stainless-steel escutcheon with set screw by Paragon #28303, SR Smith #EP-150, Spectrum #24095 or approved equal.
4. Stanchion posts (backstroke and false start) must be provided as required and in the quantities shown on the drawings. The posts must be a straight length of type 316L stainless-steel tubing, 1.90-inch OD x 0.145-inch wall thickness x 8-foot overall length, polished and buffed to 320 grit finish. Stanchions must be capped at one end with a closure plug containing a U-shaped hook and fitted with a stainless-steel eyebolt attached to an adjustable nickel-plated bronze sliding collar. Stanchion with sliding collar and eyebolt as manufactured by Paragon #38106 with #38301, SR Smith #10167-MG with #35-102, Spectrum Products #23614 with #23625 or approved equal. Anchor sockets for stanchions must be of cast bronze or stainless-steel, sized to receive a full 6 inches penetration of 1.90-inch OD tubing as manufactured by Paragon #38201TC, Spectrum Products #23626, Kiefer #700103, SR Smith #AS-100D or approved equal. Each anchor socket must be provided with a flush threaded, vandal proof closure cap Paragon #38201TC, Spectrum Products #23628, or Kiefer #700103C and a grounding lug with screw. Provide Paragon #38303, Spectrum Products #23630, Kiefer #700103K or

approved equal spanner wrenches for removing the closure cap. Anchors or sockets must be provided with flush closure caps and escutcheons with set screws where indicated.

5. Starting Platforms

- a. Single post starting platforms for the rollout gutter (9 required, 8 plus 1 spare) must have number plates on both sides numbered 1 through 8. Spare block must not be numbered. Platform block height must be 29-1/2" inch above water level. The platform top (24" wide x 32" deep) and intermediate sidestep (8" x 12") must be constructed of UV inhibited high density polypropylene. Confirm step is on correct side (right or left) according to plans. The surface must have a non-skid dual cross-grooved sand textured finish. The top must be permanently positioned at a 10° tilt towards the pool. Frames must be 2.5 square inch x 0.125-inch wall thickness 304 stainless-steel tubing with a powder coated finish. Refer to the Owner/Architect for color selections. Verify height of platform above water before ordering. The backstroke bar must be 1" diameter and allow both horizontal and vertical grab positions. Blocks must have raised side grip handles and adjustable back plate. Platforms must be custom blocks as detailed on the plans similar to the Track Start Quickset with adjustable backplate and hand grip kit by Paragon, Velocity with adjustable backplate and side handle option by SR Smith, Riptide with adjustable backplate and hand grip option by Kiefer, Xcellerator by Spectrum Products or approved equal. Provide starting platform with team/school logo and custom colors. Refer to the Owner/Architect for color and logo selections. Each starting platform must have two labels affixed stating "Warning – For Use by Trained Competitive Swimmers Only – Execute Shallow Racing Dives Only - Impact with Pool Bottom Can Cause Permanent Injury."
- b. Anchors sockets for single post starting platforms located on the rollout must be designed to prevent rocking. A stainless-steel cap must be provided to flush mount on the deck when platform is removed. The anchor socket must be cast T304 stainless-steel with wedge assembly consisting of a bronze wedge and T304 stainless-steel hardware. Anchors for starting platforms must be by the starting block manufacturer - Paragon Quickset Dual-wedge anchor, SR Smith Rock Solid anchor, Spectrum Products Record Breaker anchor, or Kiefer Riptide anchor.
- c. Starting platform safety covers (8 required) are designed to keep unwanted users off starting platforms. The cover is made of 1/16" thick tough, lightweight plastic with a UV stabilizer and fits 24" x 32" platform tops. The conical shape and safety orange color act as a deterrent of starting platform use. Each cover is provided with a bungee cord for securing the cover platform top.

6. Backstroke start devices (8 required) must be non-slip wedges designed to adapt to starting blocks provided. Backstroke start devices must automatically retract up and out of the water and have a 10-degree angle for secure foot placement at the race start. Backstroke start devices must be the Backstroke Start Device by Colorado Timing, Backstroke Start Device by Spectrum Products, or approved equal.

7. Lifeguard Chairs

- a. Lifeguard chairs must be constructed of UV inhibited recycled HDPE chairs. Maximum seat height must be 48"/ 66" above the pool deck. Joints must be secured using T- 316L stainless-steel screws. Refer to the Owner/Architect for color selections.

- 1) Lifeguard chairs (1 required) must be Spectrum Products Mendota #45023, Tailwind Furniture #LG510, Kiefer Forever Guard Chair #500231, SR Smith Sentry #SLGC42 or approved equal.
  - 2) Lifeguard chairs (1 required) must be Spectrum Products Mendota #45023, Tailwind Furniture #LG510, Kiefer Forever Guard Chair #500231, SR Smith Sentry #SLGC66, or approved equal.
8. Diving Stands
  - a. Diving stands for the one-meter/three-meter springboards must be provided as shown on the plans. The diving board stand must consist of heavy aluminum castings dipped in erudite chromic acid solution, followed by a 20-mil coat of baked epoxy. Finish must be touched up in the field if damaged in shipping or assembly. The roller tube and tracks must be heat-treated extruded aluminum processed by Alcoa Duranodic hard anodizing process. The bearings for the roller tube and slide must be nylon with grease fittings, adjustable and field replaceable. The diving board anchor hinges and pins must be heat treated aluminum forgings with a design tensile strength of 35,000 psi and must receive Alcoa Duranodic hard anodizing. Hinges must be designed to allow 180-deg. rotation of the diving board to the rear of the stand. Hinges must be mounted on a transverse casting machined to allow 7 leveling positions in one-inch increments. The diving board anchor bolts must be 5/8-inch diameter by 3-1/2-inch-long silicon bronze. The diving stand must be supplied with top and intermediate guard rails on two sides. The diving stand guard rails must be stainless-steel tubing firmly attached to the guard rail supports with stainless-steel band fasteners. The rails must extend to the edge of the swimming pool and the rail ends must be fitted with rubber safety tips. Fulcrum must have an adjusting wheel at one end that can be turned by hand or foot. Diving stands must be manufactured by Duraflex International Corp.
    - 1) One-meter stand (2 required) must be Durafirm #70-231-400 and included with eight (8) bronze deck anchors, Durafirm #70-231-905.
    - 2) Three-meter stand (1 required) must be Durafirm #70-231-300 and included with eight (8) bronze deck anchors, Durafirm #70-231-905.
9. Railings for the diving springboard pedestals must be provided as shown on the drawings. Rails must be custom fabricated of one continuous length of tubing wherever possible. The tubing must be Anodized Type 6061-T6 Schedule 40 Aluminum, 1.50-inch OD x 0.120-inch wall thickness – A31 Architectural Class II Clear Anodize. Surface preparation of Aluminum tubing must be M32 Medium Satin finish. Floor flanges must be J Blum #7571 heavy duty aluminum or approved equal. Anchors must be stainless-steel, Type 316L. Rails must be vented for Anodizing. Welding must be in accordance with American Welding Society Code D1.1-94. Welding electrodes must be Aluminum 5356. Welding slags, burrs and splatter must be removed from handrail surfaces and exposed welds must be ground smooth. Dimensions must be field verified prior to fabrication.
10. Diving boards (3 required) must be an aluminum extrusion type springboard. The diving boards must be a Maxi-Flex Model "B" diving board as manufactured by Duraflex International, Inc., #66-231-330 or approved equal. The diving board must be 16 feet long and 19-5/8 inches wide. The top surface must be finished with three coats combined with a mixture of sand and white aluminum oxide to affect the non-skid surface with 200 perforations.
11. Surge tank access hatch (1 required) must be provided as shown on the drawings. The access hatch must be a single door 3'-2" x 2'-6" with 1" fillable pan to receive ceramic tile

and grout or concrete fill to match the surrounding deck. The frame must be ¼ inch extruded aluminum with built in neoprene cushion and continuous anchor flange. Door must be ¼" aluminum plate reinforced with aluminum stiffeners as required. The door must be equipped with heavy continuous stainless-steel hinges and must have compression spring operators for easy operation. The door must open to 90 degrees and lock automatically in that position. The door must be built to withstand a live load of 150 lbs. per square foot and equipped with a continuous Type 316L stainless-steel hinge, tubular type, and an automatic hold open arm with release handle. Hardware must be type 316L, 18-8, stainless-steel. A flush lift handle and a snap lock with removable key wrench must be provided. Factory finish must be mill finish with bituminous coating applied to the exterior of the frame. The access door must be Type TER-3 single leaf pan type door as manufactured by the Bilco Company.

12. Sleeves for surge tank valve extensions must be Spectrum Products Valve Extension Body #1910387 with Lid and Key #36450, or Spectrum Products Bronze Anchor Kit 1.90-inch O.D. x 6-inch-deep Anchor (field modification required) with Lid and Key #23638-00.
13. Surge tank ladder must be provided for the depth of the surge tank as indicated on the drawings and include a pull-up handrail. The ladder and handrail must be constructed of polypropylene that conforms to ASTM-D4101. Ladders must meet all ASTMOC-497 load requirements and OSHA 1910.26 and 1910.27 specifications. The ladder must be fastened to the floor and wall with 1/2" x 3-3/4" 316 stainless-steel anchors and installed per manufacturer's instructions. Adjustable mounting bracket must be 8". Aluminum reinforced copolymer polypropylene rail must be 1-3/4" x 1-3/4" diameter. Steel reinforced copolymer polypropylene ladder rungs must be 1-5/8" x 1-1/4" diameter with molded finger grips, 12" O.C. The ladder must be manufactured by Lane International Corporation or approved equal.
14. Backwash catch basin ladder rungs must be ½ inch Grade 60 steel encased with co-polymer polypropylene plastic as manufactured by M.A. Industries, Inc, or approved equal.
15. Pool Lift
  - a. The pool lift (1 required) must be a battery powered handicap lift with footrest assembly. Lift must comply with the Americans with Disabilities Act Access Guidelines (ADAAG), be capable of lifting 300 lbs, and must include a seat belt assembly. The following accessories must also be provided: caddy, arm rest assembly, lift cover, extra battery, wired controls. Stainless-steel components must be 304L. Lift must be a SR Smith Splash Aquatic Lift Extended Reach #370-0000, Spectrum Products Horizon Long Reach BP 300 #2030086, Aqua Creek Products LLC Mighty 400 #F-MTY400 or approved equal. Confirm pool lift fits on pool perimeter and operates correctly.
  - b. The anchor for the pool lift must be furnished with the lift. The anchor must be an embedded sleeve made of glass reinforced copolymer, 300 series stainless-steel, or bronze. The depth of the anchor must be 6 inches, and the anchor must include a lug for proper bonding with the pool structure. The anchor must be installed in accordance with manufacturer's instructions, including required or recommended support footings. Manufacturer must provide an anchor cap and key for times when the lift is not in use. Sockets must be provided as stainless-steel or cast bronze for swimming pool accessories.

16. Provided a ship's ladder or Lapeyre Stair in the size and shape shown on the drawings. The ladder must be aluminum with aluminum stiffeners if required by OSHA. Refer to the Architect.

## 2.11 LOOSE EQUIPMENT

- A. The following items must be supplied unless otherwise noted. Proprietary names are to designate performance only. Equal products will be accepted.

1. Competition floating lane ropes must be as shown on the drawings and described in these specifications. Floating lane ropes must be a non-turbulent type with wave quelling floats and 3/16" stainless-steel coated cable. Floats must be injection-molded polyethylene. Colors to alternate the length of the pool with a contrasting solid color for the final 15 feet. Owner/Architect to select colors from standard color chart. Floating lane ropes must be provided as completely assembled and installed with take up reel, type 304 stainless-steel spring and cable lock, hooks, and wrench. 5/8" wrench must be made of a forged steel shaft with a polished chrome finish. The take up reel must be constructed of type 304 stainless-steel. The spool must be a bronze nickel-plated casting with a nylon sleeve. Floating lane ropes must be similar to Competitor Swim Products, Competitor Gold Medal 6" Racing Lanes, Kiefer Advantage II Racing Lanes, or Anti-Wave Maximum Racing Lanes, Malmsten Gold Pro Racing Lanes pre-assembled and sized to fit the length of the pool. Provide lane rope extension hooks as detailed on the drawings complete with protective sleeve. Floating lane ropes with disconnects for shorter distance is acceptable. Provide contrasting disks located 15 meters from each end to meet resurfacing requirement. This requirement must be met for each possible course length.

### Quantities:

Competition Pool:      Provide 9 at 25 yards  
                                 Provide 9 additional extension hooks

2. Cup anchors for floating lane ropes must be incorporated into the perimeter overflow system. Cup anchors must be 316L stainless-steel with stainless-steel threaded eyebolts. The heavy-duty cup anchors must be 3-3/8-inch diameter. Cup anchors must be Spectrum Products #58280, SR Smith #WA-100, Paragon #14-503 or approved equal.
3. Backstroke flags:
  - a. Backstroke flags must be made of Vinyl material, triangular in shape (12" wide x 17" long), and alternating in color, butted end to end on vinyl covered stainless-steel cable. Submit standard color samples for review and approval by the Owner/Architect. The cable must be attached to a stainless-steel take up reel at one end and a stainless-steel tension spring end-fitting at the other. Equipment must be similar to the following items by Kiefer: backstroke flag (#600808), racing lane cable (#210210), take-up reel (#210218S), and spring end fitting (#210219) or approved equal from Competitor Swim Products. Provide backstroke flags with team/school name on one side and lane identification on the other.
4. Lane Rope Storage Reel
  - a. Lane rope storage reel must be fabricated from two powder-coated enclosed aluminum wheels joined together by a 1-1/4-inch aluminum axle. This unit must ride easily on four 6" stainless-steel casters with individual brakes. The reel must have a collapsible tow handle for safe movability. The storage reel should be able to hold 902' of 4" lane

ropes or 492' of 6" lane ropes. The storage reel must come assembled. The correct number of storage reels must be provided to store the lane lines. Lane line storage reel must be Competitor Swim Products Elite Stor Lane Reel #200 850 with Competitor storage reel cover #200 861, SR Smith XL Capacity Lane Line Reel #38000 with SR Smith lane line reel cover #36100 or approved equal.

5. Pace Clocks
  - a. Battery powered pace clock (1 required) must be a portable type with stand, 31-inch octagonal face with a stabilizing foot and a built-in recessed handle. The pace clock must be the Kiefer, 31" pace clock #210403 or approved equal. Color selections made by the Owner/Architect.
6. The lifeline must be 3/4-inch blue and white polyethylene rope with floats that are 5-inch diameter by 9-inch-long. Floats must be spaced on five-foot centers. Metallic rope hooks must be stainless-steel. Provide lifeline at five-foot break between shallow and deep water as shown on the drawings. Lifeline must be equal to Recreonics #14-438.BW or Lincoln Aquatics #44-115 safety line rope, Recreonics #14-381, Lincoln Aquatics #44-190 or Competitor Swim #350EZBW locking 5" x 9" floats, and Recreonics #14-456 or Lincoln Aquatics #44-125 rope end hooks.
7. T-wrench for operation of valve extensions must be fabricated of 3/4" diameter SCH 40 stainless-steel pipe. The T-wrench must be 4'-0" in length with a 24" long welded "T" handle. The wrench must be fitted with a 3/4" square stainless-steel male end, 1" in length, for operation of valve extensions at the surge tank. Two complete T-wrenches must be provided.

## 2.12 MAINTENANCE EQUIPMENT

- A. The following items must be supplied unless otherwise noted. Proprietary names are to designate performance only. Equal products will be accepted.
  1. Wall brush (1 required) - Brush backing must be a flexible polyethylene material with five (5) rows of nylon bristles. The pool brush holder must be permanent mold cast aluminum with hydrofoil flap. The holder must have stainless-steel screws to facilitate brush changes. Handle bracket must be quick detachable mount to fit standard 1 1/4 or 1 1/2 inch diameter handles. Brush must be Recreonics #10-135, Lincoln Aquatics #31-020, or approved equal.
  2. Skimming net (1 required) - Skimmer head must consist of one-piece molded plastic frame with a reinforced, integral handle bracket suitable for quick attachment to a standard 1 1/4 or 1 1/2 inch diameter handle using bolts and wing nut. The standard nylon net must be attached to the frame using the groove and spline method. Net depth must be 16 inches minimum in the center. Skimming net must be manufactured by Recreonics #10-124, Lincoln Aquatics #31-103 or approved equal.
  3. Telescopic Poles (1 required) - Cleaning tool handle must be of the telescopic design and fabricated from corrosion resistant, high-quality anodized aluminum. Poles must be fully adjustable, to desired length, with a simple twist of a cyclac threaded locking device. Poles must consist of a 1-inch tube fitted inside a 1 1/4 inch tube and be adjustable from a range of 8 ft. to 16 ft. Handle must be adjustable from 8 ft. to approximately 16 ft. having a threaded bushing type clamp to lock handle at desired position. Poles must be Recreonics #10-323, Lincoln Aquatics #30-050 or approved equal.
  4. Portable Vacuum Poles

- a. Stainless-steel poles (1 required) –Vacuum head attachment poles are to have a heavy-duty 1¼ inch stainless-steel handle with special brass male and female threaded inserts on the ends. Poles must be 8 ft. each, totaling a 24 ft. length for vacuum head attachment. Poles must be Recreonics #10-330 with female thread adaptor Recreonics #10-335 or approved equal.
5. Test Kits
  - a. Provide two (2) test kits:
    - 1) The first test kit must feature liquid reagents, a color comparator, waterproof instructions and treatment charts, chemistry guide and water gram. Test kit to have the ability to test for free and total chlorine (0.5 – 5.0 ppm), bromine (1-10 ppm), pH (7.0 – 8.0), acid and base demand, total alkalinity, calcium hardness and cyanuric acid. The test kit must be Taylor Complete 2005 test kit or approved equal.
    - 2) The second test kit must be photometric and utilize tablet reagents for stability that will allow accurate measurement of free and total chlorine (0-10 ppm), bromine, pH, alkalinity, calcium hardness, and cyanuric acid. The test kit must have solid-state digital electronics and built-in filters. The test kit must be direct reading with automatic blank settings, automatic power cut-off, and store the last 10 results in nonvolatile memory. Provide LMP106C Pooltest 6 with Hard Carry Case Kit and LMC001 Check Standard by Lumiso, AquaPRO 6 Test Kit manufactured by Orbeco-Hellige Inc and Reference Standard Kit (LP275680) or K-2010-CH by Taylor Technologies or approved equal.
6. Vacuum Cleaner
  - a. Vacuum cleaner (filtered water return to pool) - (1 required) must be complete with a 36-inch dual manifold head with 50 feet of 1-1/2-inch floating hose. Hose must be Recreonics, #10-414, Lincoln Aquatics #29-114 or approved equal. 24 ft. stainless-steel pole must be available for attachment. The portable cartridge vacuum cleaner system must include a 155 square foot T-316 stainless-steel up-flow single cartridge filter, a 1 HP self-priming thermoplastic self-priming pump 1-1/2-inch suction and discharge connection and 110 cubic inch strainer capacity. Cartridge must be Harmsco #ST/155 or approved equal. The system must be provided with one spare cartridge filter. The pump motor is 115-volt single phase, open-drip proof and must be UL and NSF listed. The pump motor must be provided with a 120-volt Hubbell switch, weatherproof switch cover, in-line pre-wired GFCI and a 100' power cord. The cord must be wired to a 20-amp, 115-volt switch which must be mounted on the pump motor. Interconnecting pipe and fittings must be schedule 40 PVC. The entire assembly must be bolted to a T-316 stainless-steel cart and must have pneumatic wheels with grease fittings and roller bearing hubs. The unit must be Recreonics #10-806, Lincoln Aquatics #27-010 or approved equal. Accessories must include a 1-1/2-inch x 25 ft. discharge hose with stainless-steel hose clamp. Hose must be Recreonics #10-440, Lincoln #29-140 or approved equal.
7. Robotic Pool Cleaner
  - a. Provide one (1) dual pump floor, wall, and waterline only automatic commercial robotic pool cleaner. The cleaner must provide up to 5,820 square feet per hour of cleaning coverage as well as filter up to 9,000 gallons per hour. Unit must have 4-,

6- and 8-hour cleaning cycles. The pool cleaner must be provided with 131 feet of cable, PVC brushes, two (2) bottom loaded filter bags and a remote control for "spot cleaning". Features must include zero-depth entry sensor and transportation caddy. Unit requires a dedicated 120-volt circuit receptacle with GFCI to transform which provides 27 volts the automatic pool cleaner. The automatic pool cleaner must be #9999359-W120 WAVE 120 as manufactured by Maytronics USA or approved equal.

8. Stainless-steel Cleaner - Provide a stainless-steel cleaner. The cleaner must comprise of one (1) gallon of organic passivation solution. It must be complete with instructions for proper maintenance of stainless-steel surfaces and material safety data sheets for the passivation solution. The cleaner must be the Spectra-Clean System 2 as manufactured by Spectrum Products. Product must be applied with 3M scouring pad, or equivalent.
9. Stainless-steel Protective - Provide protective coating on swimming pool rail goods. The coating must provide envelope protection. Surfaces coated must be clean and dry and free of oil, films, grease, silicones polishes and waxes, anything that leaves a film on the surface. Care must be taken not to clean the surface with a type of cleaner or solvent that may leave behind a thin film. The coating must be applied at approximately ½ mil WFT yielding a dry film thickness of 3-5 microns. Three coats are required. Allow to dry to touch between coats. The coating must be ProtectaClear-AF as manufactured by Everbrite and distributed by TMI Salt Pure Corporation or Spectra Shield as manufactured by Spectrum Products.

## 2.13 SAFETY EQUIPMENT

- A. The following items must be supplied unless otherwise noted. Proprietary names are to designate performance only. Equal products will be accepted.
  1. Ring buoy and extension rope (2 required) – Buoy must be 24-inch diameter vinyl clad PVC foam with a metal ring molded inside. Buoy must have a 3/8-inch polyethylene rope attached to it at four points and be a minimum 60 feet in length. Preserver must be U.S.C.G. approved. Buoy and rope must be mounted at each lifeguard chair on hooks. Ring buoy must be Recreonics #12-252, Lincoln #44-075 or approved equal. The throw rope must be Recreonics #12-261, Lincoln Aquatics #42-050, or approved equal.
  2. Life hook and pole (1 required) – Life hook must be an anodized aluminum 3/8-inch OD "shepherd's crook" with a 1-1/8-inch OD handle attachment suitable for a 1¼-inch 16 ft. aluminum extension pole. Hook must be of looped construction. Each pole must be provided with a set of spring type stainless-steel pole clamps for mounting on each lifeguard chair. Life hook must be Recreonics #12-239, Lincoln #42-060 or approved equal. Pole clamps must be Recreonics #10-353, Lincoln #30-135, or approved equal.
  3. Spineboards (1 required) - Spineboard must be 72" long x 20" wide, constructed of 100% virgin high density polyethylene. The design must provide stiffness and torsional rigidity while remaining lightweight. The spineboard must accommodate up to 500 lbs and must feature customizable buoyancy that allows users to adjust the buoyancy by inserting polyethylene foam rods (supplied with the spineboard). There must be (10) handholds around the perimeter of the board. The spineboard must be supplied with one (1) 2-piece head immobilizer, one (1) head strap, four (4) body straps, one (1) head immobilizer with head bed, and two (2) flotation rods. The spineboard must be CJ Rescue 6 package as manufactured by CJ spineboard or approved equal. Provide one (1) set of heavy-duty stainless-steel utility hooks per spineboard for storing the spineboard at a convenient and readily accessible location near the pool (Recreonics #10-362).

4. First aid kit (1 required) - First aid kit must be a 24-unit kit per American Red Cross standards as manufactured by Swift First Aid, Recreonics #12-013, Lincoln #47-084 or approved equal.
5. Bloodborne pathogen kit (1 required) – Bloodborne pathogen kit must include a protective gown, medical-grade latex gloves, face mask with eye shield, antimicrobial hand wipes, and body fluid clean-up supplies. The kit must include a wall-mountable hard storage case. Bloodborne pathogen kit must be Recreonics #12-041, Lincoln Aquatics #48-056 or approved equal.
6. Rescue tube (4 required) - Provide one rescue tube for each lifeguard chair. Rescue tube must be Recreonics #12-293, Lincoln #42-030 or approved equal.
7. Safety eyewash station (1 required) - Safety eyewash station must be a self-contained system in which eyewash bottles are securely positioned in a portable holder. Eyewash bottles must be 32 ounces and easily removable from case, and must contain a sterile, saline solution with the ability to neutralize a varying quantity acids or caustics. Eyewash stations must be equipped with a double back screw and holes for easy mounting in location determined by the Architect. Stations must be Recreonics #12-033, Lincoln Aquatics #49-026, or approved equal.
8. Safety eyeglasses - Provided a safety eyeglass dispenser station containing ten (10) pairs of safety glasses. Eyeglasses must be ANSI/OSHA accepted.
9. Bag Valve Masks – Provide two (2) bag valve mask assistant resuscitation systems, one size Adult (1500ml tidal volume) and one size Infant/Child (450ml tidal volume). Product must be a latex free disposable bag mask unit with support strap, transparent patient valve, and textured surface to eliminate slipping. Integral swivel valve, available with a closed reservoir system. Standard pack includes resuscitator, oxygen reservoir and a transparent bag for storage. Bag Valve Masks must be Ambu SPUR II or approved equal.
10. AED – Provide one (1) Automated External Defibrillator and one (1) trainer AED corresponding to the chosen AED per facility level for the aquatic facility. Product location must be coordinated with the Owner and Architect. AED must be Recreonics #12-430, Lincoln Aquatics #48-013, or approved equal and must have an available training AED device. AED Cabinet must be Recreonics #12-434, Lincoln Aquatics #48-023, or approved equal.

#### 2.14 THERMOMETERS

- A. The following items must be supplied unless otherwise noted. Proprietary names are to designate performance only. Equal products will be accepted.
  1. Portable thermometer (2 required) must be a molded ABS plastic tube body type with the ability to measure temperature in both degrees Fahrenheit and Celsius. A 3 ft. polyethylene cord must be attached to thermometer. Thermometer must be manufactured by Pac-Fab/Rainbow #R141036 or approved equal.
  2. The inline thermometer must be near the heating loop and must have a 9-inch adjustable angle with a minimum 6-inch stem. There must be a minimum of two (2) thermometers per loop and must have ability to read temperature in both degrees Fahrenheit and Celsius. Thermometers must be Recreonics #32-702, Lincoln Aquatics #21-125, or approved equal.

#### 2.15 SWIMMING POOL FINISHES

- A. Swimming Pool Tile - Reference specification section 131103, Swimming Pool Tile.

## **2.16 WATERPROOFING**

### **A. Products**

1. Interior surfaces of gutter, surge tank and backwash pit with NO additional finishes: Apply two (2) coats of Vandex BB White, Xypex Modified, Xypex Megamix I, Miracote BC Pro or Basecrete directly to surface of gutter, surge tank and backwash pit.

### **B. Surface Preparation**

1. Surface must be structurally sound and free of foreign substances and debris that could reduce or impair adhesion. Surfaces must be roughened by sand blasting or water blasting. Shot blasting, scarifying, or grinding can also be accepted methods of surface preparation. Surface defects or holes must be patched per manufacturer's recommendations.
  - a. National Plasterers Council Surface Preparation Definitions
    - 1) Pressure Washing: The washing or cleaning of a surface by a stream of water ejected from a nozzle at high velocity, typically in the range of 1,000 psi – 4,000 psi.
    - 2) Water Blasting: The cutting, abrading, or removal of a surface or substrate by a stream of water ejected from a nozzle at ultra-high velocity, typically in the range of 10,000 psi – 40,000 psi.

### **C. Application**

1. Do not apply materials under conditions where the ambient air temperature is less than 40 degrees Fahrenheit, or to a frozen substrate.
2. The mixing of products, quantities and application procedures must be done in accordance with the manufacturer's recommendations.

## **2.17 SEALANTS**

- A. Provide sealed expansion joints as shown on the pool and pool structural drawings or noted on the construction/expansion joint layout, and as required. Expansion joints must be constructed and sealed as indicated and in accordance with the manufacturer's recommendation. Sealant must be manufactured by LATICRETE International, Inc., Mapei, or Deck-O-Seal.

1. For submerged joints:
  - a. Latasil, one component, neutral cure, high performance, 100% silicone sealant in the color(s) as selected by the Owner/Architect. Must be used in conjunction with Latasil 9118 Primer per manufacturer's recommendations.
  - b. Mapeil T, 100% silicone sealant in the color(s) as selected by the Owner/Architect.
2. For joints behind the coping, or other horizontal deck joints:
  - a. Deck-O-Seal, two component (gun-grade or pourable, self-leveling), high resilience, non-sag, non-flowing, polysulfide-based sealing compound in the color(s) as selected by the Owner/Architect. Must be used in conjunction with Rezi-Weld LV per manufacturer's recommendations.

### **B. Material Storage**

1. Materials must be stored in the original unopened factory containers in a cool dry location at 60 to 80 degrees F. Protect from the elements and the hazards of construction.

**C. Joint Preparation**

1. Clean the joints of deleterious material, to sound, clean and dry substrate.
2. If the joint is existing and part of a renovation, inspect and verify that joints have firm, solid sub-surface support up to the underside of the structural slab. Identify those joints that do not have such support and fill voids under the joint with a cement slurry (being careful not to fill the joint space itself) consisting of the following:
  - a. Two (2) parts water (by weight) 10 gallons
  - b. One (1) part Portland cement 47 lb. bag
  - c.  $\frac{1}{4}$  to  $\frac{1}{2}$  part bentonite  $\frac{1}{2}$ , 50 lb. bag
3. In mixing the slurry it is recommended that the water be added first, then the cement, and finally the bentonite. The more bentonite the faster the set. Do not get the slurry on the joint itself.
4. Joint must be formed or filled with an approved, resilient, non-asphaltic, closed cell, polyethylene joint filler material down to firm substrate. Allow space at the top of the joint for the installation of approved closed cell polyethylene backer rod and install same to the required depth below the surface of the slab to control the depth of the sealant bead to within manufacturer requirements.

**D. Surface Preparation**

1. Concrete surfaces to receive sealant must be fully cured, clean, dry, and free of dirt, dust, curing compounds and other foreign material that might compromise the adhesion and performance of the sealant. Curing aids, form release agents and joint former residue must be completely removed, if necessary, by sand blasting and/or grinding. Loose dust must be brushed off.
2. Prime surfaces to receive Latasil sealant with Latasil 9118 Primer prior to sealant application, and surfaces to receive Deck-O-Seal sealant with P/G Primer prior to application.

**E. Application**

1. Apply sealant in accordance with the manufacturer's recommendations.
2. Tool the joint immediately after application to ensure a firm, intimate contact with the joint interface.
3. Remove excess sealant and smear from adjacent surfaces with Xylol or Toluol before sealant cures.
4. After the sealant has fully cured (generally a minimum period of five days at 72 degrees and 50% humidity), paint the surface of the sealant with a chlorine resistant chlorinated rubber or equivalent pool paint, in a compatible color as selected by the Owner/Architect. NOTE: Latasil cannot be painted.

**2.18 UNDERWATER LIGHTS**

- A. Underwater lights must be equivalent to 100/500 watts of incandescent light. Underwater lights must be UL listed and, in the quantities, shown and as detailed in the construction drawings and as described in these specifications. Coordinate for proper installation. Refer to the drawings for quantities and locations.

- B. The pool underwater lights must be 120VAC or 12VAC, 31 watts LED-type, and equivalent to 500 watts of incandescent light. Fixture housing must be stainless-steel construction with minimum wall thickness of 0.020 inch per UL 676 underwater pool lighting standard. The niche must be stainless-steel with cast brass mounting ring or PVC plastic with stainless-steel mounting ring. Brass construction pressure grounding lug on interior and exterior services. Lens must be 8-3/8 diameter clear tempered heat resistant glass. The gasket must be single piece "U" shaped santoprene or silicone. Fasteners must be silicon-bronze or stainless-steel. The light fixture must be supplied with a #16-3 STW (120V) or 12-3 SJTW (12V) submersible cord with ground wire positively grounded inside the fixture. Cord entrance must be a watertight seal and epoxy encapsulated. Light fixture must be IntelliBrite Architectural Series White LED pool light series by Pentair Commercial Pool and Aquatics or approved equal. Underwater lights must be provided with cord length as required to allow for deck relamping of fixtures.
- C. The spa underwater lights must be 120VAC or 12VAC, 18 watts LED-type, and equivalent to 100 watts of incandescent light. Fixture housing must be stainless-steel construction with minimum wall thickness of 0.020 inch per UL 676 underwater pool lighting standard. The niche must be stainless-steel with cast brass mounting ring or PVC plastic with stainless-steel mounting ring. Brass construction pressure grounding lug on interior and exterior services. Lens must be clear tempered heat resistant glass. The gasket must be single piece "U" shaped santoprene or silicone. Fasteners must be silicon-bronze or stainless-steel. The light fixture must be supplied with a #16-3 STW (120V) or 12-3 SJTW (12V) submersible cord with ground wire positively grounded inside the fixture. Cord entrance must be a watertight seal and epoxy encapsulated. Light fixture must be IntelliBrite Architectural Series White LED spa light series by Pentair Commercial Pool and Aquatics or approved equal. Underwater lights must be provided with cord length as required to allow for deck relamping of fixtures.
- D. Junction boxes must be provided in the quantities required and must be located at least 8" above the pool coping and 5' from the pool edge. Refer to the Electrical drawings. Cord length must be sufficient to run from fixture to the junction box with sufficient cable in the niche to re-lamp the fixture on the deck. Provide junction boxes that must be installed by Electrical.

## 2.19 DIVE HARNESS SYSTEM

- A. Provide a complete dive harness spotting system for the 1-meter springboards. The diving harness system and all components must be supplied by Springboards and More or approved equal.
- B. Beam Clamps: Provide beam clamps as required for attachment to beams/purlins overhead. Clamps must be sized as appropriate for mounting to the roof structure (Refer to Architectural drawings) and must be constructed entirely from heavy-gauge cold-rolled steel provided with a corrosion resistant factory powder coat finish. Three (3) clamps required per dive harness. Beam clamps must be by Springboards and More or approved equal.
- C. Pulleys: Provide single and double pulleys designed for use with diving harness equipment. Pulleys must have a strong swivel mechanism attached at the top that allows spotting equipment to move effortlessly. Pulleys must be constructed of high strength aluminum alloy with a super-strong sheave and axle fitted with Oilite bushing. The single pulleys must have a working load limit of 1,000 lbs. and a break load of 10,000 lbs. The double pulleys must have a working load limit of 1,200 lbs. and a break load of 12,000 lbs. Single pulleys must be "RSI 3" Single Rescue Pulley" and double pulleys must be "RSI 3" Double Rescue Pulley" as provided by Springboards and More or approved equal. Each pulley must be provided with a quick link used to attach the pulley to the beam clamps. Quick link must be Maillon-Rapide 10mm Quick Link by Springboards and More or approved equal.

- D. Spotting Rope: Provide 3/8" spotting rope as shown on the drawings. Spotting rope must be of kernmantle construction and designed for low elongation. Spotting rope must have a nylon or polyester 16-strand sheath combined with a Type Six double-twist continuous strand core to provide high tensile strength. Core strands must have opposing twists to prevent unnecessary spinning. Spotting rope must be "Blue Water Static Kernmantle Spotting Rope" as provided by Springboards and More or approved equal. The rope must be provided with swivel hooks to attached spotting rope to spotting or twisting belt. Swivel hooks must be AAI/Spaulding Cast stainless-steel spotting belt swivel hook by Springboards and More or approved equal.
- E. Spotting Belt: Provide one (1) adjustable spotting belt per dive harness assembly. The belting, hardware and fabrics of the spotting belt must be designed for use in water. Adjustable spotting belt must be "SAM's Spotting Belt" as provided by Springboards and More or approved equal.
- F. Twisting Belt: Provide one (1) twisting belt per dive harness assembly. The twisting belt must be designed for use in water. The rotating rings must be cast of high tensile strength aircraft aluminum alloy. Inner belts must be made of high strength nylon parachute webbing and open from both the front and back for quick-fit adjustments. High strength, cinch-type buckles must be made of forged steel designed for use in parachute harnesses. Two (2) 4 ft nylon webbing straps with swivel belt clips must be provided. The twisting belt must be "AAI Padded Twisting Belt" as provided by Springboards and More or approved equal.
- G. Nylon Boat Cleat: Provide two (2) nylon boat cleats for dive harness concealment. The boat cleat will provide a tie-down point for the dive harness spotting rope (9.5mm) on each side of the pool. Each boat cleat must be located at a height of seven (7) feet above the finished pool deck. The boat cleat must be 4" in length designed to support 3/8" line. Construction must be injection molded, open base, glass-filled nylon with two mounting holes. Mounting hardware must be stainless-steel.

## 2.20 POOL HEATERS

- A. Provide the pool water heating system. Heating system to include piping, heaters, controls, gauges, thermostats, control valves and wiring required to draw water from the recirculation piping, heat the water and return it back to the recirculation piping. Interlock pool heating system with pool recirculation pumps.
  - 1. Pool heater manufacturer representative must be on site to start and adjust pool heater(s). Copies of the startup report must be sent to the Architect/Engineer.
  - 2. The heater(s) system must consist of an indirect gas fired boiler with an internal pumped bypass as shown on the drawings. Proposed substitutions must include a mechanical drawing incorporating required changes in layout, piping valves, gas, venting and electrical connections. The cost of such changes must be included in the price of the substitute. Confirm by 1/4-inch scale shop drawing that the alternate heater(s) must be provided will fit within the available space.
  - 3. The pool heater(s) must have an input rating as shown on the drawings and must be orificed for operation on (Natural Gas) (L.P. Gas).
- B. Indirect Gas Fired Boiler with Pumped Bypass
  - 1. Basis of Design: Lochinvar Aquas, Raypak XTherm Indirect, or approved equal.
    - a. The indirect heater(s) package must be as follows: A high efficiency, condensing boiler piped to a dedicated two (2) heat exchanger package. The boiler side piping

- must be stainless pipe with a circulating pump, and appropriate components and fittings for safe and efficient delivery of indirect heat transfer to the pool water.
- b. The bypass pump must be constructed of cast iron and operate on a 120-volt, 60 Hz, 1 phase power supply (unless otherwise specified). The pump must be factory wired to run with intermittent pump operation.
  - c. The expansion tank must be of a bladder type design and must be sized adequately to allow for the expansion of the boiler water when heated.
  - d. The flow switch must be of a paddle type design and must be wired to the internal boiler control safety circuitry so as not to allow the boiler to operate when there is not sufficient flow.
  - e. The automatic fill valve with pressure reducer must be factory set for 15 psi and must allow fresh water to be added to the boiler system only when the water pressure has fallen below the pressure setting.
  - f. The pressure relief valve must be ASME Certified and have a setting of 50 psi.
  - g. The temperature and pressure gauge must be capable of reading temperature in both degrees Fahrenheit and degrees Celsius. The Pressure units must be read in pounds per square inch (psi). The entire assembly must be mounted on a 3" channel iron skid to facilitate handling and installation.
  - h. The heat exchanger must be as follows:
    - 1) The standard titanium heat exchanger must be of a plate and frame, or shell and tube design constructed of a carbon steel frame and utilizing a titanium plate pack with EPDM gaskets.
  - i. The boiler must be as follows:
    - 1) The boiler must bear the ASME "H" stamp for 160 psi working pressure and must be National Board listed. There must be no banding material, bolts, gaskets, or "O" rings in the header configuration. The stainless-steel combustion chamber must be designed to drain condensation to the bottom of the heat exchanger assembly. A built-in trap must allow condensation to drain from the heat exchanger assembly.
    - 2) The boiler must be certified and listed by C.S.A. International under the latest edition of the harmonized ANSI Z21.13 test standard for the U.S. and Canada. The boiler must comply with the energy efficiency requirements of the latest edition of the ASHRAE 90.1 Standard and the minimum efficiency requirements of the latest edition of the BTS2000 Standard. Models must operate up to 96.2% thermal efficiency with pool water temperatures below 100°F. The boiler must be certified for indoor installation.
    - 3) The boiler must be constructed with a heavy gauge steel jacket assembly, primed and pre-painted on both sides. The combustion chamber must be sealed and completely enclosed, independent of the outer jacket assembly, so that integrity of the outer jacket does not affect a proper seal. A burner/flame observation port must be provided. The burner must be a premix design and constructed of high temperature stainless-steel with a woven metal fiber outer covering to provide modulating firing rates. The boiler must be supplied with a gas valve designed with negative pressure regulation and be equipped with

- a variable speed blower system, to precisely control the fuel/air mixture to provide modulating boiler firing rates for maximum efficiency.
- 4) The boiler must have the following turndown ratios:
    - a) On packages with 750,000 Btu/hr input must be capable of full modulation firing with a turndown ratio of 15:1.
    - b) On packages with 1,000,000 through 1,250,000 Btu/hr input must be capable of full modulation firing with a turndown ratio of 20:1.
    - c) On packages, with 1,500,000 through 2,000,000 Btu/hr input must be capable of full modulation firing with a turndown ratio of 25:1.
  - 5) The boiler must operate in a safe condition at a de-rated output with gas supply pressures as low as 4 inches of water column.
  - 6) The boiler must utilize a 24 VAC control circuit and components. The control system must have an electronic display for boiler set-up, boiler status, and boiler diagnostics. Components must be easily accessed and serviceable.
  - 7) The boiler must feature a control panel with an LCD touch screen display. The boiler must have password security, pump delay with freeze protection, pump exercise, domestic hot water prioritization and PC port connection. The boiler must allow 0-10 VDC input connection for BMS control and have built-in "Cascade" to sequence and rotate while maintaining modulation of up to eight packages without utilization of an external controller. Supply voltage must be 120 volt/60 hertz/ single phase unless otherwise noted.
  - 8) The boiler must be equipped with two terminal strips for electrical connection. A low voltage connection board for safety and operating controls. A high voltage terminal strip must be provided for supply voltage.
  - j. The heater(s) must be supplied with venting in accordance with the National Fuel Gas Code, ANSI Z223.1/NFPA 54 latest edition. Refer to Mechanical.
  - k. The boiler must have an independent laboratory rating for Oxides of Nitrogen (NOx) of 20 ppm or less corrected to 3% O<sub>2</sub>. The manufacturer must verify proper operation of the burner, controls, and the heat exchanger by connection to water and venting for a factory fire test prior to shipping.

### PART 3 - EXECUTION

#### 3.1 EXISTING CONDITIONS, INSPECTION AND PREPARATION

- A. Carefully examine the contract documents for requirements that affect the work of this section. Prior to starting work, notify the Architect of defects requiring correction. Do not start work until conditions are satisfactory.
- B. Verify that work by others, related to this section, has been completed. This includes earthwork, concrete work, and mechanical, electrical, and plumbing connections.
- C. Protect materials and work completed by others from damage while completing the work in this section.

### 3.2 FIELD MEASUREMENTS

- A. Verify benchmark and pool location prior to layout.
- B. If field measurements differ from the construction drawing dimensions, notification must be given to the Architect prior to proceeding with work.

### 3.3 EXCAVATION, REINFORCING STEEL AND SWIMMING POOL SHOTCRETE OR CAST-IN-PLACE CONCRETE

- A. Reference Division 31 - Earthwork
- B. Reference Division 3 - Concrete

### 3.4 TOLERANCES FOR CONSTRUCTION OF THE POOL SHELL

- A. The completed structures must be constructed level and to the dimensions, elevation, depths, and thickness as shown on the plans.
- B. The elevation tolerance of the pool shell and gutter lip must be plus or minus 1/8 inch.
- C. The vertical wall surface tolerance of the pool shell, for the first 36 inches from the water surface must be plus or minus 1/4 inch from plumb measured with a 6-foot straight edge.
- D. For competitive racecourses, the following pool shell tolerances must apply:

<u>Course</u>	<u>Tolerance</u>	<u>Minimum</u>	<u>Maximum</u>
25 Yard	+ 1 3/16" /- 0"	75' - 3/4"	75' - 1 15/16"

- 1. The above dimensions include allowances for a touchpad at each end of the course. The maximum dimension includes the construction tolerance. These above tolerances also apply to courses utilizing moveable bulkhead(s).
- 2. The above dimensions apply to a vertical plane extending 1'-0" above and 3'-0" below the surface of the water at points of both end walls.
- E. Provide the services of a registered engineer or land surveyor who must measure and certify the elevations of the gutter lip at 10-foot centers as well as the length of each lane for each possible racing course. Courses designed with touchpads for competition must be measured and certified with touchpads in place. Course length survey must be made with the pool filled with water between 78- and 82-degrees Fahrenheit. The Contractor to submit compliant survey measurements to the Architect for review and record.
- F. Ground wires or grade pins, if used, must be installed in such a manner that they accurately outline the section of the pool shell as indicated on the plans. They must be located at intervals sufficient to ensure proper thickness throughout and must be maintained tight. Grade pins or grounding wires must not be permanently embedded in the pool shell.

### 3.5 WATER TIGHTNESS TEST

- A. The water tightness test described within the following section is in accordance with the Hydrostatic Tightness Testing of an Open Concrete Containment Structure as required by American Concrete Institute (ACI) 350.1-10 Section 2. Test reports must be provided and must include test locations within the structure, dates of testing, water level measurements, amounts of evaporation or precipitation, measured volume corrections, retest results (if applicable), actions taken, and final results.

- B. This test applies to the pool, the spa, the surge tank, and the gutter system.
- C. The water tightness test must be completed prior to the application of the finishes.
- D. Water Tightness Test Procedure
  - 1. Preparation
    - a. For concrete pools and surge tanks: Allow the concrete structure to set 28 days for curing purposes. Once the shell has gained sufficient strength to withstand the test load and after the outlets have been securely sealed, the pool/surge tank must be filled with water.
  - 2. Fill: Fill and then isolate the pool, the spa, the surge tank, and the gutter system. The water tightness test must begin after the vessel has been filled for a minimum of three (3) days. During the filling, outlets must be monitored for water tightness and concrete joints, if applicable, must be monitored for visible leakage. If visible leakage from the vessel is observed, the condition must be corrected prior to the start of the test.
    - a. After the initial fill, ground water must be removed from the pool sight sump or the pool location de-watering system. This must be completed prior to the start of the water tightness test. De-watering of the pool sight sump must be maintained during the entire duration of the test.
  - 3. 24-hour Allowable Loss
    - a. Calculate the allowable water loss from the unlined vessel(s). This is .1% of the total vessel volume. For example, if the vessel has a volume of 200,000 gallons, the 24-hour allowable loss will be 200 gallons.

Vessel	Total Volume (Gallons)	24-hour Allowable loss (.1% or .001 of Total Volume)
EXAMPLE	200,000 gal	200 gal
Pool 1		
Spa		
Pool 1 Surge Tank		
Pool 1 Gutter		

- 4. Measurement
  - a. Measurements must be taken at the pool(s), the spa(s), the surge/balance tank(s), and the gutter system(s). Multiple test points with averaging are recommended for vessels which will be exposed to wind. Document the separate findings on the chart below. Repeat the measurements and document every 12 hours for a total of three (3) days. The Contractor must check the pool(s), the spa(s), the surge/balance tank(s), and the gutter system(s) for water loss with the Owner or a representative designated by the Owner every 12 hours. Submit photo documentation (with time stamps) of each measurement with the completed water tightness report. Example measurements are shown in the table below.
- 5. Evaporation/Precipitation Measurement Procedure
  - a. Fill a floating, restrained, partially filled, calibrated, open pan with water and allow the container to float within the pool during the testing period. This will be used to measure evaporation and precipitation.

Vessel	12 hrs. passed	24 hrs. passed	Day 1 TOTAL	36 hrs. passed	48 hrs. passed	Day 2 TOTAL	60 hrs. passed	72 hrs. passed	Day 3 TOTAL
Example Pool	0.021 ft	0.010 ft	0.031 ft	0.016 ft	0.019 ft	0.035 ft	0.022 ft	0.017 ft	0.039 ft
Example Pan	0.008 ft	0.006 ft	0.014 ft	0.008 ft	0.007 ft	0.015 ft	0.009 ft	0.007 ft	0.016 ft
Pool 1									
Spa									
Pool 1 Surge Tank									
Pool 1 Gutter									
Evaporation/ Precipitation Pan									

6. Calculate Daily Loss

- a. Calculate the total daily water loss for the vessel(s) and record in the table below. If a vessel has a daily water loss that is greater than the calculated 24-hour allowable loss, the vessel cannot be considered watertight.
  - 1)  $\text{Daily Loss} = 7.481 \times \text{Structure Surface Area (SF)} \times [\text{Total Water Loss per Day (FT)} - \text{Evaporation per Day (FT)} + \text{Precipitation per Day (FT)}]$
- b. For example, we have a body of water that is 200,000-gallon volume and 3,500 square feet of surface area. Measurements for this example body of water are recorded in the table above.
  - 1)  $\text{Day 1 Loss} = (7.481 \text{ gallons per cubic foot}) \times (3,500 \text{ SF}) \times [(.031 \text{ ft water loss}) - (.014 \text{ ft evaporation}) + (0 \text{ ft precipitation})] = \underline{445 \text{ gallons Day 1 loss}}$
  - 2)  $\text{Day 2 Loss} = (7.481 \text{ gallons per cubic foot}) \times (3,500 \text{ SF}) \times [(.035 \text{ ft water loss}) - (.015 \text{ ft evaporation}) + (0 \text{ ft precipitation})] = \underline{524 \text{ gallons Day 2 loss}}$
  - 3)  $\text{Day 3 Loss} = (7.481 \text{ gallons per cubic foot}) \times (3,500 \text{ SF}) \times [(.039 \text{ ft water loss}) - (.016 \text{ ft evaporation}) + (0 \text{ ft precipitation})] = \underline{602 \text{ gallons Day 3 loss}}$

Vessel	Daily Water Loss Day 1 (Gal)	Daily Water Loss Day 2 (Gal)	Daily Water Loss Day 3 (Gal)	Allowable Loss (calculated above, Gal)	Are daily values higher than the Allowable Loss? (Y/N)
EXAMPLE	445 gal	524 gal	602 gal	200 gal	Y, not watertight
Pool 1					
Spa					
Pool 1 Surge Tank					

Pool 1 Gutter					
------------------	--	--	--	--	--

7. Absorption
  - a. Waiting 3 days after the initial water fill will allow the concrete to absorb water and must be sufficient to minimize the effect of absorption on the test results.
8. Evaporation
  - a. Evaporation must not have a significant effect on natatoria that are completely enclosed with no air circulation during the water tightness test. However, evaporation will have a significant effect on the water level in natatoria that has air movement across the water surface or are still partially uncovered.
9. If leaks are detected, repair the vessel, and make watertight in accordance with these requirements.
10. With regard to this test, the curing requirements, the final fill, and the cost of the water for two (2) complete fillings must be borne by the Owner. Expenses for subsequent fillings or partial fillings (more than 25%) of the pool must be provided and will not be borne by the Owner.

### 3.6 PIPING INSTALLATION

#### A. General

1. Provide and erect, according to the best practices of the trade, piping shown on the drawings and required for the complete installation of these systems. The piping shown on the drawings must be considered as diagrammatic in indicating the general run and connections and may or may not in parts be shown in its true position. The piping may have to be offset, lowered, or raised as required or as directed at the site. This does not relieve responsibility for the proper erection of the systems or piping in every respect suitable for the work intended as described in the specifications and approved by the Architect. In the erection of piping, it must be properly supported, and proper provisions must be made for expansion, contraction and anchoring of piping. Piping must be cut accurately for fabrication to measurements established at the construction site. Pipe must be worked into place without springing and/or forcing, properly clearing windows, doors, and other openings and equipment. Cutting or other weakening of the building structure to facilitate installation will not be permitted. Pipes must have burrs and/or cutting slag removed by reaming or other cleaning methods in strict accordance with the manufacturer's instructions. Changes in direction must be made with fittings. Open ends of pipes and equipment must be properly capped or plugged to keep dirt and other foreign materials out of the systems. Plugs of rags, wool, cotton waste or similar materials will not be used in plugging. Piping must be arranged so as not to interfere with removal and maintenance of equipment, filters, or devices, and so as not to block access to manholes, access openings, etc. Flanges or unions applicable for the type of piping specified must be provided in the piping at connections to items of equipment. Piping must be installed to ensure noiseless circulation. Valves and specialties must be so placed to permit easy operation and access.

#### B. Pipe Hangers and Supports

1. Pipes must be adequately supported by pipe hangers and supports as specified.
2. Horizontal PVC Schedule 80 piping must be supported in accordance with the manufacturer's recommendations for fluid temperature not exceeding 120-degree F and as listed below:

Nominal Pipe Size	Hanger Support Spacing	Minimum Rod Size for Single Rod Hanger
1-1/4" and less	5'-0"	3/8"
1-1/2" to 3"	6'-0"	1/2"
4" to 6"	8'-0"	5/8"
8" to 12"	10'-0"	7/8"
Greater than 12"	12'-0"	1"

3. Horizontal CPVC Schedule 80 piping must be supported in accordance with the manufacturer's recommendations for fluid temperature not exceeding 140-degree F and as listed below:

Nominal Pipe Size	Hanger Support Spacing	Minimum Rod Size for Single Rod Hanger
1/2" and less *	4'-0"	3/8"
3/4" to 2"	6'-0"	3/8"
2-1/2" to 3"	7'-0"	1/2"
4" to 8"	8'-0"	7/8"
Greater than 12"	10'-0"	1"

4. Round rods supporting the pipe hangers must be of the following dimensions:

Nominal Pipe Size	Rod Diameter
1/2" to 2" pipe	-3/8" rod
2-1/2" to 3" pipe	-1/2" rod
4" to 5" pipe	-5/8" rod
6" pipe	-3/4" rod

- Hanger rods must be galvanized steel. Provide for controlling level and slope by turn buckles or other approved means of adjustment and incorporate lock nuts.
- Provide means of preventing dissimilar metal contact such as plastic-coated hangers, copper colored epoxy paint, or non-adhesive isolation tape.
- Provide hangers to provide a minimum of 1-inch space between finished covering and adjacent work.
- Place a hanger within 12 inches of each horizontal elbow.
- Support vertical piping independently of connected horizontal piping. Support vertical pipes at every floor. Wherever possible, locate riser clamps directly below pipe couplings or shear lugs.
- Where several pipes can be installed in parallel and at the same elevation, provide trapeze hangers as specified. Trapeze hangers must be spaced according to the smallest pipe size or provide intermediate supports according to the support spacing schedules. Provide heavier members as required for the load supported for the entire span distance. Hanger rods must be as specified above and properly sized for the load supported, but not less than 5/8 inches diameter.
- Piping must be rigidly supported from the building structure by means of hanger assemblies properly selected and sized for the application in accordance with the manufacturer's recommendations and specifications. Do not support piping from other pipes, ductwork or

other equipment that is not building structure. Do not modify the building structure for hanger installation.

12. Attachment of piping hangers to the building structure must be provided in a manner approved by the Architect. Provide concrete inserts installed by others in the building construction at the time the concrete is poured, and hangers must be attached to these inserts.
13. The use of pipe hooks, chains, or perforated iron for pipe hanger supports will not be permitted.
14. A design for piping in a service tunnel, if required, supported by a structure must be submitted for approval. The structure must be non-corrodible and must be of a size and configuration to rigidly support the piping as shown in the plans at a minimum spacing as shown below.

**C. Concrete Inserts**

1. Provide inserts for placement in form work before concrete is poured.
2. Provide inserts for suspending hangers from reinforced concrete slabs and sides of reinforced concrete beams.
3. Where concrete slabs form finished ceilings, inserts must be flush with the slab surface.
4. Provide hook rods to concrete reinforcement section for inserts carrying pipe over 4 inches.

**D. Piping Installation – Below Grade**

1. Trench bottoms must be smooth and free of rocks and debris. If the trench is dug in ledge rock, hardpan or where large boulders are not removed, place 3 inches of sand or compacted fine-grained soil below the pipe. Pipe must be supported over its entire length with firm, stable material. Blocking will not be used to change pipe grade or provide intermittent support over low sections in the trench. Surround the pipe with backfill meeting the requirements of with a particle size of 1-1/2 inch or less and in accordance with the project geotechnical report. Compact in layers not to exceed 6 inches with vibratory method. Follow installation methods of ASTM D2774 "Underground Installation of Thermoplastic Pressure Piping".

**E. Flushing, Draining and Cleaning Pipe Systems**

1. Flush out water systems with water before placing them in operation. Other systems must be cleaned by using compressed air or nitrogen. After systems are in operation and during the test period, strainer screens must be removed and thoroughly cleaned.

**F. Expansion and Contraction**

1. Make necessary provisions for expansion and contraction of piping with offsets, loops, flexible connections, and anchors as required to prevent undue strain. Provide shop drawings for method and arrangement for control of expansion and contraction of piping.

**G. Testing**

1. Piping installation and pressure testing must be performed by the Contractor and reviewed by the Owner or a designated representative of the Owner before commencement of backfilling. A minimum notice of one (1) week is required prior to review. Results must be submitted to the Architect. Pictures with time stamps for each section of piping must be included with testing report(s) and be submitted within one (1) week of the pressure test(s).

2. Pool related piping must be hydraulically pressure tested (with water, not air) to a pressure of not less than 50 PSI for a period of no less than two (2) hours. Pressure testing must be conducted in accordance with ASTM D2774. The temperature of the water used for the test must be between 40°F and 90 °F.
3. Maintain a sustained 20 PSI pressure on pool related piping throughout the course of construction.
4. Adhere to the applicable provisions of Division 22 - Plumbing, "General Provisions" and "Basic Materials and Methods" for installation of piping system.

### 3.7 EQUIPMENT AND SYSTEMS INSTALLATION

- A. Provide and assemble equipment, special parts and accessories as shown on pool drawings, specifications, and shop drawings of the equipment suppliers.
- B. Provide anchors and inserts imbedded in the deck including fittings, inserts and structure sleeves and required anchorage as shown on the plans and as indicated in this section of the specifications. Equipment must be set true and plumb, using factory jigs where available. Removable equipment items must be easily removable from anchors and must fit without noticeable wobble.
- C. Provide templates for equipment anchors. Provide anchor bolts of the size and spacing as required by the equipment manufacturer. Anchor bolts must be stainless-steel Type 316L and of a length capable of adequate anchorage into rough slab-on-grade allowing for finish deck tile and setting bed. Anchors must be set and cast into place during building concrete work. Inspect anchor settings for horizontal and vertical alignment prior to placing concrete.
- D. Provide equipment and systems in accordance with manufacturer's directions. Equipment must be assembled and in place for final observation.
- E. Items necessary to complete this section are shown on the plans or described in the specifications including items that may be purchased by the Owner. Items are detailed and specified as a guide for dimensional purposes. Make provisions accordingly and submit shop drawings and submittals based on that data.

### 3.8 START-UP AND INSTRUCTION

- A. Supply the services of an experienced swimming pool operator/instructor for a period of not less than two days (total 16 hours) after the pool(s) have been filled and initially placed in operation. During this period, the Owner's representatives who will be operating the pool(s) must be thoroughly instructed in phases of the pool's operation. Deliver six (6) complete sets of operating and maintenance instructions for the swimming pool, structures, finishes and component equipment. Prior to leaving the job, obtain written certification from the designated Owner's representative acknowledging that the instruction period has been completed and necessary operating information provided. Include the cost of two (2) additional days (total 16 hours) of instruction and operational check out by the qualified representative during the first season of operation.
- B. Written reports of each of these visits outlining the pool's operation, competence and performance of the pool's operation personnel, and other pertinent comments must be submitted to the Owner and Architect/Engineer within one (1) week after each visit.
- C. Provide specific written procedures that must be followed for emptying and refilling the pool as mentioned previously in this section. The procedures must be included in the bound volume of operating instructions and references in the front index with a note headed by the words: "CAUTION -- VERY IMPORTANT".

END OF SECTION 131100

## SECTION 131103 - SWIMMING POOL TILE

### PART 1 - GENERAL

#### 1.1 RELATED DOCUMENTS

- A. The drawings and General Provisions of the contract, including General and Supplementary Conditions apply to the work of this section.

#### 1.2 SUMMARY

- A. Provide a ceramic tile finish on the entire interior surface of the pool and behind the pool edge as shown and detailed on the contract drawings and in strict accordance with these specifications. Contrasting color ceramic tile markings and trim at locations including the recessed wall steps, depth markings, wall targets, floor lane markings and other tile installations as shown and detailed on the contract drawings and in strict accordance with these specifications.
- B. Provide a ceramic tile finish on the entire interior surface of the spa.
- C. The Contractor must furnish and install the work of this section.

#### 1.3 RELATED SECTIONS

- A. Division 1 – Mock Ups
- B. Division 7 - Joint Sealers
- C. Division 9 - Ceramic Tile
- D. Section 131100 - Swimming Pool
- E. Section 131104 - Swimming Pool Cementitious Finish

#### 1.4 QUALITY ASSURANCE

- A. Reference Standards: Conform to the following standards unless otherwise required herein.
  - 1. American National Standards Institute (ANSI)
    - a. A108.01 – General Requirements: Subsurfaces and Preparations by Other Trades.
    - b. A108.02 – General Requirements: Materials, Environmental, and Workmanship.
    - c. A108.1, Glazed Wall Tile, Ceramic Mosaic Tile, Quarry Tile and Paver Tile installed with Portland Cement Mortar.
    - d. A108.1C – Contractor's Option: Installation of Ceramic Tile in the Wet-Set Method with Portland Cement Mortar or Installation of Ceramic Tile on a Cured Portland Cement Mortar or Installation of Ceramic Tile on a Cured Portland Cement Mortar Setting Bed with Dry Set or Latex-Portland Cement Mortar.
    - e. A108.5 – Installation of Ceramic Tile with Dry-Set Portland Cement Mortar or Latex-Portland Cement Mortar.
    - f. A108.6 – Installation of Ceramic Tile with Chemical Resistant, Water Cleanable Tile Setting and Grouting Epoxy for the Epoxy Grouting Installation Process.
    - g. A108.10 – Installation of Grout in Tile Work.

- h. A108.13 – Installation of Load Bearing, Bonded, Waterproof Membranes for Thin Set Ceramic Tile and Dimension Stone for the Waterproofing Membrane Installation Process
      - i. A137.1 Standard Specifications for Ceramic Tile.
  - 2. American Society for Testing and Materials (ASTM)
    - a. C144-99, Aggregate for Masonry Mortar
    - b. C150-00, Portland Cement
    - c. C171-97a, Sheet Materials for Curing Concrete
    - d. C206-97, Finishing Hydrated Lime
    - e. C207-91 (R1997), Hydrated Lime for Masonry Purposes
    - f. D5957, Standard Guide for Flood Testing Horizontal Waterproofing Installations
    - g. F-1869, Standard Test Method for Measuring Moisture Vapor Emission Rate of Concrete Subfloor Using Anhydrous Calcium Chloride
    - h. F-2170, Standard Test Method for Determining Relative Humidity in Concrete Floor Slabs Using in Situ Probes
  - 3. Tile Council of North America (TCNA); 2021 Edition, Handbook for Ceramic Tile Installation.
  - 4. American Concrete Institute
    - a. ACI 302 – Guide for Concrete and Floor Slab Construction
  - 5. International Concrete Repair Institute (ICRI)
    - a. Concrete Surface Profile (CSP)
- B. The Contractor must have two years' experience in similar pool projects for which the Owner may require written proof thereof and proper tools to install tile.

#### 1.5 MANUFACTURERS

- A. Subject to compliance with requirements provide ceramic tile, mortar, and grout of the following manufacturers: American Olean Tile Co. (tile), Dal-Tile Co. (tile), Buchtal (tile), KlinkerSire (tile), Daldorado (tile), MAPEI, Inc. (thin-set, waterproofing, grout, and admixtures), and LATICRETE International Inc. (thin-set, waterproofing, grout, and admixtures) or approved equal.

#### 1.6 SUBMITTALS

- A. Submit shop drawings indicating tile layout, patterns, joint layout, color arrangement, perimeter conditions, junctions with dissimilar materials, thresholds and setting details.
- B. Submit product data indicating material specifications, characteristics, and instructions for using adhesives and grouts.
- C. Samples:
  - 1. Submit physical samples for all tile color selections by Owner/Architect.
  - 2. Submit physical samples for grout color selections by Owner/Architect.
- D. Mockups:

1. Mount tile and apply grout on 24"x24" backerboard to indicate pattern, color variation and grout joint size variations of each pattern. Furnish mounted tile samples as requested by the Architect/Owner for approval.
  - E. Submit manufacturer's installation instruction.
  - F. Submit maintenance data.
    1. Include recommended cleaning and stain removal methods, cleaning materials.
- 1.7 PRODUCT DELIVERY AND STORAGE
- A. Deliver tile materials to site in unopened factory containers sealed with grade seals bearing printed name or manufacturer and the words "Standard Grade". Keep the grade seals intact and containers dry until tiles are used. Keep cementitious materials dry until used.
- 1.8 JOB CONDITIONS
- A. Inspect and verify job conditions. Report defects in base surfaces for correction before proceeding.
  - B. Maintain environmental conditions, including temperature humidity and ventilation, within limits recommended by the manufacturer. Do not install products under environmental conditions outside the manufacturer's absolute limits.
  - C. Do not install mortar, set, or grout tile exterior when inclement weather conditions are expected within 48 hours after work is scheduled to be completed unless proper protection is provided.
  - D. Maintain a temperature range of 50 degrees Fahrenheit to 90 degrees Fahrenheit during installation of tile and grout materials. Tile installation should cure for a minimum 14 days with average a temperature of 70 degrees, while maintaining the minimum 40 degrees and maximum 90 degrees Fahrenheit, prior to filling pool with water.
  - E. Vent temporary heaters to outside to avoid carbon dioxide damage to the new tile work.
- 1.9 COLORS
- A. Colors must be selected by the Owner/Architect or Interior Designer. Note that swimming pool regulations may dictate color selections within the pool tank. See tile materials for price group breakdowns.
- 1.10 WARRANTIES
- A. The Contractor warrants to the Owner that materials and equipment provided under the contract will be of good quality and new unless otherwise required or permitted by the contract documents, that the work will be free from defects not inherent in the quality required or permitted and that the work will conform with the requirements of the contract documents. Work not conforming to these requirements, including substitutions not properly approved and authorized, may be considered defective. The Contractor's warranty excludes remedy for damage or defect caused by abuse, improper or insufficient maintenance, improper operation, modifications not executed by the Contractor or improper wear and tear under normal usage. If required by the Owner, provide satisfactory evidence as to the kind and quality of materials and equipment. Warranties must be for a period of five years, unless otherwise specified.
  - B. Setting materials must be provided by the same manufacturer. Mixing materials and application procedures must be done in accordance with manufacturer's recommendations and requirements. Documentation must be provided to this effect by the Contractor with verification from the

manufacturer. This documentation must be included in the operations and maintenance manual under warranties as documentation qualifying the project for a 15 Year Systems Warranty by LATICRETE International, Inc., MAPEI, Inc. or approved equal.

- C. The Contractor must contact the tile setting material manufacturer's technical representative to review installation details, job site conditions, selected materials, and their conformance to the manufacturer's warranty requirements prior to the commencement of work. Failure to follow these requirements will not relieve the Contractor of the requirement to provide specified warranties.
- D. The Contractor must agree to repair or replace work at no cost to the Owner upon written notification from the Owner within the warranty period. Pro-rated warranties are not acceptable.

## **PART 2 - PRODUCTS**

### **2.1 TILE MATERIALS**

- A. Standard grade conforming to ANSI A137.1. Provide trimmer units as indicated and specified, including special shapes as detailed or required. Tile patterns and colors must be as indicated and specified, colors of approved shades. Mesh mounted or perforated paper backed tile is not allowed where the mesh of paper remains as a permanent part of the installation. If dot mounting is used, a minimum of 67% of the depth of the tile must be free from dots to ensure proper grout curing.
- B. Tile must be "frost-proof".
- C. Unglazed Ceramic Mosaic Tile
  - 1. Slip-resistant porcelain unglazed ceramic mosaic tile, cushion, or all-purpose edges, 2" square from price group 2 for floor, walls, and stair treads unless otherwise noted. The minimum dynamic coefficient of friction must be 0.42 for wet surfaces and 0.65 for ramped surfaces. Where special shapes are required, they must be selected from price group 3. Equivalents provided by Knochtile, Dal-Tile or American Olean. For wet surfaces: Buchtal Chroma Mosaics with front mount film (seven color options) 2"x2" 7161HVF or American Olean Unglazed color-body porcelain mosaics 2"x2", price group 1-3. For ramps: Buchtal Chroma non-slip mosaics with glass fiber net (four color options) 2"x2" 7161H. Or for wet surfaces: Buchtal Chroma non-slip 5"x5" 32020H thirteen color options) or Dal-Tile or American Olean Unglazed color-body mosaics 2"x2" with 7.5% abrasive grain (7 color options). Colors must be selected by the Owner/Architect.
  - 2. Ceramic tile band below the pool gutter lip with color selected by Owner/Architect from Dal-Tile, Keystone Unglazed Mosaic, 2"x2" price group 4, American Olean Unglazed color-body porcelain mosaics 2"x2" price group 1-3, or powder glazed 2"x2" Buchtal Chroma Mosaics provided by Knochtile.
  - 3. Ceramic tile deck band that contains the depth marker letters and numerals and the 15-meter resurfacing markers with color selected by the Owner/Architect from Dal-Tile, Keystone Unglazed Mosaic, 2"x2", price group 4, American Olean Unglazed color-body porcelain mosaics 2"x2", price group 1-3.
  - 4. Contrasting ceramic tile nosings at spa steps and spa bench must be Universal Trim 2"x2" with color selected by the Owner/Architect from Dal-Tile, Keystone Unglazed Mosaic, price group 3 and 4, American Olean Unglazed color-body porcelain mosaics 2"x2", price group 1-3.

5. Recessed steps must be Universal Trim 2"x2" or 1"x1" with color selected by the Owner/Architect from Dal-Tile, Keystone Unglazed Mosaic, price group 3 and 4, American Olean Unglazed color-body porcelain mosaics 2"x2", price group 1-3.
  6. 4" wide contrasting ceramic tile stripe and 12" lane markers on the pool floor with color selected by Owner/Architect from Dal-Tile, Keystone Unglazed Mosaic, 2"x2" price group 3, American Olean Unglazed color-body porcelain mosaics 2"x2" price group 3, or from Knoxville, as 4"x4" Buchtal Chroma Colors 22010H-717, 5556 Grey Black and 5535 Blue or 2"x2" Mosaic 7160HVF 5535 Grey Black. The main racecourse wall targets and lane markers must be black.
  7. Ceramic tile at top horizontal plane of the spa and vertical face of the spa with color selected by Owner/Architect from American Olean Unglazed color-body porcelain mosaics 2"x2" with one (1) or two (2) colors from price group 1- 4, Dal-Tile Keystone Unglazed Mosaic 2"x2" from price group 1-4 or from Knoxville: Buchtal Chroma Mosaics 2"x2" 7161HVF (seven color options) or non-slip 7161H 2"x2".
- D. Handhold tiles at pool perimeter must be C701 available from Dal-Tile or DalLUX-HH-D802 from Daldorado. Color selection by Owner/Architect. Trim pieces for C701 are as follows: SCR701 (Right Termination Piece), SCL701 (Left Termination Piece), CK701 (Inside Corner), and CC701 (Outside Corner).
- E. Provide tile trim units where indicated or necessary for a complete and finished installation. Provide rounded units for external and internal corners and angles. Provide trim units of material and finish identical to the adjoining tile. Provide SCR/L701 units where the C701 hand hold is interrupted to permit draining. Color selection by Owner/Architect. The Contractor should request via non-standard production. The SCR/L701 units are available through DalTile at 314-997-6970 or 1-800-672-2086.
- F. Message Tile and Depth Markings
1. Horizontal and vertical depth markings and warning signs must be 6"x6" with 4" high numbers and letters. Horizontal depth markers must be slip resistant. Single tile abbreviations must be used for 'FT' and 'IN.'

## **2.2 SWIMMING POOL / SPA TILE SETTING MATERIALS AND INSTALLATION**

- A. Refer to section 131100, paragraph 2.16.B. The Contractor to provide tile and setting materials over a waterproof membrane as noted in this section. Refer to and coordinate with the Architectural Drawings for extent and detailing. Coordinate for installation, interface, and flashing between pool and deck waterproofing systems. Confirm installation requirements with the manufacturer.
- B. Surface Preparation
1. Surface preparation must be in accordance with ACI 302. The surface must be structurally sound and free of foreign substances and debris that could reduce or impair adhesion. Sound and remove loose concrete to firm substrate. Surfaces must be roughened by bead blasting to a CSP of 2 or 3 (reference ICRI CSP Standards for acceptable profile height). Thoroughly wash/rinse with clean potable water. Surface defects or holes in the substrate must be patched per manufacturer's recommendations.
  2. At the conclusion of surface preparation and prior to the installation of the waterproofing, the moisture vapor emissions rate (MVER) of the concrete substrate when measured with a calcium chloride test (ASTM F-1869) must be less than 5 lbs per 1000 square feet per 24 hours. Relative humidity must be measured with a probe and must be less than 75%.

3. At the conclusion of surface preparation and prior to the installation of the waterproofing, measure the pH level of the concrete substrate. Tile work components must not be installed until the pH has a value less than 10.
- C. Slurry Bond Coat
1. Horizontal surfaces to receive a thick bed mortar application with waterproofing and finishes must be installed over a slurry bond coat of either LATICRETE 254 Platinum one-step, polymer-fortified, thin-set or MAPEI Planislope RS polymer-modified pre-blended, rapid-setting mortar mixed with water only over firm concrete substrate. As manufactured by LATICRETE International, MAPEI, Inc., or approved equal. Note that slurry bond coats are not required under vertical applications of the render and scratch coat.
- D. Mortar Bed / Render and Scratch Coat
1. Bonded Thick Bed Method (Floor / Horizontal Surfaces): Provide a dry pack, thick mortar bed on horizontal surfaces consisting of either LATICRETE 3701 Fortified Mortar Bed or MAPEI Planislope RS polymer-modified pre-blended, rapid-setting mortar mixed with water only. Apply over a properly prepared slurry bond coat. Maximum lift thickness not to exceed 2".
  2. Render- Scratch and Float Coats (Wall / Vertical Surfaces): Provide wall render (scratch and float coats) on vertical competition turning surfaces to a depth of 4'-0" below the water surface, consisting of either LATICRETE 3701 Fortified Mortar Bed or LATICRETE 3701 Lite Mortar or MAPEI Planislope RS polymer-modified pre-blended, rapid-setting mortar mixed with water only or lift thicknesses up to ½". Wall render is made to a plastic consistency when used vertically. Apply scratch coat to properly prepared substrate, scratch mortar surface and allow to harden. Apply subsequent "float coat" lifts to hardened, clean and well bonded scratch coated surfaces. Fill holes and bring surface up to line and plane as required. As manufactured by LATICRETE International, MAPEI, Inc. or approved equal. Note that slurry bond coats are not required under vertical applications of the render and scratch coat. (Refer to Course Length Tolerances for competitive pools.)
- E. Waterproof Membrane
1. Waterproofing must be a modified rubber latex system intended specifically for the application. It must be part of a compatible finish system from the surface of the concrete to the tile grout / plaster finish, be of one approved manufacturer and warranted by them. Waterproofing must extend uniformly from coping to coping, without gaps or holidays, sealed at fittings and penetrations, over which must be applied tile swimming pool finishes as required.
  2. Over thick bed mortar / render and/or scratch coat apply LATICRETE HydroBan or MAPEI Mapelastic Aquadefense single component, self-curing liquid rubber polymer waterproofing membrane. Apply to twenty mils thick minimum, without gaps, holes, or holidays and three coats with reinforcing fabric over properly prepared corners, cracks, and joints. Carefully seal at pipe and equipment penetrations. Refer to drawings for additional information. As manufactured by LATICRETE International, MAPEI, Inc. or approved equal.
- F. Elastomeric Sealant
1. Use LATICRETE LATASIL sealant over LATASIL 9118 primer or MAPEI Mapesil "T" 100% silicone sealant for inside/outside corners, expansion/movement joints, and to seal lighting/plumbing fixture penetrations. The primer and sealant installation must be in accordance with the manufacturer's requirements. As manufactured by LATICRETE International, Inc., MAPEI, Inc. or approved equal. Color selection by Owner/Architect.

- G. Mixing and application procedures must be in accordance with the manufacturer's recommendations and requirements. The manufacturer's representative must visit the site to verify field conditions, confirm materials and application requirements and ascertain that materials and systems are installed, and documentation must be provided.
- H. Tile Thin-Set
  - 1. Use either LATICRETE 254 Platinum one-step, polymer fortified, thin-set mortar or MAPEI Keraflex Super one-step, polymer modified, thin-set mortar, used in accordance with the manufacturer's requirements. As manufactured by LATICRETE International, MAPEI, Inc., or approved equal.
- I. Tile Grout
  - 1. Use either LATICRETE SPECTRALOCK PRO Premium Grout or MAPEI Kerapoxy CQ Grout in accordance with the manufacturer's requirements as manufactured by LATICRETE International, MAPEI, Inc. or approved equal. Color selection by Owner/Architect.

### **PART 3 - EXECUTION**

#### **3.1 PREPARATION**

- A. Complete water tightness test prior to tile installation. The concrete tank must be watertight per ASTM D5957, the Tile Council of North America, and specification 131100.
- B. Clean substrates of dust, dirt, oil, grease, curing compounds and other foreign substances and mechanically roughen concrete and shotcrete for bond. Conform to applicable reference standards and to recommendations of manufacturers of materials used and meeting ICRI, CSP of 2-3.
- C. Substrates to Receive Mortar Setting Beds
  - 1. Dampen concrete substrate to receive tile work according to above referenced standards or tile manufacturer's instructions, as required.
- D. Substrates to receive thin set tile applications must meet normal construction tolerances of 1/4" in 10' where competition tolerances do not apply and must meet competition tolerances where required elsewhere in these specifications, and must be free of bumps, dips and surface irregularities that may affect the satisfactory installation of the tile.
- E. Tile Wetting
  - 1. Dampen tile according to above reference standards or tile manufacturer's instructions, as required.
- F. Screeds
  - 1. Accurately set temporary screeds to control the finish plane of mortar-bed set tile and remove as soon as setting bed is sufficiently hardened. Fill void spaces from screeds with same mortar.

#### **3.2 TILE INSTALLATION**

- A. Arrange tile according to patterns detailed. Set tile with flush well-fitted joints, finished in true planes, plumb, square, joints of uniform size. Provide approved trimmers as shown or required. Cut tile without marring. Carefully grind and joint tile edges and cuts.
- B. Follow Tile Council of North America installation methods P601 and B417 to achieve total tile system thickness for thin or thick set.

1. Thick Set
  - a. Apply specified setting bed mortar, up to 2" in thickness, on cured and dried concrete pool shell. Tamp and screed to required planes. Spread no more mortar than can be covered with tile before initial set. Do not use re-tempered mortar. Trowel 3/32" to 1/8" thick bond coat over plastic setting bed mortar just before setting tile or apply bond coat to back of each tile placed. Set tile in position and beat firmly into the setting bed mortar. Bring tile faces to a true and correct plane. Complete beating and leveling before mortar sets and in no case later than one hour after first placing. When ready, wet and remove paper and glue avoiding excess water. At this time adjust out-of-line or out-of-level tile.
2. Thin Set
  - a. Apply specified bond coat on cured and dried concrete pool shell. Trowel 3/32" to 1/8" thick bond coat over concrete pool shell just before setting tile or apply bond coat to back of each tile placed. Set tile in position and beat firmly into the setting bed mortar. Bring tile faces to a true and correct plane. Complete beating and leveling before mortar sets and in no case later than one hour after first placing. When ready, wet and remove paper and glue avoiding excess water. At this time adjust out-of-line or out-of-level tile.
- C. Finished tile surface must be level and in plane, with no sharp or protruding edges. Tiles out or plane more than 1/16" must be removed and replaced. Sharp edges must be stoned smooth.
- D. Grout Joint Sizes
  1. Unless otherwise approved, install tile with uniform 3/32" joint width. A maximum 1/8" joint width may be utilized to meet specific installation requirements, if required.
- E. Ceramic Tile Joint Grouting
  1. Mix grout to a thick creamy consistency and force into joints for entire thick depth, flush with surface. Clean off excess and fill skips and gaps before grout sets. Color selection by Owner/Architect or Interior Designer. Provide dampness for minimum 3-day curing and polish with clean dry cloths (not required when epoxy grouts are used).
- F. Expansion Joints
  1. Place expansion joint per applicable TCNA Method P601MB, P601TB, or P602 and conforming to Method EJ171. Provide shop drawings showing backer rod and joint dimensions. Expansion, control, construction, cold, and seismic joints in the pool structure should continue through the tile work, including such joints at vertical surfaces. Movement joints must be placed at changes in direction and elevation. Refer to the structural engineer for additional required movement joints. Joint size must be a minimum of 1/8". Joints through tile work directly over structural joints must not be narrower than the structural joint. The Contractor must use cement compatible coatings when using chalk lines for joint layout purposes.
- G. Fill and Empty Rates
  1. Use a fill and drain rate of 2'-0" per 24 hours to minimize thermal shock and structural movement. Maintain a temperature differential of 10 degrees Fahrenheit or less between the pool water and the substrate during fill and drain cycles.

**3.3 TESTING AND INSPECTION**

- A. Before filling of the pool, and its subsequent provisional acceptance at substantial completion, the tile installation must be visually inspected and sounded in the presence of the Architects and/or the Owner's representative to verify mortar coverage below the tile to its substrate as well as its overall compliance with the requirements of this Section.
- B. Tile work found loose, lacking proper mortar coverage, out of plane, misaligned or otherwise non-conforming must be removed and replaced at no additional cost to the Owner.
- C. Monitor the pH level of the substrate prior to laying tile. Do not install tile until the pH has a value less than 10. Properly balance the pool water immediately upon fill.
- D. At the conclusion of surface preparation and prior to the installation of tile, measure the relative humidity of the slab. The relative humidity must not exceed 75%.
- E. At the conclusion of surface preparation and prior to the installation of the tile, measure the moisture vapor emissions rate (MVER) with a calcium chloride test (ASTM F-1869). The MVER must be less than 5 lbs per 1000 square feet in 24 hours.

**3.4 CLEANING**

- A. Upon completion of placement and grouting, clean tile installation as recommended by TCNA and manufacturers of proprietary materials. Tile must be cleaned with pH neutral solutions, free of both sodium and potassium, in accordance with the tile and grout manufacturer's printed instruction.
- B. Leave finished installation clean and free of cracked, chipped, broken, un-bonded or otherwise defective tile work.
- C. Protect installed tile work with non-staining Kraft paper, polyethylene sheeting, or other approved heavy covering during the construction period to prevent damage.

**3.5 REPLACEMENT TILE**

- A. Provide the Owner with approximately 10% or 25 square feet (whichever is least) of each color and type tile used on the project for Owner's repair and replacement requirements.

**END OF SECTION 131103**

## SECTION 131106 - SWIMMING POOL TIMING SYSTEM

### PART 1 - GENERAL

#### 1.1 RELATED DOCUMENTS

- A. The BIDDING REQUIREMENTS, CONTRACT FORMS, AND CONDITIONS OF THE CONTRACT and applicable parts of DIVISION 1 - GENERAL REQUIREMENTS, as listed in the Table of Contents, must be included in, and made a part of, this Section.

#### 1.2 SUMMARY OF WORK

- A. Introduction
  - 1. Provide labor, materials, equipment, and services necessary to provide a complete electronic timing and scoreboard system with multi-sport capability for race swimming and diving.
- B. Work included in this section.
  - 1. It is the intent of this section to place the entire responsibility for the complete electronic timing and scoreboard system (including appropriate connections) with multi-sport capability under one vested supplier. The supplier is responsible for providing full integration of this system. Multiple suppliers for a system will not be approved.
- C. Related work specified in Electrical sections. Reference Division 26 – Electrical.
  - 1. Ground and bond pool structures, fittings, and equipment in accordance with Article 680 of the N.E.C. Test and verify that the system electrical ground is true and solid. Provide certification to this effort.
  - 2. Obtain permits, inspections, and approvals of wiring including grounding and bonding of metal components associated with the pool in accordance with Local, State and National Electrical Codes.
  - 3. Provide power, conduits, electrical boxes, ethernet connections and wiring for the Contractor provided electronic timing and scoreboard system with multi-sport capability for race swimming and diving.
  - 4. Supply junction boxes for equipment outlined in these specifications and depicted on the timing system drawings.
- D. Basis of Design:
  - 1. The complete electronic timing and scoreboard system with multi-sport capability is based upon Colorado Timing Systems, Inc.

#### 1.3 ACCEPTABLE MANUFACTURERS AND SUPPLIERS

- A. Colorado Time Systems, Inc. (Basis of Design: Timing System & Scoreboard)

#### 1.4 SUBMITTALS

- A. Submittals must include the following:
  - 1. Product data
  - 2. Shop drawings detailing system layout.

3. Operations and maintenance manuals for system. Manuals must include a complete parts list.
4. Warranty for each piece of equipment within this section.

#### **1.5 JOB CONDITIONS**

- A. Manufacturers proposing to submit a quotation for the electronic timing and scoreboard system must confirm that embedded items are compatible with the installation of their respective systems.
- B. Manufacturers must review the construction documents and must notify the architect 10 days prior to the bid date of conflicts or additions to the work of other trades for the proper installation of their system.

#### **1.6 WARRANTIES**

- A. The Contractor must warranty the completed installation of systems in this section for one year.
- B. The manufacturer must warranty the computer consoles, touchpads, pace clocks and starting system for two years.
- C. The manufacturer must warranty the titanium timing system wall plate and deck plates for five years.
- D. The manufacturer must warranty the scoreboard for five years.

### **PART 2 - PRODUCTS**

#### **2.1 SCOREBOARD SYSTEM**

- A. Full Color Video Display
  1. Full Color Video Display system must display necessary information to time swimming and diving in compliance with the appropriate sanctioning body - NCAA. Display must provide competitor's names, full matrix graphics and animation, live video, and have advertising capabilities.
    - a. Basis of Design: Multi-Sport LED Scoreboard System is based upon Colorado Timing Systems, Inc. or approved equal.
  2. Display must include the following: Full matrix LED scoreboard with computer controller and DisplayLink+ software, flat wall mounting hardware and data/fiber cable up to 500'.
  3. The display must be a full color LED matrix display. The display must be comprised of red, blue, and green LE. to form pixels. Display must be capable of 281 trillion shades of color.
  4. The display should be capable of 16-bit video processing, one hundred (100) levels of dimming capability and allow for Gamma correction.
    - a. Display intensity must be adjustable up to 3000 nits for INDOOR.
  5. The display must have a built-in graphics and animation capability with Windows- based software. Graphics and animation must have the capacity of being displayed on the entire matrix. MS Windows fonts must be compatible with the display.
  6. Display must have the ability to show live video or DVD's.
  7. Display must allow for front service access.
  8. Display must include 3% spare critical parts.

9. Operation temperature must be between 14°F – 105°F (-10°C – 40°C)
10. Humidity tolerance must be between 0%-95% non-condensing.
11. Each indoor pixel must be comprised of 3 LEDs, 1R1G1B SMD LED package.
12. Display must include LED video controller with the following functions/features at a minimum:
  - a. Dual zone, picture in picture capable with on-the-fly user defined window sizes.
  - b. Hardware controlled scaling of all video input sources; PC (computer) based scalers are not an accepted alternative.
  - c. Must have a simple to use menu architecture allowing user to switch between video inputs and layouts with minimal keystrokes.
  - d. The controller must have a minimum of five (5) user defined display layout templates capable of switching between sources as well as zone layouts accessible via the controller's main menu.
  - e. Display controller must accept the following video input signals:
    - 1) Two (2) DVI
    - 2) One (1) HDMI
    - 3) Two (2) VGA
    - 4) One (1) DP
    - 5) Two (2) composite
13. Scoreboard details must be as follows. Exact cabinet dimensions, detailed drawings, and weight must be provided with the submittals.
  - a. Pixel Spacing: 10 MM
  - b. Active Area: 8.4'(H) x 14.7'(W)
  - c. Pixel configuration must be: 114,688 pixels
  - d. Weight: 300 LBS

**B. Scoreboard Hanging Requirements**

1. Scoreboard manufacturer must provide drawings with hanging information.
  - a. Material: Scoreboard hangers must be galvanized steel for an indoor natatorium.
  - b. Coordinate scoreboard hanging requirements with structural engineer prior to the submittal process.
2. Anchors
  - a. Hollow Block Construction
    - 1) Sleeve type anchors feature a split expansion sleeve over a threaded stud bolt body and integral expander, nut, and washer. Anchors must be made of zinc plated Carbon Steel, or Type 18-8 Stainless Steel. Anchors should be installed with carbide tipped hammer drill bits made in accordance to ANSI B212.15-1994. Anchors must be tested to ASTM E488 criteria and must meet or exceed U.S. Government G.S.A. specification A-A-55614 Type 2 (Formerly GSA:

FF-S-325 Group VIII, Type 2), California State Fire Marshal, Factory Mutual and Underwriters Laboratories.

b. Filled Block or Solid Concrete Construction:

- 1) The anchor must be a torque-controlled expansion anchor, which provides consistent performance for a wide range of mechanical anchor applications. This anchor series is available in carbon steel with zinc electroplated coating, carbon steel with hot-dip galvanized coating, 304 stainless steel and 316 stainless steel versions. The threaded stud version of the anchor is available in a variety of diameters ranging from 1/4- to 1-in. depending on the steel and coating type. Applicable base materials include normal-weight concrete, structural lightweight concrete, lightweight concrete over metal deck, and grout-filled concrete masonry. Basis of design is AISI Type 316 stainless steel KWIK Bolt 3 (KB3) manufactured by Hilti, Inc.
- 2) Three anchors must have an anchor body, nut and washer that conform to AISI Type 316. The expansion wedges conform to AISI Type 316 stainless steel.
- 3) Anchor bodies smaller than 3/4-inch, excluding KWIK Bolt 3 Countersunk, are produced from AISI Type 304 or Type 316 stainless steel having the bolt fracture loads shown in table 1. Anchor bodies 3/4-inch and larger, and stainless-steel KWIK Bolt 3 Countersunk anchor bodies are produced from AISI Type 304 or Type 316 stainless steel having the mechanical properties shown in table 1. Nuts meet the dimensional requirements of ASTM F594. Washers meet the dimensional requirements of ANSI B18.22.1, Type A, plain. Stainless steel expansion wedges for AISI Type 304 are made from either AISI Type 304 or Type 316. Stainless steel expansion wedges for AISI Type 316 anchors are made from type 316. Stainless-steel nuts and washers for AISI Type 304 or Type 316 anchors are manufactured from AISI Type 304 or 316, respectively.

3. Supports

a. Unistrut (LED Board)

1) Material

- a) Fittings, unless noted, are made from hot-rolled, pickled, and oiled steel plates, strip, or coil, and conform to ASTM specifications A575, A576, A635, or A36. The fitting steel also meets the physical requirements of ASTM A1011 SS GR 33. The pickling of the steel produces a smooth surface free from scale. Many fittings are also available in stainless steel, aluminum, and fiberglass. Consult factory for ordering information.

2) Finishes

- a) Fittings are available in: Perma-Green III (GR), Electro-galvanized (EG), conforming to ASTM B633 Type III SC1; Hot-dipped galvanized (HG), conforming to ASTM A123 or A153.

4. Brackets

- a. Per ANSI B1.1- Surface roughness per ANSI B46.1- Surface roughness on holes 250 MAX unless otherwise specified. Variations in form from unmachined features are permitted within established –1 filets 0.005-0.020 (APPROX. RADIUS) – Screw threads per ANSI B1.1- Pipe threads commercial standards. Edges and corners 0.005-0.020 (approx. radius or chamfer).
    - b. Materials and components used in the assembly of this item must be RoHS complaint material: 12GA (.105) HRS. The finish must be ZINC CLEAR CHROMATE PLATED. Manufacturer must break sharp edges and corners.
    - c. Support hardware, brackets, fasteners, hangers, etc. used during installation of the scoreboard must be Zinc Clear Chromated Plated.
  - C. Software to Control Matrix / Video Display must include the following:
    1. Operates full color LED matrix displays.
    2. Receives data from all sports timers and scoring consoles.
    3. Receives data from 3rd party meet management software.
    4. Displays standard graphics formats (JPG, GIF, BMP, PNG).
    5. Playback of standard digital video (AVI, MPG, WMV).
    6. Allows creation of custom data templates with sport-specific information.
    7. Creates and plays sequences of templates and graphics, with transition effects.
    8. Stores name and team information for up to 12 lanes for an infinite number of events and heats.
    9. Stores multiple diving event orders, with name and team information.
    10. Supports any Windows font as well as custom CTS bitmap (pixel-mapped) fonts.
    11. Graphics and templates can be used to provide in-venue advertising.
    12. Multiple options for displaying team scores and full event results (standalone or in conjunction with meet management software).
    13. Quick message feature allows user-driven dynamic messaging.
    14. Provides user ability to schedule automatic display of templates and graphics, with recurrences.
    15. Allows creation of multiple outputs regions for multizone displays or multiple displays of varying resolutions.
    16. Allows creation of transparent overlay templates, facilitating sports data overlaid on still and video graphics backgrounds.
    17. Runs on Windows 8.1 and greater.
    18. Provides customer initiated remote technician assistance and fault monitoring.
- 2.2 MULTI-SPORT COMPUTER/TIMING SYSTEM
- A. Gen 7 Serial Timing System
    1. The Multi-Sport Computer/Timing System must be supplied with necessary software to time swimming in compliance with the appropriate sanctioning body - NCAA.

- a. Basis of Design: Multi-Sport Computer/Timing System is based upon the GEN7 TIMING as manufactured by Colorado Timing Systems, Inc.
2. Multi-Sport Computer/Timing System must be a standalone unit with physical connections to timing inputs. Timer must be controlled by user interface device (e.g., computer, tablet, etc.) via USB or TCP/IP. One (1) laptop must be provided.
  - a. Timer PC or tablet interface device must be supplied with necessary software to time and score swimming in compliance with the appropriate governing organization(s) - NCAA.
  - b. Configuration of racecourses must be through graphical user interface. It is unacceptable that race configurations need specific cable connections to system connections such as wall plates defining a specific end of a course.
  - c. The user interface must display complete race status. The interface must be capable of functioning as miniature scoreboard displaying information simultaneously for active lanes including lane number, current length in race or final place, split or finish time, relay judging status indicator, and backup time and backup button status.
  - d. Timer must automatically flag timing discrepancies (in the user interface, on the results printouts and in stored memory) greater than a user defined interval between touch pad and backup times.
3. Multi-Sport Computer/Timing System input/output ports must include:
  - a. Must accept inputs for up to 4 courses of up to 32 lanes each for a serial in-deck wiring installation and must be able to time them simultaneously.
  - b. Up to 8 timers must be supported to accept inputs of the same in-deck wiring installation for parallel race timing and backup.
  - c. Must accept on-deck cable harness inputs for up to 20 lanes near end and/or far end.
  - d. Must communicate with meet management peripheral software on a two-way “handshake” basis, enabling the meet manager’s resident computer to query the timer’s memory via the USB port or via the network at any time for any race results.
  - e. Must provide backup time via push button provided on a per lane basis should swimmer fail to trigger touch pad or touch pad fail to register. The timer must be capable of accepting up to three backup button times per lane.
  - f. Must automatically compare the touch pad hit of an incoming swimmer with the starting swimmer’s time of departure from the optional relay-judging platform. Results display both “plus” and “minus” takeoff times and can be printed and stored in race memory.
4. Accuracy of the Multi-Sport Computer/Timing System:
  - a. Must time to a user-selectable resolution from 1 second to .001 second. It must take starts and finishes from the near end and/or far end of the pool. It must accept inputs from the start system; touch pads, up to three manual button backup times per lane, and relay judging platforms.
  - b. Must be able to evaluate and report multiple states of timing component input condition, ranging from excellent to failure. It is unacceptable that only two states such as on or off are reported.

- c. Must have touch pad delay feature with ability to program delays from 1 to 99 seconds.
  - d. Must permit the operator to correct for an erroneous touch by adding/subtracting a touch pad hit to correct the lengths completed. The interface must not permit the operator to finish a race in any lane; timers including such a function are unacceptable because they permit the possibility of cheating.
  - e. Later recall of stored race data must allow for a re-run of a given race including changes in user decisions.
5. Multi-Sport Computer/Timing System Detection:
- a. Must be capable of detecting timing components such as pushbuttons, touchpads, RJPs, speakers, Speedlight and start systems connected to an in-deck system and capable of detecting touchpads and RJPs connected to an on-deck system.
  - b. Must be capable of reporting corrosion in the in-deck wiring installation.
6. Multi-Sport Computer/Timing System must run off a 12-volt power supply connected to a standard 110/240 VAC outlet and will automatically switch to (and display on screen of connected interface device) internal battery power source, in case of line power failure without affecting the continuity and accuracy of the timing system.
7. Multi-Sport Computer/Timing System must interface to single-line and multi-line scoreboard and must post immediate results to scoreboard in "Lane" or "Place" order (user selectable). The timer must also have the capability to pull race results from memory and post those results to the scoreboard in "Lane" or "Place" order (user selectable).
8. Multi-Sport Computer/Timing System must include internal clock calendar with self-sustaining battery to time/date stamp results.
9. Multi-Sport Computer/Timing System must meet acceptable safety standards. Must be UL approved, or equivalent.
10. Multi-Sport Computer/Timing System Storage and Internal Memory:
- a. System must store each and every timing input state change. It is not acceptable that state changes get discarded and are not available for later re-evaluation of a race.
  - b. Race data, including near and far end splits, must be stored to internal memory for later recall to facilitate meet management connectivity and printing. Printed reports must include cumulative and subtractive splits as well as relay judging times (when required).
  - c. Meet memory must be capable of being transferred to external storage (via USB) or cloud data backup services (e.g., Dropbox, Google Drive).
11. Multi-Sport Computer/Timing System must have an Automatic Event Sequencer that is capable of holding both standard and user defined event sequences. The event order will be able to be downloaded from meet management software. The desired order is user selectable. EVENT SEQUENCES with appropriate race distance and race description for high school, college meets, and two "User Defined" meets to permit construction of custom meets, NCAA. When recalled from memory, race distance and descriptions are automatically selected for the operator.
12. Multi-Sport Computer/Timing System must have a user interface software that permits operation of essential functions including Lane Off/On, Finish Arm, Split Arm, & Print

Results directly from the main screen to ensure speed and simplicity of operation during critical race times. The interface must permit the operator to edit a time when required or to disqualify a lane (DQ), automatically posting it to the scoreboard, and provide automatic re-ranking of results. Corrections generated by the operator (edit or disqualification) must be clearly identified on the results printouts.

13. Multi-Sport Computer/Timing System must include electronic beeper and LED signaling to indicate touchpad, backup button and RJP inputs. Timers which do not allow the user to configure (enable/disable) this feature are unacceptable.
14. Multi-Sport Computer/Timing System connectivity must include:
  - a. USB (Type A) port for external storage
  - b. USB (Type B) port for meet management connectivity.
  - c. USB (Type B) port for user interface computer connectivity
  - d. Ethernet port for network connectivity
  - e. 3 independent scoreboard output ports
  - f. Wireless 2.4GHz scoreboard connectivity
  - g. Connection for in-deck wiring and two connections for on-deck (near and far end) wiring.
  - h. Start system connection directly to timer.
  - i. External DC power port
15. Multi-Sport Computer/Timing System must be capable of updating internal software/firmware via Internet connection.
16. Multi-Sport Computer/Timing System software must have the ability to adjust the intensity of LED scoreboard brightness.
17. Cabling, conduit, and wiring must be provided by the manufacturer of the Multi-Sport Computer/Timing System to connect the Multi-Sport Computer/Timing System to the scoreboard should the scoreboard be provided by an alternative manufacturer to the Multi-Sport Computer/Timing System.

## 2.3 SWIMMING TIMING SYSTEM CONNECTORS

### A. General Description

1. The Multi-Sport Computer/Timing System must employ the topology of a single communication bus to which timing and connectivity nodes are connected and communicate with each other.
2. Connection points must be production items and not a one off or prototypes.
3. Exposed connectors must feature titanium contacts. They must be wet pluggable and electrically passive if not connected. No maintenance to prevent corrosion of deck plate connector contacts is needed.
4. Self-test capabilities to detect compromised timing bus wire terminations and scoreboard bus wire terminations.

### B. Wall Plates

1. Wall plates must be provided as required in the quantities as shown on the drawings. Wall plates must be the termination point for connections between deck cables, timers, start system, and other wall plates.
  - a. Basis of Design: Wall plates are based upon TITANIUM SERIAL WALL PLATE as manufactured by Colorado Timing Systems, Inc.
2. Wall plates must allow for the following connections depending on location and usage:
  - a. Connection to the timer.
    - 1) Connectivity to timing courses and one scoreboard bus with one cable connection.
    - 2) Detection of presence or absence of connected timer.
    - 3) Diagnostic capabilities to detect anomalies with connectors (corrosion, shorts).
  - b. Connection to a start system and must provide the following:
    - 1) Inputs for start system and speaker.
    - 2) Diagnostic capabilities to detect anomalies with connectors (corrosion, shorts) and anomalies with the speaker input or start system.
    - 3) Detection of presence or absence of speaker input or start system.
  - c. Connection to a scoreboard and must provide the following:
    - 1) Detection of presence or absence of connected scoreboard.
    - 2) Self-test capabilities to detect compromised timing bus wire terminations.
3. Junction Boxes (Provided by Electrical):
  - a. Wall plate components must fit into a 12" x 12" x 6" PVC junction box.
  - b. Acceptable Manufacturer: Cantex (P/N 5133713) or similar box that will fit wall plate assembly of the following dimensions: 12" x 12" x 6"  $\pm 0.05$ ", cover plate width must be 15"  $\pm 0.02$ " square.
  - c. Conduit interconnects between boxes (deck plates and wall plates) must be PVC. Refer to drawings for sizing.
  - d. Verify routing of conduit with Multi-Sport Computer/Timing System manufacturer prior to installation.

**C. Deck Plates**

1. Deck plates must be provided as required in the quantities as shown on the drawings. Deck plates to permit plug-in connection for touch pads, A, B, C, backup buttons, electronic relay judging, start light signal, start speakers and a signal to start the timing device at each lane.
  - a. Basis of Design: Deck plates are based upon TITANIUM SERIAL DECK PLATE as manufactured by Colorado Timing Systems, Inc.
2. Domed deck plate node with contacts mounted on integrated slopes that cause corrosive pool water which creates water bridges to flow off through gravity, overcoming water surface tension and therefore reducing electrolytic currents and corrosion. No maintenance for corrosion is needed.

3. Titanium contacts as exposed connectors.
4. Inputs for button A, B, C, touchpad, start system, speaker, RJP and Speedlight (RJP as separate input, not piggy backed on another input).
5. Speedlight must be controlled in synchronicity and individually per lane (requires RJPs).
6. Diagnostic capabilities to detect anomalies with connectors (corrosion, shorts) and anomalies with the timing components push buttons, touchpad, RJP, Speedlight, speaker or start system.
7. Ability to detect presence or absence of push buttons, touchpad, RJP, Speedlight, speaker or start system.
8. Plate must have self-test capabilities to detect compromised timing bus wire terminations.
9. Junction Boxes (Provided by Electrical):
  - a. In deck system components must fit into a 4" x 4" x 6" PVC junction box.
  - b. Conduit interconnects between boxes (deck plates and wall plates) must be PVC. Refer to drawings for sizing.
  - c. Verify routing of conduit with Multi-Sport Computer/Timing System manufacturer prior to installation.

**D. Start System Deck Plate**

1. Start system deck plates must be provided as required in the quantities as shown on the drawings.
  - a. Basis of Design: Start system deck plates are based upon TITANIUM SERIAL START SYSTEM DECK PLATE as manufactured by Colorado Timing Systems, Inc.
2. Connection to start system that must provide the following:
  - a. Inputs/outputs for start system and speaker.
  - b. Detection of presence or absence of speaker input or start system.
  - c. Diagnostic capabilities to detect anomalies with connectors (corrosion, shorts) and anomalies with the speaker or start system.
3. Junction Boxes (Provided by Electrical):
  - a. In deck system components must fit into a 4" x 4" x 6" PVC junction box.
  - b. Conduit interconnects between boxes (deck plates and wall plates) must be PVC. Refer to drawings for sizing.
  - c. Verify routing of conduit with Multi-Sport Computer/Timing System manufacturer prior to installation.

**2.4 SWIMMING TIMING START SYSTEM**

- A.** Swimming Timing Start System (1 required) must be provided to start the automatic swim Multi-Sport Computer/Timing System. The start system must drive speakers mounted under the starting blocks, the relay judging platform strobe lights and deck side start indicators, with microphone.
1. Basis of Design: Swimming Timing Start System is based upon the CHAMPIONSHIP START SYSTEM as manufactured by Colorado Timing Systems, Inc.

- B. System must drive up to twenty 6-watt (reflex) corrosion resistant speakers located under the individual starting blocks as well as be able to drive individual speed lights on each starting block.
- C. System must have the capability to use either wired or wireless microphones and must have a volume control on each microphone input.
- D. Start system must have a high impact resistant plastic molded enclosure.
- E. The system must have external connections for additional strobe light, speaker output and start output.
- F. The system must run off of an external 12-volt power and have 2 internal gel cell batteries. The internal batteries will automatically be recharged while the starter is plugged in to the external power supply.
- G. There must be an LED warning light on the system showing when the internal batteries are starting to get low on power.

## 2.5 DIVING

### A. Diving Scoring Software:

1. The diving scoring system must be supplied with necessary software to score diving in compliance with the appropriate sanctioning body - NCAA.
  - a. Basis of Design: The diving scoring system is based upon GEN7 DIVING as supplied by Colorado Timing Systems, Inc.
2. The diving scoring system must utilize the scoreboard to display diving scores and results without modification from swimming configuration.
3. Diving scoring system software must support standard and artistic scoring.
4. Accept seven (7) judges' input scores and compute award based upon proper formulas for seven (7) judges. Software must be operable with either remote judges' terminals or manual input of flash card scores.
5. System must be expandable to use up to eleven judges scoring terminals.
6. Permit display of the lead diver number, current diver number, dive number, degree of difficulty, judges' scores and diver's calculated award and total score.
7. Permit entry of diving data into non-volatile memory for storage or receive data from meet management computer without additional modifications. Data must include diver number, round number, dive number, and position. Degree of difficulty must be automatically calculated based upon dive number per current NCAA regulations. Dive degree of difficulty can also be manually input.
8. Automatically recall the diver with round number, dive number and DD using minimal keystrokes. Systems which require live entry of dive information are unacceptable.
9. Permit storage of diver's point totals and provide ranking of the divers at the end of each round.
10. Permit editing of judges' scores if required by meet officials.
11. Provide an output for computer data handling of diving events.
12. Permit a two-point deduction from the judges' scores and zero points for a failed dive. Such changes must be clearly shown on the printout.

13. Printout must provide preliminary data, diver ranking by rounds, and results of individual dives with judges' scores.
  14. Judges' terminals must be housed in sealed, water-resistant, shockproof housing.
  15. The terminals must provide a signal to inform the judge that the diving console has requested a score. Signal must cease when an appropriate score is transmitted. They must also allow each judge to input a score with a minimum of keystrokes, review that score via a built-in LCD display, and correct a score if needed before transmitting to the Judging Software.
  16. The Software must provide a switchable mode for sending data to the scoreboard display.
    - a. Mode-Automatic: In this mode the software must send the judges scoring information to the display with no software operator interaction.
    - b. Mode-Hold for Authorization: In this mode the software must receive authorization from a referee terminal or an assistant referee terminal prior to sending the scoring data to the display.
- B. Remote Judging Terminal:
1. Interface hub must plug into a user interface device (e.g., computer, tablet, etc.) via USB 2.0 or greater. One (1) laptop/tablet must be provided.
  2. Judges' terminals must include a quick release mating connector for connection to the Diving Cable Breakout Box.
  3. Judges' terminals must include rugged communications cable to connect to the diving interface box. The cable should be removable for easy cost-effective replacement of the cable.
  4. Judges' terminals must utilize sealed keyboards with a 128x64 Pixel Backlit LCD display suitable for indoor and sunlight readability.
  5. Judges' terminal LCD must be capable of displaying Divers Name.
  6. Judges' terminal LCD must be capable of displaying Divers Team or Country Name.
  7. Judges' terminal LCD must be capable of displaying scores of other judges once the scores have been accepted.
  8. Judges' terminal LCD must be capable of displaying Dive and Dive Degree of Difficulty
  9. Judges' terminal LCD must be capable of displaying the terminal number, so they can be easily identified to the judge.
  10. Judges' terminals must include a request change button to notify the software that the judge's input is requesting permission to correct the submitted score.
  11. Judges' terminals must be able to be assigned as a Referee's terminal or Assistant Referee's terminal allowing the device to control when the judging data is transmitted to the scoreboard display.
  12. Provide seven (7) Judging Terminals (JT-01) with associated cables. Provide one interface hub box (IH-01) with associated cables. Provide one (1) cable breakout box (CB-01) with associated cables.

## 2.6 SWIMMING TIMING COMPONENTS

### A. Gutter Hung Touchpads

1. Provide 9 touchpads (9 required, 8 plus 1 spare) to time swimming, in compliance with the appropriate sanctioning body.
  - a. Basis of Design: The gutter hung touchpad is based upon the AQUAGRIP GUTTER HUNG TOUCHPAD as manufactured by Colorado Timing Systems, Inc.
2. Touchpad must be constructed of an all-plastic exterior with only electrical connector metal exposed. Touchpad must be the following dimensions:
  - a. Touch pad must be the TP-78G AQUAGRIP, 78" wide x 22" tall x 0.3" thick.
3. Touchpad must have a uniform fine grit and non-abrasive surface that prevents swimmer slippage in any direction.
4. Touchpad markings must have contrasting colors with a 2" black border and black end-wall cross pattern for portion covered by touchpads.
5. Touchpad brackets must be custom made to fit the pool. The Contractor to provide sufficient number of brackets for support of each touchpad.
  - a. The Contractor to provide an additional 2 spare touchpad brackets.
6. Touchpad must have a two-year warranty without a requirement to purchase a protective touchpad cart.
7. Touchpad caddy for storing the number of touch pads supplied must be CAD-TP/P.

### B. Relay Judging Platforms

1. Provide 1 relay judging platforms to time swim start reaction in compliance with the appropriate sanctioning body. Platform must electronically indicate when a swimmer has left the starting block in relation to the incoming swimmer's touch of the timing pad. Accuracy must be 1/100<sup>th</sup> of a second.
  - a. Basis of Design: The relay judging platform as manufactured by Colorado Timing Systems, Inc.
2. Relay Judging Platform must have a non-skid surface to prevent swimmer slippage.
3. The top and front surface must be sensitive to the swimmer's push off.
4. Each platform must be capable of securing to starting blocks.
5. Refer to starting block specification for starting block top size. The relay Judging Platform must be sized to adequately cover the starting block.
6. LED Speed Light
  - a. Platforms must be equipped with speed light, LED lights that flash with the start signal.

### C. Push Buttons

1. Provide two (2) back-up buttons for each touchpad provided.
2. Back-up buttons must be plunger style buttons with a 5' cable.

### D. Swimming Timing Systems Caddies

1. Provide touchpad caddy for storing touch pads. The correct number of touchpad caddies must be supplied to store touchpads. Caddy must be sized to match timing system touch pad widths. Touchpad caddy must consist of an aluminum frame with four freewheeling casters. The Contractor is responsible for assembly. Touchpad caddy must be CAD-TP as manufactured by Colorado Timing Systems, Inc.

## **2.7 PACE CLOCKS**

### **A. Slim Pace Clocks**

1. Pace clocks must be provided as required in the quantities as shown on the drawings.
  - a. Basis of Design: SLIM PACE CLOCKS as manufactured by Colorado Timing Systems, Inc.
2. The pace clock must include thirteen (13") high visibility LED digits, with variable intensity settings. The pace clock must include a rugged powder-coated aluminum enclosure, conformal coated to protect against corrosion, a real time of day clock, and must be suitable for indoor or outdoor use.
3. Pace clock must include twelve (12) operating channels to eliminate interference.
4. Pace clocks have an integrated real time of day chip (RTC). If multiple pace clocks are used in a facility, they will synchronize the time automatically.
5. Pace clock must include a wireless frequency of 2.4 GHz and have autosensing power capabilities for 120/240 VAC.
6. The pace clock must have four (13") digits.
  - a. Overall Size (H x W x D): 19.25" x 42.25" x 2.8"
  - b. Weight: 15 lbs

### **B. Tripod Mounting Kit, TR-3**

1. Provide one tripod mounting bracket for third pace clock not mounted to natatorium wall.

## **PART 3 - EXECUTION**

### **3.1 EXISTING CONDITIONS**

- A. Verify that work by others, related to this section, is installed.
- B. Carefully examine the construction documents that affect the work of this section.
- C. Prior to starting work, notify the Architect of defects requiring correction.
- D. Protect other materials and installed work against damage while completing work in this section.

### **3.2 INSTALLATION**

- A. Provide custom cables, connectors, scoreboard mounting brackets, and fasteners.
- B. Provide scaffolding and labor for mounting scoreboard and pulling cables.
- C. Provide equipment in accordance with the manufacturer's drawings and instructions.
- D. Provide scoreboard mounting, Multi-Sport Computer/Timing System cable terminations, system checkout, and local operator training at time of installation. Training must consist of one 4-hour session.

- E. Provide as-built drawings precisely locating items.
- F. Wiring and grounding must be installed in strict accordance with the latest edition of the National Electric Code – Article 680.

END OF SECTION 131106

## **Section 131250 Continuous Elevated Angle Frame Bleachers**

### **Part 1 General**

#### **1.01 SPECIFICATION INCLUDES**

- A. Design, fabrication and installation of angle frames bleachers for use in the Natatorium only.

#### **1.02 REFERENCES**

- A. ASTM A36 – Specification for Structural Steel.
- B. ASTM A123 – Specification for Zinc (Hot Dip Galvanized Coatings and Iron and Steel Products.
- C. ASTM A307 – Specification for Carbon Steel Bolts and Studs, 60,000 psi Tensile.

#### **1.03 SUBMITTAL**

- A. Submittal Drawings: Submittal drawings sealed by a registered professional engineer indicating location, size, details, and quantity of all concrete, steel, and aluminum components and accessories. Drawing will indicate the locations of all exits stairs, ramps, aisles, seat locations, decking configuration, and general materials to be supplied.
- B. Design Calculations: Design calculations sealed by a registered professional engineer for the State of New Jersey and shall present an analysis which will indicate that the structural members will have sufficient strength to support the required loads and ability to resist the loads subjected, without exceeding the allowable stresses of the materials.
- C. Color Chart: Submit color finishes for selection, if applicable.
- D. Manufacturer's product data. Submit product brochure and descriptive data.

#### **1.04 QUALITY ASSURANCE**

- A. Codes and Standards: Design, fabrication, and installation shall be in accordance with International Building Code, 2021 – New Jersey Edition. Owner will verify code, requirements.
- B. Manufacturer Qualifications: Minimum 10 years existence under current ownership and experience in the design and manufacture of bleachers.
- C. Manufacturer Installer Qualifications: Employ persons trained and experienced in the installation of bleachers.
- D. Welders: AWS certified.
- E. AISC Certification: All structural steel shall be fabricated in an AISC certified plant at the time of the bid. The manufacturer must be listed on the AISC's website as a certified fabricator.

### 1.05 DESIGN CRITERIA

- A. Applicable Codes: All design, materials and workmanship shall be in accordance with the International Building Code 2021 – New Jersey Edition and ICC 300 Bleachers, Folding and Telescopic Seating and Grandstands. (or current edition)
- B. Design Loads:
  - Live Loads:
    - Uniform Loading-Structure=100 PSF
    - Uniform Loading-Seat=120 PLF
  - Sway Loads:
    - Perpendicular to Seating=10 lbs PLF
    - Parallel to seats= 24 PLF
  - Wind Loads: not applicable, interior installation
  - Snow Loads: not applicable, interior installation
  - Seismic Loads: Per Local Building Code
  - Handrail and Guardrail: 200 lbs concentrated in any direction

### 1.06 WARRANTY

- A. Guarantee bleachers to be satisfactory as to design, workmanship, and materials for five years beginning after completion of project.

### 1.07 MAINTENANCE

- A. Annual inspection and evaluation to be conducted by a qualified person retained by the owner. Required maintenance of grandstand to insure safe conditions by owner.

## PART 2 PRODUCTS

### 2.01 MANUFACTURER

- A. Basis of Design:
  - a. Sturdisteel Company
- B. Other Manufacturers subject to performance requirements of this specification and the basis of design:
  - a. Southern Bleacher
  - b. Or approved equal

### 2.02 ANGLE FRAME BLEACHERS

- A. Design shall be in accordance with American Institute of Steel Construction and Specifications for Aluminum Structures.
- B. Shop Connections: Welded.
- C. Welding: AWS standards.

- D. Framework: Space prefabricated aluminum angle bleacher frames at 6 foot intervals and connect by cross braces.
- E. Rise and Depth Dimensions:
  - 1. Vertical Rise and Horizontal Depth per Row: 8 inches by 24 inches.
  - 2. Seat Above its Respective Tread: 17 inches.
- F. Riser:
  - 1. Nominal 1 by 6.25 at all rows .
- G. Seats: Nominal 2 by 10 anodized aluminum plank, with 2 by 10 end caps.
- H. Decking is to be a closed deck utilizing an Interlocking No Through Bolt Decking System. The aluminum extrusions shall interlock together lengthwise while allowing for expansion and contraction of individual planks. The interlocking design will minimize the deflection of individual planks and cause the deck planks to react together at all treads and walkways. This decking system shall be such that the attachment of seat brackets, step brackets, mid-aisle rails and all other components is accomplished without any deck penetrations. This system also allows for seats and aisle reconfiguration at anytime without evidence of the previous configuration. No drilling of the aluminum deck will be permitted. (Tongue and Groove boards do not meet this specification)
- I. Guardrail: To be on all sides of the bleachers and shall be secured to structural angle post/vertical members attached to the understructure. Attachment of guardrail posts to aluminum planking (seats or footboards) is prohibited.
  - 1. Back and Side Top Rails: 42 inches above its adjacent seat.
  - 2. Guardrail to consist of clear anodized aluminum picket rails with 4" maximum spacing
- J. Aisle Width: 48 inches in accordance with IBC 2021-NJ, ICC 300, unless greater width specified by local code requirements. Each aisle extension boards to have a 2-inch dark bronze anodized nosing.
- K. Anchor to concrete slab, designed by manufacturer, using 2 3/8 x 3 screw anchors for each frame.
- L. Wheelchair provisions, quantity and locations shown on the plans. Wheelchair locations shall be such that a 4-inch sphere will not pass through to grade, and shall have guardrails directly behind the wheelchair section.

## 2.03 MATERIALS

- A. Framework
  - 1. Mill Finish aluminum angle frames, cross bracing, guardrail posts:
- B. Extruded Aluminum:
  - 1. All planking to be extruded aluminum alloy 6063-T6.
  - 2. Seats and risers shall be clear anodized 204R1, AA-M10C22A31, Class II
  - 3. Tread planks intended for walking surfaces Seats and risers shall be clear anodized 204R1, AA-M10C22A31, Class II
- C. Accessories:
  - a. Channel End caps: aluminum alloy 6063-T6, clear anodized finish to match the seats
  - b. Hardware
    - i. Bolts, nuts and washers are galvanized
    - ii. Hold-down clip assembly is aluminum alloy 6061-T6
  - c. Guardrailing: sides and rear to be clear anodized aluminum picket rails with pickets 4" max o.c. | Provide Manufacturers Standard Powder Coat Color Options
  - d. Handrails: Anodized aluminum pipe 1-5/8 inch o.d.

- e. Polymer seat Topper with number tag at all net seat locations: EAGLE SERIES 1000 in color “orange” or approved equal.
- f. Bleacher end curtains with printed design/logo

### **PART 3 EXECUTION**

#### **3.01 INSTALLATION**

- A. Install angle frame bleachers complete in accordance with manufacturer’s written instructions and approved shop drawings

#### **3.02 CLEAN UP**

- A. Clean all surfaces after installation, in accordance to manufacturer’s recommendations
- B. Remove and properly dispose of all packaging and construction debris

END OF SECTION

## **SECTION 142100 TRACTION ELEVATORS**

### **PART 1 – GENERAL**

#### **1.1 SECTION INCLUDES**

- A. One, Gearless, machine-roomless electric traction passenger elevators.

#### **1.2 RELATED SECTIONS**

- B. Section 033000 – Cast-in-Place Concrete: Elevator pits.

#### **1.3 REFERENCES**

- A. ANSI/ASME A17.1/CAN/CSA B44 – Safety Code for Elevators and Escalators.
- B. ADAAG – Americans with Disabilities Act Accessibility Guidelines.
- C. ANSI/NFPA 70 – National Electrical Code.
- D. ANSI/NFPA 80 – Fire Doors and Windows.
- E. ANSI/UL 10B – Fire Tests of Door Assemblies.
- F. CAN/CSA C22.1 – Canadian Electrical Code.
- G. Model and Local Building Codes. ISO 9001: 2000 - Quality Management Systems - Requirements.

#### **1.4 DESIGN REQUIREMENTS**

- A. Arrange elevator components in control closet or machinery space so equipment can be removed for repairs or replaced with minimal disturbance to other equipment and components.
- B. Where permitted by code, provide all elevator equipment including controls, drives, transformers, and rescue features within the elevator hoistway.

#### **1.5 SUBMITTALS**

- A. Comply with Section 013300 – Submittal Procedures.
- B. Product Data: Submit manufacturer/installer's product data, including,
  - a. Descriptive brochures or detail drawings of car and hall fixtures, cab ceilings, and product features.
  - b. Power Information: Horsepower, starting current, running current, machine and control heat release, and electrical requirements.

- C. Shop Drawings: Submit manufacturer/installer's shop drawings, including plans, elevations, sections, and details, indicating location of equipment, loads, dimensions, tolerances, materials, components, fabrication, fasteners, hardware, finish, options, accessories, and other information to render totally functional elevators.
- D. Samples: Submit manufacturer/installer's samples of standard colors and finishes of finish materials.
- E. Operation and Maintenance Manual: Submit manufacturer/installer's operation and maintenance manual; including operation, maintenance, adjustment, and cleaning instructions; trouble shooting guide; renewal parts catalogs; and electrical wiring diagrams.
- F. Warranty: Submit manufacturer/installer's standard warranty.

#### 1.6 PERMITS AND INSPECTIONS

- A. Obtain and pay for all necessary municipal and State inspections and permits and make such tests as are required by the regulations of such authorities. These tests shall be made in the presence of the authorized representatives of such authorities.

#### 1.7 QUALITY ASSURANCE

- A. Manufacturer/Installer's Qualifications: Specialize in manufacturing and installing elevator equipment, with a minimum of 10 years successful experience.
- B. Regulatory Requirements:
  - a. Elevator design, clearances, construction, workmanship, materials, and installation, unless specified otherwise, shall be in accordance with ANSI/ASME A17.1, handicap accessibility, Americans with Disabilities Act, and other codes having legal jurisdiction.
  - b. ANSI/ASME A17.1 shall govern, except where codes having legal jurisdiction include more rigid requirements or conflict with ANSI/ASME A17.1.
  - c. Elevator shall follow design and manufacturing procedures certified in accordance with ISO 9001-2000 to meet product and service requirements for quality assurance for new products.
- C. Comply with all requirements of the State of New Jersey.
- D. Tolerance for Elevator Travel: Plumb and secure guide rails within an overall tolerance of 1/4" (measured with no wind or solar load on building) and within 0.01" joint offset on rail surface. Limit short-span tolerance (measured between upper and lower car guides, continuously) to the following:
  - 1. Plumb Tolerance: 1/8".
- E. Tolerance for Car Leveling: Position stopping car within following tolerance, up or down, regardless of load and direction of travel:
  - 1. Car Floor to Landing: 1/4" out of level.
- F. Fire Resistance: Except as otherwise indicated, comply with NFPA Standard No. 80 for construction and installation of hoistway entrance. Provide each door unit bearing UL label of approval ("B" label, except as otherwise indicated) as a "Fire Door" if horizontal sliding or vertical bi-parting, and as a "Frame and Fire Door Assembly" if swinging. Where required by NFPA Standard No. 80, provide separate UL labels of approval on hardware, sills, closers, and other accessory items of hoistway entrance.

G. Pre-installation Meeting:

- a. Convene pre-installation meeting before start of installation of elevators.
- b. Require attendance of parties directly affecting work of this section, including Contractor, Architect, and elevator manufacturer/installer.
- c. Review examination, installation, field quality control, adjusting, cleaning, protection, and coordination with other work.

**1.8 DELIVERY, STORAGE, AND HANDLING**

- A. Delivery: Deliver materials to site in manufacturer/installer's original, unopened containers and packaging, with labels clearly identifying product name and manufacturer/installer.
- B. Storage: Store materials in clean, dry area indoors in accordance with manufacturer/installer's instructions.
- C. Handling: Protect materials during handling and installation to prevent damage.

**1.9 PROJECT CONDITIONS**

A. Temporary Electrical Power:

- a. General Contractor to coordinate and provide for temporary 220 VAC, single-phase, 60 Hz., GFCI-protected electricity to be available for installation of elevator components or as required by elevator manufacturer
- b. Comply with Section 015100 – Temporary Utilities.

B. Installation of the Elevator:

- a. General Contractor will provide permanent three-phase power prior to installation start.
- b. General Contractor will provide clear, rollable access to a 20' x 10' secure and dry storage area prior to delivery or as required by elevator manufacturer.
- c. General Contractor will provide a clean, dry, and complete hoistway along with temporary installation platform and all required OSHA-compliant barricades prior to delivery.

**1.10 SCHEDULING**

- A. Coordinate elevator work with work of other trades, for proper time and sequence to avoid construction delays.

**1.11 WARRANTY**

- A. Manufacturer/installer shall guarantee materials and workmanship of equipment installed under these specifications and make good, defects not due to ordinary wear or to improper use, which may develop within 1 year after completion of installation or acceptance thereof by beneficial use, whichever is earlier.

**1.12 MAINTENANCE SERVICE**

- A. Elevator maintenance service shall be performed by elevator manufacturer/installer.

- B. Elevators shall receive regular maintenance on each unit for period of 12 months after completion of work specified herein or acceptance thereof by beneficial use, whichever is earlier.
- C. Trained employees shall make periodic examinations but not less than quarterly with final visit less than 30 days prior to expiration of warranty period and perform work including necessary adjusting, greasing, oiling, and replacing parts to keep elevators in operation, except parts that require replacement because of accidents, vandalism, misuse, or negligence by parties other than manufacturer/installer.
- D. Manufacturer/installer shall perform all Work, except emergency minor adjustment call-back service, during regular working hours. Manufacturer/installer shall provide emergency minor adjustment call-back service, during regular working hours.
- E. Maintenance Options
  - Regular Maintenance: During Regular Working Hours, not less than quarterly.
  - Callback Service: During Regular Working Hours
  - Maintenance Period: 12

## **PART 2 – PRODUCTS**

### **2.1 MANUFACTURER/INSTALLER**

- A. Elevator shall be installed by elevator manufacturer. Passenger Elevators, Basis of Design: Provide "Schlinder 3300 XL" gearless, machine-roomless elevator as manufactured by Schlinder or approved equal with the following characteristics specified herein.
- B. Other manufacturers: TK elevator, Fujitec, Kone, Otis or approved equal

### **2.2 ELEVATOR SYSTEM AND COMPONENTS**

- A. Elevator Equipment Summary:
  - a. Application: Machine Room Less (MRL)
  - b. Counterweight Location: Side
  - c. Machine Location: Top of the hoistway mounted on car and counterweight guide rails
  - d. Control Space Location: Top landing entrance frame or entrance frame at one floor below the top landing
  - e. Service: Hospital/service
  - f. Quantity: 1 Unit
  - g. Capacity: 4500 lbs
  - h. Speed: 150 fpm
  - h. Travel: 16' 0"
  - i. Landings: 2
  - j. Front Openings: 1
  - k. Rear Openings: 1

- l. Rear Door Hand: Left
- m. Operation: Microprocessor Single Car Automatic Operation
- o. Clear Inside Dimensions: 5' 4-1/4" Wide X 8' 2 1/2" Deep
- p. Cab Height: 7' 9"
- q. Guide Rails: Equivalent to 12 lb. per foot
- r. Entrance Type and Width: Two Speed Side Opening 4' 0" Wide X 7' 0" High doors
- t. Power Supply: 480 Volts 3 Phase 60 Hz

**C. Performance:**

a. Car Speed: -10% to +5% of contract speed under any loading condition or direction of travel.

b. Car Capacity: Safely lower, stop and hold up to 125% of rated load per code.

**D. Ride Quality:**

- a. Vertical Vibration (maximum): 25 mg
- b. Horizontal Vibration (maximum): 15 mg
- c. Vertical Jerk (maximum): 2 ft/sec<sup>3</sup>
- d. Acceleration (maximum): 1.6 ft/sec<sup>2</sup>
- e. In Car Noise: 53-60 dB(A)
- f. Stopping Accuracy: ±5mm
- g. Starts per hour (maximum): 180

**E. Elevator Operation:**

a. Simplex Collective Operation: Using a microprocessor based controller, operation shall be automatic by means of the car and hall buttons. When all calls have been answered, the car shall park at the last landing served.

**F. Operating Features - Standard:**

- a. Door Light Curtain Protection
- b. Static AC Drive
- c. Phase Monitor Relay
- d. Cab Overload with Indicator
- e. Load-weighing
- f. Central Alarm
- h. Firefighter's Operation
- i. Standby Emergency Operation / Automatic Generator Tie-In. Upon activation of fire alarm system car shall return to first floor and remain in the open position or if alarm on first floor raise to the 2<sup>nd</sup> floor position and remain open.

- j. Independent Service
- k. Top of car inspection
- l. fan and light protection

## **2.3 EQUIPMENT: CONTROL COMPONENTS AND CONTROL SPACE**

- A. Controller: Provide microprocessor based control system to perform all of the functions of safe elevator operation, as well as perform car and group operational control.
  - a. All high voltage (110v or above) contact points inside the inspection and test panel shall be protected from accidental contact in a situation where the access panels are open.
  - b. The controller shall be distributed throughout the elevator system located in the overhead, cab and inspection and test panel. The inverter will be mounted in the overhead adjacent to the hoist machine and an inspection and test panel will be located in the door jamb at the top floor or one floor below the top floor. No elevator equipment mechanical rooms or closets are required.
  - c. Provide multi-bus control architecture to reduce cabling, material and waste.
- B. Drive: Provide a Variable Voltage Variable Frequency AC Closed Loop drive system. Provide stable start without high peak current, quickly reaching a low energy consumption level.
- C. Inspection and Test Panel: Integrated control equipment, main inspection and test panel in door frame at top level served or at one floor below the top level served.

## **2.4 EQUIPMENT: HOISTWAY COMPONENTS**

- A. Machine:
  - a. Gearless asynchronous AC motor with integral drive sheave, service and emergency brakes.
  - b. Design machine to enable direct power transfer, thereby avoiding loss of power.
  - c. Design machine to be compact, lightweight and durable to optimize material usage and save space.
  - d. Mount to structural support channels on top of guide rail system as applicable in hoistway overhead.
- B. Governor:
  - a. Tension type over-speed governor with remote manual reset.
  - b. Mount to structural support channels as applicable in hoistway overhead.
- C. Buffers, Car and Counterweight: Polyurethane buffers shall be used.
- D. Hoistway Operating Devices:
  - a. Emergency Stop switch in the pit.
  - b. Terminal stopping switches.
  - c. Emergency stop switch on the machine.

- E. Positioning System: System consisting of proximity sensors and door zone vanes.
- F. Guide Rails and Attachments: Provide Tee-section steel rails with brackets and fasteners. Side counterweight arrangements shall have a dual purpose bracket that combines both counterweight guide rails, and one of the car guide rails to building fastening.
- G. Suspension System: Non circular Elastomeric coated suspension media with high tensile grade steel cords.
- H. Governor rope: Steel wire rope with 6 mm diameter.

## **2.5 EQUIPMENT: HOISTWAY ENTRANCES**

- A. Hoistway Doors and Frames:
  - a. UL rated with required fire rating minimum 1-1/2 hours.
  - b. Doors: Rigid flush panel construction with reinforcement ribs.
  - c. Frames: Securely fasten at corners to form unit frame. Frames shall be bolted.
    - 1. Full depth (Sematic) entrance jambs each floor.
- B. Finish:
  - a. Exposed Areas of Corridor Frames: Stainless Steel - All Floors
  - d. Doors: Stainless Steel - All Floors
  - g. Sills: Aluminum - All Floors
- C. Entrance Markings and Jamb Plates: Provide standard entrance jamb tactile markings on both jambs, at all floors. Plate Mounting: Refer to manufacturer drawings.

## **2.6 EQUIPMENT: CAR COMPONENTS**

- A. Car Frame and Safety: Provide car frame with adequate bracing to support the platform and car enclosure. The safety shall be integral to the car frame and shall be flexible guide clamp type.
- B. Platform: Provide platform of steel construction with plywood subfloor and aluminum threshold.
- C. Car Guides: Provide sliding guide shoes mounted to top and bottom of both car and counterweight frame. Arrange each guide shoe assembly to maintain constant contact on the rail surfaces. Provide retainers in areas with Seismic design requirements.
- D. Provide central guiding system to reduce mechanical friction and energy consumption.
- E. Steel Cab:
  - a. Fire rating: Provide Class B fire rating for cab, or Class A fire rating where required by local Code.
  - b. Subfloor: Exterior, C-C Plugged grade plywood, not less than 7/8" nominal thickness.
  - c. Car wall finish: Hung 5WL Panels textured stainless steel panels.

- d. Base and frieze: Aluminum.
- e. Car front finish: Brushed stainless steel.
- f. Car door finish: Brushed stainless steel.
- g. Ceiling: Canopy ceiling, finished in #4 Stainless Steel With Down Lit Led Lighting.
- h. Handrail: Round Bushed Stainless Steel. Locate on-all Walls without door
- i. Flooring: By others. Not to exceed 3/4" finished depth.
- j. Ventilation: Provide one-speed fan in canopy.
- k. Emergency Car Lighting: Provide an emergency power unit employing a 12 volt sealed rechargeable battery and static circuits to illuminate the elevator car and provide current to the alarm bell in the event of building power failure.
- l. Emergency Siren: Provide siren mounted on top of the car that is activated when the Alarm button in the car operating panel is engaged.
- m. Emergency Exit Switch: Provide an electrical contact to open the safety circuit when the emergency car top exit is opened. When the exit door is opened, the top exit switch shall signal the control and the car will be unable to move.
- n. Emergency Exit Lock: Provide an emergency exit lock where required by local code.
- o. Emergency Exit Guard: Provide emergency exit guard on top of car when required for hoistway wall to platform clearance exceeds 12" or for multiple cars in hoistway.
- p. Fan: A two-speed 120 VAC fan will be mounted to the structural ceiling to facilitate in-car air circulation, meeting A17.1 code requirements. Two-speed fan shall produce airflow rates of 5.8 and 7.4 m<sup>3</sup>/min on low and high setting respectively. The fan shall be rubber mounted to prevent the transmission of structural vibration and will include a baffle to diffuse audible noise. A switch shall be provided in the car-operating panel to control the fan.
- q. maintenance and protection pad mounting hooks with set of pads provided.

## **2.7 DOOR OPERATOR AND REOPENING DEVICES**

A. Door Operator: Provide a closed loop VVVF high performance door operator with frequency controlled drive for fast and reliable operation to open and close the car and hoistway doors simultaneously.

B. In case of interruption or failure of electric power, the doors can be readily opened by hand from within the car, in accordance with applicable code. Provide emergency devices and keys for opening doors from the landing as required by local code.

C. Doors shall open automatically when the car has arrived at or is leveling at the respective landings. Doors shall close after a predetermined time interval or immediately upon pressing of a car button. Provide door open button in the car operating panel. Momentary pressing of this button shall reopen the doors and reset the time interval.

D. Provide door hangers and tracks for each car and hoistway door. Contour tracks to match the hanger sheaves. Design hangers for power operation with provisions for vertical and lateral adjustment. Hanger sheaves shall have polyurethane tires and pre-lubricated sealed for life bearings.

E. Electronic Door Safety Device: Equip car doors with concealed transmitter and receiver infrared beam devices to detect presence of object in process of passing through hoistway entrance and car doorway (light curtain device).

a. Use multi-beam scanning without moving parts to detect obstructions in door opening.

b. Detector Device: Prevent doors from closing, or if they have already started closing, cause doors to reopen and remain open while object is within detection zone.

c. Horizontal Beams: Minimum of 33 infra red beams to fill doorway from ground level to a height of 6 feet.

## **2.8 EQUIPMENT: SIGNAL DEVICES AND FIXTURES**

A. Car Operating Panel: Provide a car operating panel with all push buttons, key switches and message indicators for elevator operation.

a. Full height car operating panel shall be surface-mounted on front return.

b. Comply with handicap requirements.

c. Push Buttons: Mechanical, illuminating using long-lasting LEDs for each floor served.

d. Emergency Buttons: Provide in accordance with code. Emergency alarm button, door open and door close buttons.

B. Features of the Car Operating Panel Shall Include:

a. Audible chime to signal that the car is either stopping at or passing a floor served by the elevator.

b. Raised markings and Braille provided to the left hand side of each push button.

c. Car Lantern: Provide LED illuminated car lantern with direction arrows to comply with local code when hall lanterns are not provided.

d. Door open and close push buttons.

e. Firefighter's hat and Phase 2 Key-switch

f. Inspection key-switch.

g. Key-switch for optional Independent Service Operation

h. Illuminated alarm button with raised marking.

i. Elevator Data Plate marked with elevator capacity and car number.

j. Help Button: Activation of help button will initiate two-way communication between car and a location inside the building, switching over to alternate location if call is unanswered, where personnel are available to take the appropriate action. Visual indicators are provided for call initiation and call acknowledgement.

k. Certificate Frame.

- C. Hall Fixtures: Provide hall fixtures with necessary push buttons and key switches for elevator operation. (Vandal Resistant)
  - a. Push buttons: Metallic tactile push buttons, up button and down button at intermediate floors, single button at each terminal floor. (Vandal Resistant)
  - b. Height: Comply with handicap requirements.
  - c. Illumination: Illuminating using long-lasting low power LEDs.
- D. Hall Lanterns and Position Indicators.
  - a. LED illuminated direction arrows with audible and visible call acknowledgement. (wall-mounted above entrance frame at typical landings)
- E. Hoistway access switches: Provide key-switch at top and/or bottom floor in entrance jamb as required by local code.
- F. Firefighter's Phase 1 Service: Key switch in brushed stainless steel cover plate.
- G. Fixture Cover Plates: For push buttons, hall lanterns and position indicators, resistant white back-printed glass, no screws required for mounting. Provide stainless steel cover plates for Firefighter's Phase I switch and hoistway access switches, with tamper resistant screws in same finish.
- H. Mounting: Mount hall fixtures in (entrance frames)

## **PART 3 – EXECUTION**

### **3.1 EXAMINATION**

- A. Examine hoistways, hoistway openings, and pits before starting elevator installation.
- B. Verify hoistway, pit, overhead, and openings are of correct size, within tolerances, and are ready for work of this section.
- C. Verify walls are plumb where openings occur and ready for entrance sill installation. Traditional sill angle or concrete sill support shall not be required.
- D. Verify hoistway is clear and plumb, with variations not to exceed -0 to +1 inch at any point. Verify projections greater than 4" must be beveled not less than 75 degrees from horizontal. No negative tolerance is permitted for minimum hoistway dimensions.
- E. Verify minimum 2-hour fire-resistance rating of hatch walls.
- F. Notify Architect in writing of dimensional discrepancies or other conditions detrimental to proper installation or performance of elevators.
- G. Do not proceed with elevator installation until unsatisfactory conditions have been corrected in a manner acceptable to manufacturer/installer.

### **3.2 INSTALLATION**

A. Install elevators in accordance with manufacturer/installer's instructions and ANSI/ASME A17.1.

B. Set entrances in vertical alignment with car openings and aligned with plumb hoistway lines.

### 3.3 FIELD QUALITY CONTROL

A. Perform tests of elevator as required by ANSI/ASME A17.1 and governing codes. (including one pre-test with fire alarm vendor and one final elevator inspection test per elevator)

### 3.4 ADJUSTING

A. Adjust elevators for proper operation in accordance with manufacturer/installer's instructions.

B. Adjust elevators for smooth acceleration and deceleration of car so not to cause passenger discomfort.

C. Adjust doors to prevent opening of doors at landing on corridor side, unless car is at rest at that landing, or is in leveling zone and stopping at that landing.

D. Adjust automatic floor leveling feature at each floor to within 1/4 inch of landing.

E. Repair minor damages to finish in accordance with manufacturer/installer's instructions and as approved by Architect.

F. Remove and replace damaged components that cannot be successfully repaired as determined by Architect.

### 3.5 CLEANING

A. Clean elevators promptly after installation in accordance with manufacturer/installer's instructions.

B. Do not use harsh cleaning materials or methods that could damage finish.

### 3.6 PROTECTION

A. Protect installed elevators from damage during construction in accordance with the negotiated temporary use agreement between Owner and manufacturer's installer.

END OF SECTION

## SECTION 200000 - COMMON MECHANICAL/ELECTRICAL REQUIREMENTS

### PART 1 - GENERAL

#### 1.1 RELATED DOCUMENTS

- A. This section of the specifications covers additional general requirements for Division 21 - 28.
- B. The basic general requirements for these Divisions are specified in Division 01, the entirety of which is applicable to the MEP Divisions.
- C. The following sections of Division 01 are particularly relevant:
  - 1. 01 31 00 PROJECT MANAGEMENT AND COORDINATION
  - 2. 01 32 33 PHOTOGRAPHIC DOCUMENTATION
  - 3. 01 33 00 SUBMITTAL PROCEDURES
  - 4. 01 42 00 REFERENCES
  - 5. 01 73 00 EXECUTION
  - 6. 01 77 00 CLOSEOUT PROCEDURES
  - 7. 01 78 23 OPERATION AND MAINTENANCE DATA
  - 8. 01 78 39 PROJECT RECORD DOCUMENTS
  - 9. 01 81 13.xx SUSTAINABLE DESIGN REQUIREMENTS LEED

#### 1.2 SUPPLEMENTARY MEP DEFINITIONS

- A. "Architect means the "Prime Design Consultant." If R.G. Vanderweil Engineers, LLP is not the Prime Design Consultant, the Architect may authorize R.G. Vanderweil Engineers, LLP to act on the Architect's behalf in matters concerning the systems Vanderweil has designed.
- B. The words "Architect" and "Engineer" may be used interchangeably in the mechanical and electrical Division specifications.
- C. The terms "Contractor," "General Contractor," "Construction Manager," and "Design-Builder," may appear in the mechanical and electrical Divisions. Wherever such a term is used, it shall mean the entity that is directing all the construction.
- D. "AHJ" means "Authorities Having Jurisdiction."
- E. "MEP" as used herein means the work specified in Divisions 20 through 28, as follows:
  - 1. Divisions 21 (Fire Suppression), 22 (Plumbing), 23 (HVAC), 26 (Electrical), 27 (Communications), 28 (Electronic Safety and Security)

#### 1.3 ADDITIONAL PROVISIONS RELATING TO THE MEP DOCUMENTS

- A. The two-dimensional drawings govern the construction. They show the design intent and are part of the Contract Documents. BIM models are not part of contract documents. They are developed for convenience only.
- B. In spaces used by building occupants, but not in mechanical rooms, the architectural drawings shall govern the location of visible mechanical and electrical components. In order to obtain the intended aesthetics in such spaces, prior to installation of visible material and equipment

(including access panels), review Architectural Drawings for desired locations and where not definitively indicated, request information from Architect.

- C. Maintain maximum headroom at all locations. All piping, duct, conduit, and associated components to be as tight to underside of structure as possible.
- D. Systems shall be run in a rectilinear fashion.
- E. Requirement for complete MEP systems and coordination adjustments:
  - 1. The two-dimensional drawings and the BIM model are diagrammatic, whether furnished electronically or in hard copy. They indicate general arrangements of mechanical systems and other work, and are intended to convey sufficient information for skilled contractors and tradesmen to furnish and install complete systems. They are not intended to be absolutely precise or at the level of detail of coordination or shop drawings. They are not intended to show every offset, fitting, and component. The purpose of the drawings and BIM model is to indicate a systems concept, the main components of the systems, and the approximate geometrical relationships. Based on this information Contractor shall provide all other components and materials to make the systems fully complete, coordinated with other systems, the structure and space available, and operational.

#### 1.4 ADDITIONAL REQUIREMENTS FOR MEP DISCREPANCIES

- A. Provide systems and components that are fully complete and operational and fully suitable for the intended use.
- B. Where Drawings or Specifications conflict or are unclear, or do not coincide with manufacturers' recommendations or with applicable codes and standards, submit clarification request in form of an RFI before installation. Otherwise, make changes in installed work required for compliance with manufacturer instructions or codes and standards within Contract Price. Similarly, where insufficient information exists in the documents to precisely describe a certain component or subsystem, or the routing of a component or its coordination with other building elements submit clarification request in the form of an RFI before installation.
- C. If the required material, installation, or work can be interpreted differently from drawing to drawing, or between drawings and specs, provide material, installation or work that is of the higher standard.
- D. Where discrepancies exist between the mechanical, plumbing, fire protection, and electrical drawings in regards to what trade owns disconnects or starters, the discrepancy shall be brought to the Architect's attention in accordance with paragraph (b) above. If the scope is not resolved prior to the Award of Contract, Division 26 shall provide such items.

#### 1.5 MEP CLASH DETECTION

- A. As part of the coordination effort, Contractor shall resolve any clashes detected in his/her clash detection analysis. The great majority of these are non-clashing adjacencies or interferences of small MEP components like piping 2 inches or less in diameter (excluding insulation). Such clashes shall be worked out by the contractor as part of his coordination effort. If a clash consists of major routing or other impasse, upon submittal of an RFI, the engineer will provide guidance.

#### 1.6 SUPPLEMENTARY PROVISIONS FOR MEP COORDINATION DRAWINGS

- A. For main mechanical and electrical rooms, show the paths of egress and for equipment removal and replacement.

- B. The MEP coordination drawings shall start with the sheet metal subcontractor's BIM model. This model shall include sheet metal (in its own color), structure, access panels, fire walls, smoke partitions, cross sections where congested, and other information required by Division 01. They shall also show elements of Architect's reflected ceiling plan, exposed ductwork, walls, partitions, diffusers, registers, grilles, fire dampers, sleeves and other aspects of construction for coordination. Show horizontal and vertical offsets and changes of direction.
- C. Each of the mechanical, electrical and other specialty trades shall electronically add its work to the model in a separate color, with appropriate offsets, elevations and grid dimensions, and showing access panels. Drawings shall indicate horizontal and vertical dimensions to avoid interference with structural framing, ceilings, partitions, and other services.
- D. The 2-D PDFs are considered the coordination drawings. The engineering review is based on these, not on the 3-D model, which the engineer may need to refer to for clarification in congested spaces.

#### 1.7 MEP DIGITAL DATA TRANSFER REQUIREMENT

- A. Electronic BIM files for Fire Protection, Plumbing, HVAC, Electrical, Communication, or Electronic Safety and Security systems will be furnished by Engineer at contractor's request. These files will be provided on Engineer's FTP site in the software release used by the Engineer. If other media or software version is requested, Engineer will require advance reimbursement of processing costs. Requests for electronic files will be honored after receipt of a signed licensing agreement acceptable to Vanderweil.

#### 1.8 MEP CODES, STANDARDS, AUTHORITIES AND PERMITS

- A. Perform MEP work in accordance with rules, regulations, standards, codes, ordinances, and laws of local, state, and Federal governments, and other authorities that have legal jurisdiction over the site.
- B. Prior to beginning work, secure and pay for all permits and inspections required by the AHJ.
- C. Materials and equipment shall be manufactured, installed and tested as specified in latest editions of applicable publications, standards, rulings and determinations of: Applicable local and state codes, NFPA, OSHA, UL, FM, American Insurance Association (AIA) (formerly National Board of Fire Underwriters), Owner's Insurance Underwriter.
- D. Specific reference is made to the following NFPA standards which contain an exceptionally high quantity of mechanical, electrical, and fire protection requirements. These standards as referenced by the applicable building, fire, and mechanical codes shall apply: No. 13 - Installation of Sprinkler Systems, No. 14 - Installation of Standpipe and Hose Systems, No. 20 - Installation of Centrifugal Fire Pumps, No. 30 - Combustible Liquids, No. 37 - Installation of Use of Stationary Combustion Engines and Gas Turbines, No. 45 - Fire Protection for Laboratories Using Chemicals, No. 70 - National Electric Code, No. 72 - National Fire Alarm Code, No. 101 - Life Safety Code
- E. Material and equipment shall be listed by UL.
- F. When requirements cited in the various parts of the Contract Documents conflict with each other, most stringent shall govern work. Architect may relax this requirement when relaxation does not violate ruling of AHJ. Approval for relaxation shall be obtained from AHJ in writing.
- G. Unless indicated otherwise, the most recent editions of applicable specifications and publications of the following organizations form part of these Contract Documents. Material and Equipment shall be approved by the relevant organizations for intended service: AGI,

ANSI, ASME, NEMA, ASTM, AWWA, ASHRAE, AMCA, SMACNA, ARI, IEEE, Thermal Insulation Manufacturers Association (TIMA), Insulated Cable Engineers Association (ICEA), Manufacturer's Standardization Society of the Valve & Fittings Industry (MSS)

**1.9 ADDITIONAL REQUIREMENTS FOR MEP WARRANTIES**

- A. Part 2 paragraphs of all specification Sections may specify warranty requirements that exceed those of this Paragraph.
- B. Warranty the Work of the MEP Divisions of the specifications in writing for one year following the date of Substantial Completion. If the equipment is used for ventilation, temporary heat, or other use prior to initial beneficial occupancy by the Owner, the bid price shall include an extended period of warranty covering the one-year of beneficial occupancy by the Owner. The warranty shall be for satisfactory system operation as well as to repair or replace defective products, materials, equipment, workmanship and installation that develop within this period, promptly and to Architect's satisfaction, and to correct damage caused in making necessary repairs and replacements under warranty within Contract Price.
- C. Additionally, obtain written equipment and material warranties offered in manufacturer's published data, without exclusion or limitation, in Owner's name.
- D. Replace material and equipment that require excessive service during warranty period. Excessive service shall be defined as more than three service calls for the same material or equipment within a 12 month period.
- E. Provide 24-hour service beginning on the date of Substantial Completion and lasting until the termination of the warranty period. Service may be provided by a separate service organization subject to Owner approval. Submit name and a phone number that will be answered on a 24-hour basis each day of the week, for the duration of the service.
- F. Use of systems provided under this Section for temporary services and facilities shall not constitute Final Acceptance of work nor beneficial use by Owner, and shall not institute warranty period.
- G. Provide manufacturer's engineering and technical staff at site to analyze and rectify problems that develop during warranty period immediately. If problems cannot be rectified immediately to Owner's satisfaction, advise Architect in writing, describe efforts to rectify situation, and provide analysis of cause of problem. Architect will recommend course of action.

**1.10 SUBMITTALS - SUPPLEMENTARY REQUIREMENTS FOR MEP SYSTEMS**

- A. These supplemental requirements apply only to the MEP systems and are in addition to the requirements in Division 01.
- B. Besides shop drawings, which are submitted relatively early in the project, code-required information on life safety and other systems is required to be submitted prior to claiming construction completion and filing for an occupancy permit. Refer to the specification section covering "Closeout Procedures."
- C. Contractor review of MEP submittals shall confirm that the submittal item physically fits into the space available.
- D. On the submittal cover sheet, provide the following additional information: (a) Contract Drawing Reference Number, (b) Equipment Tag (from Schedules on drawings), (c) Identify Submission Number (first, second, third, fourth).

- E. Also on the submittal cover sheet provide the following: (a) Product representative's contact information, (b) Do all submitted items exactly match scheduled/specified items (Yes, No)?, (c) Is this item a substitution or deviation from the contract documents (Yes, No)?, (d) Does equipment fit space on construction documents, coordination drawings, and actual field conditions (Yes, No)?, (e) Does this material/equipment add expense to other trades or project costs?, (f) Is control interface coordinated (Yes, No)?, (g) List electrical characteristics (Voltage/Phase/Hz/Amps).
- F. Provide shop drawings showing details of piping connections to ALL equipment.
- G. Division 23 shop drawings and installation layout drawings for heating, pumping, process piping, and refrigeration systems prepared by the Installer shall note name(s), license number(s), and license expiration dates of the installing firm.
- H. Sheet metal shop drawings shall show the same content as coordination drawings, but without the fire protection, plumbing and electrical layers superimposed.
- I. Engineer will return MEP submittals notated as follows:

"APPROVED AS NOTED"

"Reviewed and found generally acceptable. Minor deviations may be noted. Contractor shall submit:"

- ☐ No further submittal required if notations are complied with.
- ☐ Line-item confirmation of compliance with notations

"PROVISIONALLY APPROVED -

CONFIRMATORY RESUBMITTAL  
REQUIRED"

Submittal shall be considered approved when notations have been incorporated and a resubmittal with explanatory cover letter has been made.

"REJECTED; REVISE AND  
RESUBMIT"

"Submittal contains deviations which shall be corrected and confirmed by a new submittal."

"REJECTED"

Submittal is incorrect to such an extent that material is unacceptable or is incomplete to such an extent that a complete review cannot be made. Resubmit in accordance with requirements of the Contract Documents."

"NO ACTION"

Submittal not reviewed.

"REVIEWED FOR INFORMATION"

This Submittal is for information only.

1.11 ADDITIONAL REQUIREMENTS FOR MEP PHOTOGRAPHIC DOCUMENTATION

- A. The MEP record photos are specifically for the mechanical and electrical trades in concealed areas.
- B. Take photographs of all concealed systems and equipment in inaccessible ceilings, shafts, underground (buried) piping routes and other concealed, not readily-accessible areas. At completion of work, submit digitally, with explanatory information for each. These are information submittals.

1.12 SUPPLEMENTARY REQUIREMENTS FOR MEP OPERATION AND MAINTENANCE MANUALS

- A. Provide lubrication instructions for each item that requires lubrication.
- B. Incorporate system one-line and flow diagrams, to indicate how each component relates to the whole.

- C. Include valve directory showing each valve with I.D., and show I.D.'s on respective one line or flow diagrams.
- D. Include copy of HVAC balancing report.

## PART 2 - PRODUCTS (NOT USED)

## PART 3 - EXECUTION

### 3.1 LIFE SAFETY SYSTEMS - REQUIREMENTS FOR CERTIFICATE OF OCCUPANCY

#### A. Scheduling Life Safety Work

- 1. Schedule work so life safety systems are complete in advance of other systems. This requirement is to allow the Engineer to conduct a final project visit and correction of issues found without affecting issuance of a Substantial Completion Certificate or a Certificate of Occupancy.

#### B. Life Safety Systems Include

- 1. Fire Suppression Systems
- 2. Fire Notification (Alarm) and Detection Systems
- 3. Smoke Control Systems and Special Inspections
- 4. Egress Signage and Lighting Systems
- 5. Emergency Power Systems

#### C. Engineering Certification

- 1. Contractor shall ascertain from the AHJ whether Engineer must certify completion as a prerequisite for the Occupancy Permit. If so, confirm all systems are complete and notify Engineer in writing at least 10 working days before the Occupancy Certificate is requested.

#### D. Meaning Of "Complete" for a Life Safety System

- 1. No further work is required to satisfy the requirements of the drawings, specifications and applicable codes and standards.
- 2. Systems are fully operational with power to components, valves open, status indicators in "normal" condition and otherwise ready "as-is" to perform required functions.
- 3. Required product data and shop drawing submittals have been submitted and returned with a "Reviewed" status.
- 4. Test certificates have been submitted and returned with an "Approved as Noted" status.
- 5. Project visit report observations and "punch list" items have been addressed and/or corrected.
- 6. "O&M" documentation and "as-built" plans have been submitted and returned with a "Reviewed" status.

### 3.2 SPECIAL INSPECTIONS FOR SMOKE CONTROL SYSTEMS, INCLUDING ATRIUMS AND STAIR PRESSURIZATION SYSTEMS.

#### A. General

1. Special inspections for all smoke control systems shall be accomplished, in accordance with the version of the International Building Code in effect in the jurisdiction in which the project is located. The inspection shall cover associated mechanical systems, controls, and interface with building fire alarm system and smoke control panel.
2. In addition to special inspection for smoke control systems, documentation of completion of MEP systems is required to obtain an occupancy permit. The required documentation is detailed below.

**B. Special Inspections Team**

1. The special inspections team shall consist of:
  - a. A 3<sup>rd</sup> party Smoke Control Special Inspector (“SCSI”).
  - b. The Contractor’s Project Manager (“CPM”), plus the Project Manager for the Controls Vendor, plus designated representatives of sheet metal, electrical and fire alarm subcontractors.
  - c. A representative of the HVAC and Fire Alarm Engineers.
  - d. A representative of the Owner.
2. Coordinate the timely hiring by the Owner of the SCSI. The SCSI shall meet the requirements for the SCSI as defined in the applicable building code; namely have expertise in mechanical engineering, fire protection engineering and be a certified air balancer and approved by the AHJ. The SCSI may be comprised of multiple building professionals.
3. The CPM shall serve as the construction team’s single point of contact for the SCSI. The CPM shall be responsible for Contractor oversight and direction of the inspections effort and for communications to all contractors’ and subcontractors’ representatives on the inspections team. This includes coordinating the SCSI’s work with the TAB contractor and startup efforts. It shall be the CPM’s responsibility to ensure that all required parties, including technical representatives of equipment vendors, are present at smoke control and fire alarm inspections-related efforts when required by this specification and/or when requested by the SCSI. The CPM shall witness all inspection activities and shall initial inspection forms to indicate satisfactory completion.

**C. Special Inspection Requirements and Team Responsibilities**

1. Perform the testing, as directed by the SCSI. Prior to testing, Contractor shall submit proposed test protocol for approval by SCSI and Engineer.
2. Include all meetings, planning, scheduling, coordination, special inspection, testing, adjustment, re-testing, and material and labor to ensure that all smoke control systems operate according to the Construction Documents.
3. A report of all testing shall be prepared by the SCSI, submitted to the Engineer and the AHJ and stored at an approved location in the building upon completion of the inspections. The report shall include device identification by manufacturer, nameplate data, design values, measured values and identification tags.
4. The HVAC and Fire Alarm Engineers will review the report, and when satisfied that the design intent has been achieved, stamp the report with applicable PE seal. Any modifications to the testing, installation or documentation required by the PE must be made by the inspection team prior to stamping.

5. Special inspector shall review and comment on all related shop drawings. Submit SCSi comments on the reviewed shop drawings to Engineer in time for engineer to incorporate into design team review.
6. The phases and overall scope of testing are as follows:
  - a. Planning. Meeting, scheduling, and coordination to ensure that all parties, including vendors' representatives, know in advance the scope and schedule of what is required of them in the testing process.
  - b. Pre-Inspection (leakage testing and device location documentation). After equipment is installed, connected, and ready to operate, but before walls are sealed, the Contractor shall conduct and the SCSi observe pre-inspection to validate the installation of all equipment, ductwork, controls, smoke control panel and fire alarm being inspected. The CPM and the respective contractor's inspection team members shall witness and shall certify the results of the pre-inspection by initialing the respective forms. The CPM shall advise the SCSi and Engineer of the exact schedule for pre-inspection so that the SCSi and Engineer can witness parts or all of the pre-inspection.
  - c. After equipment has been successfully started up and operated, the Contractor shall have the systems tested and balanced. Testing shall include testing and verification of all controls sequences and pressure differentials. The SCSi shall witness the testing and balancing and controls verification.
  - d. Performance Tests (pressure-difference testing, flow measurements, detection and control verification). After systems are complete and equipment pre-inspection, startup, and testing and balancing have been completed, and test protocols have been approved, Contractor shall conduct performance testing, in order to validate component and systems performance. The CPM and the respective contractor's inspection team members shall witness and shall certify the results by initialing the respective forms. The CPM shall ensure that representatives of equipment vendors are present to observe and assist in the testing of respective equipment. The CPM shall advise the SCSi and Engineer of the exact schedule for functional performance testing so that the SCSi and Engineer can witness parts or all of it. The inspections effort shall be continuous day to day for whatever duration is required to complete it, and the CPM and other contractor team members must be consistently available for the testing. Performance tests shall be conducted under normal building power and repeated under emergency power.
  - e. Final system overall testing and acceptance by the Fire Department.
  - f. Acceptance of Special Inspections
    - 1) Acceptance shall be accomplished when the following has been satisfactorily completed by the contractor and certified by the SCSi and Engineer:
      - a) Pre-inspection
      - b) Startup, testing, and balancing
      - c) Performance Testing
      - d) Completed testing report, approved and stamped by the Engineer.
      - e) Acceptance of system by Fire Department, and issuance of final occupancy permit.

### 3.3 MEP CONTRACTORS' SPECIAL RESPONSIBILITIES

- A. Cooperate and coordinate with work of other Sections in executing work of this Section.
  - 1. For equipment provided under any division or section which has connections made under the mechanical or electrical sections, obtain detailed installation and hookup information from the equipment manufacturers.
  - 2. Obtain final roughing dimensions or other information needed for complete installation of items furnished under other Sections or by Owner.
  - 3. Keep fully informed as to shape, size and position of openings required for material or equipment to be provided under all Sections. Give full information so that openings required by work of this Section may be coordinated with other work and other openings and may be provided for in advance.
  - 4. Provide information requested as to sizes, number and locations of concrete housekeeping pads necessary for floor-mounted vibrating and rotating equipment.
  - 5. Notify Architect of location and extent of existing piping, conduit, ductwork and equipment that interferes with new construction. In coordination with and with approval of Architect, relocate piping, ductwork and equipment to permit new work to be provided. Remove non-functioning and abandoned piping, ductwork and equipment. Dispose of or store items.
- B. Building Expansion Joints and Firewalls
  - 1. Ductwork, conduit, cable tray, piping, and other horizontal distribution systems shall be provided with expansion provisions when passing across building expansion joints. Provide copper ground jumper across expansion joints for electrical components. Systems shall be run through rated walls, partitions, and floors via approved fireproofed sleeves.
- C. Installation Shall Provide Access to Systems
  - 1. Installation shall allow clearances for easy access to systems for routine maintenance, for repairs, and for installing new cable in conduit and cable trays.
  - 2. Access panels shall be installed in ceilings that are not composed of removable tiles. These shall be located where system components exist that have moving parts, motors, or other components requiring periodic maintenance, adjustment, or replacement. Access panels shall be shown on Coordination Drawings and shall be of the type and finish approved by the Architect.
- D. Installation Only Items
  - 1. Where a Contractor is required to install items that it does not purchase, coordinate the delivery and be responsible for their unloading from delivery vehicles and for safe handling and field storage up to the time of installation.
    - a. Provide field assembly and internal connections, as well as mounting in place of the items, including the purchase and installation of dunnage supporting members and fastenings to adapt them to architectural and structural conditions.
    - b. Provide connection to building systems including the purchase and installation of terminating fittings necessary to adapt and connect them to the building systems.
  - 2. Carefully examine items upon delivery. Claims that items have been received in a condition that their installation will require procedures beyond the scope of work of this

contract will be considered only if presented in writing within one week of their date of delivery. Unless claims have been submitted, fully recondition or replace damaged items.

**E. Surveys and Measurements**

1. Base measurements, both horizontal and vertical, on reference points established by Contractor and be responsible for correct layout of work.
2. In event of discrepancy between actual measurements and those indicated, notify Architect in writing and do not proceed with work until written instructions have been issued.

**F. Fireproofing**

1. Clips, hangers, clamps, supports and other attachments to surfaces to be fireproofed shall be installed, insofar as possible, prior to start of spray fiber work.
2. Ducts, piping and other items that would interfere with proper application of fireproofing shall be installed after completion of spray fiber work.
3. Patching and repairing of fireproofing due to cutting or damaging to fireproofing during course of work shall be performed by installer of fireproofing and paid for by trade responsible for damage and shall not constitute grounds for an extra to Owner.

**G. Air Bound Systems**

1. If, after systems are operational, piping systems, coils or other apparatus are stratified or air bound (by vacuum or pressure), they shall be repiped with new fittings, air vents, or vacuum breakers at no extra cost. If connections are concealed in furring, floors, or ceilings, installing trade shall bear all expenses of tearing up and refinishing construction and finish, leaving same in as good condition as before it was disturbed.

**H. Site Logistics**

1. Unload materials and equipment delivered to site. Pay costs for rigging, hoisting, lowering and moving equipment on and around site, in building or on roof.

**I. Continuity of Services**

1. Do not interrupt existing services without Owner's approval.
2. Schedule interruptions in advance, according to Owner's instructions.
3. Interruptions shall be scheduled at times of day and work so that they have minimal impact on Owner's operations.
4. Include premium time work associated with interruptions of services and/or shutdowns to avoid disruption to Owner's operations.

**3.4 MEP - CLEANING OF PIPING**

- A. Furnish pipe cleaning chemicals, chemical feed equipment, materials and labor necessary to clean piping.
- B. Chemicals shall conform to LEED standards for environmental compatibility.
- C. Permanently install necessary chemical injection fittings complete with stop valves.
- D. After piping systems have been pressure tested and approved for tightness, clean and flush piping as specified and in accordance with applicable codes.

- E. Maintain continuous blowdown and make-up during flushing operation.

### 3.5 MEP AND FIRE PROTECTION COMPLETION REQUIREMENTS

#### A. Special Provisions for MEP Completion Punchlists

1. When the contract work is substantially complete, if requested by the Contractor, the Engineer will inspect the relevant work to confirm completion status. Prior to the inspection, the Contractor shall submit a punch list of remaining items to be completed as well as the Testing, Adjustment, and Balance report. In the course of the review the Engineer will add a supplement to the Contractor's punch list with any observed remaining work that is not already on the list and provide the modified punch list, in a medium selected at the Engineer's discretion, for the Contractor's convenience in closing out the work.
2. Regardless of what the Engineer observes and does not observe in the inspection, the responsibility for successful completion of the contract in all of its details remains with the Contractor.
3. If, when the Engineer arrives at the site certain areas are not complete and ready for review at the substantial completion stage, the Engineer will not review these areas.
4. Confirmation of Punch List Remediation. Once the engineer has submitted the supplement to the Contractor punch list, it shall be the responsibility of the Contractor to confirm that all the listed items have been correctly remedied. Upon receipt of such confirmation, and at the request of the Contractor, the engineer will perform an additional inspection to confirm completion.

#### B. Supplementary MEP Provisions for Obtaining Occupancy Permit

1. Contractor shall coordinate with the approved agency (commissioning agent) and owner regarding the preliminary commissioning report and acknowledgement letter, as required by the IBC and IECC as a condition for final inspection.
2. Contractor shall prepare and submit the below life-safety related items as a prerequisite for construction completion and occupancy. These shall be submitted to the Engineer prior to filing for the occupancy permit so that the Engineer can provide the completion documentation to the AHJ in a timely fashion. Provide a copy of all documents to Architect and to Owner. The required Contractor submittals include:
  - a. Contractor certification that MEP systems have been installed in compliance with the Permit Documents
  - b. Contractor statement of compliance of (a) the fire protection and fire alarm installation with the contract documents, and (b) testing of the fire alarm in accordance with the manufacturer's specifications.
  - c. Contractor certification that acceptance tests of the fire protection and life safety systems have been successfully completed.
  - d. Contractor Test and Material Certificates (per NFPA) for fire protection, fire alarm, smoke control and emergency power systems.
  - e. As-builts of the fire protection system.
  - f. Special Inspector Reports (smoke control system testing).
  - g. HVAC Air and Water Balancing Reports.

- h. Contractor certification of successful emergency and standby power test and inclusion of NFPA 110 test report.
- i. Contractor certification of successful functional testing of lighting controls system.
- j. Contractor certification of successful emergency egress lighting test.
- k. Domestic water systems testing, chlorination and water quality documentation.
- l. Contractor certification of completion of code-related items on contractor's punch list and supplemental architectural and engineering punch lists.
- m. List of remaining punch list items for 100 percent MEP completion.
- n. Final as-built drawings, operations and maintenance manuals, final system balancing report and final commissioning reports must be provided to the Owner within 90 days of the receipt of the Certificate of Occupancy.

END OF SECTION

H:\Y0586.00\DOC\SPEC\2025\_02-20\_IFB\200000\_MECH\_ELEC REQUIREMENTS.DOC

## SECTION 210500 - COMMON WORK RESULTS FOR FIRE SUPPRESSION

### PART 1 - GENERAL

#### 1.1 RELATED DOCUMENTS

- A. Certain requirements common to all the mechanical and electrical trades (Fire Suppression, Plumbing, HVAC, Electrical, and Tele/Data) are specified in Division 20. To avoid repetition, they are not repeated in each relevant Division and Section. However, these requirements are applicable to the work of this Section and are hereby incorporated by reference.
  - 1. For example, prior to requesting an occupancy permit, the MEP documentation listed in Part 3 of Division 20 (in paragraph "MEP and Fire Protection Completion Requirements", subparagraph "Occupancy Permit" must be submitted and approved so the Engineer can certify that the MEP systems and life safety provisions are completed.
- B. Drawings and general provisions of the Contract, including General and Supplementary Conditions and Division 01 Specification Sections, apply to this Section.

#### 1.2 SUMMARY

- A. This Section includes elements common to Division 21 Fire Suppression Sections:
  - 1. Common Division 21 Product requirements:
    - a. Pipe, tube, fittings, and joining materials.
    - b. Pipe hangers and fasteners.
    - c. Sleeves, stack-sleeve fittings, and sleeve-seal systems.
    - d. Escutcheons.
    - e. Grout.
  - 2. Common Division 21 General and Execution requirements.

#### 1.3 DEFINITIONS

- A. Finished Spaces: Spaces other than mechanical and electrical equipment rooms, furred spaces, pipe chases, unheated spaces immediately below roof, spaces above ceilings, unexcavated spaces, crawlspaces, and tunnels.
- B. Exposed, Interior Installations: Exposed to view indoors. Examples include finished occupied spaces and mechanical equipment rooms.
- C. Exposed, Exterior Installations: Exposed to view outdoors or subject to outdoor ambient temperatures and weather conditions. Examples include rooftop locations.
- D. Concealed, Interior Installations: Concealed from view and protected from physical contact by building occupants. Examples include above ceilings and in chases.
- E. Concealed, Exterior Installations: Concealed from view and protected from weather conditions and physical contact by building occupants but subject to outdoor ambient temperatures. Examples include installations within unheated shelters.

**1.4 SUBMITTALS**

- A. All Division 21 submittals shall be in accordance with Division 20 for common mechanical and electrical requirements.
- B. Submit Division 21 for action submittals prior to applying for authority having jurisdiction installation permits (where required) and system installation.
- C. Submit Division 21 for informational submittals related to testing and inspections after successful system testing and prior to scheduling authority having jurisdiction final approval demonstration testing.
- D. Submit Division 21 for closeout submittals as part of project closeout procedure.

**1.5 ACTION SUBMITTALS**

- A. Product Data: For each type of product indicated. Include rated capacities, operating characteristics, electrical characteristics, and furnished specialties and accessories.

**1.6 INFORMATIONAL SUBMITTALS**

- A. Welding certificates.

**1.7 CLOSEOUT SUBMITTALS**

- A. Not used.

**1.8 QUALITY ASSURANCE**

- A. Division 21 Drawings are diagrammatic. They are not intended to be absolutely precise; they are not intended to specify or to show every offset, fitting and component. The purpose of the drawings is to indicate a system concept, the main components of the system and the approximate geometrical relationships, provide all other components and materials necessary to make the systems fully complete and operational.
- B. Where conflicts between referenced standards, codes, Division 21 Drawings, and Division 21 Specifications exist the most stringent shall apply unless approved in writing by the Engineer.
- C. Division 21 Product Standards: Listed in the "Fire Protection Equipment Directory" published by UL or the "Approval Guide" published by FM Global.
  - 1. Subject to compliance with requirements, indication of a UL product requirement within Division 21 shall be construed to be inclusive of a corresponding FM Global approved product, with or without UL listing.
- D. Division 21 Electrical Components, Devices, and Accessories: Listed and labeled as defined in NFPA 70, by a qualified testing agency, and marked for intended location and application.
  - 1. Equipment of higher electrical characteristics may be furnished provided such proposed equipment is approved in writing and connecting electrical services, circuit breakers, and conduit sizes are appropriately modified. If minimum energy ratings or efficiencies are specified, equipment shall comply with requirements.
- E. Division 21 Steel Pipe Welding Qualifications: Qualify processes and operators according to ASME Boiler and Pressure Vessel Code: Section IX, "Welding and Brazing Qualifications."
  - 1. Comply with provisions in ASME B31 Series, "Code for Pressure Piping."

2. Certify that each welder has passed AWS qualification tests for welding processes involved and that certification is current.
- F. Division 21 Steel Support Welding Qualifications: Qualify processes and operators according to AWS D1.1, "Structural Welding Code--Steel."

#### 1.9 COORDINATION

- A. Definition, "Coordinate": Where Sections of the Work interact, the Contractor responsible for this Section of the Work initiates verbal and/ or written communication with one or more different Contractors responsible for other interacting Sections of the Work for the purposes of establishing a coordinated approach of product selections and installation sequencing that satisfies the individual requirements of the interacting Sections of the Work as well as the requirements of the Work as a whole.
- B. Coordinate construction operations with those of other Sections of the Work and other entities to ensure efficient and orderly installation of each part of the Work.
  1. Arrange for pipe spaces, chases, slots, and openings in building structure during progress of construction, to allow for fire-suppression installations.
  2. Coordinate installation of required supporting devices and set sleeves in poured-in-place concrete and other structural components as they are constructed.
- C. Coordinate operations and product selections of this Section with operations and product selections included in different Sections that depend on each other for proper installation, connection, and operation.
- D. Schedule construction operations in sequence required to obtain the best results where installation of one part of the Work depends on installation of other components, before or after its own installation.
- E. Coordinate installation of different components with other Sections of the Work to ensure maximum performance and accessibility for required maintenance, service, and repair.
  1. Coordinate requirements for access panels and doors for fire-suppression items requiring access that are concealed behind finished surfaces. Access panels and doors are specified in Division 08.
- F. Make adequate provisions to accommodate items scheduled for later installation.
- G. Coordination Drawings: Contribute to preparation of Coordination Drawings in the sequence established under Division 01 and Division 20; indicate water-based fire suppression system Work coordinated with other Sections of the Work.

#### 1.10 DELIVERY, STORAGE, AND HANDLING

- A. Deliver pipes and tubes with factory-applied end caps. Maintain end caps through shipping, storage, and handling to prevent pipe end damage and to prevent entrance of dirt, debris, and moisture.
- B. Store plastic pipes protected from direct sunlight. Support to prevent sagging and bending.
- C. Pipe and fittings shall be protected from moisture. Pipe and fittings shall not be stored directly on ground. Pipe and fittings exposed to moisture and showing significant rust shall be removed from site, and shall not be installed.

## PART 2 - PRODUCTS

### 2.1 PIPE, TUBE, AND FITTINGS

- A. Comply with individual Division 21 Sections for pipe, tube, and fitting materials.

### 2.2 PIPE JOINING MATERIALS

- A. Comply with individual Division 21 Sections for joining materials.

### 2.3 PIPE HANGERS AND FASTENERS

#### A. Pipe Hangers:

1. Manufacturers: Subject to compliance with requirements, provide products by one of the following:
  - a. Tolco.
  - b. Cooper B-Line.
  - c. Anvil International.
  - d. Or approved equal.
2. Material: Steel, galvanized.
3. Type: Adjustable band type and clevis; comply with Part 3 "Piping Support Installation" for applications.

#### B. Hanger Rod:

1. Material: Carbon steel, galvanized.

#### C. Attachments to Steel:

1. Manufacturers: Subject to compliance with requirements, provide products by one of the following:
  - a. Tolco.
  - b. Cooper B-Line.
  - c. Anvil International.
  - d. Or approved equal.
2. Material: Carbon or malleable steel, galvanized.
3. Type: Beam clamp.

#### D. Drop in Anchors:

1. Manufacturers: Subject to compliance with requirements, provide products by one of the following:
  - a. Hilti Corp.
  - b. ITW Red Head.
  - c. Powers Fastners, Inc.
  - d. Or approved equal.

2. Standard: UL 203.
3. Material: Mild steel with zinc plating.

E. Concrete Inserts (Cast-In):

1. Manufacturers: Subject to compliance with requirements, provide products by one of the following:
  - a. Tolco.
  - b. Hilti Corp.
  - c. Powers Fasteners, Inc.
  - d. Or approved equal.
2. Material: Carbon steel, galvanized.

2.4 SLEEVES

- A. Manufacturers: Subject to compliance with requirements, provide products by one of the following:
  1. Advance Products & Systems, Inc.
  2. Calpico, Inc.
  3. GPT, an EnPro Industries Co.
  4. Or approved equal.
- B. Steel Pipe Sleeves: ASTM A 53/A 53M, Type E, Grade B, Schedule 40, anticorrosion coated or galvanized, with plain ends and integral welded waterstop collar.
- C. Galvanized-Steel Sheet Sleeves: 0.0239-inch minimum thickness; round tube closed with welded longitudinal joint.

2.5 STACK-SLEEVE FITTINGS

- A. Manufacturers: Subject to compliance with requirements, provide products by one of the following:
  1. Jay R. Smith Mfg. Co.
  2. Zurn Industries, LLC.
  3. Or approved equal.
- B. Description: Manufactured, Dura-coated, Duco-coated, or galvanized cast-iron sleeve with integral clamping flange for use in waterproof floors and roofs. Include clamping ring, bolts, and nuts for membrane flashing.
  1. Underdeck Clamp: Clamping ring with set screws.

2.6 SLEEVE-SEAL SYSTEMS

- A. Manufacturers: Subject to compliance with requirements, provide products by one of the following:
  1. Advance Products & Systems, Inc.
  2. Calpico, Inc.

3. Metraflex Co.
4. Or approved equal.

**B. Description:**

1. Modular sealing-element unit, designed for field assembly, for filling annular space between piping and sleeve.
2. Designed to form a hydrostatic seal of 20 psig minimum.
3. Sealing Elements: Nitrile (Buna N) interlocking links shaped to fit surface of pipe. Include type and number required for pipe material and size.
4. Pressure Plates: Stainless steel, Type 316. Include two for each sealing element.
5. Connecting Bolts and Nuts: Stainless steel, Type 316, of length required to secure pressure plates to sealing elements.

**2.7 ESCUTCHEONS**

- A. One-Piece, Steel Type: With polished, chrome-plated finish and setscrew fastener.
- B. One-Piece, Galvanized-Steel Type: With hot-dipped galvanized-steel wall plate and setscrew fastener.
- C. One-Piece, Stainless-Steel Type: With polished stainless-steel finish.
- D. Split-Plate, Stamped-Steel Type: With polished, chrome-plated finish; concealed hinge; and spring-clip fasteners.

**2.8 GROUT**

- A. Description: Nonshrink, for interior and exterior sealing openings in non-fire-rated walls or floors.
- B. Standard: ASTM C 1107/C 1107M, Grade B, post-hardening and volume-adjusting, dry, hydraulic-cement grout.
- C. Design Mix: 5000-psi, 28-day compressive strength.
- D. Packaging: Premixed and factory packaged.

**PART 3 - EXECUTION**

**3.1 REMOVAL OF EXISTING FIRE-SUPPRESSION SYSTEMS**

- A. Comply with Division 01 and Division 02 for general demolition requirements and procedures.
- B. Prepare, in narrative and drawing format as directed by the authority having jurisdiction (AHJ), a formal impairment plan identifying at a minimum the following:
  1. Status of building occupancy (or vacancy) during construction.
  2. Duration and timing of fire suppression system shutdowns.
  3. Necessary provisions for temporary water supplies and connections to existing fire suppression systems to remain in service.
  4. Provisions for temporary fire protection systems such as linear heat detection.

- C. Coordinate impairment plan with the NPFA 241 Fire Safety Program prepared by the General Contractor's Fire Safety Program Manager.
- D. Disconnect, demolish, and remove fire-suppression systems, equipment, and components indicated to be removed.
  - 1. Piping to Be Removed: Remove portion of piping indicated to be removed and cap or plug remaining piping with same or compatible piping material.
  - 2. Piping to Be Abandoned in Place: Drain piping and cap or plug piping with same or compatible piping material.
  - 3. Equipment to Be Removed: Disconnect and cap services and remove equipment.
  - 4. Equipment to Be Removed and Reinstalled: Disconnect and cap services and remove, clean, and store equipment; when appropriate, reinstall, reconnect, and make equipment operational.
  - 5. Equipment to Be Removed and Salvaged: Disconnect and cap services and remove equipment and deliver to Owner.
- E. If pipe, insulation, or equipment to remain is damaged in appearance or is unserviceable, remove damaged or unserviceable portions and replace with new products of equal capacity and quality.

### 3.2 PIPING INSTALLATION

- A. Install piping according to the following requirements and individual Division 21 Sections specifying piping systems.
- B. Drawing plans, schematics, and diagrams indicate general location and arrangement of piping systems. Indicated locations and arrangements were used to size pipe and calculate friction loss, expansion, pump sizing, and other design considerations. Install piping as indicated unless deviations to layout are approved on Coordination Drawings.
  - 1. Deviations from approved Shop Drawings require written approval from authorities having jurisdiction. File written approval with Architect before deviating from approved working plans.
- C. Install couplings, flanges, flanged fittings, unions, nipples, and transition and special fittings that have finish and pressure ratings same as or higher than system's pressure rating for aboveground applications unless otherwise indicated.
- D. Refer to equipment specifications in other Sections for rough-in requirements.
- E. Field-verify final equipment locations of equipment for rough-in.
- F. Select system components with pressure rating equal to or greater than system operating pressure.
- G. Install provisions to accommodate building expansion joints. Provide for expansion at building expansion joints with assemblies listed for that purpose. Coordinate the maximum value of building deflection with the appropriate Structural Section of the Work.
- H. Install piping in concealed locations, unless otherwise indicated and except in equipment rooms and service areas.
- I. Install piping indicated to be exposed and piping in equipment rooms and service areas at right angles or parallel to building walls. Diagonal runs are prohibited unless specifically indicated otherwise.

- J. Install piping above accessible ceilings to allow sufficient space for ceiling panel removal.
- K. Install piping to permit valve servicing.
- L. Install piping at indicated slopes.
- M. Install piping free of sags and bends.
- N. Use listed fittings to make changes in direction, branch takeoffs from mains, and reductions in pipe sizes.
- O. Install piping to allow application of insulation.
- P. At the end of each working day all pipe openings shall be covered or capped to minimize the likelihood of introduction of foreign materials into piping. All piping not covered or which has had covering damaged shall be visually inspected internally to confirm no obstructions have been introduced to the piping.

### 3.3 JOINT CONSTRUCTION

- A. Join pipe and fittings according to the following requirements and Division 21 Sections specifying piping systems.
- B. Ream ends of pipes and tubes and remove burrs. Bevel plain ends of steel pipe.
- C. Remove scale, slag, dirt, and debris from inside and outside of pipe and fittings before assembly.
- D. Threaded Joints: Thread pipe with tapered pipe threads according to ASME B1.20.1. Cut threads full and clean using sharp dies. Ream threaded pipe ends to remove burrs and restore full ID. Join pipe fittings and valves as follows:
  - 1. Apply appropriate tape or thread compound to external pipe threads unless dry seal threading is specified.
  - 2. Damaged Threads: Do not use pipe or pipe fittings with threads that are corroded or damaged.
- E. Steel-Piping, Cut-Grooved Joints: Cut square-edge groove in end of pipe according to AWWA C606. Assemble coupling with housing, gasket, lubricant, and bolts. Join steel pipe and grooved-end fittings according to AWWA C606 for steel-pipe joints.
- F. Steel-Piping, Roll-Grooved Joints: Roll rounded-edge groove in end of pipe according to AWWA C606. Assemble coupling with housing, gasket, lubricant, and bolts. Join steel pipe and grooved-end fittings according to AWWA C606 for steel-pipe grooved joints.
- G. Brazed Joints: Construct joints according to AWS's "Brazing Handbook," "Pipe and Tube" Chapter, using copper-phosphorus brazing filler metal complying with AWS A5.8.
- H. Flanged Joints: Select appropriate gasket material, size, type, and thickness for service application. Install gasket concentrically positioned. Use suitable lubricants on bolt threads. Join flanges with gasket and bolts according to ASME B31.9.
- I. Welded Joints: Construct joints according to AWS D10.12M/D10.12, using qualified processes and welding operators according to "Quality Assurance" Article.
  - 1. Shop weld pipe joints where welded piping is indicated.
  - 2. Do not use welded joints for galvanized-steel pipe.

- J. Dissimilar-Material Piping Joints: Make joints using adapters compatible with materials of both piping systems.

### 3.4 PIPING SUPPORT INSTALLATION

- A. Install hangers, fasteners, and structural attachments:
  - 1. NPS 6 and larger: Use clevis type hangers only.
  - 2. NPS 4 and smaller: Use clevis or adjustable band type hangers.
  - 3. Install beam clamps with retaining straps regardless of seismic classification.
  - 4. Powder-driven or pre-expanded inserts shall not be used.
  - 5. Threaded connections shall not be used for attachments to concrete.
- B. Install seismic restraints and flexible couplings. Comply with Division 21 for seismic controls for fire suppression piping and equipment.

### 3.5 SLEEVE INSTALLATION

- A. Install sleeves for piping passing through penetrations in floors, partitions, roofs, and walls.
  - 1. Exterior Concrete Walls above Grade: Use steel pipe sleeves.
  - 2. Exterior Concrete Walls below Grade: Use steel pipe sleeves with sleeve-seal systems.
  - 3. Concrete Slabs on Grade: Use steel pipe sleeves with sleeve-seal systems.
  - 4. Concrete Slabs above Grade: Use steel pipe sleeves.
  - 5. Interior Wall Partitions: Use galvanized-steel sheet sleeves.
  - 6. Slabs with Waterproof Membrane: Comply with Part 3 "Stack-Sleeve Fitting Installation".
- B. For sleeves that will have sleeve-seal system installed, select sleeves of size large enough to accommodate annular clear space required for installation of sleeve-seal system.
- C. Install sleeves in concrete floors, concrete roof slabs, and concrete walls as new slabs and walls are constructed.
  - 1. Cut sleeves to length for mounting flush with both surfaces.
    - a. Exception: Extend sleeves installed in floors 2 inches above finished floor level.
  - 2. Using grout, seal space outside of sleeves in slabs and walls.
- D. Install sleeves for pipes passing through interior wall partitions.
  - 1. Cut sleeves to length for mounting flush with both surfaces.
  - 2. Seal annular space between sleeve and piping or piping insulation; use joint sealants appropriate for size, depth, and location of joint.
- E. Fire-Resistance-Rated Penetrations, Horizontal Assembly Penetrations, and Smoke Barrier Penetrations: Maintain indicated fire or smoke rating of walls, partitions, ceilings, and floors at pipe penetrations. Seal pipe penetrations with fire- and smoke-stop materials. Comply with requirements for firestopping and fill materials specified in Division 07.

### 3.6 STACK-SLEEVE FITTING INSTALLATION

- A. Install stack-sleeve fittings in new slabs to be provided with membrane waterproofing as slabs are constructed.
  - 1. Install fittings that are large enough to provide necessary annular clear space between sleeve and pipe or pipe insulation.
  - 2. Secure flashing between clamping flanges for pipes penetrating floors with membrane waterproofing. Comply with requirements for flashing specified in Division 07.
  - 3. Install section of cast-iron sleeve fittings to extend sleeve to 2 inches above finished floor level.
  - 4. Extend cast-iron sleeve fittings below floor slab as required to secure clamping ring if ring is specified.
  - 5. Use silicone sealant to seal around the outside of stack-sleeve fittings.
- B. Fire-Barrier Penetrations: Maintain indicated fire rating of walls, partitions, ceilings, and floors at pipe penetrations. Seal pipe penetrations with firestop materials. Comply with requirements for firestop materials and installations in Division 07.

### 3.7 SLEEVE-SEAL SYSTEM INSTALLATION

- A. Install sleeve seals systems in sleeves in exterior concrete walls at water-service piping entries into building.
- B. Select type and number of sealing elements required for pipe material and size. Position pipe in center of sleeve. Assemble sleeve seal components and install in annular space between pipe and sleeve. Tighten bolts against pressure plates that cause sealing elements to expand and make watertight seal.

### 3.8 ESCUTCHEON INSTALLATION

- A. Install escutcheons for penetrations of walls, ceilings, and floors.
- B. Escutcheons for New Piping:
  - 1. Bare Piping at Exterior Wall Penetrations: One-piece galvanized-steel wall plate.
  - 2. Bare Piping at Wall and Floor Penetrations in Finished Spaces: One-piece steel with chrome-plated finish.
    - a. Corrosive Environments: One-piece stainless steel with polished stainless steel finish.
  - 3. Bare Piping in Unfinished Service Spaces and Equipment Rooms: No escutcheon.
- C. Escutcheons for Existing Piping:
  - 1. Bare Piping at Exterior Wall Penetrations: Split-Plate Stamped Steel with polished chrome plate finish.
  - 2. Bare Piping at Wall and Floor Penetrations in Finished Spaces: Split-Plate Stamped Steel with polished chrome plate finish.
  - 3. Bare Piping in Unfinished Service Spaces and Equipment Rooms: No escutcheon.

3.9 PAINTING

- A. Comply with Division 09 for painting of fire-suppression systems, equipment, and components.
- B. Damage and Touchup: Repair marred and damaged factory-painted finishes with materials and procedures to match original factory finish.

3.10 ERECTION OF METAL SUPPORTS AND ANCHORAGES

- A. Refer to Division 05 for structural steel.
- B. Cut, fit, and place miscellaneous metal supports accurately in location, alignment, and elevation to support and anchor fire-suppression materials and equipment.
- C. Field Welding: Comply with AWS D1.1.

END OF SECTION

H:\Y0586.00\DOC\SPEC\2025\_02-20\_IFB\210500\_COMMON WORK RESULTS FOR FIRE  
SUPPRESSION.DOC

## **SECTION 210553 - IDENTIFICATION FOR FIRE SUPPRESSION PIPING AND EQUIPMENT**

### **PART 1 - GENERAL**

#### **1.1 RELATED DOCUMENTS**

- A. Certain requirements common to all the mechanical and electrical trades (Fire Suppression, Plumbing, HVAC, Electrical, and Tele/Data) are specified in Division 20. To avoid repetition, they are not repeated in each relevant Division and Section. However, these requirements are applicable to the work of this Section and are hereby incorporated by reference.
- B. Drawings and general provisions of the Contract, including General and Supplementary Conditions and Division 01 Specification Sections, apply to this Section.

#### **1.2 SUMMARY**

- A. Section Includes:
  - 1. Equipment labels.
  - 2. Warning signs and labels.
  - 3. Pipe labels.
  - 4. Valve tags.
  - 5. Warning tags.
  - 6. Information signs.

#### **1.3 ACTION SUBMITTALS**

- A. Product Data: For each type of product.
- B. Samples: For color, letter style, and graphic representation required for each identification material and device
- C. Information Sign Proofs: Proposed information signs completed with required data and installation details.
- D. Equipment-Label Schedule: Include a listing of all equipment to be labeled and the proposed content for each label.
- E. Valve Schedules: Valve numbering scheme.

#### **1.4 CLOSEOUT SUBMITTALS**

- A. Maintenance Data: For each piping system to include in maintenance manuals.

#### **1.5 QUALITY ASSURANCE**

- A. Identification products for fire suppression piping and equipment compliant with this Section except as modified and approved by the authority having jurisdiction (AHJ).

### **PART 2 - PRODUCTS**

#### **2.1 EQUIPMENT LABELS**

- A. Metal Labels for Equipment:

1. Material and Thickness: Brass, 0.032 inch (0.8 mm) thick, with predrilled holes for attachment hardware.
  2. Letter Color: White.
  3. Background Color: Red.
  4. Minimum Label Size: Length and width vary for required label content, but not less than 2-1/2 by 3/4 inch (64 by 19 mm).
  5. Minimum Letter Size: 1/4 inch (6.4 mm) for name of units if viewing distance is less than 24 inches (600 mm), 1/2 inch (13 mm) for viewing distances up to 72 inches (1830 mm), and proportionately larger lettering for greater viewing distances. Include secondary lettering two-thirds to three-fourths the size of principal lettering.
  6. Fasteners: Stainless-steel rivets.
  7. Adhesive: Contact-type permanent adhesive, compatible with label and with substrate.
- B. Plastic Labels for Equipment:
1. Material and Thickness: Multilayer, multicolor, plastic labels for mechanical engraving, 1/8 inch (3.2 mm) thick, with predrilled holes for attachment hardware.
  2. Letter Color: White.
  3. Background Color: Red.
  4. Maximum Temperature: Able to withstand temperatures up to 160 deg F (71 deg C).
  5. Minimum Label Size: Length and width vary for required label content, but not less than 2-1/2 by 3/4 inch (64 by 19 mm).
  6. Minimum Letter Size: 1/2 inch (13 mm) for viewing distances up to 72 inches (1830 mm), and proportionately larger lettering for greater viewing distances. Include secondary lettering two-thirds to three-fourths the size of principal lettering.
  7. Fasteners: Stainless-steel rivets.
  8. Adhesive: Contact-type permanent adhesive, compatible with label and with substrate.
- C. Label Content: Include equipment's Drawing designation or unique equipment number, Drawing numbers where equipment is indicated (plans, details, and schedules), and the Specification Section number and title where equipment is specified.
- D. Equipment-Label Schedule: For each item of equipment to be labeled, on 8-1/2-by-11-inch (A4) bond paper. Tabulate equipment identification number and identify Drawing numbers where equipment is indicated (plans, details, and schedules) and the Specification Section number and title where equipment is specified. Equipment schedule shall be included in operation and maintenance data.

## 2.2 WARNING SIGNS AND LABELS

- A. Material and Thickness: Multilayer, multicolor, plastic labels for mechanical engraving, 1/8 inch (3.2 mm) thick, with predrilled holes for attachment hardware.
- B. Letter Color: White.
- C. Background Color: Red.
- D. Maximum Temperature: Able to withstand temperatures up to 160 deg F (71 deg C).

- E. Minimum Label Size: Length and width vary for required label content, but not less than 2-1/2 by 3/4 inch (64 by 19 mm).
- F. Minimum Letter Size: 1/2 inch (13 mm) for viewing distances up to 72 inches (1830 mm), and proportionately larger lettering for greater viewing distances. Include secondary lettering two-thirds to three-fourths the size of principal lettering.
- G. Fasteners: Stainless-steel rivets.
- H. Adhesive: Contact-type permanent adhesive, compatible with label and with substrate.
- I. Label Content: Include caution and warning information, plus emergency notification instructions.

## 2.3 PIPE LABELS

- A. General Requirements for Manufactured Pipe Labels: Preprinted, color-coded, with lettering indicating service and showing flow direction.
- B. Pretensioned Pipe Labels: Precoiled, semirigid plastic formed to cover full circumference of pipe and to attach to pipe without fasteners or adhesive.
- C. Pipe-Label Contents: Include identification of piping service using same designations or abbreviations as used on Drawings; pipe size; and an arrow indicating flow direction.
  - 1. Flow-Direction Arrows: Integral with piping-system service lettering to accommodate both directions, or as separate unit on each pipe label to indicate flow direction.
  - 2. Lettering Size: At least 1-1/2 inch (38 mm) high.
- D. Pipe-Label Colors:
  - 1. Background Color: Red.
  - 2. Letter Color: White.

## 2.4 VALVE TAGS

- A. Description: Stamped or engraved with 1/4-inch (6.4 mm) letters for piping-system abbreviation and 1/2-inch (13 mm) numbers.
  - 1. Tag Material: Brass, 0.032 inch (0.8 mm) thick, with predrilled holes for attachment hardware.
  - 2. Fasteners: Brass wire-link chain, beaded chain, or S-hook.
  - 3. Valve-Tag Color: Natural Brass.
  - 4. Letter Color: Black.
- B. Valve-Tag Size and Shape: 2 inches (50 mm), round.
- C. Valve Schedules: For each piping system, on 8-1/2-by-11-inch (A4) bond paper. Tabulate valve number, piping system, system abbreviation (as shown on valve tag), location of valve (room or space), normal-operating position (open, closed, or modulating), and variations for identification. Mark valves for emergency shutoff and similar special uses.
  - 1. Valve-tag schedule shall be included in operation and maintenance data.

**2.5 WARNING TAGS**

- A. Description: Preprinted or partially preprinted, accident-prevention tags, of plasticized card stock with matte finish suitable for writing.
  - 1. Size: 3 by 5-1/4 inches (75 by 133 mm) minimum.
  - 2. Fasteners: Brass grommet and wire.
  - 3. Nomenclature: Large-size primary caption such as "DANGER," "CAUTION," or "DO NOT OPERATE."
  - 4. Color: Yellow background with black lettering.

**2.6 INFORMATION SIGNS**

- A. Material and Thickness: Multi-layer, multi-color plastic, mechanically engraved, 1/8 inch (3.2 mm) thick.
- B. Letter Color: White.
- C. Background Color: Red.
- D. Maximum Temperature: Able to withstand temperatures up to 160 deg F (71 deg C).
- E. Minimum Letter Size: 1/4 inch (6.4 mm).
- F. Adhesive: Contact type permanent adhesive, compatible with label and with substrate.
- G. Minimum Indications for NFPA 13 General Information Signs:
  - 1. Name and location of facility protected.
  - 2. Occupancy classification.
  - 3. Commodity classification.
  - 4. Presence of high-piled and/or rack storage.
  - 5. Maximum height of storage planned.
  - 6. Aisle width planned.
  - 7. Encapsulation of pallet loads.
  - 8. Presence of solid shelving.
  - 9. Flow test data.
  - 10. Presence of flammable/combustible liquids.
  - 11. Presence of hazardous materials.
  - 12. Presence of other special storage.
  - 13. Location of auxiliary drains and low point drains on dry pipe and preaction systems.
  - 14. Original results of main drain flow test and date conducted.
  - 15. Name of installing contractor and contact information.
- H. Minimum Indications for NFPA 13 Hydraulic Design Information Signs:
  - 1. Location of design area.
  - 2. Discharge density over the design area.

3. Required flow and residual pressure at the fire pump discharge, or if no pump is present at the connection to the water supply.
4. Occupancy classification, or commodity classification, maximum storage height, and configuration.
5. Hose stream allowance.
6. Installing Contractor's name and contact information.
- I. Minimum Indications for NFPA 14 Hydraulic Design Information Signs:
  1. Location of the two hydraulically most remote hose connections.
  2. Design flow rate for the hydraulically most remote hose connections.
  3. Design residual inlet and outlet pressures for the hydraulically most remote hose connections.
  4. Design static pressure and design system demand at the system control valve or fire pump discharge, and at each fire department connection.
- J. Minimum Indications for NFPA 14 Water Supply Pump Signs:
  1. Minimum pressure and flow required at the pump discharge flange to meet the system demand.

### **PART 3 - EXECUTION**

#### **3.1 PREPARATION**

- A. Obtain authority having jurisdiction (AHJ) approval for identification materials, lettering, colors, indications, quantity, and locations.
- B. Clean piping and equipment surfaces of substances that could impair bond of identification devices, including dirt, oil, grease, release agents, and incompatible primers, paints, and encapsulants.

#### **3.2 GENERAL INSTALLATION REQUIREMENTS**

- A. Coordinate installation of identifying devices with completion of covering and painting of surfaces where devices are to be applied.
- B. Coordinate installation of identifying devices with locations of access panels and doors.
- C. Install identifying devices before installing acoustical ceilings and similar concealment.

#### **3.3 EQUIPMENT LABEL INSTALLATION**

- A. Install or permanently fasten labels on each major item of mechanical equipment including pumps, controllers, releasing control units, packaged systems, air compressors, nitrogen generators, and similar.
- B. Locate equipment labels where accessible and visible.

#### **3.4 PIPE LABEL INSTALLATION**

- A. Pipe-Label Locations: Locate pipe labels where piping is exposed or above accessible ceilings in finished spaces; machine rooms; accessible maintenance spaces such as shafts, tunnels, and plenums; and exterior exposed locations as follows:

1. Near each valve and control device.
2. Near each branch connection excluding short takeoffs. Where flow pattern is not obvious, mark each pipe at branch.
3. Near penetrations through walls, floors, ceilings, and inaccessible enclosures.
4. At access doors, manholes, and similar access points that permit view of concealed piping.
5. Near major equipment items and other points of origination and termination.
6. Spaced at maximum intervals of 50 feet (15 m) along each run. Reduce intervals to 25 feet (7.6 m) in areas of congested piping and equipment.
7. On piping above removable acoustical ceilings. Omit intermediately spaced labels.

### 3.5 VALVE-TAG INSTALLATION

- A. Install tags on valves and control devices in piping systems. List tagged valves in a valve-tag schedule.

### 3.6 WARNING-TAG INSTALLATION

- A. Write required message on, and attach warning tags to, equipment and other items where required.

### 3.7 INFORMATION SIGN INSTALLATION

- A. Permanently mount information signs in locations as required by NFPA and authority having jurisdiction (AHJ).
- B. Install NFPA 13 General Information Signs at each system control riser.
- C. Install NFPA 13 Hydraulic Design Information Signs at each system riser.
  1. Provide separate hydraulic design information signs for each design performance criteria.
- D. Install NFPA 14 Hydraulic Design Information Signs at system control valves.
- E. Install NFPA 14 Water Supply Pump Signs in the immediate vicinity of fire pumps or connected controllers.

END OF SECTION

H:\Y0586.00\DOC\SPEC\2025\_02-20\_IFB\210553\_IDENTIFICATION FOR FIRE SUPPRESSION  
PIPING AND EQUIPMENT.DOC

## **SECTION 211300 - WATER BASED FIRE SUPPRESSION SYSTEMS**

### **PART 1 - GENERAL**

#### **1.1 RELATED DOCUMENTS**

- A. Certain requirements common to all the mechanical and electrical trades (Fire Suppression, Plumbing, HVAC, Electrical, and Tele/Data) are specified in Division 20. To avoid repetition, they are not repeated in each relevant Division of the Specifications. However, these requirements are applicable to the work of this Division, and are hereby incorporated by reference.
- B. Drawings and general provisions of the Contract, including General and Supplementary Conditions and Division 01 Specification Sections, apply to this Section.

#### **1.2 SUMMARY**

- A. Section Includes:
  - 1. Piping applications
  - 2. Steel pipe and fittings
  - 3. Flexible connections
  - 4. Fire protection valves
  - 5. Trim and drain valves
  - 6. Specialty fire protection pipe fittings
  - 7. Alarm devices
  - 8. Pressure gauges
  - 9. Sprinkler applications
  - 10. Sprinklers
  - 11. Fire department inlet connections

#### **1.3 DEFINITIONS**

- A. Standard-Pressure System Piping: Water-based fire suppression system piping designed to operate at working pressure of 175 psig maximum.

#### **1.4 SYSTEM DESCRIPTIONS**

- A. Sprinkler System Types:
  - 1. Wet-Pipe Sprinkler System: Automatic sprinklers are attached to piping containing water that is connected to an automatic water supply. Each sprinkler opens when heat from fire melts the sprinkler fusible link or destroys the sprinkler frangible bulb. Water discharges immediately from open sprinklers.

#### **1.5 ACTION SUBMITTALS**

- A. Product Data: For each type of product indicated. Include rated capacities, operating characteristics, electrical characteristics, and furnished specialties and accessories.

B. LEED Submittal:

1. Product Data for Credit EQ 4.1: For solvent cements and adhesive primers, including printed statement of VOC content and chemical components.

C. Shop Drawings: For water-based fire suppression systems. Include plans, elevations, sections, details, and attachments to other work. Include all information required by the applicable NFPA water-based fire suppression standard(s) for “Working Plans”. Comply with Part 3 “Technician Design and Layout”.

1. Hydraulic Calculations: Perform calculations in accordance with applicable NFPA water-based fire suppression Design and Installation Standard(s) for “hydraulic calculations”.

D. Delegated Design Submittals – RESERVED.

1.6 INFORMATIONAL SUBMITTALS

A. Qualification Data: For qualified Installer and Delegated Design Professional.

B. Water Supply Evaluation Report: Include water supply flow test report and Delegated Design Professional evaluation report confirming adequacy of water supply and significant deviations from historical data or Contract Documents.

C. Field Test Reports and Certificates: Indicate and interpret test results for compliance with performance requirements and as described in NFPA water-based fire suppression system Design and Installation Standards. Include "Contractor's Material and Test Certificate for Aboveground Piping" corresponding to each water-based fire suppression system.

D. Field quality-control reports.

1.7 CLOSEOUT SUBMITTALS

A. Record Drawings: Complete Shop Drawing re-submittal updated to reflect actual final system installation.

B. Operation and Maintenance Data: For water-based fire suppression system specialties to include in emergency, operation, and maintenance manuals.

1.8 QUALITY ASSURANCE

A. Installer Qualifications:

1. Personnel licensed by the governing licensing authority for the installation of water-based fire suppression systems. Successfully installed, tested, obtained approvals for, and put into service no less than three (3) water-based fire suppression systems similar in type, size, and complexity to that of the Work of this Section.

B. Certified Engineering Technician Qualifications:

1. Shop Drawings and Calculations prepared by personnel licensed as a Professional Fire Protection Engineer by the governing licensing authority or, where permitted by local authorities having jurisdiction, NICET certified as a Fire Protection, Water-Based Systems Layout Level III or IV Technician.

C. Delegated Design Professional Qualifications:

1. Shop Drawings and Calculations prepared by personnel licensed as a Professional Fire Protection Engineer by the governing licensing authority.

- D. Source Limitations: Obtain products for each product category from a single manufacturer.
- E. Product Standards: Listed in the "Fire Protection Equipment Directory" published by UL and the "Approval Guide" published by FM Global.
  - 1. Subject to compliance with requirements, indication of a UL product requirement within Part 2 shall be construed to be inclusive of a corresponding FM Global approved product, with or without UL listing.
- F. Electrical Components, Devices, and Accessories: Listed and labeled as defined in NFPA 70, by a qualified testing agency, and marked for intended location and application.

#### 1.9 COORDINATION

- A. Definition, "Coordinate": Where Sections of the Work interact, the Contractor responsible for this Section of the Work initiates verbal and/ or written communication with one or more different Contractors responsible for other interacting Sections of the Work for the purposes of establishing a coordinated approach of product selections and installation sequencing that satisfies the individual requirements of the interacting Sections of the Work as well as the requirements of the Work as a whole.
- B. Coordinate construction operations with those of other Sections of the Work and other entities to ensure efficient and orderly installation of each part of the Work.
- C. Coordinate operations and product selections of this Section with operations and product selections included in different Sections that depend on each other for proper installation, connection, and operation.
- D. Schedule construction operations in sequence required to obtain the best results where installation of one part of the Work depends on installation of other components, before or after its own installation.
- E. Coordinate installation of different components with other Sections of the Work to ensure maximum performance and accessibility for required maintenance, service, and repair.
- F. Make adequate provisions to accommodate items scheduled for later installation.
- G. Coordination Drawings: Contribute to preparation of Coordination Drawings in the sequence established under Division 1 and Division 20; indicate water-based fire suppression system Work coordinated with other Sections of the Work.

#### 1.10 MAINTENANCE MATERIALS

- A. Furnish extra materials that match products installed and that are packaged with protective covering for storage and identified with labels describing contents.
  - 1. Sprinkler Cabinets: Finished, wall-mounted, steel cabinet with hinged cover, and with space for a minimum of six spare sprinklers plus sprinkler wrench. Include number of sprinklers required by NFPA 13 and sprinkler wrench. Include separate cabinet with sprinklers and wrench for each type of sprinkler used on Project.
  - 2. Custom-finish Sprinklers: Provide a minimum of six spare cover-plates or sprinklers for each custom finish in addition to spares required by NFPA 13.
- B. Furnish drain hose assembly for conducting sprinkler drain outlet discharge-to-grade away from building façade and adjacent hard-scape subject to staining; include:
  - 1. Brass hex nipple fitting: Furnish one fitting for each drain outlet fitting size used.

2. Brass swivel hose adapter fittings for connection to 2-1/2 inch hose coupling; furnish one adapter fitting for each hex nipple outlet size used.
3. Industrial double-jacket EPDM rubber-lined interior / exterior fire hose with hose-coupling ends; 2-1/2 inch , 75 ft .
4. Galvanized-steel, wall-mount, hose and coupling storage rack. Mount adjacent to main system riser.

#### 1.11 UNIT-COST ALLOWANCES

- A. Definition: Unit-cost allowance is a quantity of work established in lieu of additional requirements, used to defer the installation of materials and equipment to a later date when direction may be provided to Contractor by the Architect or Authorities Having Jurisdiction (AHJ) to provide labor and materials pursuant to final field coordination or AHJ final inspections.
- B. Unit-cost allowance shall include all necessary material, plus cost for delivery, installation, insurance, applicable taxes, overhead, and profit.
- C. Include the following Unit-cost Allowances:
  1. Sprinkler concealed: Total quantity equal to twenty (20) installed.
  2. Sprinkler upright: Total quantity equal to twenty (20) installed.
  3. Sprinkler, dry pendant: Total quantity equal to five (5) installed.
- D. Unused Materials: After installation has been completed and accepted by authorities having jurisdiction return unused materials to manufacturer or supplier and credit Owner for materials and labor.

### PART 2 - PRODUCTS

#### 2.1 PERFORMANCE REQUIREMENTS

- A. Design and Installation Standard(s):
  1. Sprinkler Systems: Comply with NFPA 13.
  2. FM Global: Comply with FM Global Datasheets for the design, installation, and testing of water-based fire suppression systems.
- B. Standard-Pressure Piping System Component: Listed for 175 psig minimum working pressure.
- C. Seismic Performance: Piping systems shall withstand the effects of earthquake motions determined according to NFPA 13 and ASCE/SEI 7.

#### 2.2 PIPING APPLICATIONS

- A. Comply with Part 3 "Piping Schedule" for applications of pipe, tube, and fitting materials, and for joining methods for specific services, service locations, and pipe sizes.

#### 2.3 STEEL PIPE AND FITTINGS

- A. Schedule 40 Steel Pipe: ASTM A 53, A795 or A135; Schedule 40. Pipe ends may be factory or field formed to match joining method.

- B. Schedule 10 Steel Pipe: ASTM A 135 or ASTM A 795. Schedule 10 in NPS 5 and smaller; and NFPA 13-specified wall thickness in NPS 6 to NPS 10, plain end.
- C. Steel Pipe Nipples: ASTM A 733 steel pipe nipples; made of Schedule 40, ASTM A 53 seamless steel pipe with threaded ends.
- D. Steel Pipe Couplings: ASTM A 865 steel couplings; threaded.
- E. Threaded Fittings: ASME B16.4, cast-iron threaded fittings, Class 125 and Class 250.
- F. Malleable- or Ductile-Iron Unions: UL 860.
- G. Cast-Iron Flanges: ASME 16.1, Class 125 and Class 250.
- H. Steel Flanges and Flanged Fittings: ASME B16.5, Class 150 and Class 300.
- I. Pipe-Flange Gasket Materials: AWWA C110, rubber, flat face, 1/8 inch thick or ASME B16.21, nonmetallic and asbestos free.
  - 1. Class 125, Cast-Iron Flanges and Class 150, Bronze Flat-Face Flanges: Full-face gaskets.
  - 2. Class 250, Cast-Iron Flanges and Class 300, Steel Raised-Face Flanges: Ring-type gaskets.
  - 3. Pipe-Flange Bolts and Nuts: ASME B18.2.1 carbon steel unless otherwise indicated.
- J. Steel Welding Fittings: ASTM A 234/A 234M and ASME B16.9.
  - 1. Welding Filler Metals: Comply with AWS D10.12 for welding materials appropriate for wall thickness and chemical analysis of steel pipe being welded.
- K. Steel Welded Outlet Fittings:
  - 1. Manufacturers: Subject to compliance with requirements, provide products by one of the following:
    - a. Anvil International, Inc.
    - b. Victaulic Company.
    - c. Or approved equal.
  - 2. Pressure Rating: 175 psig minimum.
  - 3. Description: UL 213B; forged steel, Schedule 40 wall thickness, with threaded or grooved-end outlet.
- L. Grooved-Joint, Steel-Pipe Appurtenances:
  - 1. Manufacturers: Subject to compliance with requirements, provide products by one of the following:
    - a. Anvil International, Inc.
    - b. Tyco Fire & Building Products LP.
    - c. Victaulic Company.
    - d. Or approved equal.
  - 2. Pressure Rating: 175 psig minimum.
  - 3. Grooved-End Fittings for Steel Piping: ASTM A 47/A 47M malleable-iron casting or ASTM A 536 ductile-iron casting; with dimensions matching steel pipe.

4. Grooved-End-Pipe Couplings for Steel Piping: AWWA C606 and UL 213, rigid pattern, unless otherwise indicated, for steel-pipe dimensions. Include ferrous housing sections, EPDM-rubber gasket, and bolts and nuts.
- M. Coatings for Steel Pipe and Fittings: Steel pipe, steel pipe nipples, steel pipe couplings, and threaded fittings factory hot-dipped galvanized.

## 2.4 FLEXIBLE CONNECTIONS

- A. Manufacturers: Subject to compliance with requirements, provide products by one of the following:
  1. AnvilStar, Division of Anvil International.
  2. Metraflex Company.
  3. Victaulic Company.
  4. Or approved equal.
- B. Standard: UL's "Fire Protection Equipment Directory" listing and/or "Approval Guide," published by FM Global, listing.
- C. Pressure Rating: 175 psig minimum.
- D. Design: Factory assembled flexible loop assembly of elbow fittings, steel pipe spool sections, and flexible steel corrugated pipe section with braided steel cover sheathing; capable of accommodating differential movement of spanned expansion joint minimum  $\pm 8$  inches movement.
- E. Size: Match pipe connections.
- F. End Connections: Flanged and/or Grooved.

## 2.5 LISTED FIRE-PROTECTION VALVES

- A. General Requirements:
  1. Isolation valves shall be indicating type and shall include integral or external valve position tamper switches as indicated.
  2. Valve -inlets and -outlets shall include plugged threaded taps for the installation of pressure gauges, alarm devices, drains, and similar trim.
  3. Iron valves shall include factory applied interior and exterior epoxy coating in compliance with ANSI/AWWA C550 and NSF-61.
- B. Iron Butterfly Valves:
  1. Manufacturers: Subject to compliance with requirements, provide products by one of the following:
    - a. Anvil International, Inc.
    - b. Tyco Fire & Building Products LP.
    - c. Victaulic Company.
    - d. Or approved equal.
  2. Standard: UL 1091.
  3. Minimum Pressure Rating: 250 psig.

4. Body Material: Cast or ductile iron.
5. Disc: Ductile iron, nickel plated.
6. Actuator: Worm gear or traveling nut with external indicator.
7. Supervisory Switch: Integral to valve actuator.
8. End Connections: Grooved.

## 2.6 TRIM AND DRAIN VALVES

- A. Manufacturers: Subject to compliance with requirements, provide products by one of the following:
  1. Conbraco Industries, Inc.; Apollo Valves.
  2. Fire-End & Croker Corp.
  3. Kennedy Valve; a division of McWane, Inc.
  4. Milwaukee Valve Company.
  5. NIBCO INC.
  6. Tyco Fire & Building Products LP.
  7. United Brass Works, Inc.
  8. Victaulic Company.
  9. Watts Water Technologies, Inc.
  10. Or approved equal.
- B. Standard: UL 258.
- C. Description: Brass or bronze body ball-, globe-, and angle-valves for fire protection trim and drain applications.
- D. Standard-Pressure Applications, Minimum Pressure Rating: 175 psig.

## 2.7 SPECIALTY FIRE-PROTECTION PIPE FITTINGS

- A. Flexible Sprinkler Connections:
  1. Manufacturers: Subject to compliance with requirements, provide products by one of the following:
    - a. FlexHead Industries, Inc.
    - b. Victaulic Company.
    - c. Reliable Sprinkler.
    - d. Or approved equal.
  2. Standard: UL 1474.
  3. Description: Flexible hose for connection to sprinkler, with bracket for connection to ceiling grid, partition framing, or masonry construction. Connection shall be minimum NPS 1 corrugated stainless steel tubing with braided stainless-steel jacket. Assembly shall be UL-listed and FM approved.
  4. Minimum Pressure Rating: 175 psig.

**B. Flow Detection and Test Assemblies:**

1. Manufacturers: Subject to compliance with requirements, provide products by one of the following:
  - a. AGF Manufacturing Inc.
  - b. Reliable Automatic Sprinkler Co., Inc.
  - c. Tyco Fire & Building Products LP.
  - d. Victaulic Company.
  - e. Or approved equal.
2. Standard: UL's "Fire Protection Equipment Directory", Category VEOY.
3. Minimum Pressure Rating: 175 psig.
4. Description: Cast- or ductile-iron housing with connected flow switch, pressure gauge, and combination test-and-drain valve fitting; include integral pressure relief valve with discharge connected to assembly drain.
5. End Connections: Threaded and grooved.

**C. Test-and-Drain Fittings:**

1. Manufacturers: Subject to compliance with requirements, provide products by one of the following:
  - a. AGF Manufacturing Inc.
  - b. Reliable Automatic Sprinkler Co., Inc.
  - c. Tyco Fire & Building Products LP.
  - d. Victaulic Company.
  - e. Or approved equal.
2. Standard: UL's "Fire Protection Equipment Directory", Category VEHZ.
3. Minimum Pressure Rating: 175 psig.
4. Description: Brass body 3-position single-handle ball valve with sight glass, discharge test orifice, and integral pressure relief valve with discharge connected to outlet.
5. End Connections: Threaded and grooved.

**D. Inspector's Test Fittings:**

1. Manufacturers: Subject to compliance with requirements, provide products by one of the following:
  - a. AGF Manufacturing Inc.
  - b. Reliable Automatic Sprinkler Co., Inc.
  - c. Tyco Fire & Building Products LP.
  - d. Victaulic Company.
  - e. Or approved equal.
2. Standard: UL's "Fire Protection Equipment Directory", Category VEHZ.

3. Minimum Pressure Rating: 175 psig.
4. Description: Brass body single-handle ball valve with sight glass and discharge test orifice.
5. End Connections: Threaded.

E. Automatic Air Release Vents:

1. Manufacturers: Subject to compliance with requirements, provide products by one of the following:
  - a. AGF Manufacturing Inc.
  - b. Potter Electric Signal Co., LLC.
  - c. Or approved equal .
2. Standard: UL 2573.
3. Minimum Pressure Rating: 175 psig.
4. Description: Brass body automatic air release vent with strainer.
5. End Connections: Threaded.

2.8 ALARM DEVICES

- A. Manufacturers: Subject to compliance with requirements, provide products by one of the following:
  1. Potter Electric Signal Co., LLC.
  2. System Sensor; a Honeywell Company.
- B. Or approved equal. General: NEMA enclosure suitable for application, metal cover, 250-psi rated, two sets of SPDT (form C) contacts.
  1. Explosion-Proof Applications: Listed and labeled for use in “Hazardous (Classified) Locations”; Class and Division listing appropriate to intended location and application.
- C. Flow Switches: UL 346, paddle type with field adjustable 0-90 second delay adjustment.
- D. Pressure Switches: UL 753, field adjustable for operation upon pressure increase or pressure decrease.
- E. Tamper Switches: UL 753, mounting brackets suitable for valve type, with normally closed contacts for supervision of valve stem position.

2.9 PRESSURE GAUGES

- A. Manufacturers: Subject to compliance with requirements, provide products by one of the following:
  1. AMETEK; U.S. Gauge Division.
  2. Ashcroft, Inc.
  3. Brecco Corporation.
  4. WIKA Instrument Corporation.
  5. Or approved equal.

- B. Standard: UL 393.
- C. Dial Size: 3-1/2- to 4-1/2-inch diameter.
- D. Pressure Gage Range: 0 to 250 psig.
- E. Water System Piping Gauge: Include "WATER" or "AIR/WATER" label on dial face.
- F. Air System Piping Gauge: Include "AIR" or "AIR/WATER" label on dial face.

## 2.10 SPRINKLER APPLICATIONS

- A. Comply with Part 3 "Sprinkler Schedule" for applications of sprinklers for specific services and service locations.

## 2.11 SPRINKLERS

- A. Manufacturers: Subject to compliance with requirements, provide products by one of the following:
  - 1. Reliable Automatic Sprinkler Co., Inc.
  - 2. Tyco Fire & Building Products LP.
  - 3. Victaulic Company.
  - 4. Viking Corporation.
  - 5. Or approved equal.
- B. General: Brass body automatic sprinklers for fire-protection service; when applicable, listed for use in NFPA 13 Light or Ordinary Hazard occupancies as required by application; minimum K-factor of 5.6.
  - 1. Corrosion Resistant Sprinklers: Stainless steel body, or ENT-plating, or polyester coating; listed as corrosion resistant.
- C. Minimum Pressure Rating: 175 psig.
- D. Minimum Pressure Rating for High-Pressure Applications: 250 psig.
- E. Temperature Ratings:
  - 1. Ordinary: 135 deg F to 170 deg F .
  - 2. Intermediate: 175 deg F to 225 deg F .
  - 3. High: 250 deg F to 300 deg F .
- F. Standard Spray-Pattern Sprinklers:
  - 1. Standard: UL 199.
  - 2. Frame Styles: Upright, pendent, horizontal-sidewall, vertical-sidewall, concealed pendent, and concealed horizontal-sidewall.
  - 3. K-factors: 5.6, 8.0.
  - 4. Response Characteristics: Quick response (QR), unless standard response (SR) is indicated or otherwise required by application.
  - 5. Concealed Sprinkler Cover-plates: Flat, non-perforated; for ceiling- and wall-mount.
    - a. Finishes: Polished chrome-plated, painted, and special application.

- b. Concealed sprinklers shall be provided in locker rooms to prevent corrosion of sprinkler.
      - c. Seismic Applications: Oversized to conceal sprinkler ceiling penetration including required 1 inch annular clearance around penetrating sprinkler assembly.
    - 6. Sprinkler Finishes: Brass, polished chrome-plated, and painted.
    - 7. Escutcheons: Single-piece steel; flush and recessed for ceiling- and wall-mount.
      - a. Finishes: Polished chrome-plated and painted.
  - G. Dry-type Sprinklers:
    - 1. Standard: UL 199; standard and extended coverage spray-pattern.
    - 2. Description: Factory-assembled dry-pipe barrel and sprinkler with threaded connection to wet-pipe sprinkle piping.
    - 3. Frame Styles: Upright, pendant, horizontal-sidewall, and concealed pendent.
    - 4. K-factors: 5.6.
    - 5. Response Characteristics: Quick response (QR), unless standard response (SR) is indicated or otherwise required by application.
    - 6. Concealed Sprinkler Cover-plates: Flat, non-perforated; for ceiling- and wall-mount.
      - a. Finishes: Polished chrome-plated, painted, and special application.
    - 7. Sprinkler Finishes: Brass, polished chrome-plated, and painted.
    - 8. Escutcheons: Single-piece steel; flush and recessed for ceiling- and wall-mount.
      - a. Finishes: Polished chrome-plated and painted.
  - H. Sprinkler Guards:
    - 1. Standard: Listed for use with attached sprinkler.
    - 2. Type: Single-piece, wire cage with fastening device for attachment to sprinkler.
- 2.12 FIRE-DEPARTMENT INLET CONNECTIONS
- A. Manufacturers: Subject to compliance with requirements, provide products by one of the following:
    - 1. American Fire Hose & Cabinet.
    - 2. Elkhart Brass Mfg. Company, Inc.
    - 3. Fire-End & Croker Corp.
    - 4. Guardian Fire Equipment, Inc.
    - 5. Potter Roemer Fire Pro.
    - 6. Or approved equal.
  - B. Standard: UL 405.
  - C. Minimum Pressure Rating: 175 psig.
  - D. Body Material: Cast brass.
  - E. Connection Style: Horizontal NHS, flush wall-mount.

- F. Inlets: Brass with threads according to NFPA 1963 and matching local fire-department sizes and threads. Include extension pipe nipples, brass lugged swivel connections, and check devices or clappers.
- G. Caps: Brass, lugged type, with gasket and chain.
- H. Escutcheon: Brass; with brass pipe sleeve for free-standing applications.
- I. Escutcheon Marking: Similar to "AUTO SPKR" as approved by authority having jurisdiction.
- J. Exposed Parts Finish: Polished chrome-plated.

### **PART 3 - EXECUTION**

#### **3.1 PREPARATION**

- A. Schedule and conduct water supply flow tests promptly to establish available water supply flow and pressure characteristics.
- B. Schedule and sequence water supply flow tests and Shop Drawing preparation such that the flow test date is no more than twelve (12) months prior to the Shop Drawing submittal date.
- C. Tests shall be conducted during time of seasonal and daily peak demand based upon review with local water authority.
  - 1. Where testing during time of peak demand is not permitted or feasible, obtain historical data regarding seasonal and daily system pressure variations from local water authority.

#### **3.2 WATER SUPPLY HYDRANT FLOW TESTS**

- A. Perform water supply evaluation testing in accordance with NFPA 291 "Recommended Practice for Fire Flow Testing and Marking of Hydrants" for hydrant flow tests.
- B. Comply with Division 21 for hydrant flow tests.

#### **3.3 TECHNICIAN DESIGN AND LAYOUT**

- A. General:
  - 1. Roles and responsibilities shall be as set forth in NSPE Position Statement No. 1749 "SFPE/NSPE/NICET Joint Position of the Engineer and the Engineering Technician Designing the Fire Protection System", available at nspe.org. As applied to the Work, the Contract Documents have been prepared by the "Engineer" and Shop Drawings required by this Section of the Work are prepared by the "Certified Engineering Technician".
  - 2. As the Certified Engineering Technician, prepare Shop Drawings indicating system layout and sizing in accordance with the requirements of the Contract Documents, including but not limited to:
    - a. Evaluation of water supply adequacy.
    - b. Detailed sizing and layout of piping and appurtenances including feed-mains, risers, cross mains, branch lines, valves, drainage provisions, hangers, restraints, supports, and similar.
    - c. Detailed sprinkler layouts.

- d. Hydraulic calculations.
  - e. Installation details for the specific equipment being furnished.
- B. Design and Installation Standard(s): Comply with Part 2 Article "Performance Requirements".
  - 1. Comply with the performance requirements indicated by the Contract Documents where such requirements are more stringent than those of the Design and Installation Standard(s); otherwise, comply with the performance requirements of the Design and Installation Standard(s).
- C. Water Supply Evaluation:
  - 1. Evaluate water supply flow test data obtained as part of the Work of this Section against historical data obtained from the water authority and, where included, water supply flow test data indicated by the Contract Documents.
  - 2. Promptly report in writing significant deviations between water supply test results obtained as part of the Work of this Section and those indicated by the Contract Documents or historical data, and anticipated system design impacts.
  - 3. Complete the evaluation of water supply flow test data prior to preparing Shop Drawings and associated hydraulic calculations.
- D. Design and layout fire suppression piping to satisfy performance requirements:
  - 1. Rectilinear fire suppression piping arrangement with respect to building partitions and structural elements.
  - 2. Concealed fire suppression piping installation throughout finished spaces and maximum headroom beneath exposed fire suppression piping in areas exposed to structure above.
  - 3. No fire suppression piping within electrical, information technology, or similar spaces other than branch piping serving sprinklers protecting such electrical, information technology, or similar space spaces.
  - 4. No fire suppression piping directly above electrical equipment, electrical panels, information technology equipment, or similar energized equipment.
  - 5. No fire suppression piping within exit enclosures except standpipes supplying hose valves within the exit enclosure, sprinkler zone control assemblies and piping immediately downstream, branch piping supplying sprinklers within the exit enclosure, and associated drain connections and risers.
  - 6. No fire suppression piping within or in proximity to hazardous materials storage or processing operations other than branch piping serving sprinklers protecting such hazardous materials storage or processing operations.
  - 7. Fire suppression piping supported from primary building structural elements or approved supplemental supports capable of supporting the attached load.
  - 8. Fire suppression piping crossing building expansion joints provided with expansion fittings appropriate to the joint design deflection value.
  - 9. Fire suppression feed-main, standpipe, and system riser piping supplied by fire pumps rigidly restrained against movement resulting from pump-induced system pressure increases and water velocity induced forces.
  - 10. Fire suppression piping protected against damage where subject to earthquakes.

11. Fire suppression piping protected against damage where subject to freezing without the use of heat-trace cables unless indicated otherwise.
  12. Fire suppression piping arranged such that piping drains back to main drains and drain risers without the use of auxiliary drains.
  13. Fire suppression drain risers, system riser main-drain piping and other equipment drains discharge at a safe location outside the building or at an approved, adequately sized interior drain receptacle if outside discharge is not feasible.
- E. Design and layout sprinklers to satisfy performance requirements:
1. Sprinklers located to provide automatic sprinkler protection throughout as required by the Contract Documents and the requirements of the Design and Installation Standards.
    - a. Comply with graphic sprinkler layouts and narrative layout parameters indicated by the Contract Documents. Where sprinkler layouts or layout parameters are not indicated by the Contract Documents, comply with Design and Installation Standard(s).
  2. Sprinklers located according to the per-sprinkler protection area limitations corresponding to the protected occupancy hazard and construction type.
  3. Sprinklers within finished-spaces flush or recessed mount as indicated; located in the center of suspended ceiling tiles, along the centerline of ceiling features, and in-line with adjacent ceiling fixtures.
  4. Sprinklers located with respect to structural members and construction type and beam pocket arrangement within spaces exposed to structure above.
  5. Sprinklers located with respect to obstructions to sprinkler discharge; considering all obstructions such as ductwork, piping, lighting, cable trays, floating ornamental ceilings, and similar.
    - a. Sprinkler protection provided above and below such obstructions where protection cannot be provided in accordance with the Design and Installation Standards via sprinklers located solely above or below obstructions.
  6. Sprinklers located within construction voids or enclosed spaces that do not meet the NFPA 13 definition of concealed spaces due to openings or similar features.
  7. Sprinklers located within combustible concealed spaces including attics, ceiling voids, and similar.
  8. Sprinkler locations at water curtains coordinated with corresponding draft stops or protected glazing assemblies.
  9. Specific-application sprinklers located in accordance with corresponding sprinkler listing requirements and restrictions.
- F. Hydraulically design water-based fire suppression system piping using the Hazen-Williams or Darcy-Weisbach formulas in accordance with the Design and Installation Standard(s).
1. Sprinkler System Occupancy Hazard and Discharge Criteria: Comply with criteria indicated by Drawings as approved by authorities having jurisdiction.
    - a. Calculation areas shall not be reduced for quick response sprinkler applications.
  2. Standpipe System Flow and Pressure Criteria: Comply with criteria indicated by Drawings as approved by authorities having jurisdiction.

3. Margin of Safety Between Available and Required Pressure at Design Flowrate: 10 psi minimum, including losses through water-service piping, valves, and backflow preventers.
4. Include pressure losses associated with specialty fittings and assemblies such as seismic separation assemblies and flexible sprinkler connections.

**G. Hydraulic Calculations for Sprinkler Piping:**

1. Sprinkler mains including zone control and riser valve assemblies shall be no smaller than as indicated by the Drawings.
  - a. Hydraulically determine pipe sizes for sprinkler branch piping.
2. Sprinkler zone control and riser valve assemblies shall be no smaller than as indicated by the Drawings.
  - a. Hydraulically determine pipe sizes for sprinkler piping downstream of zone control assemblies.
3. Where sprinkler systems are supplied by two (2) risers, pipe sizing shall be based upon supply from the hydraulically most remote riser only.
4. Include additional hydraulic calculations as required when the hydraulically most remote area is not clear (not the geometrically most remote).
5. Include a minimum of three (3) calculation areas for gridded systems demonstrating that the hydraulically most demanding area is identified.
6. Do not utilize NFPA 13 area reduction for quick response sprinklers unless otherwise indicated.

**H. Flexible Sprinkler Connections:**

1. Hydraulic Calculations: Include pressure losses through flexible sprinkler connections. Indicate installation parameters for maximum hose length, maximum bend radius, maximum quantity of bends, and fitting patterns associated with the calculated pressure loss.
2. Shop Drawings: Include locations of flexible sprinkler connections with limiting installation parameters as determined via hydraulic calculations clearly indicated.

**3.4 ON-SITE AS-BUILT DRAWINGS**

- A. As work progresses and for the duration of the construction operations, maintain complete and separate set of prints of Shop Drawings (Working Plans) at project site at all times. Record work completed and all deviations from reviewed Shop Drawings (Working Plans) clearly and accurately. Include actual locations of existing utilities if they differ from design documents. Record valve tag designations as installed.

**3.5 EXAMINATION**

- A. Examine sleeved penetrations through concrete and structural penetrations through steel and verify that they are suitable for intended piping installation.
- B. Examine walls and partitions and verify that they are suitable for installation of piping, cabinets, inlet connections and similar products.

- C. Examine areas to contain standpipe hose outlets including stairwells and vestibules and verify that door swings or other obstructions will not interfere with the installation or future operation of hose valves.
- D. Report conflicts with proposed solutions. Proceed with installation after conflicts have been resolved.

### 3.6 PIPING INSTALLATION

- A. Locations and Arrangements: Drawing plans, schematics, and diagrams indicate general location and arrangement of piping. Install piping as indicated.
  - 1. Deviations from approved Shop Drawings require written approval from authorities having jurisdiction. File written approval with Architect before deviating from approved working plans.
- B. Piping Standard: Comply with requirements for installation of piping in NFPA 13 and NFPA 14.
- C. Install hangers and supports: Comply with Division 21 for common work results for fire suppression.
- D. Install seismic restraints and flexible couplings. Comply with Division 21 for seismic controls for fire suppression piping and equipment.
- E. Install provisions to accommodate building expansion joints. Provide for expansion at building expansion joints with assemblies listed for that purpose. Coordinate the maximum value of building deflection with the appropriate Structural Section of the Work.
- F. Install sleeves, sleeve-seals, fire-stopping, and pipe escutcheons. Comply with Division 21 for common work results for fire suppression.
- G. Use listed fittings to make changes in direction, branch takeoffs from mains, and reductions in pipe sizes.
  - 1. Hole-Cut Fittings: Where used, use two-piece cast type fittings only; fittings utilizing straps, U-bolts, or similar are not permitted.
- H. Install unions adjacent to each valve in pipes NPS 2 and smaller.
- I. Install flanges, flange adapters, or couplings for grooved-end piping on valves, apparatus, and equipment having NPS 2-1/2 and larger end connections.
- J. Install water-based fire suppression piping with drains for complete system drainage.
- K. Install water-based fire suppression piping such that piping drains back to main drains and drain risers without the use of auxiliary drains.
- L. Pipe drain risers, system riser main drain piping and other equipment drains to discharge at a safe location outside the building or at an approved interior drain receptacle if outside discharge is not feasible.
- M. Use threaded-end galvanized-iron 45-degree elbow with galvanized-iron wall plate for exterior drain outlet terminations at building exterior. Threads shall match drain hose adapter and coupling required under Part 1 Article "Extra Materials".
- N. Install "Inspector's Test Connections" in sprinkler system piping, complete with shutoff valve, and sized and located according to NFPA 13.

- O. Install sprinkler control valves, test assemblies, and drain risers adjacent to standpipes when sprinkler piping is connected to standpipes.
- P. Install alarm devices in piping systems.
- Q. Install automatic air release vents.
- R. Install pressure gages at locations indicated and as required by the Design and Installation Standards. Include pressure gages with connection not less than NPS 1/4 and with soft metal seated globe valve, arranged for draining pipe between gage and valve. Install gages to permit removal and install where they will not be subject to freezing.
- S. With air release vents in service, fill water-based fire suppression system piping with water.

### 3.7 JOINT CONSTRUCTION

- A. Comply with Division 21 for common work results for fire suppression.

### 3.8 VALVE AND SPECIALTIES INSTALLATION

- A. Install listed fire-protection valves, trim and drain valves, specialty valves and trim, controls, and specialties according to the Design and Installation Standards and authorities having jurisdiction.
- B. Install listed fire-protection shutoff valves supervised open, located to control sources of water supply except from fire-department connections. Install permanent identification signs indicating portion of system controlled by each valve.
- C. Install valves in locations that are readily accessible. Install system control valves in areas that allow for safe fire department access during emergency conditions.
- D. Install indicating valves such that indicator is clearly visible from the floor level below.
- E. Pipe pressure relief valve- and air release fitting-discharge to sprinkler drain risers.
- F. Install check valve in each water-supply connection. Install backflow preventers instead of check valves in potable-water-supply sources.
- G. Install alarm valves in vertical position unless otherwise indicated.
- H. Install alarm valve trim sets for drain, priming level, alarm connections, ball drip valves, pressure gages, priming chamber attachment, and fill-line attachment.
- I. Install dry-pipe and deluge valves with trim sets for air supply, drain, priming level, alarm connections, ball drip valves, pressure gages, priming chamber attachment, and fill-line attachment.
  - 1. Install air-pressure maintenance device(s) with shutoff valves to permit servicing without shutting down system; bypass valve for quick system filling; pressure regulator or switch to maintain system pressure; strainer; pressure ratings with 14- to 60-psig adjustable range; and 175 psig maximum inlet pressure.

### 3.9 SPRINKLER INSTALLATION

- A. Install sprinklers in suspended ceilings in center of acoustical ceiling panels with no visible deviation.
- B. Do not install pendant or sidewall, wet-type sprinklers in areas subject to freezing. Install dry-type sprinklers with water supply from heated space.

- C. Where pendent sprinklers are indicated for dry-pipe or preaction sprinkler systems, use dry-type sprinklers.
- D. Piping used for sprinkler connection return-bends, drop-nipples, and riser-springs shall be no smaller than NPS 1.
- E. Supply pendent sprinklers using a return-bend piping arrangement with connection at the top of the branch pipe to prevent the accumulation of piping corrosion, scale, and sediment at the sprinkler.
- F. Install sprinklers such that cover plate or escutcheon is flush and uniform with respect to penetrated ceiling or wall finish and complies with manufacturer installation requirements. Correct sprinklers that are not flush by adjusting them in accordance with the manufacturer's instructions and/or re-installing sprinklers.
  - 1. Adjustable sprinkler drop nipples are not permitted.
- G. Install sprinklers in accordance with the requirements of NFPA 13 regarding obstructions to sprinkler discharge. Consider all obstructions such as structural elements, ductwork, piping, lighting, cable trays, and floating ornamental ceilings. Adjust sprinkler locations and/or add sprinklers as a Unit-Cost Allowance where installations are not coordinated, and obstructions cannot be relocated to accommodate sprinklers as installed.
  - 1. Coordinate the installation of solid barriers beneath "non flat", "non-solid", or "non continuous" obstructions required by FM Global with the Construction Manager.
- H. Provide and install guards on sprinklers susceptible to mechanical damage. At a minimum provide guards for pendent and upright sprinklers located in the following locations: electrical rooms and closets, near adjacent to ceiling mounted equipment requiring maintenance, beneath obstructions such as ductwork or catwalks, walk-in freezers or cold rooms, and beneath stair landings.
- I. Where not provided under other Sections of the Work, provide and install non-combustible baffles between sprinklers less than 6 feet apart to prevent cold-soldering.

### 3.10 INSTALLATION OF FLEXIBLE SPRINKLER CONNECTIONS

- A. Install flexible sprinkler connections in accordance with manufacturer's recommendations.
- B. Install each flexible sprinkler connection according to the criteria and limitations established by the submitted Product Data, Shop Drawings and Hydraulic Calculations with respect to quantity and type of fitting connections, maximum hose length, maximum quantity of bends, and minimum bend radius.
- C. Branch connections shall be made a minimum 45 degrees from horizontal. Where connections from the side or bottom of branch are required due to coordination, locations shall be clearly indicated on shop drawings and approved by the Engineer.

### 3.11 FIRE HOSE VALVE INSTALLATION

- A. Install fire hose valves in readily accessible locations and with sufficient operational clearances for connection of fire hose and operation of valve handwheel.
  - 1. Do not locate fire hose valves that require the operator to stand within a door-swing path or similar obstruction or hazard.
  - 2. Install exposed fire hose valves orientated to minimize projection into adjacent walking surfaces.

- B. Install fire hose valves in cabinets where indicated. Include pipe escutcheons with finish matching valves and firestopping if required.
  - 1. Coordinate with Division 10 requirements for "Fire Protection Cabinets".
- C. Install NPS 2-1/2 fire hose valves with quick-disconnect NPS 2-1/2 by NPS 1-1/2 reducer adapter.

### 3.12 FIRE-DEPARTMENT CONNECTION INSTALLATION

- A. Install fire department connections in readily accessible with sufficient operational clearances for connection of fire hoses.
- B. Install fire department inlet connections such that they are readily visible from the roadway or accessway designated for fire department pumper apparatus access.
- C. Coordinate locations of fire department inlet locations with locations of Division 28 exterior waterflow alarm bells such that bells are adjacent to connections.
- D. Install automatic (ball drip) drain valve at each check valve for fire department inlet connection, to drain piping between fire department inlet connection and check valve. Install drain piping to spill over floor drain or to outside building; drain piping to stone dry-well for free-standing connection applications.

### 3.13 IDENTIFICATION

- A. Install labeling and pipe markers on equipment and piping according to Division 21 for identification for fire suppression piping and equipment.

### 3.14 FIELD QUALITY CONTROL

- A. Flush, test, and inspect sprinkler systems according to NFPA 13, "Systems Acceptance" Chapter.
- B. Flush, test, and inspect standpipe hose valve systems according to NFPA 14, "Systems Acceptance" Chapter.
- C. Hydrostatically test system piping in accordance with the applicable NFPA water-based fire suppression system design and installation standards. Repair leaks and retest until no leaks exist.
- D. Inspect system components in accordance with the applicable NFPA water-based fire suppression system Design and Installation Standards. Adjust settings or replace damaged or malfunctioning components and retest until proper operation is achieved.
- E. Inspect and adjust alarm and delay settings of alarm devices.
- F. Inspect and adjust alarm valve trim settings.
- G. Inspect and adjust air / nitrogen supply and delivery system settings.
- H. Inspect and adjust pressure relief valves such that no water is discharged under normal system working conditions.
  - 1. Adjust standpipe fire hose valves in accordance with the minimum and maximum pressure requirements indicated in NFPA 14.
  - 2. Adjust sprinkler system regulating devices in accordance with the maximum pressure requirements of NFPA 13 and the minimum pressure requirements as indicated by hydraulic calculations.

- I. Verify that equipment hose threads are same as local fire-department equipment.
- J. Functionally test water-based fire suppression systems, including required full-flow tests, in accordance with the applicable NFPA water-based fire suppression system Design and Installation Standards. Combine tests to conserve water. Correct deficiencies and retest satisfactory results are achieved.
- K. Conduct backflow preventer forward-flow tests.
- L. Conduct main-drain tests.
- M. Conduct standpipe flow tests; automatic and manual operation.
- N. Conduct pressure-regulating valve flow tests.
- O. Coordinate with fire-pump tests. Operate as required.
- P. Coordinate with fire-alarm tests. Operate as required.
- Q. Water-based fire suppression system will be considered defective if it does not pass tests and inspections.
- R. Prepare test and inspection reports. Use NFPA "Contractor's Material and Test Certificate" format.

### 3.15 CLEANING

- A. Clean dirt and debris from system components including backflow preventers, listed fire protection valves, trim and drain valves, specialty fittings, alarm devices, pressure gauges, air compressors, and nitrogen generators.
- B. Clean dirt and debris from hose valves and specialties.
- C. Clean dirt and debris from sprinklers. Remove and replace sprinklers with paint other than factory finish or similar.
- D. Clean dirt and debris from fire department inlet and outlet connections.

### 3.16 DEMONSTRATION

- A. Train Owner's maintenance personal to adjust, operate, and maintain water-based fire suppression systems; including the following:
  - 1. NFPA 25 inspection, testing, and maintenance activities and frequencies.
  - 2. Location and function of system isolation valves.
  - 3. Location and function of system drain valves and test valves.
  - 4. Location of drain discharge outlets and procedure for connection of exterior drain hose.
  - 5. Location and contents of spare sprinkler cabinet and procedure for emergency replacement of sprinkler.
  - 6. Procedure for conducting backflow preventer forward-flow tests.
  - 7. Procedure for conducting main-drain flow tests.
  - 8. Procedure for conducting sprinkler waterflow alarm tests.
  - 9. Procedure for conducting fire hose valve standpipe flow tests.
  - 10. Procedure for conducting pressure-regulating valve flow tests.

- B. Engage a factory-authorized service representative to train Owner's maintenance personnel to adjust, operate, and maintain the following:
  - 1. Wet-pipe, dry-pipe, and deluge alarm valves.

### 3.17 PIPING SCHEDULE

- A. Standard-pressure wet-pipe water-based fire suppression shall comply with the following:
  - 1. Applications:
    - a. Wet pipe sprinkler and standpipe.
  - 2. Pipe and Fittings (shall be one of the following):
    - a. Schedule 40 steel pipe with threaded ends; uncoated threaded fittings; and threaded joints.
    - b. Schedule 40 steel pipe with cut-grooved ends; grooved-end fittings; grooved-end pipe couplings; and grooved joints.
    - c. Permitted for NPS 2-1/2 and larger: Schedule 10 steel pipe with roll-grooved ends; grooved-end fittings; grooved-end pipe couplings; and grooved joints.

### 3.18 SPRINKLER SCHEDULE

- A. Unless otherwise indicated or required by application, sprinkler pressure rating shall be 175 psig.
  - 1. Minimum Pressure Rating for High-Pressure Applications: 250 psig.
- B. Unless otherwise indicated or required by application, sprinkler K-factor and thermal sensitivity shall comply with the following:
  - 1. Light Hazard: Quick response, minimum 5.6 K-factor.
  - 2. Ordinary Hazard: Quick response, minimum 8.0 K-factor.
- C. Unless otherwise indicated or required by application, sprinklers shall be NFPA 13 Ordinary temperature classification.
  - 1. Sprinklers shall be higher temperature classification in accordance with NFPA 13 for maximum ambient ceiling temperatures greater than 100 deg F
  - 2. Sprinklers shall be High temperature classification for Extra Hazard or high pile / rack storage occupancies where corresponding NFPA 13 high temperature sprinkler design criteria is utilized for hydraulic calculations.
- D. Finish indications shall apply uniformly to sprinkler assembly components exposed to view including frame, escutcheon, and cover plate.
- E. Corrosion Resistant Sprinklers: Sprinklers for the following applications shall be corrosion resistant:
  - 1. Pool.
  - 2. Pool equipment / mechanical rooms
- F. Sprinklers for Ceiling Applications shall be: Standard-spray concealed-pendent; chrome-plated finish.
- G. Sprinklers for Ceiling Exposed Applications shall be: Standard-spray, upright; bronze finish.

- H. Sprinklers for Dry-type Sprinkler Applications shall be: Standard-spray, concealed-dry-pendent and sidewall; chrome-plated finish.

## SECTION 220500 - COMMON WORK RESULTS FOR PLUMBING

### PART 1 - GENERAL

#### 1.1 RELATED DOCUMENTS

- A. Certain requirements common to all the mechanical and electrical trades (Fire Suppression, Plumbing, HVAC, Electrical, and Tele/Data) are specified in Division 20. To avoid repetition, they are not repeated in each relevant Division and Section. However, these requirements are applicable to the work of this Section and are hereby incorporated by reference.
  - 1. For example, prior to requesting an occupancy permit, the MEP documentation listed in Part 3 of Division 20 (in paragraph "MEP and Fire Protection Completion Requirements", subparagraph "Occupancy Permit" must be submitted and approved so the Engineer can certify that the MEP systems and life safety provisions are completed.
- B. Drawings and general provisions of the Contract, including General and Supplementary Conditions and Division 01 Specification Sections, apply to this Section.

#### 1.2 SUMMARY

- A. This Section includes the following:
  - 1. Manufacturers.
  - 2. Pipe Tube and Fittings
  - 3. Joining Materials
  - 4. Transition fittings.
  - 5. Dielectric fittings.
  - 6. Mechanical sleeve seals.
  - 7. Sleeves.
  - 8. Escutcheons.
  - 9. Grout.
  - 10. Containment room sealing requirements.

#### 1.3 DEFINITIONS

- A. Finished Spaces: Spaces other than mechanical and electrical equipment rooms, furred spaces, pipe chases, unheated spaces immediately below roof, spaces above ceilings, unexcavated spaces, crawlspace, and tunnels.
- B. Exposed, Interior Installations: Exposed to view indoors. Examples include finished occupied spaces and mechanical equipment rooms.
- C. Exposed, Exterior Installations: Exposed to view outdoors or subject to outdoor ambient temperatures and weather conditions. Examples include rooftop locations.
- D. Concealed, Interior Installations: Concealed from view and protected from physical contact by building occupants. Examples include above ceilings and in chases.

- E. Concealed, Exterior Installations: Concealed from view and protected from weather conditions and physical contact by building occupants but subject to outdoor ambient temperatures. Examples include installations within unheated shelters.

#### 1.4 SUBMITTALS

- A. Product Data: For the following:
  - 1. Transition fittings.
  - 2. Dielectric fittings.
  - 3. Mechanical sleeve seals.
  - 4. Escutcheons.
- B. Welding certificates.

#### 1.5 QUALITY ASSURANCE

- A. Steel Support Welding: Qualify processes and operators according to AWS D1.1, "Structural Welding Code--Steel."
- B. Steel Pipe Welding: Qualify processes and operators according to ASME Boiler and Pressure Vessel Code: Section IX, "Welding and Brazing Qualifications."
  - 1. Comply with provisions in ASME B31 Series, "Code for Pressure Piping."
  - 2. Certify that each welder has passed AWS qualification tests for welding processes involved and that certification is current.
- C. Electrical Characteristics for Plumbing Equipment: Equipment of higher electrical characteristics may be furnished provided such proposed equipment is approved in writing and connecting electrical services, circuit breakers, and conduit sizes are appropriately modified. If minimum energy ratings or efficiencies are specified, equipment shall comply with requirements.

#### 1.6 DELIVERY, STORAGE, AND HANDLING

- A. Deliver pipes and tubes with factory-applied end caps. Maintain end caps through shipping, storage, and handling to prevent pipe end damage and to prevent entrance of dirt, debris, and moisture.
- B. Store plastic pipes protected from direct sunlight. Support to prevent sagging and bending.

#### 1.7 COORDINATION

- A. Arrange for pipe spaces, chases, slots, and openings in building structure during progress of construction, to allow for plumbing installations.
- B. Coordinate installation of required supporting devices and set sleeves in poured-in-place concrete and other structural components as they are constructed.
- C. Coordinate requirements for access panels and doors for plumbing items requiring access that are concealed behind finished surfaces. Access panels and doors are specified in Division 08.

## **PART 2 - PRODUCTS**

### **2.1 MANUFACTURERS**

- A. Division 22; specified products found throughout Part 2 articles where subparagraph titles below introduce lists, the following requirements apply for product selection:
  - 1. Available Manufacturers: Subject to compliance with requirements, manufacturers offering products that may be incorporated into the Work include, but are not limited to, the manufacturers specified.
