Course objectives

The student will demonstrate mastery of statistical terminology through discussion and definition in exams and homework assignments. The student will demonstrate their understanding of statistics through forming a hypothesis, and testing that hypothesis using regression analysis. The student will also demonstrate mastery through the use of software to facilitate the computation of statistical inferences.

The time required to understand the concepts in the course will increase as the semester advances.

Required reading

Douglas Lind, William Marchal, and Samuel Wathen. 2014. Statistical Techniques in Business and Economics, 16th edition (Mcgraw-Hill/Irwin)

Calculator and Software

You will need a calculator for this course. Please choose one you are familiar with. It also helps to have one that has some statistical functions on it.

Evaluation Criteria

Your grade will be determined on the following scale:

93-100%	A	80-82%	B-	67-69%	D+
90-92%	A-	77-79%	C+	63-66%	D
87-89%	B+	73-76%	C	60-62%	D-
83-96%	B	70-72%	C-	> 60%	E

Your grade will be based on performance in the quizzes, on the assignment, in the mid-semester exam, and on the cumulative final exam. The breakdown will be as follows:

Task	% of Course Grade
Assignment	15%
Quizzes	15%
Midterm	35%
Final Exam (Cumulative)	35%
Total	100%

Exams

The exams will contain both materials from the PowerPoints as well as the text. There will be no makeup exams. I will substitute the grade for the final in place for the mid-term exam if it benefits the student, the final will be the most difficult of the two exams, don't count on this option. If a midterm is missed the score for the final will replace the zero for missed exam. There will be no make-up exams for the final.

Quizzes

There will be one quiz for each chapter. I will drop the lowest quiz. The last few chapters cover the most difficult material; do not use that drop early on in the semester.

Assignment

There will be one paper due by the date of the final. It will be a paper on a multiple regression of your choosing (multiple regressions covered in chapter 14)
