

FOOD INSECURITY

sySTEMic
2024

1 in every 10 people suffers severe food insecurity – about 800M people worldwide

Food insecurity is the lack of consistent access to sufficient nutritious food. This occurs in every country in the world, in both rural and urban locations. 23% of kids and 43% of college students in the US suffer food insecurity. Climate change is impacting crops and increasing food insecurity.

Ideas your team might explore:

- Nutrient supplements
- Vertical farming systems
- Drones in agriculture
- Meatless Protein
- Climate resistant crops
- On-campus food sharing

For more information on food insecurity watch [this video](#):

How can you get involved and compete for prizes?

- Sign up by **November 28th** as an individual or team of 4-7 LSAMP/B2B students (Individuals will be placed on teams)
- **Innovate a solution** to any aspect of this issue
- **Present** your idea as a team in a 5-minute pitch at a virtual event in late February/early March 2024
